THE CONCISE UNIVERSAL ENCYCLOPEDIA

Edited by
J. A. HAMMERTON
EDITOR OF THE UNIVERSAL ENCYCLOPEDIA

VOLUME ONE

THE STANDARD LITERATURE CO., LTD.
CALCUTTA AND RANGOON

A HOUSEHOLD NECESSITY

IN the pressure of modern life an encyclopedia of general information, complete in two handy volumes and yet not too scanty in its presentation of the facts, has become a household necessity. To meet this need the present work has been produced.

THE CONCISE UNIVERSAL ENCYCLOPEDIA is a carefully epitomised and up-to-date version of the famous Universal Encyclopedia originally published in twelve volumes. The essence of these twelve volumes is here offered in the handiest possible form, designed especially for rapid reference. THE CONCISE contains approximately two million words and upwards of six thousand illustrations. Of the latter many have been expressly prepared to suit the requirements of this handy edition.

UTILISING all the proven editorial resources of the parent work, THE CONCISE can claim to provide the most convenient means of procuring the essential information on scores of thousands of questions of fact. It is therefore with full confidence that THE CONCISE ENCYCLOPEDIA is offered to readers in India, Burma and Ceylon as the most efficient and handy work of general reference available to-day.

THE CONCISE UNIVERSAL ENCYCLOPEDIA

A. First letter and vowel of the English and many other alphabets. Its commonest sounds in English are those heard in bar, map, bald, name. Under the influence of certain consonants and in certain positions it has the value of short e, i, o, u, as in many, village, was, about. It occurs doubled and combined with other vowels, as aa, ae, ai, ao, au, av, aw.

In music A is the sixth note of the natural scale of C, and also the tuning note of the modern orchestra, this being the pitch of one of the strings of each bowed instrument.

The letter A occurs in certain common abbreviations. See Abbreviations: Alphabet.

AL Symbol for first class. Used originally by Lloyd's Register of Shipping to denote the best type of wooden vessels, it is now applied to anything first-rate.

AAHHOTEP. Name of two Egyptian queens. The coffin of Aahhotep I, mother of Aahmes I (c. 1580 B.C.), found by A. Mariette at Thebes in Egypt, 1859, and now at Cairo, contained her mummy, with a collection of fine jewelry. This included gold and silver boats with crews, a ceremonial bronze axe, gold chain and scarab, bracelets, etc.

AAHMES. Name of two Egyptian kings, called by the Greeks Amasis. Aahmes I (c. 1580 B.C.) expelled the Hyksos from Memphis, and founded the XVIIIth dynasty. Aahmes II (d. 526 B.C.) revolted against Apries, the Pharaoh-hophra of Jer. 44, and seized the throne. His land being invaded by Nebuchadrezzar (or Nebuchadnezzar) II, he contracted alliances with Croesus, king of Lydia, and Polycrates tyrant of Samos. He opened Naukratis to Greek traders.

Aaron's Rod
or Mallein

AALAND OR **ALAND** ISLANDS. Group of some 300 isles and rocks at the entrance to the Gulf of Bothnia now part of the republic of Finland. Only about 80 are inhabited; the largest, Aaland, is 18 m. long, and the area of the group is 551 sq m. Mariehamn is the chief town. The people, mainly of Swedish origin, are skilful sailors and fishermen. Hardy cereals and cattle are raised and meat, fish, hides, cheese, and butter are exported.

In 1809, Sweden, to whom the islands had long belonged, ceded them to Russia. Fortifications were forbidden by the Aaland Convention of 1856, but disputes arose from time to time over Russia's alleged contravention of this prohibition. In 1918 a referendum resulted in favour of union with Sweden, but in 1921 the League of Nations decided that the islands should belong to Finland. Pop. 27,000.

AALBORG. Seaport and city of Jutland, Denmark on Lym Fjord. It is 156 m. by sea from Copenhagen. A commercial centre, it exports grain and fish. The name means eel castle. Pop. 42,819.

AAR, AARE, OR AROLE. River of Switzerland. About 180 m. in length, it rises in the canton of Berne, near the Grimsel pass, flows through lakes Brienz and Thun, and, passing Interlaken, Thun, Berne, Soleure, and Brugg, joins the Rhine near Waldshut. On the right bank of the river, at the southern foot of the Jura, stands Aarau, capital of the canton of Aargau. Pop. 11,500.

AARDVARK (Dutch aard, earth; vark, pig). Ant bear of Africa, found from Somaliland to the Cape. A nocturnal, hurrowing animal of ungainly appearance, it has a long, pig-like snout, enormous ears, and thick tail. It feeds on ants and termites, and, owing to its shy habits, is seldom seen.

AARDWOLF (*Proteles cristatus*). Animal resembling the hyena, found in South Africa and along the E. coast of Africa. Yellowish-grey in colour, it has black stripes and a long, bushy tail. The hair on neck and back is erectile. Its teeth are small and rudimentary, and it feeds mainly on earthen and termites.

Aardwolf in captivity. Hyena-like native of South and East Africa.

AARHUS OR **AARHUS.** Seaport and second largest city of Denmark. On the E. coast of Jutland, 110 m. by sea from Copenhagen, it has been a bishop's see since 951, has a Gothic cathedral, a museum, and a library. Grain, hides, tallow, bacon, butter, eggs, and cattle are exported. Pop. 76,226.

AARON. Elder brother of Moses and high priest of Israel. By divine command he acted as spokesman for Moses before the elders of Israel and Pharaoh (Ex. 4 and 7). Eloquent, but of weak character, he yielded to the people when Moses was on Sinai by fashioning the golden calf for worship (Ex. 32) and with his sister Miriam rebelled against his brother (Num. 12). Made high priest (Ex. 29 and Lev. 8), his title was vindicated by the miraculous budding of his rod (Num. 17). He and his brother, for disobedience at Kadesh, were denied entry to the Promised Land. Aaron died on Mount Hor in Edom, being succeeded in the priesthood by his third son, Eleazar (Num. 20).

In botany the popular name Aaron's Beard is applied both to *Hypericum calycinum* and *Saxifraga sarmentosa*, while Aaron's Rod is that given to the common mullein, *Verascum thapsus*.

ABACUS (Lat. abacus, Gr. abax, slab, board). Mechanical contrivance for facilitating arithmetical calculations. It consists of an oblong wooden frame with several wires stretched across it lengthwise and ten beads strung upon each wire.

In architecture the term abacus is used for the uppermost member of the capital of a column. In an isolated column it might be round or square, or polygonal, but in columns

Aardvark or African ant bear. It is about six feet long and lives in a deep burrow. See above.

carrying an entablature it was generally rectangular. Medieval builders modified the abacus. See Architecture.

ABADAN. Island on the E. side of the Shatt-el-Arah, near its entrance to the Persian Gulf. On it the Anglo-Persian Oil Co. has large refineries, machine shops, storage tanks and other facilities for dealing with its oil, and these, together with the houses for the workers, make a town of some size. The first refinery was built in 1909. During the Great War the British Government took over the island and built wharves and other facilities for shipping. It was returned to the Anglo-Persian Co. in 1919 and since then has grown considerably.

ABANDONMENT (Fr. *à bandon*, at liberty). In law, the surrender of one's rights or privileges. The surrender must be voluntary and with full knowledge of all the circumstances. Coercion or fraud vitiates the abandonment.

ABATTIS (Fr. *abattre*, to beat down). Military obstacle formed by cutting down trunks of trees, lopping off the small branches, and sharpening the stout ends. These are then placed across a path or approach likely to be taken by the enemy, the butts being anchored to the ground, with the spear-like tips facing him. Fixed in a shallow excavation, the obstacle cannot be seen at a distance and can only by chance be destroyed by artillery.

ABATTOIR (Fr.). Public building in which cattle are slaughtered. A large public abattoir suitable for the needs of a great city will usually consist of the following departments: (1) lairage; (2) slaughtering rooms or halls, sub-divided into a hall for cattle, a portion of the same hall for sheep and calves, a hall for pigs, and a hanging-house or cooling chamber; (3) cold chambers for maturing and storing meat; (4) offal room and tripe house; (5) meat inspector's room; (6) room for condemned meat; (7) destructor room for disposing of condemned meat; (8) engine and boiler house; (9) manure depot. In 1929-30 a new abattoir, at that time probably

Abacus. Form of this contrivance once used in schools.

the largest in the world, was erected at the port of Liverpool. See Food.

ABBA. Aramaic word meaning father, used three times in the N.T. (Mark 14; Rom. 8; Gal. 4) in reference to God. As far as is known, the word was restricted to the Deity. It lingers as a title for bishops in the Coptic Church.

ABBAS (c. 1557-1628). Shah of Persia, known as the Great. The son of Shah Mahommed, he succeeded his father in 1586. He was an enlightened administrator, though cruel and capricious. His court is described by Sir Anthony Sherley in his *Travels into Persia*, 1613.

ABBAS. Name of two rulers of Egypt. Abbas I (1813-54) succeeded his uncle Ibrahim Pasha as regent in 1848, and in 1849, after the death of Mehemet Ali, became viceroy.

Abbas II (b. 1874) was Khedive of Egypt, 1892-1914. The eldest son of Tewfik Pasha.

whom he succeeded in 1892, he received a Western education. He gradually became reconciled to foreign control, and took an interest in the social and economic improvement of Egypt, being a keen agriculturist. In Dec., 1914, Egypt was declared a British protectorate, and Abbas, having been detected in intrigues with the enemies of Great Britain, was deposed, being succeeded by Hussein Kamil. See Abbas II, Earl of Cromer, 1915.

Abbas II, Khedive of Egypt, 1892-1914

ABBASIDES. Arah dynasty, descendants of Mahomet's uncle Abbas. They were the second line of the Bagdad caliphs, the first being their rivals, the Ommiads, who were defeated and massacred by the Abbasides in 750. From that time until 1258 the Abbasides, of whom Haroun-al-Raschid was one, ruled at Bagdad. In 1258 Bagdad was lost, but the Abbasides ruled in Egypt until 1517. See Caliphate.

ABBATE, NICCOLO DELL' (1512-71). Italian painter. Born at Modena, his principal work was the series of frescoes at Fontainebleau, after the designs of Francesco Primaticcio. He died in Paris, and many of his drawings are in the Louvre.

ABBEVILLE. Town of N. France, on the river Somme. It is 28 m. by rly N.W. of Amiens, and is connected with the English Channel by a canal. Its chief industries are the manufacture of cloth, carpets, hemp goods, and sugar, and it has ship-building yards and trades in grain. It was the scene in 1514 of the marriage of Louis XII to Mary, sister of Henry VIII, and in 1527 of the signing of a treaty between England and France. The cathedral of S. Vulfran, dating partly from the 15th century, has a fine façade. Pop. 21,472.

Abbeville. Cathedral of S. Vulfran, partly of the 15th century

ABBEY (late Lat. abbatia). Self-governed monastery of not fewer than 12 monks or nuns, ruled by an abbot or abbess respectively. An abbot must be 25 years of age, and a priest. He is elected by the votes of the professed members of the community, for life. An abbess is elected in the same manner but cannot exercise any priestly function.

In the West abbeys date from S. Benedict (6th century), under whose rule they are generally formed. Of no particular style in architecture in the beginning, a common form came later into use—a quadrangle, with open cloisters on each side, various buildings adjoining the cloisters, and a large church. The adjoining buildings were the oratory, the dormitory, the refectory, kitchen, workshops, infirmary, novice house, chapter house, and cellars for stores. In some, a school for boys was held in the cloisters or, as at Durham, in a separate building.

As hospitality was an essential feature of the rule of S. Benedict, every abbey had one or more guest houses. While the abbot was the absolute authority, in a large community of 100 or more monks his authority had to be delegated in many matters of daily routine, and the following were the chief officials at the important abbeys: the precentor, who was choirmaster, librarian, and in some cases master of the boys' school; the sacrist, to whom was committed the care of the church fabric, plate and vestments; the cellarer, responsible for the supply of food, drink, and fuel; the kitchener, who saw to the serving and distribution of food; the infirmarian, who tended the sick; the almoner, who distributed alms and food to the poor; the chamberlain, who saw to the clothing of the brethren: the novice master; and the guest master.

The abbey was a centre of industry, a place of learning and a self-supporting, self-contained community; and the abbots of all the larger abbeys were large landlords, with seats in Parliament. See Benedictines; Cistercians; etc.

ABBEY, EDWIN AUSTIN (1852-1911). American painter. Born in Philadelphia, April 8, 1852, he first attracted notice by his black-and-white magazine drawings. Settling in London in 1881, he was a regular exhibitor from 1890 at the R.A., being elected A.R.A. in 1896 and R.A. in 1898. His chief oil paintings are Richard Duke of Gloucester and the Lady Anne, 1896, and the official picture of the coronation of Edward VII, 1904. His great decorative works, executed for America, include The Holy Grail series for the Boston municipal library. Abbey died Aug. 1, 1911.

Edwin A. Abbey, American painter
Elliott & Fry

ABBEY THEATRE. Dublin theatre built in 1904 by Miss A. E. F. Horniman for the Irish National Theatre Society. The plays of J. M. Synge were its chief mainstay, notably his Riders to the Sea, In the Shadow of the Glen, and, above all, The Playboy of the Western World. Other playwrights represented in the theatre are W. B. Yeats, Lady Gregory, Edward Martyn, "A.E." (George Russell), George Moore, Padraic Colum, Norreys Connell, St. John Ervine, Douglas Hyde, and G. B. Shaw. After the War it was managed by Lennox Robinson and plays by Eugene O'Neill and others were produced here.

ABBOT, GEORGE (1562-1633). Archbishop of Canterbury. Born at Guildford in Oct., 1562, the son of a cloth worker, he was educated at Guildford Grammar School and at Oxford, where he was thrice vice-chancellor. In 1609 he was appointed bishop of Coventry and Lichfield, in 1610 bishop of London, and in 1611 archbishop of Canterbury. In 1621, while hunting, he accidentally killed a keeper. The subsequent inquiry fell to the ground, but left Abbot under a cloud. He died at Croydon in Aug., 1633.

George Abbot, English Primate

A brother, Robert Abbot (1560-1617) became successively chaplain to James I, regius professor of divinity at Oxford, and bishop of Salisbury.

ABBOT OF UNREASON OR LORD OF MISRULE. Name given to the master of the revels in medieval times. He was chosen by election at times of festivity, particularly Christmas. At Oxford, Cambridge, the Inner Temple, and Gray's Inn he had charge of the Christmas revels, arranged the Latin plays, and acted as master of the ceremonies.

ABBOTSFORD. Residence of Sir Walter Scott. Built 1811-24, it is on the right bank of the Tweed, 3 m. W. of Melrose Abbey. A part of the building has been converted into a museum which contains relics of the novelist. Scott lived here until his death.

Abbotsford. Sir Walter Scott's picturesque home near Melrose

The Abbotsford Club was founded in 1834 to issue historical works connected with Scott's writings.

ABBOTT, SIR JOHN JOSEPH CALDWELL (1821-93). Prime Minister of Canada. The son of a clergyman; he became a successful lawyer, and before the Federation of 1867 was a member of the Canadian Parliament and solicitor-general. After 1867, Abbott became a follower of Sir John A. Macdonald, whose cabinet he joined in 1887. In 1891 he succeeded Macdonald as prime minister, but resigned Dec., 1892, and died Oct. 30, 1893.

ABBREVIATIONS, List of. Here we give the chief abbreviations in use among those who speak the English language.

A.A. Associate in Arts; Automobile Assoc.; Architectural Assoc.; A.A.A. Amateur Athletic Assoc.; A.A.G. Assist. Adjutant General; A.B. Bachelor of Arts; Able-bodied seaman; A.C.A. Assoc. ABDEL-KRIM. Moroccan chief. The son of a tribal leader, he received some education and obtained employment at Melilla. In 1919, after a quarrel with some Spaniards there, he fled to his mountain home and headed a revolt. In 1921 the Spanish post at Anual was seized, and further successes followed, each bringing fresh adherents to the native cause. Raisuli, who had gone over to the side of the Spaniards, was captured, and in the interests of his allies Abdel entered French territory. The union of French and Spanish power that followed was too much for him, but he offered a stout resistance until forced to surrender in May, 1926.

ABDIEL. Name given by Milton to the seraph who, in *Paradise Lost* (v. 805-907), withstood Satan and other rebel spirits. "Among the faithless, faithful only he."

ABDOMEN. Cavity of the body lying between the large horizontal muscle called the diaphragm and the bones and muscles forming the pelvis. It is enclosed by a muscular body wall, lined with a smooth membrane known as the peritoneum. The principal organs contained in the abdomen are the stomach and intestines, liver, spleen, pancreas, kidneys and bladder, and in the female the organs of reproduction. Anatomists divide the surface of the abdomen into nine regions by means of two horizontal and two vertical lines, the three

Abdomen. Diagram showing the organs in this part of the body

central regions being termed, from above downwards, the epigastric, umbilical and hypogastric, and those at the sides the right or left hypochondriac, lumbar, and iliac.

In the lower phyla, or orders, of the animal kingdom there is no persistent distinction between the abdomen and the thorax or chest. It may be regarded as beginning with the arthropoda. See Anatomy.

ABDUCTION. (Lat. ab, from; ducere, to lead.) Crime relating to offences against women and children. There can be no abduction of a male person over the age of 14. Whosoever unlawfully, either by force or fraud, takes away, entices or detains any child under the age of 14 with intent to deprive any person who has the lawful custody of such child, or with the intent to steal any article upon or about the child, is guilty of felony, and may be kept in penal servitude for any period not exceeding seven years.

ABDUL HAMID. Name of two sultans of Turkey. Abdul Hamid I (1725-89) was involved in war with Russia and in 1774 signed a treaty by which Turkish suzerainty over the Crimea and elsewhere was lost.

Abdul Hamid II (1842-1918) was the second son of the Sultan Abdul Mejid, and became sultan on Aug. 31, 1876, on the deposition of his brother Murad V. A clever diplomatist, he skillfully played off the Powers of Europe against each other, but his empire was always in disorder, and the Armenian massacres in 1896 won for him the title of The Great Assassin and Abdul the Damned. In April, 1909, the Young Turks under Enver Bey rose in revolt, the National Assembly voted his deposition and he became a stato captive. He died in Constantinople, Feb. 11, 1918.

Abdul Hamid II,
Sultan of Turkey

ABD-UR-RAHMAN (1830-1901). Ameer of Afghanistan. Grandson of the great ameer, Dost Mohammed, he was driven out of Afghanistan when he first claimed the succession. In 1880, at the close of the second Afghan War, he was the candidate acknowledged by the British. Establishing his own authority, he proved himself a strong and shrewd ruler, and his wisdom at the time of the Penjdeh incident in 1885 averted what seemed to be inevitable war between Russia and Great Britain. On his death, Oct. 3, 1901, he was succeeded by his son Habibullah. See Afghanistan.

ABECEDARIANS (Lat. abecedarius, pertaining to the alphabet). Familiar name of an Anabaptist sect founded in Germany by Nicolaus Storch in the 16th century. They held that all human knowledge prevented men from inwardly hearing God's voice, and refused to learn even the alphabet, or A B C—hence the nickname.

Abecedarian is the term given to hymns in imitation of Hebrew acrostic poetry.

A BECKETT, GILBERT ABBOTT (1811-56) English humorous writer and dramatist. He was a contributor to Punch from its commencement until his death, at Boulogne, Aug. 30, 1856. He wrote The Comic History of England. See The A Becketts of Punch, A. W. A Beckett, 1903.

ABEDNEGO. Name given in Babylon to the exiled Jew Azariah (Dan. 1-3), friend of Daniel. He received honour and office from Nebuchadnezzar, until, refusing to worship a golden image, he was thrown into a burning furnace. Having miraculously escaped unharmed, he was restored to office.

ABEL. Second son of Adam and Eve. A shepherd, he was killed by his brother Cain because of their two sacrifices Abel's was more acceptable to God (Gen. 4). He is alluded to in the N.T. (Matt. 23; Heb. 11).

ABEL, SIR FREDERICK AUGUSTUS (1827-1902). British chemist. Born at Woolwich, July 17, 1827, in 1852 he was appointed professor of chemistry at the R.M.A., Woolwich, and four years later was appointed chemist to the War Office, carrying out researches which resulted in a process by which perfectly stable gun cotton can be made. His most important work was the invention, in conjunction with Sir James Dewar, of cordite, patented in 1889. At the time of his death, Sept. 6, 1902, Abel was director of the Imperial Institute.

The Abel test for petroleum, devised by him, is described in Schedule I of the Petroleum Act, 1879. By its use can be ascertained the temperature at which petroleum gives off inflammable vapour, the object being to find out whether a particular sample is safe under ordinary conditions of storage and use.

ABEL, ROBERT (b. 1859). English professional cricketer. Born at Rotherhithe, Nov. 30, 1859, he first played for Surrey in 1881, and during his cricket career made over 70 separate centuries, his highest score being 357 not out against Somersetshire in May, 1899. In each of the seasons 1895-1900 and 1902 he compiled over 2,000 runs, and was one of the chief mainstays of the Surrey XI until his retirement about 1908.

ABELARD, PIERRE (1079-1142). French scholastic philosopher and theologian. Born at Le Pallet, near Nantes, Brittany, he was appointed, in 1115, lecturer at the cathedral school of Notre Dame, Paris.

In the house of Fulbert, a canon of Notre Dame, Abelard was tutor to his host's niece, the accomplished and beautiful Héloïse, with whom he fell passionately in love. The two were privately married, but when Héloïse, not to mar Abelard's career in the Church, denied the marriage and fled to the convent of Argenteuil, her uncle, in revenge, caused Abelard to be horribly mutilated. Abelard retired to the abbey of St. Denis, and induced Héloïse to take the veil. He afterwards built a hermitage and chapel at Nogent-sur-Seine, and later, when appointed abbot of St. Gildas de Rhuys, Brittany, he founded at Nogent the abbey of the Paraclete, appointing Héloïse as first abbess. Then were written the famous letters which have served more than anything else to preserve the memory of their writers.

After his downfall Abelard's many enemies pursued him relentlessly with charges of heresy, culminating in 1141 in his condemnation by the council of Sens. Reconciliation with the Church was effected, but Abelard died the following year, and was buried at the Paraclete, as was Héloïse twenty-two years later. In 1817 the remains of the lovers were interred at Père-Lachaise, Paris. Abelard's teaching was an appeal to reason against tradition. His works were written in Latin, and first printed in Paris, 1616.

Abele (Dutch, ahele). Alternative name for the white poplar (*Populus alba*). See Poplar.

ABENCERRAGES. Moorish family which settled in Spain in the 8th century. They attained to a position of influence, but in the 15th century, according to tradition, the principal members were massacred by Boabdil

in what is known as the Hall of the Abencerrages in the Alhambra. On this Chateaubriand based a play and Chernbiui an opera.

ABEOKUTA. Town of Nigeria, in the Yoruba territory. Capital of Egba district, on the Ogun river, 60 m. by rly. N. of Lagos. The town, or rather group of towns and villages, covers a large area, and is enclosed by a high mud wall. It has courts of justice, government buildings, and waterworks opened in 1914, and is the centre of an active trade in palm oil, rubber, timber, and other local produce and European manufactured goods.

Aberavon. Since 1921 this market town of Glamorganshire has been part of the borough of Port Talbot (q.v.).

Aberbrothock. Old name of the Scottish town of Arbroath (q.v.).

ABERCARN. Urban district and town of Monmouthshire, England. It is 10 m. N.W. of Newport on the G.W.R., with collieries and iron, tinplate, and chemical works. Market day, Sat. Pop. 20,480.

ABERCONWAY, CHARLES BENJAMIN BRIGHT M'LAREN, 1ST BARON (b. 1850). British coalowner and politician. Born in Edinburgh, May 12, 1850, son of Duncan M'Laren, M.P. for Edinburgh, he was a nephew of John Bright. In 1880 he entered Parliament as a Radical; in 1902 he was made a baronet, and in 1911 a baron. His wife was an active advocate of women's suffrage and kindred movements.

ABERCORN. Settlement in Northern Rhodesia. It is about 10 m. S.E. of Lake Tanganyika on the Stevenson Road connecting that lake with Lake Nyasa. Established in 1889, it carries on a considerable trade with the neighbouring tribes. Here on Nov. 14, 1918, the remnants of the German force under von Lettow-Vorbeck surrendered. A mining district and settlement in Southern Rhodesia bears the same name.

ABERCORN, DUKE OF. Title held by the Hamilton family. It originated in 1603, when James, eldest son of Lord Claud Hamilton, was created baron of Abercorn. In 1606 the barony became an earldom, and in 1790 a marquessate. James Hamilton (1811-85) succeeded his grandfather as second marquess in 1818, and was made a duke in 1868. Groom of the stole to the Prince Consort 1846-59, he was lord-lieutenant of Ireland, June 1866-Feb. 1868 and 1874-6. He died Oct. 31, 1885, when his eldest son, James (1838-1913), long the chairman of the British South Africa Co., became duke. His son James, the 3rd duke, became governor of Northern Ireland in 1922.

ABERCROMBY, SIR RALPH (1734-1801). British general. Son of a Scottish landowner, he abandoned law for the army in 1756. After service in Flanders and the West Indies, he was appointed in 1797 to command the troops in Ireland. In 1801 he was given command of

the Mediterranean expedition, landing his troops under heavy fire at Abukir Bay. Wounded in the battle that followed, he died March 28, 1801. Abercromby probably did more than any other soldier of his time to restore the discipline of the British army.

Sir Ralph Abercromby. British general and reformer of the army. Painting by J. Hoppner, R.A.

Robert Abel,
English cricketer.
Elliott & Fry

After his death his wife was made a baroness. The harony became extinct in October, 1924.

ABERDARE. Urban district and market town of Glamorganshire, Wales. It is 4 m. S.W. of Merthyr Tydfil on the G.W. Rly. It has coal mines, brickfields and breweries, and has grown enormously with the development of the local mining industry. Near by are cairns and remains of a British encampment. The division of the parl. borough of Merthyr Tydfil, to which it gives its name, returns one member. Market day, Sat. Pop. 55,010.

Henry Austin Bruce (1815-95), created Baron Aberdare in 1873, took his title from this district. He became Liberal M.P. for Merthyr in 1852, and was home secretary 1868-73. His grandson, the 3rd baron, was, as Hon. C. N. Bruce, a noted sportsman.

ABERDEEN. The fourth largest city of Scotland. It stands on a bay of the North Sea, between the mouths of the rivers Dee and Don, 130½ m. by rly. N. of Edinburgh. It is the co. town of Aberdeenshire, the chief seaport of N. Scotland, and is served by the L.M.S. and L.N.E. Rlys. Aberdeen consists of two contiguous towns—Old Aberdeen, extending N. towards the Don, and New Aberdeen, lying N. and W. of the Dee—

Aberdeen. War memorial, consisting of a domed court attached to the art gallery and museum

which, however, have corporate existence for administrative purposes. In old Aberdeen are King's College and the remains of S. Machar Cathedral, the nave of which is now the parish church. New Aberdeen has many imposing public edifices, notably Marischal College and other university buildings, the municipal and county buildings, the market hall, the post office, the royal infirmary, Trinity or Trades Hall, Gordon College, the Grammar School, and His Majesty's Theatre.

Aberdeen. 1. Marischal College, founded in 1593 by George Keith, Earl Marischal. 2. King's College, founded by Bishop Elphinstone in 1494. 3. View of the city and harbour from Balnagask

The city has a new art gallery. The university consists of two colleges, King's and Marischal, united in 1860.

The industries of Aberdeen include, besides the fisheries and fish curing establishments, for which it is noted, shipbuilding yards, engineering, chemical, granite polishing, and paper works, and woollen, linen, cotton, comb, and tobacco factories. Its banks are important. There is a commodious harbour, with a pier over 2,000 ft. long, and docks covering nearly 85 acres, with quayage of nearly 2,000 ft. Off the entrance is Girdleness Lighthouse.

There are golf links and several public parks, Duthie Park, of nearly 50 acres, being the largest. There is a broadcasting station, 2 B D. Two members are returned to Parliament. Market day, Fri. Pop. 158,969.

An important place in the 12th century, Aberdeen was granted a charter by William the Lion in 1179. Its people espoused the cause of Robert the Bruce, from whom it received large grants of land, and it was burned by Edward III in 1336. During the Civil War it suffered at the hands of both Royalists and Covenanters.

ABERDEEN, GEORGE HAMILTON GORDON, 4TH EARL OF (1784-1860). British statesman. Born at Edinburgh Jan. 28, 1784, he succeeded his grandfather in 1801 as 4th earl of Aberdeen, a title dating from 1680. In 1813 he went to Vienna as ambassador, afterwards representing his country at the peace of Paris in 1814. A Tory, he became a cabinet minister in 1823, and later held office under Peel.

Aberdeen resigned with Peel in 1846 and after his leader's death was the recognized head of the party which had followed that statesman in his conversion to Free Trade. As such he became prime minister in Dec., 1852, but had to resign in 1855 over the Crimean War. He died Dec. 14, 1860, and was succeeded by his eldest son, George John James Hamilton Gordon (1816-64).

Earl of Aberdeen, Prime Minister

ABERDEEN, JOHN CAMPBELL GORDON, 1ST MARQUESS OF (b. 1847). British politician. Born Aug. 3, 1847, and educated at St. Andrews and Oxford, he succeeded his brother as 7th earl in 1870. One of Gladstone's intimate friends, he was lord-lieutenant of Ireland in 1886, governor-general of Canada, 1893-8, and again lord-lieutenant of Ireland 1905-15, when he was made marquess of Aberdeen and Temair.

Lord Aberdeen, 1st Marquess

Lady Aberdeen (b. 1857), a daughter of the 1st Lord Tweedmouth, whom he married in 1877, has been prominent in political and philanthropic circles. Their eldest son, Lord Haddo (b. 1879), has also figured in political life. Lord Aberdeen's chief seat is Haddo House, Aberdeenshire. In 1926 he published reminiscences by himself and his wife entitled *We Twa*, and in 1929 *More Cracks with 'We Twa'*.

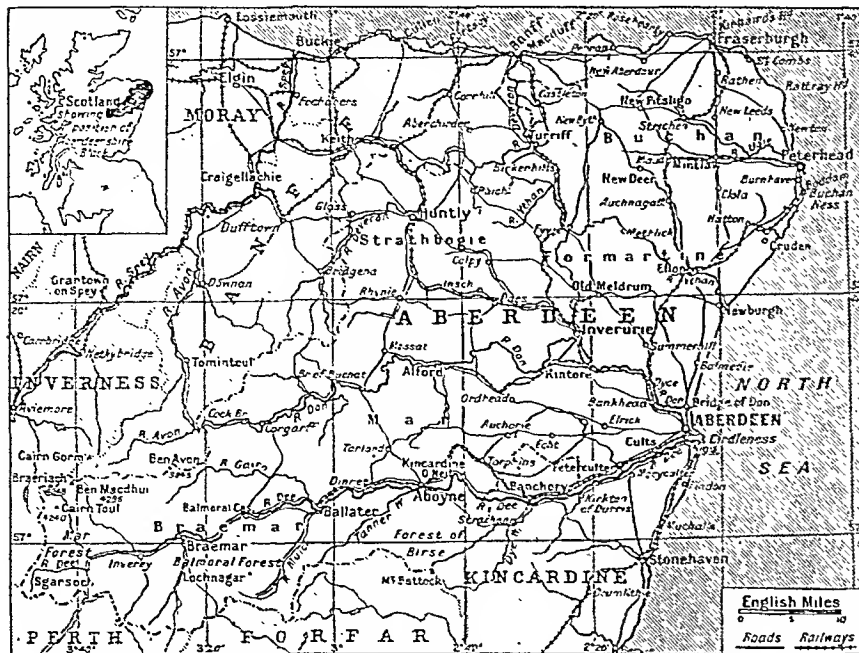

Isobel Maria, Lady Aberdeen

ABERDEENSHIRE. N.E. maritime co. of Scotland. It is popularly apportioned into five districts, Mar, Strathbogie, Garioch, Formartine, and Buchan, has an area of 1,971 sq. m., and is the sixth largest Scottish shire. The coast is bold and rocky, but almost free from indentations. The surface is generally hilly, and becomes extremely mountainous in the S.W., where the Grampians throw out

Aberdeen, county town of Aberdeenshire, Scotland. Ground plan showing the harbour, docks, principal buildings and thoroughfares

Aberdeenshire. The sixth, in regard to size, of the counties of Scotland

the Cairngorm group, the loftiest summit being Ben Macdui, 4,296 ft. Granite and gneiss are the prevailing rocks, the former being largely quarried for building purposes; sandstone is also worked. The largest rivers are the Dee, 87 m.; Don, 82 m.; Deveron, 61 m., and Ythan, 36 m., all plentifully stocked with salmon and trout.

The surface of the hilly districts is mainly moorland, but in the N.E. and between the Don and Ythan the soil has been made fertile by highly skilful tillage, oats and barley being the chief crops cultivated. Next in importance to agriculture is the fishing industry, while as a stock rearing and feeding county Aberdeenshire excels. Of the other industries, several are associated with the quarrying of granite, while fish-curing and the manufacture of woollens, cottons, sailcloth, and paper are actively carried on. The principal towns are Aberdeen, the co. town; Peterhead, the centre of the fisheries; Fraserburgh, Huntly, and Inverurie. The co. unites with Kincardineshire to return three members to Parliament. Balmoral Castle is in the S.W. part of the county, and at Bucksburn near Aberdeen is the Rowett Institute for research in animal nutrition. Pop. 310,000.

LITERARY ASSOCIATIONS. Lord Byron was taken to Aberdeen in 1790, at the age of two, by his mother, a Gordon of Gight in Aberdeenshire. Mother and son lived in Broad Street, Aberdeen, till Byron's 11th year. Among men of letters associated with the university are James Beattie (1735-1803), philosopher and poet, educated at Marischal

College; and Tobias Smollett, the novelist, M.D. of the same college. Two Aberdeenshire novelists were William Alexander (1826-94) and George MacDonald (1824-1905).

ABERDOR. Parish and village of Fifeshire, Scotland. On the Firth of Forth, 18 m. by the L.N.E. Rly. N.W. of Edinburgh, it is resorted to for sea bathing, and has a good tidal harbour. Here are the ruins of Aberdour Castle, an old seat of the earls of Morton. Pop. 3,063.

ABERDOVEY. Village and watering place of Merionethshire, Wales. It stands at the mouth of the Dovey, 4 m. S. of Towyn, on the G.W. Rly. Pop. 1,551.

ABERFELDY. Police burgh of Perthshire, Scotland. It stands near the S. bank of the Tay, 32½ m. N.W. of Perth, on the L.M.S. Rly. The Falls of Moness, 1 m. distant, are mentioned in Burns's *Birks of Aberfeldy*. Pop. 1,560.

ABERFOYLE. Village of Perthshire, Scotland. On the Laggan, a head-stream of the Forth, it is 35 m. N.N.W. of Glasgow by the L.N.E. Rly. Its scenery is described by Scott in *Rob Roy*. Pop. 1,147.

ABERGAVENNY (Rom. Gobannium) Municipal borough and market town of Monmouthshire, England. It lies on the river Usk, where the Gavenny joins it, and is 13 m. W. of Monmouth, on the G.W. Rly. It has lime, stone, and iron works, a grammar school, and remains of the castle of the Nevilles and a priory. Market day, Tues. Pop. 9,008.

The town gives the title of marquess to the Neville family. In 1392, Edward Neville, son of the earl of Westmorland, and a great-grandson of Edward III, having inherited the estate of Abergavenny, became a baron. In 1784, Baron Bergavenny or Abergavenny was made an earl, and in 1876 the fifth earl (1826-1915) was made a marquess. The principal seat of the family is Eridge Castle, Kent, and the heir to the title is known as the earl of Lewes.

ABERGELDIE CASTLE. Royal residence in Aberdeenshire, Scotland. On the river Dee, 6 m. W.

of Ballater and 2 m. from Balmoral, it derives its name from the Geldie Burn, which enters the Dee near

ABERGLASLYN. Pass of One of the beauty spots of N. Wales, it is 1½ m. from Beddgelert, the river Glaslyn flowing between rocky walls that rise steeply to 700 ft. on either side. The river here forms the boundary between Carnarvonshire and Merionethshire.

ABERNETHY. Police burgh of Perthshire, Scotland. On the estuary of the Tay, 9 m. S.E. of Perth, with a station on the L.M.S. Rly. It has one of the only two ancient round towers in Scotland. Pop. 593

ABERNETHY, JOHN (1764-1831), British surgeon. Born in London. April 3, 1764. After serving as assistant surgeon and lecturer at St. Bartholomew's Hospital, of which he was surgeon in 1815-29, he was made professor of anatomy and surgery at the College of Surgeons in 1814. Abernethy first enunciated the principle that local diseases are symptomatic, and that most of them arise from disordered digestive organs. He died at Enfield, April 28, 1831.

ABERRATION (Lat. ab, from. errare, to wander) Aberration is a term used in optics to denote certain imperfections in the focussing action of spherical mirrors and of lenses. Spherical aberration is due to the excessive reflective or refractive effect occurring at the edges of the curved surface and results in a blurred image. Chromatic aberration arises from the dispersing action of a lens on the components of white light. The foci for the different dispersed rays are not the same, the result being an image with indistinct and coloured edges. (See Light.)

In astronomy aberration is the displacement of a star, arising from the progressive motion of light combined with the orbital movement of the earth. See Astronomy

ABERSYCHAN. Urban district of Monmouthshire, England. It is 10 m. N.N.W. of Newport on the G.W. and L.M.S. Rlys., and has a large industrial population engaged in the neighbouring coal mines and tinplate and iron works. Market day, Sat. Pop. 24,656.

ABERTILLERY. Urban district of town of Monmouthshire, England. It is 16 m. N.W. of Newport, on the G.W.R. It owes its growth to the development of the adjacent coal mines and has iron and tinplate works. It gives its name to a division which returns one member to Parliament. Market day Sat. Pop. 38,805

Aberystwyth. National Library of Wales, of which King George I. laid the foundation stone in 1910

ABERYSTWTH. Mun. borough, market town, seaport and watering place of Cardiganshire, Wales. It stands at the junction of the rivers Ystwith and Rheidol, on Cardigan Bay, 249 m. W.N.W. from London, on the G.W. Rly. Among a number of public buildings are the University College, attached to the University of Wales, and the National Library of Wales, founded in 1907. The college, opened in 1891, contains a library and a museum. The

Abergeldie Castle. Scottish royal residence near Balmoral, used by King George V when Prince of Wales

century castle is said to have been built by Gilbert Strongbow, and was used by Charles I as a mint. It was dismantled in 1647, and only a few ruins remain. The town lives mainly on the revenue obtained from its visitors, who are attracted by its fine beach, boating and fishing facilities, and the surroundings. It was one of the Cardigan parliamentary boroughs till 1885. Market day. Mon. Pop. 11,220.

ABEYANCE (Fr. à and bayer, to gape at, hanker after). Legal term used when there is uncertainty as to whom rights and titles belong. Typical cases are claims to peerages, the ownership of manorial rights, and the right of presentation to livings. Rights of action are in abeyance until the action is begun or abandoned. In some cases there is a statutory limitation as to the period within which the action must be brought. The word is most commonly used in connexion with peerages.

ABGAR. Name or official title of 28 rulers, of Edessa, in Mesopotamia, 136 B.C.-A.D. 217. Discredited tradition states that Abgar XIV sent a letter to Jesus Christ asking Him to visit him and heal a disease from which he was suffering. This letter, with the reply of Christ, is quoted by Eusebius of Caesarea, who states that Christ promised to send a disciple to Edessa after His ascension.

ABHORRERS. Name given to persons who, in 1679-80, abhorred the agitation for persuading Charles II to call a Parliament. This, it was thought, would pass the bill excluding James, duke of York, afterwards James II, from the throne. Those who devised the Parliament for that purpose were called petitioners; their leader was the earl of Shaftesbury, and their protégé the duke of Monmouth. The name originated at the time when public opinion was excited against James and the Roman Catholics.

ABIATHAR. Jewish high priest. Son of Ahimelech, who was killed by order of Saul for assisting David, he escaped his father's fate (1 Sam. 22) and became a firm friend to David. In Solomon's time he followed Adonijah in revolting, and was deprived of his office (1 Kings 1 and 2).

ABIGAIL. Wife of Nabal, a rich boor who refused food to David when he was in the wilderness of Paran. She persuaded David not to punish her husband, and so gained his affection that he married her after the death of Nabal (1 Sam. 25). Abigail as a name for a waiting maid is derived from Abigail's description of herself as David's handmaid. Another Abigail was David's sister and mother of Amasa (2 Sam. 17 and 1 Chron. 2).

ABIMELECH. Hebrew name meaning My father is the king, and possibly a royal title. It occurs in the O.T. in connexion with the Philistine king of Gerar in the days of Abraham and Sarab and Rebekah and Isaac (Gen. 20, 21, and 26); and with the son of Gideon, or Jerubbaal, by a woman of Shechemite nationality (Judges 8 and 9), who made himself king by murdering all his brothers except Jotham, who escaped.

ABINGDON. Municipal borough and market town of Berkshire. It is on the Thames, 6 m. S. of Oxford by the G.W.R., and has clothing and carpet factories and a large agricultural trade. Its antiquities include the remains of a 7th century abbey and a 17th century town hall. The old bridge over the Thames was rebuilt in 1929. The grammar school was founded in 1563. Abingdon was a prominent town in the 8th century. A parl. borough down to 1885, it now gives its name to a county division which returns one member to Parliament. Pop. 7,167.

Derived from the town is the title borne since 1682 by the family of Bertie, and before that by the family of Norris. The earl's seat is Wytham Abbey, near Oxford, and his eldest son is known as Lord Norreys.

ABINGER, JAMES SCARLETT, 1ST BARON (1769-1844). British judge. Born in Jamaica, he was educated at Trinity College, Cambridge. Scarlett was M.P., first as a Whig and then as a Tory, 1819-35, and at one time attorney general.

Lord Abinger
Sir M. A. Stoe, P.R.A.

From 1834 until his death, April 7, 1844, he was chief baron of the Exchequer. In 1835 he was made a peer, the title being still held by his descendants. Abinger's second son was Sir J. Y. Scarlett (1799-1871), the cavalry leader at Balaclava. The title was taken from a village near Dorking, Surrey.

ABINGTON, FRANCES (1731-1815). English actress. Daughter of a private in the Guards, her maiden name was Frances Barton.

She made her stage debut at the Haymarket as Miranda in Mrs. Centlivre's comedy, The Busybody, Aug. 21, 1755, and in 1759 married her music master, Mr. Abington. After five years in Dublin, she was invited by David Garrick to Drury Lane, where she remained for 18 years, playing the great ladies of comedy, Shakespearean heroines, romps, and even chambermaids, and creating the part of Lady Teazle in the original production of The School for Scandal in 1777. In 1782 she went to Covent Garden, where she was for eight years. She died March 4, 1815.

Mrs. Abington, English actress
Painting by Sir Joshua Reynolds, P.R.A.

ABISHAI. Son of Zeruiah and nephew of King David. A man of remarkable courage, he went with David into the camp of Saul (1 Sam. 26), whom he wished to kill, and fought against Edom in the Valley of Salt (1 Chron. 18). One of the three who risked their lives by entering the Philistine lines to get water for David from the well at Bethlehem (2 Sam. 23), he also saved the king's life by killing the Philistine giant, Ishbi-benob (2 Sam. 21).

ABITIBI. River and lake in Ontario, Canada. The lake is 60 m. long and contains numerous islands. The river issues from its W. end, and is a tributary of the Moose. Its length is about 200 m. Gold has been discovered in the Abitibi region, but not in any great quantity.

ABKHASIA. Tiny republic in the Caucasus. It is part of the larger Soviet republic of Georgia, its capital being Sukhum. See Georgia.

ABLUTION (Lat. abluere, to wash away). Liturgical term for ceremonial washing in religious services, usually as a symbol of the purification of the soul. The law of Moses gives directions for these washings. The term is applied to the cleansing of the vessels after Holy Communion.

ABNER. Captain of King Saul's army. After the death of Saul, he supported Ishbosheth and then joined David. He was treacherously killed by Joab, and David wrote an elegy on him (1 Sam. 14; 2 Sam. 2 and 3). Abner is a character in Racine's *Athalie*.

ABNEY PARK. District in N. London. It is in the metropolitan borough of Stoke Newington, and has a large cemetery, dedicated May, 1840, and notable for its ancient trees and arboretum. The district is named after Sir Thomas Abney, who occupied a house in which Isaac Watts lived for 36 years.

Abo, BOE or IBO. Town of Nigeria. It stands at the head of the Niger delta, and its chief trade is in palm oil. Pop. 7,500.

ÅBO. Seaport of Finland and the former capital of the country. It is on the river Aurajoki, near its mouth on the Baltic Sea, and is 168 m. by rly. from Helsingfors. It exports timber, hides, fruit, and eggs, and has shipbuilding yards, is the seat of an archbishop, has a fine cathedral, and its old castle contains a museum. The university formerly at Åbo was removed to Helsingfors after a fire in 1827. A new university (Swedish) was opened in 1919, and a Finnish one in 1922. Peace was concluded at Åbo between Russia and Sweden in 1743. Pop. 62,599.

ABOMA. Small fiver of British Gold Coast Colony, about 65 m. W. of Accra. In Feb., 1919, diamonds were discovered in the shallow quartz gravels of this stream.

ABOMEY or **ABOMEXY**. Capital of the former kingdom of Dahomey, West Africa, now one of the chief centres in the French colony of that name. Situated 63 m. N. of Whydah, it trades in palm oil, ivory, and gold. Pop. 11,000.

ABORIGINES (Lat. ab origine, from the beginning). Name applied by classical writers to primitive tribes in Italy. The term is now

Aborigines. Two kings and a queen, natives of Southern Queensland, Australia, where there is a chief protector of aborigines

generally used for the peoples found in distant lands by their first European discoverers. The preferable form in the singular is aboriginal; this, with its plural, is increasingly used in Australia, the word native being applied to Australian-born whites.

After the Act for the abolition of slavery throughout the British colonies was passed in 1833, reports upon the condition of the aborigines were presented to Parliament in 1834 and 1837. An Aborigines Protection Society was founded in 1837, and a British and Foreign Anti-Slavery Society in 1839. Amalgamated as the Anti-Slavery and Aborigines Protection Society in 1909, it aims at protecting and advancing the interests of enslaved and oppressed native races. The protection of aborigines is also a matter of administrative concern throughout the British Empire. Consult *Peoples of All Nations*; 7 vols., 1922-23.

ABORTION (Lat. *ab.*, from: *oriri*, to arise). Term used in two different senses. To physicians it means expulsion of the contents of the uterus or womb during the first three months of pregnancy. In law, however, abortion means the artificial expulsion of the uterine contents at any period of pregnancy. Abortion, in the medical sense, is very common, having been estimated at as much as one-sixth of all deliveries. The most frequent causes are disease or malformation of the mother or infant, acute illness, accident, poisoning, or some violent emotion. In law the essence of the offence is the intention to procure abortion, and it is an offence to supply any instrument or drug for the purpose, even though the woman does not use it and is not even pregnant. If a woman dies as the result of criminal abortion, the person responsible may be held guilty of murder.

ABOUKIR. Name in the British Navy, first given to the French 74-gun ship *Aquilon*, taken at the Battle of the Nile, in 1798.

H.M.S. Aboukir, sunk by German submarine U9, September 22, 1914

under the command of Capt. J. E. Drummond, and in company with the *Hogue* and *Cressy*, she was torpedoed by the German submarine U9, and sunk, with a loss of 25 officers and 502 men. The *Hogue* and *Cressy* were also sunk, the loss being 62 officers and 1,397 men.

ABOUT, EDMOND FRANÇOIS VALENTIN (1828-85). French writer. Born at Dieuze, Meurthe, Feb. 14, 1828, the novels from his pen are *Tolla*, 1854; *The King of the Mountains*, 1856; *Germaine*, 1857; *Madelon*, 1863; and *The Romance of an Honest Man*, 1880. Elected a member of the Academy in 1884, he died Jan. 17, 1885, before installation. Pron. *Abou*.

ABOYNE, OR CHARLESTON OF ABOYNE. Village, Aboyne and Glentanner, of Aberdeenshire, Scotland. On the Dee, it is 10 m. E. of Ballater, on the L.N.E. Rly. Near is Aboyne Castle, the seat of the marquess of Huntly.

ABRACADABRA. Magical word or formula derived from Gnostic worship. The first known reference to it is in a work by Serenus Sammonicus, a follower of Basilides of Alexandria, in the 2nd century. It was supposed to conceal the name of God. Usually written on parchment in the form of an inverted cone, and folded in the shape of a cross, it was worn round the neck as a talisman against sickness or danger. See *Abraxas*.

ABRAHAM, PLAINS OF. Heights, close to the city of Quebec, Canada, and on the N. bank of the St. Lawrence river, where Wolfe defeated the French under Montcalm, Sept. 13, 1759. They were named after a pilot called Maitre Abraham The Plains, on which stands a monument to Wolfe and Montcalm, were dedi-

Plains of Abraham, near Quebec, Canada, showing the monument erected to Wolfe and Montcalm

cated to the public as a park and playground in 1908. See *Quebec*.

ABRAHAM OR **ABRAM**. Founder of the Jewish or Hebrew nation. The story of his life, as given in Gen. 11-25, has been the subject of much critical inquiry. Son of Terah, descendant of Shem, and a native of Ur of the Chaldees, his period is conjecturally about 2300 B.C. With his father, his wife Sarai and his nephew Lot, Abraham moved from Ur to Haran, near Edessa. Here Terah died, and thence, under divine guidance, Abraham migrated to Canaan. At Shechem, where it was revealed to him that his seed should possess the land, he raised his first altar.

He was driven by famine to Egypt, but returning to Canaan, he gave Lot choice of the Jordan valley for his flocks, and pitched his tent by the oak of Manure, near Hebron. Despairing of an heir, Abraham followed the native custom by taking Sarai's Egyptian handmaid, Hagar, as his second wife, and thus became father of Ishmael. Then came the visit of the three heavenly messengers, with the promise of a son to Sarai, and news of the pending destruction of Sodom and Gomorrah, for the people of which Abraham pleaded with Jehovah. Lot and his family were spared, though Lot's wife, for disobedience, was turned into a pillar of salt.

In due time Sarai bore a son, Isaac; circumcision was instituted, and Abraham's faith was severely tested by the divine command to offer up Isaac as a sacrifice. Sarai was buried in the cave of Machpelah. Abraham then married Keturah, by whom he had six sons; and after arranging the marriage of Isaac and Rebekah, the patriarch passed away.

The figurative expression Abraham's bosom is used both by Christians and Jews to signify the abode of the faithful departed.

ABRAHAM, WILLIAM (1842-1922). British labour leader. After some education at Carnarvon, he entered the coal mines, his father being a miner, and in 1873 was chosen by his fellows as one of their agents. Elected in 1886 M.P. for the Rhondda division of Glamorganshire, he retained his seat until his death. In 1911 he was made a privy councillor. His gifts as a singer won the title *Mabon* (bard). He died May 14, 1922.

W. Abraham ("Mabon")
Elliott & Fry

ABRAHAM MEN. Slang term used in England in the 16th-18th centuries for a class of able-bodied beggars. One of the wards in Bethlem Hospital, London, was for lunatic beggars, and was named after Abraham. These lunatics wore a special badge and were allowed to go about begging. Tom o' Bedlam or Abraham Man was the name given to a beggar of this type, and the country became infested with their imitators, known as sham Abrahams or Abram coes.

ABRANTES. Town of Portugal, in the district of Santarem. It is on the right bank of the Tagus, 88 m. by rly N.E. of Lisbon, and is picturesquely placed on a hill. Its castle is mentioned by Camoens. It has a trade in oil, fruit, wine, and cereals. Founded by the Iberians about 300 B.C., it was colonised by the Romans. Pop. 8,000.

ABRASIVE. Securing and polishing material used in a variety of manufacturing processes. High-grade abrasives are natural minerals, such as emery or corundum, or artificial products of alumina or silicon-carbide, such as carborundum. Low-grade abrasives are crushed quartz for sandpaper, etc.; quartz sand for plate glass making and for etching glass and stone; feldspar and quartz for polishing powders, etc.; pumice powder, diatomaceous earth or tripoli for scouring materials; flint pebbles for use in grinding pigments, etc.; and, finally, grindstones, whetstones, hones, etc. See *Bathbrick*; *Emery*.

ABRAXAS. A mystic word engraved on gems anciently worn, sometimes in rings, as amulets. Analogous to *abracadabra*, the word *abraxas* dates apparently from the time of the Gnostic Basilides, and the Greek letters composing it, used as numerical characters, represent the number 365, held by the Gnostics to symbolise the spiritual manifestations of the Supreme Deity, the number of worlds forming the universe, or the number of days in the solar year. The word is said to be derived from the Coptic for Holy Name or the Hebrew *Ha-Brachiah*, blessing. The *abraxas* moth is more usually known as the magpie moth (*q.v.*).

ABRUZZI, LUIGI AMADEO, DUKE OF THE (b. 1873). Italian traveller, explorer, and man of science. The third son of Amadeo, duke of Aosta and king of Spain, 1870-3, he was born in Madrid, Jan. 29, 1873. He ascended Mt. St. Elias, Alaska, July 31, 1897, being the first to do so. He organized an Arctic expedition, 1899-1900, and from his ship, the *Stella Polare*, sent out sledging parties, one of which attained lat. 86° 33' N., the then highest recorded. He was commander of the Italian navy in 1915-17.

Abruzzi e Molise is the name of a department of Italy comprising the provs. of Aquila, Teramo, Chieti and Campobasso and having an area of 6,387 sq. m. Pop. 1,480,750.

ABSALOM. Third and favourite son of King David. As described in 2 Sam. 13-18, he was renowned for personal beauty and reckless ambition. Absalom's sister Tamar having been wronged by her half-brother Amnon, Absalom compassed Amnon's death. Exiled by David, he rewarded his father's forgiveness by raising a revolt, in which he was joined by Ahithophel, Bathsheba's grandfather. David fled beyond the Jordan, and Absalom entered Jerusalem. His army, however, was routed in the wood of Ephraim. Fleeing on a mule, Absalom was caught by the head in the boughs of a great oak, and there killed by Joab, against David's express orders.

ABSCESS (Lat. *ab.*, from: *cedere*, to go away). Collection of pus or matter bounded by tissue called the abscess wall. An acute or inflammatory abscess is due to septic infection by bacteria, and should usually be treated by hot fomentations in the earlier stages and incision in the later. A chronic or cold abscess is nearly always a manifestation

of tuberculosis. and may be an indication of deep-seated disease. Surgical treatment is sometimes helpful in this condition, but frequently it calls for a healthy, outdoor life.

ABSINTHE (Gr. *apsinthion*, wormwood). Highly alcoholised, deleterious liqueur. It owes its distinctive properties, flavour, and colour to wormwood, star-anise, angelica, hyssop, mint, sweet-flag and other aromatics. The effects of absinthe drinking, due to the

Abu-Simbel. Entrance to the great temple, showing the four colossi hewn from the cliff

wormwood, are speedy intoxication, hallucinations, and delirium, leading to paralysis or idiocy. Absinthe, which contains from 50-80 p.c. of alcohol, is consumed chiefly in France, in the form of fruit liqueurs.

ABSOLUTION (Lat. *ab*, from; *solutus*, free). Theological term for the forgiveness of sins, after public or private confession, pronounced by priest to penitent in the name of God. Absolution was recognized by the Jews (2 Sam 12). The forms used in Christendom vary with the doctrine, but are based on interpretations of Matt. 16 and 18, John 20, Acts 2, 2 Cor. 2 and 5, and James 5.

ABSTINENCE, DAYS OF. Days appointed in the churches to be observed by abstinence from flesh food. In the Anglican church the words fasting and abstinence are used indifferently, and fasting or abstinence is enjoined during the forty days of Lent, all Fridays, and certain other days. In the R. C. church a distinction is observed between fasting and abstinence, and the days of abstinence vary in different countries. See Fasting.

ABU-BEKR (573-634). Name, meaning father of the virgin, borne by the first caliph or successor of Mahomet. It was substituted for his original name of Ahd-el-Kaha after the marriage of his daughter Ayesha to the Prophet. Born at Mecca, he was a wealthy merchant of the Koreish tribe. He was Mahomet's sole companion during the flight from Mecca to Medina, and was designated his successor by the Prophet himself. See Caliphate.

ABUKIR or **ABU-QIR.** Village in Egypt, on Ahukir Bay, 14 m. by rly. N.E. of Alexandria. Near here, Nelson at the Battle of the Nile defeated the French fleet, Aug. 1, 1798, Napoleon overcame the Turkish army, July 25, 1799, and Abercromby defeated the French, March 21, 1801. In the neighbourhood are extensive Egyptian and Roman remains, including the ruins of Canopus. The old Canopic mouth of the Nile emptied itself into the bay. See Nile.

ABU KLEA. Name of some wells in the Sudan, on the route from Korti to Metemneh, where the British repulsed the dervishes in 1885. The expedition led by Lord Wolseley was proceeding along the Nile to the relief of Gordon. To save time by avoiding the loop made by the Nile above Dongola, a camel corps under Sir Herbert Stewart was sent across the

Abu-Simbel. Façade of the smaller of the rock temples built by Rameses II and dedicated to his consort and to the goddess Hathor

desert. On Jan. 17 this was attacked at Abu Klea, and on the 19th at Abu Kru, where Stewart was mortally wounded. The little force was too late to save Gordon.

ABU-SIMBEL, or **IPSAMBU.** Locality in Egypt, on the left bank of the Nile, 40 m. N. of Wady Halfa. It is celebrated for its remarkable rock temples of Rameses II. The great temple of Ra, 180 ft. deep, has a cliff-hewn façade with four enthroned colossi, 65 ft. high, the largest sculptured figures in Egypt. The smaller temple of Hathor has four standing colossi, 33 ft. The larger colossi represent Rameses II; with the smaller are two figures of his queen Nefrêre.

ABU TELLUL. Scene of a British victory over the Turks. On July 14, 1918, the Turks undertook an offensive on both sides of the Jordan, N. and E. of Jericho, against the British under General Allenby. W. of the river, in the vicinity of the Wady Auja, at 3.30 a.m. they suddenly attacked Abu Tellul, and captured it, but within two hours were driven out, with heavy losses, by the Australian Light Horse. The second phase of the Turkish offensive was also repulsed.

ABUTIG, ABUTIJ OR ABUTIZH (anc. Abutis). Coptic town in Upper Egypt. It is situated on the Nile, 15 m. S.E. of Assiut. In the neighbourhood are rock tombs and other remains. Pop. 10,500

Abutilon. Shrub of the Mallow family

ABUTILON. Favourite garden and greenhouse shrubs of the mallow family (*Malvaceae*), chiefly natives of South America and the West Indies. The flowers agree in the main with those of hibiscus. The forms mostly grown are garden hybrids between the natural species, and are

Abyssinia. Bobbed-haired women of the Galla tribe
Kurt Lubinski

preferred because they flower more freely. They are propagated by means of seeds sown in spring in a mixture of loam and peat. They grow freely in the open in summer, especially in southern counties.

ABYDOS. Ancient city of Asia Minor. It stood on the narrowest part of the Hellespont, opposite Sestos, and is associated with Byron's poem *The Bride of Abydos*. It was here, opposite Sestos, that Leander swam the Hellespont to visit Hero; and Xerxes threw bridges of boats across to transport his army to Europe during the expedition against Greece, 480 B.C.

ABYDOS. Ancient city of Upper Egypt, near the left bank of the Nile, 350 m. S. of Cairo. The Egyptians called it reliquary hill, because the head of Osiris was traditionally interred there. The necropolis was the burial-place of the Egyptian kings for many centuries, the tombs including that of Menes, the first historical ruler of Egypt. Seti I built the great temple, the Memnoneion of Strabo, containing a list of kings called the Table of Abydos; and Mineptah built a hall for the Osirian mysteries.

ABYSS. (Gr. *a*, not; *byssos*, depth, bottom of the sea). Name given by the Jews of the Christian era to a large underground pit, the dwelling place of the dead and evil and revolted spirits. Here also punishment was meted out to sinners.

ABYSSINIA. The country of Ahysinia, the official name of which is Ethiopia, is an independent empire in N.E. Africa, having an area of about 350,000 sq. m. The population is estimated at about 8,000,000, divided

Abyssinia. Well born couple outside their home
Kurt Lubinski

into four main groups: the Gallas in the S. and S.W., comprising one-half of the population; the Shoans in the central districts, who furnish the ruling class; the Tigrians of the N.; and the Danakilis, or Afars, in the E., these being a Mahomedan people.

Abyssinia. A country in N.E. Africa, extending for 900 m. from W. to E. and about 750 m. from N. to S., with an estimated population of 8,000,000

The rulers of Abyssinia claim descent from Menelek, son of Solomon and the Queen of Sheba. The country had close relations with the Jews and with the Greeks under the Ptolemies, but with the rise of Mahomedan power after the 6th century Abyssinia was cut off from the rest of the world. When Portuguese travellers penetrated into the country at the end of the 15th century, they found it divided into several independent states. In the following 300 years there was a continuous struggle for supremacy between the three kingdoms of Tigré, Amhara and Shoa, Amhara being generally successful.

In 1805 Abyssinia was visited by a British mission under Lord Valentia and Henry Salt, followed by other travellers. In 1868 trouble arose over the action of Theodore III, ruler of Amhara, in imprisoning British officials for supposed slights. An expedition was sent out under Sir Robert Napier, resulting in the defeat of Theodore, who committed suicide. After his death the chief of Tigré was crowned as Johannes II, but was himself killed in battle in 1889 and Menelek II, son of the former ruler of Shoa, became sole emperor.

Menelek was a man of great ability who maintained the independence of his country and kept it from internal disorders. He died in 1913, and his equally able wife, Taitou, in 1918. Menelek was succeeded by Lij Yasu, son of his second daughter, but in 1916 the new ruler was deposed owing to his Turkish sympathies, and Zanditu, the elder daughter of Menelek, was proclaimed empress, with Ras Tafari as regent and heir. Friction between empress and regent was settled in October, 1928, by Ras Tafari being crowned negus or king of Ethiopia. In 1923 Abyssinia joined the League of Nations.

The boundaries and political status of Abyssinia have been settled by conventions with certain European powers, the most important being that of 1896 with Italy, and the agreement of Dec. 13, 1906, whereby Great Britain, France and Italy undertook to respect the integrity of the country.

Abyssinia is essentially a pastoral and agricultural country, although highly mineralised. Cotton, coffee, and sugar are grown, and the forests produce ebony, mahogany, and other hard wood. The minerals are almost unworked, with the exception of gold. The main avenue of trade is the French-Ethiopian railway, which runs from

edge of deserts. Some species furnish valuable drugs, gums, and tanning material.

The acacias of the greenhouse come from Australia, the East Indies, and South America, and vary in height from 5 ft. to 20 ft. The flowers are yellow, white, and red. They flourish in any ordinary mixture of loam and sand in a temperature of from 50° to 65°. The mop-headed, standard, so-called acacia tree of suburban gardens is really robinia, or false acacia, raised from seeds or cuttings in the ordinary way. The Australian wattle is an acacia, and this the Anzao troops planted on the graves in Gallipoli.

ACADEMY (Gr. akademeia). Originally the name of a piece of land N.W. of Athens, so called from its supposed former owner, the hero Academus. It contained a gymnasium and a grove of plane and olive trees. It was a favourite resort of Plato, who lectured there daily on philosophy. Hence his followers were known as Academicians, and his school as the Academy. The name is now used for any artistic, literary, or scientific society and in Scotland and Ireland for a school, e.g. Edinburgh Academy.

In England there is the Royal Academy, which holds an annual exhibition of pictures at Burlington House, London, and the British Academy, founded in 1893, for the promotion of historical, philosophical and philological studies. The various Royal Societies are academies, except in name. Edinburgh has the Royal Scottish Academy, chiefly concerned with art, and Dublin the Royal Irish Academy.

Of academies abroad the most famous are the Académie Française and the Accademia della Crusca, founded in Florence in 1582. The former, with its forty members called the Immortals, was established in 1635 and is the final authority on all matters connected with the French language. With four other academies it forms the Institut de France. In the U.S.A. there is the American Academy of Arts and Sciences. See Burlington House.

ACADIA OR **ACADIE**. Name by which Nova Scotia (q.v.) was officially known by the French before 1713. It was given by the early French

the port of Jibuti in French Somaliland to Addis Abbaba, the capital. Other important towns are Harar, Gondar, and Goé. In 1928 an arrangement was made by which Italy granted Abyssinia land for a port on the Red Sea.

Consult Unconquered Abyssinia, C. F. Rey, 1923; L'Abyssinie: étude d'actualité (1922-24), L. D'Arcé, 1925; Seven Years in Southern Abyssinia, A. Hodson, 1927; A History of Ethiopia (Nubia and Abyssinia), E. A. Wallis Budge, 1928.

ACACIA (Gr. akis, point) An extensive genus of spiny shrubs and trees of the leguminous order. They are natives of hot countries, and grow in belts on the extreme

Acacia, Australian Wattle in Gallipoli.

settlers, many of whom after the final cession of the province to the English in 1713, migrated to Canada or were exiled in circumstances related in Longfellow's Evangeline.

ACANTHUS (Gr. akanttha, prickly). Genus of herbs with bold, handsome foliage. They are mostly natives of S. Europe, the best known being Acanthus mollis, with soft teeth edging the leaf lobes, and A. spinosus (bear's breech), with stiff prickles. Both species are frequently cultivated as foliage plants. Acanthus spinosus is said to have furnished the Greeks with the idea for the capital of the Corinthian column, an idea elaborated more on the lines of Acanthus mollis in Roman art.

Acanthus leaf (above) which probably suggested Corinthian capital (below)

Acarus. Minute parasitic animal. See Mite.

ACCELERATION (Lat. accelerare, to hasten). Word used in its most general sense to indicate any change in velocity. Commonly, however, acceleration is employed to denote a change in speed only. It may be uniform, in which case equal changes of speed occur in equal times, or it may be variable. If the speed is increasing, then the acceleration is positive; if decreasing, negative. Uniform acceleration is measured by the change in speed taking place in a given time when divided by that time. Variable acceleration is measured by dividing the change in velocity occurring in an interval so small that the acceleration does not appreciably change in it by the time.

ACCENT. Mark used to indicate stress in pronunciation. Those now most commonly used, e.g. in French, are the old classical accents, the grave or heavy ('), the acute or sharp (') and the circumflex, a combination of both (^). In the French the use of the circumflex generally indicates the dropping out of a consonant before another consonant. Certain other marks called diacritical serve as guides to pronunciation, e.g. the cedilla (,) placed under c, chiefly in French and Portuguese, when the letter is to be sounded like s, not like k. In Spanish the tilde (~) is placed over n (ñ) to indicate the y-sound heard in poniard.

ACCENTOR (Lat. ad, to; cantor, singer). Name given to a sub-family of small birds, probably related to the thrushes. They occur in Europe, N. Africa, and parts of Asia, and are usually found in thickets and hedges in hilly districts. The group is represented in Great Britain by the hedge sparrow, which is no relation of the house sparrow. Its plumage is dusky brown, with a reddish back and

Accentor or British hedge sparrow

bluish-grey head and neck. The eggs are blue without spots.

ACCEPTILATION (Lat. acceptilatio, reckoning a thing as received). In Roman law, complete legal discharge from all liability. In Scots law it is not necessary that an obligation should be based on valuable consideration, as in English law. In English law, before a contract or obligation is binding there must be consideration, i.e. something to be done or forborne. In Scotland the doctrine of consideration is rejected.

ACCESSORY. Term used in criminal law to denote that while a person may not have taken a principal part in the commission of an offence, yet he has incurred some degree of criminal responsibility. Accessories are of two kinds: accessory before the fact and accessory after the fact. An accessory before the fact is one who, though absent at the time the offence was committed, yet procured, counselled, or abetted another to do it. An accessory after the fact is one who, knowing that an offence has been committed, relieves, receives, comforts, or assists the felon so that he shall escape from justice. See *Accomplice*.

ACCIDENT. Accidents may be divided into general and industrial. The former are largely but not wholly due to vehicular traffic. In 1926 there were in the United Kingdom 120,805 non-fatal street accidents and 4,876 which were fatal, and 374 persons killed and 23,433 injured in railway accidents. In 1928 the number of street accidents had risen to 156,024. The responsibility for preventing these accidents as far as possible rests upon the Board of Trade, which holds inquiries into such accidents, and the police, who have power to regulate street traffic.

Industrial accidents are those that happen in the course of one's occupation. In the United Kingdom in 1923 there were 154,319 accidents in the factories of Great Britain, of which 953 were fatal. The duty of reducing their number rests upon the Home Secretary, who acts through a staff of inspectors, to whom every accident of the kind must be reported. Persons injured in the course of their employment, provided that their own negligence has not contributed to the accident and that their salaries or wages do not exceed £250 a year, are covered by the Workmen's Compensation Acts.

The vast industrial changes brought about by the Great War led to a great increase in the number of accidents to workpeople, and Dr. H. M. Vernon issued in 1918 an important report on them. He concluded that increase in the speed of production was one of their chief causes. Fatigue was less important. According to modern research the psychological factor is one of the most important in the causation of accidents. The movement known as safety first has done something to protect pedestrians and others. See *Safety First: Workmen's Compensation*.

ACCLIMATISATION (F. à, to; climat, climate). Term for the adaptation of people, animals, plants, or trees to a new environment, particularly with reference to climate. Applied to an individual or a race, it has special significance with reference to disease. In the case of an individual it means that a person has acquired the power of absolutely or partially resisting agencies which otherwise would be injurious to his existence. Applied to an entire race, acclimatisation is a form of protective evolution.

In animals and plants acclimatisation depends in general on two factors, food and enemies. Other factors are climatic temperature and habit.

ACCOLADE (Lat. ad, to; collum, neck). Act of conferring knighthood by gently striking on the shoulder with a naked sword. It is performed either by a sovereign prince or by a knight holding authority from such a prince. See *Knighthood*.

ACCOMMODATION. Term in English law, generally applied to a bill of exchange or promissory note which is executed by the parties thereto, so as to enable one or all of them to discount it, and so raise money.

The term is also used in a wider sense, meaning to lend money generally; for instance, the accommodation granted by a banker.

Visual accommodation is the process or power of focussing the eyes to enable objects to be seen at different distances. The adjustment is effected by alterations in the convexity of the crystalline lens behind the pupil, through which rays of light pass to the retina. See *Eye*.

ACCOMPLICE (Lat. ad, to; eum, with; plicare, to weave). One who assists another in the commission of a crime. An accomplice may be an aider and abettor or an accessory. The evidence of accomplices is always admissible against a prisoner, but requires corroboration. The evidence of other accomplices is not corroboration, but the dying declaration of an accomplice is admissible. Such declaration, however, must have been made in the certain expectation of immediate death. See *Accessory*.

ACCORDION (late Lat. accordare, to agree). Portable reed instrument with bellows and a small keyboard. To save weight and space, each key usually sounds two notes with the alternating action of the bellows. A Viennese invention, it dates from 1829.

ACCOUNTANT. The keeping of professional accounts is of ancient origin. Records of the 12th century in Italy are known, but it was not until 1581 that the first association of accountants was founded in Venice. The initial growth of the profession in the United Kingdom is traceable to Scotland, seven accountants being mentioned in the Directory of Edinburgh as practising there in 1773.

To-day the two chief bodies of accountants in Great Britain are the Institute of Chartered Accountants in England and Wales (Moorgate Place, London, E.C.2) and the Society of Incorporated Accountants and Auditors (Victoria Embankment, London, W.C.2). Their examinations are recognized virtually throughout the English-speaking world, although there are separate societies for accountants in Scotland, Ireland, Canada and elsewhere.

The period of articles prescribed by the Institute of Chartered Accountants is five years, but for university graduates the period is reduced to three years. Sitting for examination without service under articles is permitted in the case of accountants' clerks of six years' continuous service.

A professional accountant must be able to conduct an audit of the accounts of financial, commercial, municipal and utility undertakings. He must also be able to act as liquidator, trustee, receiver and arbitrator. Qualified accountants are required to-day in every field of industry, so that the supply is not likely to exceed the demand.

ACCRA or **AKKRA.** Seaport and, since 1876, capital of British Gold Coast Colony, 80 m. E. of Cape Coast. It has rly. communication with Tafo, 65 m. distant. Surveys for additional construction to connect it with Kumasi started in 1914. A municipality, Accra is a signal, telegraph, and wireless station, and has a light-house, banks, Anglican church, and racecourse. It has no harbour and landing is by surf boats. It exports gold dust, palm oil, ivory, rubber, gum, and timber. Pop. 38,049.

ACCRINGTON. Municipal and parl. borough and market town of Lancashire, England. On the river Hindburn, 23 m. N.W. of Manchester by the L.M.S. Rly., it is an important cotton-spinning centre, with bleaching, cotton printing and dye works, and manufacture of chemicals and textile machinery. There are quarries and collieries near. St. James's Church, rebuilt in 1763, dates from 1554; the town hall, market hall, mechanics' institute, and other buildings are modern. First mentioned in Henry II's reign, Accrington was given a charter of incorporation in 1878. It returns one member for Parliament. Market days, Tues., Fri., and Sat. Pop. 43,610.

ACCUMULATION (Lat. ad, to; eumulare, to heap up). Term used in English law. By the *Thellusson Act* (1800) restrictions were placed on the accumulation of the income of property in the hands of trustees. A testator or settlor can direct the accumulation of the income of property only for one of the following periods: (1) the life of the settlor; (2) 21 years after his death; (3) the minority of any person or persons living at the settlor's death; or (4) the minority of any person who, if of full age, would be entitled to the income.

ACCUMULATOR. An accumulator is a device by means of which energy can be stored for future use. Accumulators are of various types, which differ according to the method in which the power to be stored is generated and applied. In engineering, the principal types of accumulator for the storage of energy on a large scale are hydraulic, steam, pneumatic, and electric.

The hydraulic accumulator is used to create an artificial head of water so as to maintain a constant pressure in water used for driving hydraulic machinery. The ordinary weight type of hydraulic accumulator consists of a long vertical cylinder in which a loaded ram works up and down. By varying the weight on the ram the pressure on water pumped into the cylinder may be changed according to requirements.

Accumulator for a country house

The steam accumulator is a modified form of hydraulic accumulator in which steam pressure is substituted for the load upon the ram.

Accumulator for portable ignition

The pneumatic accumulator is similar in action to the steam accumulator, but compressed air is employed in the upper cylinder in lieu of steam.

The electric accumulator is also known as a storage or secondary cell or battery. By its use electrical energy, converted into electrochemical energy, can be stored for a length of time so as to be available for reconversion into electrical currents. See *Battery*.

ACCUSATION. Term used in English law. It is a crime to accuse or threaten to accuse; or to send to any person any letter or writing with intent to extort money or gain, accusing or threatening to accuse either that person or another of a crime, or of any misconduct not amounting to a crime. See *Blackmail*.

ACE (Lat. as, a unit). Term originally used to denote the side of the dice with one pip. Hence the expression, when dicing with two cubes, deuce ace, i.e. deuce turned up with one die and ace with the other. The ace is also the one pip in playing cards; but though in dice always indicating the lowest, in cards the ace is often the highest of each suit. The term denotes one point at Badminton, racquets, tennis, etc.

The term ace was used in the Great War to designate a fighting pilot who had brought down five enemy machines in aerial combat.

ACELDAMA. Name meaning, in Aramaic field or place of blood. The modern Hakeldamm, it is a spot S. of Jerusalem identified with the potter's field of Zech. 11 and Matt. 27, and the *Aceldama* of Acts I, which Judas bought or the chief priests acquired as a burial place for strangers. During the Crusades pilgrims were hurried here.

ACETAL (Lat. acotum, vinegar). Colourless liquid ($C_2H_4O_2$), having a pleasant fresh smell and nutty after-taste. It was discovered among the products of the slow combustion of alcohol over platinum black, and was investigated more fully by Liebig in 1833. Acetal is one of the compounds which develop in and modify the flavour of wines. It is prepared by distilling a mixture of alcohol, manganese dioxide, water, and sulphuric acid.

ACETIC ACID. Acid ($C_2H_4O_2$) which occurs naturally in the juices of many plants, either in the free state or combined with potassium or calcium. Vinegar, the only acid known to the ancients, owes its sour taste to acetic acid, of which it contains from 3 p.c. to 10 p.c. Vinegar is produced mainly by the souring of wine or the fermentation of malt mash, the alcohol in these liquids being oxidised to acetic acid.

The acid is, however, chiefly made by the destructive distillation of wood, the impure acetic acid thus obtained being known as pyroligneous acid. Glacial acetic acid is the strongest acetic acid and has caustic properties.

Acetic ether is obtained by heating acetic acid and ethyl alcohol in the presence of sulphuric acid. It is used in medicine, organic synthesis, flavouring, etc.

ACETONE. Product (C_3H_6O) generally obtained by the distillation of wood or by the dry distillation of acetates. During the Great War it was obtained by several new processes. Acetone is a clear liquid with a peppermint-like and pungent odour. It has special properties as a solvent for resins, fats, celluloid, and gun-cotton, and is very largely used in the manufacture of cordite, synthetic indigo, and aeroplane dope. It is employed in place of alcohol for the manufacture of chloroform, and has the property of absorbing about 24 times its volume of acetylene, in which form it is an excellent illuminating agent.

ACETYLENE. Hydrocarbon gas (C_2H_2) given off by calcium carbide when mixed with water. A pound of calcium carbide yields about five cubic ft. of gas, which has an illuminating value sixteen times greater than an equal volume of coal-gas. The light is very white, and yields a spectrum very similar to that of daylight. The oxy-acetylene flame, obtained by projecting oxygen and acetylene from a mixing jet, is the hottest gas flame known, having a temperature of over $3,500^\circ C$. It is used to a great extent for cutting through plates and bars of iron and steel, and for welding metals of all kinds.

Small acetylene generators, such as those used for some cycle, hand-, and motor-car lamps, are of the simplest description, consisting only of a carbide container into which water drips through an adjustable valve from a water reservoir above. The pressure of the gas tends to check automatically the entry of an excess of water. In more elaborate apparatus for producing gas on a larger scale, movements of the gasometer are made to regulate the admission of water into the carbide chamber or of carbide into a water chamber. Calcium carbide is produced by fusing lime and coke together in an electric furnace. See Gas.

ACHAEA (Gr. Achaia). Name of an ancient division of Greece. It is on the N. coast of Peloponnesus and is bounded N. by the Gulf of Corinth. Mountainous, with a narrow strip of fertile land along the coast, it is the chief currant-growing district of the mainland. Patras is the chief town. Under the Byzantine Empire Achaea was a despotat or principality, and was conquered by the Turks in 1460. There was another Achaea in Thessaly.

In Homer, Achaeans is the general term for all Greeks as opposed to Trojans. In historical times the name was confined to the inhabitants of the Peloponnesian state of Achaea.

The Achaean League was originally a federation of twelve cities which gradually extended throughout Greece up to 146 B.C., when Achaea became a Roman province.

ACHATES. In Roman legend, the friend and faithful follower of the Trojan hero Aeneas. Achates is always distinguished by the epithet *fidus* (faithful), and his name has become proverbial. See Aeneas.

ACHELOUS. Longest river wholly within Greece. Now known as Aspropotamo, or white river, it rises in the Pindus mts., flows S. and divides Actolia from Acarnania before falling into the Ionian Sea. Its length is about 130 m. In Greek mythology, Achelous was a river god, son of Oceanus and Tethys.

ACHERON. In ancient geography the name of several rivers. The best known was in Epirus. It flowed through the Acheronian lake into the Ambracian gulf, and was regarded with awe as in some way connected with the underworld. Another was in Italy. Mythology knew of a river Acheron in Hades, which itself was often called by that name.

ACHEULIAN. Middle period of the lower palaeolithic age in Europe, when the warm Chellian was followed by a colder climate. Human remains are lacking, or of uncertain attribution, but the flint industry developed greatly, the houcher, or hand-axe, becoming finer, even-edged, ovate, and then pointed, and the flakes themselves utilised. First studied at St. Acheul, on the Somme—whence the name—the stations extend from England, across Central Europe to Poland.

ACHI BABA. Hill in Gallipoli. A barren ridge nearly 600 ft. high, it sends out rocky spurs on each side to the sea and so forms a barrier across the W. end of the peninsula. In 1915 it was fortified by the Turks, and the British attempts to take it were incidents in the Gallipoli campaign. See Krithia.

ACHILL or **EAGLE ISLE.** Largest island belonging to the Irish Free State. It lies off the W. coast, and forms part of county Mayo, from which it is separated by the narrow Achill Sound; area 57 sq. m. The surface is mountainous. There are cromlechs, stone circles, and other antiquities. Pop. 5,260.

ACHILLES. Greek hero, according to legend the son of Peleus and Thetis, and third in descent from Zeus. As king of the Myrmidons, he took part in the expedition against Troy, and in the *Iliad* Homer makes him the leading figure on the Greek side. By his mother Achilles was made invulnerable, the most popular version being that she did this by dipping him in the river Styx. In so doing she held him by the heel; consequently this was untouched by the water and hence originated the proverbial phrase about the heel of Achilles.

After Achilles had reached Troy he performed redoubtable deeds against his foes, eventually carrying confusion into the Trojan ranks. The circumstances of Achilles' death are variously described, although not by Homer. In the *Odyssey*, Homer tells how his remains were buried on the shores of the Hellespont.

The Achilles statue in Hyde Park, London, is a restoration, in bronze, of one on the Quirinal Hill, Rome, and was erected in 1822 as a memorial to the first Duke of Wellington.

Achilles, Greek hero
Ancient marble statue,
from Villa Borghese,
now in Louvre, Paris

The Achilles Club was founded in 1920, membership being confined to athletes from Oxford and Cambridge, who engage in contests with public schools, etc. The address is 71, Eccleston Square, London, S.W.

ACHIN, **ATCHEEN** or **KOTARAJAH.** Town of N.W. Sumatra, Dutch East Indies, it is the Dutch Atjeh. On the Achin river, 4 m. by rly. from the port of Olchleh, and the capital of the prov. of Achin, which is about 20,500 sq. m. in area. It lies at the foot of Gold Mountain, 5,660 ft. The Dutch, to whom the prov. with other territory in Sumatra had been ceded by Great Britain in 1824, sent out in 1873 the first of several expeditions to subdue the native risings. Dutch civil government was established in 1880, but hostilities were resumed in 1896 and 1898, and again in 1901-4.

ACHISH. A Philistine king of Gath with whom David twice found refuge when fleeing from Saul (1 Sam. 21 and 27-9). On the first occasion David feigned madness to avoid recognition.

Achor. Valley in Canaan. Here Achan was stoned (Josh. 7) for secreting spoil in his tent after the fall of Jericho.

ACHRAY. Small loch or lake in Perthshire, Scotland, between lochs Katrine and Vennachar. It is mentioned in Scott's poem *The Lady of the Lake*. About $1\frac{1}{2}$ m. long and $\frac{1}{2}$ m. broad, it provides good fishing.

Achromatic Lens (Gr. *achromatos*, colourless). Optical instrument for correcting the chromatic aberration (q.v.) of white light.

Janet Achurch,
British actress
Dorothy

Mrs. Charrington toured the world with this play, interpreting Ibsen for the first time in English in many lands. She died at Ventnor, Sept. 11, 1916.

ACID (Lat. *acidus*, sour). Popularly, an acid is any sour substance, but chemically acids are salts of hydrogen, as belonging to a class of substances which always contain hydrogen. Other general characteristics are that they have a sour taste, possess the property of neutralising alkalis to form well-defined salts and change the colour of blue litmus paper to red. As some salts exhibit acid properties, it is necessary to add that the substances must contain no basic elements or group of elements.

Other elements than hydrogen are present in acids. If the acid contains oxygen, e.g. sulphuric acid (H_2SO_4), the abstraction of water (H_2O) leaves the anhydride or acid oxide. If the acid contains no oxygen, it is indicated by the prefix *hydro*, e.g. hydrochloric acid (HCl), or hydrocyanic acid (HCN). The termination *ic* indicates that the characteristic element or group exercises its highest valency; the termination *ous* means that the second highest valency obtains.

Some acids on treatment with the hydroxide of an alkali metal exchange all their hydrogen for metal, thus producing a normal salt, while other acids produce acid salts in addition, i.e. all the hydrogen is not replaced. The former variety of acid is termed monobasic, and the latter class polybasic.

Inorganic acids or mineral acids are combinations of non-metallic elements with hydrogen only, or with an additional element, generally oxygen. Organic acids are considered as derived from hydrocarbons or their alcohols by the replacement of hydrogen (H), or hydroxyl (HO), by the carboxyl group (CO-OH). Examples of inorganic acids are sulphuric acid, hydrochloric acid, and nitric acid, while well-known organic acids are acetic acid, citric acid, and tartaric acid.

Acidimetry is the name given to the chemical process of measuring the amount or strength of acid in solid or liquid substances.

ACIREALE. Ancient town and epise. see on the E. coast of Sicily. It is 9 m. by rly. N.E. of Catania, at the S.E. base of Mt. Etna and the mouth of the river Acis, from which it takes its name. It has important thermal springs, and is a favourite sea-bathing place. Features are the cave and rocks of Polyphemus and the grotto of Galatea. Pop. 35,587.

ACIS. In classical mythology, a shepherd of Sicily, son of Faunus, beloved by the nymph Galatea. His rival, Polyphemus the Cyclops, crushed him to death with a mass of rock, whereupon the gods changed his blood into a stream of the same name at the foot of Mt. Etna. The story, told by Ovid, is the basis of Handel's oratorio, *Acis and Galatea*.

ACKWORTH. Parish in the W. Riding of Yorkshire, England. It is 3½ m. S. of Pontefract on the L.M.S. and L.N.E. Junction Rly. At a school here, managed by the Society of Friends, John Bright and other prominent Quakers were educated. Pop. 4,831.

ACLAND. Name of an English family long settled in Devon and Somerset, the baronetcy dating from 1645. John Dyke Acland (d. 1778), soldier and politician, was the eldest son of Sir Thomas Acland. He keenly advocated the vigorous prosecution of the war with America, and in 1776 sailed with General Burgoyne's expedition.

Henry Wentworth Dyke Acland (1815-1900) was appointed Lee's Reader in Anatomy at Oxford, 1845, and was Regius Professor of Medicine there, 1858-94. It was largely through him that the study of natural science was introduced and that of medicine revived at Oxford. He was created a baronet in 1890.

Thomas Dyke Acland (1809-98) succeeded his father as 11th baronet in 1871. He became Tory M.P. for West Somerset in 1837, but in 1846 followed Sir Robert Peel, and finally joined the Liberal party, representing North Devon, 1865-85. His second son, Arthur Herbert Dyke Acland (1847-1926), who succeeded to the family baronetcy in 1919, is best known as an educationist. His son, Sir Francis Dyke Acland (b. 1874) entered the House in the Liberal interest and held several ministerial appointments under Asquith.

ACLINIC LINE (Gr. a, not; klinein, to bend). Line along which there is no dip of the magnetic needle. Elsewhere, owing to the magnetic attraction of the earth, freely suspended and horizontally balanced needles dip downwards at one end after having been magnetised. The acclinic line, also called the magnetic equator, makes an irregular curve roughly following the equator. Lines along which the magnetic dip is everywhere the same are called isoclinic lines.

ACNE. Chronic disease of the skin, most frequently caused by obstruction of the ducts of the sebaceous or oil glands. Several forms are recognized, the commonest being acne vulgaris, which appears most frequently on the face, back of the neck, back, and chest. The first sign is an eruption of small red pimples, which may suppurate, and often in the centres of these a small black point, a blackhead or comedo, the obstructed termination of the duct, may be seen. Treatment is

by local applications and building up the constitution by healthy living.

ACOLYTE (Gr. akolouthos, attendant). Name given in the Roman Catholic Church to a young cleric of the fourth minor order ranking next to a subdeacon. His office, first mentioned at Rome in the 3rd century, was that of a candle bearer. The name is also given in the Anglican church to one who performs similar duties.

ACOMA. Indian village in New Mexico, U.S.A. It is 80 m. W.S.W. of Albuquerque, and is supposed to be the oldest continuously inhabited place in the States. It stands on a sandstone rock or mesa, at an alt. of 250 ft. above the floor of the cañon, which is here 6,040 ft. above sea level, and is approached by a winding stairway. Around it is an Indian reservation of nearly 100,000 acres. Pop. 830.

ACONCAGUA. Highest mt. in S. America, some 90 m. E. by N. of Valparaiso. An extinct volcano, it is in the Andes on the borders of Chile and Argentina, the summit, 23,097 ft., being in the latter country. It was first ascended in 1897 by Zurbriggen. A river of the same name rises on its S. slopes and flows for 200 m. to the Pacific.

It gives its name also to a province of Chile, 5,406 sq. m. in area, and extending from the

Aconcagua, the highest peak of the Andes. It gives its name to one of the provinces of Chile

Andes to the Pacific. The capital is San Felipe, and the population about 132,000. See Andes.

ACONCIO, GIACOMO (1492-1566). Italian philosopher, theologian, jurist, and engineer. Having left the Church of Rome, he was banished and took refuge in England. He became a favourite of Queen Elizabeth, to whom he dedicated his *Stratagems of Satan*, which, written in a tolerant spirit, made him many enemies.

ACONITE. Genus of Ranunculaceae, one of which is Monkshood, its active principle is one of the most deadly poisons known. Treatment in cases of poisoning, while awaiting the doctor, is to give an emetic, keep the patient lying down, apply warmth to the limbs, and start artificial respiration if the breathing is failing. See Monkshood.

ACORN. The fruit of the oak-tree (quercus). Botanically it is a nut, standing in a cup which is composed of a number of consolidated bracts.

Acorn Barnacle. Popular name for a genus of Crustacea. See Barnacle.

ACOUSIMETER (Gr. akouein, to hear; metron, measure). Instrument for gauging

Acorns and oak leaf

the acuteness of the sense of hearing. It consists of a steel bar which is beaten with a hammer and it was invented by the French aurist, Jean Gaspard Itard (1775-1838).

ACOUSTICS (Gr. akouein, to hear). Name sometimes given to the theoretical treatment of the manifestation of sound, but more correctly the investigation of the conditions in which sounds are heard in everyday life, more especially sounds heard in confined places.

Buildings used for public speaking, churches, balls, theatres, etc., vary much in their acoustic properties. The indistinctness of sound in such places is always to be referred to the reflections of the sound waves, which, impinging on the walls or roof, are reflected back and conflict with the waves proceeding from the original source of sound. Many devices have been used to neutralise these effects.

Very few actual data, however, have been arrived at to show what is the best shape of interior and what the best proportionate dimensions in order to ensure good acoustic qualities. It has been proved that the wires stretched across balls or theatres effect little or nothing, and that in some cases it is impossible to alter the echoes or interferences with sound by any sound-reflecting devices. In general, the reflections or echoes can be rendered less noticeable by the abolition of large smooth surfaces and by the substitution of broken surfaces which do not reflect the sound in simultaneous volume. See Sound.

ACQUAVIVA, CLAUDIUS (1543-1615). Fifth general of the Jesuits. Born at Naples of a noble family, he joined the Society of Jesus in 1567, and was elected general in 1581. As an organizer and educator he proved the ablest general the order has ever had. His scheme for regulating Jesuit education is still authoritative within the society. He died at Rome Jan. 31, 1615.

ACQUITTAL (Lat. ad, to; quietare, to quiet). Legal term, meaning the discharge of an accused person by order of the court after he has been properly indicted. It is a bar to any further prosecution for the same matter.

ACRE (Gr. agros, field). British imperial land measure containing 4,840 sq. yds. It is divided into four roods. Local acres, generally smaller in size than the statute acre, still survive in Scotland, Ireland, and parts of England. The word, variants of which are found in most European languages, is occasionally used to denote open ground generally or a particular piece, e.g. the familiar God's acre. See Weights and Measures.

ACRE, ST. JEAN D', OR AKKA. Seaport and town of Palestine. On a promontory at the base of Mt. Carmel, 80 m. N.N.W. of Jerusalem, it is connected by rly. with Haifa and Damascus. The harbour is partly sanded up, and shipping goes mostly to Haifa. It trades in cereals, oil, etc. Apart from the ruined Crusaders' walls, few old buildings remain.

Of remote antiquity, the Acre of the O.T. (Judges 1), and the Ptolemais of the N.T. (Acts 21), Acre, known as the Key of Palestine, was captured by the Arabs in 638. After passing to the Crusaders it was again lost by the Christians in 1291. The Turks took it in 1517, and it fell into decay. After its revival, a French trading community settled here, and Napoleon besieged it in 1799, but was defeated by the Turks aided by Sir Sidney Smith's sailors. In 1832 Ibrahim Pasha captured and held it till 1840, when it was taken by the British, Austrian, and Turkish fleets. It was restored to Turkey the next year. During the Great War Acre was occupied by British cavalry Sept. 23, 1918. Pop. 6,420.

ACRIDINE (Lat. acer, sharp). Basic substance (C₁₂H₈N) contained in crude anthracene. From this it can be extracted as

Acropolis of Athens. Below, the ruins seen from the south-west. The Parthenon dominates the hill, while beyond it to the left is the Erechtheum, and, still farther to the left, the Propylaea. To the right rises Mount Lycabettus. Above is a restoration of the Acropolis seen from the west.

acridine chromate by adding sulphuric acid and potassium bichromate. On treating the acridine chromate with ammonia the base is obtained. The most characteristic property of acridine is that it causes sneezing when its dust or vapour is inhaled. It is the active ingredient in electric snuff. Acridine derivatives are employed as dye-stuffs.

ACRISIUS. In Greek mythology, king of Argos and father of Danaë. To prevent the fulfilment of an oracle which declared he should be slain by his grandson, Acrisius shut up Danaë in a tower. There, however, she was visited by Zeus in the form of a shower of gold, and had a son Perseus, by whom Acrisius was accidentally killed some time later.

ACROBAT (Gr. akrobatos, walking on tip-toe). General term for a professional performer on the trapeze, a tight-rope walker, or a tumbler. In medieval times such performers, male and female, were called in England tumblers, and their feats are illustrated in several 13th and 14th century MSS. A troop of acrobats has always been one of the stock turns of a travelling circus, and daring trapeze performances are to be seen at the chief music halls. Charles Blondin in 1859 walked several times across a tight rope over Niagara Falls, once with a man on his back.

ACROCERAUNIA (Gr. akros, highest; keraunos, thunderbolt). Promontory of Albania, now called Cape Glossa or Cape Linguetta. It had an evil repute in classical times, especially among sailors, and Horace refers to its ill-famed rocks. Shelley mentions it in his poem *Arethusa*, as does Tennyson in his poem, *To E. L. on his Travels in Greece*.

ACROGENS (Gr. akron, top; gen-, to be born). Plants that grow by additions to the summit only. The term was formerly used to denote the ferns, mosses, and horsetails.

ACROGRAPHY. Process of making printing blocks. It was invented by an American, N. S. Amstutz. A gelatine relief is made from a photographic negative and mounted on a cylinder. A sheet of celluloid is secured round it and the cylinder rotated against a V-shaped cutting tool, which produces sharp furrows on the celluloid, corresponding with the variations in the gelatine relief.

The cylinder is shifted through a minute distance after each revolution, the two movements taking place automatically and exposing the whole surface to the cutting tool. See *Printing*.

ACROLITH

(Gr. akron, top; lithos, stone). Ancient Greek statue, of which the trunk was of wood and the head, arms and feet of stone. The draperies were often covered with gilding.

ACROMEGALY (Gr. akron, top; megas, large). Rare disease, the most prominent symptom of which is enlargement of the bones, particularly those of the hands and feet.

Actaeon changing into a stag and attacked by his dogs

Antique in British Museum

ACROPOLIS (Gr. akros, topmost; polis, city). Greek hill stronghold. Applied originally to a site on the top of a rocky hill, the word came to mean the citadel itself, and is specially applied to the Acropolis of Athens. This is a long mass of rock 500 ft. above sea level, at its highest point, and precipitous except on its western side. The approach, called the Propylaea, is a wall of Pentelic marble, with five gateways.

During the Persian war its buildings were destroyed and rebuilt by Cimon, and in the age of Pericles it was adorned with splendid specimens of Athenian architecture: the Parthenon, or temple of the maiden goddess Athena, from which the Elgin Marbles, now in the British Museum, were brought to England by Lord Elgin in 1812; the Erechtheum, sacred to Poseidon, god of the sea, and to Erechtheus, a mythical king of Athens; the temple of Nike Apteros or Wingless Victory; the Odeum, a hall for musical entertainments, built by Pericles; the theatre of Dionysus; and a temple of Asclepius (Aesculapius). The statues included the colossal Athena Promachos in bronze; the ivory and gold statue of Athena by Pheidias in the Parthenon, and six statues of maidens known as the Caryatides in the Erechtheum. See *Athens*.

ACROSTIC (Gr. akron, end; stichos, row). Series of lines of which the first words are chosen because their initial letters, read downwards, compose a word or sentence. In the double acrostic ingenuity is carried to the further point of making the terminal letters of each line perform a similar, complementary function. Acrostics once engaged the serious attention of poets and poetasters.

ACT. In drama, that portion of a play which is performed continuously, and is followed by a brief period of rest, or *entr'acte*, intended to denote the passage of time. This division, even that into five acts, dates back to Roman times. On the other hand, the ancient Greek drama was not thus divided, breaks in the action being filled in by choric passages. Modern dramatists have largely broken with the five-act tradition, and their plays are frequently divided into but three or four acts, indicating three more or less definite stages in the story unfolded—exposition, development, and climax. An act may consist of one or several scenes. See *Drama*.

ACTAEON. In Greek mythology, a famous huntsman, pupil of the centaur Chiron. Having watched the virgin goddess Artemis (Diana) bathing, he was changed by her into a stag, in which form he was torn to pieces by his fifty dogs on Mt. Cithaeron. The dogs are supposed to represent the dog days which destroy vegetation.

ACTA SANCTORUM (Lat. Acts of the Saints). Collection of histories and legends of saints and martyrs projected by Heribert Rosweide (d. 1629), and begun at Antwerp in 1643, by Jan van Bolland, a Jesuit. See *Bollandists*.

ACTING. The origins of the art of acting, like those of drama, are probably to be traced in ritual, associated as that must usually have been with dancing. To this, which from a religious gradually became a communal affair, first pantomime, then recitation or dialogue would be added. Masks were worn by primitive tribes, and masks long kept their place in connexion with the art; early players sometimes copied the appearance and movements of animals—so perhaps arose comic acting—and only by degrees would speech replace mere incantations of magic.

In the Middle Ages, really a new civilization, acting starts again much as in Greece or the East. The first medieval actor was the priest who dramatised his Church's service; and in the miracle plays, until they were given in the

streets, the clergy must have monopolised the acting.

Clowning folk-comedy passages figured in most miracle plays, and from quite early days seem to have been left to professionals. As the mysteries passed into the hands of artisans, and from theirs into those of strolling players, the clergy's attitude changed, with the result that before the end of the 16th century interdicts vetoed performances of ecclesiastical plays on the grounds of the ignorance and incompetence of the actors.

The French farce players provided something more professional, but their methods were coarse and their technique was trivial alongside the work of exponents of the famous Italian comedy of art.

On the English stage talent soon revealed itself with the opportunities afforded by Shakespeare. The Elizabethan stage, whatever its structure, was essentially a platform stage, and the appeal of the theatre was, and continued to be, rhetorical and perhaps statuesque rather than, as to-day, pictorial.

Boys played heroines' parts until the Restoration, when to the re-opened theatres came the actress, scoring at first chiefly as comedienne. Her influence would seem to have bettered the technique of comedy acting, for Molière bears witness to the care taken about accentuation, character painting, and ensemble. Betterton, in England, seems to have had a stiffer style, and it was left to Garrick to restore naturalism to the stage and replace tumid declamation by insistence on the human element in acting.

Since the actor must be a perfect instrument and his body must form no small part of that, he should, unless specialising in comic or eccentric character, be well proportioned, have an agreeable bearing and possess features which are mobile and can be built up into something like beauty or strength. He should keep himself physically fit, be a fair adept at fencing, have mastered the tricks of make-up, be able to wear clothes of all periods easily, and gesticulate far more freely than is common in English private life; he should have learnt repose, and with it the manipulation of the hand, the carriage of the person, and the art of throwing himself into graceful postures.

He should be acquainted with the customs and manners of different eras. He should own a trained and musical voice, have the gift of memorising, and the adaptability to work in ensemble. He must have the instinct for phrasing, no less important, as Charles Wyndham

ACTINIC RAY (Gr. *aktis* ray). Rays of sunlight which do not give out heat, but produce chemical changes. A beam of sunlight is made up of rays which range in colour from red to violet. Beyond the violet rays are other invisible rays known as ultra-violet. These are of much shorter wave length, do not give heat, but are much more active in producing chemical changes. They are the rays which produce alterations in the chemicals of the photographic plate, and are also notable for their effect on body metabolism. *See* Light.

ACTINIUM. Radio-active substance accompanying thorium extracted from pitchblende. It was discovered in 1899. Actinium disintegrates, seven successive radio-active products having been identified as formed during the process. Actinium emanation has the characteristic property of rendering bodies with which it comes in contact temporarily radio-active. *See* Radium.

ACTINOLITE. (Gr. *aktis*, ray; *lithos*, stone). Natural silicate of calcium, magnesium,

Acting. Scene in the green room of a Greek theatre, showing an author (seated) directing an actor on the management of his hands

After mosaic found at Pompeii

and iron. A member of the group of monoclinic amphiboles, it contains no alumina and is green in colour. It occurs in fibrous aggregates, or elongated crystals.

ACTINOMETER. Instrument for measuring at any moment the direct heating power and chemical properties of the solar rays, invented by Sir John Herschel in 1825. With it is used the actinograph, which records variations in power of the solar rays.

ACTINOMYCOSIS (Gr. *aktis*, ray; *mykes*, fungus). Disease in cattle, occurring rarely in the horse, and sometimes in sheep, pigs, and dogs. Human beings occasionally suffer from it. In cattle it is commonly known by the name of wooden tongue, because it usually attacks that organ, producing a hard growth. The disease is due to a parasite known as the ray fungus, which reaches the tissues of the animal by means of some foodstuff, especially barley, on which the fungus grows.

ACTION. In legal phraseology this term means "a civil proceeding commenced by writ, or in such manner (e.g. by originating summons) as may be prescribed by rules of court." Thus, divorce suits are not actions, nor any bankruptcy proceedings, because they are commenced by petition and not by writ. Nor are criminal proceedings actions, because they are commenced by summons, indictment, or information; and, moreover, they are not civil proceedings. *See* Appeal.

ACTIUM. Promontory of Acarnania on the coast of ancient Greece. Here, Sept. 2, 31 B.C., the great naval battle took place between the forces of Antony and Cleopatra and those of Octavian, commanded by Agrippa. Antony's defeat left Octavian (Augustus) master of the Roman world.

ACT OF GOD. Term used in English law to mean some act or convulsion of nature so extraordinary that it could not be foreseen; or, if foreseen, could not be guarded against. For example, an extraordinarily high tide, a tempest of rare violence, and the like. Act of God is, as a rule, a good defence to an action: e.g. where one is bound to keep a sea wall in repair, and it is overthrown by a remarkably high tide.

ACT OF PARLIAMENT. Official name for a measure which has become the law of the land. The word bill is applied to a measure on its introduction, and for it to become an Act it has to be read three times in the House of Commons, approved by vote, and sent to a committee for examination. Any alterations by this committee must be approved by the House. The bill is then sent to the House of Lords, where the same procedure is gone through, and, finally, having received the royal assent, it becomes an Act.

The Acts of each session are arranged in chapters, and officially quoted according to the year of the reign in which they are passed.

The Acts of the English Parliament go back to 1235. The Acts of the Scottish Parliament date from about 1430 to 1707, and those of the Irish from 1310 to 1800. *See* Assent.

ACTON (A.S. *ac*, an oak; *tun*, a town or farm). Munic. borough of Middlesex, England, 4 m. W. of London (Paddington). A residential and industrial suburb, it is reached by the G.W., L.M.S., Metropolitan and Central London railways, and by trams and omnibuses. It has manufactures of motor parts and accessories, engineering works, aeroplane construction works, laundries, dyeing and cleaning works, and an aerodrome. Here are the enormous offices of the Ministry of Pensions. Other buildings are the town hall and the technical institute opened in 1929.

In the 18th century Acton's medicinal springs, which Queen Elizabeth had visited and which were long fashionable, were reputed to possess the qualities of Cheltenham waters. Richard Baxter, Henry Fielding, and Bulwer Lytton were residents. It was made a borough in 1921 and the division sends a member to Parliament. Pop. 63,040.

ACTON, JOHN EMERICH EDWARD DALBERG, 1ST BARON (1834-1902). British historian and moralist. Born Jan. 10, 1834, at Naples, of an old Roman Catholic family, Acton was the eldest son of Sir John F. E. Acton 7th Bart. In 1858 Acton settled at Aldenham, Shropshire, where he formed his famous library of 59,000 volumes, now in the university of Cambridge. He sat as Liberal M.P. for Carlisle, 1859-65, but spoke only once in the House. Honoured by many universities, Acton was appointed, in 1895, regius professor of modern history at Cambridge and elected honorary fellow of Trinity College. Lord Acton was a profound scholar and a gifted historian. He planned *The Cambridge Modern History*, and died June 9, 1902.

His grandfather, Sir John Francis Edward Acton, 6th Bart. (1736-1811), was invited in 1779 to reorganize the Neapolitan navy, and became successively minister of marine, minister of war, generalissimo of the sea and land forces, and prime minister of Naples.

ACTS OF THE APOSTLES. Fifth book of the N.T., giving the earliest history of the Christian Church. The authorship was attributed by early writers to S. Luke, and this has never been seriously questioned. The date was probably about A.D. 65.

Acting. Mask to intensify voice

showed, in comedy than in poetic drama; he must live the character he plays, as much when silent as speaking. Finally, to say nothing of imagination and brains, he must have laughter, emotion, and every mood ready at the playwright's call. *See* Drama; Theatre. Consult *How to Act*, H. Browning, 1925; *The Drama in Europe in Theory and Practice*, E. F. Jourdain, 1924.

Lord Acton, British historian
Elliot & Fry

The first twelve of the chapters describe the rapid spread of Christianity after the Ascension of Christ, and deal mainly with the Church in Palestine, with S. Peter as the dominant figure. The remainder of the work consists of a somewhat broken biography of S. Paul and an account of his missionary journeys.

ACTUARY. Word of Roman origin, now mainly used to describe those who work out calculations for insurance companies and similar bodies. They calculate the cost of a pension scheme, and the payments necessary to keep it solvent; work out rates for annuities and the cash values of reversionary interests; and report upon the solvency or otherwise of a friendly society. Their interests are protected by the Institute of Actuaries (Staple Inn, Holborn, London, W.C.) and by the Scottish Faculty of Actuaries (14, Queen Street, Edinburgh). See Insurance.

ADAD OR HADAD. Storm god in Babylonian and Assyrian mythology. Controller of storm and flood and their consequence, famine, he was a power to be dreaded, or to be invoked for the overcoming of enemies. Under another of his names, Rammon, said to be the Rimmon of the O.T. (2 Kings 5), he is connected with the flood legends.

ADALIA. Seaport of Turkey. It is on the Gulf of Adalia, an opening on the S. coast of Asia Minor, about 200 m. S.E. of Smyrna. Timber, grain, cattle, and horses are exported, but its commercial importance has declined through inadequate harbour facilities. Founded by Attalus II (220-138 B.C.), king of Pergamum, and known as Satalia to the Crusaders, Adalia, or Attalia, figures prominently in the medieval history of the Levant. Pop. 28,000, including 9,000 Greeks.

ADAM. Biblical figure, the reputed progenitor of the human race. According to the narrative in Genesis I, on the sixth day "God created man in his own image, in the image of God created he him; male and female created he them." In the second chapter a similar account, though with some variations, is given: "And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life, and man became a living soul."

According to the second narrative Adam was created first and Eve afterwards, because "it is not good that the man should be alone." They were placed in the Garden of Eden and given dominion over the rest of the animal creation. They were allowed to eat of the fruit of all the trees in Eden except the tree of knowledge, which they were forbidden to touch. The serpent, however, tempted them, and Eve succumbed, and afterwards induced her husband to partake of the forbidden fruit. For this they were driven from Paradise and a curse was laid upon them.

The literal truth of this narrative has been called in question by modern criticism. It is not easy to reconcile it with the facts of science, especially with the recent developments of geology and biology. Similar narratives are found in most mythologies, and some remarkable parallels have been found in the legends of Babylonia and Persia.

ADAM, JULIETTE (b. 1836). French authoress. Born Oct. 4, 1836, at Verberie, daughter of Dr. Lamber, she married in 1851 M. Lamassine, a lawyer, and in 1868 M. Edmond Adam, a senator (d. 1877). The leading woman writer in France for over fifty years, and one of the most learned, progressive, and vivacious, she founded a salon described as "the birthplace of the Republic." In 1879 she established *La Nouvelle Revue*, which she edited until 1899; under the name of Count Paul Vasil she wrote plays, works of travel, poetry, fiction, criticism, biography and politics. See Mme. Adam, La Grande Française, Winifred Stephens, 1917.

ADAM, ROBERT (1728-92). British architect. The second son of William Adam, of Maryburgh, he was born at Kirkealdy, and educated at Edinburgh University. In 1754

Robert Adam.
British architect

he went to Italy, and for eight years studied the buildings in that country. In 1764 he published drawings of Diocletian's palace at Spalatro, in Dalmatia, which he selected as a typical residential building of classical times. On Adam's return from Italy in 1762 he was appointed architect to George III, but resigned this position in 1768, when he became parliamentary candidate for Kinross-shire. In this year also he began the plans for building the Adelphi—so called by him because his three brothers, especially James, were associated with him in this work. Adam's other works included the fine screen to the Admiralty building, Whitehall; Lansdowne House, London; the Infirmary at Glasgow; the Register House, Edinburgh; Osterley House, Brentford; Caen (or Ken) Wood House, Hampstead; and Luton Hoo, Bedfordshire. He died March 3, 1792, and was buried in Westminster Abbey.

ADAM STYLE. Adam's architecture was more than equalled by his achievements as a decorator of interiors. His ceilings, chimney-pieces, staircases, etc., were designed with a

Adam style. Drawing room furnished and decorated in the style introduced in the 18th century by Robert Adam, and remarkable for lightness and grace

lightness and grace that brought a new note into the application of classicism to domestic dwellings, and has influenced interior decoration to this day. He designed furniture and fittings to harmonise with the result that an Adam room is distinguishable by its perfect unity.

While arabesques, sphinxes, and griffins were introduced, extravagances were severely toned down. Prominence was given to conventionalised floral, geometrical, and ribbon forms, often combined with the key, wave, boneysuckle, and palm motifs, sometimes framing medallions and panels with figure or other paintings or designs in line relief. Such panels and medallions on walls, ceilings, and furniture were painted by Angelica Kauffmann, Zuechi, Pergolesi, and others. Colour schemes were subdued in tone, in which half-tints prevailed.

In furniture, satinwood, amboyna, hawwood, and other light woods were used in combination with mahogany. Everything was light and elegant, with marked leaning towards straight lines, though curved forms were also employed. Legs of chairs and tables were tapered and usually lightly fluted. Carving was reduced to the minimum, reliance being mainly on outline and harmonising tones. See Adelphi; Furniture

ADAMANT (Gr. a, not; damacin, to tame). Word applied in the 3rd century B.C. to the emery stone of Naxos, then the hardest known crystalline stone. It was long a synonym for the lodestone and among scientists for the diamond. Adamantine spar is a semi-transparent, light brown corundum, which exhibits the phenomenon of asterism or a cluster of stars.

ADAMELLO. Mountain of Italy, 11,661 ft. high, in the Lomhard Alps. The chief peak of a great glacier region between the Val Camonica, on the W., and the Etschtal, or Adige Valley, on the E., it was first ascended in 1864 by Julius Payer. In April, 1916, the crest of the glacier was captured by the Italian Alpini from the Austrians.

ADAMITES. Name of several sects who prayed and worshipped in a state of nudity. The first, in Africa, was an obscure Gnostic sect of the 2nd century; another, in Antwerp, belonged to the 12th century; and a third, sometimes called Picards, after their Flemish founder, was exterminated by the Hussite general Ziska in 1421. They professed to revive the original innocence of Adam.

ADAMNAN, SAINT (624-704). Abbot of Iona. Born at Drumbone, Donegal, brought up in a monastery, and influenced theologically by the Venerable Bede, he became abbot of Iona in 679. He wrote, in Latin, a *Life of S. Columba*, which has been translated into English, and is a very valuable historical work. He also wrote a work on the Holy Places, based on experiences understood to have been communicated to him by Arculfus, a Gallic bishop shipwrecked on the British coast while returning from the Holy Land. He died Sept. 23, 704.

ADAMS, JOHN (1735-1826). The second president of the U.S.A. Born Oct. 30, 1735, at Braintree, later Quincy, Massachusetts, he graduated at Harvard and became a lawyer. As a delegate from Massachusetts, he was a member of the continental congress at Philadelphia in 1776. He helped to draft the Declaration of Independence, and was president of the Board of War in Washington's Cabinet. As a commissioner from Congress, Adams repeatedly visited France and Holland, and was a member of the body which arranged the treaty of 1783 between Great Britain and the U.S.A. Two years later he was appointed minister to Great Britain and in 1796 was a candidate for the presidency. He was supported by the Federalists and defeated his opponent, Thomas Jefferson. In 1800, however, the two were again candidates, and this time Adams was beaten. He died at Quincy, July 4, 1826.

John Adams.
American president

ADAMS, JOHN (c. 1760-1829). English seaman, mutineer and settler, whose real name was Alexander Smith. Under the lead of Fletcher Christian he took part in the mutiny on H.M.S. *Bounty* (q.v.), April, 1789. Of the nine members of the crew who left Tahiti and, with Tahitian wives, settled on Pitcairn Island, he was in 1808 the sole survivor.

ADAMS, JOHN COUCH (1819-92). British astronomer. Born at Launceston, Cornwall, June 5, 1819, he is famous for having predicted the existence of, and ultimately discovered, the planet Neptune. Owing to delays in investigating it at Greenwich and Cambridge, the credit of priority passed to the French astronomer, Leverrier. Adams's work was completed in June, 1846, and the planet was found by the German astronomer Galle on Sept. 23, 1846, very near the place assigned to it by Leverrier. It was observed at Cambridge six days later. Adams became professor of astronomy in 1858, and was director of the Observatory at Cambridge from 1860 until his death, Jan. 21, 1892.

ADAMS, JOHN QUINCY (1767-1848). Sixth president of the U.S.A. The son of John Adams, the second president, he was born July 11, 1767, at Quincy, Massachusetts.

J. Quincy Adams, American president

After studying at Paris, Leyden, and Amsterdam, he became professor of rhetoric at Harvard. In 1814 he was one of the negotiators of the treaty with Great Britain which ended the war of 1812, and from 1814-17 he was American minister in London. Appointed in 1817 secretary of state under President Monroe, he was partly responsible for the purchase of Florida from Spain, and strongly supported the Monroe doctrine. He was a candidate for the presidency in 1824, when none of the four candidates secured the necessary majority, and the House of Representatives chose Adams. Defeated on offering himself for re-election in 1828, in 1831 he entered the House of Representatives, where he became a supporter of the emancipation of the slaves. He died Feb. 23, 1848.

ADAMS, MAUDE KISKADDEN (b. 1872), American actress. Born at Salt Lake City, Nov. 11, 1872, both her parents being on the stage, she made her theatrical debut in children's parts. After experience under the management respectively of E. A. Sothorn, C. Frohman, and John Drew, she made a hit in 1892 in *The Masked Ball*. This was followed by successes as Babbie in *The Little Minister*, 1898; the Duke in *L'Aiglon*, 1900; Miss Phoebe in *Quality Street*, 1902; and Rosalind in *As You Like It*, 1910.

Maude Adams, American actress

ADAMS, WILLIAM (c. 1575-1620). English sailor and the first Englishman to settle in Japan. Born at Gillingham, Kent, Adams went, in 1598, as pilot on board the *Charity*, a Dutch vessel bound for India. The ship lost its way and the crew found themselves off the coast of Chile. Making their way across the Pacific, they reached Japan in April, 1600, and at Osaka Adams interviewed the ruler of that country, who gave him an estate and kept him in Japan. Adams married and assisted in founding an English settlement on the island of Hirado. He died May 16, 1620. A monument to him was unveiled at Yokosuka in May, 1918. His story is found in the publications of the Hakluyt and Japan Societies.

Adam's Apple (Lat. *Pomum Adami*). Protuberance of the larynx seen in the front of the neck. See *Larynx*.

ADAM'S BRIDGE. Chain of rocks and sandbanks, running N.W. to S.E. between Rameswaram Island, off the S. coast of Madras, and Manar Island, off the N.W. coast of Ceylon. At high tide the bridge, which is 17 m. long, is

covered by a few feet of water. However, three winding and difficult channels have been dredged, enabling vessels to pass from the Gulf of Manar and Palk Strait.

ADAM'S NEEDLE. Popular name of the various species of yucca, also known as bear's grass and Spanish bayonet. They are handsome plants belonging to the lily family, and natives of America. The long, thick, and mostly rigid sword-shaped leaves are borne in tufts or rosettes, and end usually in a spine, while the edges often bear slender threads. The large, drooping flowers are borne in a dense panicle several feet in length, and are succeeded by three valved pods. The leaves yield fibres from which cloth and cordage are made.

Adam's Needle, a species of Yucca

ADAMSON, WILLIAM (b. 1863). British politician. He began life as a miner in Fife-shire and for 27 years worked in the pits. In 1902 he became assistant secretary of one of the unions of Scottish miners, and in 1908 its general secretary. In Dec., 1910, he became M.P. for West Fife. In 1917 he was chosen chairman of the Parliamentary Labour Party, and in 1918 was made a privy councillor. He was secretary for Scotland, Jan.-Nov., 1924, and returned to that office in 1929.

Wm. Adamson, British politician
Elliott & Fry

ADAM'S PEAK. Mt. in Ceylon, 7,353 ft. in height. There is an impression in the granite resembling a human foot, 5 ft. long and 2½ ft. broad. According to Arab tradition it was formed by Adam, who stood on one foot at this spot to expiate his crime. The Hindus attribute the mark to Buddha. The mt., a place of pilgrimage, is 44 m. E. of Colombo.

ADANA. Town of Turkey. The capital of the vilayet of Adana, it is on the Seihun Irmak, 42 m. by the Bagdad Rly. N.E. of the port of Mersina and near the Cilician Gates. The river is crossed by a bridge attributed to Justinian and since restored. Pop. 72,600.

ADAPTATION (Lat. *ad*, to; *aptare*, to fit). Biological process which any living organism undergoes in adjusting itself to the conditions under which it exists. In order that a living creature may survive and reproduce itself, it is necessary that during the whole of its existence there must be a more or less close adaptation to surroundings.

There are two main theories to account for this obvious fact. One is the Lamarckian doctrine, which holds that adaptation has been secured through transmitted acquired effects of use, disuse, or injury. The other, commonly called the Darwinian theory, which has various modifications, is that of natural selection, which claims that individuals and races have become adapted to their environment by the survival of the fittest.

The characters thus naturally selected for survival are thought by some to have been minute variations which meet the ever-changing surroundings; and by others to have been much larger variations, or mutations, as they are termed, which were of great advantage to the individual. In either case the process is one of adaptation. This is the outstanding characteristic of all living organisms, whether plant or animal, and is true both of mental and bodily qualities. See *Evolution*.

ADCOCK, ARTHUR ST. JOHN (b. 1864). British author and journalist. Born in London, Jan. 17, 1864, he is known as the editor of *The Bookman*. A versatile and authoritative literary critic and humorist, he is the author of more than 30 volumes of verse, fiction, essays, and London literary topography.

ADDA. Town and river port of British Gold Coast Colony. It is on the Volta, some 6 m. from its mouth, and 62 m. E.N.E. of Accra. Pop. 12,000.

ADDAX (*Addax nasomaculatus*). Genus of African antelope related to the gemsbok. It has fine ringed horns, sometimes nearly a yard long, which twist in an open spiral in both sexes. Found in N. Africa and Arabia, and an animal of the desert, it is a little over 3 ft. in height, has a tuft of hair on the forehead, and develops a fine mane in winter.

ADDER OR VIPER (*Vipera berus*). Venomous snake, the only one in Great Britain. The word is really nadder, a nadder being corrupted into an adder. It is found in every county in England, Scotland, and Wales, but, like other snakes, is absent from Ireland.

The average size of adult vipers in Great

Adder. Close view of a large specimen of Britain's one venomous snake

Britain is from 20 ins. to 25 ins. Specimens of 30 ins. and upwards have been taken, but are rare. A smaller variety, known as the small red viper, averages from 10 ins. to 12 ins. in length. The adder is distinguished by its flattened head, upon which are two dark hands converging in the form of a V. Along the back there is a dark zig-zag line, and along the sides are two rows of dark patches, one on each side. Its food consists of mice, slow-worms or other lizards, young birds, newts, and water voles.

The females are slightly larger than the males as a rule, less brilliantly coloured, and can be distinguished by their shorter tails. The upper jaw carries the poison fangs about ½ in. in length, pointing backwards to the throat. The reproduction is viviparous, the young being born alive. The bite of the adder is rarely fatal, except in the cases of young children and persons in poor health.

ADDER'S TONGUE FERN (*Ophioglossum vulgatum*). One of the least fern-like of the ferns. Each plant produces but one frond,

which is divided into a smooth, leathery, oval blade, 3 ins. or 4 ins. long, and an erect spike of fructification bearing a double row of capsules which contain the spores. It is much more plentiful than is commonly supposed, growing inconspicuously among grass in damp pastures.

ADDINGTON. District of Croydon containing Addington Palace, long a residence of the archbishops of Canterbury. The house was built in 1772, probably on the site of the manor house. In 1808 the estate was bought for the

Adder's Tongue, a pasture fern

archbishop, and the prelates lived here until 1902, when it was sold. It was then remodelled by Norman Shaw, R.A., and some of its 1,200 acres sold for building land. In 1928 it became a country club, with a golf course.

ADDIS ABABA. Capital of Abyssinia. Standing among the mts. in Shoa, at an alt. of over 8,000 ft., 225 m. W. by S. of Harar, it consists of villages and suburbs scattered round the royal palace, a collection of unimposing buildings enclosed by walls. It is connected by rly. with Jibuti, in French Somaliland. Founded in 1885, it was made the capital by Menelek II in 1892, is an important trading centre, and has telegraphic and telephonic systems. The treaty with Italy was made here, Oct. 26, 1896. Pop. 65,000.

ADDISCOMBE. Residential suburb of Croydon, with a station on the Southern Rly. From 1812-61 the East India Company had a college here for instruction in the scientific branches of the Indian army.

ADDISON, CHRISTOPHER (b. 1669). British politician. Born at Hogsthorpe, Lincolnshire, June 19, 1669, Addison was educated at Harrogate and St Bartholomew's Hospital, London. He was for a time professor of anatomy at University College, Sheffield. In 1910 he entered political life as M.P. for Hoxton, and in 1914 became parliamentary secretary to the Board of Education. In 1915 he was secretary to the new Ministry of Munitions; in 1916 he became minister of munitions himself, and in 1917 head of the new ministry of reconstruction. In 1919 he was transferred to the Local Government Board, and in June, 1919, became the first minister of health, resigning in 1921. Later he broke away from Mr. Lloyd George and joined the Labour Party. In 1929 he was elected M.P. for Swindon and was made parl. secretary to the Ministry of Agriculture.

ADDISON, JOSEPH (1672-1719). English essayist, poet, and statesman. Son of Lancelot Addison, who became dean of Lichfield, he was born

Joseph Addison, essayist and statesman

Painting by Kraemer

May 1, 1672, at Milston rectory, near Amesbury, Wiltshire. He went to schools at Amesbury and Lichfield; to the Charterhouse, where his friendship with Steele began, and in 1687 to Oxford, where he became a fellow of Magdalen College in 1698. The walk by the Chervell is named Addison's Walk. Leaving England in 1699, Addison spent nearly four years in France, Italy and Germany.

When he returned to England at the close of 1703, in straitened circumstances, Tonson introduced him to the Whig coterie known as the Kit-Cat Club, and through Halifax he was commissioned to write a poem in celebration of the victory of Blenheim. This poem, *The Campaign*, 1704, secured for him a commissionership of excise and an under-secretaryship of state. His *Fair Rosamond*, an unsuccessful opera, followed in 1706, and in 1708 he was returned M.P. for Lostwithiel, an election later declared invalid. In 1708 he went as chief secretary to Ireland, where he made many friends, including Swift, and sat in the Irish Parliament as member for Cavan. In 1710 he became M.P. for Malmesbury.

Collaboration with Steele on *The Tatler* led to the foundation by them of *The Spectator*, 1711-14. On his essays therein, and especially his portrait of Sir Roger de Coverley, his literary fame mainly depends, though his papers in *The Guardian*, *Freholder*, and *Old Whig* are also noteworthy. His *Cato*: a Tragedy, proved for political reasons a great success in 1713, and in 1714, on Anne's death, he became secretary to the regency. In 1715 he was again in Ireland as chief secretary, and in 1716 was appointed a commissioner for trade and colonies. On Aug. 3, 1716, he married Charlotte countess of Warwick. From April, 1717, to March, 1718, he was a secretary of state, and he died at Holland House, London, June 17, 1719. He was buried in Westminster Abbey. His hymns include "When all Thy mercies, O my God."

ADDISON'S DISEASE. Constitutional disease associated with changes in the suprarenal capsules or small glands attached to the kidneys. The most frequent cause is tuberculosis of these glands. The disease begins with symptoms of weakness and languor, followed by irritability of the stomach, feebleness of the heart, and pigmentation of the skin, which is often the first symptom to attract attention. Death may occur from heart failure or from development of tuberculosis. It is named after Dr. Thomas Addison (1793-1860).

ADDLESTONE. Town of Surrey, England. It is 21 m. from London, with a station on the Southern Rly., and is chiefly a residential district for Londoners. Pop. 8,000.

ADDRESS. In Great Britain each session of Parliament is opened by the sovereign or his deputy with a speech outlining the business which it is proposed to transact. To this both Houses return addresses of thanks, which are usually made the occasion of important debates, especially in the Commons. By moving amendments to the Address members are enabled to ventilate real or imaginary grievances, and to bring up questions for discussion. When, after discussion, the Address is voted, it is taken to the sovereign, who returns thanks to the Lords by the Lord Steward, and to the Commons by the Comptroller of the Household. See *Parliament*; *King's Speech*.

ADDRESS, FORM OF. In formally addressing persons of rank or office the following styles are adopted. *e* stands for address on envelope, *l* for commencement of letter, and *p* for personal address in speech.

ROYALTY. The King: *e.* The King's Most Excellent Majesty:

l. and *p.* Sire contracted to Sir. The Queen: *e.* The Queen's Most Excellent Majesty; *l.* and *p.* Madam, contracted in speech to Ma'am. Prince: *e.* His Royal Highness Prince; *l.* and *p.* Sir. Princess: *e.* Her Royal Highness Princess; *l.* and *p.* Madam.

NOBILITY. Duke: *e.* His Grace the Duke of; *l.* My Lord Duke; *p.* Your Grace. Duchess: *e.* Her Grace the Duchess of; *l.* and *p.* Madam, or Your Grace. Marquess: *e.* The Most Hon. the Marquess of; *l.* My Lord Marquess; *p.* My

Lord. Earl, Viscount, and Baron: *e.* The Rt. Hon. the Earl of — the Rt. Hon. Viscount —, the Rt. Hon. Lord —; *l.* and *p.* My Lord.

ECCLESIASTICAL. Archbishop: *e.* His Grace the Lord Archbishop of; *l.* My Lord Archbishop; *p.* Your Grace. The wife of an archbishop or bishop has neither rank nor title, and is plain Mrs. —. Bishop: *e.* The Right Rev. the Lord Bishop of; *l.* and *p.* My Lord. For a retired bishop: *e.* The Right Rev. Bishop Brown or whatever the surname may be, and only in personal conversation is the title My Lord retained. Cardinal: *e.* His Eminence Cardinal; *l.* and *p.* Your Eminence. Archdeacon: *e.* The Venerable the Archdeacon of; *l.* and *p.* Venerable Sir. Dean: *e.* The Very Rev. the Dean of; *l.* Very Rev. Sir, or Mr. Dean; *p.* Mr. Dean. (No title on retirement.) Clergymen generally: *e.* The Rev. A. B.; *l.* and *p.* Rev. Sir. In the case of Roman Catholic clergy it is customary to add Father to Rev.

LEGAL. Lord Chancellor: *e.* The Rt. Hon. the Lord High Chancellor; *l.* and *p.* My Lord. Judge of the High Court: *e.* The Hon. Sir A. B.; *l.* Sir; *p.* My Lord, but in court only. County Court Judge: *e.* His Honour Judge A.; *l.* Sir; *p.* Your Honour, but in court only. Magistrate: *e.* J.P. after the surname; *l.* and *p.* Sir, and Your Worship. Recorder: *e.* The Worshipful (of London the Rt. Worshipful) the Recorder of; *l.* and *p.* Sir, and Your Worship. Sheriff of London: as Recorder of London.

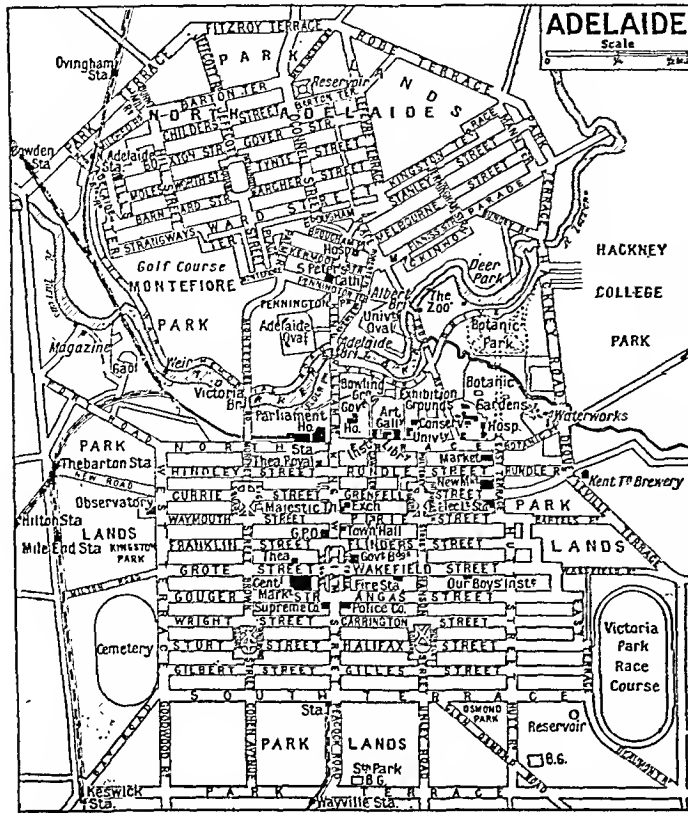

MUNICIPAL. Lord Mayor: *e.* The Rt. Hon. the Lord Mayor of; *l.* and *p.* My Lord. Lady Mayoress: *e.* The Rt. Hon. the Lady Mayoress; *l.* and *p.* Madam, or My Lady. Lord Provost: *e.* The Rt. Hon. the Lord Provost of; *l.* and *p.* My Lord. The wife of a Lord Provost has neither rank nor title. Mayor: *e.* The Worshipful the Mayor of; *l.* and *p.* Sir.

ADDRESSOGRAPH. Addressing machine by which printed matter, not necessarily limited to addresses, is put on paper by the use of embossed metal printing plates. Different matter is printed at each stroke of the machine at speeds varying from 500 to 7,000 an hour, according to the particular type of machine.

ADELAIDE. Capital of South Australia. It stands near St. Vincent Gulf, 7 m. by rly. S.E. of Port Adelaide. An important centre of the Australian railway system, it is situated on a plain, overlooked on the E. and S. by the

Adelaide. King William Street, the noble thoroughfare which runs through the centre of the city from the Torrens River to the South Terrace
Courtesy of the Australian Government

Adelaide. Ground plan of the Queen City of South Australia, which is celebrated for its magnificent situation and its broad and regularly laid-out streets

Mount Lofty range, which rises between 4 m. and 8 m. beyond the town. The Torrens, crossed here by four iron bridges, has been converted by a dam into an extensive lake.

On the wide, regular streets stand many imposing buildings—the government house, parliament house town hall, South Australian institute, jubilee exhibition building (1887), and hospital. Adelaide is the seat of an Anglican and a Roman Catholic bishopric, with cathedrals dedicated respectively to S. Peter and S. Francis Xavier, its chief educational institutions being the university, founded in 1874. S. Barnabas College, S. Peter's College, and a school of mines and industries. A large railway station was opened in 1928. The Botanic Gardens have an area of 40 acres, and the adjoining Botanic Park and Zoological Gardens are 85 acres in extent. There are also extensive parks and parklands on the outskirts. At Marble Hill, 12 m. distant, in the Mount Lofty range, is the viceregal summer residence.

Adelaide is the mining share market of Australia and the trade centre of South Australia, its chief exports consisting of wheat, flour wool, wine, and copper; its manufactures include leather, iron, and woollen goods. It has a wireless station. At the census of 1921 the pop. was 255,318. In 1929 it was estimated at 328,000.

Another Adelaide is in Cape Province, S. Africa, 90 m. from King William's Town. Pop. 2,600.

ADELAIDE. Queen of William IV, king of Great Britain. The eldest child of George Duke of Saxe-Coburg-Meiningen, she married in 1818 William duke of Clarence, who became king in 1830. Her alleged meddling with politics made her very unpopular. After nursing the king in his last illness, her health broke down,

Adelaide, Queen of William IV

the boisterous humour of which made him popular in America and Great Britain. Elbow Room and Random Shots are among his other works. He died Aug. 10, 1915.

ADELPHI, THE (Gr. adelphoi, brothers). Name of a locality in London, between the Strand and the Thames Embankment. It was created by the enterprise of the brothers Robert and James Adam, who, in 1768, began to reclaim this part of the foreshore of the Thames for building purposes. They obtained parliamentary sanction in 1771, and by constructing the Adelphi Arches provided raised ground on which they built Adelphi Terrace and the streets named after the four brothers Adam, James, William, John, and Robert.

The Adelphi Theatre, in the Strand, London, was built in 1806 by the inventor of "Old True Blue" washing blue, John Scott, who with his

and she went to Malta, where she built the church of S. Paul at Valetta. She died at Bentley Priory, near Stanmore, Middlesex, Dec. 2, 1849.

ADELBODEN. Village and health resort of Switzerland, in the Bernese Oberland. In the canton of Berne, it lies in the Adalboden valley, 10 m. by road (diligence) S. of Frutigen, on the rly. from Thun. It has mineral springs, an old church (1433), and timbered houses. Beautifully situated at an alt. of over 4,000 ft., it commands fine views.

ADELER, MAX (1841-1915). American humorist, whose real name was Charles Heber Clark. Born in Berlin, Maryland, July 11, 1841, he was the son of a clergyman. He is famous as the author of *Out of the Hurly Burly*, 1874,

station and port of call for liners on the seaway to and from India, and was given a fresh significance by the construction of the Suez Canal. It is the capital of a settlement named after itself and of the Aden Protectorate, is a cable and wireless station, and has two harbours, but only the inner harbour is of commercial value. On the isthmus connecting Aden with the mainland are salt works.

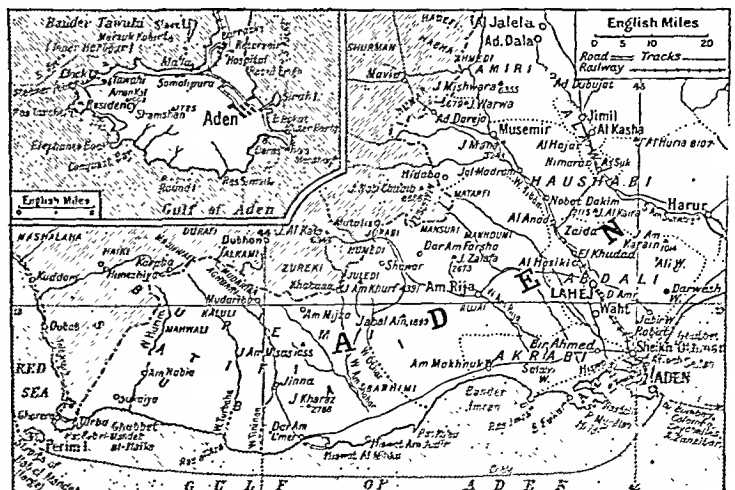

The Protectorate, area 9,000 sq. m., adjoins on the N.W. the Yemem, and on the W. extends to the Hadhramaut, in Arabia. Its frontier, which was delimited by an Anglo-Ottoman Commission in 1905, runs from Turba, on the gulf, to the river Bana, and thence N.E. to the Great Desert. The islands of Perim and Kuria Muria off the Arabian coast, and Socotra off the African coast, are dependencies of Aden.

Part of Arabia Felix, Aden was of considerable importance in Roman times. Unsuccessfully attacked by the Portuguese in 1513, it fell to the Turks in 1538, and was fortified by Solymann the Magnificent. Seized in 1735 by the Sultan of Lahej, it was the subject of many struggles until 1839, when it was annexed by Great Britain in consequence of numerous outrages on British ships. There was fighting in the Protectorate during the Great War and the Turks held Lahej from July, 1915, until the Armistice.

In 1928 the differences between the British Government and the imam of Sanaa came to a head. For some years the imam had been in possession of parts of the Protectorate and had rejected a formal offer to settle the difficulty. His troops, therefore, were driven out and the administration of Aden was reorganized. The British Government gave control of military affairs to the Air Ministry and of political ones to the Colonial Office. The Government of India remained responsible for internal affairs.

The gulf of Aden is an arm of the Arabian Sea, between Arabia and Somaliland on the east coast of Africa. Its length is about 500 m. and its greatest breadth about 200 m.

ADENOID (Gr. aden, gland; eidos, form). Mass formed by the overgrowth of the lymphoid tissue at the back of the nose. The condition may be found in infants, but is most common between the ages of three and eighteen. The first effect of adenoids is to hinder or prevent breathing through the nose, and this, in its turn, leads to other and sometimes serious developments. The growth may lead to deafness, or set up serious inflammation of the ear. Children suffering from adenoids are frequently irritable and listless and backward at school. The growth can be removed by a

Aden. Map of territory surrounding this important fortified British coaling station, with inset map of the peninsula on which the town itself is situated

surgical operation which is not dangerous, and is almost always satisfactory.

ADENOMA. Name given to a tumour or new growth which arises in connexion with secreting glands and, in microscopic structure, simulates the tissue from which it is formed. Some of the polypi which are found in the rectum and nose are tumours of this nature.

Adenomata are almost invariably non-malignant, that is to say, they do not, like cancer, tend to spread into the deeper tissues or give rise to fresh growths in other parts of the body. Occasionally, however, an adenoma does become malignant. The growth of these tumours is slow. Sometimes they become cystic, i.e. develop a cavity containing fluid.

Adiaphora (Gr. things indifferent). Term formerly applied by the Stoics to things on the borderland between good and evil

ADIGE. River of Italy, the ancient Athesis and the German Etsch. Its length is about 240 m. Rising in Tirol, in the Rhaetian Alps, and flowing past Trent and Verona, it enters the Adriatic S. of Chioggia. Subject to floods, it is with difficulty navigable upstream as far as Trent. In its lower courses it is canalised and connected with the Po. It figured in the battles in 1915-16. See Trentino

ADIPOCERE (Lat. adeps, fat; cera, wax). Wax-like substance formed in the process of decomposition of fatty animal matter, particularly in bodies buried in wet soil or immersed in water. In Great Britain adipocere takes from eight to twelve months to form in any quantity, but in hot countries the process is more rapid. When formed, adipocere remains unchanged for an indefinite period

ADIRONDACK MOUNTAINS. A group of mts. situated in the N.E. of the state of New York. The head streams of the Hudson river rise in these picturesque mts. Numerous small lakes afford excellent fishing, and there are extensive forests of pine, birch, beech, etc., about 4,000 sq. m. of which have been constituted a state reserve. The region, especially Keene Valley, is a hunting and tourist resort. There are rich deposits of magnetic iron ore. The highest summit is Mt. Marcy or Tabanus, 5,346 ft. See Appalachian Mountains.

ADIT (Lat. aditus, entrance). Opening driven into a mine horizontally, not, as a shaft, vertically. Adits are generally driven on a slight up-gradient to allow of a ready flow of water, their principal purpose being for drainage, although they are also used for ventilation. One of the longest adits in the world is the Kaiser Josef Erbstolln in Hungary, which is over 10 m. long.

Adjaria. A little republic in the Caucasus. It is part of the larger republic of Georgia, its capital being Batum. See Georgia

ADJOURNMENT (Lat. ad, to.; diurnus, daily; cf. fr. jour, a day). Literally a postponement to another day. The word is chiefly used in connexion with debates in Parliament and meetings of other public bodies, where it is opposed to dissolution, which is the end of the meeting in question. One of the privileges of the House of Commons is that the member who moves the adjournment of the House opens the debate when it is resumed.

ADJUDICATION (Lat. adjudicare, to adjudge). A term used in bankruptcy law. The court is said to adjudicate or declare a debtor bankrupt when satisfied that there is reason for so doing. See Bankruptcy.

ADJUSTMENT (Lat. ad, to.; justus, exact). Term that is used in marine insurance. It means settling the exact amount of money an insured person shall receive for goods lost at sea. Being often a complicated matter, the work has fallen into the hands of a specially

trained class of men called adjusters. These have formed themselves into a society, the Average Adjusters' Association, which makes rules for their guidance. See Insurance.

ADJUTANT (Lat. adjutare, to assist). Term formerly employed in ordinary language, but at present only used in the military sense. In the British Army an adjutant is a regimental staff officer who is recommended for appointment by the commanding officer of a battalion, regiment, squadron, or brigade and assists in all details of duty. The appointment is almost always held by a captain, but occasionally by a senior lieutenant. The adjutant receives and issues orders on behalf of the commanding officer, inspects guards and escorts before they go on duty, directs the drilling and tuition of recruits, superintends the work of the orderly room and general administration of the unit, and keeps the regimental books and records. In peace time officers of the regular army are appointed as adjutants of all auxiliary forces.

Adjutant, a bird of the stork family

The adjutant-general is a member of the Army Council and the head of the department that looks after the supply and discipline of the men, the medical services, etc.

ADJUTANT (Leptoptilus dubius). Indian stork of the genus which includes the marabout stork of Africa. It is a large bird, standing nearly 5 ft. high, and the extended wings often measure 15 ft. from tip to tip. Its bald head and the pouch hanging on its breast give it a somewhat repulsive appearance. It is useful in India as a scavenger.

ADLER, NATHAN MARCUS (1803-90). Jewish scholar. Born at Hanover and educated in Germany, he was in turn chief rabbi of Oldenburg and Hanover. In 1844 he became chief rabbi in London, where he promoted union among the various Jewish congregations, and organized Jewish schools.

His son, Hermann Adler (1839-1911), became in 1863 principal of the Jews' College in London, and succeeded his father as chief rabbi in the British Empire in 1891.

Hermann Adler, Jewish scholar

ADLER, Victor (1852-1918). Austrian politician. Born at Prague of Jewish parentage, he qualified as a doctor, but gave up his professional work for the propaganda of social democracy. He became leader of the Socialist party, sat for many years in the Reichsrath, and was foreign minister at the time of his death. The chief director and proprietor of the Arbeiterzeitung, and author of numerous books and pamphlets on Socialism, he died in Vienna, Nov. 11, 1918.

His son Friedrich, like his father a social democrat, shot Count Stürgkh, the Austrian prime minister, in Vienna, Oct. 21, 1916. Condemned to death for the murder, he was reprieved, and took part in the revolution at Vienna in Nov., 1918.

ADMETUS. In Greek legend, son of Phereas, king of Phereas in Thessaly. He took part in the Calydonian boar hunt

and the voyage of the Argonauts. The devotion of his wife, Alcestis, is the subject of a play by Euripides, freely adapted by Browning in Balaustion's Adventure. Apollo obtained from the Fates the promise that Admetus should never die if somebody else consented to die in his stead, and Alcestis volunteered.

ADMINISTRATION, LETTERS OF. Phrase used in English law. When a person dies without a will; or leaves a will but without an executor named therein; or the executor has died before the testator; or the executor declines to act, the proper course is for some person to take out letters of administration to enable the deceased's property to be dealt with and his debts paid. Until this is done, no one can legally pay anything owing to the deceased, or in any way meddle with his property. Letters of administration will be granted to the widow or next of kin, or if none of these wishes to act, then to a creditor. An administrator has to give a bond, with sureties, for an amount generally double the value of the estate, that he will administer it faithfully.

ADMIRAL (Arab. amir-al-bahr, commander of the sea). Title borne by naval officers of high rank. Its first use occurs in a convention dated March 8, 1297, wherein William de Leybourne is described as Admiral of the Sea of the King of England. In addition to admirals proper there are in the British navy rear-admirals, vice-admirals, and admirals of the fleet. Promotion from captain to rear-admiral and then to vice-admiral is by seniority.

The rank of admiral, also reached by seniority, is the highest in which naval officers are usually employed, and all the principal commands, both afloat and ashore, are generally held by admirals. The age limit is 65, and retirement is enforced after three years' unemployment, or immediately on promotion if the officer has not served as a vice-admiral. Advancements to the rank of admiral of the fleet are made by the sovereign's selection, subject to qualifications as to service. Officers of this rank are rarely given employment, and are retired at 70 or on completing five years in the rank.

Admirals when on active service fly a flag indicative of their rank, whence the term flag officer. The admiral of the fleet's flag is a Union Jack, and the admiral's a plain S. George's Cross, while vice- and rear-admirals have respectively one and two red balls on the cross next the staff. Until 1865 the flag ranks below admiral of the fleet were subdivided into those of red, white, and blue squadrons.

ADMIRALTY, BOARD OF. The governing authority of the British navy. The Lords of the Admiralty constituting the Board are commissioners appointed by letters patent for executing the duties of the former Lord High Admiral. The office was first put into commission in 1628, and from 1709 onward, except in 1827-8, when the duke of Clarence was Lord High Admiral, it has always remained in commission.

The Board consists of the First Lord, a member of the Cabinet; the Civil Lord and the parliamentary secretary, also politicians, and four Sea Lords. These are the chief of the naval staff, the chief of naval personnel, the controller and the chief of supplies and transport. Other members are the deputy chief

Admiral. Insignia of rank on sleeve cuffs of officers of the British Navy. Left to right: Admiral of the Fleet, Admiral, Vice-Admiral, Rear-Admiral

and assistant chief of the naval staff, and the permanent secretary, a civil servant. The Sea Lords and their assistants are professional seamen.

The headquarters of the Admiralty are in Whitehall, London, S.W., overlooking St. James's Park. Admiralty Arch, at the entrance from Trafalgar Square to St. James's Park, is a memorial to Queen Victoria. See Navy.

Admiralty. The Admiralty Arch between St. James's Park and Trafalgar Square. To the right are the Admiralty headquarters, also shown above

ADMIRALTY, COURT OF. English court of law which existed until 1875, and is now represented by the Probate, Divorce, and Admiralty Division of the High Court of Justice. At one time there were in England several admirals, each with his own court, but from about 1400 there was only one admiral, the lord high admiral, for all England, and consequently only one court. Its duties were to punish crimes committed on the high seas, to decide questions about prizes, and the like.

ADMIRALTY ISLANDS. Group of islands in the Pacific, N. of New Guinea. They are ruled by Australia under mandate from the League of Nations. Part of the Bismarck Archipelago, their total area is some 600 sq. m. Manus, the largest, about 55 m. long, is mountainous but fertile. The natives are of Papuan origin and cannibals. Coconut trees abound, and the pearl fisheries are valuable. Discovered by the Dutch in 1616, they became German in 1885, and were occupied by Australian troops in Sept., 1914.

ADOBE. Spanish word meaning sun-dried bricks. These bricks are made of mud, chopped straw or similar material being added to prevent cracks in the drying. The word is also used for the earth from which the bricks are formed and any structure made of the material indicated. Slime of this kind of earth serves for mortar.

Adobe bricks are found plentifully in prehistoric structures in hot climates. Egypt abounds in them, and in the pre-Aztec remains of Mexico they are sometimes ball-shaped, as if moulded in the palms of the hands. An adobe structure is formed by embedding dry mud in wet mud.

ADONIJAH. David's fourth son (2 Sam. 3). Born when his father reigned over Judah only, he claimed to be heir apparent, being supported by Abiathar and Joab, and using similar means to those adopted by Absalom. David, then nearing his end, caused Solomon to be anointed and enthroned. Adonijah was pardoned, but, falling under suspicion of reviving his claim, was put to death by Solomon (1 Kings 1-2).

ADONIS. In Greek mythology, a beautiful

youth beloved by Aphrodite. When he was killed by a wild boar, Aphrodite's grief was so great that Zeus allowed him to spend alternately six months among the living and six among the dead. The worship of Adonis, of Phoenician origin and widespread in Mediterranean countries, was in essence the worship of a spirit of vegetation. The gardens of Adonis, which formed part of the

ADOUR. River of France. The ancient Aturus, it rises in the Pyrenees and flows over 200 m. N. and W. through Hautes-Pyrénées, Gers, and Landes to the Bay of Biscay below Bayonne. It is navigable for about 80 m., and is in parts canalised.

ADOWA, ADUWA OR ADOA. Town of Abyssinia. Capital of the prov. of Tigré, it stands 6,270 ft. above sea level, and is the chief centre of trade between the interior of Tigré and the coast. Pop. 5,000.

On March 1, 1896, an Italian army was defeated here by the Abyssinians, who were armed with French rifles. During a night march the plans of the Italian general went wrong. The enemy attacked, and the Italians lost over 6,000 killed and 4,000 taken prisoner. The Abyssinians, too, lost heavily, but the Italian invasion was stopped and peace made.

ADRAMYTI (Turk. Edremid). Seaport of Asia Minor. It stands at the head of the gulf of the same name opposite Mitylene, and 80 m. N. of Smyrna. The ancient Adramyttum was near. The Gulf of Adramyti is an arm of the Aegean Sea (q.v.).

ADRAR (Berber, highlands). Name of three large districts in the Sahara, known respectively as Northern, Western, and Eastern Adrar. See Sahara.

ADRASTUS. In Greek legend, king of Argos and Sicyon. With six other chiefs, he organized the expedition of the Seven against Thebes to restore the fugitives Tydeus and Polynices, in which all the leaders perished except himself. Ten years later he led the sons of the fallen heroes, known as Epigoni or descendants, in a second war, in which Thebes was destroyed.

ADRENALIN (Lat. renes, the kidneys). Active principle of the supra-renal gland, a small organ attached to the kidneys. It was discovered in 1901, is a very powerful astringent, and occurs as a light brown powder with a bitter taste. It causes contraction of the arteries, and is used to arrest hæmorrhage.

ADRIAN. Roman saint, martyr, and soldier. Converted by witnessing the heroism of some Christian martyrs, Adrian was put to death at Nicomedia, March 4, 303. He is regarded as the patron saint of the soldier, and churches in Flanders are named after him. His festival is kept on Sept. 8. According to legend Adrian's limbs were cut off on an anvil, an emblem which appears on representations of his figure.

Adonis. Reproduction from the picture of Venus and Adonis by Titian, remarkable for its refined voluptuousness and graceful composition
From the printing in the Museum, Madrid

festival in his honour, were collections of plants in flower which soon withered. Shelley in his poem *Adonais* likened Keats to Adonis.

ADOPTION (Lat. ad, to; optare, to select). Legalised recognition of the child of other parents as one's own. In ancient Greece the adopter had to be without male children, fully in control of his property, and 14 years older than the proposed adoptive child. In Rome, adoption was of two kinds—adoption proper and arrogation. In the former, the person adopted had to be still under the father's control; in the latter, he was completely independent. In both the adopter had to be childless.

In Great Britain, by a law passed in 1926, an adoption order can be made by a judge or magistrate in cases where the adopter is at least 21 years older than the child adopted. A child so adopted is in exactly the same position as a child born in lawful wedlock. A register of adopted children is kept at Somerset House, London, by the registrar-general.

After the Great War devastated French and Belgian towns were adopted by English ones. Birmingham, for instance, adopted Albert.

Adoptionism is the belief that Jesus Christ was the Son of God by adoption only.

ADOPTIVE ACT. An adoptive act is an Act of Parliament which local authorities may or may not adopt at their pleasure. Acts empowering local authorities to establish free libraries, museums, and baths, for example, are usually adoptive, as are some concerning public health.

ADRIAN. Name of six popes. Adrian IV, pope from 1154 to 1159, was Nicholas Breakspear, the only Englishman who has been pope. Born at Langleigh in Hertfordshire, he became a monk in France, and, made abbot of a house near Arles, attracted the attention of Eugenius III, who made him a cardinal. He did good work for the church in Norway and Sweden, and in 1154 was elected pope. By crowning Frederick I as emperor in 1155, he so displeased the Romans that they drove the two rulers from their city. Returning in 1156, Adrian was involved in a quarrel with Frederick about their respective rights, which occupied him until his death at Anagni, Sept. 1, 1159.

Adrian VI, a Dutchman, was tutor to Charles V. He was pope from Jan., 1522, until his death, Sept. 14, 1523.

ADRIANOPOLE (Gr. Hadrianopolis, the city of Hadrian). City of Turkey. Called Edirneh by the Turks, it is on the Maritza at its junction with the Tunja, 137 m. by rly. W.N.W. of Constantinople. In addition to the 16th century mosque of Selim II, a ruined palace, and a Byzantine bridge, it has an immense bazaar, barracks, hospitals, schools, and municipal and military buildings, and is the seat of a Greek archbishop. Pop. 34,700.

Originally called Uskudama, and renamed after the emperor Hadrian, who rebuilt it about A.D. 125, from 1361 to 1453 it was the capital of the Ottoman Empire. Here, after the Russo-Turkish War, was signed the treaty of Sept. 14, 1829.

The battle of Adrianople, fought Aug. 9, 378, ended in the defeat of the Romans by the Goths, who then settled in the Empire. The success of the Goths was due to their cavalry.

In Nov., 1912, during the first Balkan War,

Adrianople was attacked by the Bulgarians and Serbians, but they failed to carry it. In March, 1913, they made another attempt, and this time the fortress, with 40,000 men and 600 guns, was captured. This victory was confirmed by the treaty of London of May 30, 1913, but in the second Balkan War Adrianople was again occupied by the Turks, to whom it was formally restored by the treaty of Constantinople of Sept., 1913.

ADRIATIC SEA. Arm of the Mediterranean, the ancient Mare Adriaticum. Extending N.W. between Italy and Yugo-Slavia, its length is 470 m., mean breadth 110 m., and area, including islands, about 52,000 sq. m. The W. shore is comparatively low, with few inlets; the E. is steep, rocky, barren, broken, and fringed with islands. The Dalmatian and Albanian coasts are picturesque, and near Cattaro high mountains dip down to the sea. Its fisheries give occupation to the seafaring population of the western coasts and islands. The chief ports are Venice, Ancona, Bari, and Brindisi on the W.; Trieste, Pola, Fiume, Zara, Ragusa, Cattaro, Durazzo, and Avlona on the E.

During the Great War there was fighting for the control of the Adriatic. The Austrians raided the Italian coast, but in 1916 the Italians were strong enough to land a force in Albania. With the arrival of the German submarines, which did considerable damage to the Italian fleet, the British sent drifters to protect the nets and mines, and the attempts to destroy these led to fighting. Gradually the Italians got the upper hand and more than once entered Pola, the Austrian base. In 1918 it was found possible to close the Sea to the enemy by placing a barrage across the Straits of Otranto.

In 1919 serious difficulties arose about the possession of the eastern, or Austrian, side of the Adriatic, with its islands. In 1920, by the treaty of Rapallo Italy and Yugo-Slavia came to terms, each obtaining additions of territory.

ADULLAMITES.

Name given in derision to those members of the Liberal Party who, in 1866, left their colleagues rather than agree to Earl Russell's proposals for parliamentary reform. The most prominent of these was Robert Lowe, afterwards Viscount Sherbrooke, and their defection led to the resignation of Russell's ministry. The name was due to John Bright, who likened the dissenters to the distressed and the discontented who flocked to David in the cave of Adullam (1 Sam. 22).

ADULT SCHOOL.

Institution for social, educational, and religious work, mainly organized and supported by the Society of Friends. These schools exist throughout Great Britain, and recent statistics showed a total of about 1,400 schools and nearly 50,000 members. The movement has spread

to Australia, New Zealand, Canada, the U.S.A. and other countries.

The schools meet usually on Sunday mornings at an early hour. Associated with them are libraries, savings banks, study circles, lectures, social evenings, and technical classes, also benefit, coal, book and athletic clubs.

The schools are organized in the National Adult School Union (30, Bloomsbury Street, London, W.C.1). This has a magazine, One and All, and maintains several guest houses for holidays, conferences, etc.

ADULTERATION (Lat. adulterare, to corrupt). Term meaning the debasement of anything by the substitution for one or more of its ingredients of something inferior. It is usually applied to food and drink.

The law relating to adulteration of food is contained in the Sale of Food and Drugs Acts of 1875, 1879, and 1899: while special Acts relate to the purity of milk, cream, butter, and margarine. The Sale of Food and Drugs Acts prohibit the mixing or colouring of any article of food with any ingredient so as to render it injurious to health, and no article so mixed may be sold under a penalty not exceeding £50; and they forbid the sale to the prejudice of the purchaser of any article of food which is not of the nature, substance, and quality demanded.

The Acts also provide for the appointment of public analysts and of inspectors who can purchase samples for analysis. The inspector after purchasing a sample for analysis must inform the seller of his intention to have it analysed, and must then and there divide the sample into three parts, each of which is then marked, sealed or fastened up, one part being delivered to the seller, one being taken for analysis, and one being retained for future comparison and production in court if necessary. In 1928 the Ministry of Health examined 129,034 samples, of which 7,524, or 5.8 per cent, were found to be adulterated. Of 67,350 samples of milk examined, 5,542, or 8.2 per cent, were adulterated, or not up to the standard. In 1927 the percentage was 7.4, and in 1926 it was 6.9.

ADULTERY

(Lat. ad, to; alter, other). Unfaithfulness to the marriage vow, or sexual connexion by a husband or wife with someone other than the lawful spouse. Legally, adultery is committed where these conditions obtain, however innocent the adulterer may be morally.

By English law either husband or wife can obtain a divorce if the other party has been guilty of adultery. Before 1923 the wife could not obtain one unless the husband had been guilty of cruelty or desertion, in addition to the adultery. See Divorce.

ADUR. River of Sussex, England. About 20 m. in length and navigable for sailing barges, it enters the English Channel at Shoreham. The yacht-building industry, which used to flourish in the artificial harbour by which it enters the sea, received considerable stimulus during the Great War.

ADVENT (Lat. adventus, coming). The four weeks immediately preceding Christmas, reckoned from the Sunday nearest to St. Andrew's Day. Beginning the church year, this season is observed as one of solemn preparation for Christmas and for the second Advent or Parousia (Matt. 24-5). According to one hypothesis, this second Advent is past and judgement is proceeding.

ADVENTISTS. Name of several sects, mainly of American origin. The Second Adventists, founded in 1831 by William Miller (1781-1849), believe in the imminence of the second Advent, and have repeatedly assigned dates for it. Seventh Day Adventists date from 1844, believe the second Advent imminent, but do not date the event, and observe the seventh day as the Sabbath.

Adrian IV,
English Pope

Adriatic Sea. Arm of the Mediterranean lying between Italy and Yugo-Slavia. Most of its eastern coast belonged to Austria until 1918

ADVERTISING. Advertising is now generally taken to mean the methods employed to make known to a large public the merits of some commodity, such as a food or beverage, or of some utility, such as insurance or the service of a railway company. The same or similar means, however, may be employed for other purposes, such as appeals for charitable objects and political or other propaganda. A sustained effort on the part of an advertiser to achieve a particular object is called a campaign, and the amount of money devoted to it is the appropriation.

In some form or other advertising is obviously as old as society itself. Only within the last few decades, however, has it been practised on a large scale, or its possibilities systematically studied. The great development of the newspaper and periodical Press in the latter half of the 19th century, following on the repeal of the taxes on newspapers by Gladstone, favoured the rapid growth of advertising, while another impetus came somewhat later from the perfection of mechanical methods of reproducing illustrations, which enabled the advertiser to make wide use of the work of the artist and the photographer. The duty on newspaper advertisements, first enforced in 1712, was abolished in 1853.

Advertising may be divided into Press advertising, i.e. advertisements in newspapers and periodicals; circularising through the post and distributing leaflets; exhibiting posters; and miscellaneous forms such as illuminated signs.

Most advertisers find it to their advantage to secure the assistance of an advertising agent, who will recommend the methods suitable for a particular case, and prepare the necessary advertisements. The advertising agent finds his remuneration for this work in the commission allowed by publishers, bill-posters, and others. An advertisement consultant is frequently called in to give advice. Large advertisers often have on their staff a skilled advertising manager, but even in such cases the cooperation of an agent is desirable if only in making contracts and for relieving the advertiser of clerical detail.

LAW OF ADVERTISING. Offers made to the public in an advertisement become a contract upon acceptance by a member of the public who complies with the conditions required. Again, when goods are offered for sale to the public, and the goods are described in an advertisement, there is an implied condition that the goods must correspond with the advertised description. Copyright exists in advertising matter, but only when literary composition and originality can be proved. There is no copyright in expressions in common use. Advertisement space booked for a specified period (e.g. an insertion once a week for thirteen weeks) cannot be cancelled unless the seller of the space agrees to forgo his rights. The seller of space may decline any advertisement of an illegal or scandalous nature without incurring any liability.

Advertising is now a large and important profession with its trade journals and organizations, its clubs and benevolent funds. The Aldwych Club (Exeter Street, Strand, London, W.C.) is mainly for advertising men. The chief trade journals are *The Advertising World* and *The Advertisers' Weekly*.

ADVOCATE (Lat. ad, to; vucare, to call). Term common to all members of the legal profession when representing a client before any court or tribunal. In Scotland the word is used in a more definite sense. There the advocate is a member of the higher branch of the legal profession, the equivalent of the English barrister. To become an advocate one must pass certain examinations and pay certain fees, arranged and controlled by the Faculty of Advocates. The examinations

are in general subjects and afterwards in law.

All advocates must be members of the Faculty of Advocates as only those who are can plead before the Court of Session. It dates from 1532 when a College of Justice was founded in Scotland. The head of the faculty is the dean. Its headquarters are in Parliament Square, Edinburgh. Its fine library in the Parliament House is now the National Library of Scotland.

ADVOWSON (Lat. advocatio, legal aid, patronage). Right of presenting to an ecclesiastical living—e.g. a rectory or vicarage. The owner of the advowson is called the patron of the living. An advowson may be sold, or bequeathed, and passes to the trustee in bankruptcy if the patron becomes bankrupt. A patron must not take money for presenting a clergyman to the living. To do so is simony, and the presentation will be void. See Benefice.

ADZE (A.S. adesa, axe). Woodcutting tool resembling an axe. The line of its blade is at right angles to the line of its handle, instead of in line with it, and the blade is curved towards the hand of the user. It is used for rough-planing timber. Slight modifications of form are indicated by adjectives indicating shape or purpose, such as flat-headed adze, ship adze, notching adze.

AEACUS. In Greek legend, son of Zeus by the nymph Aegina, and king of the island named after her. The father of Telamon and Peleus, he was renowned for his integrity and justice, and after his death, with Minos and Rhadamanthus, was made by Pluto one of the judges of the underworld.

AEDILE (Lat. aedes, a building). Roman magistrate. In republican times the chief duties of the aediles were the superintendence of public buildings and of the water supply, direction of the police, provisioning of the city, management of public games, and care of the public archives. Instituted 494 B.C., they were at first two in number, both plebeians; but in 366 two more, called curules because they sat in a curule chair, were appointed.

AEDUI. Celtic tribe, living between the Loire and the Saône. They were the first Gallic people to join the Romans, and were treated with special regard by Caesar, who defended them against external foes. Their chief town was Bibracte, later Augustodunum (Autun).

AEETES. In Greek legend, king of Colchis, in Asia Minor, and possessor of the Golden Fleece. Jason and his Argonauts were assisted in their search for it by his daughter Medea. See Golden Fleece; Jason.

AEGADES ISLANDS (anc. Aegates; Ital. Egadi). Three mountainous islands, Favignana, Maritimo, and Levanzo, off the W. coast of Sicily. They were the scene in 241 B.C. of the defeat of the Carthaginian fleet by the Romans. Goat rearing and tunny fishing are the chief industries. Pop. 7,000.

AEGEAN CIVILIZATION. Name given to the pre-Hellenic civilization, also known as Minoan and Mycenaean. Its chief cities were Troy in Asia Minor, Mycenae and Tiryns in Greece, and Knossos and Phaestus in Crete.

The excavations of Schliemann, begun in 1870 at Hissarlik (Troy), and continued at

Aegina. Reconstruction, at Munich, of the Temple of Aphaea. See p. 24
From Furtwängler, 'Die Aegineten der Glyptothek'

Tiryns and Mycenae, showed that such a civilization existed in 1500 B.C. His conviction that Crete would produce even more important results has been justified by the discoveries, since 1894, of A. J. Evans and others. It is established that about 3000 B.C. Crete had passed from the stone to the bronze age, and was inhabited by a people whose civilization, anterior to those of Greece and Mycenae, reached its height about 2000 B.C.

The term Minoan, adopted by Evans, though less comprehensive than Aegean or Mediterranean, suggests Crete under a great ruler of the Minoan dynasty as the centre of this civilization. Its successive phases, the dates of which are approximately fixed by a comparison with Egyptian chronology and the various stages of development shown by the pottery finds, have been arranged as Early, Middle, and Late Minoan, each being similarly divided into three. The period covered extends from about 3000 to 1100. The first palaces of Knossos and Phaestus, built about 2000 and destroyed about 1750, were rebuilt and remodelled. The golden age of Crete lasted about a century (1500-1400), towards the end of which the island was invaded and the palace of Knossos burnt. The 14th century witnessed the decline of Minoan civilization, the 11th its overthrow.

The remains of the palace, identified by Evans, from its intricate arrangements, with the ancient Labyrinth, exhibit architectural talent of a high order. Most interesting are the Throne Room, The Hall of the Double Axe, possibly the fetish of some divinity, and the Queen's Hall, with frescoes representing religious processions, bull fights, boxing contests, and other scenes from national life. Explorers have been struck by the excellence of the sanitary arrangements indicated, and the similarity of the female attire to that of the modern society lady.

The early inhabitants probably belonged to the so-called Mediterranean race, distinguished by long heads, dark complexions, and short stature. They at first used a pictorial system of writing, and later linear signs; numerous specimens have been discovered, but not deciphered. Essentially a seafaring people, they carried on an extensive commerce, especially with Egypt. The Cretans were skilled carpenters and metal-workers, but agriculture seems to have been little practised. They had a metal currency and a system of weights of Babylonian origin. The chief Cretan divinities were a nature goddess, and a younger male subordinate, the former identified with various Hellenic goddesses, the latter with Zeus. See Crete. Consult *The Palace of Minos*, Sir A. Evans, 2 vols., 1922 and 1928.

Aegean Sea. It separates Greece from Asia Minor, and is closely studded with islands, one of which, Lemnos, was a British base during the Great War

AEGEAN SEA OR GREEK ARCHIPELAGO (Gr. archipelagos, chief sea). That part of the Mediterranean which lies between Greece and Asia Minor. Its length N. to S. is about 400 m., its greatest breadth is about 170 m., and its navigation difficult. The waters abound in fish and sponges. The chief of its numerous islands are Euboea, the largest, Mitylene, Thasos, Samothrace, Imbros, Lemnos, Chios, Cos, Samos, the Sporades, and the Cyclades.

AEGEUS. In Greek legend, king of Athens and father of Theseus. On returning from Crete, whither he had gone to deliver Athens from the tribute to the Minotaur, Theseus forgot to change his black sails for white, the agreed signal of his success. Aegeus, seeing the black sails, threw himself into the sea, which was called Aegean. See Minotaur.

AEgina. Island and ancient city of Greece in the Saronic or Aegina Gulf, an opening of the Aegean Sea. About 40 sq. m. in area, it is mainly rugged, fertile though stony on the W., produces cereals, wine and fruit, manufactures pottery, and has a valuable sponge fishery. The city, taken about 456 B.C. by the Athenians after a long siege, dates back to pre-Dorian times. Some remarkable sculptures were found in the ruins of the temple of Aphaea in 1811 and taken to Munich. Pop. 8,500. See illus. p. 23.

AEGR. In Norse mythology, the giant of the seashore. He was the husband of Ran, the storm giantess, and father of nine daughters—the billows. The name is also applied to the bore or tidal wave on the English river Trent.

Aegis. In Greek mythology, the shield of Zeus and other divinities. The word now has the general meaning of protection.

AEgISTHUS. In Greek legend, son of Thyestes and cousin of Agamemnon. During

to complete the work of an examination for this reason may he given an aegrotat or pass certificate, the examiners being satisfied that but for illness he would have passed in the ordinary way.

AELFRIC (c. 955-1022). English scholar. A pupil of Ethelwold, first at the Benedictine monastery of Abingdon and then at Winchester, he was made abbot of the new monastery of Cerne Abbas, Dorset, in 987, and later head of the Benedictine monastery at Eynsham, near Oxford, where he died. His main works include 80 Homilies, his Colloquium, a Discourse on the occupations of monks, and translations of the early books of the Bible.

AENEAS. In classical legend, Trojan hero. According to the story in Virgil's Aeneid, after the fall of Troy he escaped with his father Anchises and his son Ascanius or Iulus. After much wandering he was driven by a storm to Carthage, where he won the love of Dido, its queen, who, being abandoned by him, committed suicide. He afterwards made his way to Latium in Italy, where Lavinia, the king, promised him his daughter Lavinia in marriage. After killing Turnus, a rival suitor, Aeneas married Lavinia and became the ancestor of the Romans. Killed in battle while fighting against the Rutulians, he was worshipped as a god.

The Aeneid, Virgil's epic poem based on the legendary adventures of Aeneas, is really a glorification of Rome and of the Julian house to which the Emperor Augustus belonged, and as such became the national epic. It has been translated into English by J. W. Mackail, 1885, and others. See Virgil.

Aeneas Silvius. Name by which Pope Pius II (q.v.) is known. His full name was Aeneas Silvius de Piccolomini.

his cousin's absence at the siege of Troy, Aegisthus carried on an intrigue with his wife Clytaemnestra. On his return Agamemnon was murdered by them, a crime avenged later by Agamemnon's son Orestes.

AEGOSPO-TAMI. River in the Thracian Chersonese. Here in 405 B.C. a battle was fought between the Athenian fleet and that of the Spartans under Lysander assisted by a Persian squadron. The defeat of the Athenians destroyed their naval supremacy and deprived them of the hegemony of Greece. The name means rivers of the goat.

AEgROTAT (Latin, he is ill). Phrase used at universities and other educational establishments for a certificate excusing a student from work or college duties on account of illness. A student unable

AEOLIAN. One of the three great branches of the ancient Greeks. The Aeolians spoke a dialect distinct from that of the Dorians or the Ionians. The poets Alcaeus, Sappho, and Anacreon wrote in the Aeolic dialect. The original home of the Aeolians, who claimed descent from Aeolus, son of Hellen, was in Thessaly, but they spread to other parts of N. Greece, and colonised Lesbos and Tenedos and a strip of land in Asia Minor, afterwards called Aeolia or Aeolis.

AEOLIAN HARP. Musical instrument. It consists of a box containing wires or strings loosely stretched to produce musical notes when a current of air passes through them. A gentle breeze causes low notes to sound, and as the air current increases in intensity higher notes of the harmonic series are elicited.

AEOLOTROPY (Gr. aiolos, shifting; trepo, to turn). Alteration in the electrical, optical and other physical qualities of a body due to change of position. Thus, a tube could be given a twist which would alter its electrical conductivity, and would then be said to be aeolotropic in regard to its electrical conductivity. Iceland spar is a mineral which does not exhibit the same optical refractivity in all directions. Its condition is said to be one of optical aeolotropy.

AEOLUS. In classical mythology, the king of Aeolia, one of the Lipari Islands. He was the god of the winds, which he kept shut up in a mountain. According to Homer, he gave Odysseus (Ulysses), when starting on his voyage home, a bag containing the unfavourable winds. The bag was untied by one of the crew, the winds escaped, and the ship was forced to return to Aeolia.

AEpyORNIS (Gr. aipys, tall; ornix, bird). An extinct wingless bird of Madagascar. Related to the extinct moa and the existing apteryx of New Zealand, it stood about 13 ft. high, and its fossilised eggs, occasionally found in the marls, are a foot long and correspondingly large.

Aerated Bread. Bread charged with carbonic acid gas in the place of yeast. See Baking.

AERATED WATER. Beverages charged with an excess of carbonic acid gas (carbon dioxide) or, occasionally, oxygen. The carbonic acid gas is made by the action of sulphuric acid on calcium carbonate or sodium bicarbonate. In smaller installations and soda fountains, liquid carbonic acid gas, prepared by the complete combustion of coke, is employed. When the gas is generated it is passed into a gas-holder, and the necessary pressure applied. This is required in the subsequent operations of dissolving the gas in water and bottling the liquid.

AERIAL. Name given to the antennae of a wireless telegraphic or telephonic installation. They are the wires which transmit or collect the electrical waves whereby communication is set up between two stations. The broadcast licence issued by the Postmaster General limits the length of an aerial to 100 feet.

AERIAL DERBY. Aeroplane race round London. Originated by The Daily Mail, it was organized by that newspaper, which presented a gold cup. The first race was won in 1912 over a course of 81 m. by the English airman T. O. M. Sopwith on a 70 h.p. Blériot monoplane at a speed of 60 m. per hour; in 1923 (the last year in which the race was flown) L. L. Carter won at an average speed of 192.4 m. per hour.

AEROCLINOSCOPE (Gr. aer, air; klinos, to incline; skopein, to examine). Apparatus used for indicating or signalling the direction of the wind in connexion with the variations of barometric pressure. It consists of a pillar with arms that act like those of a semaphore.

Aerial. Wireless installation erected in 1929 at Brookman's Park, 15 miles north of London, by the British Broadcasting Corporation. See page 24

AERODROME (Gr. aer, air; dromos, course). Term used to signify an area used for the landing and departure of aircraft, including the necessary appurtenances e.g. workshops, stores, etc. The aerodrome comprises a landing ground with prepared approaches. Flanking this are hangars for the machines, and alongside these the repair sheds, workshops, and stores essential for upkeep. At a terminal aerodrome are a customs station where cargo and passengers' effects are examined for duty, and bonded stores for the housing of dutiable goods.

The development of commercial flying has made necessary the provision of a chain of aerodromes on the recognized air routes, supplemented by emergency landing grounds. Thus on the English side of the route from London to the Continent there is the terminal aerodrome at Croydon, and another at Lympne, landing grounds being provided at Popham, Marden, and Littlestone.

At night the aerodrome is marked out by lights, and powerful beacons guide night-flying aircraft to it. By means of a wireless installation; directional and meteorological information is sent out to pilots, who are enabled to keep in touch with the aerodrome throughout the journey.

An aerodrome for airships is furnished with a mooring mast, this being a tall steel structure comprising lifts for goods and passengers, and the necessary pipes for conveying fuel and water to the airship. Plant for the generating and supplying of the inflating gas is also installed.

In 1929 great progress was made towards providing England with a chain of municipal aerodromes. The Air Ministry reported upon 31 sites, and in some cases municipalities bought land and began building. Manchester selected a site on Chat Moss and Nottingham one at Tollerton. The aerodromes for these cities have been licensed, as were those at Hull and Blackpool. In addition Liverpool, Plymouth, Carlisle, and Stoke have bought land and other cities and towns have reserved sites for aerodromes in their town planning schemes. In 1929 the Royal Institute of British Architects offered a prize for a design for an ideal aerodrome.

All British aerodromes used regularly by aircraft carrying paying passengers must be licensed by the Air Ministry, which inspects them. See Airport; Hangar.

AERODYNAMICS. Science which treats of the effect of air or other gases in motion and, mathematically, examines the powers and motion of elastic fluids. In practice it examines the varying resistances of bodies moving in air,

or the varying pressure of air upon moving bodies. As all flying bodies which are heavier than air establish support in the air through forces which produce relative motion, aerodynamics may be defined as the science of flying machines. See Aeronautics; Flight.

Aerofoil. Term used to define the cambered plane or wing of the aeroplane.

AEROLITE. Meteorite consisting entirely of stony material, usually a mixture of silicates of iron and magnesium. It is in contradistinction of siderite, consisting only of metal, and to siderolite, made up partly of metal and partly of stony matter.

AERONAUTICS. The science of aerial navigation. The history of aeronautics falls naturally into two divisions: (1) Balloons; (2) Heavier-than-air machines. Aerial navigation

may be said to have begun with the experiments of the Montgolfiers in France (1783). They used a spherical balloon lifted by hot air, in which animals were sent up. Pilatre de Rozier went up in a Montgolfier balloon which was fastened to a cord so that it could not rise higher than 100 feet. Later, Pilatre de Rozier and the Marquis d'Arlandes made the first free balloon ascent. Two other Frenchmen, Charles and Robert, in the same year made a successful ascent in a hydrogen balloon which was the prototype of the modern spherical balloon. The balloon attained a height of 2,000 feet, and made a trip of 27 miles from Paris to Nesle in two hours.

The natural sequence from the free balloon was the idea of making a navigable balloon. Various attempts were made to propel ordinary spherical balloons by means of oars worked by hand from the car, and even by large propellers made of fabric stretched on frames and turned by a crank from the inside of the car. Such vessels could be propelled over the ground if the air were absolutely calm, but no real success was achieved until the cigar-shaped or spindle-shaped balloon was developed.

A navigable cigar-shaped balloon, or air-

ship, was made by Giffard in 1852, propelled by a small steam engine. Haenlein in Germany and Dupuy de Lôme in France constructed elongated balloons in 1872, the former pro-

Aerolite of 1,400 lb. which fell on the Alps. Now in Paris

pelled by a gas engine, and the latter, 118 ft. long, by a manually operated screw. Tissandier (1883) and Renard and Krebs (1884)

Aeronautics. 1. First ascent with two passengers in a free hot-air balloon, Nov. 21, 1783. 2. Earliest flight in a hydrogen-filled balloon from Paris to Nesle, Dec. 1, 1783. 3. Earliest ascent in a balloon with steering apparatus, July, 1794. 4. First attempt at a man-power, wing-propelled airship, made in England in 1834. 5. Ascent of Bell's steerable balloon, July 22, 1850; it had man-power side propellers

Aeronautics. 1. Dirigible balloon, La France, passing over Paris, Sept. 25, 1885. 2. Santos-Dumont circling the Eiffel Tower, Paris, Oct. 19, 1901. 3. The French dirigible, Clément-Bayard No. 1. 4. An early German Zeppelin manoeuvring over Lake Constance. 5. Britain's giant airship, R 34, launched near Glasgow, March, 1919. She was the first airship to cross the Atlantic Ocean. 6. Graf Zeppelin, which completed a world tour in 1929, seen over Philadelphia after her Atlantic crossing, 1928. 7. Stern view of British airship R 101, riding at her mooring mast at Cardington, Beds, 1929

constructed electrically propelled dirigible airships, and Schwartz in 1893 turned out an aluminium-covered vessel which is regarded as the progenitor of the rigid type of to-day. Four years later a petrol-engined airship was constructed by Wolfert, but this caught fire during a flight.

With the appearance in 1899 of Zeppelin's rigid type of airship, lifted by separate gas ballonets, and the circuit of the Eiffel Tower by Santos-Dumont in a non-rigid type of craft, aeronautics took on a new complexion. Airships of different types came to be built for military purposes, among them being the Parseval (non-rigid), and Clément-Bayard (non-rigid), and small vessels of a semi-rigid type for Great Britain. During the Great War airships were used by all the belligerents, the Allies employing small non-rigid and semi-rigid vessels for observation and anti-submarine warfare, and Germany sending out her Zeppelins on bombing raids. Recent development has been in rigid airships, since there is a practical limit to the size of the non-rigid type. Any increase in the size of the envelope involves greater internal gas pressure, with a resulting increase of density and loss of lifting power.

Large passenger airships have been built by Great Britain and Germany for service on transatlantic and Far Eastern routes. Other countries have built similar vessels for naval purposes. The Italia, an airship of the Zeppelin type, was lost in Noble's Arctic expedition of 1928. New principles of construction are involved in a vessel built for the U.S. Navy in 1929. This has a metal hull, made of a thin skin of aluminium alloy, and the shell of the airship serves as the container for the lifting gas.

HEAVIER-THAN-AIR MACHINES. Successful model flying machines were built long before one capable of carrying a man was constructed. As early as 1840 Henson and Stringfellow, in England, were experimenting with model gliders intended to be propelled by steam, and in 1848 Stringfellow built a monoplane which flew a distance of about 40 yards. Professor Langley, a half-century later, constructed a steam-driven model aeroplane which made circular flights and covered a distance of over 4,000 feet.

Early man-carrying flying machines were devised with bird-like wings intended to be operated by the muscular power of the pilot, but none of these achieved success. The first

successful efforts took the form of gliders, which may be best described as aeroplanes more or less on modern lines, but without engines. These gliders were launched as a rule from the top of a hill in the face of a wind. George Cayley in 1809 was probably the first to make a successful glider, and the many experiments of Otto Lilienthal, in one of which he met his death, prepared for real flight.

Several other pioneers carried on the work, among those who made successful gliding experiments being Chanute, Langley, Montgomery and the Wrights in America; Pilcher, Wenham, Dunne, and Weiss in England; and Ader, Blériot, Pénard, Santos-Dumont, the Voisin brothers, and the Farman brothers in France. Eventually the brothers Wright in America succeeded in making a petrol-engined man-carrying aeroplane, on the lines of the gliders they had been using, which made a straight flight of 852 feet in December, 1903.

Progress was slow till 1908. Short "hops" were made by Santos-Dumont in 1906, and in October of that year he made a flight of 200 feet. A machine of monoplane type built by a Dane named Ellerhammer also left the ground under its own power early in 1906, and by 1908 many aeroplanes were flying.

regularly in France, and Cody and A. V. Roc had made their first short flights in England. Wilbur Wright brought an improved machine to France for demonstration. In July, 1909, Blériot made a place-to-place flight of 33 miles and, in a later flight, crossed the Channel from Calais to Dover. Henry Farman in the same year flew a distance of 118 miles in just over three hours.

In the Great War aeroplanes were used for a variety of purposes, including reconnaissance, spotting for artillery, and bombing. Suitably armed fighter machines were employed to protect aircraft engaged on other duties, and to prevent enemy aeroplanes from carrying out reconnaissance or observation. Later, special fighter squadrons were organized, and the enemy's aircraft were sought out and attacked far over his own lines, and his aerodromes so invested that aeroplanes were prevented from emerging. Aeroplanes flying low also took part in ground fighting, attacking troops with bombs and with light machine gun.

In naval warfare aeroplanes, seaplanes and flying boats played an important rôle. The aircraft carrier, a warship provided with a flat deck on which aeroplanes could land, came into being. Aeroplanes were used for spotting and attacking submarines, and seaplanes equipped with torpedoes were used to attack surface vessels. The flying boat, an aeroplane with a boat-shaped hull, was employed for long reconnaissance flights over the sea.

As a result of the experience gained in the war great advances were made in the development of speed, climbing power, and range of flight. The tables given in the article on Air Records show the most important steps in the progress made in speed, altitude, and distance of flight. In June, 1919, Alcock and Whitten Brown flew the Atlantic from St. John's, Newfoundland, to Ireland in 15 hours 57

minutes, using a twin-engined Vickers-Vimy biplane. Ross Smith in 1919 flew a similar machine from England to Australia, by stages, in 124 flying hours. The first non-stop Atlantic flight from east to west was made in April, 1923, in a Bremen monoplane and occupied 36 hours.

AIR SURVEYS. Aircraft have done much useful work in carrying out geological and other investigations, such as those in connexion with irrigation, settlement and engineering projects. The leading British company had surveyed up to December 31, 1928, over 30,000 sq. m. of land and 50 towns. Aircraft have also been found very useful in polar exploration and in archaeological investigations.

The Aeronautical Society, founded in 1866, is a body devoted mainly to the scientific side of aerial navigation. Membership is open to

all interested in the subject. The offices are at 7, Albemarle St., London, W.1. See Air Force, Royal; Air Records; Airship; Angle; Aviation; Flight; Flying Boat; Schneider Trophy.

AEROPLANE. Virtually a power-driven kite, capable of lateral and longitudinal control. It is a development of the glider, and the first power-driven machine of the Wright brothers was a biplane glider fitted with two propellers. An aeroplane with a single set of planes is called a monoplane, one with two sets a biplane, and one with three sets a triplane.

Essentially an aeroplane consists of a fuselage or body, in a compartment of which the pilot sits, and one, two, or three sets of cambered and inclined planes or lifting surfaces. Ailerons or movable flaps hinged to the wings at the trailing edge give lateral control, and

Aeronautics. 1. Wright aeroplane, 1903, from rear. 2. Blériot on first flight across English Channel, 1909. 3. Vickers-Vimy biplane in which first direct transatlantic crossing was made by Alcock and Brown, 1919. 4. Arrival over Westminster Bridge of Cobham in De Havilland seaplane in which he flew to Australia and back, 1928. 5. Savoia S 64 machine in which Ferrarin and del Prete accomplished world's non-stop long distance record, Rome to Natal (Brazil), 1928. 6. Supermarine Rolls-Royce S 6, winner of Schneider Trophy, 1929, and holder of world's speed record 3, courtesy of Science Museum, London; 5, courtesy of Società Idrovolanti Alta Italia

directional control is effected by the movement of a vertical rudder. Hinged horizontal planes or elevators at the rear of the fuselage provide longitudinal control. In large machines there is a separate cabin or saloon for passengers. Propulsion is by the rotation of one or more airscrews, driven by powerful multi-cylinder petrol engines.

The wings are built up of wooden spars and ribs braced and strutted, and the fuselage of wood formers and ply-wood, or of strutted and braced members. Fuselage and wings are covered with fabric, which is then treated with a dope or varnish to tighten it and render it waterproof. Aeroplanes are also built mainly of metal. Thrust, lift, the reduction of resistance, and the overcoming of drag are the keynotes of successful flight.

Controls are operated by a lever in the cockpit, with side to side and fore and aft motion; a rudder bar is worked by the pilot's feet. Instruments to indicate height, speed, etc., and those pertaining to the engines, are fixed handy to the pilot. Gyroscopic and other devices to keep the machine on an even keel are also provided.

Aeroplane. Diagram of a modern single-engined British passenger machine, with principal parts named and portions of wing and fuselage cut away in show details of construction

Since the inauguration of a daily passenger service of aeroplanes between London and Paris in 1919 air liners with two or three engines and a passenger capacity of 20 ply regularly between London and the Continent. In 1929 a service to India was commenced. A Fokker monoplane, said to be the largest in the U.S.A., made successful test flights in September, 1929. Its four engines develop a total h.p. of 1,100, and the cruising radius under full load (30 passengers and a crew of four), is nearly 500 miles. In October, 1929, a German flying-boat, the Dornier Do.X, made a flight carrying 169 persons.

AEROPLANE CLUBS. The growth of aviation has led to the formation of clubs for those interested. On December 31, 1928, there was 13 of such clubs in Great Britain, with a membership of 3,288. See Aeronautics; Airship; Flight; Flying Boat; Seaplane.

Aeroscope. Apparatus by which germs, dust and other impurities are extracted from the air for analysis.

AEROSTATICS. Term meaning that branch of hydrostatics which is concerned with the pressure and equilibrium of the atmosphere and other gases. It is therefore an essential part of the study of aeronautics. In an aerostatic press compressed air is used to make dyewoods yield their pigments. See Aeronautics; Hydrostatics.

AERSCHOT. Town of Brabant, Belgium. It is on the Demer river, 22 m. N.E. of Brussels. Fierce fighting took place here in the opening stages of the Great War. The Germans captured the town on Aug. 19, 1914. The Belgians regained it later, but it was in German hands from Oct., 1914, until the end of the struggle. Pop. 7,800.

AESCHINES (389-314 B.C.). Athenian orator and statesman. He became leader of the party which urged the futility of resistance to Macedonia, and Demosthenes did not hesitate to accuse him of corrupt motives. After the Macedonian victory at Chaeronea (338), Ctesiphon, a friend of Demosthenes, proposed that a golden crown be given to Demosthenes for his services to the state. Aeschines, in 330, prosecuted Ctesiphon on technical grounds. Demosthenes' speech for the defence (De Corona), in which he justified his whole anti-Macedonian policy, was a masterpiece, and Aeschines was exiled. See Demosthenes; Consult also Attic Orators, R. C. Jebb, 1876.

AESCHYLUS (525-456 B.C.). Greek tragic poet. Born at Eleusis, a town of Attica, he fought with distinction in the battles of Marathon (490) and Salamis (480). In 499

he first entered for the prize offered for the best tragedy, but it was not until 484 that he obtained first place. The later years of his life were spent largely away from Athens. Two, perhaps three, visits being made by him to Sicily, where he died at Gela in 456.

Aeschylus, Greek tragic poet. Bust at Capri, Rome

Seventy tragedies in all are credited to Aeschylus, of which only seven survive. Of these the best are The Persians, an expression of the sense of triumph felt by the Greeks after the Persian Wars; Prometheus Bound; and the great trilogy of the Agamemnon, Choephori and Eumenides, which relates the return of Agamemnon from Troy and his murder at the hands of Clytemnestra, his unfaithful wife; the vengeance exacted by his son Orestes, who kills his mother and her paramour; the pursuit of Orestes by the Furies, and his absolution by the Areopagus at Athens. The Agamemnon is the greatest of all the plays of Aeschylus and one of the world's masterpieces of dramatic literature. The best edition is that of F. A. Paley, 1879, and there are English verse translations of all the plays by E. H. Plumptre, 1868, and Lewis Campbell, 1890.

AESCLAPIUS. Roman, and better known, name of the Greek god Aesclepios. In

classical mythology he was the god of medicine, though Homerspeaks of him as a mortal. By his knowledge of the healing art he was able to restore the dead to life, and his use of this power aroused the anger of Zeus, who killed him with a thunderbolt. In later times the chief seat of his worship was at Epidaurus.

Aesculapius and Hygieia. Statuary in the Vatican

where his temple served the purpose of a modern hospital. The symbol of Aesculapius, a staff with a serpent twisted round it, is the badge of the R.A.M.C.

AESIR. Plural of As and the collective name for the chief gods of Norse mythology. They included Thor, Baldr, Njörd, Frey, Loki, who with Freyja and other goddesses dwelt in Asgard (home of the gods). They waged war against the powers of evil and were themselves threatened with destruction by Ragnarök, the twilight of the gods.

AESOP (c. 620-560 B.C.) Traditional author of the famous collection of fables. A native of Phrygia and originally a slave in Samos, he is said to have won the favour of Croesus, king of Lydia, who employed him on important missions. One of these was to Delphi, and Aesop, giving offence to the Delphians, was thrown over a precipice. Tradition represents him as very ugly but very witty. The fables in Greek verse by Babrius and in Latin verse by Phaedrus (q.v.) contain translations or adaptations of many fables ascribed to Aesop.

Aesop, famous Greek fabulist. Bust in Villa Albani, Rome

AESTHESIOMETER OR **ESTHESIOMETER** (Gr. aisthesis, sensitiveness; metron, measure). Instrument for measuring sensitiveness to touch in the human body. Its principle is that two separate points are applied to one part of the body, and the minimum distance at which they are felt as two points is taken as the degree of sensitiveness. It is found that the tip of the tongue is the most sensitive part.

AESTHETICS. The term æsthetic (Gr. aisthetikos, perceptive) is explained in the Oxford English Dictionary as "the philosophy or theory of taste or of the perception of the beautiful in nature and art." One of its purposes is to define the beautiful and to analyse the attitude to it of the human mind. Not only perception is involved, but pleasure, and the objects provoking this are of more than one kind. There is beauty in the ordinary sense, that is, a combination of subtly contrasting but harmonious qualities; and there are the complex sentiments of the sublime and the ludicrous, which are closely connected to the aesthetic feeling.

Beauty presented in the arts has essentially the same aesthetic effect as that offered by nature. Practical aesthetics consists in the establishment of a rational basis for art criticism. It enables the student to distinguish, for instance, in architecture, works of art from mere structures of utility; in painting, it teaches appreciation of treatment apart from the subject of the work. The principles of design and ornament also fall under the head of practical aesthetics.

Conditions of production and the psychology of the artist are also the concern of aesthetics. Much light has been thrown on the former by the study of primitive man in whose life a prominent part was taken by art. Later investigations have shown that the practice of forms of art such as personal adornment and the dance is of distinct service to the individual and the community, although recognition of this ultimate utility is not the determining cause of the artistic operation.

Æstheticism was the popular name for the movement started by D. G. Rossetti, William Morris, and others who rose in revolt against the ugliness of the Victorian age.

AEROPLANE. REPRESENTATIVE BRITISH AND FOREIGN MACHINES IN RELATIVE SIZES

The machines illustrated are British unless otherwise stated. In the case of foreign machines the country of origin is indicated in parentheses thus—(Fr.) French: (Ger.) German, etc.

Specially drawn by Leonard Bridgman

Consult Aesthetics, B. Croce, trans. 1909; The Nature of Beauty in Art and Literature, C. Mauron, trs. R. Fry, 1927; The Theory of Beauty, E. F. Carritt, 3rd ed., 1928; The Meaning of Beauty, W. T. Stace, 1929.

AESTIVATION (Lat. aestivare, to pass the summer). In zoology, the summer sleep of animals, resembling the more common hibernation, or winter sleep. It is seen chiefly in molluscs and fresh-water fish that are unable to endure a dry condition.

In elementary botany the term aestivation is used to indicate the arrangement of the parts of a flower in the unexpanded bud.

AETHERIOSCOPE (Gr. aether, air; skopein, to examine). Instrument for measuring differences of temperature produced by radiation. It can also be used to record minute variations of temperature brought about by changing conditions of the sky. It consists of a differential thermometer, the bulbs of which are placed in a concave or encephalic mirror, one of the bulbs being in the focus of the mirror. It was invented by Sir John Leslie, who described it in the Transactions of the R. Society of Edinburgh, 1818.

AETIUS (d. A.D. 454). Roman general under Valentinian III, Roman emperor of the west. He defended the frontiers of the Empire for nearly 20 years, and in 451 defeated Attila near Châlons. His son was betrothed to Valentinian's daughter, but in 454 the emperor, suspecting that Aëtius had designs upon the throne, killed him.

AFFIDAVIT (Lat. ad, to; fides, faith). In English law, a statement put into writing, and then sworn to and signed by the witness, who is called the deponent. The oath may be administered by any person who has authority to administer oaths in the court where the affidavit is to be used, usually a commissioner for oaths: or, abroad, by a British consul. Affidavits are not used, except by consent or special leave, as evidence in the trial of actions, except sometimes in the Chancery Division, but they are used in interlocutory proceedings.

AFFILIATION (Latin ad, to; filius, son). Legal term meaning the fixing of the paternity of a bastard child. Proceedings may be taken against the man by the mother or a public assistance authority, by means of a summons in a magistrate's court. They must be begun either before the birth or within 12 months thereafter: and, upon paternity being proved, the magistrate may order the father to pay a sum to cover lying-in expenses, and not exceeding 20s. a week until the child is 16.

AFFIRMATION (Latin ad, to; firmus, firm). Solemn declaration made before a competent officer in place of a judicial oath. Any person who, on giving evidence, or upon any other occasions when an oath is required, objects to be sworn, is allowed to make an affirmation instead. But he must give as his reason for objecting to an oath either (1) that the taking of an oath is contrary to his religious belief; or (2) that he has no religious belief. In 1833 Quakers and Moravians were allowed to affirm, and in 1888 the privilege was granted by law to others if they had objection to taking an oath. An affirmation has the same force as an oath. See Oath.

AFFORESTATION. The word afforestation is here used in the ordinary sense of clothing bare ground with trees. It represents an effort to repair loss due to reckless exploitation or to destruction by fire. The term also includes plantations designed to turn waste land or poor pasture to better account, to provide shelter from wind, to stem the violence of torrents, to check the denudation of steep ground, or to fix shifting sands.

The need for afforestation varies in each country in inverse proportion to its own timber resources and its facilities for obtaining supplies elsewhere. Great Britain, whose need

of timber is the greatest of all countries, has hitherto relied on her purse and her ships to bring her all she requires. The immense loss incurred on this account during the Great War, and the uncertainty of the world's supplies, especially those of Russia, from which in recent years half the British imports have been drawn, have compelled the Government to adopt a policy of afforestation. The scheme adopted provides for the planting of 1,750,000 acres, which will increase the existing forest area by more than half. This will not suffice to guarantee adequate supplies in normal times unless Canada, which is the great timber reserve of the British Empire, effectually protects her forests from fire.

Afforestation in Great Britain is controlled by the Forestry Commission, which was set up in 1919. It has acquired over 500,000 acres of land, including the crown lands transferred to it in 1924, and has planted over 117,000 acres. It has power to aid afforestation by making grants to local authorities and private individuals. See Forestry.

AFFRIC. Glen, river, and lake of Inverness-shire, Scotland. The glen is considered to be the most beautiful in the kingdom, and the river, 18 m. long, passes through it and the lake to join the Glass river.

AFGHANISTAN. Afghanistan is a country lying N.W. of India and forming a buffer state between Russia and the Indian Empire. Its estimated area is 245,000 sq. m. It is mainly mountainous, broken by deep ravines and fertile valleys. From the N.E. it is crossed by the lofty ranges of the Hindu Kush, some of the peaks reaching 24,000 ft. in height. The climate is generally healthy and dry and is marked by extreme variations of temperature. There are two harvests

Afghanistan. The buffer state between Russia and India. It is mostly mountainous country broken by rocky ravines and fertile plains

annually, yielding cereals, vegetables, and fruit, especially grapes. Copper, iron, and gold are worked. Silk and carpets are manufactured.

Connecting with India there are four main lines of communication, the two most important being from Peshawar through the Khyber Pass to Jalalabad and Kabul; and from Quetta through the Bolan Pass to Kandahar.

Afghanistan, with a population estimated at 6,380,000, is inhabited by a variety of nationalities, generally spoken of as Afghans, though properly only the Durani, one of the two dominant tribes, are Afghans. The languages are Persian and Pushtu, and the religion Mahomedan. The principal towns are Kabul, the capital, in the E., Herat in the W., and Kandahar in the S.

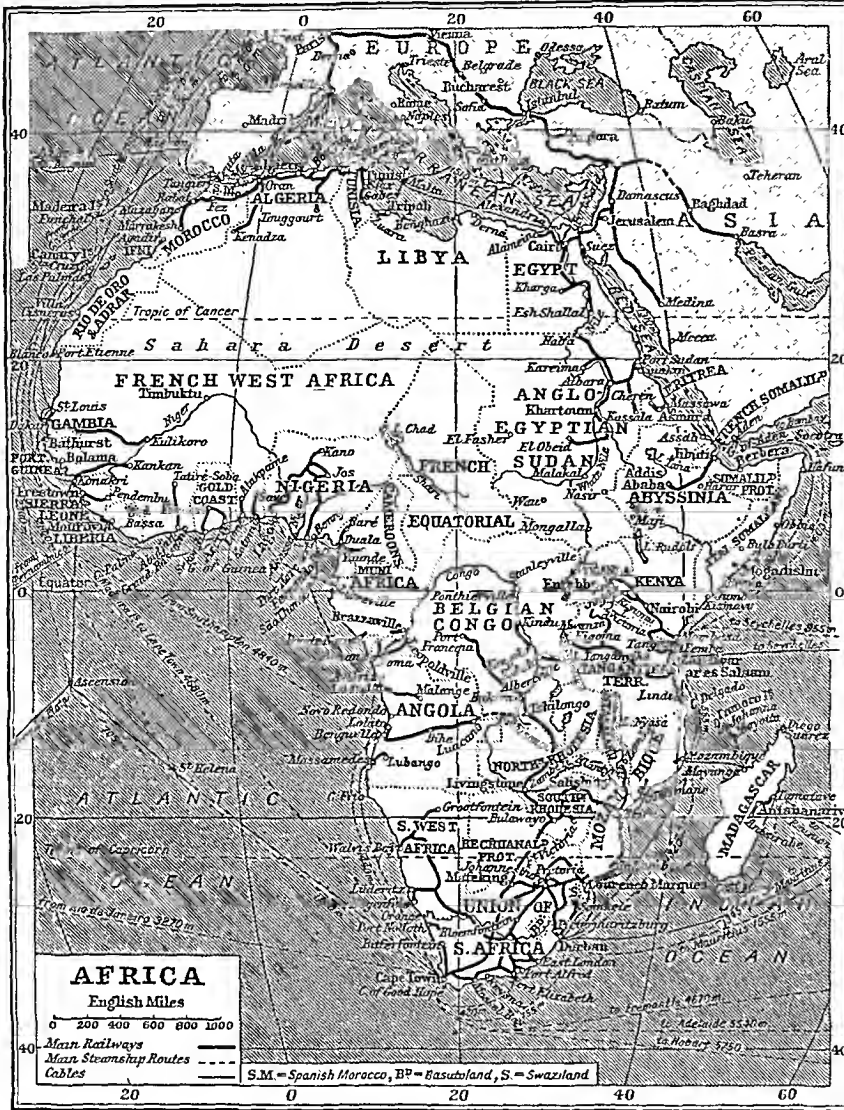

The history of Afghanistan dates from the 5th cent. B.C., its modern history from about 1747, in which year the Durani dynasty was founded by Ahmad Khan. In 1838, following the discovery of negotiations with Russia, Afghanistan was invaded by a British force and the Ameer sent as a prisoner to India. The occupation of Kabul led to an insurrection in 1841 and to a massacre of the British. Two British forces recaptured Kabul in 1842 (first Afghan War). Sher Ali, son of the banished Ameer succeeded him and by his intrigues with Russia provoked in 1878 the second Afghan War.

By a treaty made in 1879 with his son, Britain attained control of Afghan foreign policy, stipulated for residence of her representative at Kabul and extended the British frontier by occupying the Khyber Pass. Further massacres, including that of the British resident, Sir Louis Cavagnari, were followed by Roberts being sent with an army to Kabul, where he remained for nearly a year, engaged in almost constant hostilities. In July, 1880, he marched to Kandahar and defeated the Afghan army besieging that city. From 1881 to 1901 Abd-ur-Rahman was sole ruler, when he was succeeded by his son Habibullah Khan. Difficulties between Russia and Britain concerning the Afghan northern boundary were settled by diplomacy.

Following the assassination of the Ameer in 1919, his third son and successor, Amanullah Khan, began a campaign against Britain, but was defeated at all points and forced to make peace. In 1929, owing to his introduction of western customs, there was a serious rising, during which he and his family and the British residents in Kabul were rescued by the British Air Force. He subsequently abdicated in favour of the rebel leader, Habibullah Ghazi.

Afghanistan. Group of Brahuis, hill people on the Baluchistan frontier. Above, Afghan merchant

Africa. Map of the continent showing its extensive coastline and division into countries

but the latter was soon defeated and a leading Afghan soldier, Nadir Khan, was chosen king in October of that year.

Consult *L'Afghanistan*: géographie, histoire, ethnographie, voyages, R. Furon, 1926; *Afghanistan of the Afghans*, S. I. A. Shah, 1928; *Through the Heart of Afghanistan*, E. Trinkler, trans. B. K. Featherstone, 1928; *Afghanistan*: from Darius to Amanullah, Sir G. MacMunn, 1929.

AFRICA. This great continent forms a S.W. extension of Asia, to which it is attached by the isthmus of Suez. From N. to S. it stretches about 5,000 m., and about 4,000 m. from its W. to E. extremes. The total area is about 11,500,000 sq. m., and the estimated population some 180,000,000.

The coastline is almost unbroken. Orographically the continent may be divided into four regions: (1) the coastal plains; (2) the Atlas region of N. Africa; (3) the north and west African plains, including the Sahara; and (4) the great southern and eastern tablelands. In the southern plateau there are a number of ridges, and in equatorial regions many craters of extinct volcanoes, such as Kilima-Njaro (20,000 ft.) and Kenya (18,500 ft.). The principal rivers are the Nile, Congo, Niger and Zambezi, and about two-thirds of the continent drains towards the Atlantic. There is a vast interior lake system,

including Lakes Victoria Nyanza, Tanganyika, and Nyasa in the E. and Lake Chad in West Africa. The principal deserts are the Sahara, Libyan and Nubian in the N. and Kalahari in the S.

Typical flora includes the date-palm in the Sahara oases, rubber-yielding lianas, the oil-palm and other economic plants in W. and Central Africa, mahogany and ebony in the vast forests of the coastal region and of the Congo basin, cedar and the Ibean camphor in British East Africa, etc. The African fauna proper includes the giraffe, single-humped camel, buffalo, zebra, rhinoceros, lion, leopard, elephant, chimpanzee, gorilla and baboon.

Gold is found over wide districts, especially in the S.; iron ore is worked in Algeria, copper in the Belgian Congo and coal chiefly in S. Africa.

There are four main language groups: Bantu (S. Central Africa), Sudanic (W), Hamitic (chiefly N.), and Semitic (N.E.). The two former are negro groups and together comprise about 1,170 languages, while there are 50 Hamitic languages. The Semitic languages are intrusive and belong to Asia.

The majority of the inhabitants are negroes; others include Bushmen and Hottentots, Eastern Hamites, Libyans, occupying Algeria and Morocco, Semites or Arabs, and numerous tribes of mixed race.

HISTORY. Africa's ancient history is confined to the northern part. The primitive population consisted of pygmies (who still remain in Central Africa), and immigrants from Arabia and Asia. The first settlements were Egyptian, Phoenician and Greek. From the first century Northern Africa was successively annexed wholly or in part by Rome, the Vandals, Arabia, Turkey, and, in the 18th century, France. There was early colonisation of parts of Central and S. Africa by the Egyptians, Phoenicians, Greeks, and Arabs. In the 15th and 16th centuries Portuguese explorers descended the W. coast, reaching the Congo and doubling the Cape.

The first English reached the Gold Coast in 1582. By the 19th century they had out-distanced all other European explorers. They put much of lower Egypt on the map, explored Abyssinia and Senegambia, discovered the Upper Niger and the Orange River, the sources of the Nile and the great lakes bordering Tanganyika. Famous explorers of the time were Bruce, Mungo Park, Burton, Speke, Livingstone and Stanley.

To-day the British Empire in Africa, including mandated areas, comprises some 4,652,000 sq. m., with an estimated population of 50,000,000. The French possessions cover only a little less. The chief of the British possessions are the Union of South Africa, with the S.W. Africa Protectorate, which it governs for the League of Nations, the Anglo-Egyptian Sudan, Rhodesia and the Protectorates of Kenya, Nigeria, Uganda, Somaliland and Nyasaland. Smaller areas are Sierra Leone, Mauritius, Gold Coast and Gambia. Tanganyika Territory is governed under a mandate. The Congo Free State was annexed by Belgium in 1908.

French possessions comprise part of Morocco, Madagascar, Algeria, Tunis, a vast tract in N. and W. Africa which includes most of the Sahara, and part of the Congo; Portugal has territories in W. and S.E. Africa; Italy's dependencies are Eritrea, Italian Somaliland, and Libya (comprising Tripolitania and Cyrenaica), while Spain holds part of Morocco, Rio de Oro and Spanish Guinea.

In 1919, Germany was deprived of her African possessions, Great Britain, France and Belgium being appointed to act as mandatories of the League of Nations. Abyssinia is an independent kingdom, and Egypt was declared an independent state in 1922.

In this work, each country, town and important physical feature is dealt with under its own heading. See Abyssinia; Cairo; Congo; Nigeria; Nile; South Africa, etc.

AFRICA GENERAL SERVICE MEDAL.

British decoration awarded in 1902 to commemorate military expeditions in East, Central, and West Africa. It shows on the obverse the head and bust of King Edward VII. in a field-marshal's uniform; on the reverse a figure of Britannia with lion gazing over a desert at the rising sun. The ribbon is yellow with black edges and two narrow green stripes.

Africa General Service Medal

The medal commemorates incessant warfare of a minor but exacting type. Clasps awarded are for N. Nigeria and S. Nigeria for various dates; Uganda, 1900; Jubaland, Gambia, Lango, 1901 and 1902; Jidballi and Kissi, 1905; Somaliland, 1901 and 1902-4; British Central Africa, 1899-1900; and Aro, 1901-2. The majority of the clasps have been won by the King's African Rifles. A medal of the same name and similar design was issued in 1916.

AFRICAN LILY (*Agapanthus umbellatus*). Fine bulbous plant of the lily family, with long, fleshy, strap-shaped leaves, from the middle of which rises a leafless stem, two or three feet high. On the top is an umbel of many bright blue funnel-shaped flowers. It is a native of S. Africa, whence it was introduced to English conservatories in 1692. See Lily.

African Lily,
Agapanthus

AFRIDI. Pathan tribe of the Indo-Afghan frontier. Tall, lean, light-tinted Iranian Aryans, and avowedly Sunni Moslems, they speak a north Pushtu dialect. Of their eight clans the Adam Khel, of the Kohat Pass, and the Zakka Khel, of the Khyber Pass, have been the objects of British punitive expeditions.

AFRIKANDER BOND. Association of Afrikaners, i.e. Dutchmen born in S. Africa, formed in British South Africa in 1880. Its object was to secure the independence of the country. In time the objects of the Bond became somewhat less hostile to British rule, but it was supported by the more aggressive section of the Dutch, and during the war of 1899-1902 it sympathised with the Boers.

AGADIR. Bay and port of Morocco, 23 m. S. of Cape Ghir. In 1910, as a counterpoise to the influence of France in Morocco, some German capitalists bought from the sultan concessions over a large part of the country. In July, 1911, the German Government sent the gunboat Panther to Agadir, and her officers promised the Moroccan kaid the support of Germany in resisting the control of France. This nearly brought about a European war, but the two Powers came to an arrangement by which France was given a free hand in Morocco in return for the cession of about 100,000 sq. m. of land in the Congo basin to Germany. In 1930 it was made a free port.

Agag. Amalekite ruler spared by Saul against the divine command and cut to pieces by Samuel a. Gilgal (1 Sam. 15).

AGAGIA. Station in the Libyan desert, about 14 m. S.E. of Barrani and 12 m. inland from the Mediterranean. It is near the coast road W. from Alexandria. Near here in Feb., 1916, a British force defeated the Senussi (q.v.).

AGAMEMNON. In Greek legend, king of Mycenae in Argos, and leader of the Greeks in the Trojan War. He was the brother of Menelaus, the husband of Helen, whose abduction by Paris was the cause of the war. The Greek fleet was assembled at Aulis, but detained there by a calm sent by the goddess Artemis, whom Agamemnon had offended by killing a stag sacred to her. To appease the goddess, Agamemnon agreed to sacrifice his daughter Iphigenia; but at the moment of sacrifice she was carried off in a cloud by Artemis.

In the tenth year of the war occurred the famous quarrel between Agamemnon and Achilles over the possession of the captive maiden Briseis. At the end of the war, when Agamemnon returned to Mycenae, he was murdered, together with the Trojan princess Cassandra, by his wife Clytemnestra and her paramour Aegisthus. They were afterwards put to death by Agamemnon's son Orestes. The story is the subject of the trilogy—Agamemnon, Choephoroi, and Eumenides—of Aeschylus and of tragedies by Sophocles and Euripides. See Orestes.

AGAMOGENESIS (Gr. a, not; gamos, marriage; genesis, origin). In biology, an asexual method of reproduction found among some lower animals and in certain plants, in which the reproductive cell develops without fusion with any other cell.

AGAPE (Gr. agapē, love). Love feast peculiar to the early Christian Church. It preceded or followed the Eucharist, and later became a charitable gathering and a social banquet. Abuses arose and it was condemned by the councils of the Church. It survives in the distribution of blessed bread after the Eucharist in Eastern and French churches, and in certain social gatherings held by the Moravians.

Afridi of the Indo-Afghan frontier

Agapemone was the name given to the headquarters of a community of both sexes founded in Somersetshire in 1859 by Henry James Prince, formerly a doctor of medicine and a Church of England clergyman (1811-99). Prince styled himself "the beloved" and a reincarnation of the Holy Ghost. He and his followers lived in a luxuriously furnished building at Spaxton, professedly with all things in common, but yielding implicit obedience to the head. Prince was succeeded by T. H. Smyth Pigott, also a clergyman, in 1902.

AGAR AGAR. Jelly used by bacteriologists for their cultures. It is a vegetable gelatine produced chiefly from a red seaweed known as Ceylon moss (*Gracilaria lichenoides*). The same seaweed is much used in the East as a basis for soups and jellies.

AGARIC (Gr. agarikon, fungus). General term in botany used to denote numerous species of fungi, including the mushroom. They bear their spores on thin plates or gills on the lower surface of the cap and radiating from the stem. See Mushroom.

Agaric. Poisonous kind, the fly agaric

AGASSIZ, JEAN LOUIS RODOLPHE (1807-73). Swiss-American naturalist. Born at Motier, Switzerland, May 28, 1807, he was professor of natural history at Neuchâtel, 1832-46, and an ardent follower of Cuvier. His work in 5 volumes, *Recherches sur les poissons fossiles*, was published 1833-43, and his scientific investigation of the movements of glaciers resulted in *Etudes sur les glaciers*, 1840. In 1848 he was appointed professor of natural history at Harvard, where later he established the museum of comparative zoology. He left his great work on the *Natural History of the U.S.A.* unfinished. He died at Cambridge, Massachusetts, Dec. 14, 1873.

J. L. R. Agassiz,
Swiss-American
naturalist

His son Alexander Agassiz (1835-1910) was born at Neuchâtel, graduated at Harvard in 1855, and was curator of the Harvard Museum of Comparative Zoology, 1874-97. He specialised in marine zoology and established a marine station on Rhode Island in 1875.

The Agassiz Association, an American society for nature study, was named after the elder Agassiz.

AGATE. Form of silica deposited from water, usually presenting a banded or ribbon-like structure due to pauses in its growth. On account of its hardness and toughness it is used as bearings in scientific instruments, e.g. chemical balances. The more delicately banded

and coloured varieties are used as ornamental stones and are known as onyx, cornelian, etc.

AGATHA (d. 251). Saint, virgin and martyr. Sicilian by birth, she suffered martyrdom under Decius at Catania, after having been tortured by the praetor Quintianus, whose addresses she had rejected. Canonised by Pope Gregory I, a chapel in Catania cathedral is dedicated to her, and her festival is kept on Feb. 5. Her name is in the Church of England calendar.

AGATHOCLES (361-289 B.C.). Tyrant of Syracuse. Of humble birth, he entered the army as a common soldier, but having married the widow of his wealthy patron Damas, became the richest man in Syracuse.

Expelled from the city by his enemies, he returned with a band of mercenaries and was besieged in Syracuse 310 B.C., but triumphantly carried the war into the enemy's country in N. Africa. Henceforth (307 B.C.) he was king of all Sicily. His successful campaigns in Italy and the Lipari islands consolidated his rule.

Agathocles, Tyrant of Syracuse
Dust in National Museum, Naples

AGATHON (d. c. 400 B.C.). Athenian dramatist. He was a pupil of Gorgias and a friend of Plato and Euripides. Only fragments of his tragedies have survived, but the Alexandrian critics assigned him a high place. He wrote *The Flower*, the first Greek play with an original plot, the subject of previous dramas having been taken from mythology. He was also the first to make his choral odes mere lyrics.

AGAVE OR AMERICAN ALOE. Plant so called from a superficial likeness to the true aloe, to which it is not related. There are many species of agave, all natives of S. America, Mexico, and the southern United States; the best known is the noble *Agave americana*. The stem is very short and supports a rosette consisting of about 40 leaves some 5 ft. in length and more than 1 ft. broad. They are very thick and fleshy, and the edges are armed with hard spines.

Agave,
or American Aloe

The plant matures slowly in from 10 to 70 years, and then very rapidly develops a flowering stem from 15 ft. to 40 ft., its upper portion bearing several thousands of yellow-green flowers. The flowering exhausts the plant, and it soon dies. The roots and leaves contain fibres from which twine, cordage, and paper are made.

AGEN. City of France. Capital of the department of Lot-et-Garonne. It is on the Garonne, 84 m. by rly. S.E. of Bordeaux. The ancient Aginnum, it is a bishop's see, has a 12th century cathedral, and many old buildings and institutions. It is noted for its poultry, and is a rly. centre. It was the birthplace of Joseph Sealger. Pop. 23,391.

In medieval times the district round the city of Agen was known as Agenais, and formed part of Aquitaine and later of Toulouse

AGENDA (Lat. agenda, things to be done). Name given to the programme of a business meeting of any kind. The agenda is usually prepared by the secretary for the guidance of the chairman.

AGENT. In law, one who acts for and on behalf of another (the principal) in such a way as to make the principal legally liable for his acts and defaults. The legal relationship is termed the agency.

By the doctrine of ratification, if a person purports, without authority, to act for a principal, the principal may, on learning what has been done, ratify the agency and take the benefit and assume the burden of what had been done in his name. If, however, he refuses to recognize it, the agent is personally liable, on what is called a "warranty of authority." The authority of an agent is revoked by the death or bankruptcy of the principal. It may also be expressly revoked at any time by the principal. An agent is entitled to be reimbursed and indemnified for all acts done and expenditure incurred within the scope of the agency. He is liable for negligence in the conduct of his principal's business.

Agent general is the name given to the London business representatives of the six states of the Australian Commonwealth and most of the provinces of Canada.

In France, a government agent who associated with conspirators and disaffected persons generally, incited them to violence and crime, and then betrayed them to the authorities, was known as an agent provocateur.

AGESILAUS (c. 442-360 B.C.). King of Sparta and one of the ablest generals of his time. An appeal from the Greeks of Asia Minor for help against the Persians led him to declare war against Persia. After a victory on the Pactolus in 396 he was obliged to return to defend Sparta against a coalition of Athens, Thebes, Argos, and Corinth. The coalition was beaten at Coronea in Boeotia in 394 B.C. Thebes, however, gradually increased in power, and in 371 Sparta was defeated at the battle of Leuctra, and might have suffered extinction but for the efforts of Agesilaus. In 361 Agesilaus led an expedition into Egypt to assist King Tachos against the Persians, but died in the following year.

AGGTELEK. Village of N. Hungary, in Gömör es Kis-Hont co., N.E. of Budapest. In the neighbourhood are the famous labyrinthine stalactitic caves, measuring, with side branches, over 5 m. in length, in which prehistoric remains have been found.

AGHA or **AGA.** Title used by the Turks for the chief of the janissaries, for military officers, and for the head eunuch. It is also a general term of respect among Mahomedans.

AGHA KHAN. Title of Hasan Ali Shah (1800-81), hereditary chief and unrevealed imam of the Ismailite sect of the Mahomedans.

He was governor-general of the province of Kerman under Fateh Ali Shah, but fell out of favour and fled to India, settling in Bombay under the protection of the British. For his valuable services, notably in the first Afghan war and the Sind campaign, he was granted the title of highness and a substantial pension. Agha Khan III (b. 1875) was knighted in

Agha Khan III,
Indian Prince
Lafayette

1902, and for his important service in the Great War was granted the status of a first-class Indian prince. In 1929 he married Andrée Carron, a French lady.

AGHA MOHAMMED (c. 1740-97). Shah of Persia and founder of the Kajar dynasty. The son of the Kajar chief, Mohammed Hasan,

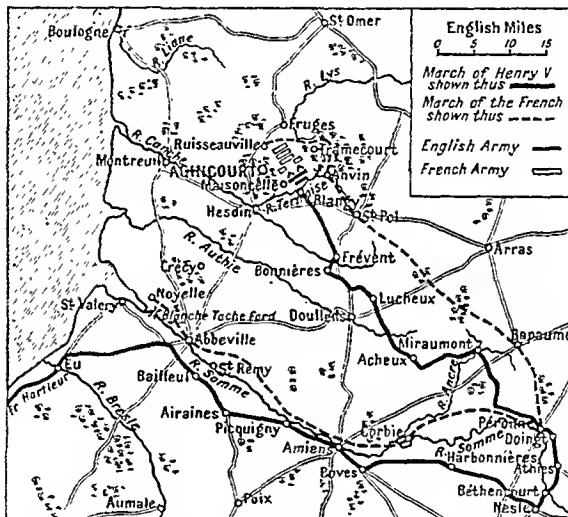

he was mutilated in boyhood by Adail Shah, and became known as the eunuch. After his father's death he surrendered to the Zend chief Karim Khan, by whom he was kept at Shiraz. At Karim's death in 1779 he escaped from Shiraz and began his struggle for the crown. In 1795 he took Kerman, massacred the inhabitants, and murdered the reigning sovereign. He was crowned shah in 1796 at Teheran, which he made his capital, but only reigned until his murder in 1797.

Agha Mohammed,
Shah of Persia

AGINCOURT. Village in the Pas-de-Calais, about 14 m. from St. Pol. It gives its name to the battle fought between the English and the French, Oct. 25, 1415.

The English force of about 9,000, under Henry V, consisted largely of archers, and was outnumbered by the French in a ratio of four to one. With this handicap, and suffering from

Agincourt. Map showing the route followed by the British force under Henry V, before the great battle of Oct. 25, 1415

fatigue and lack of provisions, it nevertheless defeated the French after three hours' fighting, and drove the enemy from the field with losses that nearly equalled the entire British strength.

The British warship Agincourt was built at Elswick for Brazil, and then taken over by Turkey. In 1914, when nearing completion, the British Government took her and she was present at Jutland.

AGIRA. Town of Sicily, in the province of Catania. It was formerly known as San Filippo d'Argiro, being on the site of the ancient Agrigum. It is one of the oldest cities of Sicily, is 35 m. N.W. of Catania and noted for its marble. Diodorus Siculus, the Greek historian, was born here. Pop. 22,485.

AGISTMENT (Lat. ad, to; O. Fr. giste, lodging). Term in English law for the practice of hiring the right to graze cattle. The person who contracts to graze the cattle must take reasonable care of the beasts, or he is liable for damages. The agisted cattle cannot be seized for arrears of rent.

AGITATOR OR **ADJUTATOR** (Lat. agitare, to act frequently). Name, merely meaning an agent, given in 1647 to the representatives chosen by the regiments of Cromwell's New Model Army to present the grievances of the soldiers to the generals and to Parliament.

The agitators, who belonged to the rank and file, acted with the council of officers to resist the arbitrary acts of the Long Parliament; they obtained some money, but their main grievances were not redressed. They seized the king (Charles I) at Holmby House, and the army marched to London, but Cromwell soon restored order, and the agitators disappeared.

AGNES (d. 306). Roman saint, virgin, and martyr. She was beheaded at the age of 13 under Diocletian, and is commemorated on Jan. 21. A church in Rome is dedicated to her, her name is retained in the Church of England calendar, and her martyrdom is the subject of paintings by Tintoretto and others.

AGNEW. Family of art dealers and publishers. Thomas Agnew (1794-1871) was mayor of Salford in 1851. His sons were Sir William Agnew (1825-1910), the first baronet, and Thomas Agnew. The business was later carried on by William Lockett Agnew (1858-

1918) and other members of the family. In 1870 the Agnews obtained, through marriage, an interest in Punch, and from 1890 Sir William Agnew was closely identified with that periodical.

AGNI. In Hindu mythology, the god of fire. Prominent in Vedic hymn and legend, he is pictorially represented with two faces, three legs, and seven arms, and riding on, or accompanied by, a ram.

AGNOMEN. In Roman nomenclature, an extra name, added as a sign of service to the state or as indicative of some characteristic. Thus Scipio received the agnomen of Africanus as the destroyer of the African power of Carthage; while Fabius was called Cunctator (the delayer), in allusion to his waiting policy against Hannibal.

Agincourt. British warship that took part in the Battle of Jutland. Built for Brazil and transferred to Turkey, she was taken over by Britain in 1914

AGNOSTICISM (Gr. a, not; gnostikos, knowing). Name given by Huxley in 1869 to that mental attitude which regards as unknowable whatever is not capable of scientific demonstration. Hence the existence of God, of the soul in the spiritual sense, and of any other than material existence, is held to be beyond the cognition of man. This attitude is distinct from that of atheism. See Atheism; Free Thought.

AGNUS DEI (Lat. Lamb of God). Symbolic title given to Christ by S. John Baptist (John I) in allusion to His atoning sacrifice. The representation of Christ under the form of a lamb bearing a banner or a staff headed with a Greek cross is of great antiquity in ecclesiastical art.

AGONY COLUMN, THE. Personal advertisement column in newspapers. It contains appeals for missing relatives and friends, and similar matter. These advertisements are often in cipher. The dynastic change brought about in Portugal in 1833 is said to have been conducted by means of the Agony Column of The Times.

AGORA (Gr. assembly). Originally used to denote the assembly of the people summoned by the kings of ancient Greece, the term came to mean meeting place. It was usually the central square of the city, corresponding to the Roman forum.

AGOUTI. South American and West Indian rodent of the genus *Dasyprocta*. The common agouti is about 18 ins. long and, though distinctly allied to the guinea-pig, somewhat resembles a brown rabbit but without the characteristic ears. Dwelling in woods, and gregarious and nocturnal in habit, it is very destructive in sugar plantations.

AGRA. City and fortress of India from which both a division and a district of the United Provinces take their names. It is on the right bank of the Jumna, 138 m. by rly. S.E. from Delhi. The fortress erected by Akbar in 1566 is surrounded by walls 1½ m. in circumference and 70 ft. high, and contains the palace of Shah Jāhān; beyond the walls E. of the city is the celebrated Taj Mahal. The Moti Masjid and Jama Masjid are magnificent mosques, and there are remains of tombs and palaces.

interpolations. They include the sayings found on papyrus at Oxyrhynchus by Grenfell and Hunt in 1897 and 1904, the genuineness of most of which is questioned. See Logia; consult also Paralapomena: Remains of Gospels and Sayings of Christ, B. Pick, 1908.

AGREEMENT (Lat. ad, to; gratus, pleasing). In English law an agreement presupposes two or more parties and a common intention; also that it is intended to affect the legal relations of the parties. Contract is

Agra. Fort and Delhi Gate of the city of Agra. The fort, built by Akbar in 1566, is surrounded by a strong and lofty two-tiered wall of red sandstone. Above, the Taj Mahal, the white marble mausoleum built in 1632 by the emperor Shah Jāhān for the remains of his favorite wife

British buildings include the Government House, college, and barracks. An important rly. and commercial centre, the city manufactures shoes, lace, and inlaid mosaics, and is an emporium for grain, cotton, tobacco, and sugar. The Jumna river and the Agra canal afford additional transport facilities. From 1566-1658 Agra was the capital of the Mogul Empire. It was captured by Lord Lake in 1803, and withstood a siege of several months during the Mutiny. Pop., city, 185,532; dist., 1,060,528. See Taj Mahal.

AGRAM. Town of Yugo-Slavia, known to the Hungarians as Zagreb or Zagreb. It stands near the left bank of the Save, 42 m. by rly. E.N.E. of Fiume. Its chief buildings include the 15th century Gothic cathedral, archiepiscopal palace, palace of the ban or governor, university founded in 1874, and natural history museum. Founded in 1094 by Ladislaus I, it became a free city in 1242, and the capital of Croatia-Slavonia in 1867. In Oct., 1918, when the Austro-Hungarian empire was breaking up, a Croatian provisional government was set up here. It manufactures leather, linen, carpets, and wagons, and trades in wine, cereals, and hides. Pop. 130,000.

AGRAPHA (Gr. agraphos, unwritten). Word used for reputed sayings of Jesus Christ not found in the Gospels and for certain sayings that, found therein, are thought to be

one kind of agreement. There are others—e.g. marriage. An agreement to make a gift is not a contract. An agreement to do, or abstain from doing, or to pay money is only enforceable if the agreement is a contract. Agreements to be valid must be stamped, usually with a 6d. stamp. See Contract.

AGRICOLA, GNAEUS JULIUS (A.D. 37-93). Roman general and administrator and governor of the Roman province of Britain. In A.D. 59 he served with the Roman army in Britain, and saw further service in Asia, again in Britain, and in Aquitania. Governor of Britain 78-86, he was recalled to Rome by Domitian. Agricola is the subject of a biography by his son-in-law Tacitus, the Roman historian. This claims for him a record as a conqueror and administrator which the result of research has failed to confirm. His recall was probably due to the feeling that the results of the campaigns were not commensurate with his efforts.

AGRICULTURAL CREDIT. In Great Britain, following the example of certain other countries, this is now given to farmers and smallholders by banks and societies.

An Agricultural Credits Act was passed in 1923. By this the Ministry of Agriculture was empowered to make advances to farmers and others on approved security. In five years to March 31, 1928, the amount advanced to

farmers was £4,612,600. In 1928 a further Act was passed with the object of extending the system of agricultural credits. Under it a company was formed, its capital being subscribed by the Bank of England and the large banks. It can give credits for longer periods.

AGRICULTURAL LABOURER. One who works on the land for weekly wages. According to the census of 1921 there were 581,594 agricultural labourers in England and Wales, the number having decreased seriously during the previous thirty or forty years.

Owing to low wages, bad housing, long hours of labour, and a general lack of the amenities of life, agricultural labourers have been long regarded as the poorest and most depressed class in the social system.

Much was proposed but little done to improve their lot until the Corn Production Act of 1917. By this an agricultural Wages Board was set up and a minimum wage of 25s. a week was fixed for the labourers. This lasted until 1921, when the Board was abolished and committees were appointed in the various districts to fix wages by agreement between employers and employed. In 1924 the Wages Board was again set up, but no minimum wage was fixed. Instead, committees appointed for each county, or group of counties, were given the power to settle rates of remuneration. In practice the average minimum wage for adult male agricultural workers is 31s. 8d. per week. Unlike other workers, agricultural labourers were not insured in 1911 against unemployment. Consult The Village Labourer, J. le B. and B. Hammond, 1911.

AGRICULTURE. The word means literally tillage of the field, but in popular use it also includes the rearing of animals for food.

The chief concerns of the farmer can be grouped under the three headings of soil, plants, and animals.

SOIL. The agricultural value of soil lies in the fact that it contains soluble mineral matters which are used by plants as food. In a very dilute solution they cling to the soil particles in the form of thin films (hygroscopic water), quite distinct from "free" water, which is removed by drainage. The more thorough the tillage, the greater will be the accessibility to the plant of this mineral food. Soils are commonly classified according to their chemical nature, the three chief types being sand, clay and carbonate of lime. Loams chiefly consist of sand and clay and are most useful to the farmer; marls are limy clay. No soil can be fertile unless it contains humus, which furnishes the essential nitrogenous part of plant food. Soils which are naturally deficient in one or more essential kinds of plant food, or have become exhausted by cropping, require chemical improvement by judicious manuring.

PLANTS. Farm plants may be roughly divided into three groups: (1) Crops and plants to serve as food for man and stock; (2) weeds; (3) fungoid pests, such as rust and potato disease. Some agricultural plants, such as wheat and beans, live for one year only. Others, for example, turnip and beet, last for two years, completing their growth and storing up reserves of food in the first year, and forming flowers and seed in the second. An ordinary mixed farm consists partly of permanent grass (for pasture or hay crops), and partly of arable land, a regular succession of different crops being part of established farm practice.

ANIMALS. An average farmer is concerned with horses, cattle, sheep, pigs and poultry. He must feed them in the most economical manner consistent with keeping them in perfect health, and he must be able to treat at least their simpler ailments. With the exception of pigs and poultry, farm animals are vegetarian.

AGRIGENTUM. The Temple of Concord, one of the most perfect of the surviving examples of Hellenic architecture, in this ancient Greek city in Sicily

IMPLEMENTS AND MACHINERY. These may be divided into six groups: (1) Implements for working or tilling the soil, including many kinds of plough, cultivator, harrow, roller, and hand tools such as spades, forks, hoes, etc; (2) drills and distributors for seeds and manures; (3) implements for collecting and storing crops, such as mowing and haymaking machines, corn reapers and binders; (4) machines for thrashing, winnowing and screening; (5) implements for preparing food for stock, such as turnip cutters, etc; (6) machines for supplying power, including steam, oil and petrol engines.

During the Great War the area of arable land in the United Kingdom was increased by 1,750,000 acres, and before hostilities terminated Britain was raising three-fifths of the grain required for home consumption. Since then the area under plough has shrunk almost continuously, being, in 1928, 13,320,000 acres compared with 15,949,000 in 1918. This period of depression is imputed to high costs and low prices.

The Agricultural Holdings Act of 1908 has as its main object to control the relations between landlords and tenants and to compensate the latter, when their tenancies terminate, for improvements which they have effected.

Agricultural interests in Great Britain are promoted by many bodies, headed by the Ministry of Agriculture and Fisheries (q.v.). The Chamber of Agriculture has for its object to watch over all parliamentary measures affecting agricultural matters. There are Agricultural Organization Societies for promoting cooperative methods by which farmers in a small way, by uniting their forces, can secure advantageous terms. Agricultural Societies are associations of farmers and others connected with the land which render great service by holding shows and meetings, awarding prizes for stock and produce, issuing publications and retaining experts for the assistance of members.

Facts and figures about agriculture all over the world are collected and examined by the International Institute of Agriculture, which has its headquarters at Rome.

See Agricultural Labourer; Bee; Crops; Dairy; Farm; Fruit; Horse; Manures; Poultry; Stock, etc.

AGRICULTURE AND FISHERIES, MINISTRY OF. Department for superintending these industries in England and Wales. Known until 1919 as the Board of Agriculture and Fisheries, it has at its head a minister, usually a member of the Cabinet. It has a parliamentary and a permanent secretary. The Ministry's duties are to look after matters concerned with diseases of animals, with

AGRIGENTUM (mod. Girgenti). Ancient city on the S. coast of Sicily, known to the Greeks as Akragas. Founded by colonists from Gela about 581 B.C., it soon acquired both wealth and territory, and had, it is said, at one time a population of 200,000. Agrigento had many handsome temples, that of Jupiter being one of the finest in Sicily. The Carthaginians destroyed the city in 405, but it was rebuilt by Timoleon in 340. It was sacked during the first Punic War, and again in 210. It remained, however, a great trading centre for several centuries. The city walls can still be traced. See Girgenti.

AGRIMONY. Common British wild-flower

alternately large and small. From June to Aug. it sends up a tall, flowering spike, bearing numerous small yellow flowers and top-shaped fruits with hooked prickles. The rootstock yields yellow dye.

AGRIPPA. The name of two Idumean rulers of Judaea under the Romans. Agrippa I,

allotments and small holdings, and in general to promote the interests of agriculture. It spends money on agricultural education, and collects and distributes a mass of agricultural statistics and other information. The promotion of forestry and the Ordnance Survey are also in its charge. The head offices are in Whitehall Place, London, S.W.

For Scotland there is a separate Board of Agriculture, while Northern Ireland and the Irish Free State have each a Ministry of Agriculture.

grandson of Herod the Great, killed James, son of Zebedee, and cast Peter into prison. He reigned with much pomp and met with a horrible death at Caesarea, described in almost identical terms by Josephus and in Acts 12.

His son, Agrippa II, with his sister Berenice, heard Paul's statement before Festus at Caesarea, and was "almost persuaded to be a Christian." (Acts 25-26.) After the fall of Jerusalem he returned to Rome, where he died A.D. 100, the last of the Herodians.

AGRIPPA, MARCUS VIPSANIUS (63-12 B.C.). Roman general and statesman, friend and confidant of Octavian, afterwards the Roman emperor Augustus. During the civil wars following the death of Caesar, Agrippa con-

Agrippa. Roman general Capitoline Museum, Rome

ducted a successful campaign in Gaul in 38 B.C.; effectually checked the menace of Sextus Pompeius by his naval victory at Naulochus in 36; and commanded the fleet at the decisive battle of Actium in 31. After Augustus became emperor, he conducted successful campaigns. Agrippa was responsible for many public works at Rome and was a generous patron of art and letters. His third wife was Julia, the emperor's daughter. See Augustus

AGRIPPINA (d. A.D. 33). Called the Elder, she was a daughter of Marcus Vipsanius Agrippa and Julia, daughter of Augustus. A woman of strong character, she shared the hardships of the campaigns of her husband Germanicus, by whom she was the mother of Caligula and Agrippina.

Agrippina the Younger married Gnaeus Domitius Ahenobarbus, and was mother of the emperor Nero. She later married her uncle, the emperor Claudius, and persuaded him to adopt her son, to the detriment of Britannicus, his own son by his former wife Messalina. Nero, on his accession, had her assassinated.

AGUASCALIENTES. Capital of the state of Aguascalientes, Mexico. The state, quite a small one, has an area of 2,968 sq. m. with a pop. of 107,581. The town is 365 m. by rly. N.W. of Mexico city and has rly. connexion also with Tampico and the U.S.A. About 6,400 ft. above sea level, it has fruit gardens. Pop. 48,041. There is a town of the same name, which means hot springs, in Peru.

AGUINALDO, EMILIO (b. 1870). Filipino patriot. Born at Cavite, Luzon, of which he was mayor 1893-6, he took a leading part in the insurrection against Spain. In the Spanish-American War he first supported the American forces, but in 1899 led a formidable rising against them. Captured in March, 1901, a month later he swore allegiance to the U.S.A.

Agrippina the Elder. This beautiful example of ancient sculpture has been traditionally believed to represent the mother of Caligula and grandmother of Nero Capitoline Museum, Rome

AGULHAS (Port. needles). Cape of Africa. The southernmost point of the continent, it derives its name from its jagged rocks, and is subject to violent storms. Agulhas Bank extends E. from the cape along the entire coast of South Africa.

AHAB. King of Israel (875-53 B.C.). He succeeded his father Omri (1 Kings 16-22), and by his marriage with Jezebel, daughter of Ethbaal, king of Tyre, was drawn to the worship of Baal and Astarte. When, to secure Naboth's vineyard for him, Jezebel caused Naboth's death, and Ahab hastened to take possession of the land he coveted, he was met by Elijah with the prophecy of his death and the destruction of his house, a punishment delayed by his repentance. In his reign of 22 years he carried on two successful campaigns against the Assyrians under Benhadad II, and was slain in a third campaign at Ramoth-gilead by a "certain man" who "drew a bow at a venture." Ahab is the name also of a false prophet who was burnt to death by King Nebuchadnezzar (Jer. 29).

AHASUERUS (c. 519-c. 465 B.C.). King of Persia. He is mentioned in Ezra 4, Dan. 9, and Esther, and is usually identified with Xerxes, son of Darius Hystaspes, but doubt has been thrown on the identity of the Ahasuerus of Dan. 9, since Darius the Mede is unknown to history. Ahasuerus is also the name of the principal character in the legend of the Wandering Jew.

AHAZ. Son and successor of Jotham, king of Judah (2 Kings 16; 2 Chron. 28; Is. 7). He became a vassal of Tiglath-Pileser, king of Assyria, whose aid he had sought against the kings of Israel and Damascus. He reigned for 20 years, about 735-15 B.C.

AHAZIAH. Name of two kings mentioned in the O.T. One was son and successor of Ahab, king of Israel (1 Kings 22; 2 Kings 1). He was a worshipper of Baal, and reigned c. 851-49 B.C. The other was son and successor of Jeoram, king of Judah, and of Athaliah, daughter of Ahab (2 Kings 8; 2 Chron. 22), and was slain by Jehu after a year's reign, about 844 B.C.

AHIMELECH. High priest at Nob (1 Sam. 21-22). For giving David the showbread to eat and the sword of Goliath, he and his house were slain by Saul. Another Ahimelech was a Hittite companion of David (1 Sam. 26).

AHITHOPHEL. Friend and counsellor of David (2 Sam. 15-17). He joined Absalom in rebellion, but despairing of success he "put his household in order and hanged himself."

AHMADABAD. Chief city of Ahmadabad district, Bombay Presidency, India. On the Sabarmati river, 309 m. by rly. N. from Bombay, it is an important centre of the cotton industry, and manufactures gold, silver, and silk thread, pottery, paper, and tin. A walled city, 2 sq. m. in area, it has some fine mosques.

Founded in 1412, it was a city of great splendour under the Mogul emperors and capital of the Mahomedan kingdom of Gujarat. Captured by the British in 1780, it was restored to the Mahrattas, but reverted to Great Britain in 1818. Feeling against the Rowlett Act was the cause of disturbances here on April 11, 1919, when two Government buildings were

Ahmadabad. Entrance to the Jama Masjid, or Great Mosque

burned. The district has an area of 3,815 sq. m. Pop. city, 274,007.

AHMADNAGAR. Chief town of Ahmadnagar district, Bombay Presidency, India. On the Sina river, it is 218 m. E. of Bombay by the Great Indian Peninsula Rly. A walled city, founded in 1494 and 3 sq. m. in area, it was captured in 1803 by General Wellesley. Its manufactures include cotton and silken goods, copper and brass pots. Ahmadnagar Fort, used during the South African War for the internment of Boer prisoners and during the Great War for Germans, lies $\frac{1}{2}$ m. to the E. The district of Ahmadnagar, with an area of 6,600 sq. m., is chiefly agricultural and produces pulse, millet, oil-seeds, etc. Pop. town, 49,878.

AHRIMAN. Personification of the spirit of evil in the Zoroastrian belief of the ancient Persians and the modern Parsees. Like the Satan of the Bible, he is the chief of a hierarchy of demons of darkness, but, unlike Satan, is regarded as the equal of the creator Ormuzd, or Ormazd, the spirit of good, although before the end of the world he is to be finally subdued. Other forms of the name are Angra Mainyu, and Arimanes. See Zoroastrianism.

AHWAZ, **AHWAS** OR **ANWUZ**. Town of Persia, in Arabistan province. It stands on the river Karun, 70 m. N.E. of Basra, and is notable for the neighbouring ruins of the capital of Artabanus, the last king of Parthia. In the war with Persia, 1857, it was captured by the British. During the Great War the British occupied it in 1915 to protect the oil wells of the Anglo-Persian Oil Company, but they were forced to retire by large Turkish forces in March, 1915. Later in 1915 the British held it again.

Ailsa Craig. Basaltic rocky islet in the Firth of Clyde, Scotland. It rises 1,114 ft. above the sea level

AI OR **HAI**. Royal city of the Canaanites, E. of Bethel (Gen. 13; Josh. 7-8). The Israelites were smitten here after the fall of Jericho. With its inhabitants it was destroyed by Joshua.

AID. Payment made in feudal times by vassals to the king, barons, and other overlords, the equivalent of the taxes of to-day. The Latin word for aid in this sense was auxilium.

At first in England the kings and barons collected aids as often as they could, but by the time of Henry I the number of times they could lawfully do this had been reduced to three: (1) when the eldest son was knighted; (2) when the eldest daughter was married; (3) when the king or lord himself needed ransom. The term aid was also used in the time of the later Plantagenet kings (1272-1377) for other taxes, such as money paid in lieu of military service. See Feudalism.

AIDAN (d. 651). Saint and Apostle of North Britain. He was a monk of Iona and was sent to Northumbria at King Oswald's request. There he won the people to Christianity, and was consecrated first bishop of Lindisfarne in 635. He made this place the centre of his missionary work, and when Oswald died his successor Oswy protected him. He died at Bamborough, Aug. 31, 651.

AIDE-DE-CAMP. Word, of French origin, applied to an officer who serves a general or a

Aigues Mortes. Famous fortifications of the historic French town in the department of Gard. They were built about 1280

governor in a personal capacity. In times of peace his functions are secretarial and domestic. In war he arranges for the comfort of the commander and sometimes acts as camp commandant at headquarters, supervising the batmen, drivers, clerks, etc. An aide-de-camp is designated by the letters A.D.C.

AIDIN OR **GUZEL-HISSAR**. Town of Turkey, in the vilayet of Aidin. It stands on the Smyrna-Dineir Rly., 81 m. S.E. of Smyrna. Built near the ruins of ancient Tralles, it manufactures leather and is noted for its sweetmeats, fruit, and cotton. It suffered by an earthquake in 1899. Turkish and Greek forces contended for its possession in 1919, the Turks being defeated. The vilayet has an area of 25,800 sq. m. and is very productive. Pop. of the vilayet, 211,750; town, 36,000.

AIGUES MORTES (Lat. aquae mortuae, dead waters). Town and seaport of France, in the department of Gard. It is 24 m. by rly. S. of Nîmes, and 3 m. from the Mediterranean with which it is connected by canal. Its walls and towers were built about 1280. Pop. 4,330.

AIGUILLE (Fr. needle). Name for a bare needle-shaped pinnacle of rock standing above the snow-line. Such pinnacles are formed by the action of frost causing granite or other crystalline rocks to split. There are many examples in the Alps.

AILANTUS OR **TREE OF THE GODS**. The tree is a native of North China, whence it was introduced to Europe in 1751. In some places it is extensively planted as a shade tree. The flowers are greenish-white. The larva of the Ailanthus silk moth feeds on the plant.

AILSA, **MARQUESS OF**. Scottish title dating from 1831. It is derived from Ailsa Craig, a rocky islet in the Firth of Clyde, and is borne by the family of Kennedy. The first Lord Kennedy, ennobled in 1452, was a regent in Scotland during the minority of James III. The 3rd lord, made earl of Cassilis in 1509, was killed at Flodden. The 12th earl was made marquess of Ailsa. The family seat is Culzean Castle, Ayrshire, and the eldest son is known as the earl of Cassilis.

AIN. Department of E. France. Between the Rhône and Saône rivers, and bordered

N.E. by the Swiss cantons of Vaud and Geneva, it has an area of 2,248 sq. m. and is traversed by the river Ain. It yields bituminous limestone, from which Seyssel asphalt is made. The chief towns are Bourg, the capital, and Belley. It takes its name from a tributary of the Rhône. Pop. 317,195.

AINLEY, HENRY HINGLIFFE (b. 1879). British actor. Born at Leeds, Aug. 21, 1879, he made his first appearance in London at the Lyceum Theatre in 1900, and in 1903 toured in America. His successes included Brutus in Julius Caesar and parts in The Great Adventure and If I Were King. After service in the army he appeared in 1919 in Reparation, in 1923 in Oliver Cromwell and later in Hassan, Macbeth, and other plays. In 1929 he played in The First Mrs. Fraser.

Henry Ainley,
British actor
E. O. Hoppe

AINSWORTH, WILLIAM HARRISON (1805-82). British novelist. Born in Manchester, Feb. 4, 1805, he studied at the Inner Temple, but soon tired of the law and settled down in London as an historical novelist and magazine editor. His first success was Rookwood, 1834, and the last of his 39 novels, Stanley Brereton, was published in 1881. The Tower of London, 1840, Old St. Paul's, 1841, and The Lancashire Witches, 1848, are his best works. From 1842-53 Ainsworth edited Ainsworth's Magazine and for some years later The New Monthly Magazine. He died at Reigate, Jan. 3, 1882. Consult Ainsworth and his Friends, S. M. Ellis, 1911.

W. H. Ainsworth,
British novelist
After D. Macleis; R. A.

worth's Magazine and for some years later The New Monthly Magazine. He died at Reigate, Jan. 3, 1882. Consult Ainsworth and his Friends, S. M. Ellis, 1911.

AINTREE. Suburb of Liverpool. It is on the L.M.S. Rly. and the Leeds and Liverpool Canal. The canal passes across the racecourse, over which the Grand National Steeplechase is run. See Grand National.

AINU OR AINO. Primitive race of Caucasian stock inhabiting the Kurile Islands, Yezo and S. Sakhalien. They number less than 20,000.

Occupying roomy reed-thatched huts, with separate storehouses on stilts, they are essentially hunters and fishers, using a detachable harpoon and cooking all animal food. Their language, clearly primitive, is richly developed, a vocabulary of 14,000 words having been compiled. Their animism includes a complex nature worship of the sun, fire, lightning, and rivers.

Ainu. Man and wife of this primitive Caucasian race

AIR OR ASBEN. Oasis and sultanate of the French Sahara, situated due north of Nigeria. Mountainous, and with a fairly temperate climate, its valleys are fertile, dates being abundant, while indigo and senna are grown. The inhabitants are chiefly Tuaregs. The

capital is Agades. Asben town is a caravan centre for N. and Central Africa.

AIR. Word used in several senses. As applied to the atmosphere we breathe, it denotes a mixture of gases extending at least 200 m. beyond the earth's surface. This is mainly nitrogen and oxygen, the former occupying nearly four-fifths of the total.

USES OF AIR. Air is used as a source of power in the air engine. Here the alternate heating and cooling of a body of air in a cylinder causes a piston to travel in and out as the air expands and contracts.

The air lift is a device for raising water or oil by means of compressed air. It comprises a large-bore air tube (B) open at its lower end and closed at its upper end, through which passes an outflow pipe of smaller diameter (C) open at its lower end and connected at its upper end to a reservoir. This apparatus is lowered into a well (A), for instance, and air is forced into the air tube from a compressor (E) when a succession of elongated bubbles, or short columns of water, is driven up into the outflow pipe (C).

An air lock is a chamber, usually constructed of steel plates, which gives admittance to, or egress from, a caisson or other chamber in which the air pressure exceeds that of the atmosphere. It is fitted with two doors, one opening outwards into the working chamber and the other opening inwards from the outside air. By means of a valve the pressure in the air lock is equalised to that of the working chamber, or to the lesser pressure of the outside air, so that persons or material can be admitted or passed out without loss of pressure in the working chamber.

AIR, LAW OF

THE. The development of flying has made necessary laws for regulating the movement of vessels in the air. These have followed largely the model of the shipping laws, and arrangements have been made for the registration of aircraft just as ships are registered. In Great Britain measures passed in 1911, 1913 and 1919 forbid aircraft to fly below certain heights, and order them to use only recognized aerodromes. Those entering the country must only land at recognized airports in order that their cargoes may be examined by officials of the customs. The secretary for air can make orders forbidding them to fly over certain areas and below a certain height, as was done in Nov., 1929.

All air vessels must be registered and their crews licensed, while those that carry passengers must be certified as airworthy. Lights, green, red and white, must be carried, and distress and landing signals have been arranged. The rule of the air is that aeroplanes must give way to airships and airships to balloons.

In 1919 an air navigation conference met to decide matters of international concern. It was laid down that each state had the sovereignty over the air above its territory. The nationality of aircraft depends upon the country of registration. Rules about marking and licensing aircraft, and also about the documents which they must carry, were made. An

international commission for air navigation was set up in Paris, and in 1925 another conference was held.

AIR CHIEF MARSHAL. Title of an officer in the R.A.F. The second highest in the service, it ranks next to marshal of the air and corresponds to general in the army.

AIR COMMODORE. Title of an officer in the R.A.F. corresponding in rank to rear-admiral in the navy and brigadier-general in the army.

AIR COUNCIL. Department of the British Government in charge of the Royal Air Force, established towards the close of 1917. In 1929 the Council consisted of the secretary of state and the under-secretary of state as president and vice-president, with three other members, the chief of the air staff, and the members for personnel and for supply and research. The council has also a secretary who is a civil servant. See Air Force.

AIRCRAFT CARRIER. Term applied to a vessel made to carry seaplanes, and allow them space to take off from, with cranes or other apparatus for lifting them on deck from the water. The first British carrier was a tramp steamer, the Ark Royal, which was adapted in 1914. Other vessels were adapted for the purpose during the Great War, including the light cruiser Furious, and in 1917 the Hermes was built as a carrier. In 1924 the Washington Conference fixed limits to

Air Lift. Diagram showing method of working. See text

Aircraft Carrier. H.M.S. Furious, light cruiser adapted during the Great War to carry aircraft and reconstructed in 1925
Stephen Critch

the size and armament of the carriers, which must not exceed 27,000 tons. See Seaplane.

AIR CUSHION. Bag made of strong cloth coated with rubber which can be inflated and used as a cushion. Air cushions are useful in cases of illness or fatigue, but they are liable to crack, tear, and puncture.

AIRD SIR JOHN (1833-1911). British contractor. Born in London, Dec. 3, 1833, John Aird joined his father as contractor. Having erected the Crystal Palace in 1851, the Airds undertook the construction of railways, docks, etc., nearly all over the world. In 1898-1902 Aird constructed the great dams of Assuan and Assiut on the Nile. From 1887-1905 he was Conservative member of Parliament for North Paddington, London, and in 1901 he was made a baronet. He died Jan. 6, 1911.

AIRDRIE. Burgh and market town of Lanarkshire, Scotland. It is 11 m. E. of Glasgow, on the L.M.S. and L.N.E. Rlys., and near the Monkland Canal. The industries include coal mining, iron and brass founding, engineering, cotton and silk weaving, and paper making. The buildings include the town hall, academy, mechanics' institute, and the first free library in Scotland, opened in 1856, the present building dating from 1894. Pop. 25,093.

AIRE. River of Yorkshire, England. It rises in the Pennines, flows into Malham Tarn, and, after a short subterranean course, reappears N. of Malham village. It then flows first S. and then S.E. to join the Ouse above Goole. Above Leeds it passes through Airedale, and W. of Skipton is the Aire Gap, a passage through the Pennines into Ribblesdale.

The Aire and Calder Navigation is a system of rivers and canals linking up industrial towns of Yorkshire. Its total length is 74 miles. The chief port of the system is Goole, and its two main lines are between Goole and Leeds and between Castleford and Wakefield. See Canal.

AIREDALE. Upper valley of the river Aire, Yorkshire. It extends 35 m. from Malham Cove to Leeds.

The Airedale Terrier is a sporting dog bred originally in Airedale. There are several varieties, but two main divisions, the smooth and the rough-haired, the latter being more akin to the Scotch terrier. He is a good retriever and a faithful companion.

AIR FORCE, ROYAL. Official name of the British air service. It came into existence April 1, 1918, as an amalgamation of the Royal Naval Air Service and the Royal Flying Corps. Its fighting chief is the inspector general.

The commissioned ranks are pilot officer, flying officer or observer, flight lieutenant, squadron leader, wing commander, group captain, air commodore, air vice-marshal, air marshal, air chief marshal, and marshal of the air. Below are warrant officers, flight sergeants, sergeants, corporals, and mechanics. The uniform is light blue. The motto is *Per ardua ad astra* (through difficulties to the stars).

In 1929 the strength of the Air Force was 32,000. The cadet college is at Cranwell, in Lincolnshire, and the staff college at Andover.

AIR FORCE CROSS. Distinction awarded to officers and warrant officers of the R.A.F. Dating from 1918 it is given for courage and devotion to duty. The ribbon is red and white.

AIR FORCE MEDAL. Distinction awarded to N.C.O.'s and men of the R.A.F. and bestowed for acts of courage and devotion to duty. The ribbon is red and white. It was instituted in 1918.

AIR GUN. Weapon fired by means of compressed air. In the simplest form air is condensed in a chamber by a syringe in the stock. When the trigger is pulled a valve is opened between air-chamber and barrel and the bullet is discharged.

Examples of these guns are in the Imperial Service Museum, London, S.W.

AIRMAN. Official designation of N.C.O.'s and men of the Royal Air Force, not applied to commissioned officers. Colloquially it is applied to any person connected with the practice of aviation.

AIR MARSHAL. Title of an officer in the R.A.F., the third highest in the service; it corresponds in rank to vice-admiral in the navy and lieutenant-general in the army.

AIR MINISTRY. Department of the British Government responsible for maintaining and directing the R.A.F. As constituted in 1917, its head ranked as a secretary of state, but in 1918 it was placed under the Secretary for War. Since 1921 the office of secretary of state for air has been a distinct one, a salary of £3,000 a year being attached to it. He is head of the Air Ministry, a member of the Cabinet, and is assisted by an under-secretary.

AIR POCKET. Vertical current or shaft of air, or any aerial disturbance, entry into which causes aircraft to drop involuntarily. Comparatively little is known of the nature and causation of these upward and downward currents, but the rapid improvements in aircraft and in airmanship, as well as the increased power of modern machines, have combined to reduce the dangers. At slow speeds, and especially when about to land, the risks of air pockets must be guarded against.

AIRPORT. A town where aircraft may land from abroad and passengers and goods are examined as at a seaport. It must have one or more aerodromes with landing grounds, as well as accommodation for the work of the customs and immigration officials. Croydon is the chief English airport, the station being at Waddon. Others are Lympne, Southampton, Dover, Plymouth, Liverpool, Birkenhead, Newcastle-upon-Tyne, Avonmouth, Belfast and other seaports. Of inland cities Manchester and Nottingham have been licensed as airports. Some are for goods only; others only for passengers. See Aerodrome.

AIR RAID. The Germans began their raids on England before the end of 1914. The first, by aeroplane, took place on Christmas Eve of that year, and the worst, judging by the injury to life, was an aeroplane raid by day-

light on June 13, 1917. London was naturally the chief sufferer, but many towns on the east coast, especially Hull, Ramsgate, Scarborough and Yarmouth, were repeatedly visited by Zeppelins. One destructive raid reached as far inland as Birmingham and the Black Country, while enemy airships penetrated to Manchester.

As regards air raids on England, the following figures are taken from the official return of airship and aeroplane raids over Great Britain and bombardments of the coast.

Between Dec. 24, 1914, and June 17, 1918, when the raiding ceased, there were 51 airship raids and 57 aeroplane raids. The total casualties, including those by bombardment from the sea, were: Killed, 1,570; injured, 4,041, a total of 5,611, of which the casualties due to bombardment from the sea were 791, leaving 4,820 for air raids. Tables showing the principal airship and aeroplane raids are given in page 38.

AIR RECORDS. The sporting side of aviation is governed by the Fédération Aéronautique Internationale, an affiliation of bodies similar to the Royal Aero Club of Great Britain. No record is considered valid unless this body officially verifies the performance, and no national record unless it is passed by the affiliated aero club. Some international aeroplane records are:

SPEED. Official record for aeroplanes: Bonnet, in a Bernard, at Istres, France (Dec. 11, 1924), 277·805 m.p.h. Official record for seaplanes: Squadron Leader Orlebar, at Calshot, in a Supermarine Rolls-Royce seaplane (Sept. 12, 1929), 357·7 m.p.h., this being the average speed of four runs over a 3 km. straight-line course. On Sept. 10 a single run over this course was taken at 368·8 m.p.h.

Airedale Terrier, Culmington Chip, a winner of many prizes

AIR RAIDS ON GREAT BRITAIN DURING THE GREAT WAR, DECEMBER 24, 1914, to JUNE 17, 1918. See p. 37.

MAXIMUM DISTANCE COVERED. Official record for aeroplanes: Ferrarin and del Prete, in a Savoia, on a flight from Rome to Brazil (July 3-5, 1928), 4,420 miles. Official record for seaplanes: Cornell, Rodd and Vincent, in a PN10 flying boat at San Diego, Cal. (Aug. 16, 1927), 1,568 miles.

DURATION. Official record for aeroplanes: Ristic and Zimmerman, in a Junkers W33, at Dessau (July 5-7, 1928), 65 hours 25 mins. Official record for seaplanes: Gavin and Soucek in a PN12 seaplane at Philadelphia (May 3-5, 1928), 36 hours 1 min.

ALTITUDE. Official record for aeroplanes: Lt. Champion, U.S.N., in a Wright Apache, at Washington (July 25, 1927), 38,423 ft. Official record for seaplanes: Lt. Champion,

in a Wright Apache seaplane (May 5, 1927), 37,985 ft.

Other fine performances include the following. Altitude: Neunhofer in a Junkers monoplane (May 26, 1929), 40,625 ft. British record held by Lady Heath (23,000 ft.). Non-stop flight: Costes and Bellonte, in a Breguet XIX, Le Bourget, France, to Tsitsikhar, Manchuria, a distance of 4,900 miles (Sept. 27-29, 1929). Duration: D. Jackson and F. O'Brien, at St. Louis, U.S.A., remained in the air for 420 hours, the aeroplane, St. Louis Robin, being refuelled periodically from another craft (July, 1929). Gliding flight: Nehring, at Darmstadt, made a gliding flight of 44½ miles in a straight line (April, 1929). The record is claimed by Kronfeld for a glide

of 62 miles at Riesenberg, Prussia (May, 1929). In October, 1929, a gliding record for duration was made at Rossitten, nr. Königsfeld. It lasted 14 hrs. 44 mins. See p. 39.

AIRSHIP. Aircraft depending for support on buoyancy given by gas contained within its envelope. Early airships were simply balloons or fabric bags distended by pressure of the contained gas. Many of the smaller vessels of the present day are of this type, and are therefore designated non-rigid.

Beneath an elongated, egg-shaped, gas-tight body, inflated with hydrogen or another gas, is suspended a car containing engines, fuel, and the crew. A tail with horizontal and vertical fins steadies the vessel, and hinged planes at the after edges of this provide for the steering. Forward motion is produced by one or more airscrews. To equalise internal and external pressure separate air chambers are arranged within the envelope, air pressure being diminished or increased by deflation or inflation as the vessel climbs or descends. Thus a mean internal pressure is maintained and the shape of the envelope does not change.

As an increase in envelope size means greater internal pressure of gas to keep the envelope to its correct shape, with a consequent increase of density and diminution of lifting power, there is a practical difficulty in building large non-rigid airships. Hence the

semi-rigid type, stiffened with a keel, and the rigid type, with an external framework, were devised.

In a typical modern airship of the rigid type the envelope is maintained in shape by a shell of light, stiff girders. Longitudinal ones hold together a series of polygonal rings built up of other girders. Radial steel wires tie the rings from periphery to centre, and form a series of bulkheads, in the intervals between which are separate gasbags. The outside of the skeleton is covered with a fabric envelope, fairing off the outline and leaving an insulating air space between gasbags and envelope. The lower set of longitudinal members is specially stiffened to take the weight of the ears for engines, fuel, etc. and for the crew. In the most recent types cabins and saloons for passengers are constructed within the shell of the airship.

Power plants for the airships consist of petrol motors, or of engines using heavy

Two giant airships (R100 and R101), built for the British Government, and completed late in 1929, have a gas capacity of about

trip round the world in the summer of 1929, have a gas capacity of 3,700,000 cubic feet, a length of 772 ft., and a maximum girth of 100 ft. Early in 1930 a Zeppelin of 5,500,000 cu. ft. capacity was under construction, and a still larger airship (6,500,000 cu. ft.) was being built by the American Zeppelin Company.

In the latter part of 1929 the Z.M.C., a metal-clad airship designed for the U.S.A. navy, made successful test flights. This vessel has an outer skin of alelad, a metal sandwich consisting of a core of duralumin within layers of aluminium. This metal skin is .0095 inch thick, and is applied to the framework of the airship in narrow strips which are shaped to the required contour and riveted together. The metal hull acts as the container for the lifting gas, pressure being adjusted by means of two air-filled ballonets. Helium is the gas used, and the capacity is 202,000 feet. The hull is 145 ft. long, with a maximum girth of 52 ft. On test flights the Z.M.C. attained a speed of 47 m. per hour. The useful load is said to be 3,442 lbs. See Aeronautics; Aeroplane; Balloon; Zeppelin.

AIR VICE-MARSHAL. Title of an officer in the R.A.F. It corresponds in rank with rear-admiral in the navy and major-general in the army.

AIRY, SIR GEORGE BIDDELL (1801-92). British astronomer. Born at Alnwick, Northumb., July 27, 1801, he was educated at Cambridge, where he was senior wrangler in 1823, and became a fellow of Trinity and Plumian professor of astronomy. In 1825 he was appointed director of the Observatory at Cambridge, and in 1835 astronomer royal. He resigned in 1881, and died Jan. 2, 1892.

AISLE (Lat. ala, wing). Portion of a church on one or both sides of the choir or nave, from which it is divided by columns and arches. The transepts of large churches are furnished with aisles. The Roman basilica

of the larger type was divided by columns into nave and aisles, and has served as a model for Christian churches.

AISNE. River of France. Rising in the Meuse department, it flows W. and joins the Oise near Compiègne. Connected with the Meuse and Marne by canals, it is navigable for rather more than half its length of 175 m.

Aisne is also the name of a frontier department of N.E. France. The capital is Laon, and Soissons is one of the department's chief towns. Pop. 530,226.

BATTLES OF THE AISNE. The first battle, fought Sept. 13-20, 1914, was an effort of the Allies to cross the Aisne and complete the defeat of the Germans recently driven back at the battle of the Marne. It was fought on a vast front of 100 m. from Compiègne to Tahure, E. of Reims. The British under Sir J. French attacked from S. of Soissons to Vauxcéré, and the French 9th army under Foch advanced N. near Reims, other French armies being in support. Gallant and successful attempts to bridge the river under fire were made and local successes gained by both sides, but eventually the fighting degenerated into trench warfare, as the Germans had dug themselves in. The British army was then moved to Flanders. The importance of this battle was that it inaugurated the trench system which continued on the west front practically throughout the war.

The second battle, fought April 16-May 20, 1917, was the one supreme attempt to break through the German lines in the west front, previous to 1918. Dissatisfied with the progress of the war, the French Government had replaced Joffre by Nivelle as Commander-in-Chief. He conceived the idea of making a great and final offensive which would pierce the German front, put an end to trench warfare, and by instituting a war of movement turn the enemy's flanks and so hasten the end. Nivelle attacked in great force on the Aisne, between Soissons and Reims.

To deflect notice from this offensive the British attacked at Arras. On the first day the French crossed the Aisne at Chavonne, but were beaten back, advanced W. along the Chemin des Dames, carried Bernécourt and Coucy, captured 10,000 prisoners, and penetrated the German trenches to a depth of a mile. Day after day the attack was renewed with the utmost determination, but Nivelle's plan to pierce the German front by a single great operation proved impossible, and the French Ministry ordered the abandonment of the offensive. The French losses were heavy and there followed a serious mutiny in the army, Nivelle being deposed from his command. The German losses were about 30,000 prisoners and 227 guns.

The third battle, fought May 27 to June 18, 1918, was the third of the great German offensives against the Allies in the west front in 1918. Following the methods which they had employed in their March and April attacks, the Germans forced back from the Chemin des Dames four French divisions, broke the Allied centre and streamed through to the Aisne. On May 29 they stormed Soissons, and reached the Marne on May 30. Exhaustion and Allied counter-attacks finally brought to a close the battle, which had carried the German front to a point which was only 40 m. from Paris.

AIVALIK OR AIWALYK. Seaport on the W. coast of Asia Minor. It stands on the Gulf of Adramyti, 66 m. N. of Smyrna, near the site of the ancient Heraclia Pontica, and is called Kydonia by the Greeks. It was burnt by the Turks in 1021. Aivalik exports olive oil, cereals, wood; and skins. The name means quince country. Pop. 21,000, mostly Greeks.

Aisne (N.) of Worcester Cathedral, looking to the East

AIX. City of France. It is in the department of Bouches-du-Rhône, 18 m. by rly. N. of Marseilles. The seat of an archbishop, the cathedral dates from the 11th century. The university, founded in 1409, is now incorporated with that of Marseilles. The city has a large library, technical colleges, schools, museums, law courts, a 17th century town hall, and natural fountains. The ancient Aquae Sextiae, Aix grew up round warm mineral springs. It was the former capital of Provence. Pop. 29,836.

AIX-LA-CHAPELLE. City of Germany, in the Rhine province, known also as Aachen. It is situated near the frontiers of Holland and Belgium, 45 m. by rly. W. of Cologne. Of its two most notable buildings, the cathedral and the Rathaus, the former was built in 796-804, on the site of an earlier church, by Charlemagne, who was buried here, and was added to in 983 by Otto III. Parts of this old building remain, but the choir and chapels date from the 14th and 15th centuries. With other relics the bones of Charlemagne are preserved in the cathedral treasury. The Rathaus, or town hall, occupies the site of Charlemagne's palace, and dates from the 14th century. The old city has also the Grashauss, used for the archives, two of its old gates, and many venerable churches.

Around the old town, with the Fishmarket, the Market Square, and the Cathedral Square, lies the newer town with suburbs. To the E. are the sulphur and chalybeate springs, and adjacent are the Kurhaus and the Kursaal, for which the city is famous. The Suermondt Museum has a valuable collection of paintings.

Aix-la-Chapelle owes its origin to its springs, which were known to the Romans, who called it Aquisgranum. Charlemagne made it his favourite place of residence, and it remained for 700 years the coronation place of the

German kings. In 1801 it became part of France, and in 1815 was given to Prussia.

Aix owes its prosperity to the opening of a large coalfield, while its direct rly. communication with Cologne, Brussels, Antwerp and Liège is another commercial advantage. Its manufactures include cloth and other textiles, iron goods of various kinds, chemicals, and beer. The municipality includes the suburb of Burtscheid, united with it in 1897, which has medicinal springs. Pop. 156,143.

Three treaties were signed at Aix-la-Chapelle: (1) treaty of 1668 which terminated the short War of Devolution between France and Spain; (2) treaty of 1748, added to in 1750, which ended the War of the Austrian Succession between Britain, Austria and Holland on one side and France, Prussia and Spain on the other; (3) treaty of 1818 between Great Britain, Austria, Russia and Prussia, by which it was decided that France should be evacuated.

AIX-LES-BAINS. Town of S.E. France, in the department of Savoie. A favourite watering place, it is 8 m. by rly. N. of Chambéry, on the Paris-Turin line, and 823 ft. above sea level. Its warm springs are beneficial to sufferers from rheumatism and gout, the waters being used for both baths and drinking. Ruins of Roman temples, baths, and a triumphal arch remain. Pop. 8,934.

AJACCIO. City and capital of Corsica. Situated on the W. coast, on the N. shore of the Gulf of Ajaccio, it is connected by rly. with Calvi and Bastia, and by steamship with Marseilles and Nice. The seat of a bishop since the 7th century, it has a cathedral, colleges, library, museum, the house in which Napoleon I was born, and a large harbour protected by a citadel. It has a wireless station. Its mild, clear climate makes it a favourite winter resort. Pop. 22,614.

AJAIGARH. Native state in Bundelkhand, Central India, 130 m. W.S.W. of Allahabad. It is named from its 9th century hill fortress, with ruined Jain temples, at the N. base of which is Naushahr, the residence of the rajah. Its area is 800 sq. m. Pop. 87,093.

AJALON OR AJALON. Town and valley of Dan (Josh. 10). Identified with Yalo, N. of Jerusalem, the locality is memorable for the defeat of the Canaanites by the Israelites, when the sun and moon stood still at the word of Joshua "until the people had avenged themselves upon their enemies."

AJANTA OR ADJUNTA. Village and ravine in Hyderabad, India. The ravine is celebrated for its Buddhist cave temples, dating from 200 B.C. to A.D. 600, and decorated with frescoes. Consult Paintings in the Buddhist Cave Temples of Ajanta, J. Griffiths, 1896-7.

Aisne. Map of territory occupied by the Germans in the Third Battle of the Aisne

AJAX. In Greek legend, the name of two heroes who fought for the Greeks in the Trojan War. One, the son of Telamon, was accounted, next to Achilles, the mightiest warrior in the Greek host. He killed himself after the award of Achilles' armour to the rival claimant Odysseus.

Ajax the son of Oileus, though small of stature, was fleet of foot and a skilful fighter. On account of his profanation of the temple of Athena at the fall of Troy, he was shipwrecked on his way home, but took refuge upon a rock. Further defiance of the gods provoked Poseidon to shatter the rock, and Ajax was drowned.

AJMER. Capital of the British province of Ajmer Merwara, Rajputana, India. In a picturesque valley, 228 m. by rly. W. of Agra, it stands at the foot of Taragarh Hill, the fort on which

was built by Akbar. It has a surrounding wall, with five gates, and contains the remains of a beautiful Jain temple, converted into a mosque, and the tomb of the 13th century Moslem saint Kwaja. Ajmer has railway workshops, exports cotton, salt, and opium, and specialises in dyeing. Pop. 113,512.

AJOWAN. Small, ribbed fruits of an Indian umbelliferous plant. Cultivated in the province of Bengal, they are much like the so-called caraway seeds, aromatic, with a thyme-like odour. Besides being used in cookery, they are employed in medicine, chiefly as a carminative.

Ajowan, Indian aromatic and medical herb

by the Arah in July 1917.

AKALKOT. Native state of India. It is in the presidency of Bombay and has an area of 498 sq. m. Agriculture and weaving are carried on. Akalkot is the chief town. Pop., state, 83,500; town, 18,750.

AKBAR (1542-1605). The greatest of the Mogul emperors in India. His empire, which during his reign expanded so as to include the whole of India N. of the Vindhya hills, had been won for him by his grandfather, Babar, who had invaded India from Afghanistan and founded the Mogul empire of Hindustan.

Akbar aimed at creating in India a united and consolidated empire. The whole land was brought under a systematic assessment, forming a lasting basis for a reasonable taxation. Akbar's officers were chosen from Hindus and Mahomedans alike. All were free to practise their religion; the Hindus were relieved from the taxes which had been imposed upon them as Hindus by all the Mahomedan lords of India. Akbar's feats of daring and endurance could be matched by few. To his friends he was royally trustful and generous, to his enemies splendidly magnanimous. He was the true founder of the great Mogul Empire. See India; also p. 33; consult Akbar, the Great Mogul, Vincent A. Smith, 1917.

AKEE. Fruit of a W African tree (*Cupania sapida*) introduced into S America and the W Indies. The fleshy fruit is three-sided and about 3 ins. long. When ripe it splits down each side, disclosing a white spongy substance (aril). This is the portion eaten, and has a pleasant sub-acid flavour.

Ajax defending his ships
From an engraving on an ancient gem

AKEMAN STREET. Early English name for a Romanised road which, leaving the Fosse Way at Cirencester, skirted the Thames valley, crossed the Icknield Way at Tring, and joined Watling Street at St. Albans. It was an alternative to the Silchester road from Bath to London.

A KEMPIS, THOMAS (c. 1379-1471). Devotional writer. His family name was Hammerken, and he was born at Kempen, near Düsseldorf, of peasant parents. About 1400 he went to the Augustinian monastery of Mont S. Agnes, near Zwolle. Here in 1406 or 1407 he became a monk, and here the whole of his life was spent. The greater part of his time was occupied in writing chronicles of his monastery, biographies, books of devotion, hymns, and sermons, and copying MSS.

His fame rests on *The Imitation of Christ*, first published anonymously in 1418, completed in 1424, and since that date translated more widely than any volume except the Bible. The strength of its extensive appeal lies in the author's knowledge and experience of the unchanging needs of the human heart and the simple sincerity of his writing. The earliest printed copy of the *Imitation* was published at Augsburg in 1471 or 1472, and the first English translation in 1502.

AKENSIDE, MARK (1721-70). British poet and physician. Born at Newcastle-upon-

Tyne, he studied medicine at Edinburgh and Leyden. In 1741 he published *The Pleasures of Imagination*, a didactic poem in blank verse. For a time he practised as a physician, but achieved little success until his friend Jeremiah Dyson established him in Bloomsbury Square and made him an allowance of £300 a year. In 1759 he became principal physician at St. Thomas's Hospital, and he died in London, June 23, 1770. Akenside appeared in Smollett's *Peregrine Pickle* as the physician who provides a banquet in the style of the ancient Romans. He was the author of the pungent satiric couplets of *An Epistle to Curio*.

AKERMAN, AKKERMAN OR **AKIERMAN.** Town of Rumania. On the Dniester estuary, near the Black Sea, and 30 m. S. of Odessa, it exports wine, salt, fish, tallow, and wool. A Russo-Turkish treaty was concluded here in 1826. Pop. 40,400.

AKHENATON, IKHNATON OR **KHUEENATEN.** Egyptian king of the XVIIIth dynasty, about

1375 B.C. Son of Amenhotep III and his half-Syrian queen Tiye, he began his reign as Amenhotep IV. He abandoned Ammon worship for that of the solar disk Aton and changed his name and capital accordingly. This monotheistic reform and its attendant naturalistic art, examples of which have been unearthed at Tell-el-Amarna (q.v.), were brief. See Tutankhamen.

AKHWAN (Arab. brotherhood). Name of a religious movement in Arabia. Its adherents are enjoined to spread the reformed faith by force among heretics and infidels. The movement arose in 1919 under Ibn Saud, emir of Nejd, and was a contributory cause of his dispute with the King of the Hedjaz.

AKKA. Tribe of pygmy forest-hunters in the Belgian Congo. They were found by Schweinfurth in 1870 in the Aruwimi forests between the Congo and the Albert Nyanza. Their Niam-Niam neighbours call them Tiki-Tiki. Descended from the dwarf negroid race depicted on early Egyptian monuments and traceable in palaeolithic Europe, their ape-like characters—snout-like jaw, top-heavy head, long arms, and inturned feet—betray an arrested human development. See illus. below.

AKKAD. Ancient Mesopotamian city. The Acaad of Gen. 10, it is identified with the pre-Semitic Agade, the capital of Sargon I (c. 2800 B.C.). Its ruins, which were unearthed between 1917 and 1919, reveal it as a garden city, stretching for 20 m. along the left bank of the Tigris. See Samarra.

AKRON. Capital of Summit co., Ohio, U.S.A. It is on the Ohio Canal, 36 m. S.S.E. of Cleveland, in a coal mining district. Well served by railways, it is a centre of the rubber and printing industries, and the growth of these led to an enormous increase of population between 1910 and 1930. Other products are machinery, and pottery, and power for the factories is obtained from the Cuyahoga river. In 1913 a university was founded here, with Buchtel College as its centre. The town dates from 1825. Pop. 208,435.

ALABAMA. One of the southern states of the U.S.A. Its area is 51,998 sq. m., and its chief river the Alabama, 312 m. in length. The state is also drained by the Tennessee river, which traverses almost its entire breadth. Alabama consists of wide lowlands largely under cultivation, but there are also in the S. extensive pine forests, yielding valuable timber. In the N.E. the surface is hilly.

The great cotton belt, consisting of extremely rich soil, lies in the S.E. corner, and here slavery had its strongest hold. The chief industry of the state is agriculture and the population is mainly rural. Maize is the chief cereal crop. Cotton, hay, oats, potatoes, wheat, sugar, peaches, tobacco, and rice are also grown. Coal and pig iron are largely mined. The state produces 60 p.c. of the U.S.A. output of crystalline graphite, the chief district being round Ashland. The university of Alabama is the principal educational institution.

The chief cities are Birmingham, the centre of the iron and steel manufactures; Mobile, the only seaport, and Montgomery, the capital. The population in 1920 was 2,348,174, of whom 1,447,032 were whites. In 1928 the estimate was 2,573,000. Alabama was first

Thomas à Kempis, devotional writer

Akka. Pygmy people of the Aruwimi forests in Central Africa

visited by Spaniards, and in 1539 by De Soto. The French settled there in 1702. It was ceded to the British in 1763 and gradually acquired by the U.S.A. Consult History of Alabama, and Dictionary of Alabama Biography. T. M. Owen, 1921.

ALABAMA QUESTION. Dispute between Great Britain and the U.S.A. On July 29, 1862, during the American Civil War, the Alabama, a vessel just built at Birkenhead, sailed for the Azores. There she was armed, and, hoisting the Confederate flag under Captain Semmes, did enormous damage to the shipping of the North, until sunk, June 19, 1864. The arbitrators decided unanimously that Britain was responsible for the damage done by the Alabama, and by a majority that she was responsible for that done by two other vessels. The final award was signed Sept. 14, 1872, the damage being assessed at 15,500,000 dol., about £3,230,000.

ALABASTER. Massive translucent form of gypsum. It is often found associated with salt deposits in the form of beds and nodular masses. It occurs in the Triassic rocks of Britain, and is used as an ornamental stone. According to Pliny, the name is derived from Alabastron, in Egypt, whence it was obtained.

ALADDIN. Hero of a story included in most English and French versions of The Arabian Nights' Entertainments, although not in any Arabic text of The Thousand Nights and A Night. The story tells how Aladdin, the son of a poor widow, meets an African magician and becomes possessed of a wonderful lamp. Helped by the genie, who appears whenever the lamp is rubbed, Aladdin provides himself with everything he desires, including the hand of the sultan of China's daughter. The magic lamp occurs in the folklore of nearly all Europe as well as that of India and China.

ALAIS. Town of France, in the department of Gard. On the river Gardon, it lies at the foot of the Cévennes, 25 m. N.N.W. of Nîmes, and is a junction on the Paris-Lyons Rly. Its buildings include the church of St. Jean, a citadel, and a school of mines. It has silk mills and a trade in cocoons and ribbons. The centre of a mineral field producing coal, iron, lead, zinc, and asphalt, it has iron works and glass, brick, tile, and cloth manufactures. It was taken from the Huguenots by Louis XIII in 1629, when the Peace of Alais was made here. Pop. 36,445.

ALANS OR ALANI. A barbarian tribe of Sarmatian race. From their home in the Caucasus they ravaged the eastern provinces of the Roman empire; in A.D. 276 they were defeated in Asia Minor by the emperor Tacitus. In the 4th century they were conquered by the Huns and divided into two main branches. One went westwards with the conquerors, sharing their fortunes; the other took up its abode in the Caucasus, where it is represented by the Ossetes.

ALARCON, PEDRO ANTONIO DE (1833-91). Spanish writer and politician. Born at Guadix in 1833, he became a political journalist. He took part in the Morocco campaign of 1857, and served as a deputy in the Cortes. Of his novels The Three-Cornered Hat is the most popular; it formed the theme of the ballet of the same name by Martinez Sierra, produced in London in 1919. Alarcon's short stories and sketches of Spanish life are the best of his literary productions. He died in Madrid, July 20, 1891.

ALARIC. Name of two kings of the Visigoths. On the death of the emperor Theodosius in 395 the Goths revolted under a youthful chief, afterwards Alaric I (376-410). Alaric overran Greece and Epirus, in 408 and 409 he ravaged N. Italy, and in 410 stormed and sacked Rome.

Alaric II succeeded his father Euric as eighth king in 485. Though an Arian, he permitted the Catholic synod of Agde to be held, 506. On the score of his heterodoxy he was attacked by the Frankish king, Clovis, who defeated the Goths near Poitiers, in 507. Alaric was slain in the rout after the battle. The legal code known as the Breviary of Alaric was compiled in his reign.

ALA-SHAN. Mt. range of China. Extending 150 m. from N.E. to S.W., it separates the Mongolian territories of Ordos and Ala-shan. Its greatest height is over 11,000 ft.

The name is also that of a territory of Mongolia. This is bordered S. by the Chinese province of Kan-su, E. by the Ala-shan range and the Hwang-ho, and W. by the Edzingsol. Called also Little Gobi, it is part of the Gobi desert and is sparsely peopled by Kalmucks.

ALASKA (Alcut, alak'shnik or al-ay'ok-sh, a great country or continent). Territory of the U.S.A. In the extreme N.W. of N. America, it was purchased from Russia by the U.S.A. in 1867 for \$7,200,000 (about £1,450,000), and constituted a territory in 1912. The total area is 590,884 sq. m. and the pop. 55,036. The country contains several of the highest summits of N. America, notably Mt. McKinley (20,300 ft.), the loftiest in the continent. About 1,600 miles of the course of the Yukon river pass through Alaska.

Reindeer are used in the South to provide food for the natives. More important commercially are the fur-bearing animals, moose, fox, beaver, mink, seal and otter. The annual catch of salmon, tinned for export, is valued at over £6,000,000. Barley, oats, rye, potatoes and cabbages are cultivated, while the national forests cover a surface of over 21 million acres. Gold, coal, quartz and platinum are mined. A railway line runs from Seward to Fairbanks, another from Skagway to White Horse.

The natives are of two stocks: the Eskimo or Innuut, and the Indian, the latter occupying the interior and the S.E. The territory has its own legislative assembly of eight senators and 16 representatives, which meet biennially at Juneau, the capital. There is a governor, appointed by the President of the U.S.A., who holds office for four years.

Bering, the Danish navigator, first explored Alaska in 1741 and three years later it became a Russian settlement. See Aleutian Islands. Consult Handbook of Alaska, A. W. Greely, 1925; Alaska, an Empire in the Making, J. J. Underwood, new ed. 1925.

ALASSIO. Seaport and health resort on the Italian Riviera. It lies at the foot of well-wooded hills, 56 m. S.W. of Genoa, and is an important bathing resort in summer. The winter climate is equable and fairly bracing. The town is old and picturesque and attracts many English visitors. Pop. 6,453.

ALASTOR. In Greek mythology, name applied to avenging deities who pursued sinners and incited them to commit fresh crimes. It is an epithet of Zeus and the Furies, and is also used in the sense of a great sinner. Alastor, or the Spirit of Solitude, is the title of a beautiful poem by Shelley.

Alb, decorated with apparels

ALB (Lat. albus, white). Ecclesiastical vestment of white linen, with openings at the neck and foot. It has tight sleeves, and reaches to the feet. In the Roman Catholic Church it is worn under other eucharistic vestments by bishops, priests and deacons at Mass, and it is often ornamented with pieces of embroidery called apparels. Its use in the Church of England,

abandoned under Elizabeth, was revived partially in the 19th century. See Vestments.

ALBA LONGA. First of Latin cities and mother city of Rome. Presumably it was situated on a ridge above the Alban Lake, 15 m. S.E. of Rome. Legend ascribes its foundation to Ascanius, son of Aeneas, some 300 years before the foundation of Rome (q.v.).

ALBAN. British saint and martyr. According to tradition he was born in the 3rd century at Verulamium, now known as St. Albans, and was converted A.D. 304 by a fugitive Christian priest whom he sheltered. Martyrdom quickly followed. A later version of the legend makes him a Roman soldier converted in Rome. His veneration in England dates from the 5th century, and the abbey of St. Albans was founded on the site of his martyrdom in 793. June 22 is St. Alban's festival, but the Church of England Calendar, in which it was placed in 1662, marks it June 17. See St. Albans.

ALBAN HILLS. Group of volcanic mts. in Italy, E. of Rome. Mons Albanus, now Monte Cavo (3,115 ft.), was the scene of military parades up to the temple on the top by Roman generals who were denied a triumphal entry into Rome. On the summits of the hills are small towns, including Albano, whose ancient remains include villas of the emperors Tiberius, Caligula, and Nero, and which is now the seat of a bishop; Frascati, Genzano, and Castel Gandolfo, with a papal palace and a chateau. Lakes Alban and Nemi lie to the S.

ALBANI. Roman family, said to have come from Albania in the 16th century. Several members attained high ecclesiastical rank. Giovanni Francesco became pope in 1700 as Clement XI. His nephew Alessandro (1692-1779), a bitter opponent of the Stuarts, was made a cardinal in 1721. He built the Villa Albani, near Rome, where he formed a famous collection of antiquities, chiefly sculpture. Many of these were taken by Napoleon to Paris; they were restored in 1815. The present Albani collection contains some priceless examples of Greek sculpture. The family became extinct in 1852.

ALBANI, FRANCESCO (1578-1660). Italian painter. Born at Bologna, March 17, 1578. His most famous works are a fresco of Children in the Colonna Palace, Rome; Europa and the Bull in the Torlonia Palace, also in Rome, and the quartet of allegories representing the Four Elements, painted for Maurice cardinal of Savoy. He died Oct. 4, 1660.

ALBANI, MADAME (b. 1852). Professional name of Marie Louise Cécile Emma Lajeunesse, soprano vocalist. Born near Montreal, and educated at Albany, New York (hence the name Albani), she made her début in 1870 at Messina as Amina in La Sonnambula, and appeared first in London in 1872. She was for many years the leading soprano in opera and oratorio. In 1878 Mme. Albani married Ernest Gye. She was made D.B.E. in 1925. Consult her Forty Years of Song, 1911.

Madame Albani, soprano singer

ALBANIA. Kingdom of Europe. It is a mountainous country on the W. side of the Balkan Peninsula, with an area of about 17,374 sq. m. The population is estimated at 833,618. The country is for the most part a tangle of mountains, a continuation of the Alpine ranges of Bosnia and Dalmatia, and of high valleys watered by small swift streams.

There is little agriculture. Their flocks and herds provide the main subsistence of the people. Bitumen is exported. The great majority of the inhabitants are only half

civilized. They are divided by language into two groups: the Ghegs in the N. and the Tosks in the S. The chief towns are Tirana, the capital, Durazzo, Scutari, Koritza, Elbasan, Argyrokastru, and Avlona (Valona).

The early history of Albania is obscure. In 1478 it became a province of Turkey and remained under the Turks until, as a result of the first Balkan War, it was constituted an autonomous state by the Great Powers in 1912-13. It had previously been reduced in

Albania. Primitive urban conditions typified by draught oxen at a broken pump. Above, girls from the Macedonian border

area by the Treaty of Berlin, July, 1878, and the provisional frontiers assigned to it in 1912-13 by the London Conference indicated a further loss of territory.

On Feb. 21, 1914, an Albanian deputation offered the crown to Prince William of Wied, who arrived at Durazzo on March 7, 1914. But when Austria declared war on Serbia on July 28, with most of the members of the International Commission, left the principality to look after itself, whereupon its condition became anarchy and remained so for 2½ years.

On June 3, 1917, General Ferrero, commander of the Italian army of occupation, issued a proclamation by which Italy took Albania under her protection. Austria retaliated by announcing her protectorate of the country. Fighting took place, but in Sept. the Austrians gradually withdrew into Montenegro, and all Albania was occupied by the Italians. In 1919 their rule was challenged by an armed movement of the followers of Essad Pasha aiming at complete independence. After his murder in 1920 Albanian notables in that year established an independent government at Tirana. A new constitution was proclaimed in 1925 by which Albania became a republic. This continued until 1928, when Albania was proclaimed a kingdom with Ahmed Bey Zogu, president since 1925, as king.

Consult L'Albanie en 1921, J. Godart, 1922; The Ottoman Empire and its Successors, W. Miller, 2nd ed., 1923; Albania, J. Swire, 1929.

ALBANY OR ALBAN. Early name for that part of Scotland N. of the Forth and Clyde. Later, about 900, it referred to a district, formerly called Pietland, between the Forth and Clyde and the Spey. This had its own kings for about a century, and was afterwards

the nucleus of the kingdom of Scotia, later Scotland. The word is a variant of Albion.

ALBANY. Town of W. Australia. On King George Sound, 352 m. by rly. S.E. of Perth, it is a popular health resort. Though its harbour is one of the best in W. Australia, it has been gradually superseded by Fremantle. Pop. 3,980.

ALBANY. District in the S.E. of Cape Province, S. Africa. It was first settled during the administration of Lord Charles Somerset by 3,500 immigrants, who landed at Algoa Bay in 1820. These settlers formed the first considerable body of emigrants assisted by the British Government, and were a rampart against the incursions of the Kaffir tribes. In area 1,645 sq. m., its capital is Grahamstown. Pop. 24,000.

ALBANY. City of the U.S.A., capital of New York State, and of Albany county. It stands on the W. bank of the Hudson river, 145 m. N. of New York City. An important industrial and commercial centre, with several large manufactures, Albany has excellent railway facilities and waterway communication by the Erie and Champlain canals. Its many handsome public buildings include the capitol, which was partly destroyed by fire in 1911, the city hall, two cathedrals, the state hall, state museum, colleges, and schools. Pop. 117,820.

Formerly a Dutch settlement, it was ceded to Great Britain in 1664, and named after the duke of York and Albany, afterwards James II, being granted a charter in 1686. In 1797 it became the state capital.

The Convention of Albany took place in 1754. This was a conference promoted to arrange for a closer union between the American colonies, in view of the war then imminent between Great Britain and France.

ALBANY, DUKE OF. Scottish title. The first duke was Robert, a brother of Robert III, king of Scotland. Lord Darnley, husband of Mary Queen of Scots, was created duke of Albany in 1553, and from him the title passed to James I and the succeeding Stuart kings, and was claimed by the exiled descendants of James II. Ernest Augustus, a brother of

George I, and Edward Augustus, a brother of George III, were in turn created duke of Albany, and both died without heirs, as did the next duke, Frederick, a son of George III.

In 1881 this ancient title was revived and bestowed by Queen Victoria on her youngest son, Prince Leopold (1853-84). In 1882 he married Helen Frederica Augusta, princess of Waldeck-Pyrmont, by whom he left a son and a daughter. He died at Cannes, March 28, 1884. His daughter, Alice Mary, was married in 1904 to Prince Alexander of Teck, afterwards earl of Athlone. His son, Leopold Charles, succeeded his uncle as duke of Saxe-Coburg in 1900, when he renounced his British nationality. In 1919 he was deprived of his British titles.

Prince Leopold, Duke of Albany.
Dorsey

ALBANY, LOUISA, COUNTESS OF (1752-1824). Wife of Charles Edward Stuart, the Young Pretender. Louisa was the eldest daughter of Prince Gustavus Adolphus of Stohlberg-Gedern. In 1772 she married Charles Edward Stuart, who styled himself count of Albany, but in 1784 she separated from him. After travelling with the poet Alfieri, she settled at Florence, where she died Jan. 29, 1824.

Louisa, Countess of Albany
Nat. Port. Gallery

The title of Count of Albany was later assumed successively by two brothers, John Sobieski Stolzberg Stuart (1797-1872) and Charles Edward Stuart (1799-1880), who claimed descent from the Young Pretender through a son alleged to have been born to his wife Louisa in 1773.

ALBANY, THE Building on the N. side of Piccadilly, near Burlington House. Erected on the site of Sunderland House, it was known as Piccadilly House until 1770, when Lord Holland sold it to Viscount Melbourne, by whom its name was changed to Melbourne House. He exchanged it for a mansion in Whitehall with the duke of York and Albany, after whom it was renamed and let out first as chambers and more recently in flats. Byron, Lytton, and Macaulay resided in the Albany.

ALBATROSS. Name given to a genus of the zoological order tubinariae, or tube-nosed birds, which includes the petrels. All birds of this order have the nostrils produced into tubes, which lie on the upper surface of the beak. Albatrosses are the largest marine birds; when the wings are extended they often measure 12 ft. from tip to tip.

Except in the nesting season, the albatross spends all its time at sea and most of it on the wing. It is a native of the southern tropical and sub-tropical seas, but one species is sometimes found as far N. as Alaska. It nests in vast colonies on rocks and islands of the South Pacific Ocean, and Tristan da Cunha is one of its favourite places. An old superstition of sailors that ill-luck attended the killing of an albatross at sea is the theme of Coleridge's poem The Ancient Mariner.

Albatross. Largest sea bird, famed for speed and endurance

Albania. Mountainous state on the eastern shore of the Adriatic Sea

AL-BATTANI, Latinised as **ALBATEGNUS** (c. 850-930). Arab prince and astronomer. He calculated the length of the solar year with great exactitude, and worked out tables for the movements of the planets. Astronomy owes to him the first numerical calculation of the eccentricity of the earth's path, as well as the discovery of the variation of the apses of the earth's orbit towards the signs of the Zodiac. He revised Ptolemy's *Almagest*, and rendered service to trigonometry by the introduction of the use of sines in computations.

ALBAY. Province of Luzon, Philippino Islands. It has an area of about 1,000 sq. m., and has gold and silver mines. The capital is Legaspi (formerly Albay), with a pop. of 32,372.

ALBEDO (Lat. whiteness). Scientific term for the degree of reflected light of a planet or other member of the solar system, the light being that of the sun. The light reflected by the moon from the sun is the albedo of the moon. See *Light*.

ALBEMARLE, EARL OF. British title, derived from the French town Aumale. It dates from the Norman Conquest, and has been revived at least four times. William III, by making his Dutch favourite the soldier Arnold Joust van Keppel (d. 1718) earl of Albemarle, gave the title to the family of Keppel, by whom it has been since borne. The family estates are mainly in Norfolk, where is the earl's chief seat, Quidonham Hall, near Attleborough. His eldest son is known as Viscount Bury.

ALBEMARLE, GEORGE MONK OR MONCK, 1ST DUKE OF (1603-70). English soldier and politician. Born at Great Potheridge, Devon, Dec. 6, 1603, in early life he served in campaigns against France and Spain. About 1630 he crossed over to the Netherlands, where his reputation as a soldier was made.

He was a royalist in the first stages of the Civil War, but after two years' imprisonment (1644-46) returned to Ireland as Governor of Ulster under the Parliament. He held a command at Dunbar under Cromwell (1650) and as Admiral of the Fleet defeated the Dutch at sea in 1653 and again in 1666. After Cromwell's death in 1658 he became active as a political leader and was instrumental in restoring Charles II to the throne. For this the king made him duke of Albemarle in 1660. He died Jan. 3, 1670, and was buried in Westminster Abbey. His son Christopher succeeded to the dukedom, but on his death in 1688 it became extinct. See *Civil War*.

ALBENDORF. Village of Silesia, East Germany. On the Cedron, 50 m. S.S.W. of Breslau it is famous as a place of pilgrimage. It has a beautiful 18th century church, on the model of the temple of Jerusalem, a Calvary, and an image of the Virgin. Before the Great War this little place, with less than 2,000 inhabitants, was visited yearly by about 100,000 pilgrims. It has been celebrated since about 1200.

ALBERNI. Town and port of Vancouver Island, Canada. It stands at the head of the Alberni Canal, 58 m. from Nanaimo, and is the terminus of branches of the C.P.R. and the C.N.R. to Victoria. From here steamers go to Victoria and elsewhere. Its industries are connected with lumbering, saw-mills, and fish curing. Pop. 2,054.

ALBERONI, GABRIEL (1611-1752). Italian prelate and Spanish statesman. After varied

diplomatic experiences he was in 1713 sent by the duke of Parma to Madrid. He negotiated the marriage of Philip V with Elizabeth Farnese in 1714, and in the same year became prime minister, being made a cardinal in 1717. He did much to revive Spanish commerce and to organize the Spanish army and navy, but his aggressive foreign policy resulted in 1719 in the Quadruple Alliance between England, France, Austria, and Holland. Having been banished he died at Piacenza, June 16, 1752.

ALBERT OR **ALBERT NYANZA**. Lake in East Central Africa. Since 1910 the eastern side forms part of the British protectorate of Uganda, and the western side is attached to the Belgian Congo. It is about 80 m. N.W. of the Victoria Nyanza. It is 100 m. long and 25 m. broad, with an area of 1,650 sq. m. The Victoria Nile empties into the N.E. corner and the White Nile issues from its N. extremity. The situation of the Albert Nyanza was first announced by Spoke and Grant in 1862.

ALBERT. Town of France, in the department of Somme. It stands on the Ancre, 18 m. N.E. of Amiens and 11 m. S.W. of Bapaume, and has paper, cotton, and other industries. Formerly known as Ancre, it received its present name on its presentation to Charles d'Albret, duke of Luynes, by Louis XIII.

George Monk,
1st Duke of Albemarle
From an engraving by W. T. Motte

The church of Notre Dame de Brebières became famous during the Great War for its so-called hanging Virgin, a gilded figure of the Madonna and Child, which fell into a position 15 degrees below the horizontal during the early operations and remained thus until March, 1918, when it fell. There was a popular belief among the French that the day the figure fell the war would end, and the shell that dislodged it would close the reign of the Hohenzollerns. After the Great War Albert was adopted by Birmingham.

The series of indecisive engagements fought around here between the French and the Germans, Sept. 20-30, 1914, are known as the battle of Albert. The town was occupied by the Germans from March 27, 1918, to Aug. 22, 1918, when it was recaptured by the Allies.

ALBERT, known also as **THE PRINCE CONSORT** (1819-61). Husband of Queen Victoria and father of her successor, Edward VII. He was the younger son of Ernest, duke of Saxe-Coburg-Gotha, and was born August 26, 1819, being christened Francis Charles Augustus.

Prince Albert, consort of
Queen Victoria

Albert Emanuel. He married Queen Victoria on Feb. 10, 1840.

As the prince consort, a title conferred on him in 1857, Prince Albert occupied a somewhat anomalous position, having no status in the constitution; at the same time he soon

became the queen's most intimate personal counsellor. His knowledge of continental politics was exceptionally thorough, and this greatly enhanced the value of his counsels. Under other conditions he might well have taken high rank as a statesman, but his statesmanship could only be displayed indirectly. The prince died of typhoid fever at Windsor Castle, Dec. 14, 1861.

Albert, King of the Belgians,
in the uniform of a British field-marshal
Vandyke

ALBERT (b. 1875). King of the Belgians. Born at Brussels, April 8, 1875, he was the second son of Philip, count of Flanders, a younger brother of the Belgian king, Leopold II. He was educated for the throne, to which he succeeded in Dec., 1909. Albert had married in 1900 Elizabeth, a princess of Bavaria, and their elder son, the duke of Brabant, was born in 1901. Two other children, a son and a daughter, were born in 1903 and 1906 respectively. When presented, in Aug., 1914, with Germany's ultimatum, Albert decided to maintain the neutrality of Belgium, and at once the country was invaded, Antwerp and Brussels being quickly taken. The king bore these misfortunes with a dignity that won for him the respect of Europe. His Government was removed to Le Havre, and he himself took his place as commander of his army in the field. In Sept., 1918, he took command of an Allied Army which recaptured the entire Belgian coast by Oct. 20. Consult *Albert, King of the Belgians*, E. Graham, 1929.

Albert, Duke of York. Second son of George V. See *York*.

ALBERT (b. 1865). Duke of Württemberg and German soldier. The son of Philip, duke of Württemberg, and the archduchess Theresa of Austria, he was born at Vienna, July 23, 1865, and entered the German army in 1883. When the Great War broke out he was commander-in-chief of the German Third Army. He advanced later to the Meuse, and, after a check at Dinant, dislodged from that river the French Fourth Army. He fought in the Battle of the Marne and the first battle of Ypres. Before the revolution of 1918 the duke was heir to the throne of Württemberg.

ALBERTA. Province of the Dominion of Canada, constituted in 1905. From N. to S. the length is 760 m., the mean breadth from E. to W. is 255 m., and the area 255,285 sq. m. The pop. is 607,600. The Rocky Mts. form a natural boundary in the S.W. Three of the great N. American river systems, the Saskatchewan, Athabaska, and Peace, with their tributaries, traverse the plain.

Down to the end of the 19th century Alberta consisted of a vast ranching country, but it has become increasingly agricultural. There are over 12 million acres of forest reserves, and it is estimated that over 100 million acres are suitable for farming, though of this area only 8 p.e. is under crops. Grain is the chief product, cattle and butter are exported, and pigs are raised for the great packing establishments. Alberta has vast coalfields, its yield being nearly 7,000,000 tons per annum.

The chief towns are Edmonton, the capital, Calgary and Lethbridge. Alberta sends six members to the Dominion Senate at Ottawa and 12 to the House of Commons. For local affairs it has an elected assembly of 48 members. The university of Alberta was opened at Edmonton in 1908. Two theological colleges are affiliated with it. See History of Alberta, J. Blue, 1924.

Alberta, one of the prairie provinces of the Dominion of Canada. It was created in 1905

ALBERT HALL. Building in South Kensington. It was completed in 1871, and, with the Albert Memorial in Kensington Gardens, was dedicated to the memory of Albert, Prince Consort. It was designed by Captain Fowke, R.E., but after his death was almost entirely re-designed by Sir Gilbert Scott. It is nearly a true ellipse in plan and exteriorly follows the Italian Renaissance style. The auditorium was designed to contain 8,000, and the orchestra, 1,200 persons. The hall is used for oratorio, concerts, public meetings, boxing contests, etc., and its organ is one of the largest in the world.

ALBERTI, CHERUBINO OR BORGREGGIANO (1533-1615). Italian painter and engraver. He was mainly occupied in executing paintings in oil and fresco for the churches and palaces of Rome, where he died. His fame rests upon his line engravings, nearly 180 in number, many after works by Michelangelo, Raphael, Andrea del Sarto, and other masters. Several fine friezes painted by Caravaggio on the façades of buildings are only known through Alberti's prints.

ALBERT MEDAL. British decoration instituted by Queen Victoria in 1866 for distinguished acts of bravery in life-saving at sea, and extended in 1877 to mark similar acts on land.

Albert Medal, for bravery

The rules of the award were amended in 1905. Each of the two classes is in two divisions. The badge is oval, in gold for the 1st class and bronze for the 2nd, with the monogram V.A.; that for sea service has an anchor interlaced with the monogram. The ribbon is crimson and white. See Medals.

ALBERT MEMORIAL. Elaborate canopied monument, erected in Kensington Gardens, London, in memory of Albert, Prince Consort. It was designed by Sir Gilbert Scott and is richly embellished with statuettes in high relief representing painters, sculptors, and musicians, the gilded statue of the prince being by J. H. Foley. The monument is 150 ft. high, and was unveiled March 9, 1876.

ALBERT PARK. National park in the Belgian Congo. It is in the district of Lake Kivu and covers 500,000 acres and adjoins a reserve of a similar kind in Uganda.

ALBERTUS MAGNUS (c. 1205-80). Scientist, philosopher, and theologian. He joined the Dominican order of friars in 1223, and in 1254 was elected provincial of the Dominicans in Germany. In 1260 he was made bishop of Ratisbon, but resigned two years later and returned to his studies at Cologne. Beatified, but not fully canonised as a saint, by Pope Gregory XV in 1622. His festival is kept on Nov. 15.

Albertus Magnus was, with the possible exception of Roger Bacon, the greatest scientist, philosopher, and theologian of his time. His works, 21 folio vols., were published in 1651 at Lyons and in Paris, 1899-1900. See Scholasticism.

ALBERTVILLE. Settlement in the Belgian Congo, on the W. shore of Lake Tanganyika. It is the terminus of a rly. from the river Lualaba to Lako Tanganyika, and by means of this line communication by rly. and water from the mouth of the Congo, on the W. African coast, to Dar-es-Salaam, on the east side of Africa, is possible.

ALBI. City of France. The capital of Tarn department, it is on the Tarn, 44 m. by rly. N.E. of Toulouse. The seat of an archbishop, it has a cathedral dating from the 13th century and a 14th century archiepiscopal palace. It manufactures textiles and trades in wine, grain, and fruit. The city suffered much in the wars against the Albigenes, who took their name from it. Pop. 26,628.

ALBIGENSES. Name given to a religious sect which flourished in the S. of France in the 11th-13th centuries. Their beliefs were that man and matter were wholly evil, that Jesus Christ never existed save in the spirit,

Albert Hall, London, completed in 1871, from the designs of Captain Fowke, R.E., and Sir Gilbert Scott

Albert Memorial, Kensington Gardens, London, designed by Sir Gilbert Scott and unveiled in 1876

that marriage was to be depreated, and that only by abstinence and self-denial could men free themselves from the evils inherent in their bodies. On the political side the Albigenes were deliberately opposed to the whole system of the Church of Rome and to the faith and morals of Christendom.

Befriended by the people and feudal nobles, the sect was condemned and persecuted by the Church. A massacre lasting 20 years (1209-29) was begun by Simon de Montfort, and with the capture of their stronghold, Mont Ségur, in 1245, the Albigenes were finally exterminated.

ALBINISM (Lat. albus, white). Absence of the natural pigment of the skin, hair, and coating of the eye. The phenomenon occurs in the human species, more noticeably among negroes, and is found in many usually coloured animals. The hair of a true albino is white, the skin transparent, and the eyes generally appear pink, the iris being colourless and transparent, and rendering the eye abnormally sensitive to light. A kind of albinism is seen in the periodic assumption of white by animals in the northern regions in winter. Albinism has also been observed in plants.

ALBION. Ancient name of the British Isles. It is possibly of Celtic origin, and was connected by the Romans with albus, white, from the colour of the Dover cliffs.

ALBION METAL. Mechanical combination of tin and lead. It is made by laying a thin sheet of tin on a thicker sheet of lead, and rolling them together under sufficient pressure to make them adhere. It is particularly a Birmingham product, being used for the production of buttons, toys, fancy articles, handles, and even jewelry.

ALBITE (Lat. albus, white). Plagioclase felspar, sodium aluminium silicate. It occurs both as a primary and secondary constituent of igneous rocks and is prevalent in the crystalline schists.

ALBOIN (d. 572 or 573). Lombard conqueror of Italy. He became king of the Lombards in Pannonia about 565, and after helping to subdue the Ostrogoths joined forces with the Avars against the Gepidae, who were totally defeated. Alboin slew the Gepid king Cunimund and married his daughter Rosamund. In 568 he invaded Italy and subdued most of the northern part of the country. He was assassinated in 572 or 573.

ALBORNOZ, GIL ALVAREZ CARILLO (1300-67). A Spanish soldier and prelate. He was born at Cuenca, Spain, and became archbishop of Toledo. He took part in the fighting against the Moors, and for saving the life of Alphonso XI of Castile was made a knight. Created cardinal by Clement VI at Avignon, and sent as legate to Rome by Innocent VII, he died at Viterbo after being appointed papal legate at Bologna.

ALBRET. Notable French family which had extensive lands in the S. of France. John of Albret married Catherine of Foix and became king of Navarre, and their son Henry was made a duke of France in 1550. Henry married Margaret, a sister of King Francis I, and their daughter Jeanno (1528-72) was historically the most important member of this family. On her father's death she became queen of Navarre, and by her marriage with Antony of Bourbon, mother of Henry IV, to whom her kingdom passed. Jeanne, a zealous Calvinist, was a leader of the Huguenots during the civil wars of religion in France. See Bourbon.

ALBUERA, BATTLE OF. British victory in the Peninsular War. It was fought on May 16, 1811. The French, about 23,000 strong, under Marshal Soult, were marching to relieve Badajoz, then besieged by the British. Wellington ordered Beresford to raise the siege and intercept the advancing enemy at Albuera, 13 m. S.E. of Badajoz. The allied troops, numbering 30,000, were caught unexpectedly by the French, who had made a feint of attacking elsewhere, but after a fierce struggle, lasting 7 hours, the French retreated with the loss of 8,000 men.

ALBUM. General name for books of blank leaves on which can be written, drawn, or pasted autographs, verses, sketches, photographs, etc. In ancient Rome albums were whitened boards on which were inscribed public notices and lists of officials.

ALBUMEN OR **ALBUMIN** (Lat. *album*, white). Important sub-group in the class of nitrogenous constituents of both plants and animals known as proteins. To-day albumins are classed as simple proteins. The term albumen is now generally restricted to white of egg and the chemical expression albumin to its chief constituent.

Albumin is a complex carbon compound, which occurs only in living bodies and is essential to both plant and animal life. So far all attempts to prepare albumin synthetically have failed. The distinguishing chemical characteristics of the albumins are that they are soluble in water and coagulable by heat.

ALBUMINOID. Class of substances, as the name signifies, resembling albumin. The modern name for albuminoids is scleroproteins. They are derived from animal tissues and are chiefly represented by gelatin and horn.

ALBUMINURIA (Lat. *albumen*; *urina*, urine). Presence of albumin in the urine, most often a sign of disease of the kidneys, bladder, or urethra, but also occurring in fevers and other affections. Tests for albuminuria are only reliable when performed by experts.

ALBUQUERQUE. Chief city of Bernalillo county, New Mexico, U.S.A., and named after the Duke of Albuquerque, viceroy of New Spain, 1702-10. On the Rio Grande, 36 m. S.W. of Santa Fé, it is the seat of the university of New Mexico. The city contains a large wool-scouring plant and deals with the products of the many ranches of the neighbourhood. Pop. 15,157.

ALBUQUERQUE, ALFONSO D' (1453-1515). Portuguese viceroy of the Indies. In 1503 he made his first expedition to the Indies, and established the influence of Portugal in Cochín

In 1507 he was appointed to succeed Francisco d'Almeida as viceroy of the Indies, and he began at once a series of conquests. Goa

Alcázar. Interior of the arcaded Court of the Ambassadors in the Moorish palace of Seville

and Malacca and eventually Ormuz were secured. In 1515 his enemies at the Portuguese court secured his downfall. A just and capable ruler, so firmly did he establish the Portuguese power that Goa has remained in the possession of Portugal to this day. His Commentaries, translated into English by W. de G. Birch, were published by the Hakluyt Society, 1875-84. Consult Life. H. Morse Stephens, 1892.

ALBURY. Village of Surrey, England. It is 40 m. from London, Chilworth, on the Southern Rly., being the station. Here is Albury Park, bought in 1819 by Henry Drummond, the banker, which, through his daughter became the property of the dukes of Northumberland. In 1840 Drummond built the Catholic Apostolic Church here. At Albury is the Silent Pool, the modern name for Sherbourn Pond.

Another town of this name is in New South Wales, in Goulburn county, 386 m. by railway S.W. of Sydney. The district is noted for its sheep, cereals, tobacco and wine. Pop. 8,750.

ALCAEUS (c. 600 B.C.). Greek lyric poet. A native of Mitylene in Lesbos, and of noble family, he fought on several occasions in defence of the oligarchy to which he belonged, and as a result was banished and went into exile in Egypt. Returning, he took up arms against the tyrant Pittacus, was taken captive, but magnanimously forgiven. The surviving fragments of his political poems are passionate, but mainly; his love and drinking songs are characterised by sensuality. The term Alcaic metre is given to a form of lyric poetry said to have been first used by him.

ALCALDE (Arabic, *al-qadi*, the judge). Spanish official title for the president of the council of the commune. Usually he is chosen by the members of the council in the larger towns, but he may be appointed by the government. He discharges certain executive and judicial duties, his position being not unlike that of an English mayor. The title is used in parts of Spanish America.

ALCAMO. Town of Sicily, in Trapani province, 51 m. by rly. W.S.W. of Palermo. The ancient town was built by the Saracens in the 9th century on the N. slope of Mt. Bonifato, the new town at its foot after the victory over the Moors by Frederick II in 1233. Alcamo is in a rich agricultural district. Pop. 32,211.

ALCANTARA (Arabic *al-kántarah*, the bridge). Town of Spain, in Cáceres province. On the S. bank of the Tagus, 35 m. N.W. of Cáceres, it is famous for its six-arched Roman bridge, 617 ft. long, 26 ft. wide, with middle piers about 190 ft. high. Built A.D. 105, this bridge was thoroughly restored in 1860. The Gothic church of S. Maria de Almoebar dates from the 13th century. Pop. 3,650.

The town gave its name in 1217 to the order of Alcántara. As at present constituted, this order of knighthood, founded in the 12th cent. and several times suppressed, dates from 1874.

Another town bearing the name Alcántara is a seaport of Brazil, 16 m. to the N.W. of Maranhão city. The harbour is too shallow for extensive trade. Exports include coffee, cotton, hides, and salt. Pop. 16,000.

ALCAZAR (Arabic, *al qasr*, the palace). Name applied to various Moorish palaces in Spain. They were built as strongholds, but, in accordance with the Moorish love of decorative art their decorative work and arcaded courts are a distinguishing feature. Notable examples are the alcázar of Seville, built in the 14th century on the site of a Moorish citadel of 1181, and restored in 1624 and 1857; and that of Segovia, built by Alphonso VI of Castile (1072-1109), renewed 1352-S, but almost destroyed by fire in 1862.

ALCESTER. Parish and market town of Warwickshire, England. It lies at the union of the rivers Alne and Arrow, 15 m. S.W. of Warwick by the G.W.R. Market day, Fri. Pop. 2,259.

From this town, Frederick Beauchamp Paget Seymour, Baron Alcester (1821-95) took his title. He entered the navy in 1834. During the Maori War of 1860-1 he commanded the naval brigade, and was in charge of the Mediterranean Fleet at the bombardment of Alexandria in 1882. For his skill in conducting that operation he was made a baron and awarded £25,000. On his death the title became extinct.

ALCESTIS. In Greek legend, the wife of Admetus. The Fates, at the request of Apollo, had granted her husband immortality on condition that he procured another to die in his stead. His aged parents, although they had only a few more years to live, refused, but Alcestis nobly sacrificed herself. In one version Alcestis is said to have been brought back to her husband from the underworld by Hercules. The story is the subject of the drama of the same name by Euripides and of Browning's *Balaustion's Adventure*.

ALCHEMY. Alchemy is a term used for the art of chemistry as practised from ancient times to the middle of the 17th century. It first had to do with the working and colouring of metals, from which developed the search for the philosopher's stone, with which it was hoped to convert base metals into gold or silver. Dissolved in alcohol and known as

the elixir of life, the philosopher's stone was believed to produce eternal youth. Alchemists also sought for the alchemist or universal solvent, a method of creating living beings and of restoring plants from their ashes.

Of the ancient alchem-

ists the best known are Hermes Trismegistus, an Egyptian of the time of Moses, and Geber, an Arabian who flourished in the 8th or 9th century. Among the numbers who followed up their researches were Albertus Magnus and Roger Bacon in the 13th century, Paracelsus in the 16th century, who taught that the object of chemistry is not to make gold but to heal disease, and Sir Kenelm Digby (1603-65) who devised a tincture of gold as a universal remedy for disease. James Price (1752-83).

Alchemical signs or symbols

professed to have discovered the philosopher's stone, but committed suicide when required by the Royal Society to repeat his experiments.

The ancient chemists invented a system of alchemical signs, and down to the end of the 17th century books on chemistry employed these signs in the directions for preparing chemicals and drugs.

ALCIBIADES (c. 450-404 B.C.). Athenian statesman and general. The son of Cleinias, he was born at Athens during the ascendancy of his kinsman Pericles. He was among the companions, though not the imitators, of Socrates, who saved his life at the battle of Potidaea (432 B.C.), and whose life he saved in return at the battle of Delium (424). Shortly afterwards Alcibiades plunged into politics. He stirred up the Athenians to organize the expedition against Syracuse in 415, when the war between Athens and Sparta was suspended. Alcibiades procured his own appointment to the command with two other generals, but was accused of an outrage against the sacred images called Hermac, and recalled. Thereupon he fled to Sparta and set about intriguing for a renewal of the war against Athens. Later he quarrelled with the Spartans and in 412 repaired to the court of the Persian satrap Tissaphernes, defecting the latter's alliance from Sparta to Athens, and thus bringing about his own reinstatement in the favour of his countrymen. A series of military and naval victories brought him popularity, but following two defeats he was again exiled. He met his death by assassination in Phrygia.

Alcibiades, Athenian statesman and general
Just in the Villa Albani, Rome

ALCINOUS. Legendary hero of Greece. In Homer's *Odyssey* he is represented as king of the Phaeacians and dwelling on the island of Scheria, identified by some with Corfu. During his wanderings Odysseus and some companions were shipwrecked on the island, where they were hospitably received before being sent on their homeward way. The halls and gardens of Alcinous were regarded as exceptionally splendid, and his subjects had a great reputation as skilled seamen.

ALCMAEON. In Greek legend, son of Amphiarus and Eriphyle. Bribe by the necklace of Harmonia, Eriphyle urged her husband to join the fatal expedition to Thebes. For this treachery she was killed by Alcmaeon, who was then driven mad by the Furies. King Phegeus cured him and gave him his daughter Arsinoë in marriage. He was slain by the brothers of Arsinoë while trying to obtain from her the necklace of Harmonia to give to his second wife Callirrhoe.

ALCMAEONIDAE. Noble family of ancient Athens, descendants of Alcmaeon, a Dorian immigrant from Pylos. Following a sacrilege alleged to have been committed by Megacles, one of its members, the whole family was banished from the city, c. 630 B.C. They did not return permanently to Athens until 509. They joined the popular party, and the head of the family, Cleisthenes, was responsible for the new and more democratic constitution at Athens. See Cleisthenes.

ALCMAN (c. 620 B.C.). Greek lyric poet. Born at Sardes in Lydia, he was the author of hymns, epinikia (songs of thenia (songs intended to be sung by choruses of maidens). He wrote in the Doric dialect, with an admixture of Aeolic elements.

ALCOCK, SIR JOHN (1892-1919). British airman. In 1913 he won second place in the race from London to Manchester and back again. In Aug. 1914, Alcock joined the R.N. Air Service, and served against the Turks until he was taken prisoner. There he won the D.S.C. and held the record for a long-distance homing raid. Released at the time of the armistice, Alcock returned home and with Lieutenant A. W. Brown won, June 14-15, 1919, the £10,000 prize offered by The Daily Mail for a flight across the Atlantic. A few days later both were knighted. Alcock was killed Dec. 18, 1919, when flying from London to Paris.

Sir John Alcock,
British airman

ALCOFORADO, MARIANNA (1640-1723). Portuguese nun and letter-writer. Born at Beja, she became a nun at the age of 16. In 1665 a young French officer, Noel Bouton, afterwards Marquess de Chamilly and marshal of France, visited the convent, and remained on visiting terms for two years. Marianna's five letters describe how Noel came, saw, conquered, and rode away, and reveal her agony of grief, her pride in her passion, and finally her contempt for it. They were written between Dec., 1667, and June, 1668, and were first published anonymously in Paris in a French translation in Jan., 1669. See *Letters of a Portuguese Nun*, trans. Edgar Prestage, 3rd ed., 1903.

ALCOHOL. By alcohol is generally meant ethyl alcohol, a liquid obtained from the distillation of sugary solutions, either natural sugar derived from malted grain, sugar cane or beetroot, or artificial, formed by the action of dilute mineral acids on starch obtained from the potato or other sources. Absolute alcohol may contain a small amount of water, but not more than 1 per cent by weight; rectified spirit contains 10 per cent of water by volume, and proof spirit 43 per cent by volume. Spirits are overproof when they contain less water, and underproof when they contain more water than this.

Alcohol is a transparent, colourless, inflammable liquid, with a burning taste and a pungent odour. The amount present in spirituous liquors varies from 2-5 per cent in light beer up to 70 per cent in liqueur brandy. In the United Kingdom a large revenue is raised by the duty on spirit; this is at the rate of £3 12s. 6d. per proof gallon. Three varieties employed industrially, namely, mineralised, industrial and power methylated spirit, are exempt from tax.

Alcoholometry is the term applied to methods of testing the strength of alcohol in a liquid. See Distilling; Spirits, etc.

ALCOHOLISM. Habit of taking alcoholic liquor to excess. It differs widely among different races, and it has been shown that the vice is least prevalent among nations which have known longest how to prepare drinks containing alcohol, and worst among those to whom it has been introduced recently.

The effects on the body of excessive indulgence in alcohol are serious. Delirium tremens is a form of acute alcoholic insanity, and complete mental breakdown may follow chronic alcoholism. Treatment requires much patience and perseverance. Most alcoholics require assistance by having alcohol placed

for a time beyond their reach, or by living in a home for inebriates or with friends who can control them. See Liquor Control.

ALCORNOCO. Reddish-brown bark of a Brazilian tree of the pea family, *Bowdichia virgiloides*. This tree is abundant in the campos, and is of handsome appearance, the upper branches being clad with bright blue flowers. The bark is bitter and colours the saliva yellow. It is used as a tonic.

ALCOTT, LOUISA MAY (1832-88). American authoress. Her first book, *Flower Fables*, was published in 1855, but she first attracted attention by *Hospital Sketches* (1863), the record of her experience as an army nurse in the Civil War. Her *Little Women* (1868, second series 1869; dramatised version produced in London, 1919) made her famous. Her other works include *An Old-fashioned Girl*, 1869; *Little Men*, 1871; *Good Wives*, 1871, and *Jo's Boys*, 1886.

Louisa M. Alcott,
American authoress

ALCUIN OR ALBINUS (735-804). English scholar and theologian. He was born at York, and was educated at the cloister school, succeeding Ethelbert as master in 778. In 781, at the invitation of Charlemagne, he established a school in the palace at Aix-la-Chapelle. He retired in 796 to Tours, where he also founded a school. Theologian, philosopher, orator, historian, and poet, Alcuin was the foremost scholar of his time.

ALCYONE (Greek, kingfisher). In Greek mythology, daughter of Aeolus, the wind-god, and wife of Ceyx, son of Hecosphorus, the Morning Star. In their pride husband and wife called themselves Zeus and Hera and were changed by Zeus into sea-birds. In a variant legend Ceyx was drowned on a voyage, his body was found on the shore by his wife, and the gods, pitying her sorrow, changed both into kingfishers. For seven days during winter she hroods over the sea, while her father causes all the winds to cease, this being the origin of the phrase *halcyon days*.

ALDBOROUGH. Village in the W. Riding of Yorkshire, England. It is 1 m. E. of Boroughbridge station on the L.N.E.R. and 16 m. from York. It returned two members to Parliament from Elizabeth's time until 1832. It has many remains of Isurium, the supposed capital of the Brigantes.

ALDEBARAN. Star a Tauri, the Follower (of the Pleiades). A shade less bright than first magnitude and conspicuous for its ruddy colour, it is the chief object in the group of the Hyades, its intrinsic light being some 29 times that of the sun.

ALDEBURGH OR ALDBOROUGH. Mun. borough and seaside resort of Suffolk, England.

It is on the Alde estuary, 99 m. E.N.E. of London by the L.N.E.R. It has a half-timbered 16th century moot hall, and was the birthplace of the poet Crabbe. In 1832 it was disfranchised. In 1908 Mrs. Garrett Anderson was elected mayor of Aldeburgh, being the first woman in England to hold mayoral office. Pop. 2,889.

Aldeburgh. Moot Hall, a brick, flint and timber 16th cent. building

ALDEHYDE or ACETALDEHYDE. Colourless liquid with a pungent odour obtained by the oxidation of alcohol. It can be made by acting on alcohol with manganese dioxide and sulphuric acid, but is obtained on a large scale as a by-product in the distillation of spirit. It is inflammable and by the action of oxygen can be changed into acetic acid.

ALDEN, JOHN (c. 1599–1687). One of the Pilgrim Fathers. In 1620 he sailed as a cooper in the Mayflower, and settled at Duxbury, Massachusetts, where for more than forty years he served as magistrate and sometimes as acting governor. In 1623 he married Priscilla Mullins, whom he had originally courted for his friend Miles Standish—the subject of Longfellow's poem. He died at Duxbury, Sept. 12, 1687. See Pilgrim Fathers.

ALDENHAM. Village of Hertfordshire. It is 3 m. from Elstree, its railway station. It has an old church and a public school, founded in 1597, with accommodation for 240 boys. From the place the family of Gibbs takes the title of baron, conferred in 1896 upon Henry Hicks Gibbs (1819–1907), a leading London merchant, also a strong churchman and Conservative; his son, the 2nd baron, was Unionist M.P. for the city of London, 1892–1906.

ALDER (*Alnus glutinosa*). Small tree common in Europe, growing in moist ground. The leaves vary from broad oval to round with wavy and toothed margins, and when young are hairy and sticky. Flowers are produced in catkins, formed late in summer, but not reaching maturity until the following March, when they become

very conspicuous on the leafless tree. Alder wood is light and soft, red when freshly cut, pinkish when dry. If kept constantly moist it is very durable. Its charcoal is valued by gunpowder makers.

ALDER FLY (Sialis). Name of a family of neuropterous insects related to scorpion flies. The European alder fly (*S. lutaria*) passes its larval stage in the water, and is about an inch long. About May it leaves the water and buries itself in the ground, where it passes the pupal stage. A few weeks later it emerges as the perfect insect—known to anglers as a good bait for fly-fishing.

ALDERLEY EDGE. Urban district of Cheshire, England. A residential district for Manchester business people, it is 8 m. S.W. of Stockport on the L.M.S. Rly., and takes its name from a small ridge of hills producing copper and lead ores. Pop. 3,088.

ALDERMAN. Word of Anglo-Saxon origin meaning elder man. It is applied to certain members of town and county councils in England, Wales, and Ireland, and to members of municipal bodies in the U.S.A. and Canada. They are elected by the councillors. In English municipalities, except in London, the proportion is one alderman to every three councillors, the term of office being six years. For the Corporation of the City of London there are 26 aldermen chosen for life. In the London boroughs and in the counties the

proportion is one alderman to six councillors. Women may be chosen as aldermen.

ALDERNEY (Fr. *Aurigny*; Lat. *Riduna*). The most northerly of the Channel Islands. Comprising 1,962 acres, it is 4 m. long and 1½ m. wide. Off the W. coast are the perilous Casquet rocks, with three lighthouses. From precipitous cliffs W. and S., of which the highest point is 306 ft., the land slopes down N. and E. to sandy bays. St. Anne, the only town, is situated in the centre. The government is in the hands of a judge appointed by the Crown and of 18 representatives of the people. It is a British possession and a dependency of Guernsey. French is the official language, but English is spoken by half the inhabitants. The chief wealth of Alderney is in its small but excellent breed of cows. Pop. 1,598.

ALDERSGATE. Ward and street of the City of London. The street runs N. from St. Martin's-le-Grand to Goswell Road. The old gate at the S. end of the street was the N. gate of the city. Rebuilt in 1618 and damaged in the Great Fire, it was finally razed in 1761. At one time Milton lived here.

Aldersgate. Gateway that stood on the N. side of the City of London

ALDERSHOT. Urban district of Hampshire, England. On the confines of Surrey and Berkshire, 34 m. S.W. of London by the Southern Rly., it is the site of a permanent military camp erected in 1855.

The camp is divided into three sections known respectively as Marlborough Lines, Stanhope Lines and Wellington Lines. In addition to the barrack buildings, there are engineering workshops, officers and quarters for the general and staff officers, besides several churches, hospitals and other institutions and recreation grounds. There are also schools of instruction in medical and veterinary duties, ballooning, signalling, cooking and general supply work. Farnborough, where the Marlborough Lines are situated, is a depot and was the original headquarters of the Royal Air Force. Laffan's Plain and Caesar's Camp, in the vicinity, and Ash in Surrey, where musketry practice is taken, may also be included in the camp area of about 70 sq. m.

It was from Aldershot that the first division of the expeditionary force departed for France in Aug., 1914. Aldershot gives its name to a county division returning one member to Parliament. Pop. 28,764.

ALDERSON, SIR EDWARD ALFRED HERVEY (1859–1927). British soldier. After service in Egypt and South Africa, from 1903 he commanded an infantry brigade at Aldershot, and from 1908–12 the Poona Division in India. During the Great War he was commander in France of the Canadian Division, which he directed at the second battle of Ypres, and when a Canadian Corps was formed he was placed at its head. In 1916 he was made a K.C.B., being then a lieutenant-general. He died Dec. 14, 1927.

ALDGATE. Ward and street of the City of London. The street connects Fenchurch Street with Whitechapel. The old gate was the extreme E. gate of the city; in 1606 it

was taken down and rebuilt, being removed finally in 1761. Aldgate's chief existing relic is the jump; this was dried up for years, but water was laid on again in 1908.

ALDHELM (c. 640–709). English saint, bishop, and scholar. He succeeded Maildulf as abbot at Malmesbury about 676, was made bishop of Sherborne in 705, and died May 25, 709. Aldhelm was a skilful architect, and the foundation of the Saxon church of S. Lawrence at Bradford-on-Avon, Wiltshire, has been attributed to him. His writings include the famous riddles in Latin hexameters embodied in a treatise on Latin prosody, verses, and a treatise addressed to the nuns of Barking.

ALDIN, CECIL CHARLES WINDSOR (b. 1870). British artist. Born at Slough, April 28, 1870, he studied anatomy and painting, and began to draw for the Press in 1891. His lifelike illustrations of animals made him known, and many popular books were illustrated by him.

ALDINE EDITIONS. Small octavo or duodecimo editions of the Greek, Latin, and Italian classics printed at Venice, 1494–1597. They were issued from the press in the Campo di S. Agostino founded by the scholar-printer Mnnutius Aldus, for whom Francesco of Bologna designed the type known as cursive or italic, first used in a Virgil of 1501. Aldus began a revolution in book printing, which combined cheapness, accuracy and portability with elegance of form. The Aldine trade mark, a dolphin twined round an anchor, was adopted in 1830 by William Pickering and adapted later by Bell and Daldy and their successors, George Bell and Sons. See Mnnutius Aldus.

ALDRED (d. 1069). English prelate. A monk of Winchester, he was made abbot of Tavistock about 1027 and bishop of Worcester in 1044. In 1060 he was appointed to the archbishopric of York, which he held jointly with the see of Worcester until compelled to resign the latter by Pope Nicholas II. He crowned William the Conqueror in 1066.

ALDRICH, THOMAS BAILEY (1836–1907). American writer and humorist. He was editor of *The Atlantic Monthly*, 1881–90. His light verse is best represented in *The Ballad of Babe Bell*, 1856, and *Cloth of Gold and Other Poems*, 1874. His stories include *The Queen of Sheba*, 1877, and the once popular *Story of a Bad Boy*, 1870. He died March 19, 1907.

ALDRIDGE, IRA FREDERICK (c. 1804–67). American coloured actor called the African

Aldgate. An old gateway of the city of London. It was razed in 1761

Aldine. First mark of the Aldine Press

Thomas B. Aldrich, American author

Roscius. In 1826 he became valet to Edmund Kean, who was then in America, and accompanied him to England. The association prompted him to go on the stage, and he returned to America in 1830, making his debut at Baltimore. His first appearance in London was as Othello at Covent Garden in 1833. He died Aug. 7, 1867.

Aldwick. Craigwe House from the sea front. Here, in 1929, King George made a good convalescence

ALDWICK. Seaside village of Sussex. It is about 1½ miles to the west of Bognor, in the parish of Pagham. Here is Craigweil House, the property of Sir Arthur du Cros, Bart., where in 1929 King George spent some months in recovering from his serious illness.

ALDWYCH. Main London thoroughfare, opened by King Edward VII, Oct. 18, 1905. It is concave to the Strand, which it enters on the E. near S. Clement Danes and on the W. at the new Gaiety Theatre, and is separated from it by an island block.

The name comes from the Danish settlement of Aldwyeh, that once occupied the site and had

Aldwyeh, London. The Strand Theatre and Waldorf Hotel on the N.W. side

been perpetuated in Wyeh Street, which with the parallel Holywell Street or Booksellers' Row, was demolished in the improvement. In Aldwyeh are the Waldorf Hotel, the Strand Theatre, the Aldwyeh Theatre and Bush House. See Kingsway.

The Aldwyeh Club is a London club founded in 1911 as a social centre for advertising men. The house is 18, Exeter Street, Aldwyeh, W.C.

ALEANDER, HIERONYMUS, OR GIROLAMO ALEANDRO (1480-1542). Italian humanist and cardinal. After acting as rector of the university of Paris he was sent by Eberhard, prince-bishop of Liège, to Rome. In 1519 he became librarian of the Vatican. A strong opponent of Luther, against whom he prepared the imperial edict, he endeavoured to check the reform movement in the Netherlands. He was made archbishop of Brindisi in 1524 and a cardinal in 1536. His grand-nephew and namesake (1574-1629) was also a notable scholar.

ALECTO. In Greek mythology one of the Furies. She is represented with a flaming torch and serpents crawling about her head. See Eumenides.

ALEKHINE, ALEXANDER (b. 1892). Russian chess player. Born in Moscow, Nov. 1, 1892, his father was a public official. He

was educated in Leningrad, studied law and joined the staff of the Foreign Office. In 1917, owing to the revolution, he went to France, and, after serving with the Red Cross, made his home in Paris. Alekhine had become famous as a chess player as early as 1909, and after the War his exploits in international contests and as a blindfolded player were remarkable. In 1927, by beating Capablanca, he became champion of the world.

ALEMAN, MATEO (1547-c. 1609). Spanish novelist. Born and educated at Seville, he entered the public service in 1571, and after a somewhat troubled life migrated in 1608 to America, probably to Mexico. His fame rests on his long and popular novel, *Guzman de Alfarache*, 1599-1604. It is the story of a rogue, and although diffuse and impeded by a tendency to moralise, gives a wonderful picture of contemporary life in Spain.

ALEMBERT, JEAN LE ROND D' (1717-83). French mathematician and philosopher. He was founder and joint editor, with Diderot, of the great French encyclopedia. To this work d'Alembert contributed the introduction, in which are discussed, in the manner of Francis Bacon and Locke, the origin and classification of the sciences. His treatise on dynamics enunciated an important principle still known by his name. D'Alembert was a sceptic and relativist, who held that the nature of matter and mind is unknown and all knowledge is derived from sensation. He corresponded with Frederick the Great and Voltaire. He died Oct. 29, 1783.

Alembic (Arab. al. the; anbig, still). Apparatus of glass or metal for distilling, now superseded. See Retort.

ALENCON. Town of France. The capital of Orne department, it stands on the river Sarthe and is 67 m. by rly. S.S.E. of Caen. Its Gothic church of Notre Dame dates from the 16th century. The ramparts have been replaced by boulevards, and the remains of the castle, two 15th century towers, are used as a prison. Alençon was noted for its lace and also for its crystals and cut quartz, called Alençon diamonds, industries now decadent. It manufactures textiles, straw hats, etc. Pop. 16,249.

The town has given the title of duke to several members of the French royal family. The last was Ferdinand, a grandson of Louis Philippe.

ALEPPO (Gr. Beroea, Arab. Haleb). City of Syria. It is the capital of Aleppo vilayet

(area, 33,430 sq. m.) and lies in a fruitful valley watered by the Kuweik, 70 m. E. of the Mediterranean. on the Adana-Damascus Rly. Through its port of Alexandretta it conducts a large and very old-established foreign trade, chiefly in silk, cotton, wool, damascened and leather goods, rugs, soap, tobacco, cereals, oil, wine, and fruit. It has a medieval castle, a citadel, several fine mosques and is the centre of much and varied religious activity. The town was occupied by the British on Oct. 26, 1918, in the Palestine-Syrian campaign. Pop. 250,000. See Palestine.

ALESSANDRIA. City of Italy. Situated on the Tanaro, 56 m. by rly. E.S.E. of Turin, it is the capital of Alessandria province and the seat of a bishop. It was founded in 1168, and named after Pope Alexander III. Its present cathedral dates from 1823 and its academy from 1562. Alessandria is an important rly. junction, and has manufactures of macaroni, linen, silk, woollen goods, and candles. Pop. 84,747. The province has an area of 1,960 sq. m. See Marengo.

ALESSIO. Town of Albania. Called Ljesh by the natives, and anciently Lissus, it is situated on the left bank of the Drin, near its mouth, about 17 m. S.E. of Scutari. It is the seat of a Roman Catholic bishop. During the first Balkan War it was captured by Serbian and Montenegrin forces on Nov. 5, 1912, and in the Great War was occupied by Austria, Jan. 26, 1916. It was occupied by the Italians Oct. 27, 1918, but at the peace was given to Albania. Pop. 3,500.

ALETSCHE. Glacier of Switzerland, the most extensive icefield in the country. Formed chiefly of the snows of the Jungfrau and the Aletschhorn, it is on the S. slope of the Bernese Alps and is nearly 13 m. long. The Aletschhorn, the second highest summit of the Bernese Alps, is 13,721 ft. high.

ALEUTIAN ISLANDS OR CATHERINE ARCHIPELAGO. Chain of about 150 islands extending in curved formation W. from the peninsula of Alaska. The islands, most of which belong to the U.S.A. territory of Alaska, are bare and rocky, and contain numerous volcanic peaks, active and dormant. The inhabitants are principally Aleuts, a branch of the Eskimo race, and belong in the main to the Greek Church.

In July, 1928, the McCracken-Stoll expedition found on the summit of a precipitous crag in one of the islands the mummified bodies of three adults and a child of the Stone Age. The bodies were in a perfect state of preservation. The clothing was intact, as were the wooden coffin and the domestic articles, hunting weapons and other paraphernalia buried with them.

Aleppo. The ancient city surrounds the fortress and is itself enclosed within a Saracenic wall, 3½ miles in circuit and containing seven gates. A view of part of the fortress is shown on the right

ALE WATER. River of Selkirkshire and Roxburghshire, Scotland. It flows 24 m. N.E. and E. to the Teviot, is a trout stream, and has falls in its upper course.

ALEWIFE. Small fish, occurring chiefly in the sea, rivers, and lakes of N. America. In length from 8 ins. to 10 ins., it is related to the shad and herring, resembling the former in colour and shape. In the U.S.A. it is used for food and is exported.

ALEXANDER. The name of eight popes, of whom three were important. Alexander III was pope 1159-81. He was conspicuous as an opponent of the emperor, Frederick I, but by the peace of Venice in 1177 Frederick was compelled to recognize him and receive his pardon. Alexander III supported the cause of Becket against Henry II, and after that prelate's murder in 1170 made the English king do penance.

Alexander VI was pope 1492-1503. By birth a Spaniard, he was known as Rodrigo Borgia. He was made archbishop of Valencia and vice-chancellor by his uncle Calixtus, and cardinal by Sixtus IV. When Innocent VIII died in 1492, Borgia was a candidate for the vacancy, and by extensive bribery was chosen.

Before this event Alexander had become the father of five children by Vannozza dei Cattani—Caesar Borgia, three other sons and Lucrezia. Caesar Borgia was even more unscrupulous than his father, and between them they worked for the destruction of their enemies, the increase of their own power, and the unity of Italy. Alexander had Savonarola

put to death, and he made use of the Inquisition for political ends, refusing to allow persecution of the Jews in Rome, and issued in 1492 the bull which divided the New World between Spain and Portugal.

Alexander VI. Pope, unscrupulous politician and patron of the arts
Fresco by Pinturicchio in the Vatican

Alexander VII was pope 1655-67. Before his elevation he was secretary to Innocent X, and his rule was distinguished by his encouragement of literature and art and by the architectural improvements carried out at Rome. He came into collision with Louis XIV, and Avignon was lost to the papacy.

ALEXANDER (1893-1920). King of Greece. Born Aug. 1, 1893, he was the second son of King Constantine and of his wife Sophia, a sister of the ex-Kaiser William II. When Constantine was compelled to abdicate, the Entente Powers signified their inability to recognize the crown prince George, and Alexander was chosen in his stead. He ascended the throne, June 13, 1917, and died Oct. 25, 1920.

ALEXANDER THE GREAT. (356-323 B.C.) King of Macedonia. This remarkable conqueror was the son of Philip II, king of Macedonia, whom he succeeded in 336 B.C., and was the third of five kings of Macedonia bearing the name of Alexander. Educated by Aristotle, he was richly endowed with natural abilities, physical strength, energy and ambition.

After his father's death he successfully quelled revolt among the Illyrians and the Greeks, and early in 334 crossed the Hellespont (Dardanelles) with an army, to carry out Philip's projected conquest of the Persian empire which, under Darius, included all western Asia and Egypt. At the river Granicus

Alexander shattered a great Persian force, and later marched against the army of Darius and completely overthrew it at Issus (333).

Alexander the Great
Capitoline Museum, Rome

Persepolis the Persian capital.

His next great undertaking was to lead his army, in the spring of 326, into India. Having conquered the Punjab, Alexander had to return to Persia, as his troops refused to go farther. In 323 he projected the rounding off of his Asiatic dominion by the subjugation of Arabia, and was on the point of starting when at Babylon he was stricken with fever and died at the age of 32. No provision had been made for a successor, and the inevitable result of Alexander's premature death was the disintegration of the new empire, which was divided up among the most powerful of his military leaders.

ALEXANDER I (1777-1825). Tsar of Russia. Son of the tsar Paul I, he succeeded to the throne on his father's murder in 1801.

Alexander made a convention with Great Britain, but sought also to act in concert with Napoleon, whom in reality he distrusted, and from whom he broke after the murder of the duc d'Enghien, 1804. His armies fought against the French, until he was forced to sign the treaty of Tilsit in 1807. His sympathies were against Napoleonic domination and in 1812-13 he took a leading part in the European struggle which ended at Elba. Alexander was prominent in organizing the Congress of Vienna for the settlement of Europe. He died Dec. 1, 1825, at Taganrog.

Alexander I,
Tsar of Russia

ALEXANDER II (1818-81). Tsar of Russia. Son of Nicholas I, whom he succeeded in 1855. In spite of his measure for the

Alexander II,
Tsar of Russia

emancipation of the Russian serfs in 1861, and his display of liberal sympathies in other ways, the despotic and arbitrary methods of Russian government remained fundamentally unchanged, and the revolt of Poland in 1863 was mercilessly crushed. The tsar's reign witnessed that expansion of Russia in Central Asia which was regarded by the British as a menace to India. During his later years there was a great development of the revolutionary or nihilist party in Russia, culminating, after several attempts upon the tsar's life, in his murder on March 13, 1881. His only daughter married the duke of Saxe-Coburg, one of Queen Victoria's sons.

ALEXANDER III (1845-94). Tsar of Russia. A son of the tsar Alexander II, he married a daughter of Christian IX, king of Denmark, in 1866, and succeeded to the throne when his father was murdered in March, 1881. His reign was marked by the repression of all liberal ideas, persecution of the Jews, and determined attempts to force the Russian language and Russian ideas on subject peoples. On the other hand, peace was maintained. He died Nov. 1, 1894. His widow, Marie, sister of Queen Alexandra, died October 13, 1928.

Alexander III,
Tsar of Russia

ALEXANDER. Name of three kings of Scotland. Alexander I (1078-1124), son of Malcolm Canmore and Margaret, an Anglo-Saxon princess, passed some of his early years in England and became king of Scotland when his elder brother Edgar died 1107. During his reign the S. part of the kingdom was almost independent, being ruled by Alexander's young brother David, who was afterwards David I.

Alexander II (1198-1249) was the son of William the Lion, whom he succeeded in 1214. He was lord of considerable estates in England and helped the barons to procure Magna Carta from King John.

Alexander III (1241-86) was the son of Alexander II by his second wife Mary de Couci, and became king when eight years old. In 1251 he was married at York to Margaret, eldest daughter of Henry III of England. In 1263, by defeating Haakon V at Largs, he ended the Norwegian claim to the Hebrides.

ALEXANDER I (1876-1903). King of Serbia. The son of King Milan, who abdicated in 1889, he was proclaimed king under a regency, and assumed the kingship in 1893. In 1900, amid universal opposition, he married Draga Mashin, who had been one of his mother's ladies in waiting, and in March, 1903, arbitrarily suspended the constitution. A palace conspiracy was the result, and Alexander and his queen were assassinated in Belgrade June 11, 1903. See Serbia.

ALEXANDER (b. 1888) First king of Yugo-Slavia. Born at Cetinje, Dec. 17, 1888, second son of King Peter of Serbia, he took the oath as heir apparent March 27, 1909, when his elder brother George renounced his right of succession. He distinguished himself in the wars of 1912-13 against Turkey and Bulgaria, and was nominally the commander-in-chief of the Serbian Army in the Great War. Proclaimed king of Yugo-Slavia (q.v.), Aug. 19, 1921, he dismissed his parliament and set up a dictatorship in 1928. In 1922 he married Marie, a princess of Rumania.

Alexander, first
King of Yugo-Slavia

ALEXANDER (1857-93). First prince of Bulgaria. The second son of Prince Alexander of Hesse, he was elected first prince of Bulgaria, April 29, 1879. He aroused Russian and Serbian opposition in 1885 by aiding the revolt in E. Rumania and bringing about its union with Bulgaria. A skilful soldier, he defeated the Serbs in the field, but on Aug. 20, 1886, as the result of Russian intrigue, was compelled to abdicate. He died at Gratz, Styria, Nov. 17, 1893. See Bulgaria.

ALEXANDER, ALBERT VICTOR (b. 1885). British politician. Born at Weston-super-Mare, May 1, 1885, he was educated in Bristol and joined the staff of the Somerset County Council. Later he became connected

with the Co-operative movement and, having meanwhile served in France, was in 1920 made secretary to the parliamentary committee of the Co-operative Congress. This led to a seat in Parliament and in 1922 he was elected for the Hillsborough Division of Sheffield. In the Labour Government of 1924 Alexander was secretary to the Board of Trade, and in 1929 he was appointed First Lord of the Admiralty.

A. V. Alexander,
British politician

ALEXANDER, SIR GEORGE (1858-1918). British actor. In 1880 he joined Irving's Lyceum company, and during the greater part of the next eight years played under that great actor. In 1889 he took a theatre of his own, the Avenue, and two years later removed to the St. James's, where he remained for the rest of his life. In 1911 he was knighted. As an actor Sir George was best in fashionable modern comedy. Among his most successful productions were *The Second Mrs. Tanager*, *His House in Order*, *Lady Windermere's Fan*, *The Importance of Being Earnest*, and *Old Heidelberg*.

Sir G. Alexander,
British actor
Elliot & Fry

Earnest, and Old Heidelberg.

ALEXANDER, JOHN WHITE (1856-1915). American painter. He applied himself chiefly to portraiture, and his men sitters included Walt Whitman, Auguste Rodin, Oliver Wendell Holmes, and Robert Louis Stevenson. He was keenly interested in decorative design, and by such great mural paintings as *The Crowning of Labour*, in the entrance hall of the Carnegie Institute, Pittsburgh, and *The Evolution of the Book*, in the Congressional Library, Washington, gained a foremost place among American artists.

ALEXANDER, WILLIAM (1824-1911). Irish divine. He held various livings in Ulster until 1867, when he was made bishop of Derry, and in 1896 archbishop of Armagh and primate of All Ireland. He remained archbishop almost until his death at Torquay, Sept. 12, 1911. Chiefly distinguished for his earnestness and eloquence as a preacher, Alexander was the author of devotional works and a great number of poems. His wife, Cecil Frances (d. 1895), was a writer of hymns, including *There is a Green Hill Far Away*.

ALEXANDER NEVSKI (1220-63). Russian saint and warrior. Second son of Prince Yaroslav of Novgorod, he led the Russian forces against the Germans, Poles, Danes, and Swedes, and derived his surname from the defeat he inflicted on the Swedes on the Neva in 1240. He spent much of his life in seeking to improve the condition of the poor, and after his death was canonised by the Orthodox Church. A great monastery and the order of S. Alexander Nevski were founded in his honour by Peter the Great.

Alexanders, celery-like wild flower

ALEXANDERS (*Smyrnium olusatrum*). Biennial herb of the order Umbelliferae. It was used as a potherb from ancient times until the more extended cultivation of celery, which has supplanted it. It is a native of the Mediterranean region, but is now wild in many parts of Europe, including Britain, especially near the coast. It bears numerous minute yellow flowers in round-topped umbels.

ALEXANDER SEVERUS (205-235). Roman emperor from 222 to 235. The son of Julia Mammæa, he was adopted by a cousin, the emperor Elagabalus, and placed on the throne when Elagabalus was murdered. In 232 he defeated the Persian king Artaxerxes, who had attempted to encroach upon the eastern boundaries of the empire. While on a campaign to repel a German invasion of Gaul, he was murdered by Maximinus, who succeeded him. Just and tolerant, Alexander Severus was distinguished for his love of learning and virtuous life.

ALEXANDRA (1844-1925). Queen Consort of King Edward VII. Born at Copenhagen, Dec. 1, 1844, she was the eldest daughter of Prince Christian of Schleswig-Holstein-Sonderburg-Glücksburg. Her mother was Louise, daughter of the landgrave of

Alexandra, Queen Consort of Edward VII. This was one of the last photographs taken before her death
Vandyk

Hesse-Cassel. Alexandra was brought up in Copenhagen amid exceptionally simple surroundings. She first met King Edward, then Prince of Wales, in 1861, but it was not until March 10, 1863, that they were married in St. George's Chapel, Windsor, and settled down at Marlborough House and Sandringham, their two chief residences for nearly forty years.

The princess of Wales gave birth to her first child, Albert Victor, at Frogmore, on Jan. 8, 1864. Two sons and three daughters followed. The second son was the future King George V. The three daughters were the princess royal, afterwards Duchess of Fife, the princess Victoria, her mother's constant companion, and the princess Maud, afterwards Queen of Norway. The third son died when an infant. The early years of her married life had been taken up with domestic matters, but after 1871 she fulfilled with remarkable success the social duties of her high station. Her gracious manner and her real interest in the people made her popular everywhere.

In Jan., 1901, the prince succeeded to the throne, and Alexandra was crowned in Westminster Abbey as queen consort by the archbishop of York, Aug. 9, 1902. When in 1910 Edward VII died, Alexandra, known officially as the queen-mother, returned to Marlborough House and received an annual income of £70,000. She died Nov. 20, 1925.

Over £230,000 was raised as a national memorial to Queen Alexandra. This sum was devoted to forming a fund for developing district nursing, to provide pensions for

Queen's nurses, and to erect a group in bronze, Faith, Hope and Charity, near Marlborough House, London.

Alexander Severus,
Roman emperor

Alexandra Day, so called because it was inaugurated to celebrate the 50th year of her residence in England, is observed in June. Artificial wild roses, made by the blind and crippled, are sold in the streets, the profits being distributed among convalescent houses and kindred institutions. Consult *Life*, Sarah A. Tooley, 1902.

ALEXANDRA PALACE. London place of amusement. Situated in Alexandra Park, Muswell Hill, N., the present structure, the second of its name, was opened in 1901. It occupies about seven acres. The Grand Hall seats 12,000 persons and the orchestra 2,000, while the concert hall, which has a fine organ, can accommodate 3,500 and the theatre 3,000. The park, in which is a racecourse, covers 480 acres. See illus. below.

ALEXANDRETTA. Seaport of N. Syria. It is known also as Skanderoon, from its Turkish name of Iskanderun, and lies on the E. shore of the gulf of the same name, about 70 m. N.W. of Aleppo. Anciently called Alexandria ad Issum, it was founded by Alexander the Great to commemorate his victory at the Issus, 333 B.C. In the Great War it was occupied by British and French troops, Nov. 9, 1918. It is the port for Aleppo, has a fair harbour, and is a busy commercial centre. Pop. 15,000. The independence of the Alexandretta region as a separate state was proclaimed in March, 1926.

ALEXANDRIA. The Arabic Iskanderia, Alexandria is the second city of Egypt and also its chief port. Founded by Alexander the Great, 332 B.C., it lies on a narrow and sandy spit between the sea and Lake Mariut or Mareotis, its native quarter extending seawards along an artificial piece of land which marks the site of the ancient Heptastadium, a great viaduct seven stadia, or 1,400 yds., long, built by the Greeks to connect the shore with the island of Pharos.

Under Alexander's successors, Ptolemy Soter, Philadelphus, and Euergetes, Alexandria rapidly rose to be the most famous centre of art, science, and learning in the world. The great library, housing about 700,000 papyrus rolls, the museum, the temple of Serapis, and the royal palaces were among its famous buildings, but all of them have disappeared except the so-called Pompey's Pillar, really a landmark for sailors, in the centre of the Serapeum, erected in A.D. 302. The two

Alexandra Palace at Muswell Hill, N. London. It was opened free to the public May 18, 1901

obelisks, now known as Cleopatra's needles, stood in the E. part of the city, and were removed to London and New York in the years 1878 and 1889 respectively.

In the first period of Alexandria's greatness her intellectual leaders included Euclid, who founded a mathematical school, with Archimedes as one of his pupils, and the poets Theocritus and Callimachus. After the Roman conquest in 30 B.C. arose the schools of philosophy of the Neo-Platonists, and the next period was marked by fierce controversies between the heathen philosophers, Jews and

ALEXANDROPOL. Town of Armenia, formerly called Gumri by the Turks, and now known as Leninakan. In the government of Erivan, it is 80 m. S. of Tiflis. Fortified by Russia in 1837, it was used as a military base in the war against Turkey in 1877. During the Great War it was defended against the Turks by the Armenians, who fought with desperate bravery, but were defeated in the spring of 1918. Pop. 48,940.

ALEXANDROVSK. Town of Ukrania. It is 50 m. S. of Ekaterinoslav and on the Lozovaya-Sevastopol Rly. It has brick works, foundries, and flour and saw mills, and exports grain and timber. In the neighbourhood are

the Volunteer Army to fight the Bolsheviks. On Sept. 23, 1918, he died of pneumonia.

ALEXIUS. Name of five East Roman emperors, 1081-1204, belonging to the Paphlagonian family of the Comneni. The only one of any importance was Alexius I (1048-1118), who was raised to the throne in 1081 by a military revolution.

Knowing the desire of Rome for a reconciliation with Constantinople, Alexius appealed to Pope Urban II for aid against the common enemy, Islau. The result was the first crusade and French victories over the Turks in Asia. Later he recovered the western half of Asia Minor for the empire. A most capable ruler, by his military successes and skilful, if shifty, diplomacy, he postponed, but could not avert, the fall of the empire.

ALEYARD OR YARD OF ALE. Ancient

English drinking glass, a yard or so long, holding about a pint. It was usually trumpet-shaped, not unlike the horn carried by the guard of a coach. Sometimes it ended in a hollow ball; when the air reached the inside of the bulb the liquor spurted over the drinker. Drinking a yard of ale at one draught was a popular feat.

Aleyard, British drinking-glass

ALFIERI, COUNT

VITTORIO (1749-1803).

Italian poet. Born at Asti, Piedmont, Jan. 17, 1749, at the age of fourteen Alfieri became practically his own master, with ample means, and as a youth showed little inclination for serious studies. He entered the army, and for some years led a life of dissipation and intrigue, varied with travel in France, Spain, Holland, and England. At the age of 26 he turned to literature and wrote a play on the subject of Cleopatra. The reception of this at Turin fired him with ambition to write Italian poetry.

Alfieri wrote six comedies, twenty-one tragedies, an opera, an epic, some lyrical poems, and an autobiography. In 1777 he met at Florence the countess of Albany, wife of Prince Charles Edward, the Young Pretender. She left her husband some years later, and lived happily with Alfieri until his death on Oct. 8, 1803.

ALFOLD. Plains of Hungary. The Little Alföld lies across the Danube east of Pozsony (Pressburg), and the Great Alföld occupies the whole area

numerous kurgans, ancient (probably Scythian) grave mounds. Opposite Alexandrovsk is the island of Khoritsa, once a famous Cossack settlement. Pop. 51,605.

Two towns in Soviet Russia bear this name. One lies on the left bank of the Neva, 5½ m. E. of Leningrad, and has manufactures of glass, porcelain and woven products. The other, also known as Port Catherine, is a seaport in the government of Archangel.

ALEXEIEFF, MICHAEL VASSILIEVITCH (1855-1918). Russian soldier. During the Russo-Japanese war, 1904-5, he became chief of staff to the Russian Third Army after the battle of Mukden. At the beginning of the Great War Alexeieff was chief of staff to General Ivanoff, who then commanded the Russian armies on the south-west of the eastern front. In 1915 he became the real generalissimo. After the Revolution he lost favour with the Soviets and was replaced by General Brussiloff in June. In Sept. he was again commander-in-chief, but after Lenin and Trotsky seized the Government in Nov. he retired to the Kuban with Korniloff and other generals and with them organized

Alfred the Great. Left, three aspects of the Alfred Jewel, found in Somerset in 1693. It is now in the Ashmolean Museum, Oxford. Right, the colossal statue at Winchester by Hamo Thornycroft, R.A. See p. 53

Alexandria. Left, Pompey's Pillar, erected in 302 as a landmark for sailors. It is nearly 100 ft. high and is of red granite. Right, the Place des Consuls, a splendid thoroughfare of the modern city

Christians. Alexandria came under Mahomedan rule in 640 and thereafter declined, especially after being taken by the Turks in 1517, until in the 19th century prosperity revived under Mehemet Ali. The town was taken by Napoleon in 1798, but surrendered to the British in 1801, five months after the battle of Alexandria, at which British troops under Sir Ralph Abercromby checked the French advance into Egypt. In 1882 it was bombarded by the British during the rebellion of Arabi Pasha, whose followers then sacked the town.

To-day Alexandria is Egypt's most important trading centre and forms the summer headquarters of the Egyptian government. Its principal buildings are the museum, municipal palace, the barracks and the arsenal. In Nov., 1929, a stadium covering 70,000 sq. yds. was opened here. Pop. 573,063.

ALEXANDRIA. Town of Dumbartonshire, Scotland. On the Leven, 3 m. N. of Dumbarton by the L.M.S. and L.N.E. Rlys., its importance is due to cotton printing, bleaching, and dye works. Pop. 5,699.

Another town of this name is a suburb of Sydney, New South Wales. Wool-scouring and glass bottle making are important local industries. Pop. 9,491.

ALEXANDRINE VERSE. Rhymed iambic hexameter verses with the caesura properly between the sixth and seventh syllables. First used in the French metrical romance of Alexander the Great, from which, or from one of whose authors, Alexandre de Bernay, its name is probably derived, it became the standard form of French heroic verse. The most generally familiar instance of the verse is furnished by Pope's disapproving description of it as a needless line "That like a wounded snake drags its slow length along."

ALEXANDRITE. Name of a dark green variety of chrysoberyl. It is found in the Ural Mountains and is prized as a gem-stone on account of the light transmitted in a certain direction being red.

between the Danube and the-Bibar mountains on the edge of Transylvania.

The Alföld is sometimes referred to as the puszta or steppe; it is a typical treeless grassland which has become one of the granaries of Central Europe, and great efforts have been made to increase the total crop yield. The towns of the Alföld are characteristic; they are "garden cities" built round an open space for a fair or market at the cross roads. The houses are set each in its own plot, and the people, mostly Magyars, live in the towns or villages and not on the farms.

ALFRED THE GREAT (849-901). English king. A younger son of Ethelwulf, king of Wessex. Kent. and Essex, and overlord of the other English kingdoms, and his first wife, Osburga, he was born at Wantage, in Berkshire. In 868 a Danish army attacked Mercia, but Ethelred and his young brother led an army to the help of the Mercians. In 871 the Danes invaded Wessex in force, and were defeated at Ashdown, mainly by the skill and valour of Alfred; but two months later the Danes more than held their own in another great fight at Merton. A few days after the battle of Merton Ethelred died and Alfred succeeded.

Until 875 Alfred was left in peace. He used the time in organizing the English for war and in laying the foundations of a fleet. In 876 the Danes invaded Wessex once more, and at the beginning of 878 Alfred, with only a few followers, was driven into retreat in the isle of Athelney, in Somersetshire. Yet in May the English forces had been again so re-organized that Alfred was able to lead them to a decisive victory at Ebandune. Danish irruptions in 884 and 892 resulted again in victory for Alfred, so that from 896 until his death on Oct. 28, 901, he was unmolested.

Alfred's genius as a military organizer, even more than brilliant leadership, rescued half England from Danish conquest. He was no less great as an administrator. He modified and co-ordinated the varying laws and customs of his kingdom into the code known as the dooms of King Alfred, which may be regarded as the real foundation of the common law of England. Hardly less remarkable were his efforts and achievements in the direction of education.

An enamelled gold oval jewel found near Athelney Abbey, Somersetshire, in 1693, is known as the Alfred Jewel. Evincing indirect Byzantine influence, it bears a portrait, presumably of the king, surrounded by the words *Aelfred meo heht gew[e]rean*, or Alfred had me wrought. It proves the existence of goldsmiths in Alfred's time. See illus. p. 52.

ALFRETON. Urban district and market town of Derbyshire, England. It is 14 m. from Derby, on the L.M.S., and the centre of a busy industrial district, with potteries, stone quarries, collieries, ironworks, and hosiery manufactories. The name is supposed to come from that of its founder, Alfred the Great. Market days, Fri., Sat. Pop. 20,472.

ALGAE (Lat. seaweeds). In botany, the most lowly organized of the green plants, in which the individual is built up entirely of simple cells with little or no differentiation. The familiar olive seaweeds—wracks and tangles—of British rocky shores may be taken as examples of the higher algae: simpler forms will be found in the bright green hair-like "crowns" of streams. All parts of the thallus, or plant-body, surface absorb nutriment from the water or air, there being no roots to draw it from the earth.

In geology, algae are fossil seaweeds, especially those having calcareous or siliceous coats. They enter largely into the composition of certain rocks.

ALGECIRAS. Seaport and winter resort of S. Spain, in Cadiz province. It stands on the W. side of the bay of Algeciras, 6 m. W. of Gibraltar. Oranges, charecoal, and leather are exported. The old town was founded by the Moors in 713: the modern town dates from the 18th century. In the bay, on July 6, 1801, Sir James Saumarez was defeated by a Franco-Spanish fleet, which, on July 12, he completely vanquished. Pop. 19,417.

The Convention of Algeciras was an international agreement signed in 1906 regulating the privileged position of France with regard to Morocco. See Morocco.

ALGERIA (Fr. *Algérie*). French dependency on the N. African coast. It is not regarded as a colony, but is politically a portion of the French Republic itself, which is represented by the governor-general in Algiers.

Algeria has an area of 343,500 sq. m., and is divided into two parts, Northern and Southern, the former consisting of three departments, Algiers, Oran, and Constantine, and the latter of four territories, Ain Sefra, Ghardaia, Touggourt, and the Saharan oases.

The Atlas Mts., running roughly parallel with the coast, consist of two series of chains.

the Little, or Tell, Atlas to the N., and the Great, or Saharan, Atlas to the S., and form a broad belt of highlands, tablelands, and ravines, their highest summit never attaining 8,000 ft., and separate the coastal region of undulating cultivated land known as the Tell from the desert region of the Algerian Sahara. The Algerian rivers are short and are useless for navigation.

The climate is of the Mediterranean type, but is subject to considerable fluctuation. The flora, which comprises about 3,000 species, is closely related to that of S. Europe. In the Sahara the date-palm is characteristic.

The country is rich in minerals. Of these, iron ore is the most important. Antimony ore is yielded, and large quantities of phosphates are obtained near Constantine. Good marbles and building stones are quarried. Agriculture, which provides employment for nearly three-fourths of the entire population, has been greatly developed by the sinking of artesian wells, especially in the Sahara. About 8,000,000 acres are under cultivation. Vegetables and fruits (oranges, figs, almonds, bananas, grapes, dates, etc.,) are grown on an extensive scale. Wine, sheep, wheat, barley, fruit, esparto grass, iron and zinc ore, tobacco, and phosphates are exported, and cottons, machinery and metal goods, clothing, sugar, coffee, and furniture are imported.

The population of Algeria is very mixed.

Algae: characteristic examples of seaweed. 1. *Halidrys siliquosa*, with the finer growth of *Sertularia*, or sea-fir. 2. *Fucus uodousus*. 3. *Fucus serratus*. 4. *Dictyota dichotoma*. 5. *Plocamium coccineum*.

Algeria. Map of the land on the northern coast of Africa which was the last stronghold of piracy in Mediterranean waters. In 1830 it was brought into submission and taken over by France

Of the 6,064,865 inhabitants the majority, 5,147,872, are natives. The French number 549,146, and the Spaniards, 135,032. The natives are Mahomedans, and consist of Arabs and Berbers.

Under the governor-general there is a prefect for each of the three departments, and also a council for each. Each department is represented in the National Assembly in Paris

Algeria. Dancing girl performing in the street to the accompaniment of native musicians
Crète

The 19th Army Corps is permanently stationed in Algeria. The chief towns are Algiers, Bougie, Sidi-bel-Abbes, Mostaganem, Mascara, Blida, Setif, Constantine, Philippeville, Bône, Orleanville, Tlemcen, and Oran, all connected by railway.

Algeria was conquered in turn by the Romans, Vandals and Mahomedans. In the 11th century came the Arabs and, later, Moors expelled from Spain. In the 17th century Algerian pirates overran the Mediterranean, and although temporarily suppressed by a British and Dutch squadron in 1816, it was not until 1830, when a French army landed and occupied the forts, that the country was brought into submission.

Consult Algeria from Within, R. V. C. Bodley, 1927. Histoire d'Algérie, S. Gsell, G. Marçais and G. Yver, 1927; Desert Winds: Travels in Algeria Hafsa, 1928.

ALGERS (Fr Alger; Arabic Al-jeza'ir, the islands). Capital of Algeria, distant about 500 m. from Marseilles, with which it has regular steamboat communication in 26 hours, the modern commercial town is European in appearance and contains the govern-

ment offices, wharves, and business buildings, and several mosques. The new town contrasts strangely with the old, or Arab, town, wherein is congregated a motley throng of Arabs, Moors, Jews, and Europeans. The heights around the town are strongly fortified and armed with modern guns. Public buildings include the palaces of the governor-general and the archbishop, the Grand Mosque, probably the oldest in the city, a Roman Catholic cathedral, and a library, college, and museum.

Algiers is one of the principal coaling stations on the Mediterranean and has a spacious port with an inner and an outer harbour. It has an important foreign trade, chiefly with France. The city is rich in vestiges of Roman, Christian, and Moorish civilization, and their preservation and study are fostered by the French authorities. Pop. 226,218.

ALGIN. Substance resembling gum arabic. It is prepared from red seaweed, or laminaria, in the Stanford process of making iodine. When dissolved in water very viscous liquids are produced. By the action of mineral acids, algin or alginate acid is obtained. Both algin and alginate acid could be employed as dressings for fabrics and as an article of food.

ALGOA BAY. Wide roadstead on the E. extremity of the coast of S. Africa. Port Elizabeth lies in the S.W. angle of the bay, which has fairly well-sheltered anchorage.

ALGOL (Arabic al-ghul, the demon). Remarkable double star which is charted as β Persci. It was called by the ancient astronomers The Demon Star because of the malevolence of its winking eye, a phenomenon of varying brightness now ascribed to the

revolution of a dark star about a bright one. Algol gives its name to a small class of variable stars. See Stars.

ALGOMA. District in the S. of Ontario, Canada. Occupying an area of over 71,378 sq. m., it extends from Lake Nipissing in the E. to the Lake of the Woods in the W. It is a rich mining region, where iron, copper, silver, nickel, platinum, etc., are found, and is served by the C.P.R. and other railways. The town of Algoma lies on Lake Huron.

ALGONKIAN. Systematic name applied to those pre-Cambrian rocks of North America which are of sedimentary origin, such as sandstones. It is used in contradistinction to the pre-Cambrian rocks of igneous nature, such as gneisses, which are designated Archean. The name is that of a tribe of American Indians, the Algonquins, and means at the fish-spearer place.

ALGORISM. Term employed to denote the Arabic or decimal system of numeration. The numbers of algorism are the Arabic or Indian numerals. The word is corrupted from the territorial name of the Arab mathematician, Abu Ja'far Mohammed Ben Musa Al Khwarizmi, the translation of whose work on algebra made known the Arabic numerals in Europe.

AL-HAKIM (d. 976). Caliph of Cordova. Son of Abd-er-Rahman III, whom he succeeded in 961, he was an able administrator and a patron of learning. He founded the great library of Cordova and enlarged the famous mosque, subsequently a cathedral.

ALHAMBRA (Arabial, the : hamra, red). Famous Moresco-Spanish palace. It stands on a spur of the hills on which Granada is built, and overlooks the river Darro. The building was begun by Mahomed I (1232-72), the ruler of the kingdom of Granada, and completed during the reign of Yusuf I (1333-54). The palace stands in a park of English elms—a present from the Duke of Wellington, in return for an estate bestowed upon him.

The Alhambra is both a palace and a fortress. The outside walls are of great thickness, and are further strengthened by defensive towers. The most splendid of the remaining parts of the palace are the Court of the Lions, so called from the twelve marble lions grouped around a centre fountain; the Court of the Fishpond, which has a length of 150 ft., the whole filled by a marble bath; and the fine Hall of Ambassadors, a square of 37 ft.,

Algiers. General view taken from the lighthouse and showing the government offices and modern business premises that extend along the sea front. Above, old mosque in Government Square

roofed with a dome the centre of which is 60 ft. from the ground.

The outstanding features of the palace, the needle-like columns, richly carved capitals and decorated arches, gorgeous mosaics, and the tracery, boundless in its variety, of wall, ceilings and windows, do not deviate from the characteristics of Mahomedan architecture. The stupendous scale on which these details were carried out is distinctive.

The Alhambra in Leicester Square, London, was long famous as a music hall and then as a variety theatre. In 1929 it was leased as a talking picture house.

ALI (c. 600-661). Fourth caliph. Son of Abu Talib and cousin of Mahomet, whose daughter Fatima he married. He succeeded Othman as caliph in 656. He was vigorously opposed by Mahomet's widow Ayesha, whom he captured near Basra. He was assassinated at his capital Kufa, and his shrine at Nejef, known as Meshed Ali, became a famous place of pilgrimage. His followers form the Shiite sect of Mahomedans. The Fatimite dynasty claimed descent from Fatima and Ali.

ALIAS. Latin word meaning otherwise. It is most generally employed for a name which is not the lawful one of the person using it. An alias may be quite legitimate, e.g. in the case of the pseudonym of a writer or actor. Its modern use is derived from a legal form formerly put down in indictments. To make certain the identity of a person charged with crime, his indictment would run thus: Henry Jekyll alias Edward Hyde.

ALI BABA. Hero of one of the tales in The Arabian Nights' Entertainments, known as that of Ali Baba and the Forty Thieves. Ali Baba is a poor man who happens on the knowledge of a robbers' hoard and of the secret words, Open Sesame, which gain admission to it. The thieves seek to discover who has learnt their secret, and are successively killed in the attempt, thanks to the quick-wittedness and courage of Ali's slave Morgiana.

ALIBI (Lat. elsewhere). A name given to a plea by an alleged criminal that he was somewhere else at the time. False alibis are very common, because nothing is more easy than for witnesses to be called to state that the prisoner was in their company at the time of the crime.

ALICANTE. Seaport and winter resort of Spain. Anciently known as Lucentum, it lies on the Mediterranean, is the capital of Alicante province, and has rly. communication with Madrid and Murcia. It enjoys an equable climate, has a modern cathedral and a good harbour, exports wine, fruit, esparto, and minerals, and manufactures cigars and textiles. Pop. 68,411.

ALICE (1843-78). Grand-duchess of Hesse-Darmstadt, and the second daughter of Queen Victoria. She was born at Buckingham Palace, April 25, 1843, and was named Alice Maud Mary. In 1862 she married Prince Louis of Hesse. She died Dec. 14, 1878, of diphtheria, caught in nursing her husband and children.

ALICE SPRINGS. Telegraph and post station of Northern Territory, Australia. It is situated 1,120 m. N.W. of Adelaide, on the transcontinental line to Darwin, and since 1927 has been the capital of the territory of Central Australia.

ALIEN (Lat. alienus, foreign). Person who does not belong to the country in which he lives. In English law the word alien includes all persons born out of the British dominions, except the children of natural-born British subjects born abroad, and the grandchildren to the second generation on the father's side. In 1870 aliens were given the right to hold every kind of property except a British ship. An alien cannot vote at elections, nor be elected to Parliament. A person born in British dominions, but the child of an alien, or

Alhambra. 1. General view, with Granada on the right. 2. Gate of Justice, the main entrance. 3. Court of the Lions, so called from the central marble group. 4. Part of the beautiful porch of the Hall of Justice.

the child, born abroad, of a British father, may on attaining the age of 21, make a declaration of alienage.

ALIEN IMMIGRATION. Most countries have laws to prevent the free entry of aliens into their lands. The United States fixes each year the number and nationality of the immigrants, and there, as in Canada and Australia, there are special provisions with regard to the immigration of Orientals. In some countries they pay a poll tax.

Into the United Kingdom free entry was allowed practically to all aliens until 1905, when, as the result of a continued agitation, an Act was passed restricting the admission of all aliens. Under this act steerage passengers could only land at certain ports, where immigration officers rejected the undesirable. The Act allowed the entry of fugitives from religious or political persecution.

Under the Aliens Order, 1920, all resident aliens must register and report themselves at stated periods to the authorities; also, they can be deported by order of the Home Secretary on the grounds of undesirability, after a recommendation to that effect by a magistrate.

The Great War led to a distinction between aliens and enemy aliens. Many of the latter were interned, and two Acts were passed making it very difficult for aliens to enter the country. In 1921 this special legislation ceased to operate.

Alienation. English legal term meaning the transfer of the ownership of property.

Alienism. Term in pathology meaning the study and treatment of mental diseases. See Insanity.

ALIF. First letter of the Arabic alphabet. Used as a symbol for Allah, the Mahomedan name for the Deity, it is often set at the head of Arabic documents.

ALIGARH. District and town of India. The district, the southernmost in the Meerut division of the United Provinces, has an area of 1,946 sq. m. The town is situated 55 m. N. of Agra. The fort, which gives its name to the place, was captured from the Mahrattas by Lord Lake in 1803. Aligarh College, founded by Sir Syed Ahmad in 1875, is a Mahomedan centre of learning and is usually regarded as the nucleus of a future Mahomedan university. The town trades in cotton, grain, and indigo. Forty per cent. of the population of the town are Mahomedans, although the district contains only 14 p.c. Pop. of town 66,963.

ALIMONY (Lat. alere, to nourish). Legal term used for an allowance in money paid by husband or wife, generally the former, to a spouse from whom he or she is separated. While divorce proceedings are pending, the court usually orders alimony to be paid by the husband to the wife, generally at the rate of one-fifth of the husband's income. After a decree of judicial separation, the court usually orders the husband to pay such a sum as will make up his wife's income to one-third of their joint income.

In Scots law the term aliment is used in this connexion, and refers to allowances made not only to husband or wife, but to children, grandchildren, parents, and even to grandparents.

ALINE. Sea-loch of Argyllshire, Scotland. Forming an arm of the Sound of Mull, it is $2\frac{1}{2}$ m. long and $\frac{1}{2}$ m. wide. Near are the ruins of Kinlochaline Castle.

ALINGTON, CYRIL ARGENTINE (b. 1872). British schoolmaster. He was the son of a Lincolnshire clergyman, was educated at Marlborough and Trinity College, Oxford, and became a fellow of All Souls in 1895. After holding masterhips at Marlborough and Eton, he took holy orders and was appointed headmaster of Shrewsbury in 1908. In 1916 he succeeded Dr. Edward Lyttelton as headmaster of Eton. A writer on widely varying subjects, his books include A Schoolmaster's Apology, 1914; Eton Fables, 1921; Mr. Evans: a Cricketo-Detective Story, 1922; and Elementary Christianity, 1927. In 1929 appeared a volume of dialogues entitled Doubts and Difficulties.

C. A. Alington, Headmaster of Eton Elliott & Fry

ALI PASHA (1741-1822). Albanian ruler, known as the Lion of Janina. As a Turkish vassal, he was appointed pasha of Trikala in Thessaly for his services in the war of 1787, and in 1788 became pasha of Janina. During the Napoleonic wars he took the side of the French and the British alternately, with a view to securing a firm foothold on the Adriatic. Parga in Albania was granted to him by the British, but in 1822 he was defeated and put to death by order of the sultan, Mahmud II. Byron, who met him, refers to him in Child Harold.

ALIPUR. Southern suburb of Calcutta, India. It contains public offices, Belvedere House, the residence of the lieutenant-governor of Bengal, a large gaol, and cantonments for native troops. Here are also the Zoological Gardens and the Horticultural Society's Gardens.

ALIPURA. Minor native state of Central India, in the Bundelkhand agency. It has an area of 73 sq. m., and produces grain. The town of Alipura is a station on a branch of the G.I.P. Rly. Pop. of the state, 16,146.

ALI-RAJPUR. Native state of Central India, in the Bhopavar agency. About 20 m. N. of the river Narbada, in the old prov. of Malwa, it is mountainous and has an area of 836 sq. m. The ruler is called the rana. Pop. 72,454, mostly members of jungle tribes, for example, the Bhils.

ALISON, SIR ARCHIBALD, BART. (1792-1867). British historian. Eldest son of the Rev. Archibald Alison (1757-1839), who was author of *Essays on the Nature and Principles of Taste*, he became an advocate, and in 1834 was made sheriff of Lanarkshire. In 1832-3 he published *Principles of the Criminal Law of Scotland*, for long a standard work; in 1833-42 the *History of Europe from 1789 to 1815*, and in 1852-9 its sequel, the *History of Europe from Waterloo to the Accession of Louis Napoleon*. Alison was made a baronet in 1852, and died May 23, 1867.

His eldest son, Sir Archibald Alison (1826-1907), fought in the Crimean War and also the Indian Mutiny. After holding commands at home, he served in the Ashanti War of 1873-4, led the Highland brigade at Tel-el-Kebir, and, gazetted general 1888, succeeded Wolseley as commander-in-chief in Egypt. For five years he held the Aldershot command.

ALIWAL. Village of the Punjab, India. It is on the Sutlej, 9 m. W. of Ludhiana, and was the scene of a battle fought Jan. 28, 1846, between the British and the Sikhs, by which Britain obtained the territory E. of the Sutlej.

ALIWAL NORTH. A town and district of Cape Province, S. Africa. The town, on the Orange river, 280 m. by rly. and about 170 m. direct N.N.W. of East London, was captured from the Boers March 11, 1900. The Aliwal sulphur springs are near the town. The district has an area of 1,330 sq. m. Pop., district, 16,425; town, 5,557.

Aliwal South was the old name of the S. African port Mossel Bay (q.v.).

ALIZARIN (Arab, al, the; asarah, plant-juice). The chief colouring matter contained in madder, *rubia tinctoria*, a dye used for obtaining the colour known as Turkey-red.

Perkin, the discoverer of the first aniline dye, turned his attention to the artificial production of alizarin, and in 1868 prepared it commercially from anthracene. The manufacture is now successfully carried on by the British Alizarin Company. See Dyes.

ALKALI (Arab, al, the; qali, ashes of salt-wort). Name originally applied to soda-ash, but now to a class of basic compounds. The best known alkalis are soda, potash, and ammonia. They neutralise acids when mixed with them, and if the alkaline carbonates are employed there is effervescence. Alkalis turn the colour of red litmus to blue and that of yellow turmeric to brown. All alkalis are soluble in water. Lime, baryta, and strontia are known as alkaline earths, while potassium, sodium, lithium, caesium, and rubidium are called alkaline metals.

The alkaline industry embraces the production of alkalis and also of those chemicals manufactured in connexion with them, such as, for example, hydrochloric acid, nitric acid, sulphuric acid, chlorine, and bleaching powder, usually referred to as "heavy" chemicals.

The alkali made in Great Britain is soda, including both carbonate of soda, Na_2CO_3 , and caustic soda, NaHO . In the Leblanc method common salt (sodium chloride) is

Alkali. Solid block of alkali dug from the bed of Lake Magadi in British East Africa

the starting point of the manufacture. The details of this method, an important one for making carbonate of soda, include three stages, the salt-enke process, the black-ash process and lixiviation.

The Leblanc process has been replaced to a great extent by the ammonia-soda process, which depends upon the circumstance that when a strong solution of salt is mixed with carbonate of ammonia, bicarbonate of soda is produced. Soda is obtained from natural beds which occur near Lake Magadi, in East Africa. Caustic soda is also manufactured by an electrolytic process.

Owing to damage to vegetation in the neighbourhood of the works legislative action was taken to compel alkali makers to condense the acid gases. The Alkali, etc., Works Regulation Act, 1906, consolidated previous Acts of 1863, 1874, 1881, and 1892.

Alkali deposits is the name given to deposits from which salts of soda and potash can be extracted.

Alkali or alkaline rocks form a class of igneous rocks containing a high percentage of soda and potash. They include such minerals as nepheline, melilite, hauyne, sodalite, analcite, leucite, soda-pyroxenes and soda-amphiboles, orthoclase and anorthoclase.

Some of the most important alkaline rocks are the nepheline-syenites, phonolites, and leucite-basanites.

Alkaline earths was the name given by the old chemists to certain earthy minerals which they found to be insoluble in water, such as carbonates, sulphates, or oxides of various metals.

ALKALOID. Class of nitrogenous organic compounds possessing basic properties. They are found in plants and animals, the vegetable alkaloids used in medicine being the more important.

Alkaloids are extracted from plants by grinding the plants to fine powder, moistening with 95 p.c. of alcohol and treating the mass with alcohol in a percolator. Several of the alkaloids are violent poisons, but in appropriate doses form valuable medicines. Most of them are solids, but a few are liquids. Among alkaloids obtained from the vegetable kingdom are aconitine, atropine, quinine, caffeine, morphine, and strychnine.

ALKANET. Name of certain plants of the order Boraginaceae, such as *Anchusa officinalis* and *A. tinctoria*; also of a colouring material obtained from the root of the latter species, which plant is a native of S. Europe. It is an herbaceous perennial with oblong, bristly leaves and bright blue funnel-shaped flowers.

ALKMAAR. Town of

Holland. On the N. Holland Canal, 4 m. from the sea and 20 m. by rly. N.W. of Amsterdam it is the chief market for cheese in Holland. Its architectural features include the 15th century church of S. Laurence, called usually the Great Church and containing some old tombs. There is a town hall and a weigh house dating from 1582. The town walls have been pulled down. The town withstood a siege by the duke of Alva in 1573. Pop. 27,509.

ALLAH (Arab, al, the; ilāh, God). Name adopted by Mahomet for the Most High God and used as such by Arabic-speaking Jews and Christians, as well as by Mahomedans. The Moslem creed is expressed in the words: There is no God but God and Mahomet is the prophet of God.

ALLAHABAD. Division, district, and city of India. Allahabad city, the capital of the United Provinces, stands on the left bank of the Jumna, at its confluence with the Ganges,

Alkanet, *Anchusa officinalis*

Allahabad. 1. Cenotaph of Mir Jehan. 2. Post Office. 3. East Indian Railway Bridge across the river Jumna. 4. Asoka's Pillar, nearly 50 ft. in height and made of highly polished stone. It was originally set up about 250 B.C. by the Buddhist emperor Asoka, who inscribed upon it his famous edicts

565 m. N.N.W. of Calcutta. A holy place from a very early period, it was not until the construction of the fort by Akbar, in 1575, that the city acquired political importance. In 1801 it was ceded to the English, and was the scene of a massacre during the Mutiny in 1857.

Its industries include an iron foundry, indigo factories, and printing presses. It has a wireless station, and among its principal buildings are the Government House, the government offices, the Mayo Memorial Hall, the Thoruhill and Mayne Memorial, with a public library and museum, the Anglican and the Roman Catholic cathedrals, the University, which is an examining and inspecting body only, and the Muir College. The fort contains an underground temple and the Pillar of Asoka, on which is inscribed an edict by that emperor (3rd century B.C.). Outside the fort are the mausoleum and gardens of Khusrū. The Jumma Masjid, or Great Mosque, was pulled down in 1157. The district has an area of 2,858 sq. m. and produces grain, cotton, oil-seeds, sugar, and ghi. Pop., city, 157,220.

ALLAMANDA. Genus of S. American climbing shrubs of the order Apocynaceae. They have evergreen leaves and golden-yellow flowers, except *Allamanda violacea*, which has reddish-violet flowers. An infusion of the leaves of *A. cathartica* in moderate doses is a valuable medicine in painter's colic, though in stronger doses it is violently emetic and purgative. It is so called from the Swiss scientist Allamand (1713-87).

Allamanda, American climbing shrub

ALLAN, SIR HUGH (1810-82). Canadian ship-owner. Born at Salcoats, Ayrshire, Sept. 29, 1810, Allan went in early life to Canada, where he became partner in a shipping firm. About 1852 he founded the Allan line of steamers and was one of the promoters of the C.P.R. Since 1860 the Allan line has maintained a regular weekly service between Liverpool and Montreal or Portland, Maine, and since 1872 between Glasgow and the same ports. Allan's donation to the party funds in Canada in 1873 was denounced as corruption and largely brought about the Conservative defeat at the ensuing general election. Knighted in 1871, he died in Edinburgh, Dec. 9, 1882. His son, Sir H. M. Allan (b. 1860), was knighted in 1904.

ALLAN, MAUD (b. 1879). Professional name of Maud Allan Durrant, British dancer. Born at Toronto of English parents, and educated at San Francisco, she studied music at Berlin and in that city first appeared as a professional dancer in 1901. She later achieved success as a dancer in London and in the U.S.A., and is remembered for her performance of *Salome* in 1908. Subsequently she made several successful world tours.

ALLAN, SIR WILLIAM (1782-1850). Scottish painter. Born and educated in Edinburgh, he was apprenticed to a coach painter before studying art in London. In 1814 he took to genre and history painting, finding subjects in *The Waverley Novels*. His *Regent Moray Shot by Hamilton* secured his election as A.R.A., and in 1834 he became R.A. Four years later he was elected president of the Royal Scottish Academy, and in 1841 succeeded Sir David Wilkie as limner to the queen in Scotland. In 1843 he exhibited his *Waterloo*, which was purchased by the duke of Wellington. Allan died Feb. 22, 1850.

Sir William Allan, Scottish painter

ALLAN, SIR WILLIAM (1837-1903). British politician and engineer. Born at Dundee, he worked as an engineer and served as such in the Navy. In 1866 he settled in Sunderland, where he built up an engineering business, which was amalgamated with Richardson, Westgarth & Co. From 1893 until his death Allan was Liberal M.P. for Gateshead. Knighted in 1902, he died Dec. 28, 1903.

Sir William Allan, British politician

ALLANTOIN. A tasteless crystalline substance. It can be made by boiling uric acid with lead oxide and water and filtering, allantoin and uric acid being obtained on evaporation. It has been isolated from the comfrey (*Symphytum officinale*), a decoction of which has been used since Saxon times for healing wounds. From this observation allantoin came to be used in medicine to promote the healing of wounds.

ALLBUTT, SIR THOMAS CLIFFORD (1836-1925). British physician. Born July 20, 1836, he went to St. Peter's School, York, and Caius College, Cambridge, of which he was elected fellow. In 1892 he was appointed regius professor of physics at Cambridge. In 1907 he was knighted and in 1914-16 was vice-president of the Royal Society. He is the author of *Science and Medieval Thought*. He died Feb. 21, 1925.

ALLEGATION (Lat. *allegare*, to bring forward). English legal term. It means a statement as yet unproved, but which those responsible for it believe to be true. Thus a phrase such as an alleged criminal is often applied to a person accused of crime before the charge has been substantiated in a court of law. The use of the word alleged helps to protect newspapers from actions for libel; they cannot say a man is a criminal or that any statement is a libel or slander without incurring penalties, but they can safely refer to an alleged libel or slander. See *Libel*.

ALLEGHENY or **ALLEGHANY**. River of U.S.A. Rising in the N. part of Pennsylvania, it passes into New York and curves again into Pennsylvania, where it follows a S.W. course to Pittsburg and unites with the Monongahela to form the Ohio. Its length is about 300 m., and it is navigable by small vessels for nearly 200 m.

Allegheny is also the name of a former city of Pennsylvania, now an industrial suburb of Pittsburg, on the right bank of the Ohio river. It has several important educational institutions, a public library, observatory, and state penitentiary, engages in the manufacture of pickles and preserves, and has rolling mills, foundries, breweries, etc.

The Allegheny Mountains is a name sometimes applied to the Appalachian Mts., U.S.A., but more correctly to a W. division of that system. See *Appalachians*.

ALLEGIANCE (Lat. *ad*, to; *ligare*, to bind). Tie of obedience which binds a subject to the sovereign. A born subject of the Crown is said to owe natural allegiance to the King, and his Majesty is called his "natural liege lord." Some writers speak of "acquired" and "local" allegiance, meaning the obedience owed by naturalised subjects and denizens in the one case and mere residents in the other. Only by making a declaration of alienage can a British-born subject get rid of his allegiance, and such cannot be made when the country is at war. See *Alien*; *Sovereignty*.

ALLEGORY (Greek *allos*, other; *agoreucin*, to speak). Presentation or description of one thing under the image of another. It is a figure most frequently employed in literary composition, but also used in painting, as by

Holman Hunt in *The Light of the World*, and Burne-Jones in *Love Leading the Pilgrim*.

In literature allegory is a persistent form, owing to its convenience in permitting the presentation of abstract ideas in concrete forms. Early English literature is rich in allegory; Langland's *Vision of Piers Plowman* and Chaucer's *Romaunt of the Rose* being examples. It was one of the principal agents in the miracle plays and moralities, such as *Everyman*, which preluded the rise of the drama, and it merged into the drama itself, in the stamping of characters with names showing them to be personifications of qualities.

ALLEN. Lough or lake of Ireland. About 5 m. long by 3 m. broad, with an area of 8,900 acres, it is on the upper course of the Shannon, in counties Leitrim and Roscommon.

The bog of Allen is a tract of bogland in the province of Leinster, Ireland. It extends into the counties of Kildare, Leix, Ossory and Westmeath, and its area is about 240,000 acres. It is not quite a continuous bog, strips of arable being found here and there. The peat goes down on the average for about 25 ft., and its nature varies from surface moss to lignite, while oak stumps and pine trunks are also found.

ALLEN, CHARLES GRANT BLAIRFINDIE (1848-99). British author, better known as Grant Allen. Born at Kingston,

Grant Allen, British author
London Stereoscopic Co.

Canada, he was educated at King Edward's School, Birmingham, and Merton College, Oxford, and was professor and principal at Spanish Town, Jamaica, 1873-7. Allen was both a popular scientist and a popular novelist. His scientific attainments were considerable, and he was a luminous and entertaining writer on evolution and biological and botanical subjects. His many novels include *The Woman Who Did*, 1895, which provoked much discussion. He died in London, Oct. 25, 1899. Consult *Life*, E. Clodd, 1900.

ALLEN, SIR JAMES (b. 1855). New Zealand politician. Born in S. Australia, and educated at Clifton and St. John's College, Cambridge, he became a mining engineer. Settling in New Zealand, he entered the legislature in 1887, and in 1912 was made minister of finance, education, and defence. He had much to do with sending New Zealand troops to the Great War, and in 1917 was made a K.C.B. In 1919 he was made Minister for External Affairs. He was High Commissioner for N. Zealand, in London, 1920-26, and in 1927 became a member of the New Zealand legislative council.

Sir James Allen, N.Z. politician

ALLEN, JAMES LANE (1849-1925). American novelist. He was a teacher at Kentucky University, afterwards acting as professor of Latin at Bethany College, West Virginia. His novels, poetically conceived and delicately written transcripts of life in his native state, include *A Kentucky Cardinal*, 1895; *Aftermath*, 1896; *A Summer in Arcady*, 1896; *The Choir Invisible*, 1897; *The Reign of Law*, 1900; *The Sword of Youth*, 1915; and *A Cathedral Singer*, 1916. His short stories are in a volume entitled *The Blue Grass Region and Other Sketches of Kentucky*. He died Feb. 18, 1925.

ALLEN, WILLIAM (1532-94). English cardinal. He left England soon after the accession of Elizabeth, and was largely responsible for the foundation in 1568 of the

college for English priests established at Douai and afterwards transferred to Reims. He began the translation of the Douai Bible, but the main aim of Allen's life was to restore Roman Catholicism in England. At first he worked quietly, but about 1582 his activities became definitely political. He supported Philip II and worked with the pope, Mary Queen of Scots, Guise, and certain of the Jesuits against Elizabeth. He signed, if he did not write, An Admonition to the Nobility and People of England (1588), which urged them to depose Elizabeth. In 1587 he was made cardinal. He resided at Rome from 1588 until his death, Oct. 16, 1594.

William Allen,
English cardinal

ALLENBY, EDMUND HENRY HYNMAN ALLENBY, 1ST VISCOUNT (b. 1861). British soldier. Born April 23, 1861, he was educated at Haileybury and entered the Inniskilling Dragoons in 1879. He served in Bechuanaaland in 1884-5, in Zululand in 1888 and throughout the South African War.

In 1914, when the Great War broke out, Allenby was inspector-general of cavalry at Aldershot. He took out the cavalry division to France, was with it at Mons, and later, when it became a corps, was given command of it. In 1915, being then a K.C.B., he succeeded Sir Herbert Plumer in command of the 5th Corps, and when the battle of the Somme

during the struggle around Tannenberg. Pop. 34,731. See Prussia, East; Tannenberg.

ALLENTOWN. City of Pennsylvania, U.S.A. The county seat of Lehigh Co., it is on the Lehigh river. It is 60 m. by rly. N. by W. of Philadelphia, on the Philadelphia and Reading and other rlys. It manufactures furniture, silk, and cement, and has large iron-works, rolling mills, and forges. During the Great War it had a medical training camp for officers. Pop. 73,502.

ALLERTON. WILLIAM LAWIES JACKSON, 1ST BARON (1840-1917). British politician and merchant. He became a tanner and built up a large and profitable leather business. In 1880, although a Conservative, he won a seat in Parliament for the Liberal stronghold of Leeds, and from then until 1892 was one of its members. In 1895 he was made financial secretary to the treasury, and in 1891 became chief secretary for Ireland. When his party went out of power in 1892 he was made Lord Allerton. For over twenty years he was chairman of the G.N.R., and he presided over the royal commission on Britain's coal resources and the committee that inquired into the Jameson Raid. He died April 4, 1917, leaving two sons. The elder succeeded to the title, but died in 1925, when it passed to his son; the other is the cricketer. Hon. F. S. Jackson (q.v.).

ALLEYN, EDWARD (1566-1626). English actor and founder of The College of God's Gift, at Dulwich. With Philip Henslowe (q.v.), whose stepdaughter, Joan Woodward (d. 1623), he married, he was a partner in the earl of Nottingham's, or, as it was also called, the Lord Admiral's, company.

In 1600 the two partners built the Fortune Theatre in Golden Lane, Cripplegate. Between 1605-14 Alleyn purchased from Sir Francis Carlton the manor of Dulwich for £10,000, and in 1613 began building the college, with chapel and almshouses, obtaining a royal charter for incorporating and endowing the charity in 1619. He died Nov. 25, 1626, and was buried in Dulwich College Chapel.

ALL FOOLS' DAY or **APRIL FOOLS' DAY.** The popular names for April 1, derived from the custom of playing practical jokes on that day, usually until noon. The origin of the custom, apparently unknown in Great Britain until the 18th century, is obscure. It may have arisen in Europe as a travesty of New Year gifts and visits, when the reformed calendar transferred the beginning of the year from April 1 to Jan. 1. In France an April fool is called a poisson d'avril (April fish), possibly because a young spring fish is easy to catch. An April fool is known in Scotland as a gowk (cuckoo), and April fooling as hunting the gowk.

ALL-FOURS. An American card game, possibly the oldest. The name is derived from the four chances or points, called respectively High, Low, Jack, and Game.

ALLIA or **ALIA, BATTLE OF THE.** Fought July 16, 390 B.C., between the Romans and invading Gauls under their leader Brennus, on the banks of a small stream of that name, a tributary of the Tiber. The Romans were defeated, and the Gauls advanced and sacked Rome. The date of this defeat was afterwards known as dies Alliensis (day of Allia).

ALLIANCE (Lat. ad, to; ligare, to bind). Term applied generally to any compact between two or more states in regard to their common action or inaction in relation to other states. Of such historic compacts the majority have had no specific title.

The more important alliances down to the 17th century are generally called leagues. The most powerful of all alliances were those formed to carry on the Great War in 1914.

ALLIBONE, SAMUEL AUSTIN (1816-89). American bibliographer. He was born at Philadelphia. His chief work was A Critical Dictionary of English Literature and British and American Authors, 3 vols., 1859-71, which contained notices of 46,499 authors. To the third volume Allibone affixed a brief Valdictory to be reproduced in all editions of the work, and a series of forty indexes of over 75,000 names classified under different branches of literature. In 1891 a two-volume Supplement to Allibone's Dictionary was published; it was prepared by John Foster Kirk and had entries concerning 37,000 additional authors.

ALLIER. River of central France. Rising in Lozère and flowing N.N.W. through Haute-Loire, Puy-de-Dôme and Allier departments, it joins the Loire about 4 m. below Nevers. Of its 356 m., 140 m. are navigable.

The department of Allier covers 2,848 sq. m. and includes some of the richest land in France, both in agriculture and minerals. In it are the mineral springs of Vichy. Pop. 370,562.

ALLIGATION (Lat. ad, to; ligare, to bind). Term used of two metals closely associated with each other in a natural state. For instance, tin and tungsten, or, in a more restricted sense, uranium and the various radioactive metals are in alligation. The term is also used in arithmetic for a method of dealing with problems relating to mixtures.

ALLIGATOR (Span. el lagarto, the lizard). Genus of the crocodile family. Of the two living species the Chinese alligator is comparatively small. The Mississippi alligator, which attains 16 ft. in length, lives in the rivers. The eggs, which may amount to 100 from one female, are laid among the bushes on the banks and covered with decaying vegetable matter. The heat of the

Alligator of the rivers of the southern states of N. America, a reptile which attains a length of 16 ft.
Gambler Bolton, F.Z.S.

sun hatches them, and the female watches her nest and conducts the young to the water. Alligator farms have been started in Florida to supply the market with "crocodile leather" for fancy goods.

Field-Marshal Viscount Allenby,
British soldier
Lafayette

the Turks from Palestine and recovered Jerusalem for the Christians. In 1917 he was made a full general, and in 1918 received the G.C.B. In October, 1919, he was appointed High Commissioner for Egypt and the Sudan, retiring in 1925. In July, 1919, Allenby was made a field-marshal, and in August was voted a sum of £50,000 and created a viscount, adopting the title of Viscount Allenby of Megiddo and of Felixstowe in the county of Suffolk. His only son, Michael, an artillery subaltern, died of wounds in France, July 28, 1917. See Palestine.

ALLENDALE. District of Northumberland. It is the valley of the little river Allen, a tributary of the Tyne, and in it are lead mines. The village of Allendale, with a station on the L.N.E. Rly., is 13 m. from Hexham. From this place the old family of Beaumont takes the title of viscount. In 1906 Wentworth Beaumont was made a baron, in 1911 a viscount. His son became the 2nd viscount in 1923.

ALLENSTEIN. Town of E. Prussia. On the Allo, near Poland, it is 64 m. direct and 82 m. by rly. S. of Königsberg. It has breweries, saw-mills, iron foundries, and machine shops, and manufactures stoves, barrels, and matches. In Aug., 1914, it was taken by the Russians, but they evacuated it

ALLIGATOR PEAR. Fruit of *Persea gratissima*, a tree of tropical America and the West Indies, belonging to the order Lauraceae. It is also known as Avocado pear. It is a pear shaped berry, externally brownish or purple, and filled with an oily pulp-like butter or marrow, which is highly esteemed when eaten with lime-juice, spice, or pepper and salt. Valuable oil may be expressed from the pulp, and the seeds yield a black stain.

Alligator wood is the name given to timber of *Guarea grandifolia*, a tall evergreen tree of tropical America. It belongs to the order Meliaceae.

ALLINGHAM, WILLIAM (1824-89). British poet. Born at Ballyshannon, Ireland, in 1824 he became editor of *Fraser's Magazine*.

He was intimate with the pre-Raphaelite group, and his second volume of poems, *The Music Master*, 1855, a revised edition of *Day and Night Songs*, 1854, was illustrated by woodcuts from designs by Rossetti, Millais, and Arthur Hughes. Of his other poems, *Laurence Bloomfield in Ireland*, 1864, and *Irish Songs and Poems*, 1887, are notable. He married Helen Paterson, who as Mrs. William Allingham was a well-known water colour painter. Consult *Diary*, ed. H. Allingham and D. Radford, 1907.

ALLITERATION (Lat. ad, to, *litera*, letter). Repetition of the same initial letter in words in close juxtaposition. Alliteration was a structural part of the versification of the Anglo-Saxon, Old English, and Gothic languages generally, a regular characteristic of Icelandic verse, and was employed by several of the Oriental nations.

In classical poetry alliteration makes only a slight appearance, but after the revival of literature it found its way into the humorous Latin verse of the 16th century. In English prose, alliteration was brought to the highest point of mechanical perfection by John Lyly. Subsequent abuse led to its disappearance, but it was revived by Dryden and later used with supreme skill and subtle effect by such masters of technique as Tennyson and Swinburne. See *Poetry*.

ALLOA. Municipal and police burgh and seaport of Clackmannanshire, Scotland. Situated on the N. bank of the Forth, 32 m. W.N.W. of Edinburgh, it is on the L.M.S. and L.N.E. Rlys. Its buildings include a town hall, county and municipal offices, and several churches, and it has yarn, hewing, distilling, glass, and shipbuilding industries. A new bridge across the Forth is projected. Close by are the earl of Mar and Kellie's seat, Alloa House, and Alloa Tower (98 ft high), the ancient residence of the earls of Mar. Market day, Sat. Pop. 12,415.

ALLOCATION (Lat. ad, to; *loqui*, to speak). Term used by the Vatican for any important pronouncement by the Pope to the cardinals assembled in a consistory. These allocations are afterwards usually affixed to the doors of St. Peter's. The address read by a candidate on his admission to the French academy is also called an allocation.

ALLOPATHY (Greek *allos*, other; *pathos*, feeling). Medical term for the method of treating diseases by creating a condition different from the symptoms of the disease

to be cured, the converse of homoeopathy. The word was first used in the early 19th century by the homoeopaths, the adherents of the new school of medicine invented by Hahnemann, to denote the traditional school.

ALLORI, ANGELO (1502-72). Florentine painter and poet. Born at Monticelli, he assisted Jacopo Carucci da Pontorno in the decoration of the church of San Lorenzo in Florence. He painted in fresco and oils, forming his style to some extent on that of Michelangelo. He painted the portraits of Dante, Petrarca, and Boccaccio. He was known, owing to the colour of his complexion, as Il Bronzino, or the sun-burnt. His nephew, Alessandro Allori (1535-1607), and his grand-nephew, Cristoforo Allori (1577-1621), were also painters, the latter's Judith with the Head of Holofernes being well known.

ALLOTMENT. Small plot of land, usually not exceeding a quarter of an acre in extent, chiefly used for the cultivation of vegetables. In order to prevent egress from agricultural districts and to give the rural population a direct interest in the land, various Acts have been passed from time to time.

In urban districts applicants may apply to the urban district council to hire land or purchase it. In the event of refusal the applicant has the right of appeal to the county council, under the Allotment Act of 1890.

In 1914 there were about 500,000 allotments in England and Wales, but efforts to increase the country's food supply during the Great War led to a considerable addition. 'Security of tenure was given to the holders, and the Ministry of Agriculture took power to obtain land for them. In 1928 there were 1,024,000.

An allotment of shares is made when a limited liability company offers shares to the public. By law this can only be done if a certain number are applied for. See *Company*.

ALLOTROPY (Gr. *allos*, other *tropos*, turn). Term given to the property, possessed by certain chemical elements, of existing in two or more distinct forms. Each form has characteristics peculiar to itself and often differing very widely in the two forms. The classical example is provided by the element carbon, which is found in three very diverse forms, in the diamond, in graphite or black-lead, and in charcoal.

ALLOWANCE. English law term used in several senses. (1) In many cases people

are liable at law for allowing things to be done. For example, the surveyor of highways must not allow an obstruction to remain on a highway. A fortiori he must know of it, because a man cannot allow a thing of which he has no knowledge. (2) In actions for the redemption of mortgages, the mortgagee is

Alloa. The Parish church
Valentine

entitled to be paid, under the head of just allowances, all he has spent on or in connexion with mortgaged property, provided that the money has been reasonably or necessarily spent. (3) The term just allowances is used in many other Chancery suits where accounts have to be taken.

Allowances of still another kind are those given by the state to the wives and other dependents of soldiers, sailors, and airmen on active service.

ALLOWAY. Village of Ayrshire, Scotland. On the N. bank of the Doon, 2½ m. S. of Ayr, it contains the cottage, now a museum, in which Robert Burns was born. The Auld Brig and a new bridge cross the Doon, and a monument stands near the ruined "haunted kirk," the scene of *The Witches' Dance* in *Tam O'Shanter*. See Burns, Robert.

ALLOXAN or **MESOXALYLUREA.** Substance in the form of white crystals prepared by oxidising uric acid with nitric acid. A study of the condensation products of alloxan and uric acid first showed the relationship between uric acid and the alkaloids of coffee and tea.

Alloxantin. Crystalline substance prepared by the action of dilute nitric acid on uric acid. It is used as a test for uric acid.

ALLOY. Term derived from the Latin *ad*, to, and *ligare* to bind, applied (1) to the artificial compound formed by the mixing of two or more metals, usually in a state of fusion; and (2) to a base or inferior metal when mixed with a more valuable one.

The alloys of metals are numerous, and of great industrial importance and scientific interest. Iron, in the cast form, contains an appreciable percentage of carbon. Steel is iron containing a definite proportion of carbon, and in certain cases small proportions of metals, e.g. nickel, manganese, chromium, vanadium, silicon, tungsten, tellurium, and so on. Bronze, one of the earliest forms of metal used by prehistoric man, is an alloy.

For practical purposes an alloy may be regarded as a new metal. Its physical properties may differ widely in degree from those of the metals composing it. Where lead, tin, or zinc are among the principal constituents, those metals will impart to the alloy their physical properties in proportion to their relative amounts.

The principal alloys of industry are those formed with the metals copper, zinc, tin, lead, and antimony. Thus copper and zinc form the extensive and important series of brass alloys, comprising brass, yellow metal, Muntz metal, and alhata. Copper and tin form the bronzes; tin and lead form pewter; tin and antimony, Britannia metal; and lead and antimony, type metal. Fusible metals are alloys of lead, tin, and bismuth. Another important series of alloys are known as solders. Where another metal is combined with mercury the product is not called an alloy but an amalgam. See *Metallurgy*.

ALL SAINTS' DAY. Festival of the Christian Church celebrated on Nov. 1 and known formerly in Great Britain as All Hallows. It originated in A.D. 608, when the Pantheon at Rome was converted to Christian uses, as the Church of the Blessed Virgin and All Martyrs, by Pope Boniface IV, but was not formally instituted until 835. It is a day of obligation for Roman Catholics, and is ordered to be observed in the Church of England. Many superstitions, dating from the pagan festival of Nov. 1, are connected in Scotland with Hallow E'en, the vigil of All Saints'. In the Greek Church the festival is observed on the Sunday after Easter.

ALLSOPP. Name of a family of Burton brewers. The founder of the business of Samuel Allsopp & Sons was Samuel Allsopp (d. 1838). His son Henry made it one of the greatest concerns of the kind in England. M.P. for Worcestershire from 1874 to 1880, Henry Allsopp was made a baronet in 1880, and in 1886 a peer as Baron Hindlip, a title taken from the Worcestershire village where his country house was situated. He died April 3, 1887.

ALL SOULS' DAY. In the Roman Catholic Church, day set apart as one of prayer for the souls of all the faithful departed. It is observed on Nov. 2, and originated in the abbey of Cluny, A.D. 998. Omitted from the English Prayer Book at the Reformation.

All Souls College, Oxford. The north quadrangle with twin towers designed by Hawksmoor

mation, its restoration was asked for in 1919 by the lower house of Convocation. In France and Italy the day is known as Day of the Dead.

All Souls College at Oxford was founded in 1437 by Henry Chichele, archbishop of Canterbury. It is unique in that it has no undergraduates. The head is the warden.

ALLSPICE. Pea-like berries of *Pimenta officinalis*, a tropical American shrub of the order Myrtaceae. It is cultivated in the W. Indies and Jamaica. The name allspice is due to its fragrant and taste being supposed to combine those of cinnamon, cloves, and nutmeg. It is also known as Jamaica pepper. Unripe berries are picked and dried in the sun.

ALLSTON, WASHINGTON (1779-1843). American painter and author. In 1814 his big canvas, *The Dead Man Revived by Touching Elisha's Bones*, was awarded a premium of 200 gs. by the British Institution. His powers were well displayed in *Spalatro's Vision of the Bloody Hand*, *Saul and the Witch of Endor*, and the unfinished *Belshazzar's Feast*. He was elected an A.R.A. in 1818, and returned to America the same year. He was also the author of *The Sylphs of the Seasons* with *Other Poems*, 1813, and a romance of Italian life called *Monaldi*, 1841.

Allusive Arms. Left to right: Thomas Beckington, T, with fire beacon in tun; Montacute, sharp mountain peaks; Plantagenet, broom plant (*Planca genista*); Botrenx, Cornish family, a botru in Cornish dialect meaning a toad; Dauphin (dolphin), medieval; De Lacy, three lances (pike)

ALLUSIVE ARMS. In heraldry arms, known as *armes parlantes*, canting arms and punning arms, having charges with names suggesting, or alluding to, the name or title and sometimes the office or profession of the bearer. Numerous celebrated examples are connected with territorial insignia, e.g. the ox crossing a ford on the shield of the city of Oxford. Among personal arms are the old shields of the Troutbecks, adorned with a wreath of trout; and those of the Lucys, displaying three pikes (once known as lances).

ALLUVIUM. Matter derived from the natural waste of rocks. It is carried by running water and deposited where the flow becomes insufficient to support the load.

ALMA. River of Russia, in the Crimea. Its length is about 45 m., and it enters the Black Sea 18 m. N. of Sevastopol.

The battle of Alma was the first pitched battle of the Crimean War, fought Sept. 20, 1854. On one side were 35,000 Russians under Prince Menshikoff, and on the other 30,000 French under Marshal St. Arnaud, 25,000 British under Lord Raglan, and a few thousand Turks.

The allies landed on the Crimean Peninsula and set out for Sevastopol. To bar their way the Russian army was established on and behind the hills across the little river Alma. A flank attack by the French, coupled with an advance by the British against the Russian front, led to desperate fighting before the Russians were forced to withdraw, leaving the allies in possession of the heights.

ALMACK'S. Name of a Whig gaming club in Pall Mall, and of assembly rooms in King Street, St. James's, London, W. Opened in 1764, the founder is said to have been Almack or McCall (d. 1781), sometime valet to the 7th duke of Hamilton, and keeper of the Thatched House tavern in St. James's Street. Later known as Goosetree's and then as Brooke's, it removed in 1778 to No. 60, St. James's Street. In 1908 a social club called Almack's was founded at 20, Berkeley St., but was closed in 1928. A new Almack's was opened in 1929 at 19, Upper Grosvenor St.

Almack's Assembly Rooms, built in King Street for Almack by R. Mylne, were opened Feb. 20, 1765. The rooms quickly became an exclusive centre of fashion, and so remained until about 1863. The rooms were later known as Willis's Rooms, and then for a time as Willis's Restaurant.

ALMAGEST (Arab. *nl*, the; Gr. *megistē*, greatest) Arabic name given to Ptolemy's great work on astronomy. It was written about A.D. 140 and translated into Arabic about A.D. 800. This comprehensive treatise covered the whole subject of astronomy, and its authority was unchallenged until the 16th century, when Copernicus put forward his heliocentric theory. It included a catalogue of stars which was a revision of the older catalogue of Hipparchus.

ALMAGRO, DIEGO D' (c. 1475-1538). Spanish leader in the conquest of S. America. Born at Aldea del Rey, New Castile, he was associated with Pizarro in the conquest of Peru, but quarrelled with him about the spoil. Almagro's army was defeated in 1538, and he was strangled in prison by Pizarro's order.

Clog or log almanacs were oblong sticks of wood, brass, bone, or horn, with notches for the days of three months of the year on each of the four edges. They were flanked left and right with symbols indicating the lunar cycle, saints' days, etc., and made to hang on wall or mantelpiece or carry in the pocket. They are occasionally seen to-day.

Almanac, old clog forms

The *Almanach de Gotha* is an international book of reference issued in French and German. Established in 1763, it is published by the firm of Justus Perthes at Gotha, hence the name. In the John Rylands library, Manchester, there is a complete set of the German edition of the *Almanach* from 1764. It includes two copies for 1808, one suppressed by Napoleon and the other revised according to his directions. The 18th century issues were illustrated with scenes from popular plays and novels.

ALMANDINE. Deep-red variety of the garnet, often having a violet tinge. Formerly known as the caruncle, it is now called the precious or noble garnet. Good almandines closely resemble rubies, but are less hard, have a higher specific gravity (4.1 to 4.3), exhibit single refraction and no dichroism, and show the same colour in whatever light they are viewed. The stones are found chiefly in Ceylon, Brazil, Tirol, the U.S.A., and Greenland. The word comes from Alabanda, a city of Asia Minor. See Garnet.

ALMANSA OR ALMANZA. Town of Spain, in Albacete province. It is 60 m. N.W. of Alicante by rly. from that town to Madrid, and has a ruined castle and an obelisk marking the site of the battle. Pop. 11,887.

The battle of Almansa was fought during the war of the Spanish Succession, April 25, 1707, between the English, with their German, Portuguese and Dutch allies on one side, and the French and Spaniards on the other. The English were commanded by Ravigny, earl of Galway, and their enemies by the duke of Berwick. After an initial success over the Spaniards the English and their allies were beaten by the French and compelled to retreat. They had about 4,000 killed and wounded, and lost 3,000 prisoners.

ALMANSUR (c. 710-75). The surname, meaning the Victorious, of the second Abbaside caliph. He succeeded his brother, Abdul Abbas, in 754, and his reign was marked by the loss of Spain and Africa and by the oppression of Christians in Syria and Egypt. For security he left his old residence near Kufa and built (763-6) a new capital on the site of the old town of Bagdad. He died while on pilgrimage to Mecca.

ALMA-TADEMA, SIR LAWRENCE (1836-1912). Anglo-Dutch painter. He was born at Dronrijp, Friesland, Jan. 8, 1836.

In 1863 the Grosvenor Gallery organized a representative exhibition of his work; in 1870 he made his home in England, and in 1873 he was naturalised. Elected A.R.A. in 1873 and R.A. in 1879, he was knighted in 1899 and received the Order of Merit in 1905. He died at Wiesbaden, June 25, 1912. Alma-Tadema devoted special study to the life and

Sir Lawrence Alma-Tadema, painter

customs of the Greeks and Romans He painted several successful portraits. Notable examples of his work are *An Audience at Agrippa's*, 1876; *A Sculptor's Model*, 1878; *Pomona Festival*, 1879; *The Roses of Helio-gabalus*, 1888; *The Colosseum*, 1896; and *The Conversion of Paula*, 1898.

ALMEH OR **ALMAH** (Arab. *alama*, to know) Name given in Egypt to a member of a superior class of professional women musicians, in allusion to the fact that they have spent years in rigorous training and know their duties. Almehs are usually singers only but sometimes also instrumentalists.

ALMEIDA-GARRETT, JOAO BAPTISTA DA SILVA LEITAO, VISCONT DE (1799-1854). Portuguese dramatist and statesman. Born at Oporto, his attachment to Liberal principles forced him to spend some years in exile. When Dom Pedro returned from Brazil in 1832 and drove Dom Miguel from the throne, Garrett was appointed minister of the interior. He carried through many reforms in the Cortes, represented his country at Brussels, and was minister for foreign affairs. He contributed to the foundation of a national theatre and wrote prose dramas. He died Dec 9, 1854.

ALMERIA. City and seaport of Spain. The capital of Almeria province and one of the chief Mediterranean ports, it is 60 m. S.E. of Granada, on the rly. to Madrid, and has a wireless station. Beautifully situated on the Gulf of Almeria, it is a winter health resort, with a fine harbour, a Moorish castle, and a Gothic cathedral. It exports the noted Almeria white grapes and other fruits, esparto and iron ore. Founded by the Phoenicians, the Moors lost it in 1489. Pop. 51,000.

ALMOHADES. Mahomedan sect and dynasty of the 12th and 13th centuries. Its founder was a Berber who preached a stricter form of the Mahomedan faith. He died in 1128, but his disciple Ahd-el-Mumin conquered a considerable part of N. Africa and in 1149 made himself ruler of Morocco. Later he crossed to Europe and subdued part of Spain, making Seville his capital. In 1212, after Mahomed III had been defeated by the Christian kings of Spain, their possessions in Spain were quickly lost, and soon afterwards those in Africa. Their last representative, Idris IV, was murdered in 1269.

ALMON, JOHN (1737-1805). English writer and bookseller, friend of John Wilkes (q.v.). Born in Liverpool, he was apprenticed to a printer and bookseller, and became a working printer in London. From his bookshop in Piccadilly Almon issued numerous productions, and in 1774 began to issue a monthly record of the proceedings of Parliament in *The Parliamentary Register*. Ten years later he became the owner and editor of *The General Advertiser*. In 1786 he was tried for libel, and this, added to money troubles, forced him to live for a time in France. He died Dec. 12, 1805.

ALMOND (Gr. *amygdale*). Fruit of a small tree of the order Rosaceae, and a native of the Mediterranean region. It is largely cultivated in S. Europe and the Levant on account of its fruit, and in cooler parts for the sake of its flowers, which appear in advance of the leaves. Closely related to the peach, the fruit of the almond tree lacks the succulent flesh of the former, and the seed (the almond of commerce) is the only edible

Almond. The fruit of the Jordan almond as it grows; and (on the left) a nut without the leathery husk, and a kernel.

portion. The almonds sold in the shops—the sweet, the bitter, and the thin-shelled Jordan—are cultivated varieties of the same species. The almond was introduced into Britain about the middle of the 16th century, and is cultivated as a beautiful spring flowering tree or shrub, varying from 3 ft. to 12 ft. in height. The flowers are white, pink, and red. Almond oil is obtained from the seeds of the bitter and sweet almonds. It is extensively used in medicine. Sweet almonds yield 40 to 54 p.c. of oil, bitter almonds 35 to 38 p.c. Peach kernels are also used for obtaining essential oil of almonds, the product being identical with that yielded by bitter almonds.

Almond. River of Perthshire, Scotland. It flows 30 m. S.E. to join the Tay some 2 m. above Perth. See *Glenalmond*.

ALMONER (Gr. *eleēmosynē*, alms) Official almsgiver. Originally the title of the member of a monastery appointed to dispense the alms, the term came to be applied to a similar functionary in the households of princes and ecclesiastics.

The British royal household has an almoner, comprising the hereditary grand almoner, the marquess of Exeter, the lord high almoner, and the sub-almoner. The lord high almoner dispenses the royal alms on Maundy Thursday. The chaplain of an institution is sometimes called the almoner.

ALMORAVIDES. Mahomedan sect and dynasty of the 11th and 12th centuries. Converted to Mahomedanism, a tribe from the Sahara made war successfully upon its neighbours and in the 11th century conquered Morocco. They called themselves the Murabit or hermits, a name altered in time to Almoraides. Adu Bekr was their early leader, but it was under his kinsman, Yusuf-ihnn-Tashfin, that they attained the height of their power. He founded the city of Marrakesh, Morocco, and in 1086 crossed over to Spain and there brought the various Moorish kingdoms under his authority. When he died in 1107, his empire included all Spain and Portugal from the Ebro to the Tagus, considerable territory in N. Africa, and the Balearic Islands. Under his successors much of the European possessions passed to the Almohades, by whom their power in Marrakesh was destroyed in 1147. See *Morocco*.

ALMSHOUSES. Homes provided in England by individual philanthropists, city companies and trades for the aged poor. Usually they consist of separate tenements.

London has many almshouses, notably the Charterhouse, founded in 1611, and they are also found in almost every city and old town in England. Near Winchester is the Hospital of S. Cross, founded in 1132; at Warwick is the Leicester Hospital, dating from 1571, and at Hereford the Coningsby Hospital, founded 1610. In the U.S.A. the term almshouse is used for buildings similar to the English workhouse, and in many cases connected with farms on which work is found for able-bodied paupers. Many almshouses are endowed and their funds are supervised by the Charity Commissioners.

ALMUCANTAR OR **ALMACANTAR** (Arab. *sundial*). Circles of the celestial sphere. They are parallel to the horizontal plane and cut the meridian at equal distances. They are, therefore, parallels of altitude. The horizon is the first almucantar.

ALNWICK. Urban district, market town, and the county town of Northumberland, England. On the Aln, 38 m. N. of Newcastle by the L. N.E. Rly., it has breweries and a trade in corn, cattle, and fishing tackle. It retains vestiges of its old walls and one gate, the Bondgate, has an old church, S. Mary and S. Michael; and S. Leonard's

Alnwick. Ancient gateway known as Hotspur's Tower.

hospital. Market day, Mon. Pop. 6,991.

The castle is a residence of the duke of Northumberland. Standing on a hill on the south side of the river Aln, it was first built in the 12th century and passed to the Percy family early in the 14th. Of the old castle little remains save a gateway and a Norman arch; the building was restored in the 18th century and added to in the 19th. Its picture gallery is famous. The castle is surrounded by a fine park which contains the ruins of two abbeys and two memorial towers. The remains of Hulne Priory, a Carmelite foundation of the 13th century, are within the castle's domain.

ALODIAL OR **ALLODIAL** (Lat. *allodium*). The name given to a form of land tenure found in England in Anglo-Saxon times and common in Scandinavia. Alodial land is practically the same as freehold and opposed to feudal. In Norway and Sweden this tenure, called *odol*, was common in the Middle Ages, and such land could not be alienated. See *Feudalism*.

ALOE. Extensive genus of the order Liliaceae. It consists of succulent shrubs (rarely trees) with thick, fleshy leaves margined with prickles or teeth. It grows in hot, dry countries, particularly S. Africa. Several species of the plant are of economic importance.

The drug aloe is the dried resinous juice from the leaves of *Aloe vera* and *Aloe socotrina*, that from the former being known as Barbados aloe and the latter as Socotrine aloe. Its most important constituent is a crystalline principle called aloin. Combined with nuxvomica and ferrous sulphate, aloe is often useful in simple anaemia. It is an excellent intestinal purgative in cases of chronic constipation, and is most frequently administered in the form of a pill.

ALOES WOOD, **EAGLE WOOD**, OR **LIGN ALOES**. Wood of a large tree, a native of Assam, India. This yields an abundance of resin and uggur oil, the latter esteemed as a perfume and burnt in Eastern temples to scent the air. For this purpose the wood is broken up and distilled. The oil is also used in gout and rheumatic affections.

ALOST. Town of Belgium, in E. Flanders, also called Aalst. It stands on the Dender, 19 m. by rly. W.N.W. of Brussels, and has a magnificent church, S. Martin's, a 13th century town hall, and a Jesuit college. It has bleaching works and manufactures textiles, leather, beer, and spirits. It was occupied by the Germans from Aug., 1914, to Oct., 1918. Pop. 35,275.

ALOYSIUS (1568-91). An Italian saint. Luigi Guozaga was the son of Ferdinand, marquis of Castiglione, and was born March 9,

Aloe. A typical specimen, *Aloe ferox*.

Chart specially prepared by Professor E. H. Minns

Greek alphabet may not owe much to the Phoenicians. Sir Arthur Evans, as a result of the Minoan discoveries, holds that the Phoenician alphabet itself is one of the fruits of Mycenaean culture; that the Cretan and Aegean forms are the more original, and were borrowed by the Phoenicians; and that the so-called Semitic names are partly Aegean names and partly translations of the latter.

The Phoenician alphabet can hardly have come into use on Syrian soil earlier than about 1000 B.C., for the available evidence goes to show that the Babylonian cuneiform script was officially employed throughout Syria for some time after 1400 B.C. Since records in cuneiform, Egyptian hieroglyphics, and possibly in Cretan script date back thousands of years before 1000 B.C., it must have been derived from or modelled upon one of the scripts of the older Mediterranean or Mesopotamian civilizations. Lenormant suggested that the Phoenician alphabet was directly borrowed from the Egyptian hieroglyphs, and Alan Gardiner strongly supports this view of its source.

The Greek alphabet was derived from the Phoenician, but from a form of it which is earlier than that of the most ancient gems and the Moabite Stone. The Latin alphabet is derived from the form of the Greek used at Chalcis in Euboea, an island of the Aegean. It was taken to southern Italy by Greek colonists about the 8th century B.C. The Irish script, usually called the Irish uncial or semi-uncial, seems to have been introduced by S. Patrick from the south of France some time in the 5th century. It was evolved from the local 5th century cursive, whereas the Roman uncial was derived in the main from the capitals.

THE ENGLISH ALPHABET. The English alphabet is a member of the Latin family of alphabets, and English printed letters are still called Roman type. They resemble the Latin forms used by the Italian printers of the 15th century, which in their turn were imitations of the forms used in the minuscule MSS. of the 10th and 11th centuries. These minuscule letters were so called from their small size. They are cursive forms of the larger and earlier uncial letters, which again were derived from the Roman letters of the Augustan age. These Roman letters correspond loosely to the capitals now used by printers.

Naturally the Latin letters had to be adapted to some extent to suit English sounds. The Latin I was converted into I and J, the Latin VV or UV into U=W. In Phoenician and Hebrew Y is the tenth letter and Z the seventh. The position of Y and Z at the end of the English alphabet seems to be due to the fact that they were a late introduction into the Latin alphabet from the Greek, and were used only in Greek loan-words. It has been pointed out that Q and X were not of much service to the Romans, and are of small service in English. Almost equally useless is the letter C in the English alphabet as an addition to K. See Armenia.

ALPHEGE or **ALPHAGE** (954-1012). English saint and martyr. After having been a monk at Deerhurst and at Bath, he was made bishop of Winchester in 984 and archbishop of Canterbury in 1006. Captured by the Danes at Canterbury in 1011, he was martyred April 19, 1012, and was buried in S. Paul's Cathedral. His body was removed in 1023 to Canterbury. He is commemorated in the dedication of several churches in England; that in London Wall, rebuilt in 1777, was partly demolished in 1919.

ALPHEUS. Chief river of Peloponnesus, Greece. Its modern name is Ruphia, and it flows from Arcadia into the Ionian Sea. Alpheus is also the name of a river god who

surprised the nymph Arethusa when she was bathing. See Arethusa.

ALPHONSO. The name of several Spanish and Portuguese kings, also called Alfonso. Alphonso the Great, the last king of the Asturias, abdicated after a long reign just before his death about 914. Alphonso (d. 1109), king of Leon and Castile, called the Brave, and Alphonso (d. 1134), king of Aragon and Navarre, called the Fighter, both won fame by warring against the Moors. A later Alphonso (1385-1488) was king of Aragon and Sicily. Alphonso X (1221-84), king of Castile and Leon, was called the Wise. He encouraged the work of historians and lawyers, and was responsible for the tables of planetary motions, called after him the Alfonsine Tables.

The first Alphonso of all Spain was Alphonso XII. A son of Isabella II, he became king in 1874, four years after his mother's abdication. His time was mainly occupied in fighting the Carlists, and he died Nov. 25, 1885. Alphonso XIII was his posthumous son by his second wife, Maria Christina, an Austrian archduchess, who died in 1929.

ALPHONSO XIII (b. 1886). King of Spain. The son of Alphonso XII, Alphonso

was born after his father's death, and was consequently a king from the day of his birth, May 17, 1886. Until 1906, when he was declared of age, his mother acted as regent. In 1906 he was married to Victoria Eugénie (Ena) daughter of Princess Henry of Battenberg and cousin of George V. Their family consists of four sons and two daughters, the heir being Alphonso, prince of Asturias (b. 1907).

Alphonso XIII, King of Spain

ALPINE CLUB. British club founded in London in 1857. Its membership is confined to those who are interested in mountaineering, especially in connexion with the Alps. It has issued since 1864 *The Alpine Journal*, and its headquarters are at 23, Savile Row, London, W.1. There are many other Alpine clubs in Europe and several in other parts of the world, especially in the U.S.A., Canada, and South Africa. See Mountaineering.

ALPINI. Italian soldiers recruited mainly in the Alps and trained for special work. They are selected men formed into special regiments, with transport suitable for fighting in mountainous districts. In the Great War the Alpini were described in Italy as "the cream of the army," and one of their exploits was the capture of the Adamello Glacier in April, 1916.

ALPNACH or **ALPNACHT.** Village of Switzerland, in the canton of Unterwalden. It stands on the slopes of Mt. Pilatus, 8 m. S.S.W. of Lucerne, and is a starting point for the ascent. It has a station on the Lucerne-Brünig-Brienzen rly.

ALPS. Term used to denote the ranges and groups of lofty mountains in the S. of central Europe, bounded, roughly speaking, on the S. by the Italian plains, on the W. by the Rhône valley, stretching E. almost to the plains of Hungary, and on the N. descending to the less elevated but still hilly country of N. Switzerland, Bavaria, and Upper Austria.

They are usually treated as divided into three main sections, the W., Central, and E. Alps. The W. Alps include the Maritime, Cottian, Dauphiné, and Graian Alps; the Central Alps include the Bernese Oberland on the N. and the Pennine Alps on the S. of the upper Rhône valley, the Lepontine, and Adula Alps, Tödi range, N.E. Swiss and the Bernina Alps, and Rhaetian Alps; the E. Alps extend through E. Tirol and Styria and the N. of Venetia and end in the Carinthian, Carnic and Julian Alps.

The region of these Alps is from about 5,000 ft. to 7,000 ft. or more above the sea level; the high mountain peaks rise above them to a height of from 10,000 ft. to 15,000 ft. The few over 14,000 ft. occur only in the group of Mont Blanc, of the central Pennines in the Zermatt region, and one, the Finsteraarhorn, in the Bernese Oberland. The highest peaks of the Alps, further E., viz. the Ortler Spitze, the Gross Glockner, the Gross Venediger, and the Wildspitze, range between 11,000 ft. and 13,000 ft. While only two summits in the whole region are over 15,000 ft. high, there are dozens over 12,000 ft., from Monte Viso in the far W., on the border of Dauphiné and Piedmont, to the Gross Glockner in the E., and many scores over 10,000 ft., in both the main chain and outlying groups.

A marked feature of the Alpine region is its greater steepness on the S. side; the plain of Lombardy is only a few feet above the sea, whereas the Lake of Constance, which is much farther from the great central ranges, is 1,300 ft. above the sea level. The rivers on the S. side descend with fairly straight course to the Po, while on the N. side the Rhine flows in its rapid upper course N.E. by E. and then N., and, after passing through the great lake, nearly due W., until it turns again N. at Basel.

On the south side of the Alps the great lakes which fill the deepest depressions in the folds of the mountains, Maggiore, Como and Garda, lie at right angles to the main chain; whereas the general direction of those on the north side, Lucerne, Zurich and Constance, is parallel to it. No water from the Alps goes to the Baltic; the greater part of it is carried away by the Danube.

Historically the Alps have formed a barrier between N. Europe and Italy, impassable except by certain well-known routes, and then as a rule only in summer. The lowest important pass across the main chain is the Brenner (4,500 ft.), dividing the mountains of E. and W. Tirol. It was known to the Romans and used by the barbarian invaders. By this pass the first railway route from Germany to Italy crossed the Alps. It was opened in 1867, and the main ranges have since been pierced by railways near Mont Cenis in the W. in 1871, in the centre by the St. Gotthard tunnel in 1882, and between the Rhône Valley and Lake Maggiore by the Simplon in 1906.

Alpine climbing, as a sport exercising body and mind, may be taken to date from the middle of the 19th century. Prior to that time some of the higher Alps had been ascended, notably Mont Blanc, the summit of which was first reached by two guides from Chamonix in 1786, at the instance of De Saussure, and by De Saussure himself the following year. Other peaks were conquered, especially in the Oberland, early in the 19th century.

In 1854 came the ascent of the Wetterhorn by Alfred Wills, in 1855 of Monte Rosa by G. and C. Smyth and others of an English party; in 1861 of the Weisshorn by Tyndall, and in 1865 of the Matterhorn by Edward Whymper with a party of eight, four of whom lost their lives in a terrible accident when descending. Since that time almost every peak in the whole Alpine region has been repeatedly ascended.

No corner of this great mountain region now remains unexplored. Each of the greater peaks is the subject of a regular tariff of fees

Alps. Although Switzerland is generally regarded as the Alpine country of Europe, the mountainous system to which is given the comprehensive title of the Alps extends west into France, east into Bavaria and Austria, and south into Italy. The highest peak, Mont Blanc, is in French territory.

for guides, who often take even inexperienced tourists to places once deemed inaccessible. Consult *The Alps*, A. H. M. Lunn, 1914; *The Alps from End to End*, Sir M. Conway, 1917.

ALSACE (Ger. *Elsass*) District between the Rhine and the Vosges Mts., with Lorraine to the N. and Switzerland to the S. It covers about 3,200 sq. m., has a population of 1,216,625, and its capital is Strasbourg, other important towns being Colmar and Mulhouse. Its chief river is the Ill and geographically it is divided into two parts, a mountainous region in the W. and a plain in the E. Well-timbered and fertile, its people are largely engaged in agriculture. Wine is produced, and the manufactures include leather, glass, chemicals, and cotton and woollen goods.

For nearly 500 years Alsace was part of the Roman empire. Later it became part of the kingdom of the Franks; in 870, by virtue of a treaty, it became German, and for some time was part of the German duchy of Swabia. It remained German until after the Thirty Years' War, when, in 1684, it became part of France, and so remained until 1871.

CAMPAIGNS IN ALSACE. In 1914 there was fighting between the French and Germans in Alsace. Early in August the French entered Mulhouse and other places, but a German force, after a fight at Cernay, drove them out of the land. A second invasion ended in the same way. A German defeat at Dornach was followed by French reverses at Morhange and Sarrebourg, after which the French fell back to the line of Vosges, but retained the small town of Thann. In December they again moved forward and there was fighting near Thann. A little later an attack was made on Altkirch, but no decided result was reached and the course of the war elsewhere put an end to serious operations in Alsace.

ALSACE-LORRAINE. District consisting of most of Alsace and a considerable portion of Lorraine, taken by Germany from France in 1871 and restored to France in 1919. Its area is 5,605 sq. m., and under the Germans

it was divided into three districts—Upper Alsace, Lower Alsace, and Lorraine. It now forms the French departments of Haut-Rhin, Bas-Rhin and Moselle. Pop. 1,795,000.

By the Germans this district was made a Reichsland, or imperial land, and as such was governed by officials appointed by the emperor. This arrangement lasted for three years, when a new system was set up. By this a statthalter or governor was appointed by the emperor; to assist him were

four ministers and a council of state. In addition, the people were allowed to choose 30 representatives, who formed a local parliament; their powers, however, were very slight. In 1877 this parliament was given more power, and in 1879 there was a larger change in the constitution. By this the Reichsland was allowed to send fifteen members to the Reichstag at Berlin, elected in the usual way. It had also two in the Bundesrat, nominated by the emperor.

The next constitutional change took place in 1911. The district was allowed another, a third, representative in the Bundesrat, and its local legislature was quite altered. It was

made a parliament of two houses. The lower house consisted of 60 members elected by the people for five years. The head of the organization was still the statthalter. This constitution remained in being until France took over the district. The Germans made great efforts, some of them of an arbitrary nature, to make this district a German land. After a time this repressive policy was partially abandoned, but they had succeeded in their main aim as, in 1910, 1,643,260 of the inhabitants, i.e. nearly 90 p.c., spoke German, and only 204,262 spoke French. See map p. 65; Consult *Alsace-Lorraine*, A. W. Holland, 1915; *Alsace-Lorraine*, G. W. Edwards, 1919.

ALSATIA. Name given to a sanctuary, or refuge for malefactors, in the Whitefriars district of London, between Fleet Street and the Thames. Alsace, or Alsatia, was debatable land between France and Germany, hence the application of the term. The sanctuary had a rude but flourishing existence during the 17th century, and was suppressed in 1697.

ALSEN. Island of Denmark, in the Little Belt. Separated from the mainland by Alsen Sound, which narrows down from 2½ m. to 300 yds., its area is 124 sq. m. Deeply indented on the W., it is picturesque and fertile and has fine orchards. Sonderburg, its chief town, has a good harbour. A railway line runs from the capital to Norburg. As part of Slesvig, Alsen was German from 1864 to 1920, when it was returned to Denmark. Pop. 26,600.

ALSTER. River of Slesvig-Holstein. A tributary of the Elbe, which it joins at Hamburg, it is 32 m. long, and navigable. At Hamburg it forms a large lake, the Outer Alster, about 430 acres in area, and a smaller lake, the Inner Alster.

ALTAI MOUNTAINS. Great system of mts. in W. Siberia and Mongolia. The Mongolian name is Altai-nula, meaning golden mountains. They hem in the Central Asian plateau on the S. and S.W., and comprise the Russian Altai, extending N. from the river

Alsace-Lorraine. Typical wearers of national costume

Irtysk to the Siberian Rly., and the Mongolian or Great Altai, running E. into the desert of Gobi. The Russian Altai contain the highest summit, Mt. Bieluka, estimated at 14,800 ft. The scenery for the most part is romantic. The region is rich in minerals, including coal, iron, gold, silver, lead, zinc, and copper, and porphyry, aquamarine, and jasper are found. Agriculture is pursued in the valleys.

The branch of the human race which developed in Central Asia is called altaic. It includes the Mongol, Tungus, and Turkish stocks.

ALTAMIRA. Palaeolithic cave, 308 yds. long, in Santander province, Spain. Herein, in 1879, mural paintings and engravings of the Magdalenian period were discovered. They include polychrome roof frescoes of animal subjects, mostly hisons—a masterpiece of prehistoric art. See Art.

ALTAR (Lat. altare, high place). Originally a structure on which victims were sacrificed or offerings of various kinds made to a divinity; in Christian churches, a table or stone on which the Holy Eucharist is offered. In prehistoric times altars were mounds, the high places of the Bible (2 Kings 23), or structures there set up, on which sacrifices or oblations were offered, and where the gods worshipped were supposed to dwell.

Among the Greeks and Romans altars were originally heaps of earth or turf: later, as

were Oriental and Hebrew altars, they were round, oblong, or square structures of stone. Altars, which from early times were places of sanctuary (Ex. 21; 1 Kings 1 and 2), were also set up in the streets to the special divinity of the neighbourhood, in camps, and in private houses for the household gods.

Early Christians used tombs of martyrs in the catacombs as altars—hence stone or marble altars in Roman Catholic churches enclose relics of saints; then portable wooden tables came into use.

The first English Prayer Book employs the word altar and God's Board: in the second Prayer Book, the words Table, Holy Table, or Lord's Table were substituted, though altar was retained in the coronation service Ecclesiastical courts have ruled that in the English Church altars must be of wood and movable.

An altar-piece is a painting, sculpture, or other work of art placed behind or over the altar in many Christian churches. See Reredos.

Altamira. Palaeolithic cave paintings, in black and red, of a deer and a bison

ALTAZIMUTH (Lat. altus, high; Arab. as-samut, ways or paths). Instrument used in astronomy to deter-

mine the exact apparent position of a star in the heavens at any instant. The star is observed through a telescope, which is in contact with a graduated vertical circle, the telescope being free to turn about a horizontal axis through the centre of the circle and perpendicular to its plane.

The whole apparatus is so mounted that it can be rotated about a vertical axis, and the angle of rotation is shown by means of a graduated horizontal circle. A large altazimuth is in Greenwich Observatory. See Telescope.

ALTDORF or **ALTORF**. Capital of Uri canton, Switzerland. A station on the S. Gotthard rly. it is the legendary scene of William Tell's shooting the apple from his son's head, a tradition commemorated by a bronze statue erected in 1895. In the immediate neighbourhood is Bürglen, the traditional birthplace of Tell. Pop. 3,837.

ALTDORFER, **ALBRECHT** (c 1480-1538). German painter and engraver. After spending his early years at Amberg he returned in 1505 to his birthplace, Ratishon (Regensburg), where he was engaged upon a picture for the church of S. Peter. He designed the city ramparts against a Turkish invasion. Of his paintings, the

Battle of Arbela and S. George and the Dragon (Munich) and a Nativity (Bremen) are notable. His talent as an engraver on

Altar of S. Paul's Cathedral, London, showing the white marble reredos completed in 1888

both copper and wood gives him a place with the Little Masters. Consult Altdorfer. T. S. Moore, 1900.

ALTENBURG. Town of Thuringia, Germany, formerly the capital of the little duchy of Saxe-Altenburg.

Altazimuth. Astronomer taking a reading of the heavens with one of these wonderful instruments

It is near the river Pleisse 26 m. from Leipzig, and is a railway junction. The chief buildings are the castle, long the residence of the rulers of Saxe-Altenburg, the 16th century town hall, museums, library, churches and schools. There is a trade in cattle, corn, wood, etc., and some manufacturing industries, such as bricks, woollens, etc. Pop. 41,315.

ALTERNATOR. Type of dynamo which generates alternating electric current. Alternators differ from ordinary dynamos in that no commutator or rectifying arrangement is employed, and two simple collecting rings make connexion with the external circuit. They are generally multi-polar machines, the field magnets being excited by continuous current. By arranging the rings of the electromagnets and armature coils in different ways a single two-phase, or poly-phase, current may be produced. There are several different types of alternator. See Dynamo.

ALTHING. Name of the parliament of Iceland. Meaning assembly of the elders, it dates from the 10th century, but its present form only from 1874, when the king of

Alsace-Lorraine. The two countries which were taken by Germany from France as a result of the war of 1870-71, and restored to France by the treaty of peace following the Great War of 1914-18. See page 64

Denmark gave a constitution to Iceland. It consists of 42 members, elected by all men and women over 25 years old. These sit in two houses, 14 in one and 28 in the other.

ALTHORN. A brass musical instrument of tenor pitch, the E flat or F saxhorn. The name is also sometimes applied to the baritone saxhorn in B flat.

ALTHORP. Seat of Earl Spencer. It is 5 m. N.W. of Northampton and 1 m. from the station of Althorp Park on the L.M.S. Rly. The estate has belonged to the Spencers since the time of Henry VII. The mansion dates from the Tudor period, but has been largely altered, in part by the 1st countess of Sunderland, Waller's Saccharissa. The house contains some fine pictures. Earl Spencer's eldest son is called Viscount Althorp.

The Althorp library, a collection of more than 40,000 volumes, is now in the John Rylands Library at Manchester. It was begun by Charles Spencer, 3rd earl of Sunderland, and added to by John, 1st Earl Spencer, who bought the library of Dr. George, headmaster of Eton; but it owed most to the bookish tastes of the 2nd Earl Spencer. It was sold in 1892 for £250,000 by the 5th Earl Spencer to Mrs. Rylands, and formed the nucleus of the library she endowed in Manchester as a memorial to her husband.

ALTISCOPE (Lat. altus, high; Gr. skopein, to look at). Instrument for enabling an observer to sight a distant object which is obscured by an obstacle in the normal line of vision. It comprises a combination of lenses and reflecting mirrors, or of reflecting mirrors only, housed in a telescopic tube. The view is received upon an upper mirror placed at an angle of 45°, and is reflected down the tube to a lower mirror, also at 45°, where the image can be seen by the observer, either directly or through an eyepiece. Magnification of the image may be produced by lenses between the mirrors. See Periscope.

ALTITUDE. In astronomy, the angular height in degrees of a star above the astronomical horizon.

An altitude meter is an instrument on the principle of the aneroid barometer, for indicating the height of an aerial vessel above sea level. The reading of the instrument is only approximately accurate.

ALTMUHL (Ger., old mill). River of Bavaria. Rising 7 m. N. of Rothenburg, after a course of about 105 m. it joins the Danube at Kelheim. With the Regnitz and the Ludwigskanal it is part of the waterways linking the Rhine and Danube.

ALTON. An urban district and market town of Hampshire, England. On the Southern Rly., 46 m. S.W. from London, it is the centre of a hop-growing and agricultural district and is celebrated for its ale. The Perpendicular church of S. Lawrence was restored in 1867. The assembly hall was presented to the town in March, 1919. A local institution is the Lord Mayor Treloar Cripples Hospital. Market day, Tues. Pop. 5,580.

ALTONA. City and seaport of Germany. It is on the right bank of the Elbe, adjacent to Hamburg, the two being united for several purposes. The buildings, which include churches, schools, museums, libraries, theatres, etc., are mainly new. The industries include fishing, shipbuilding, flour milling and brewing, the manufacture of cigars, carpets and margarine and the preserving of fish. There are ample docks for the shipping. In 1890 Altona, which had long been an important fishing centre, was enlarged to take in neighbouring places. Pop. 186,000.

ALTON TOWERS. Seat of the earls of Shrewsbury. It is at Alton, Staffordshire, England, about 4 m. E.S.E. of Cheadle on the L.M.S. Rly. The Norman castle here was destroyed during the Civil War, but some ruins remain. Built early in the 19th century, the interior contains an armoury, picture gallery, and other fine rooms. The chief attraction, however, is the gardens, which were laid out by "Capability" Brown. Terrace below terrace, they stretch to the river Churnet and abound in temples, grottoes, fountains, falls, statues, and greenhouses.

ALTOONA. City of Blair co., Pennsylvania, U.S.A. It lies at the base of the Allegheny Mountains, 115 m. E. of Pittsburg, on the Pennsylvania Railroad, and here are works belonging to the Pennsylvania Railroad Co. Pop. 60,330.

Another Altoona, sometimes called Allatoona, is a pass in Georgia, where on Oct. 5, 1864, a battle of the Civil War was fought.

ALTO RELIEVO (Ital. alto-rilievo, high relief). In art, a term signifying high relief as distinguished from low and middle, according to the degree of elevation from the flat. The term is mainly used of sculpture and carving, but may be applied to other branches of art. In high relief the figures or other parts of the design stand out conspicuously. See Sculpture.

ALTRANSTADT. Village of Saxony. It stands between Merseburg and Leipzig. Here, on Sept. 24, 1706, peace was made between the victorious Charles XII of Sweden and Augustus II of Saxony and Poland.

ALTRINCHAM. Urban district and market town of Cheshire, England. Situate on the Bridgewater Canal, it is 8 m. S.W. of Manchester by the Cheshire Lines Rly. Its market gardens supply Manchester with vegetables, fruit, and flowers. The aerodrome in Woodlands Park is licensed by the Air Ministry. Altrincham gives its name to a county division returning one member to Parliament. Market day, Tues. Pop. 20,461.

ALTRUISM (Lat. alter, another). All action which in the normal course of things benefits others instead of benefiting self. It is the opposite of egoism. The term originated with Auguste Comte, who considered altruism to be the indispensable condition of all culture and morality. See Egoism.

Aludel. Series of three of these earthenware vessels used by old-time alchemists

ALUDEL (Arab. utensil). Vessel of earthenware or glass formerly used for condensation. Externally its shape is similar to that of an Indian club. Its purpose is to condense, on the inside, metallic fumes produced in the process of distilling the more volatile metals out of their ores. It is used in series, as shown above, between 500 and 600 vessels being connected with one furnace. See Mercury.

ALUM (Lat. alumen). White transparent mineral salt consisting of the double sulphate of aluminium and potassium with water of crystallisation. This is the typical alum, but the term is extended to a series of double sulphates of the same general formula. There are, for instance, alums similar to potash alum, except that the potassium is replaced by ammonia, soda, or silver, these being known as ammonium alum, etc. On the other hand, a series of double sulphates, also known as alums, exists,

which contains no aluminium. Examples of these are iron alum, manganese alum, and chrome alum.

The raw materials from which alum is made are alunite (also called alum stone), alum shale, alum schist, bauxite and cryolite. At one time potash alum was the only kind produced, but in 1845 Spence introduced the manufacture of ammonium alum from the refuse shale underlying the coal seams of South Lancashire. Alum is also made in Great Britain from aluminium sulphate derived from bauxite or china clay. When potash alum is strongly heated the water of crystallisation is thrown off, and the product swells up and produces burnt alum.

Ordinary alum is much used for its astringent or drying properties. The largest industrial use of alum is in dyeing, in which process it acts as a mordant or fixer of the colours to the fabric. A great variety of solid colours known as lake pigments is made, in which alum is required as the base.

In paper making, alum in the form of alum-cake fills up the pores of paper and renders it less absorbent. It is also used in making shower-proof garments: in photography, where it hardens the gelatin base of plates and papers; as a fireproof filling for safes, for fireproofing fabrics and wood, for hardening plaster of Paris, in tawing leather, for sewage purification, and for softening water. In medicine, alum is used as a mild caustic and astringent.

Certain sedimentary rocks rich in alumina and highly charged with iron pyrites are known as alum shales. In Britain they occur in the carboniferous rocks of Scotland and in the Jurassic rocks of Yorkshire and Dorset.

ALUMINA. An earthy mineral, chemically an oxide of aluminium (sesquioxide), its formula being Al_2O_3 . It constitutes a large proportion of slate and of all slaty rocks and shales. It occurs in a pure state in the crust of the earth in the forms of the ruby, sapphire, Oriental topaz, amethyst and other gems, and as corundum and emery.

Alumina, when it is thrown down from a solution containing colouring matter, takes the colour with it and will deposit it on a suitably prepared surface, where it may be fixed by proper treatment. In this manner also the earths and paints which are known as lakes are formed.

ALUMINIUM (Lat. alumen, alum). Metallic element, symbol Al, atomic weight 27.4. It is the base of the mineral alumina. Unlike most other metals, it is never found native, though plentiful and widely distributed. Clays, slates, shales, schists and the granite rocks are largely composed of aluminium. It was unknown to the ancients.

Davy obtained an alloy of aluminium and iron, naming the new metal of his alloy aluminium, and later aluminium. The metal was isolated in 1827.

Aluminium is white, with a peculiar bluish tinge, hard but malleable and ductile, and has a very low specific gravity, 2.56 cast and 2.67 hammered. Its light weight is its most conspicuous physical property. It resists corrosion in ordinary conditions. Its melting point is $658.7^\circ C$ ($1217.7^\circ F.$), thus falling between those of zinc and silver. In tensile strength aluminium comes after steel, wrought iron, and copper. It readily combines with most metals, lead being the chief exception.

Aluminium. Diagram of the Héroult cell, a typical electric furnace. See text

The chief uses of aluminium comprise the manufacture of military accoutrements, the preparation of various alloys, the making of parts of petrol motors, and the manufacture of household utensils.

Aluminium is generally prepared by subjecting bauxite to the action of the electric furnace (see illus. p. 66). A is an iron casing packed with carbon, B. The current enters at the anode, C, composed of carbon electrodes, and leaves by the kathode, D. In 1928 the world production of the metal was 246,000 tons. Of this quantity the U.S.A. produced about one-third.

ALUMINIUM BRONZE. Alloy of copper and aluminium, the copper always largely predominating. It is largely used for bolts and other parts of machinery where great strength is required, or which have to be exposed to salt or brackish water. It can be forged and worked in the same way as copper. Another use is for the manufacture of cheap jewellery (See Alloy; Duralumin)

ALUMINIUM SALTS. Three hydrated oxides are known, the native forms diaspor and bauxite being the source whence other salts of aluminium are prepared. Alumina forms with sodium and potassium hydroxide the salts known as aluminates.

Aluminium chloride, $AlCl_3$, is largely employed in preparing organic compounds and as a disinfectant. Aluminium bromide and iodide also find uses in organic chemistry. Aluminium sulphate occurs native and is also made from bauxite and china clay.

ALUM ROOT (*Heuchera americana*). Perennial N. American herb of the order Saxifragaceae. It has clammy, hairy stems, long-stalked, roundish leaves, and reddish flowers. The root is very astringent. The name is given also to the spotted crane's-bill, another herb with astringent roots.

ALUTA, ALT or OLTU. Tributary of the Danube Rising in Transylvania, on the N.W. slope of the Carpathians, it flows through the Roter Turm pass into Rumania, goes through Walechia, and finally enters the Danube opposite Nikopolis. Its length is about 315 m., and it is too rapid for navigation.

ALVA. Burgh of Clackmannanshire, Scotland. It stands under the Ochil Hills, 7 m. E.N.E. of Stirling by the L.N.E. Rly., and has woollen factories, and specialises in tartans, shawls, and tweeds. Cochrane Park was given to the burgh in 1923. Here is Alva Glen, noted for its waterfall. Pop. 4,107.

ALVA, FERNANDO ALVAREZ DE TOLEDO, DUKE OF (1508-83). Spanish soldier. He became a

Duke of Alva. Governor of the Netherlands under Philip II of Spain After the painting by Antonio Moro

soldier when very young, later he was made commander-in-chief in Italy. In 1567 Philip II of Spain appointed him to the governorship of the Netherlands. There for six years he carried out his master's policy of crushing all tendencies towards religious or political liberty. The country's commerce was partly ruined by taxation and the risings ruthlessly put down by the Spanish soldiery. His end, however, was not achieved, and in the regular warfare that broke out the rebels

were sometimes more than a match for their foes. In 1573 Alva left the country and, after leading an expedition into Portugal in 1580, he died Jan. 12, 1583. Consult Rise of the Dutch Republic, J. L. Motley, 1903-04.

ALVARADO, PEDRO DE (c. 1495-1541). Spanish soldier and adventurer. Born at Badajoz, in early life he went to America, and in 1519 was one of the leaders in the expedition under Hernando Cortes for the conquest of Mexico. He was governor after the conquest, and later became governor of Guatemala. See Mexico.

ALVERSTONE, RICHARD EVERARD WEBSTER, VISCOUNT (1842-1915). British lawyer. A son of Thomas Webster, Q.C., he was born

Viscount Alverstone. British lawyer Elliott & Fry

Dec. 22, 1842, and educated at Charterhouse and Trinity College, Cambridge. In 1868 he became a barrister, and in 1885 he entered the House of Commons as M.P. for Launceston as a Conservative and soon came to the front. He was attorney-general in 1885, from 1886-92 and from 1895-1900, during which years he represented the Isle of Wight.

In 1906 he was made Master of the Rolls, but in that year was transferred to the Lord Chief Justiceship, which he retained until 1913. He died Dec. 15, 1915, and his only son having predeceased him, his barony, dating from 1900, and viscounty, dating from 1913, became extinct.

ALWAR. Native state in Rajputana, India, also called Ulwar. It was founded by Pratap Singh (1740-91) from estates in Jaipur territory, and attained its present dimensions of 3,221 sq. m. under his successor, who supported the British in the Marhatta War in 1803. The ruler is a maharajah and the people mainly Hindus. Pop. 701,000.

The city of Alwar, the capital, is 98 m. from Delhi. It is surrounded by walls in which are five gateways and commanded by a fort on a rock 900 feet high. Here are the palace, armoury, jewel house of the maharajah, and several mosques. Pop. 44,700.

ALYTH. Burgh of Perthshire, Scotland. It is 23 m. N.W. of Dundee on the L.M.S. Rly. and has some manufactures, including woollens and jute. In the neighbourhood are the remains of a British camp. Pop. 1,710

AMADAVAT (*Estrela amandava*). Small singing bird of the family Ploceidae. It is a native of E. Asia, and is sometimes called amadavat. In the mature male the head and under parts are bright crimson dotted with white. The feathers of the back are dark grey margined with red and tipped with white. The female is grey, dotted with white; pale sulphur-coloured beneath. It is a cage bird.

AMADE, ALBERT GERARD LEO D' (b. 1856). French soldier. The son of Adolphe d'Amade, military intendant, he was born at Toulouse, Dec. 24, 1856, and entered the army as a lieutenant of Algerian infantry Oct. 1, 1876. Advanced to the rank of general in 1907, he commanded the French forces in Morocco, 1907-9. On the outbreak of the Great War he was in charge of the mobilisation of the Army of the Alps. Later in the same year he commanded a group of territorial divisions, and in April-May, 1915, he led the French troops which landed in Gallipoli.

A. G. L. d'Amade. French soldier H. Walter Barnett

AMADEUS. Salt lake in the S.W. of Northern Territory, Australia. Except on rare occasions there is only a thin crust, about half an inch, of salt in the lake bed, which is about 200 m. long and of varying width. It was discovered in 1872 by Ernest Giles.

AMAGER. Island of Denmark. It is separated from Copenhagen on the southern end of Zealand by the Sound. Christianshavn, a suburb of the capital, is in the N. Amager is 9 m. long by 5 m. broad, with an area of about 25 sq. m.

AMALEKITES. Powerful and warlike nomad tribe who contested the passage of the desert south of Canaan with the Israelites (Ex. 17; Num. 14). Intermittent warfare went on for many generations between Israelites and Amalekites, until the latter were finally smitten by the Simeonites under Hezekiah (Judg. 6: 1 Sam. 15: 1 Chr. 4).

Amalfi. Beautiful Italian city on the Gulf of Salerno. It lies at the foot of Monte Cerreto

AMALFI. City and seaport of Italy, in Salerno province. Situated on the Gulf of Salerno, 23 m. S.E. of Naples, it is noted for its fine coast scenery and magnificent trees and gardens. Its antiquities include the 11th century cathedral and a 13th century Capuchin convent. In the Middle Ages it was a republic and a great trading centre, this lasting until about 1150. The laws, or tables, of Amalfi were highly regarded by seamen from the 10th to the 16th century. In 1929 the original document containing the Amalfi code in 66 articles, some in Latin and others in Italian, was presented to the Italian Government by Austria. It had been in Vienna. Pop. 6,900.

AMALGAM (Gr. malagma, soft mixture). In metallurgy, a mixture or alloy of mercury with another metal. Examples include gold amalgam, silver amalgam, and copper amalgam. Certain amalgams are important in the arts. One of tin and mercury is used for silvering mirrors. Silver amalgams are used for silvering and gold amalgams for gilding; while other uses are found in connexion with electric batteries, where zinc plates or rods are amalgamated to prevent too rapid waste. Most amalgams are loose combinations; others appear to be true chemical compounds. Two or three native amalgams are known. One of silver occurs in the form of crystals in the quicksilver mines of Bavaria.

AMALGAMATION. Term used for the process of extracting gold or silver from sands or crushed ore by the aid of an amalgam of mercury. In the recovery of gold the process is used after the rough crushing, mercury being generally put directly into the mortars of the stamp mill, while copper plates which

have been well amalgamated with quicksilver are often inserted in the mortars, so that the precious metal may be seized upon the instant it is released from the ore by the stamp.

Southwark and Gravesend, where also are its paper mills; and its headquarters, The Fleetway House, was erected in 1912. In 1927 Sir W. E. Berry, now Lord Camrose (q.v.), became chairman, and under his direction further progress was made.

Section of riffled table, simplest form of amalgamating machine

Amalgam. Forms of machine used in amalgamation. Left, Attwood machine for recovering gold escaped from battery tables: a, a, troughs containing mercury; b, b', paddle wheels skimming surface of mercury; c, crushed ore; d, water pipe for washing ore down upon mercury. Right, section of Knox amalgamating pan: a, false bottom containing grooves filled with mercury; b', b, iron runners attached through wooden blocks, c, to yoke which rotates them. The pan is partly filled with ore and water, mercury added, and runners set in motion. Steam is introduced, contents of pan heated, and amalgam thus formed is run off.

The crushed ore is washed from the mortars by water and discharged on to inclined tables fitted or formed with riffles, or transverse ridges, and having an upper surface of amalgamated copper plates. As the plates become charged with gold they are changed. Amalgamation is used later in special machines to recover the gold which has escaped the battery tables. The mercury is then removed from the gold or silver by distillation. See Metallurgy; Gold; Silver.

AMALGAMATED PRESS, THE. The origin of what is now the largest publishing enterprise in the world may be ascribed to 1888, when the founder of the firm, Alfred C. Harmsworth (later Viscount Northcliffe), issued the first weekly number of *Answers to Correspondents*, which soon had an immense circulation. Other periodicals and magazines were launched with no less success, and by 1896 the registered capital of Harmsworth

Amalgamated Press headquarters. The Fleetway House, on the east side of Farringdon Street, London Bros., Ltd., was £1,000,000. The name Amalgamated Press was adopted in 1902. The company has extensive printing works at

Amalthæa, known as cornu copiae, the horn of plenty, as a symbol of abundance, appears on coins of the Roman emperors.

AMAN-JEAN, EDMOND FRANÇOIS (b. 1860). French painter. Born at Chevry-Cossigny, Seine-et-Marne, he gained the first prize in 1883 at the Ecole des Beaux Arts and a scholarship at Rome in 1885. On his return to Paris he acquired a reputation for portraiture. His genre works are distinguished, and his decorative panels reveal dexterity in colour and drawing.

AMA-NO-HASHIDATE. One of the three celebrated sights of Japan. It is a sandbar, completely covered with pine trees, and is a scenic gem when viewed from the tops of any of the neighbouring hills. The bar separates Iwataki bay from Miyazu bay in the S.W. corner of Wakasa bay, on the Japan Sea. It is about 2 miles in length, and is almost 100 miles due north of Osaka.

AMANULLAH KHAN (b. 1892). Ameer or King of Afghanistan. Third son of Ameer Habibullah Khan, he was born June 1, 1892, and became the legal reigning Ameer on the assassination of his father, Feb. 20, 1919. In 1919, after a short war, he secured from the Indian Government a recognition of his country's independence. In 1928 he and his queen Souriya visited Europe, but his attempts to introduce European customs into Afghanistan caused serious trouble, and in the midst of the fighting in 1929 Amanullah abdicated and went to Italy. See Afghanistan.

AMARA. A town of Mesopotamia. Situated on the Tigris, 130 m. above Basra by the river, it is the largest town between Basra and Bagdad. Pop. 8,000.

At Amara a battle was fought between the British and the Turks, May 31-June 4, 1915. On May 31 General Townshend, with about 14,000 men, attacked the Turks, entrenched on two groups of islands, one 3 m. behind the other, in the Tigris above Kurna. They fled, and on June 4 the British infantry occupied the town, taking 1,800 prisoners and several vessels. See Mesopotamia.

AMARANTH (Greek amarantos, unfading flower). Genus of annual herbs found in tropical and warm countries. Individually the flowers are small, but conspicuous by being crowded in long racemes. They have no petals, but the sepals are coloured, and, being of a chaffy consistence, retain their form and colour for a long period, which has made

them popular as garden plants. Love-lies-bleeding and prince's-feather are familiar examples of these plants.

AMARAPURA. Former capital of Burma, called the city of the gods. It is on the E. bank of the Irrawadi, a few miles S.W. of Mandalay. Founded in 1783, of its former prosperity only ruined buildings and a colossal bronze image of Buddha remain. It was the capital from 1783 to 1823 and again from 1837 to 1860. Pop. 8,000.

AMARYLLIS. Name of a shepherdess in the pastoral poems of Theocritus and Virgil. The word is used generally for a rustic sweetheart or village beauty.

AMASA. Son of Ithra and Abigail, sister of David (2 Sam. 17). He commanded Absalom's army and was defeated by Joab (2 Sam. 18). Pardon by David, he became successor to Joab, who slew him treacherously near the great stone of Gibeon (2 Sam. 20).

AMATEUR (Lat. amator, lover). One who practises or indulges in a sport, pastime, or profession for pleasure and not for monetary gain or consideration.

In general, in Great Britain the distinction between amateur and professional is sharply drawn. In cricket the practice is to denote amateurs by the prefix Mr. In Rugby football the amateur, after a struggle, succeeded in keeping the game in his own hands, except in the Northern Union, but in the Association game the amateur has almost disappeared from the leading clubs. In athletics, rowing, golf, billiards, boxing, etc., the rule is that amateurs do not compete with professionals.

The Amateur Athletic Association, founded in 1880, is the governing body for all amateur athletic sports in Britain. Its address is 10, John St., London, W.C.2. See Professionalism.

AMATI. Name of an Italian family of violin makers. They lived in Cremona, and the first of them was Andrea (d. c. 1611). His sons, Antonio (1550-1635) and Geronimo (1550-1630), produced some magnificent instruments. Even more successful was Geronimo's son, Nicolo (1596-1684), whose model instrument was known as the grand Amati. His pupils included Stradivarius. The last of the family, Girolamo, son of Nicolo, died in 1740.

AMATITLÁN. Small town of Guatemala, Central America. It stands on Lake Amatitlán, 15 m. by rly. S.W. of Guatemala city, and has hot springs in the vicinity. It was founded by the Jesuits. Pop. 12,000.

The department of Amatitlán covers 463 sq. m. Lake Amatitlán is 9 m. long and 3 wide, girt by volcanic mountains, and its waters are carried to the Pacific by the Rio Michatoyat, which has a fine waterfall.

AMATOL. High explosive used by the British and American armies during the Great War. Introduced by Britain in 1915, it is a mixture of trinitrotoluene and ammonium nitrate, the proportion of the latter varying from 80 p.c. to 40 p.c., and enabling much larger quantities of explosive to be prepared from the nitrocompound available. See Explosives.

AMAZIAH. Son and successor of Joash, and 8th King of Judah. He defeated the Edomites in the Valley of Salt, but worshipped the gods of the children of Seir and vainly challenged Jehoash, king of Israel, who utterly defeated him at Bethshemesh. He fled to Lachish, where he was assassinated (2 Kings 14; 2 Chr. 25).

AMAZON. River of S. America. It is 3,550 m. long, and is the third in point of length of the world's rivers, coming next to the Mississippi and the Nile, but its valley and watershed cover 2,700,000 sq. m., or more than the Mississippi and Nile basins together.

The sources of the Amazon are the headwaters of the Marañon, which rises above Lake

Lauricocha. Other large Peruvian tributaries are the Huallaga and the Ucayali. Ocean steamers ascend the Amazon to the Peruvian town of Iquitos, some 2,500 m. from the Atlantic, and thus navigation is afforded into the heart of S. America from Europe. Small steamers ascend to the foot of the Andes.

The Napo, the Putumayo, and other tributaries come from Ecuador and Colombia. The Negro also comes from the N., and on this tributary, near the confluence, stands Manãos. The Beni and Madre de Dios, from Bolivia and Peru, fall into the great Madeira, which,

tears of pity from her slayer. Antiope, won in battle by Theseus, later fought at his side when he undertook a second expedition against the Amazons to help Heracles (Hercules) to obtain the golden girdle of Queen Hippolyte, her sister.

AMBALA OR UMBALLA. Town of India, in the Delhi division of the Punjab. A railway junction and an important garrison town, it is the centre of a large trade. Pop. 76,300.

AMBASSADOR (late Lat. ambascia, mission, agency). Name given to the representative of one

country in the capital of another. In practice the word is reserved for the representatives sent by one Great Power to another, those sent to less important countries being called ministers, envoys, or chargés d'affaires. Great Britain, for instance, is represented by an ambassador at Washington and Paris, but only by a minister or envoy at Copenhagen and Buenos Aires.

Ambassadors have many social and other privileges. In

order of precedence in Great Britain they come immediately after princes of the blood and before the archbishop of Canterbury. They have direct access to the sovereign in whose land they reside, although in Great Britain and other constitutional countries such interviews are always held in the presence of a responsible minister. Their residences, which are regarded as standing on the soil of their own country, are free from rates and taxes, and ambassadors and their attendants are not amenable to the law of the land in which they live.

The withdrawal of an ambassador is usually a preliminary step to a declaration of war. In a famous phrase Sir Henry Wotton defined an ambassador as "an honest man sent to lie abroad for the good of his country."

The conference of ambassadors was a body that met in Paris after the conclusion of the Peace Conference in 1921 to supervise the execution of the treaties. It consisted of the ambassadors of the principal Allied powers in Paris. Its action was successful in Hungary in 1922 when trouble had arisen owing to the return of the ex-king Charles, and in 1927 it composed an incipient quarrel between Italy and Greece. See Diplomacy.

AMBER (Arabio anbar, ambergis). Fossil resin derived from extinct coniferous trees. It is found principally on the Prussian shores of the Baltic and in pits or mines in Samland, East Prussia. It occurs also in Sicily, Poland, Saxony, Siberia, Greenland, China and Siam, and pieces are found on the east coast of England.

Amber takes a high polish and is used for the manufacture of beads, the mouthpieces of pipes, cigar and cigarette holders, and the handles of umbrellas. The small pieces are made into a varnish. The powder obtained in working amber can be distilled, when it yields oil of amber, employed as an ingredient in a liniment and in the manufacture of a variety of artificial musk. Small pieces of amber, by heat and strong pressure, are compressed into a solid substance known as ambroid, which is employed for ornamental purposes. When amber is rubbed it becomes negatively electrified and emits a pleasant odour, these features serving to distinguish

amber from common copal, which is similar in appearance.

AMBERGRIS (Fr. ambre gris, grey amber). Fatty substance, grey in colour, formed in the intestines of the spermaceti whale. It contains veins resembling marble, and is usually found in warm climates, washed up on the shores or floating on the water. It has a pleasant smell, and is a valuable ingredient in perfumery.

AMBIGUITY (Latin ambiguus, doubtful). Word signifying double meaning, a frequent subject of debate in law. Two kinds of ambiguity, latent and patent, may occur in documents. A latent ambiguity, which arises from the use of words which have two meanings, may always be cleared up by evidence. Where words in a document are ambiguous, they ought to be interpreted against the person who drew the document.

AMBLE. Seaport, market town, and urban district of Northumberland. It is on the Coquet estuary, 1½ m. from Warkworth, and has a station on the L.N.E. Rly. The main industries are fish curing and the manufacture of firebricks. Pop. 4,850.

AMBLESIDE. Urban district and market town of Westmorland, England. It is in the valley of the Rothay, at the foot of Wansfell Pike, 1 m. from the head of Lake Windermere. The church of S. Mary, designed by Sir G. G. Scott, has a memorial window to Wordsworth. On the last Saturday in July a rush-bearing festival is held here. It is an excellent centre for excursions in the Lake District. Market day, Wed. Pop. 2,876. See Rydal Mount.

AMBO (Gr. ambon, from anabainco, to ascend). Ros-trum or reading desk with steps used in early Christian churches. It was superseded by the pulpit. Examples, ancient and modern respectively, are in the churches of S. Clement at Rome and S. Thomas, Upper Clapton, London.

AMBOISE. Town of central France, in the department of Indre-et-Loire. It is on the Loire, 15 m. by rly. E. of Tours. The castle was a royal residence, and Charles VIII was born and died here. Its chief features are the Gothic chapel of S. Hubert, where Leonardo da Vinci is said to have been buried, the three massive round towers, and the oubliettes or underground cells. It was used in the 19th century as a state prison, and in 1875 the Comte de Paris began to restore it, but the work is incomplete.

Other notable buildings are the restored hôtel de ville, the churches of S. Denis and S. Florentin, and one of the town's old gates. Amboise is memorable for the Huguenot conspiracy of 1560 against the Guise party and for the edict of 1563, which conceded privileges to the Protestants. Pop. 4,660.

Georges d'Amboise, a French statesman, was made archbishop of Narbonne in 1492 and of Rouen in 1493. He was made chief minister by Louis XII in 1498 and created a cardinal. He died at Lyons, May 25, 1510, and his tomb is in Rouen Cathedral.

AMBOYNA OR AMBOINA (Dutch Ambon). Island of the Moluccas, Dutch E. Indies. Its area is about 360 sq. m. and its population about 45,000. It consists practically of two peninsulas, Leitimor and Hiteo, with the Bay of Amboyna between them. Although mountainous, it is fertile, and produces cloves (its speciality), sago, sugar, rice, coffee, and pepper. Amboyna wood, found on Amboyna and on Ceram, is in demand for cabinet work.

Amazon. Map showing the territory watered by the river and its tributaries. Its drainage area exceeds those of the Mississippi and Nile combined

traversing the Brazilian plain from the S., empties into the Amazon below Manãos. Other Brazilian tributaries, coming also from the S., above Manãos, are the Purús and the Jurú, and below Manãos the Tapajós and the Xingú. The river falls into the Atlantic near Pará.

The Amazon, 2,000 m. from its mouth, on the Peruvian frontier at Tahatinga, is 9,000 ft. wide, with a normal depth at that point of 66 ft., and a current velocity of 1½ m. per hour. Lower down, where the great Brazilian affluents enter, and nearer the mouth, it resembles a sea rather than a river. Tides are felt 500 m. above the mouth, where the river is 200 ft. deep; near the main mouth it is 50 m. wide.

The first European to navigate the length of the Amazon was Orellana, a lieutenant of Gonzalo Pizarro, who, embarking upon its headwaters (the river Napo), to the E. of Quito, floated downstream to the Atlantic in 1541. The name of the river has been ascribed to a mistake of Orellana's followers, who imagined that the long-haired Indians in their cotton shirts were Amazons or women warriors.

AMAZON. In Greek legend a race of women warriors whose kingdom lay on the S. shores of the Euxine or Black Sea. Headed by their queens, they fought against Greece and other States and extended their empire as far as the Caspian Sea. No men were allowed within their borders, and when they wished to have children they visited other tribes. Only the girls were reared. Amazons are represented in Greek art as beautiful women, armed for battle, mounted on fiery horses and trampling on their fallen foes.

Of their legendary queens, Penthesileia led her hosts against the Greeks in the Trojan War and, dying at the hand of Achilles, drew

Amazon
Vatican, Rome

Ambulance. Left, military ambulance railway coach for lying-down cases. Right, interior of a London County Council motor ambulance, one of many available for the victims of traffic accidents

The island was discovered by the Portuguese early in the 16th century, and was taken by the Dutch about 1609. The population consists of Malays with a few European and Chinese.

Amboyna is chiefly known from the massacre of 1623. Its trade was then confined by treaty to the two East India Companies, English and Dutch, and the Dutch tried to expel their rivals. When some English residents were charged with conspiring to seize the castle at Amboyna, their settlement at Cambello was destroyed, and many of them were tortured and put to death. When England and Holland made peace in 1654 the Dutch paid £300,000 as compensation. John Dryden made the incident the theme of a tragedy.

Amboyna, the capital, has a good roadstead, an almost land-locked inner harbour, and a wireless station. Pop. 8,000

Ambr. Two examples of this form of cupboard or niche in a church wall

AMBRINE. Mixture of melted paraffin and amber resin, a remedy for burns and scalds. It was discovered in 1904 by a French doctor, who had used it first on himself in seeking to reproduce the properties of the Dax mud baths, to relieve rheumatism. Its efficacy in treating burns was first proved on a Chinaman during the Boxer rebellion, but this use did not become general until the Great War.

AMBROSE, SAINT (c. 340-97). Bishop of Milan. Son of a Christian prefect of Gaul, his place of birth is disputed, the cities of Trèves, Arles, and Lyons claiming the distinction. He was trained at Rome for the law. In 374, on the death of the Arian bishop of Milan, Ambrose, then a layman, was chosen to succeed him. The first ten years of his episcopate were largely occupied with the Arian controversy, and in this he scored some marked successes.

The popular story of S. Ambrose excluding the emperor Theodosius from the church after the massacre of the Thessalonians is

exaggerated. Some 7,000 citizens had been massacred, under the authority of Theodosius, after an outbreak of sedition, and Ambrose, to avoid meeting the emperor, retired from Milan and, in a letter, urged Theodosius to do penance in the church for the bloodshed. Theodosius complied, and the friendship between the two lasted till the death of the emperor in 395. Ambrose, who is the patron saint of Milan, died on April 4, 397.

Ambrose wrote hymns and took much interest in church music. The Ambrosian chant, which in the 6th century was merged in the Gregorian, was probably due to him.

The Ambrosian library at Milan was founded by Carlo Borromeo and named after S. Ambrose. Housed in a building erected about 1600, it contains some priceless manuscripts, about 250,000 books, and some valuable pictures.

AMBROSIA (Gr. ambrotos, immortal). In Greek and Roman mythology, the food of the gods. It conferred immortality on those who ate it, and possessed the power of healing wounds. Its taste was nine times as sweet as honey, and its fragrance delicious. Juno and Aphrodite anointed their flowing locks with ambrosia, and in the Aeneid Virgil tells how Venus used it as a salve to cure the wounds of her son.

AMBRY, AUMBRY, OR ALMERY (Lat. armarium, cupboard or safe). In mediæval churches, a cupboard or niche in a wall with shelves for the sacred vessels, the Host, holy oil, etc. In monasteries the word was applied to linen presses or pantries, and it is still used in this sense in Scotland.

AMBULANCE. The word ambulance is derived from the Latin ambulare, to move about. It came into use in France at the time of the Napoleonic wars, was employed in England in 1819, and popularised during the Crimean War. It is now used to signify a vehicle for the transport of the wounded, for a surgical aid organization to accompany troops, and, in civil life, for a vehicle for carrying sick and injured persons to hospital.

The term field ambulance was introduced into the British military service, in place of bearer companies and field hospitals, in 1905. Three field ambulances are included in each division. A field ambulance consists of a bearer division for the early medical assistance and collection of wounded, and a tent division for their reception, temporary treatment and care; and is divisible into three sections, each capable of acting independently, or even of being mobilised separately. Each section is organized as a bearer sub-division and a tent sub-division. The transport consists of ambulance wagons for the carriage of sick and wounded, and transport wagons

and carts for the carriage of medical and surgical stores, equipment, and water.

A field ambulance, like other British medical establishments in the field, is distinguished during the day by a flag bearing the Geneva Cross on a white ground and a Union Jack flying side by side on a cross-bar, and during the night by two white lamps placed horizontally. Officers and men of an ambulance carry no arms, and wear on the left arm a brassard bearing the red cross.

The army pattern of ambulance stretcher has poles 7 ft. 9 ins. long, terminating in handles. The canvas is 6 ft. in length and 1 ft. 11 ins. wide when made taut by the traverses at each end. Two pairs of runners, 6 ins. in height, keep the poles from the ground.

AMBULATORY (Latin ambulatorio, promenade). In monastic or ecclesiastical architecture, any covered gallery or passage such as cloisters, or a place for processions leading behind the high altar and round a church. There are double ambulatories in the cathedrals of Paris and Chartres. See Cathedral.

AMEER or **EMIR** (Arab. amara, to command). Title used in the East, meaning commander. Originally a military title, it came to be applied generally to rulers and high officials, and as a title of dignity to the descendants of Mahomet. The king of Afghanistan is known as ameer. As leader of Islam the sultan of Turkey was called Amir ul Muminin, or commander of the faithful.

AMÉLIE. Queen consort of Portugal, 1889-1908, in full Marie Amélie Louise Héliène (b. 1865). A daughter of Philip, duke of Orleans, she was born Sept. 28, 1865. On May 22, 1886, she married the prince who in 1889 became king of Portugal as Carlos I. In 1910, when the country became a republic, she and her son Manuel II settled in England.

Amélie, Queen consort of Portugal

AMEN (Heb. truly, so let it be). In public worship, word used in confirmation of a statement, as at the end of the Creed; or added in a petitionary sense to a prayer, as customary from apostolic times. In the authorised version of the Bible at the beginning of a sentence it is used for emphasis (e.g. Jer. 28. 6) and is translated "verily."

AMEN COURT. This is an enclosed court near S. Paul's Cathedral, London, in which are the residences of the canons. At its entrance off Warwick Lane is Amen Corner. The name dates from the times when religious processions marched round S. Paul's Cathedral, their singing being so timed that they reached Amen at the corner.

Amen Court, London, E.C. Judges' Ltd.

AMENDMENT (Latin emendare, to correct). Act of amending or improving anything. The term is applied particularly to any alteration suggested in a bill before Parliament or a resolution before a public meeting. In Parliament an amendment is sometimes used to change entirely a clause in a bill.

As a legal term, amendment means the correction of an error in a pleading or other judicial proceeding. In the U.S.A. alterations in the constitution are called amendments.

AMENEMHAT. Name of four Egyptian kings of the XIIIth dynasty. The greatest, Amenemhat III, built an embankment 20 m. long for reclaiming 40 sq. m. from Lake Moeris in the Fayum. His pyramid there contains a sepulchral chamber hollowed out of a single 110-ton quartzite block. Near this was a funerary temple, celebrated in antiquity as the Labyrinth. See Pyramids.

AMENHOTEP. Name of four Egyptian kings of the XVIIIth dynasty. Amenhotep II was famous for his strength as an archer. In 1929 the tomb of his queen Meryet-Amen was discovered near Thebes. Called by the Greeks Amenophis, the most famous, Amenhotep III (c. 1400 B.C.), exacted tribute from Nubia to the Euphrates, and wedded a half-Syrian queen, Titi. His diplomatic correspondence has been recovered. He sculptured a rock-cut tomb and the colossi of Memnon at Thebes. His son, Amenhotep IV, renamed Akhenaton, who succeeded him, sought to make the Egyptians worship one god only, the sun god. See Akhenaton.

AMENTI OR AMENTET. The underworld of the ancient Egyptians. This hidden land was inhabited by human souls journeying to the peaceful fields of the blessed. In one form it was traversed nightly by the sun-god Ra; in another the dead soul was weighed in the balance in the presence of its lord Osiris.

AMERICA. America is the second largest of the four great continents of the globe. In reality it is almost two continents, South America being joined to North and Central America only by the narrow isthmus of Panama, through which a canal has been cut. Altogether America has a surface of between 14,000,000 and 15,000,000 sq. m. Canada occupies about 3,750,000, the United States is slightly less in area, and the states of South America have an extent of more than 6,000,000 sq. m.

Between North and South America there are resemblances both of outline and of geological formation which have given rise to many speculations about their origin. Each presents a triangular shape with the apex to the S., and each is traversed from N. to S. along the W. coast by lofty mountain ranges, and along the E. coast by comparatively low ranges, while their interiors consist of broad, unbroken plains.

America. Map of the connected continents of North and South America, indicating the mountain systems along the western coasts.

In the 10th and 11th centuries it is almost certain that Norsemen from Iceland reached Greenland, which they called Vinland, and then, sailing south, visited Nova Scotia and New England. The chief of these rovers was a certain Leif, a son of Eric, the hero of the Saga of Eric the Red, in which the exploits of these early rovers are told.

These expeditions ceased, as far as we know, for some 400 years and then, in 1492, came the memorable voyage of Columbus. The first part of the continent to be discovered was one of the Bahama Islands, where in October he dropped anchor. The object of his voyage was to discover a westward sea route from Europe to Cathay (China) and India. Columbus, when he found land after sailing across the Atlantic, imagined that it was part of India, and that belief accounts for the islands off the eastern coast of North America being called the West Indies, and for the natives of America being called by the Spaniards los Indios, the Indians.

The name America came into existence after the Italian Amerigo Vespucci had in 1504 declared that he was the first to set foot on the mainland of the continent. This man was a clerk in the trading firm of the Florentine Medici, and he went to represent his employers in Spain. He asserted that he sailed from Spain for the New World in 1497, but it appears

to be more probable that Vespucci did not visit America until 1499, after others had landed in South America. The continent, therefore, should more appropriately have been called Columbia. This name, it is true, has been adopted by the Americans, as a poetical name for their country.

Very quickly other explorers added to the discoveries of Columbus, and one of them sailed from an English port. This was Sebastian Cabot, who discovered Newfoundland and Labrador. Whether these were the first men from other continents to land on American soil is a matter in dispute. There exists a tradition that Chinese sailors drifted in junks along the coasts of Asia and were carried to America. Upon better evidence rest the voyages of Scandinavian adventurers, who are supposed to have intended to settle on American soil, but provoked the hostility of the natives and found it prudent to return.

The peoples found in America by the Spaniards and by those who colonised the northern part of the continent were, it is generally assumed, all of one stock, though in physique, language and habits they differed from one another in different regions. Their number was apparently very large.

On this vast expanse of the earth's surface, larger in extent than Europe and Africa put together, every variety of climate, almost every description of animal and plant, and every known mineral are to be found.

See Argentina; Brazil; Canada; Cuba; Mexico; North America; South America; United States; Venezuela, etc.

Amenhotep. 1. Amenhotep I, from a statue in the British Museum. 2. Amenhotep IV, limestone portrait discovered at Amarna. 3. Amenhotep III, head of a colossal statue, now in the British Museum.

AMERICA CUP. Prize for an international yacht race. It was originally named the Queen's Cup, and offered by the Royal Yacht Squadron in 1851. It was won over

The war is the story of how the Southerners resisted invasion by sea and land; how the Northerners recovered possession of what they deemed to be national territory, and how President Lincoln put down the rival president, Jefferson Davis, who had set up his government at Richmond, Virginia, within 100 m. of Washington.

The operations grouped themselves into two main theatres divided by the Appalachian Mountains. In the E., the state of Virginia was the scene of nearly 600 engagements; in the W.—in Tennessee, Missouri, Mississippi, Kentucky, Arkansas, Louisiana, and Georgia—nearly 1,300 combats took place. Until the third year of the war the Southern generals,

Joseph Johnston and Robert E. Lee, in Virginia and Maryland, opposed Generals McClellan, Pope, Burnside, Hooker, and Meade, while in the W. the Southern generals, Albert Johnston, Hood, and Forrest, operated against Generals Grant, Sherman, Thomas, and Rosecrans.

Meanwhile, the Federal navy patrolled the coast and the great waterways to prevent supplies reaching the Confederates by sea from Europe, or overland from Mexico, in exchange for cotton and tobacco.

At sea for two years the Confederates held their own, and blockade runners and commerce destroyers such as the Alabama flourished. The

as internal communications during the war is shown by the fact that the larger armies were known by the names of these rivers, e.g. the Army of the Cumberland, of the Tennessee, of the Ohio, of the Mississippi, of the James, and of the Potomac.

The long struggle came to an end when Lee was forced to abandon his lines at Petersburg, where for nine months he had resisted all Grant's attempts to break through. His retreat was blocked at Appomattox Court House and there, on April 9, 1865, he surrendered.

AMERICAN INDEPENDENCE, WAR OF. The troubles which led to the war between Great Britain and her American colonies began in 1765 when stamp duties were imposed by the Parliament in London. These were withdrawn, but in 1767 duties on paper, tea and other commodities were imposed and the resentment of the colonists became more marked. In 1773 a party disguised as Indians threw into Boston harbour 340 chests of tea about to be landed from British ships. The climax came when the British Parliament passed in 1774 a bill closing the port.

The governor, General Gage, saw that Massachusetts was preparing to fight, and on April 19, 1775, he sent out a force from Boston to Concord to destroy military stores collected there. At Lexington the column was attacked by armed farmers and, after effecting its purpose, it returned to Boston under a galling fire. Gage now found himself besieged in Boston. In May the second session of the Continental Congress began at Philadelphia. It appointed George Washington of Virginia to the command of the Colonial forces. On June 16 the Americans had occupied Breed's (not Bunker) Hill overlooking Boston, but on the next day Gage dislodged them.

Washington now planned to occupy Canada, and in the late autumn the Americans held the St. Lawrence, with the British garrison under

Sir Guy Carleton shut up in Quebec. The sea route to Quebec, however, remained open, and the arrival of a rescuing fleet in the spring of 1776 led to the entire withdrawal from Canada of the American forces. In March, 1776, the British evacuated Boston and sailed to Halifax. Sir William Howe, who had succeeded Gage in the command, took possession of the city of New York after defeating Washington in the battle of Long Island.

American Civil War. Reading the Proclamation of Emancipation
Painting by F. B. Carpenter in the Capitol, Washington

tactical operations at sea were also of interest. The ironclads Monitor and Merrimac fought in Hampton Roads for the command of the York and James rivers before McClellan's army could be moved from Washington. Naval attempts to control the Mississippi failed until Grant's land operations secured Vicksburg.

The Confederates may be credited with the first submarine, as well as the original ironclad, for the David, in Feb., 1864, outside Charleston harbour, passed under the keel of a Federal corvette, dragging a floating torpedo, which exploded on striking the blockading vessel. In the end, however, proving again one of history's lessons, the Federal blockade prevailed. The trade of Charleston was ruined, and in 1865 no fewer than 40 harbours, inlets, and channelways had been closed to the outer world. The importance of the great waterways

In 1777 a British army under General Burgoyne gathered in Canada and invaded the state of New York by way of Lake Champlain. In Sept., Howe threw his force against Philadelphia, defeated Washington at the Brandywine, and occupied

American Independence. Liberty Bell which rang for the declaration of American independence. It is now kept at Philadelphia

America Cup. 1. American yacht Resolute, winner of the cup in 1920. 2. The America Cup, previously known as the Queen's Cup, international yachting trophy. 3. America, the schooner yacht which, in 1851, first won the cup over a consort round the Isle of Wight

a course round the Isle of Wight by the U.S.A. schooner yacht America, and presented in 1857 by the owners of the winning boat to the New York Yacht Club, it has been known since as the America Cup and held against all challengers, in spite of the boats built for the race by Lord Dunraven and Sir Thomas Lipton. Most of the races in the U.S.A. have been sailed over a 30-m. triangular course round the Sandy Hook Lightship. In 1929 Sir T. Lipton entered his yacht Shamrock V for the race of Sept., 1930.

AMERICAN BLIGHT. Common pest infesting apple trees. It is distinguishable by its dark slaty-brown colour and its white fluffy, cotton-like covering. In small gardens it can be eradicated by scrubbing the affected trees with carbolic soap, but in orchards the trunks must be sprayed in winter with a mixture composed of carbonate of potash 12 lb., caustic soda 1 lb., soft soap $\frac{1}{2}$ lb., and water 15 gallons. Another remedy is brushing with methylated spirit.

AMERICAN CIVIL WAR. This great contest raged for four years over the territory bounded by the Atlantic and the Gulf of Mexico, by the trans-Mississippi States, and by the Ohio and Potomac rivers. The theatre of war was about 1,500 m. from E. to W. and about half that distance from N. to S. The combatants were the Federals and the Confederates, and the war was caused by the desire of the latter to secede from the union. Popularly it was a struggle between North and South, the North being the existing federal government, while the South had formed a new confederation.

After the bombardment of Fort Sumter by the Confederates, on April 12, 1861, no fewer than 2,260 battles, sieges, and skirmishes took place before the last of the Confederate armies surrendered on May 26, 1865. The North began the war with a professional army of 30 regiments, but ultimately put into the field nearly 3,000,000 volunteers. Statistics of the Southern, or rebel, armies are not available, but about 100,000 men finally surrendered, and their estimated loss in the chief battles was 442,000 of all ranks. The losses of the North were 360,000 in dead alone.

the city on Sept. 26. On the Hudson, Burgoyne was in difficulty, and on Oct. 17, with 6,000 men, he surrendered at Saratoga. France then, on Feb. 6, 1778, signed a treaty of alliance with the colonists.

Nevertheless the American cause fared ill after the fall of Philadelphia. Washington's army spent the winter of 1777-8 at Valley Forge under distressing conditions. They decided to abandon campaigns by land, to concentrate at New York, and to use their naval power in coast raids with a view to wearing out the enemy. Accordingly, in June, Howe evacuated Philadelphia and marched across New Jersey to New York, harassed on the way by Washington and fighting the battle of Monmouth on June 28, 1778. In Dec., 1778, the British occupied Savannah, Georgia, and in the next year overran that state. In May, 1780, they took Charleston, S. Carolina; Lord Cornwallis won a battle at Camden, South Carolina, on Aug. 16, 1780, and the whole South, to the borders of Virginia, was soon in British hands.

Washington's keen eye detected the weakness of Cornwallis's position. His support from the sea was insecure, for Holland and Spain had entered the war and with France were menacing Britain in the West Indies, so that her fleet was divided. Cornwallis made his headquarters in Virginia at Yorktown, an exposed position lying near the mouth of the York river. A French fleet under De Grasse cut off rescue by sea, and Washington closed in on Yorktown from the land, and on Oct. 19, 1781, Cornwallis surrendered with 7,000 men.

Negotiations for peace were soon begun, and in Nov., 1782, a provisional treaty was signed in Paris. On Sept. 3, 1783, the final treaty was signed, and the British evacuated New York, their last stronghold.

AMERICAN INDIANS. The original inhabitants of the American continent, both N. and S., are usually known as American Indians. The name Indian was given to them about 1493 by Columbus, who wrongly imagined he had reached India, when he was in reality in America. It has persisted, although the Indians, especially those of N. America, are sometimes known from their colour as Redskins, or Red Indians, and the contraction Amerind has been suggested as a substitute.

At the time of the discovery the system of clans in which the woman and not the man was the dominating link was giving way in some tribal groups to the opposite system. The Hurons lived in long houses of interrelated families with a matron in charge. The separate family dwelling was rare. Polygamy, where permissible, was in practice limited by ways and means; many tribes are essentially monogamous. Prudential infanticide was practised and every clan had its totem name. Taboos usually had an exogamous purpose.

Tattooing, although less general than body paint, was widely spread. This, as well as head-deformation and some other mutilations, probably came across the Pacific. The commoner form of head-flattening was accomplished by pressing cradleboards upon the forehead, as among the Choctaws; a rarer form produced a conical occiput. Initiation frequently involved torture.

American Indians. 1. Navaho (Arizona). 2 and 3. Alaskans. 4. Pawnee (Nebraska). 5. Apache. 6. Choctaw. 7. Chippewa, Wisconsin. 8. Navaho woman spinning, using her hand instead of a wheel. 9. Patagonian Indian. 10. Sioux, Dakota in ceremonial dress. 11. Iroquois. Woman of "the Five Nations" pounding maize. 12. Ute

Issues of peace and war were determined at tribal councils, whereat calumet and tomahawk were ceremonial accessories which have given rise to the phrases the pipe of peace and hurrying the hatchet.

In the Iroquois and Muskogee region enemy scalps, as trophies of war, were sometimes mounted on poles for the women's scalp dances. Wampum comprising strings of shell beads was used for ornament and currency, formed into belts they served as records of treaties concluded between various tribes.

American Organ. Instrument like the harmonium, but of sweeter tone.

To-day the Indians, like other aborigines, are probably decreasing in number in spite of measures of protection. In the United States and Canada they live on reservations, and in each a department exists to look after their interests, teaching them trades and looking after their children. In 1928 the Indian population of the U.S.A. was 355,500, about a third living in Oklahoma. In Canada the total is something like 110,000.

Outstanding Indians are Hiawatha, Pontiac, Red Cloud, and Tecumseh; a Zapotec, Benito Juarez, was president of Mexico.

AMERICAN ORGAN. Musical instrument of the harmonium type. The wind is drawn through the reeds, not blown through, as in the harmonium. The tone is somewhat rounder and sweeter than that of the harmonium. See Harmonium.

AMERONGEN. Village of Holland, in Utrecht province. It is 20 m. S.E. of Utrecht and contains the castle of Amerongen, the seat of Count Bentinck, to which the German Emperor fled in Nov. 1918. See illus. p. 74.

AMERSFOORT. Town of Holland, Utrecht province. It is on the Eem, 14 m. by rly. N.E. of Utrecht, and has woollen mills and tobacco factories. Pop. 33,098.

Amerongen Castle, Holland. The refuge of the German Kaiser after his abdication, in November, 1918. See page 73

AMERSHAM. Town of Buckinghamshire, England. It is 26 m. W.N.W. of London by the Met. and L.N.E. rlys., and has chair making, brewing, and other industries. In S. Mary's church, a fine old building, are brasses and other monuments. In the main street are the market house, built about 1680, and some almshouses of earlier date. Until 1832 it returned two members to Parliament. It has two yearly fairs, one on Whit Monday and the other in Sept. Pop. 4,221.

AMERY, LEOPOLD CHARLES MAURICE STENNETT (b. 1873). British politician. Born in India, Nov. 22, 1873, he was educated at Harrow and Balliol College, Oxford. From 1899-1909 he was on the staff of *The Times*, representing that paper during the South African War and editing its history of the struggle. An ardent tariff reformer, he tried several times to enter Parliament before being returned for a Birmingham division in 1911. During the great War he served on the staff, as assistant secretary to the War Cabinet and with the War Council at Versailles. From 1919-21 he was under-secretary for the Colonies; in 1921-22 parliamentary secretary to the Admiralty, and in 1922-24 First Lord of the Admiralty. From 1924-29 he was secretary for the Colonies and Dominions in the Conservative Ministry.

L. C. M. S. Amery, British politician

AMETHYST. Name of a lilac to purple coloured quartz used as a gem-stone. The colour is due to a small amount of manganese present as an impurity. The richest stones come from Brazil and Uruguay. The amethyst was supposed by the ancients to be a remedy against drunkenness (Gr. amethystos)—hence the name.

AMHARA. Central division of Abyssinia. It includes Gojam and was at one time a powerful state. The capital, Gondar, was the residence of the Abyssinian emperors until the middle of the 19th century. The Amharic language, originally a provincial dialect, gradually displaced Ge'ez or Ethiopic, the ancient language, and is now the official language of Abyssinia.

AMHERST. Coast town of Nova Scotia, Canada. The capital of Cumberland county, it is situated at the N.E. extremity of Chignecto Bay, 135 m. N.N.W. of Halifax by the National Rly. The centre of a rich farming area, it has shipbuilding yards, boot, shoe, leather, and woollen factories. Pop. 9,998.

Another Amherst is a town of Burma, 30 m. from Moulmein, and there is an Amherst in Massachusetts, both named after members of the Amherst family. In the American town is Amherst College, founded by Congregationalists in 1821. Pop. 5,500.

AMHERST, EARL. British title borne since 1826 by the family of Amherst. The soldier, Sir Jeffrey Amherst (1717-97), was made a baron in 1776. He had helped to conquer Canada and was governor-general of the British possessions in N. America 1760-63. He died Aug. 3, 1797. His nephew, William Pitt Amherst (1773-1857), succeeded to the title. He was governor-general of India from 1823-28, and was made an earl in 1826. His descendant Jeffrey became the 5th earl in 1927. The family estates are in Kent, the family seat, Montreal, being near Sevenoaks. The earl's eldest son is known as Viscount Holmesdale. The barony of Amherst of Hackney must be distinguished from the earldom. It was bestowed in 1892 on W. A. Tyssen-Amherst, and passed in 1909 to his daughter, the wife of Lord William Cecil, and remains in the Cecil family.

AMHERSTBURG. Town and port of Ontario, Canada. On the Detroit river and the Michigan Central Rly., which here crosses the river, it is 18 m. S. of Windsor, and is a calling place for boats engaged in the traffic of the Great Lakes. It carries on a large trade in timber. Pop. 2,769.

AMIANTH OR AMIANT (Greek amiantos, undefiled). Name given to the finest variety of the mineral asbestos. It consists of long flexible filaments, and from its resemblance to flax is sometimes called mountain or earth flax. It is incombustible and is used for lamp wicks and as a filling for gas fires. The name is also applied to a fine fibrous serpentine. The form amianth is due to confusion with the Greek word anthos, flower.

AMICE (Lat. amice, to throw round). Oblong piece of linen worn by the celebrant at Mass and by assistant ministers when the alb is worn. Rested for a moment on his head, it is then spread on the shoulders and tied with strings. The hood or cloak with long ends made of or lined with grey fur, worn by monks and pilgrims, was called an amice.

AMIDES. Bodies derived from ammonia (NH₃) by replacing one of the hydrogen (H) atoms by a metal or organic radical. When two atoms of the hydrogen are replaced the product is an imide, or secondary amide, and if the whole of the hydrogen is displaced by a trivalent radical a nitrile or tertiary amide results. Amides are thus compound ammonias. They are made by the action of ammonia on acid chlorides or on ethers, or by heating ammonium salts. Amide powder is a name applied to an explosive made from ammonium nitrate, saltpetre, and charcoal.

AMIEL, HENRI FRÉDÉRIC (1821-81). Swiss author. Born at Geneva, he became professor first of aesthetics and French literature and then of moral philosophy at Geneva, and wrote verse, but is best remembered for his posthumous *Journal Intime* of 17,000 MS. pages, 1848-81. Parts of the *Journal* were published in 1883-4, with an introduction by Amiel's friend Edmond Scherer, and an English translation by Mrs. Humphry Ward appeared in 1885. Amiel died at Geneva, May 11, 1881.

Baron Amherst, British soldier and colonial governor
After Sir Joshua Reynolds

AMIENS. City of France. It stands on the Somme, mainly on the left bank, 81 m. from Paris, and is the capital of the department of Somme. The river divides into a number of branches, and these, with its tributaries the Ayre and the Selle, form canals in the lower part of the town. It has hence been called this Little Venice. The oldest part of the city is on this right bank and the business quarters are on the left. Boulevards occupy the site of the old fortifications.

The finest building in Amiens is the Gothic cathedral. It was built mainly in the 13th century and is remarkable for its size, for the wonderful stonework of the W. façade, and for its choir stalls. The citadel dates from the 16th century and the prefecture from the 18th. The hôtel de ville has been almost entirely rebuilt. Modern buildings include the palais de justice, the public library, colleges, and schools.

There are many old houses and some fine squares. The Museum of Picardy has a valuable collection of paintings, antiquities, etc., including frescoes by Puvis de Chavannes.

Amiens is an important manufacturing and distributing centre as well as a great railway

Amiens. Battlefield, showing the extent of territory recovered from the Germans. See page 75

junction. Its industries include the spinning and weaving of textiles—cotton, wool, flax, silk, etc.—and the making of velvet, hosiery, etc. Machinery, chemicals, and sugar are also produced. In the neighbourhood to the N.E. market gardening is largely carried on, and the produce, with that of the local farms, is a considerable item of trade. The population is over 91,000.

Amiens was a Gallic settlement and in the 4th century the seat of a bishop. Later it was part of Flanders until 1185, when it became French. From 1435 to 1477 it was included in Burgundy, but, recovered by France, it was until the Revolution the capital of Picardy. It surrendered to the Germans on Nov. 28, 1870, but was restored at the peace of 1871.

During the Great War Amiens was occupied by General von Kluck for a few days before the battle of the Marne in Sept., 1914, but afterwards remained French.

Henri F. Amiel, Swiss author

The Mise of Amiens is the name given to the award of Louis IX of France in a dispute between the English king Henry III and his barons in 1264 (*see* Barons' War).

The Treaty of Amiens, signed in 1802 between Great Britain and France, marked only a truce in the struggle between the two countries, for war broke out again in 1803.

BATTLE OF AMIENS. Amiens gives its name to a great battle, fought Aug. 8-12, 1918, which marked the opening of the British counter-offensive. The object of the attack was to clear Amiens and the important railways there and to penetrate deep with all possible speed to the junction at Chaumes. The British 4th army attacked from Morlan-court to Domart, and the French 1st army from Domart to Moreuil, the whole force under the command of Sir D. Haig. By the night of Aug. 11 the Allies south of the Somme had reached the old German line as it existed before the battle of the Somme. The results were immense. No fewer than 38,500 prisoners with 800 guns were taken, Amiens was cleared and Paris relieved of constant bombardment. This victory proved to the Germans that the offensive had definitely passed to the Allies, and to the latter that they could now with every prospect of success press the attack and extend it. Amiens was awarded the Croix de Guerre. *See map on page 74.*

AMIRANTES ISLANDS. British archipelago in the Indian Ocean, S.W. of the Seychelles. Of coral formation and fertile, they produce coconut oil and are visited for turtle fishing. British since 1814, they are a dependency of the Seychelles. They were named after Vasco da Gama because he was styled admiral of India.

AMLWCH. Urban district, market town, and seaport of Anglesey, Wales. The port is dry at low water. It is on the N. coast, 24 m. N.W. of Bangor by the L.L.S. Rly. It has an old church and some antiquarian relics. Market day, Sat. Pop. 2,699.

AMMAN. Town of Transjordan. The Rabbath-Ammon of the Bible, and the Greek Philadelphia, it lies on the E. side of the Jordan, 30 m. in a direct line E. of Jericho. In the Great War it formed an important Turkish base on the Hejaz Rly., and was the objective of two British raids, in March and April, 1918. It was finally captured and held by the British on Sept. 25. Later it was made the capital of the new state of Transjordan. *See Transjordan.*

AMMANFORD. Urban district and market town of Carmarthenshire, Wales, 12 m. N. of Swansea, on the G.W.R. The industries include coal-mining, tin working, and paint manufacture. Pop. 6,984.

AMMER SEE. Lake of Bavaria; 20 m. S.W. of Munich. Formed by the little river Ammer, it is 10 m. long by 4 m. broad, and lies 1,750 ft. above sea level.

AMMETER OR AMPERE METER. Form of galvanometer for measuring currents of electricity directly in units of amperes.

Amen, god of the Egyptians
British Museum

In a common type the passage of current through a coil of low resistance endows the coil with magnetic properties and causes it

Amiens. Western facade of Amiens Cathedral, regarded as the finest example of Gothic ecclesiastical architecture in France. This western front is conspicuous for its decorated portals, its grand rose window and its arched row of statues of the Kings of Judah. The cathedral was built in the 13th century from the plans of Robert de Luzarches and has a total length of 469 ft. and a breadth of 216 ft.

to affect a small permanent magnet mounted on pivots within the magnetic field. The intensity of the coil magnetism varies with the strength of the current. A light pointer attached to the magnet indicates current strength in amperes on a graduated scale.

AMMON, AMEN OR AMEN-RA. God of the ancient Egyptians. Originally a local god of S. Egypt whose shrine at Thebes was founded or rebuilt about 2500 B.C., when the kings of Thebes became masters of the North, his importance grew until he came to be regarded as the supreme god. To maintain his position the priests identified him with Ra, the oldest of the Egyptian gods, and in time he assumed the

attributes of other great gods. The name signified hidden, and Amen-Ra was described as representing the hidden and mysterious power which created and sustained the universe, with the sun as symbol of that power.

AMMONAL. Name given to an important class of high explosives. The essential feature is that powdered aluminium is a constituent, this metal being employed on account of its high temperature of combustion. They are also called thermit explosives. *See Explosives.*

AMMONIA (Greek ammoniakon, rock-salt). A colourless pungent-smelling gas, which turns red litmus paper blue and neutralises

acids. It is chemically a compound of three equivalents of hydrogen and one of nitrogen (NH_3). It is poisonous when breathed. Ammonia is best known in the state of solution, consisting of water saturated with the gas. This liquid, or a combination known as carbonate of ammonia, forms the pungent element of ordinary smelling salts. Ammonia is used in the manufacture of soda, in dyeing, for the preparation of colours, in medicine, and in refrigerating. Its chief source is coal, ammonia being one of the by-products obtained in the manufacture of illuminating gas.

Ammonium is the compound radical NH_4 , contained in the ammonium salts, i.e. salts obtained by neutralising ammonia by acids.

AMMONIACUM. Gum resin obtained from *Dorema ammoniacum*, a herb growing in Persia and India. It contains a volatile oil which renders it of value in medicine, as an expectorant, etc.

AMMONITE. Extinct marine mollusc allied to the living nautilus and belonging to the class Cephalopoda. The shell is coiled into a plane spiral and is variously ornamented by ribs, nodules, or spines. Ammonites are found abundantly in the Mesozoic rocks and are

of the greatest value in aiding the correlation of geological formations, certain generic types and species everywhere succeeding each other in a definite order.

Ammonite is the name given to an English safety explosive. It consists of ammonium nitrate and dinitronaphthalene, and has been proved safe in coal-mining.

The name ammonite is used also for a fertiliser made from the offal of rendering establishments, which contains a high proportion of nitrogen. See Fertiliser; Fossil.

AMMONITES. A semi-savage people who inhabited the region of Palestine, E. of the Jordan. Their capital was Rabbath-Ammon. Rebuilt in the 3rd century and renamed Philadelphia, it is now represented by Amman (q.v.). The Ammonites waged war with the Jews until subdued by Judas Maccabaeus, and were finally absorbed about the 1st century A.D. by the Nabataean Arabs.

AMMUNITION. Term formerly employed to indicate military stores of all descriptions, but now usually confined to articles utilised in charging guns and ordnance, such as cartridges, powder, shell, etc., and to offensive missiles generally.

Military explosives are generally classified in two groups: (1) explosives in bulk, cartridges for cannon, and filled quick-firing ammunition; (2) small-arm cartridges, filled shell, bombs, fuses, primers, and friction tubes. The first two categories of group (1) must be stored in magazines. The remainder may be, and those in group (2) are, stored in ammunition stores. The filling, emptying, or examination of ammunition is always effected in a separate building termed a laboratory.

With modern armies in the field the question of ammunition supply is very important. In the British service, ammunition, after being

filled in the laboratories, is rigidly inspected and a portion taken for proof. If it passes satisfactorily, the lot is taken over by the Royal Army Ordnance Corps, who arrange for its transport from their stores to an ammunition dump or depot near the scene of operations, whence it is banded over to the divisional ammunition columns, who distribute it among the various units. See Artillery; Explosives; Gunpowder; Projectile, etc.

AMNESTY (Gr. *amnestia*, forgetting an offence). Term used for a collective or general pardon. From early Greek times such pardons have been granted to rebels and other offenders against the state, the leading culprits, however, being usually excluded. The word indemnity does not quite carry the same idea of total oblivion as the Greek word.

Indemnities are granted now less to deliberate offenders than to public servants who, in any sudden crisis in the state, may be obliged to transgress the law for the common good. Several instances occurred during the Great War.

AMOEBIA (Gr. *amoebe*, alternation). Genus of the Protozoa. Most species are found in the mud and decaying vegetable matter of ponds. Some species can just be seen with the naked eye, others being much more minute.

The amoeba consists of a tiny shapeless jelly-like mass of protoplasm. It has no limbs or appendages, but can push out parts of its substance, termed pseudopodia, and by this means flows forward rather than crawls. Its shape is constantly varying. The amoeba takes in its food, which consists of minute vegetable matter, by flowing over and around it, the residue being pushed out through any part of the animal's substance. When full-grown, the amoeba splits in two, thus forming two individuals in place of one.

AMOK OR **AMUCK.** Homicidal frenzy very prevalent among Malays. In Malay vernacular the word means to attack furiously, and under its influence the Malay runs through the streets indiscriminately laying about him with his kris until he is killed. Some cases are due to sudden madness, to disease, to the heat of the peninsula, and to the use of drugs. The typical amok may be connected with the wish to die fighting.

AMONTILLADO. Wine grown at Montilla, near Cordova, Spain. Akin to sherry, usually light in colour, sweet, and full-bodied, it is subdivided into fino and oloroso, the former being the more delicate, the latter having the greater bouquet.

AMOR (Lat. love). In Roman mythology, the counterpart of the Greek Eros. He was the son of Aphrodite (Venus) and the god of love. See Aphrodite; Cupid.

AMORITES. Semitic race who settled in Palestine about 2500 B.C. They were allied to and sometimes identified with the Canaanites, who may have succeeded them in a wave of immigration. The Babylonian dynasty of Hammurabi was Amorite. The Amorites settled in the highlands of Palestine and Syria, and

were conquered by the Israelites, who, under Moses, overcame Og and Sihon, and under Joshua, smote other Amorite kings at Beth-horon (Deut. 3, Josh. 10). They are referred to in Assyrian, Babylonian, and Egyptian records. Consult *The Empire of the Amorites*, A. T. Clay, 1919.

AMOS. Shepherd of Tekoa, Judah, and earliest of the Hebrew prophets whose writings are extant. He lived in the days of Uzziah and Jeroboam II (c. 750 B.C.). Wealth and luxury had demoralised Israel and Judah, and the poor were oppressed. Amos foretold that the Day of the Lord was to be a day of judgment on the Hebrews and surrounding nations. Amaziah, chief priest of Beth-el, tried in vain to suppress him. The book of Amos is marked by clear, vigorous, and picturesque diction, imagery of country life, and a remarkable power of social observation.

AMOY. City and treaty port of China, in the prov. of Fu-kien. Standing on the island of Haimen (Hiamen), at the mouth of the Lung-kiang, its walls date from the Ming dynasty. The East India Company first traded here in 1670, and it was one of the five ports to be opened to foreign trade by the treaty of Nanking (1842), but a customs station was not established until 1862. Amoy has lost much of its former importance as a tea centre, but still engages in an extensive foreign trade. It exports sugar, camphor and paper, and has regular steamer communication with Hong-Kong and Formosa, and with Chinese ports. Pop. 400,000.

AMPERE, ANDRÉ MARIE (1775-1836), French scientist. Born at Lyons, Jan. 22, 1775, his genius for mathematics was marked at an early age. He moved to Paris, 1805, became a member of the Academy of Sciences, 1814, and professor in the Collège de France, 1824. He died at Marseilles, June 10, 1836. His great work was to establish the nature of the connexion between electricity and magnetism and to work out the theory of electro-dynamics. His son, Jean Jacques Ampère (1800-64), was a noted philologist and traveller.

The ampère is a unit of current or rate of flow of electricity. An ampère hour is a current of one ampère flowing for one hour. See Ammeter; Electricity.

AMPERSAND. The name of the sign &, frequently used for "and". It is of mongrel, Latin and English, origin, being a contraction of the four words—and, per se (by itself), and. In form, it is a combination of the letters e and t, et being Latin for and.

AMPHIARAUS. In Greek legend, brother-in-law of Adrastus, the prime mover in the Argive expedition against Thebes. Amphiaraus, being possessed of the gift of prophecy, desired to take no part in it, knowing that he was doomed to perish. He went into hiding, but his wife Eriphyle, bribed by Poly-nices with the necklace of Harmonia, revealed his whereabouts. During the flight of the Argive chiefs from Thebes Amphiaraus and his chariot were swallowed up by the earth. Later he was worshipped as a god.

AMPHIBIA (Gr. *amphibios*, living a double life). In zoology, one of the chief classes of vertebrata, including frogs, toads,

Amoeba Proteus, the one on the left from a large stream, the other two from a ditch. All greatly magnified

Ammonite. Specimens of a fossil marine mollusc allied to the nautilus

A. M. Ampère, French scientist
A. Tardieu, 1825

Amorites. Typical heads of a conquered western Asiatic race, from ancient sculpture
British Museum

newts salamanders, and certain wormlike forms such as the cecilians. In the larval stage they usually have gills and live in the water, while the adults are provided with lungs and can live on land.

The life history consists generally of a series of metamorphoses. The eggs are usually laid in fresh water, connected in a jelly-like mass or string, and are hatched by the sun. The young in their larval stage possess a long, flat tail, by wriggling which they swim freely. The limbs presently begin to appear. In frogs and toads the tail is gradually absorbed; in newts and salamanders it becomes modified. Amphibians do not drink, but absorb moisture through the skin, and cannot exist unless the skin be kept moist. Hence they are almost invariably found in damp places or near water. See Frog; Toad.

AMPHIBOLE (Gr. *amphiolos*, ambiguous). Group of minerals, complex silicates of calcium, iron, and magnesium, with or without aluminium. They are natural crystalline substances, which enter largely into the composition of certain igneous and metamorphic rocks.

AMPHICTYONIC COUNCIL (Gr. *amphictyones*, dwellers around). Representative council in ancient Greece of neighbouring states originally united in worship at a common temple. Such a council met at Delos and was in existence in the 7th century B.C. or earlier. The most important consisted of twelve states, and its first shrine was at Anthela, near Thermopylae, but at a later date Delphi became its headquarters. See Delphi.

AMPHION. In Greek mythology, son of Zeus by Antiope, wife of Lycus, king of Boeotia, who had divorced her in favour of his second wife Dirce. Amphion and his twin brother Zethus were placed when born on Mt. Cithaeron, but there they were found and brought up by shepherds. On reaching manhood the two brothers avenged the cruelty of Lycus and Dirce to their mother by killing them both. Obtaining possession of Thebes, where Lycus reigned, they erected fortifications, the stones, it is said, moving to their places when Amphion played on the lyre, an accomplishment learned from Hermes.

Amphion was the name of a British light cruiser, completed in 1913. On August 5th, 1914, she sank a German mine-layer, but on Aug. 6 she struck a mine and went to the bottom with a loss of one officer and 148 men.

Amphion, British light cruiser, which after helping to sink the German mine-layer Königin Luise, Aug. 5, 1914, was mined and sunk on Aug. 6.

Amphitheatre at Verona, Italy. Built about the first century A.D., but little remains beyond the interior, the seating of which has been often restored.

Amphioxus. In zoology, a variant name for the lancelet (q.v.)

AMPHIPODA (Greek *amphi*, around; *pous*, foot). Order of small crustaceans with laterally compressed bodies. They have usually six pairs of legs, of which the anterior three are swimming limbs, the posterior being specially developed for use in jumping. They are found in salt and fresh water, fresh-water shrimps, sand hoppers and beach fleas being familiar examples. See Crustacea.

Amphion, with the lyre, and his twin brother Zethus, ruler of Thebes. Relief at Rome.

which have the power of moving equally well backwards or forwards. The true amphibiae are found in Central America and in Africa, and include some thirty species. They are wormlike in appearance and live underground. One species has external limbs. See Lizard.

AMPHISBAENA (Gr. *amphis*, both ways; *baincin*, to go). Group of lizards

theatre at Verona is the best preserved. Other remains are at Arles and Nîmes, in France, and Dorchester, in England. See Colosseum.

Amphitrite. In Greek mythology, wife of Poseidon, the sea god, and herself goddess of the sea.

Amphipoda, Fresh-water shrimp, a typical example.

AMPHITRYON OR **AMPHITRUCO**. In Greek mythology, a Theban prince whose wife Alcmena gave birth to Hercules (Heracles), Zeus (Jupiter) having visited her in the form of her husband. The story forms the subject of comedies by Plautus, Molière, and Dryden. From the reference in Molière's play, the name has come to mean a host or entertainer.

AMPHORA. Ancient earthenware vessel, with two handles and tapering to a point at the bottom, which was fixed in a stand or in the ground. It was chiefly used for keeping wines, and later as a cinerary urn. The amphora was also a measure of capacity, and was the standard for estimating the carrying capacity of ships. See illus. p. 78.

AMPLIFIER. Apparatus for intensifying sound vibrations or electrical oscillations. The carbon microphone as used in the transmitter of a telephone is a form of amplifier, the sound vibrations being

Amphisbaena. Worm-like legless American lizard.

made to vary the pressure on carbon granules behind a diaphragm, with a corresponding variation in electrical resistance in a circuit containing a telephone receiver. Thus variations in current strength are caused to produce sound vibrations greatly magnified.

AMPHITHEATRE (Gr. *amphi*, around; *theatron*, seeing-place or theatre). Structure, slightly elliptical in form, specially designed for the gladiatorial exhibitions of the ancient Roman world. The structure was built round an open space reserved for the combatants. This space, the arena, was separated from the spectators' portion (cavea) by a wall (podium) sufficiently high to protect the spectators from the wild

In wireless broadcasting, amplifier usually denotes a three-electrode thermionic valve used to strengthen the weak signals received on the aerial, and so render them audible at the desired strength in the telephones or loud speaker. High-frequency amplification is the magnifying of the impulses before rectification; low-frequency amplification is the intensifying of audio-frequency currents after rectification. The degree of amplification depends on the magnifying power of the valve, or the ratio of its grid-voltage change to plate-voltage change. This may be from 2 to 20.

Several valves may be connected together so that the incoming impulses are increased in strength a step by each; in another arrangement of the apparatus some of the plate current may be fed back again into a valve or valves so as to amplify it still more. See Thermionic Valve; Wireless.

AMPTHILL. Urban district and market town of Bedfordshire, England. On the L.M.S. Rly., 8 m. S.S.W. of Bedford, it has an old church, S. Andrew's, restored in the 19th century, some almshouses, and a brewery. Ampthill castle, now destroyed, was the residence of Catherine of Aragon just before her trial. Built in the 15th century by Lord Fanhope, it eventually passed to the Russell family, and Lord Odo Russell took his title from here. Near are the ruins of Houghton House, said to be the original of Bunyan's House Beautiful. Pop. 2,270.

AMPTHILL, ODO WILLIAM LEOPOLD RUSSELL, 1st BARON (1829-84). British diplomatist. Born at Florence, Feb. 20, 1829, the son of Lord George William Russell, he began his diplomatic career in 1849 as attaché at Vienna. After working at the foreign office from 1850-2, he filled various diplomatic posts until 1870, when he was made assistant under-secretary for foreign affairs. In Oct., 1871, he was appointed ambassador at Berlin. In 1872 he was made a privy councillor and in 1881 was raised to the peerage. He died Aug. 25, 1884, at Potsdam. His eldest son, Arthur Oliver Villiers Russell, 2nd baron (b. 1869), was governor of Madras from 1899 until 1906, and acting Viceroy of India in 1904.

AMPULLA. Vessel used by the Romans to contain liquids. It was in the shape of a bottle, and was employed for holding the oils with which both living and dead were anointed. It passed for a like purpose into the service of the Christian Church, and is still used at coronations. That used at English coronations is of gold, in the shape of an eagle with outstretched wings. The word comes from the Latin and is a diminutive of amphora (q.v.).

Ampulla used at English coronations

AMPUTATION (Latin ambi, round; putare, to prune, trim). Removal of some portion of the body which is injured or diseased in such a way as to endanger the patient's life or to preclude any hope of its restoration to a normal or useful function. See Anaesthesia; Surgery.

AMRAOTI OR UMRAWATTEE. Town in Berar, Central Provinces, India. The capital of Amraoti district, it is 6 m. from Badnara junction on the Great Indian Peninsula Rly. It is situated in the valley of the Purna, a tributary of the Taptis, at the end of an extensive alluvial plain. A great cotton mart and grain market, it is famous for its temples, that of Bhawani being 1,000 years old. Amraoti district has an area of 4,733 sq. m. Three-quarters of the people are Hindus. Pop. town, 40,694.

AMRAVATI OR AMARAVATI. Ruined city of India. In Kistna district, Madras, near Dharanikota, it is on the south bank of the Kistna, 23 m. N.W. of Guntur. One of the centres of the old Buddhist kingdom of Vengi, its tope (monument) is famous. The carvings, illustrating the life of Buddha, are preserved in the British and Madras museums.

Amphora. One of the finest known of ancient Roman examples. See p. 77
British Museum

AMRITSAR. District and city of India, in the Lahore division of the Punjab. The city is 32 m. E. of Lahore, on the North-Western Rly., and is the religious centre of the Sikhs. An important commercial city, it has carpet, cashmere shawl, and silk manufactures, and is a trading centre for Kashmir and the N.W. Frontier Provinces. Grave rioting took place here April 10-11, 1919, following the removal of two native agitators: the mobs burned banks, Government buildings, and rly. premises. On April 11 troops dispersed a meeting of 5,000 natives, of whom from 400 to 500 were killed and about 1,500 wounded. A public inquiry was held and the evidence aroused grave concern in Britain. Pop. city, 160,218.

AMSTERDAM (Latin Amstelodamum; formerly Amstelredam, the dyke or dam of the Amstel). The commercial capital, largest city, and a seaport of the Netherlands, its area is 183 sq. m. In the prov. of N. Holland, it is on the Amstel river, where it joins the IJ or Y, an inlet of the Zuider Zee.

A fishing village before 1200, the establishment of the Dutch East India Company in 1602 made it the foremost mercantile city in Europe, and its fortunes suffered little until about 1780 and then only temporarily.

Amritsar, India, religious centre of the Sikhs. The Golden Temple standing by the Pool of Immortality

Built on piles, the oldest portions of the city lie round the Dam, a great square. Later extensions are marked by concentric crescents of house-lined canals, some filled in, which form its main structural lines. The buildings include S. Anthony's Waag (weigh house), at the Nicuwe Markt, originally a city gate, once the surgeons' guild house, for which Rembrandt painted the Anatomy Lesson, containing the city archives; the Oude Kerk (Old Church, 1300), behind the Warmoesstraat; and the Nieuwe Kerk (New Church, 1408), beside the palace on the Dam, which was built in 1648-55 by Jacob van Kampen as a town hall.

During the 17th century Amsterdam expanded, by the stately Heeren and Keizergrachts or avenues, as far as the present Lynbaans-gracht. Since then the city has overflowed in new suburbs. In these suburbs building developments are supervised by the authorities, and the result is a pleasing arrangement of wide roads and open spaces in the midst of houses, shops, churches and other modern edifices. The docks and quays, which extend along the IJ, have been improved to deal with the port's increasing trade.

Amsterdam is Holland's chief money market and an important European mercantile mart. It is connected with the sea by the North Holland (1819-25) and North Sea (1865-95) canals. Diamond polishing is almost Amsterdam's monopoly. Other industries are ship-

Amsterdam: old and new buildings in Holland's commercial capital. 1. The Royal Palace, which looks on to the Dam, a great square, and the vital centre of Amsterdam. 2. Nieuwe Markt, with the quaint S. Anthony's weigh house, in which are preserved the civic archives. 3. Docks and wharf buildings. 4. The central railway station, built upon an artificial island. 5. The Bourse, an imposing modern building

building, sugar refining, printing, brewing, dyeing, and the making of glass, paper, etc.

The city's administration is vested in a burgomaster, wetbouders (aldermen), and a municipal council. The university, which has a library of 350,000 vols., dates from 1632.

Amsterdam's chief glory is associated with Dutch art. In the Rijks (National) Museum is the most representative collection of Dutch painting in the world. Other galleries are the Municipal Museum, the Fodor, the Six, and that of a private society, Arti et Amicitiae. The Palais van Volksvlijt, or palace of National Industry, is used for exhibition purposes. The city has a botanic garden and one of the finest zoological gardens in Europe. Pop. 734,884.

AMU-DARIA. River of Central Asia. It rises on the Pamir plateau in two headstreams, and during its course of about 1,500 m. forms part of the boundary between Afghanistan and Bokhara, whence it takes a general N.W. trend to enter the Aral Sea by two main branches. It is less utilised as a commercial waterway than for irrigation.

AMULET. Object worn as a charm against evil. Researches in Babylonia, Assyria, and Egypt have brought to light a vast number of specimens, of which the scarabaeus and the eye of Isis are familiar examples. Mabeomedans wear small cases containing extracts from the Koran. In Italy the peasants very commonly wear little figures of animals as charms against the Evil Eye. In Great Britain flint arrowheads and small pebbles with holes in them served a similar purpose. The wearing of Christian symbols as amulets has always been common. See Evil Eye.

AMUNDSEN, ROALD (1872-1928). Norwegian explorer. About 1901 he joined an exploring expedition into the Arctic seas, and in 1905 led a party through the North-West Passage. In 1910 Amundsen set out in the Fram for the Antarctic, and reached the South Pole on Dec. 16, 1911. After his return, he wrote a book, *The South Pole*, 1913, and lectured on his travels. In 1918 he started on a North Polar expedition, reaching Nome, Alaska, in July, 1920. He crossed the North Pole by airship, May, 1926. On June 18, 1928, Amundsen left Tromsø, in Norway, in a French seaplane, to search for the expedition under General Nobile. He never returned, so it is certain that he met his death on the journey.

Roald Amundsen, Norwegian explorer

AMUR. River of Asia. Known also as the Sakhalin-ula and the Heilung Kiang, it is formed at Ust-Stryelka by the union of the Argun and Shilka, which rise in the Stanovoi Mts. In its upper course the Amur proper follows a S.E. direction, and separates Manchuria from the Siberian prov. of Amur, after which it flows N.E., forces its way through the Khingan ranges, and enters the sea at Nikolaievsk. Frozen for half the year, it is navigable by large steamers for 1,500 m. from May to Oct. It is 2,920 m. long from the source of the Argun; the Amur proper is 1,800 m.

One of the three provinces of Manchuria, officially called Heilung Kiang (q.v.), is sometimes called Amur, as is a province of Siberia.

AMURNATH. Cave in the mts. of N.E. Kashmir. About 30 yds. high, with a depth of 20 yds., it is reputed to be the dwelling place of the god Siva, and is a resort of pilgrims.

AMYCLAE. Ancient Greek town of Laconia, 2 m. S.E. of Sparta. The reputed home of Castor and Pollux, and originally the chief town of the Achaeans, it long maintained its independence after the Dorian conquest. A

tomb of its princes contained two gold cups, magnificent examples of Mycenaean art, found at Vaphio, and the bronze statue of Apollo in his temple was famous.

AMYGDALIN (Greek amygdalē, almond). A glucoside discovered in 1830 by Robiquet and Boutron-Charlard in bitter almonds to the extent of 2.8 p.c. to 4 p.c. It is also contained in peach kernels (2.35 p.c.), cherry kernels (0.82 p.c.), and other vegetable products. See Emulsion.

AMYGDALOID (Greek amygdalē, almond; eidos, form). Geological name for a lava in which most of the steam-cavities have been filled with almond-shaped masses of mineral matter since the lava became solid. These secondary masses are known as amygdalae.

AMYL (Gr amy-lyon, starch) or **PENTYL**. Alcoholic radical of the pentacarbon series. Fusel oil is amyl alcohol and is obtained in the rectification of alcohol, particularly that prepared from potatoes. Amyl alcohol forms the starting point in the production of synthetic rubber. Amylacetate is known as jargonelle pear oil and is used for flavouring purposes. Amyl valerate has the flavour of apples. Amyl nitrite when inhaled produces sudden dilatation of the blood vessels, and is used in medicine to relieve angina pectoris.

AMYLOPSIN (Gr. amylyon, starch; opsis, appearance). Name of a ferment secreted in the pancreas or sweetbread. It acts on starch in the process of digestion, converting it into maltose, a form of sugar.

ANABAPTISTS (Gr. anabaptizein, to baptize again). Title of a fanatical Protestant sect that arose at Zwickau under the leadership of Thomas Münzer in 1520. It held that the existing order ought to be destroyed and a new divine order instituted which should do away with all inequalities and private property, ideas which developed into a negation of all moral laws. The name was afterwards loosely applied to other Protestant sects.

Münzer's doctrines helped to bring about the Peasant Revolt in Germany in 1525. He himself was put to death, but the Anabaptists continued to flourish under John of Leiden until 1535, when Münster, their stronghold, was captured and their leaders executed.

ANABASIS (Gr. going up). Historical work by the Greek general and writer Xenophon. It is the narrative of the expedition in 401 B.C. of Cyrus the younger against his elder brother Artaxerxes, king of Persia, and of the famous Retreat of the Ten Thousand, led by Xenophon himself after the death of Cyrus. The style of Xenophon's narrative is conspicuous for its simplicity and directness. Anabasis is also the title of Arrian's account of the campaigns of Alexander the Great.

ANABLEPS. Small fresh-water fish of the family of Cyprinodontidae, found in Central and S. America, and remarkable for the structure of the eyes, which project strongly and are each horizontally divided by a band or partition into two parts. Hence its popular name of cuatro ojos or the four-eyed fish.

ANABOLISM (Gr. anabolē, anything thrown up). In biology, the chemical and physical process involved in the construction or building up of simple elements into a complicated combination of protoplasm, or living matter. See Metabolism.

ANACHRONISM (Gr. ana, back; chronos, time). Assignment of events or things or persons to a period earlier or later than that to which they actually belong. Literature abounds in examples of such mistakes in fact, especially in historical drama and fiction, owing to imperfect acquaintance with the more or less remote period dealt with or to mere carelessness.

ANACOLUTHON (Gr. anakolouthos, not following). Inconsistent construction of a sentence, in which the writer or speaker passes from one form of construction to another before the first is complete, e.g. having opened the window, the candle went out.

ANACONDA. Snake of the python family, a native of Brazil and Guiana. Brown in colour, with large black spots on the back and smaller ones with white centres along the sides, its length is from 25 ft. to 30 ft. It inhabits the

Anaconda, a large snake of the python family, sometimes 30 ft. in length. It is a native of South America

forest rivers and preys upon animals and birds.

ANACONDA. City of Montana, U.S.A. It is 27 m. N.W. of Butte. Its copper smelting works, the largest in the world, are principally fed by the rich Anaconda mines. Pop. 11,668.

The Anaconda Copper Mining Co., the chief mining company in the district, is a great producer of silver and copper.

ANACREON (563-478 B.C.). Greek lyric poet. He was born at Teos in Ionia, and fled before the invading Persians to Abdera in Thrace. Later he lived at the court of Polycrates, tyrant of Samos, until 525, then under the Peisistratidae at Athens, and perhaps lastly in Thessaly. He wrote in the Ionic dialect. His language is simple, like that of everyday life, and his themes are love, wine, dancing, and enjoyment. The genuine extant fragments are distinguished by grace and charm, but lack depth of sentiment. At a much later date a collection of pieces, tasteless imitations of the real Anacreon, was published under his name.

Anacreon, Greek lyric poet
British Museum

ANADYOMENE (Gr. rising). In Greek mythology, a name given to Aphrodite (Venus). It refers to her supposed birth from the foam of the sea. This was the subject of a famous painting by Apelles. See Venus.

ANAEMIA (Gr. an-, not; haima, blood). Reduction in the amount of the blood as a whole, or of its corpuscles, or of some of its more important constituents, such as albumin and haemoglobin. It may be a primary disease, of which there are two forms—simple anaemia and pernicious anaemia—or it may be a symptom of some other disease or condition, when it is called secondary anaemia.

Simple anaemia is characterised by a marked diminution in the haemoglobin of the blood. The condition is most frequent among overworked and ill-fed girls living in large towns who do not obtain sufficient fresh air, sunshine, and healthy exercise. Chlorosis or green sickness, another form, generally begins between the fourteenth and seventeenth years. The skin takes on a greenish-yellow tinge, to which the disease owes its earlier name.

Simple anaemia is an entirely curable disease. Pernicious anaemia is a much more serious condition, associated with profound changes in the blood. It affects principally persons who have reached middle age.

ANAESTHESIA (Gr. an-, not; aisthesis, feeling). A condition of total or partial insensibility to touch and pain. This may be the result of injury or disease, or may be produced artificially by drugs. In 1800 Sir Humphry Davy discovered nitrous oxide gas for use in dentistry; in 1846 a Boston dentist

W. T. G. Morton, used sulphuric ether in dental operations; and in 1847, the Scottish obstetrician, James Young Simpson, introduced chloroform, primarily for childbirth, but also for employment in general surgery.

Modern progress in general anaesthesia has been chiefly in the direction of improvements in methods of administration. Other allied drugs have been occasionally introduced, but none except ethyl chloride has been generally adopted. Some degree of local anaesthesia can be obtained by freezing the skin with a spray of ethyl chloride or ether, but the most usual method is by the use of cocaine, discovered by Koller in 1884, and by other drugs of the same type, such as eucaine, stovaine, etc.

A general anaesthetic is usually administered in the form of vapour, by means of specially designed inhalers. Local anaesthetics may be given by spraying, as in throat operations, by dropping, as in ophthalmic surgery, or by injection, a valuable example of the latter being injection into the spinal cord to produce regional anaesthesia.

Fatalities are very infrequent and are due in nearly every instance to the severity of the injury or the bad state of health of the patient. See Chloroform; Cocaine; Ether; Laughing Gas; etc. Consult Handbook of Anaesthetics; J. S. Ross and W. M. Fairlie, 1929.

ANAGNI. City of Italy. It stands on a hill 1,500 ft. above sea level, and is 46 m. by rly. from Rome. The chief city of the ancient Hernici and a bishopric since 487, it possesses an 11th century cathedral, an early 12th century town hall, and remains of walls. It was the birthplace of four popes and the scene of Adrian IV's death. Pop. 10,430.

ANAGRAM (Greek ana, back; gramma, anything written). Word, phrase, or sentence made up of all the letters forming another word, phrase, or sentence, as in the instances: Matrimony, "Into my arm": Florence Nightingale, "Flit on, cheering angel." A 16th century one was Charles James Stuart, "Claims Arthur's Seat." An old scholastic example is that of Pilate's question Quid est veritas? (What is truth?), turned into Est vir qui adest (It is the man before you).

ANAHUAC. Name by which the great central plateau of Mexico is known, formerly applied to the ancient kingdom of Mexico. The region extends between the Rio Grande in the N. and the isthmus of Tehuantepec in the S., and was covered by lakes, hence its name, meaning amid the waters.

ANAITIS. Iranian goddess, sometimes called the Persian Artemis. The name is the Greek form of the Persian Anahita. The goddess of fertilising waters, she passed into Mazdeism, and was described in the Avesta. She was invoked in aid of marriage and child-

birth, and the Persian Artaxerxes Mnemon erected images of her throughout his empire. Her cult spread to Armenia and Asia Minor.

ANAKIM OR **ANAKIMS.** Giant race who inhabited the hill country of Hebron, S. Canaan. They were overthrown by Joshua and Caleb (Num. 13; Josh. 11, 14, 15; Judg. 1). They are regarded as Cushite wanderers from Babel.

ANALOGY (Gr. ana, up to; logos, proportion). A certain similarity in things in other respects unlike. In language, it creates

Anaesthesia. Administering an anaesthetic to a patient; (right), giving ether by Clover's inhaler

forms and even alters whole words after the model of others already familiar. Biological analogy is resemblance in function, not in form. In logic, it is a process of reasoning in which it is assumed that if two or more things possess similar essential, non-contingent attributes, their other attributes will probably be similar

ANALYSIS (Gr., decomposition). Separation of any whole into the parts of which it consists. Its correlative is synthesis (putting together), without which it is incomplete.

Grammatical analysis is the splitting of a sentence into the nouns and other parts of speech. In chemistry, analysis implies the determination of the composition of a substance, or the quantity of extraneous matter present. In mathematics, analysis denotes the process by which a problem is reduced to its simplest elements. It is more specifically applied to those branches of mathematics which investigate the relations of variable or indeterminate quantities by means of symbols. Thus analytical geometry investigates the character of lines, curves, and surfaces by the employment of algebraic symbols.

ANALYST, PUBLIC. Person appointed by a local authority—county or town council in Great Britain—under the provisions of the Sale of Food and Drugs Act, 1875. By a general order of 1900 he or she must furnish proof of competent skill and knowledge in (a) analytical chemistry, (h) therapeutics, and (c) microscopy, proof to be by certificate, diploma, licence, or document. The analyst must not be engaged directly or indirectly in any trade or business connected with food or drugs in the place for which he is appointed.

Any private individual who has purchased a food or drug is entitled to submit it to the public analyst for the place where the purchase is made, and to receive a certificate of the result of his analysis, on payment of a fee.

The Society of Analysts was founded in 1874 to promote the efficiency of food adulteration laws, secure the appointment of competent

public analysts, and improve the methods of detecting adulteration (q.v.). In 1907 it was incorporated as a limited company, The Society of Public and Other Analysts. The offices are at 85, Eccleston Sq., London.

ANANIAS. The name of three persons mentioned in the N.T. (1) A convert who made a false declaration concerning the sale of a piece of land for the church; he and his wife Sapphira fell dead before the rebuke of Peter (Acts 5). (2) A disciple at Damascus to whom Christ appeared in a vision and directed him to baptize Saul of Tarsus, who was afterwards known as Paul (Acts 9 and 22). (3) The Jewish high priest who was one of Paul's accusers before Felix (Acts 23-24).

ANAPAEST (Greek ana, back; paion, to strike). In prosody, a tri-syllabic foot consisting of a long, or accented, syllable preceded by two short, or unaccented, syllables. It is so called because it is a dactyl reversed. Although the English language contains few words that are anapaests—domineer is an example—anapaestic verse, especially the anapaestic tetrameter, has established itself firmly in English literature. A familiar example is Byron's *The Destruction of Sennacherib*, beginning *The Assyrian came down like the wolf on the fold*. See Poetry.

ANAPHYLAXIS (Gr. ana, back; phylassein, to guard). Term applied to the condition of exaggerated susceptibility to the action of an injected (albuminous) substance following a first injection of the same substance.

ANARCHISM (Gr. an-, not; archē, rule). Revolutionary doctrine in opposition to all law and order as enforced by a government. In its original sense the Greek word anarchy meant no government whatever, and it is so used to-day.

Anarchism, however, is held by its more intelligent advocates to be a system of voluntary government not relying on the sanctions of the state. It is rather a movement directed towards destroying the tyranny of the state and giving fuller play to natural economic forces and the principle of mutual aid. This, it is thought, would produce a state of society in which social order would rest not on repression, but on goodwill.

Although the philosophy of anarchism is not concerned with violence, its supporters generally are avowed advocates of forcible methods and of propaganda by deed. Before the Great War anarchist societies were common in Europe.

ANASTASIUS. Name of two East Roman emperors. Anastasius I (c. 430-518) succeeded Zeno, whose widow Ariadne he married, as emperor, in 491, changing his name from Silentiarius to Anastasius. In 493 he defeated Zeno's brother Longinus at Cotyaeum (Kutaya), and in 506, after a three years' war, made peace with Persia. He built the long wall, which was called after him the Anastasian wall, in order to protect Constantinople from Bulgar raids.

Anastasius II (d. 721) succeeded the emperor Philippicus Bardanes in 713. A mutiny at Rhodes in 716 resulted in his deposition in favour of a tax-gatherer, Theodosius, who was succeeded by Anastasius's former general, Leo the Isaurian. In 721 Anastasius, who had lived for five years as a monk at Thessalonica, attempted to recover his lost throne and besieged Constantinople, but was captured by Leo and put to death. See Byzantium.

ANATASE (Gr. ana, back; teinein, to stretch). Oxide of titanium. It is of the same composition as rutile and brookite, but differs from them in crystalline form. It occurs as small tetragonal pyramids and tables, and is usually a product of metamorphism of other

titaniferous minerals, e.g. ilmenite. As microscopic crystals it is common among the heavier constituents of most sands.

ANATHEMA. Greek word used in the Church in passing sentence of excommunication. Its literal meaning is something set up, and it was originally applied to gifts to the gods or to animals designated for sacrifice. In the latter connexion it gained its later meaning of condemned to destruction, and it is in this sense that S. Paul uses the term: "If any man love not the Lord Jesus Christ, let him be anathema" (1 Cor. 16).

ANATOLIA. The late Greek name (Anatolē, the East) for Asia Minor (q.v.). It was revived by the Turks, who called it Anadolı, and it is now part of Turkey.

The Anatolian Railway is part of the Bagdad Railway (q.v.). It runs from Constantinople to Angora and Konieh, with a prolongation from Angora to Caesarea. Its first section was opened in 1872.

ANATOMY. Derived from the Greek *anatemnein*, to cut up, the word anatomy is applied to the scientific study of the bodily structure of man and other animals. It has also been described as the art or practice of dissection, as it is only by dissecting the body that the necessary knowledge about the structure of its parts is obtained.

The systems of the body are: (1) the alimentary system, which has to do with the mastication, transmission, digestion, and absorption of food; (2) the absorbent or lymphatic system, concerned in conveying to the blood certain products absorbed from the alimentary system and also waste products from the tissues; (3) the respiratory system, comprising the lungs and breath passages, by which oxygen enters the body and the waste gas—carbon dioxide—is thrown out; (4) the circulatory system, made up of the heart, which forces blood containing oxygen and nutriment along arteries into minute vessels or capillaries, from which the living tissues are fed; while from the capillaries the blood, laden with waste products from the tissues, particularly carbon dioxide, passes into veins, by which it is conveyed back to the heart; (5) the locomotive system, comprising the muscles, which give living beings a power of moving one part upon another; the bones or skeleton, which serve as levers to the muscles and give support, solidity and protection to the body; and the joints, where bones come in contact and move on each other; (6) the nervous system, which comprises the brain, spinal cord, nerves, and organs of sense, such as the eye, the ear, the nose, the tongue, and the palate. In this system must also be included the skin, which not only serves as an organ of sense, but also protects the body and helps in regulating its temperature.

Besides human anatomy, there are veterinary anatomy, which includes a knowledge of the structure of domestic animals. artistic anatomy, in which the structure of the human or animal body is studied for purposes of correct delineation; microscopic anatomy, which reveals the minute composition of the tissues; and embryology, which is the study of the structure and growth of developing forms.

It was not until the close of the 18th century that comparative anatomy was rightly cultivated. Cuvier (1769-1832), a French naturalist, set out to classify all living animals according to their internal structure, while Darwin (1809-1882) explained variations of structure by his theory of evolution. John Hunter (1728-93) is the real founder of functional anatomy, as opposed to morphology, which is the study of form. See Embryology; Morphology; Physiology; Surgery, etc. Consult Guide to Anatomy, D. Ewart, 1926

ANAXAGORAS

(c. 500-428 B.C.). Greek philosopher. Born at Clazomenae in Asia Minor, he settled at Athens, where he found an influential patron in Pericles. Anaxagoras held that the universe was composed of an infinite number of seeds of the different kinds of matter. In the beginning these seeds were in a state of chaos, but with the advent of nous, or intelligence, a rotary impulse was given to the mass, as a result of which all cognate seeds gradually came together to form the different substances. His suggestion that the sun and moon were not divinities, but merely fiery lumps, was condemned as atheistic, and he was forced to leave the city. He died at Lampsacus in Asia Minor.

ANAXIMANDER

(c. 610-547 B.C.). Greek philosopher. Born at Miletus in Asia Minor, he was the friend of Thales and lived for many years at the court of Polycrates of Samos.

He held that all the material substances which make the universe are derived from one element—which he called *apeiron*, or indeterminate matter—which contained and governed all things, being itself immortal and imperishable. He is also credited with various inventions, e.g. a sundial and celestial globe.

ANAXIMENES. Greek philosopher who flourished in the 6th century B.C. Born at Miletus in Asia Minor, he held that all the substances of which the material universe is composed are derived from one natural element, air, as the result of its rarefaction and condensation.

ANCESTER, DUKE AND EARL OF. English title. The title of Duke of Ancaster and Kesteven was held by the family of Bertie 1715-1809, and that of Earl of Ancaster by the family of Heathcote-Drummond Willoughby since 1892. The earl is joint hereditary great chamberlain of England, an office held by the dukes of Ancaster. The estates of the family are mainly in Lincolnshire and Perthshire. Ancaster is a village in Lincolnshire, once a Roman station.

ANCESTOR WORSHIP. Expression in ritual of reverence for departed ancestors, parental or remote. It should be distinguished from the general cult or tendence of the dead, which is a widespread concomitant of the belief known as animism.

Anchor. 1. Admiralty pattern. 2. Close stowing anchor. 3. Mushroom anchor, used for lightships. 4. Stockless anchor. 5. Grapple, used from small boats

In its stricter form ancestor worship belongs to a later culture, when settled husbandry and patriarchal rule first developed outstanding men. In this form it dominated early Greek religion, with its deification of heroes. It persisted as a private worship in imperial Rome by the side of the national polytheism, and was converted, in early Christianity, to devotion to the saints. Its chief home to-day is China, where the motive is filial piety rather than the hope of objective benefits. See Animism.

ANCHISES. In Greek legend, ruler of Dardanus in the Troad. By his beauty he attracted the goddess Aphrodite, who became by him the mother of the Trojan hero Aeneas (q.v.). In the story in Virgil's *Aeneid* the aged Anchises was carried off by his son after the fall of Troy, and died in Sicily.

ANCHOR (Lat. *ancora*, a hook). Implement of iron or steel attached to a cable and thrown overboard to hold a ship stationary. A large ship will carry several anchors—bower, sheet, stream, waist, and spare anchors. The sheet anchor is presumed to be the best and to be used only in case of emergency.

Anatomy. Front and back views of skeleton, with the terms used in anatomy for indicating the various bones that build up the human frame

ANCHOR ICE. Ice formed on the bed of a stream. The waters of a stream are mechanically mixed by continual movement, so that when the air temperature is very low the whole mass is occasionally reduced to freezing point. In these conditions anchor or ground ice would be formed on the bed, where there is less movement than at the surface.

ANCHORITE (Greek, ana, back; chorein, to retire). One who retires from the world and lives apart for religious meditation. Anchorites arose about the 3rd century, where at one time some thousands lived in the deserts of Egypt. In later days the anchorite or anchoress occupied a cell or small house connected with a church. See Asceticism.

ANCHOVY (*Engraulis encrasicolus*) Small fish of the herring tribe. It abounds in the Mediterranean and in the Zuyder Zee. It

Anchovy, a small fish of the herring family, common in European waters

occurs more or less around all the European coasts, except in the extremenorth, and is not uncommon off Cornwall and Devonshire. It is characterised by a deeply forked tail and a conical snout which projects considerably beyond the lower jaw. The anchovy in its preserved state is much in demand as a relish and for sauce making.

ANCHOVY PEAR (*Grias cauliflora*). Fruit produced in Jamaica and the W. Indies by a tall slender tree of the order Myrtaceae. The tree has an unbranched stem and a crown of drooping, lance-shaped glossy leaves, often 3 ft. in length. The flowers are large and white with four leathery petals. The fruit is plum-like and russet-brown, 3 ins. or more long. It is pickled and tastes like the mango.

Anchovy pear, showing the inflorescence and a section of the fruit

Ancien Régime. Term used for the social and political system which existed in France before the French Revolution.

ANCIENT (late Latin *antianus*, old). Word of various applications. By the ancients is generally understood the civilized people of antiquity, and sometimes the early Greek and Roman authors. The word often implied seniority, hence influence and position. In the book of Isaiah the ancients of his people are the rulers. The Ancient of Days is a title of God. As a corruption of *ensign*, the word formerly meant a flag or flag-bearer, e.g. Shakespeare's Ancient Pistol.

The Society for the Protection of Ancient Buildings was founded in 1877. Its offices are at 20, Buckingham Street, London, W.C. The Ancient Monuments Protection Act, 1913, empowers the Office of Works to take charge of buildings of historic architectural interest, and many are in its care.

Ancient demesne is a phrase used for land that has been long in the possession of the Crown and the tenants of which enjoyed special privileges. Many of the old towns such as Nottingham were in ancient demesne.

ANCIENT LIGHTS. English legal term. At common law, if a building has a window which has been there since time immemorial, the owner of the building has the right to an uninterrupted flow of light to that window, and it is called an ancient light. This means that no adjoining owner may put up anything which will shut out a reasonable flow of light to the window. By the Prescription Act, 1832, a light is ancient if it has been uninterrupted for a period of 20 years.

ANCON OR PORT ANCON. Coast town of Peru. It is 30 m. by rly. N.W. of Lima. It is less populous than formerly, although much visited for bathing. It gave its name to the peace that ended the war between Chile and Peru in 1883.

Ancon is also the name given to the hospital quarter of Panama city. It was founded during the construction of the Panama Canal for the benefit of the workers.

ANCONA (Greek *ankon*, elbow, bend). Seaport and city of Italy. The capital of Ancona province, it stands on the Adriatic, 130 m. direct and 185 m. by rly. N.E. of Rome. The harbour, one of the best in Italy, is protected by two fine piers, one built by Trajan in 115 and bearing a triumphal arch in his honour. The cathedral dates from the 12th century and stands on the site of a temple of Venus, of which ten of the original columns survive; its dome is one of the oldest in Italy. There are several palaces and a museum. Ancona is defended by modern forts, and is a torpedo and wireless station; its citadel is now a sugar refinery.

Ancona was founded about 385 B.C. by Greeks from Syracuse, became a Roman colony, and was made a naval station in the Illyrian war, 178 B.C. Caesar took it on his famous march north; Trajan enlarged it; Goths, Lombards, and Saracens sacked it; and in 1532 it was handed over to Pope Clement VII. It was captured by the Austrians in 1849 and hom-barded by them from the sea during the Great War. Pop. 83,236.

The province of Ancona has an area of 748 sq. m. Fruit and cereals are produced, silkworms are bred, and sulphur is mined.

ANCONA FOWL. Offshoot of the Leghorn breed. It was imported into Great Britain in the 19th century. The breed is very precocious, the pullets often laying at eighteen weeks old, and their eggs are large and white-shelled. As a table bird it has few qualifications. The general colouring of the plumage is a distinct hestle green, each feather being tipped with white (see illustration above). See Poultry.

ANCRE. River of N. France. Rising a few miles S.W. of Bapaume, in the department of Pas-de-Calais, it flows generally W. and S.W. for about 25 m. and joins the river Somme below Albert.

Ancona Fowl. Fine specimen of Rosecomb pullet. See below

BATTLE OF THE ANCRE. The closing episode of the great series of battles in the Somme area during 1916-17 is known as the battle of the Ancre. The British advance on the Somme had left a salient on both sides of the Ancre, and to reduce this, Sir D. Haig attacked the Germans on Nov. 11, 1916, the objectives being the fortified villages of Beaumont-Hamel, Grandcourt, Beaucourt and St. Pierre-Divion. The 51st (Highland) division stormed Beaumont-Hamel on Nov. 13, and the 63rd, or Naval division, reached the outskirts of Beaucourt, which fell to the British the next day. South of the Ancre the 39th division entered the fortified village of St. Pierre-Divion. On Nov. 17 the British right made a small advance S. of Grandcourt, but German resistance prevented its capture. These actions so greatly weakened the German positions there as to render a retreat inevitable.

For some time had weather held up the attack, hut on Feb. 4 the British front was carried forward N. of the Ancre, up to a point level with the centre of Grandcourt. Throughout the month the advance continued; on Feb. 27 Gommecourt was occupied, Irles was stormed on March 10 and Gréville and Loupart Wood on March 13. Then followed the German retirement to the Hindenburg line, which marked the first important surrender of territory by Germany in the west since the opening of trench warfare in 1914. See Beaumont-Hamel; Somme.

ANCRUM. Parish and village of Roxburghshire, Scotland, $\frac{3}{4}$ m. N.N.W. of Jedburgh. It was at Ancrum Moor, 2 m. N.W., that 5,000 English were defeated on Feb. 17, 1545, by the Scots. A monument marks the spot where Lilliard, a Scottish maiden, is said to have distinguished herself in battle. Ancrum has one of the best-preserved crosses on the Border.

ANCUS MARCIUS. Fourth legendary king of Rome, 640-616 B.C. The reputed grandson of King Numa, he is credited with the foundation of the port of Ostia, at the mouth of the Tiber, and the fortification of the Janiculum, which be connected with the city by a wooden bridge, called the Pons Sublicius or bridge of piles.

ANDALUSIA. Region of southern Spain. It now comprises eight provinces—Almería, Granada, Málaga, Cadiz, Jaén, Cordova, Seville, and Huelva, and has an area of 33,700 sq. m. It includes some of the most historic and interesting parts of Spain, e.g. the Moorish kingdom of Granada, the cities of Cordova and Seville, and the seaport of Cadiz. It was a Roman province, and later for about 800 years it was under the Moors, whose influence is still evident. Pop. 4,287,872.

ANDALUSIAN FOWL. Spanish breed of poultry introduced into England in 1851 from Andalusia. In egg production it compares favourably with other Mediterranean breeds, laying a large, white-shelled egg. As it thrives equally well in confinement or at liberty, it is hardy and robust, and is adapted to farmer and hackyarder alike. The body colour is a slate blue, laced with feathers of a darker tint. The legs are a dark leaden hue, the ear lobes are white, and the male bird weighs from 7 lb. to 8 lb.

ANDAMAN ISLANDS. Group of islands in the Bay of Bengal, 120 m. S.W. of Burma. Together with the Nicobar Islands (q.v.) they form a province of India. They consist

Andalusian Fowl. Cockerel of this robust breed of poultry

of six main islands and about 200 small islands and islets, and have an area of 2,508 sq. m. They are covered with dense tropical jungle, volcanic, and hilly, and have several well-sheltered natural harbours, the chief being Port Blair, the capital. From the forests large quantities of timber are obtained. Tea and coconuts are cultivated. The islands were utilised from 1858 by the Indian Government as a penal settlement, but the practice is being discontinued; 7,196 convicts were on the islands in 1927. There is a wireless station at Port Blair. Pop. 17,814.

ANDERIDA. Roman flint fort at Pevensey, Sussex. It was probably erected by the count of the Saxon shore early in the 4th century. It was destroyed by the Saxon invaders in A.D. 491, and later became their settlement of Andredesceaster. Twelve of its solid buttress towers are still discernible.

ANDERMATT. Village of Switzerland, in the canton of Uri. It lies in the upper valley of the Reuss, 3 m. above Göschenen, and stands 4,738 ft. above sea level, near the junction, at Hospenthal, of the roads over the Furka and St. Gotthard passes. It is visited for winter sports. Pop. 986.

ANDERSEN, HANS CHRISTIAN (1805-75). Danish story-teller and poet. In 1830 Andersen published his first volume of poems, including the widely translated *Dying Child*. Three years later he received from the Danish king a pension, which enabled him to travel in Germany, England, Spain, and the East. A prolific writer, it is for his wonderful tales that he is best remembered and will be longest known. These include *The Ugly Duckling*, *The Tin Soldier*, *The Little Match Girl*. On his 70th birthday Christian IX decorated him with the Grand Cross of the Dannebrog, and an album containing one of his tales in fifteen languages was presented to him by his admirers. He died at Copenhagen, Aug. 4, 1875.

Hans Andersen,
Danish writer

E. Garrett Anderson,
British doctor
Office Edit

In 1865 the Society of Apothecaries gave her the degree of L.S.A., and in 1866 she opened a dispensary in London, which developed into the New Hospital for Women in Euston Road, of which she was senior physician for 24 years. Graduating at Paris as M.D. in 1870, she was for 23 years lecturer and ten years dean of the London School of Medicine for Women. Her greatest victory, perhaps, was the formal admission of women to the degrees of the British Medical Association in 1892. In 1908 she became mayor of Aldeburgh, the first woman to hold mayoral office in England.

She married Mr. J. G. S. Anderson, a shipowner, in 1871. Their son, Sir Alan Garrett Anderson, was controller of the navy during 1917-18; and their daughter, Dr. Louisa Garrett Anderson, was chief surgeon at the military hospital, Endell Street, London, during the Great War.

ANDERSON, MARY ANTOINETTE (b. 1859). American actress. She made her first appearance on the stage as Juliet, Nov. 27, 1875. After achieving enormous success in her own country, in 1883-7 she had seasons in London,

occupying the Lyceum Theatre during the absences of Henry Irving in America. Her chief productions were *Ingomar*, *The Lady of Lyons*, Gilbert's *Pygmalion* and *Galatea*. *Romeo and Juliet*, and *A Winter's Tale*, in which she doubled the parts of *Hermione* and *Perdita*. In 1889 she retired from the stage, and in 1890 married Antonio Navarro de Viana. She published *A Few Memories*, 1896.

ANDES. The mountain system of the Andes extends in an almost unbroken line throughout S. America from N. to S., a distance of over 4,000 m., parallel with the Pacific coast, traversing Colombia, Ecuador, Peru, Bolivia and Chile, with Argentina, and contains some of the highest peaks and most stupendous mountain scenery in the world.

In Colombia the Andes split into four ranges, the most important being the Eastern Cordillera, along the

eastern flanks of which is situated the main population of Colombia. The Andes in Ecuador embody two great chains, enclosing the basins or tablelands of Quito, Ambato and Cuenca, and forming as it were an immense avenue of snow-clad peaks, some of which are active volcanoes.

Among them are Chimborazo, 20,498 ft. and Cotopaxi, which is the world's highest active volcano, 19,613 ft.

In Peru the Andes consist of three main chains, the Western, the Central and the Eastern Cordillera. The highest peaks are the Huascaran, 22,182 ft., Huandoy, 21,088 ft. and Coropuna, 22,900 ft. In the S. of Peru the Central Cordillera disappears, and the Eastern and Western enclose the basin of the great lake, Titicaca, 165 m. long and 12,508 ft. above sea level. The Andes in Bolivia form one of the most impressive mountain masses on the globe. In Chile they consist of one main chain, with a lesser maritime Cordillera, and the system approaches much nearer the coast.

The great peak of Aconcagua, 23,097 ft., is the highest mountain in the New World.

These mountains are rich in metalliferous and

other minerals, notably gold, silver, copper, tin, lead, quicksilver, zinc, and, in places, coal. They are treeless except in the ravines, but the uplands are generally covered with coarse grass, the natural food of the llama and the vicuña. They are served by several lines of rail-

ways, including the Guayaquil-Quito line; the Oroya and the Southern, in Peru, reaching 15,660 ft. and 14,660 ft.; and the Transandinian in Chile.

Among the principal ascents of the Andes peaks are those of Chimborazo in 1802 by Humboldt, in 1831 by Boussingault and Hall, and in 1880 by Whymper; Cotopaxi in 1880 by Whymper; Aconcagua in 1897 by Zurbiggen and Vines, in 1898 and 1900 by Conway and in 1902 by Rankin. See Aconcagua.

ANDIRONS (old French andier, mod. landier) or FIREDOGS. Iron supports for logs, commonly in use before the discovery of coal,

when wood fires were universal, and still used in parts of France and elsewhere where wood is abundant. In olden times they were placed in the centre of the room or hall and supported a fixed lower and a movable upper bar; on the lower bar logs were placed criss-cross for burning, the upper one being used for grilling. Usually they were of iron in rather a plain design, though sometimes of most elaborate and exquisitely pierced steel work, and occasionally even of solid silver.

ANDOCIDES (c. 440-c. 390 B.C.). Athenian orator. In 415 B.C. he was forced to leave Athens under suspicion of being concerned with Alcibiades in the mutilation of the statues of Hermes. After two unsuccessful

Andirons, old design,
from Godington, Kent

Andes. One of the great chains of the Andes in Ecuador, the snow-clad peaks of which give rise to several of the large affluents of the river Amazon, some of which break through the Eastern Cordillera

attempts, in 399 he cleared himself of the charge. Of his three surviving speeches the most important was that delivered in 390, in which he advocated peace with Sparta on her own terms. He was included among the ten Attic orators.

ANDORRA (Arab. Aldarra). Republic in the eastern Pyrenees. It lies between the Spanish prov. of Lerida and the French department of Ariège, and covers an area of 175 sq. m. Its pop. is 5,500. Agriculture thrives where the soil is suited to tillage, rye, barley, vines and tobacco being cultivated. There is also abundant mineral wealth, especially iron and lead but transport difficulties make its exploitation doubtful. The inhabitants pay attention to stockbreeding. The natives speak a Catalan dialect.

Andorra is under the joint suzerainty of France and the bishop of Urgel, and its government is entrusted to a council, consisting of twenty-four members holding office for four years, who elect a first and second syndic to preside. Andorra la Vieja is the capital.

Sir Henry Clinton. In this capacity he acted as intermediary in the negotiations between Clinton and Benedict Arnold, who was planning to betray West Point to the British. André and Arnold met, and on the return journey to the British lines André fell into the hands of the Americans. After a court martial he was sentenced to death as a spy, and hanged at New York, Oct. 2, 1780. His remains were reinterred in Westminster Abbey in 1821.

Andrea del Sarto. Self-portrait of the Italian painter. Uffizi Gallery, Anderson

ANDREA DEL SARTO OR **ANDREA D'AGNOLO** (1486-1531) Italian painter. While a pupil of Piero di Cosimo he became intimate with Fra Bartolomeo, and the two collaborated in The Baptism of Christ, the first of twelve frescoes for the Scalzo Cloister. About 1518 he was invited by Francis I of France to visit that country; and while there he painted the famous Charity, now in the Louvre. Returning to Florence in 1519, he gradually sank into indigence, and finally fell a victim to the plague, Jan. 22, 1531.

Andrea is finely represented at the Uffizi and Pitti

galleries, and in the National Gallery, London, by a Holy Family and a portrait of himself. His famous frescoes include the Cenacolo of the S. Salvi Convent, the series of S. Philip Benizzi in the Church of the Annunziata at Florence, and the Scalzo series. Andrea had an imitative and a creative genius, a great sense of structure, drawing and colour, and a marked homeliness of style. See Assumption.

ANDREWSWEALD. Name of a woodland waste extending from Folkestone to Southampton Water, between the N. and S. Downs. This uninhabited wild—now the Weald—long formed a barrier between the Sussex and Wessex kingdoms, traversed only by Stane Street. Its timber was afterwards employed for smelting Sussex iron. Scattered relics of the original forest remain in Ashdown and Tilgate, and in avenues along many roads.

ANDRÉE, SALOMON AUGUST (1854-97). Swedish balloonist. He was born at Grenna, Oct. 18, 1854. He was educated at the Stockholm technical college and showed early a marked interest in ballooning. In 1895 he worked at a plan for reaching the North

Pole in this way. In July, 1897, he left Danes Island, Spitsbergen, with two companions, Strindberg and Fraenkel, in a balloon of 162,000 cubic feet capacity, but was heard of no more. Some of the buoys which they dropped were found, but beyond these the several expeditions sent out to find him could discover nothing. Since Andrée's time the North Pole has been successfully reached both by airship and aeroplane.

S. A. Andrée, Swedish balloonist

ANDREEV, LEONID NICOLAIEVITCH (1870-1919). Russian novelist and dramatist. He started life as a law reporter, but when his short stories began to appear rapidly attained popularity as a writer. These stories display vivid imagination and something of a morbid delight in the horrible, particularly in the analysis of the psychology of madness. The first collection of them was published in 1901. Later he wrote plays, some of which enjoyed considerable success; a Biblical Trilogy—Judas Iscariot, Eleazar, and Ben Tobit—(tr. W. H. Lowe, 1910), and a grim description of war, The Red Laugh.

L. N. Andreev, Russian author

ANDREW, SAINT. One of Christ's apostles. A native of Bethsaida, a fisherman, and a follower of John Baptist, he left the latter to follow Jesus (John 1), to Whom he immediately brought his brother Simon Peter. With his brother he was one of the two first called to apostleship (Mark 1), to be "fishers of men." The accounts of his later life are purely traditional. He is said to have preached in Scythia and so to have become patron saint of Russia, and to have suffered martyrdom at Patrae about A.D. 70. He is the patron saint of Scotland, S. Andrew's day being Nov. 30.

Lancelot Andrewes, Anglican divine Bodleian Library

ANDREWES, LANCELOT (1555-1626). Anglican divine. Appointed master of Pembroke Hall, Cambridge, in 1589, he was made vicar of S. Giles's, Cripplegate, by Elizabeth in 1589, a court chaplain, 1590, and dean of Westminster, 1601. James I promoted him to the bishopric of Chichester, 1605, Ely, 1609, and

Andorra. Capital of the little mountain republic between France and Spain

ANDOVER. Borough and market town of Hampshire. On the Anton, Andover is 57 m. W.S.W. of London by the Southern Rly. Situated in an agricultural district, it has malting works and is an aircraft station. There are Roman villas near the town. Market day, Fri. Near is Enham, the village centre for disabled soldiers. Pop 8,572

ANDRASSY, JULIUS, COUNT (1823-90). Hungarian statesman. He was born March 8, 1823, took an active part in the revolution of 1848, and remained in exile until 1857. In 1861 he was elected to the Hungarian diet, and on the formation of the Dual Monarchy in 1867 was appointed prime minister of Hungary. From 1871 to 1879 he was foreign minister of Austria-Hungary, and he represented Austria-Hungary at the Congress of Berlin in 1878 and negotiated the alliance with Bismarck in 1879. He died Feb. 18, 1890.

Count Andrassy. 1823-1890

His son, Julius Andrassy (1860-1929), was a determined opponent of Count Tisza, and became leader of the Constitutional party. In Oct., 1918, he was appointed foreign minister but soon resigned. Later he took part in Hungarian politics as a partisan of the deposed King Charles. In 1920 he published Diplomacy and the World War. He died June 11, 1929.

ANDRÉ, JOHN (1751-80). British soldier. He was born in London of Franco-Swiss parentage, and during the American War of Independence he joined the British army in Canada, 1774, and became aide-de-camp to

Andrew. The martyrdom of S. Andrew, one of Christ's apostles, depicted by the great Spanish painter Murillo Madrid

Winchester, f619. He took part in preparing the 'Authorised Version of the Bible, and died Sept. 26, 1626.

Of his literary work, *The Manual of Private Devotions* has made the widest appeal, and has been frequently reprinted. As a controversialist against Rome his talents are fully displayed in the replies to Cardinal Bellarmine on the subject of the oath of allegiance demanded by James I. His preaching and personal character were alike extolled.

ANDRIA. City of Italy, in Bari province. It is 35 m. W. of Bari, with which a light rly. connects it, and has a trade in almonds, olive oil, and majolica ware. Its cathedral, dating from the 11th century, was destroyed by fire in 1916. Pop. 53,275.

ANDROCLES OR **ANDROCLUS.** Roman slave, who is said to have lived in the 1st century A.D. He is famous for his friendship with a lion. When captured and condemned to die in the arena, the lion sent to devour him fawned upon him, and proved to be the lion from whose paw Androcles, when hiding from his cruel master in a cave in Africa, had extracted a thorn. Androcles was forthwith pardoned and presented with the lion.

Bernard Shaw's play, *Androcles and the Lion*, is a drama dealing with the persecution of the early Christians. It was produced Sept. 1, 1913, at The St. James's Theatre, London, and is an attempt to remove the halo from the first martyrs and to analyse the psychology of martyrdom.

ANDROMACHE. In Greek legend, wife of Hector. Homer's description of Hector's parting with his wife and infant son, Astyanax, before going to his fatal meeting with Achilles is one of the finest passages in literature. After the taking of Troy, Andromache became the captive of Neoptolemus, son of Achilles, who took her back with him to his kingdom of Epirus. She afterwards married Helenus, a brother of Hector. Her sorrows are the subject of a tragedy by Euripides.

ANDROMEDA. In Greek mythology, the daughter of Cepheus, king of Ethiopia. Her mother, Cassiopeia, having boasted that Andromeda was more beautiful than the Nereids, Poseidon, persuaded by the latter, sent a monster to ravage her country. An oracle declared that the monster could be got rid of if Andromeda were sacrificed to it, and so the unfortunate maiden was chained to a rock, to await her doom. She was saved by Perseus, who turned the monster to stone by showing it the head of the Gorgon Medusa.

In astronomy, Andromeda is the name given to a constellation in the northern hemisphere, one of a group which preserves the legend of Perseus and Andromeda. See Astronomy.

ANDROMEDID. Meteor which falls due in Nov. They follow the Leonids, which arrive earlier in the month. The point from which they appear to come, their "radiant," is visible throughout the night. They are slowly travelling meteors and their colour is yellow, which suggests that sodium may be their chief constituent. They are part of a meteoric orbit which appears to recede half-way between the orbits of Jupiter and Saturn, and their orbital period is therefore one of 6½ years. See Meteor.

Andromeda Nebula, which, it is suggested, may be another universe, beyond that indicated by the Milky Way

ANDRONICUS. Name of three East Roman emperors. Andronicus I was emperor 1183-85. Grandson of Alexius I, he suffered twelve years' imprisonment for plotting against the emperor Manuel. He regained Manuel's favour, 1168, and after his death in 1180 Andronicus, taking advantage of the disorders at Constantinople, reigned jointly with Alexius II until 1183, when the latter, a mere boy, was murdered and Andronicus became sole emperor.

In less than two years he restored order in the city and brought prosperity to the empire, but was killed by a rival faction in 1185. Andronicus II succeeded in 1282 and for a time reigned jointly with his son, during which time war was waged with the Turks. In 1328 he abdicated in favour of his grandson, Androniens III, under whom most of Asia Minor was lost to the Turks.

ANDROPHAGI (Gr. anēr, man; phagein, to eat). Tribe of man-eaters described by Herodotus as dwelling north of Scythia. Finnish nomads of savage culture, they came from the N.E. and settled in the region now called Poltava. There is no cannibal tradition in the folklore of the Mordvins, who may be ethnically their living representatives.

ANDROS. Largest island of the Bahamas (q.v.). It is 110 m. long. Another Andros is an island of the Greek archipelago, one of the Cyclades. It is 25 m. long and its chief town is Andros. Pop. 18,000.

ANEMOCHORD (Gr. anemos, wind; chordē, string). Musical instrument of the harpsichord kind, played by jets of compressed air. It was invented by Johann Schnell, of Württemberg, in 1784, to reproduce the tones of the Aeolian harp, and was played with great success by the inventor, and especially by the German pianist, Johann Nepomuk Hummel. The secret of its construction died with its discoverer.

ANEMOMETER (Gr. anemos, wind; metron, measure). Appliance for measuring wind pressure or velocity. A common type is the Robinson anemometer. The Kew pattern consists of four metal cups fixed on crossbars. The revolutions turn cog-wheels, thereby causing an indicator to move on a graduated dial. Wind velocities are recorded in miles per hour, and are given in British Weather Reports by the Beaufort index numbers. In the Dines pressure tube anemometer the wind acts on a recorder floating in water.

ANEMONE OR **WIND-FLLOWER.** A genus of perennial herbs of the order Ranunculaceae, consisting of about 70 species, generally distributed in temperate and Alpine regions. The divided or lobed leaves spring direct from thickened or tuberous rootstocks. Although they have no petals, they all possess handsome flowers, the sepals being large and brightly coloured. One species is the wild wood anemone with its solitary white

Anemone. Wood anemones, familiar in English coppices

flowers and purple-tinged buds. The poppy anemone and the flame anemone are natives of the Mediterranean region, whence they were introduced into English gardens at the end of the 16th century. These varieties have tuberous roots.

ANERLEY. Suburb of London. It is in Kent, within the par. bor. of Bromley, 7½ m. S. of London Bridge Station on the Southern Rly. The parish church is a modern structure built in the Decorated style, with a fine reredos of Caen stone. There is an entrance to the Crystal Palace at Anerley.

ANEROID OR **ANEROID BAROMETER** (Gr. a, not; nerōs, liquid; eidos, form). Instrument for measuring the pressure of the atmosphere. It consists of a cylindrical metal box, the lid of which is a thin corrugated plate. This box is exhausted of air, leaving a more or less perfect vacuum. The pressure of the outside air, therefore, forces the thin lid inwards. As the pressure varies, the bending of the lid varies, and the amount of its bending is registered through a system of delicate levers by the movement of a pointer which passes over a graduated scale. See Atmosphere; Barometer.

Aneroid, showing the principle on which it works. 1. Hand turning on pivot. 2. Hair spring. 3. Chain that turns the hand. 4. Lever fixed to pivot. 5. Lever. 6. Lever rod from spring. 7. Spring pulling against the air pressure on box. 8. Rod. 9. Part of round metal vacuum box. 10. Box pressed in by increased air pressure. 11. Spring pulled down by lowered top of box. 12. Lever rod lowered. 13. Levers lowered. 14. Chain unwound by levers. 15. Hand pivot pulled round by chain

ANEURISM (Gr. aneurysmos, widening). Localised dilatation of an artery which may eventually become so extreme as to form a sac or bag communicating with the artery.

Anemometer, for measuring wind velocity

The condition is frequently the result of syphilitic disease of the arteries, heavy muscular work and alcoholism being contributory causes. An aneurism of the main arteries in the chest may cause serious symptoms by displacement of the heart, pressure on the lungs, and interference with the act of swallowing.

The condition is best treated by prolonged rest and avoidance of muscular effort and excess.

ANGAMOS POINT. Promontory of Chile, about 50 m. N. of Antofagasta. Off this cape, Oct. 8, 1879, the Chilean ironclads, Blanco Encalada and Almirante Cochrane, defeated the Peruvian battleship Huascar.

ANGARY. Term used in international law. The modern definition of the right of angary (droit d'angarie) is "an act of the state by which foreign as well as private domestic vessels which happen to be within the jurisdiction of the state are seized and compelled to transport soldiers, ammunition, or

instruments of war; in other words, to become parties against their will to carrying on direct hostilities against a power with whom they are at peace."

ANGEL (Gr. angelos, messenger). Spiritual being intermediate between God and man. According to the O.T. angels were created by

Angel. English gold coin of the reign of Edward IV, slightly reduced

God (Ps. 48), and have two functions. (1) They are the messengers of God sent to guide and assist His people. (2) They are the attendants upon God's throne, in the hierarchy of heaven. In the N.T. the same functions are recorded. While the general rule is that angels are sinless beings solely devoted to God's service, reference is also made in the Bible to fallen angels, whose function is the trial and temptation of man. In the hierarchy of heaven four angels are named as arch-angels; Uriel, Michael, the warrior of Revelation, Gabriel of the Annunciation (Luke 1, 26-38), and Raphael of the book of Tobit.

An English gold coin was known as an angel. Struck in 1465, it bore a representation of the Archangel Michael slaying the dragon. It was coined until the reign of Charles 1. and ranged in value from 6s. 8d. to 10s.

ANGEL FISH (Angelus squatinus). Fish of the shark order. One species, also known as the monk fish, is common on the British coasts, especially off Scotland. It somewhat resembles a ray or skate and may be 5 ft. long.

ANGELICA. Genus of Umbelliferae, natives of the N. temperate and sub-Arctic regions, including about 18 species. They are perennial herbs with handsome compound leaves and large umbels of white or purplish flowers. The stalks of one species are candied and used as a sweetmeat. Another species (A. sylvestris) is common in damp woods and near streams throughout Britain. Angelica tree is the popular name of a N. American shrub, Aralia spinosa, used in medicine.

Angelica, flower of the species

ANGELICO, FRA (Lat. frater, brother). Italian painter, in full IL BEATO FRA GIOVANNI ANGELICO DA FIESOLE (1387-1455). In 1407 he entered the Dominican order at Fiesole, taking the name of Giovanni, but was called the Angelic, on account of his sweet disposition. In 1436 he was transferred to the priory of San Marco at Florence. Here, as at Fiesole, he decorated the convent and church with frescoes. In 1445, commissioned by Pope Nicholas V to paint a chapel in the Vatican, he removed to Rome, and he died in this city, March 18, 1455.

Fra Angelico's art is remarkable for its elaborate figure composition, rich colouring, and ecstatic though simple sentiment. He is best represented at Florence, where, in addition to the San Marco frescoes, there are numerous works in the Academy and the Uffizi Gallery. Among the most celebrated

of these are the Madonna of the Linen-weavers (1433), and the Deposition, the Last Judgement, and 35 panels of the life of Christ.

ANGEL INN. An old London posting inn, now a café and a great traffic centre. It stands at the corner of Pentonville Road and High Street, Islington, and the N. end of City Road. It was rebuilt in 1880. The original building had galleries round the yard (see illustration in right-hand column).

Angel. The Guardian Angel, celebrated picture by the 17th century Italian painter Guercino

S. Agostino Fano, Italy

crystallised in 1910 in his book, The Great Illusion. In 1929 he was elected Labour M.P. for North Bradford.

ANGELUS. Service in the Roman Catholic Church in honour of the Annunciation of the Virgin Mary. It is quite short, and is said three times a day—at 6 a.m., noon, and 6 p.m. The

Angel Fish. Genus of the same piscatorial order as the shark

name comes from its opening sentence, Angelus Domini. It is to announce this service, dating from the 14th cent., that the angelus bell is rung in churches.

ANGERS. City of France, formerly the capital of Anjou. It is 212 m. by rly. S.W. of Paris and the chief town of the department of Maine-et-Loire. Here the rivers Sarthe and Mayenne meet to form the Maine, and the town is a natural converging point of roads and railways. The cathedral, dedicated to S. Maurice, was built in the 12th and 13th centuries, and added to in the 16th. S. Serge's is another old church. The castle, now an armoury, dates from the 13th century. Angers has some picturesque old houses. Until the Revolution it had a famous university and it is still an educational centre. In the city are the noted medieval abbey of S. Aubin and the hospital of S. John. Pop. 86,260.

ANGEVIN. Family to which eight of the English kings belonged. Henry II of England, the son of Geoffrey, count of Anjou, himself became count in 1151. The counts were called Angevins, and Henry and his descendants on the English throne, of whom Richard II was the last, are often called the Angevin kings, although generally known as Plantagenets. See Plantagenet.

Fra Angelico, 15th century Italian painter

Painting by Carlo Dolci at Florence

ANGILBERT (d. 814). French saint. He was educated at the court of Charlemagne, where he fell in love with Charlemagne's unmarried daughter, Bertha, and became by her the father of two children, one of whom was the chronicler Nithard. In 790 he became abbot of S. Riquier, in Picardy. He rebuilt

Angel Inn, Islington. Courtyard of the old hostelry

From an old print

the abbey and endowed it with a library. He died Feb. 19, 814, and by unofficial canonisation figures in the calendar of saints.

ANGINA PECTORIS (Lat. angina, cheking; pectoris, of the breast). Severe paroxysmal pain in the heart. A symptom of various abnormal conditions of the heart, it is a disease of adult life, and is more frequent in men than in women. The chief causes are syphilitic disease of the arteries, gout, and diabetes, and less frequently influenza. The pain comes on suddenly, usually in consequence of muscular effort or strong emotion, such as a fit of anger. The face is pale and the body may be covered with sweat. The paroxysm lasts from a few seconds to a minute or two. Inhalation of nitrite of amyl is often of great value in relieving the pain.

Pseudo-angina, or false angina pectoris, is a condition of paroxysmal pain in the heart which is often mistaken for the true form, but is much less serious. It occurs most often in women, and is usually an indication of neurasthenia or hysteria. See Heart.

ANGIOSPERM (Greek angion, vessel; sperma, seed). One of the two sub-classes of seed-bearing plants (spermatophytes). It embraces all those natural orders whose seeds are produced in a seed vessel, as opposed to gymnosperms, whose seeds are naked.

ANGKOR or NAGARA THOM. Ruined city of Cambodia, French Indo-China. It stands near the Tonle Sap or Great Lake. Enclosed by walls 30 ft. high, it covers an area of 2 m.

Angiosperm, Horse-chestnut

square, has five splendid gates, and remains of palaces and temples. To the S. is the temple of Angkor Vat, a wonderful building where Brahma and later Buddha were worshipped. One of the finest remaining examples of Khmer architecture, it dates probably from the opening half of the 12th century. It is a Buddhist place of pilgrimage.

ANGLE (Lat. angulus, corner). In the simplest terms, the point where two lines meet, or the line where two surfaces meet. The point of meeting is called the vertex, and when meeting lines are under consideration, the figure formed by the lines emanating from the vertex is the angle.

In the strict mathematical sense, the angle is the measurement of the amount of rotation which would be necessary to make one of the lines coincide with the other. The amount is usually expressed in degrees. When one line is perpendicular to another the number of degrees between them is 90 and the angle is called a right angle. If the angle is less than this it is called an acute angle; if greater, an obtuse angle. Complementary angles are those which make up a right angle, e.g. the angles A D B and B D C.

In aeronautics there are many angles of importance. The chief are the angle of attack or angle of incidence, which is an angle formed

mainland of Wales. Anglesey has generally a flat, unpicturesque surface, relieved by slight undulations, the highest point being Holyhead Hill, 703 ft. Copper is worked, and zinc, limestone, lead ore and marble (the green serpentine of Holyhead Island) are found. Agriculture and cattle rearing receive considerable attention. Beaumaris is the county town, but Holyhead is of greater importance. Amlwch and Llangefni are other places. The county is served by the L.M.S. Rly. The county returns one member to Parliament. Pop. 51,695.

Known as Mona, Anglesey was a stronghold of the Druids, and was subjugated by the Romans A.D. 61 and 78, and finally, in 1272, by Edward I, who built Beaumaris Castle. Off the E. coast is Puffin Island. See Druid.

ANGLESEY, EARL AND MARQUESS OF. Titles held by the families of Annesley and Paget. In 1661 Arthur Annesley (1614-86). Viscount Valentia, was made earl of Anglesey by Charles II. His son James succeeded him, then his descendants until Richard, the 6th earl died in 1761, when the title became extinct.

William Paget, a Londoner, was secretary of state under Henry VIII and Edward VI. He was made a peer as Lord Paget of Beauchamp in 1552 and obtained extensive lands in Staffordshire. The barony passed to his descendants, and the 7th lord was made earl of Uxbridge in 1714, but his title became extinct when his grandson died in 1769. The barony, however, passed to a cousin who was made earl of Uxbridge in 1784. His son became first marquess of Anglesey in 1815, and the title is still held by his descendants. The estates of the family are in Staffordshire and Anglesey; their chief seat is Beauchamp, near Rugby. See Paget.

ANGLESEY, HENRY WILLIAM PAGET, 1ST MARQUESS OF (1768-1854). British soldier and statesman. He was the eldest son of the 1st earl of Uxbridge, and was educated at

He served in Flanders in 1794 and under Sir John Moore in Spain. In command of the British cavalry through the Waterloo campaign in 1815, he lost a leg in the charge on June 18, and was made marquess of Anglesey. In 1828 Anglesey was appointed lord-lieutenant of Ireland. He left Ireland in 1833 and died, a field-marshal, April 29, 1854.

ANGLESITE. Mineral found in many lead regions. A sulphate of lead (PbSO₄), it is insoluble in water, but soluble in acids, potash, and other alkaline solutions. It occurs in a massive form of granular structure, white and rather soft, and also in the form of crystals. Anglesite was first discovered in Anglesey.

ANGLICANISM. Comprehensive term used to describe the extensions throughout the world of the Church of England. Its adherents have taken to other lands the order, teaching and traditions of the Church as it is at home. The Anglican churches in the British dominions overseas do not form a single corporation, as does the Church of England, but nevertheless they look for guidance to England and to the archbishop of Canterbury. It includes the episcopal churches in Scotland, Ireland and Wales, in Canada, Australia and S. Africa, the American episcopal churches and the missionary organizations connected with all these. See Church of England.

ANGLING (A.S. angel, a hook). The art of catching fish with rod, line, and hook, more particularly that branch of fishing which requires delicate manipulation of an artificial or natural bait. The term is specially used to denote the capture of fish as a sport and a means of recreation rather than as a commercial undertaking.

Angling as a sport has several branches. The capture of salmon, sea trout, and river, or brown, trout with the artificial fly is considered the highest form of the art of fishing. General fish or coarse fish, as distinguished from the game fish of the salmon family, are taken by bait-fishing in mid-water, or on the bottom, and in the case of pike by spinning or trolling a natural or artificial lure. The principal fish now included under the category of general, and frequenting rivers, lakes, or ponds, are pike, perch, carp, bream, tench, rudd, roach, chub, eels, and gudgeon. Barbel are only found in flowing water, and dace do not thrive, as a rule, in lakes. Chub occasionally resort to still water, but they prefer streams.

The outfit for the general fisherman consists of a pike rod, a bottom rod, landing net, reels, two lines, one stout and one finer, hooks of various sizes, gut casts, and two or three floats.

Trout fishing with the artificial fly is an art that excels all others in the sport of angling. The easiest form of fly-fishing is with a wet or sunk fly in a rough mountain brook, well stocked with free-rising fish. Two or three flies may be used. These are attached to a fine gut cast about 3 yds. long.

Anglesey. Island county off the coast of N. Wales. It was the last stronghold of the British Druids.

Angle. Diagram illustrating four of the more important kinds of angle in aeronautics

by the chord of the wings with the line of flight of the aeroplane; the angle of entry, which is the angle formed by the intersection of the line of flight with the tangent of the leading edge of the plane; the dihedral angle, which is the angle between two planes; and the gliding angle, which is the angle of descent which an aeroplane makes when gliding to the ground in still air after the engine has been put out of action.

ANGLER FISH (*Lophius piscatorius*). A fish of the order Teleostei, or bony fishes. Common around the British coasts, it ranges in length from 3 ft. to 5 ft., and is known also as the sea devil, the fishing frog, and the gab. Extremely ugly and awkward in movement, it usually lurks in the weeds by the shore, where it can walk along the bottom by means of its paired fins. Its conspicuous feature is its enormous head. It derives its name from lying in wait on the sand or mud, with the bones of the first back fin stalks waving like fronds of seaweed. These attract small fish, which are promptly snapped up.

ANGLESEY OR ANGLESEA. Island and county of North Wales. It has a length of 21 m., a breadth of 28 m., and an area of 275 sq. m. Menai Strait separates it from the

Anglesey. The South Stack Lighthouse off Holyhead Island, the most westerly point of the county. The port of Holyhead is on this island

Westminster and Christ Church, Oxford. After sitting in the House of Commons 1790-6 and 1806-12, he succeeded his father as earl in 1812.

Success depends upon careful stalking, especially in clear waters with a moderate flow. When the floating fly falls lightly on the stream, no movement must be imparted to it, but it should sail down with the current, without the slightest drag of the cast. The avoidance of the fatal drag can only be learnt by practice and perseverance. In this form of fishing the fly must be tied for the purpose, with erect wings resembling the natural insect.

suzerain of Egypt, took up the matter, and in 1896-98 the country was subjugated by an Anglo-Egyptian force. When Britain recognized the independence of Egypt in 1922 she retained her hold on the Sudan. See Egypt; Sudan.

ANGLO-SAXON.

The Sudan exports ivory, cotton and gum arabic. The area under cotton has increased greatly, owing partly to irrigation, and ginning factories have been opened. A little gold is mined, and there are large beds of salt. Cattle, sheep, goats and camels are kept in great quantities, and much millet, the staple food, is grown. There is a forest area which is rich in rubber, ebony, bamboo and other valuable trees. A railway owned by the state runs from Khartoum to Wadi Halfa, with branches to Port Sudan, Kassala, a cotton-growing centre, and elsewhere. The unit of currency is the piastre, 100 of which go to the £1 sterling; of weight the kantar (99·05 lb.); and of area the feddan or 5,024 square yards.

Egypt ruled the Sudan until a revolt in 1882 destroyed her authority. After a period of anarchy Great Britain, as the

The compilation of the Chronicle was probably begun in the time of Alfred the Great, just before 900, and possibly at his instigation. Its early part was taken from Bede's History, from oral traditions, and from other sources, and is of little value. Scanty at first, it is much fuller for the 7th and succeeding centuries, and for the 8th and 9th especially is valuable. The best edition is C. Plummer's, 1892. *See* Alfred; English Literature.

ANGOLA. Portuguese possession in Africa. On the west coast it has a coastline of 1,000 miles. Its area is 485,000 sq. m. and its pop. 2,500,000. It is divided into 12 administrative districts, is ruled by a high commissioner, and has S. Paulo de Loanda for its capital. Other towns are Kabinda, Amhriz and Benguella. The chief products are coffee, rubber, ivory, cotton, sugar, maize and hides. Tobacco is grown and minerals, including diamonds, oil, copper, iron and salt, have been found.

Angora, capital of Turkey. The old town, still surrounded by its medieval walls, is seen on the hill at the back. To the left is the wireless station

The colony has about 900 miles of railway, good roads and telegraph and cable services. The unit of currency is the angolar, a coin introduced in 1928. Angola has been Portuguese since 1575 except from 1641-48, when it was Dutch.

ANGORA. City of Turkey and since 1923 the capital of the republic. The Turkish name is Ankara. In Asia Minor, it stands on the Angora river, about 220 m. from Constantinople, and is a terminus of a branch of the Anatolian Rly. Here, in 1919, Mustafa Kemal set up a nationalist government. The buildings include mosques and the newer ones erected for government purposes, including the Parliament House. Great improvements were put in hand after 1919, and the city has modern systems of drainage and water supply, and is furnished with electric light. It has a wireless station and a telephone service, and industries, such as saw and flour mills, have been started. The ancient Ancyra, Angora was an important place on the caravan route from Constantinople to Syria. The Romans built temples here and later it fell into the hands of the Turks. Pop. 74,784.

Angora goat. Long-haired breed that produces soft, light wool

The Angora goat, a variety of the Asiatic goat, is famous for its long hair. The goats are largely bred in the district, and the fleece, called mohair, is exported from here. See Mohair; Turkey.

ANGOSTURA. Name of the city in Venezuela now called Ciudad Bolívar (q.v.).

The bark of a small tree which grows in Venezuela is called angostura or cusparia. It contains an aromatic drug which is used as a carminative and sometimes in cases of fever and dysentery. It is also a constituent of angostura bitters.

ANGOULEME. City of France. The capital of the department of Charente, it stands on a hill between the Charente and its tributary, the Anguennne, is 83 m. from Bordeaux on the rly. to Poitiers, and is at the head of the navigation of the river. It has a trade in wine and paper is made here. The cathedral erected in the 11th and 12th centuries has been altered considerably. It is surrounded by boulevards which occupy the site of the fortifications. The hôtel de ville, now a museum, is an imposing building. Pop. 34,900.

The counts of Angoulême were persons of importance in France before their lands passed to the king. In 1619 Charles, a natural son of King Charles IX, was made duke of Angoulême, and later the same title was borne by Louis Antoine (1775-1844), who was the eldest son of Charles X.

ANGRA PEQUENA. Harbour in the South-West Africa Protectorate, 150 m. N. of the mouth of the Orange river. Here, on April 9, 1883, Adolph Lüderitz established a German settlement which became the protectorate of German South-West Africa. The township is connected with the main rly. system in South-West Africa. It was captured by the S. African forces Sept. 19, 1914, and its original Portuguese designation, which means little bay, was re-adopted as its official name. Near are diamond fields. Pop. 2,025.

ANGUS. Eastern maritime county of Scotland, formerly called Forfarshire. It is bounded S. by the Firth of Tay, and has an area of 873 sq. m. It contains some wild and beautiful scenery. In it are Strathmore and the Sidlaw Hills. Glas Meal (3,500 ft), one of the Grampians, is the highest point. The N. and S. Esk and the Isla are the main streams, and of several small lakes Loch Lee is the largest. Agriculture and cattle rearing are prominent, and jute and flax manufactures occupy many people.

The L.M.S. and L.N.E. Rlys. serve the county. Forfar, the county town, Dundee, Arbroath, Brechin, and Montrose are the principal towns. Glamis with its castle is in the county. Excluding the burghs, it returns one member to Parliament. The antiquities include the castle ruins of Edzell and Melgund, and the round tower at Brechin. Pop. 271,000.

LITERARY ASSOCIATIONS. At Dundee in 1465 was born Hector Boece, and nearly two centuries later, at Baldovie, Andrew Melville. Among the county's poets are Alexander Ross, the Lochlee schoolmaster; William Thom, the weaver, who lived for some years in Dundee; and James Tytler, the dialect poet. James Mill was born at Northwater Bridge, Logic Pert, and Sir Charles Lyell at Kinnordy, near Kirriemuir. At Kirriemuir (q.v.) itself Sir James Barrie was born.

ANHALT. State of the German republic. Its area is 888 sq. m. and it has a population of 351,000, who are mostly Protestants. Dessau is the capital and Bernburg the next largest town.

Anhalt lies on both sides of the Elbes which, with the Saale and the Mulde, flow,

through it. Its soil is generally fertile and produces wheat, vegetables, tobacco, hops, etc., while many cattle are reared. It has extensive forests in which deer abound, and fish are plentiful in the rivers. The district is one of the greatest chemical producing areas in the world. The railways are incorporated with those of Prussia.

Anhalt was separated from Saxony early in the 13th century, and until 1800 a bewildering succession of petty rulers governed Anhalt-Zerbst, Anhalt-Dessau, and other small districts. In 1863 Anhalt-Bernburg and Anhalt-Dessau, the surviving duchies, were united under Leopold of Anhalt-Dessau. He called a single landtag for all Anhalt and his troops assisted Prussia in the war of 1866. In 1871 Anhalt joined the German Empire. In Nov., 1918, the reigning duke abdicated and a new constitution was adopted.

ANHYDRIDES (Greek an-, not; hydor, water) Oxides which react with water to

Angus. Map of the east coast county of Scotland, formerly known as Forfarshire. The Braes of Angus form part of the great range of the Grampians

form acids or are obtained from acids by withdrawing water. Acid anhydrides are the acid radicals remaining after abstracting water from the acid. Similarly, the anhydride of an organic body is the substance obtained from it by the elimination of water. Anhydrous is the term applied to a substance with no water in it. A crystal with no water of crystallisation is said to be anhydrous.

Sulphate of calcium exists naturally in an anhydrous form, and is known as anhydrite, the variety containing water being named gypsum or selenite.

ANI, PAPYRUS OF. Finest extant example, 78 ft. long, of the Egyptian Book of the Dead. Made in honour of a Theban scribe Ani about 1500 B.C., its magnificently coloured vignettes, now in the British Museum, depict the ceremonial at an Egyptian funeral and the

amoebæ, infusorians, and blood parasites. See the articles on the several classes mentioned above, and on the various animals.

ANIMAL INTELLIGENCE. In animals intelligence, or quickness of mental apprehension, is usually measured by aptitude for

rated. Experiments carried out under scientific conditions at a circus in New York showed that, during brief periods of maximum effort, for every pound of its own weight an elephant pulled 729 lb.; a horse, 822 to 1,172 lb.; a camel, 764 lb.; a man, 8 to 1,166 lb. See Horse Power.

Ani. Portion of the magnificent papyrus made in honour of the Theban scribe Ani about 1500 B.C. This papyrus is the finest known example of the Egyptian Book of the Dead. It depicts among other incidents a funeral procession, and, as shown here, the weighing of the soul before the judgement seat.

Reduction from the original in the British Museum

weighing of the soul before the judgement seat. A papyrus in the Cairo Museum contains the paternal precepts of another scribe Ani of about 600 B.C. See Book of the Dead.

ANILINE (Arab. annil, indigo) ($C_6H_5NH_2$). Colourless oily liquid used as the starting point in the manufacture of a series of aniline dyes. Aniline is made by distilling nitrobenzene ($C_6H_5NO_2$), scrapings of soft iron castings (swarf), and hydrochloric acid. The three qualities of aniline made are pure aniline oil, aniline for red, and toluidine. Aniline combines with acids to form well-crystallisable salts, one of these, the hydrochloride, being prepared on a large scale and known commercially as aniline salt ($C_6H_5NH_2 \cdot HCl$). See Dyes.

ANIMAL (Latin, living being). Scientific name for all living creatures except plants. A living creature may be defined as an organism which exhibits five forms of activity—movement, sensation, nutrition, growth, and reproduction. It moves by its own impulse, possesses the power of sensation, or irritability, and responds to the impact of external objects or forces. It takes in nutriment, which becomes part of its own tissues, to repair a waste continually going on as the result of activity. It grows by this process, and it possesses organs of reproduction.

The animal kingdom is divided into phyla or sub-kingdoms, and these again are subdivided into about sixteen classes. The classes are divided into orders; each order is subdivided into families; each family into genera; and each genus into species.

Into a single species are grouped, generally, all animals so far identified in form that they cannot well be separated, and that interbreed and have fertile offspring. The chief classes of the animal kingdom may be thus enumerated, beginning with the highest:

I. Vertebrates (backboned). Class 1. Mammalia; 2. Aves (birds); 3. Reptilia (reptiles); 4. Amphibia (frogs, newts, etc.); 5. Pisces (fishes); 6. Cyclostomata (round-mouthed fishes); 7. Cephalochorda (amphioxus); 8. Urochorda (sea-squirrels); 9. Hemichorda (balanoglossus).

II. Invertebrates (without backbone). Class 1. Mollusca (snails, shellfish, and cuttle-fish); 2. Arthropoda (spiders, insects, crustaceans, etc.); 3. Echinodermata (starfishes and sea-urchins); 4. Annelida (worms, leeches, etc.); 5. Coelenterata (jelly-fish, corals, sea-anemones); 6. Porifera (sponge).

III. Protozoa (first forms of life). Includes

learning under training or by readiness in finding out things for themselves. In reality, intelligent behaviour is manifested by the originality of the actions concerned, and by the individuality displayed in dealing with novel conditions. This conception of intelligence serves to distinguish it from instinct.

Many alleged intelligent actions of domesticated or captive animals are either the direct outcome, or slight modifications, of simple instincts. Under natural conditions the lives of many vertebrate animals depend upon their rapidity of response to the slightest

is possible that animal worship may be the primary origin of animal domestication.

Functionally, beast cults are related to the chief material concerns of their worshippers. The nomad hunters of N Asia reverence the hear, many American Indians the deer. The pastoral races of the ancient Nile valley and of Aryan India paid divine honours to the cow. Dangerous animals are propitiated in the case of the leopard (W. Africa), lion (Bantu Africa), tiger (S.E. Asia), hawk (N. Borneo). A potent motive for the worship of animals is their supposed kinship with

man as tribal ancestors in the communion of the totem. Animal worship reaches its most systematic development in Hinduism. See Totemism.

ANIMISM (Latin anima, soul). Belief in spiritual beings, which is the philosophic groundwork of all primitive culture. It should be distinguished from animatism, which attributes to natural objects and phenomena the ability to

movement or sound. They are, therefore, exceedingly quick at detecting and acting upon signs from their trainer which are likely to pass unnoticed by onlookers. In this faculty may be the explanation of the alleged spelling and counting capabilities of horses and dogs.

ANIMAL POWER.

Standard of work that certain animals can perform. Watt estimated that a horse could do work equivalent to raising 33,000 lb. one foot per minute (33,000 foot-pounds). In practice this is too high. 22,000 ft.-lb. being about an average, but the figure of 33,000 has been adopted as the standard horse-power by which engines are

Animal Worship. Old Egyptian figures showing a king making an offering to the sacred bull, Apis. Above: Snake worship in India

exercise personal will power, apart from a separate soul.

To the savage mind a spirit may be a thing of mystery, but not an abstraction, as when the natives of Danger Island, in the Indian Ocean, employ rope nooses as traps for errant

souls. Moreover, not all spirits are traceable to a material home, while many are conceived as able to enter at will different kinds of bodies, human, animal, or inanimate. They are thus often creatures of the imagination rather than objective ghosts.

There is little, if any, moral element in animism. The belief that the after-life is determined by the ethical acts of the present belongs to a higher stage. Among animistic peoples ethics is essentially obedience to tribal law. It was after religion had come to exert a more peremptory hold on the attitude of the individual soul that to customary law it added sanctions based upon the fear of subsequent retribution, or the expectation of ultimate reward. See Anthropology; Spiritualism.

ANISE (*Pimpinella anisum*). Perennial herb of the natural order Umbelliferae. Anise is a native of S. Europe. It has leaves cut into lobed or toothed leaflets, and minute white flowers. The little fruits are pierced with tubes filled with an aromatic essential oil. The fruits, the aniseed of commerce, are used as a flavouring and the oil extracted is used in medicine. Much of the commercial oil of anise is obtained from the fruits of star anise, an evergreen shrub of the order Magnoliaceae, and a native of China and Japan.

Anise. The star anise, from which much of the oil used in medicine and for flavouring is obtained

ANJOU. Old province of France. It lay around its capital, Angers, on the Maine, and came into existence in the 7th or 8th century. In the 10th century it was ruled by Fulk, founder of the family of the counts of Anjou. One of these counts, a later Fulk, warred with Henry I of England, but in 1129 Henry's daughter Matilda married Fulk's son Geoffrey.

Henry II of England, the son of this marriage, became count of Anjou. His son John lost Anjou about 1203, when it was seized by Philip Augustus of France, and henceforward it belonged to his successors, except when, during the reigns of Henry V and Henry VI, it was again an English possession. It was finally recovered by France about 1444. In 1360 the count was made a duke. Since the Revolution it has formed the department of Maine-et-Loire and part of the departments of Indre-et-Loire, Mayenne and Sarthe. See Angevin.

ANKER. Old Dutch measure of liquid capacity. Formerly used in England, where it contained ten gallons of wine, it is still used in S. Africa, equalling $7\frac{1}{2}$ gallons. It was also used in Scotland, where it contained 20 pints.

ANKH. Ancient Egyptian symbol resembling a loop surmounting a T. From its use at coffin ends under the 1st dynasty, it is now recognized as having originated as a sandal-string. As its name resembled that of life it became the symbol of life, and as such is depicted in later ages in the hands of gods. By local association it became among the early Coptic Christians the sign of the cross.

Ankh

ANKLE. A hinge joint of the human body, scientifically known as ginglymus. It possesses very great strength owing to the ligaments which surround it and the close interlocking of the bony surfaces, the ends of the leg bones being prolonged down on each side to form a hollow resembling a mortice into which the ankle bone fits.

Injuries of the ankle are sprain, dislocation, and fracture of the bones forming the joint. Sprain is usually due to twisting or wrenching

the foot in a fall or "stepping over," and is accompanied by pain and swelling of the joint and sometimes discoloration of the skin if the blood vessels have been injured. The treatment is to apply cooling lotions for a few days while the symptoms are acute and to keep the foot at rest, but as soon as the pain and swelling have sufficiently subsided gentle massage should be begun and movements of the joints made in order to prevent adhesions and permanent stiffness resulting.

Ankle. Bones of the joint that connects the foot with the leg

Disuse of the ankle is most frequently tuberculous, a pulpy swelling gradually involving the whole region of the joint, with impairment and eventually loss of movement of the foot. The treatment is to give the joint complete rest for a prolonged period either by the application of splints or, and often preferably, by encasing it in plaster of Paris. See Anatomy; Man.

ANKLET. A ring worn upon the ankle as a bracelet is on the wrist. It is specially in favour with the peoples of Asia, Polynesia, and Africa. Anklets are made of metals, glass, and also of textiles and woven

grasses. Asiatic dancing girls often have small bells attached to their anklets, while some African tribes wear anklets of spiky grasses as a protection from snakes. See Charm.

ANKYLOSIS. Partial or complete fixation of a joint resulting from inflammation following disease or injury. The new tissue which is formed and unites the bones may be either fibrous or bony. Where only a small amount of fibrous tissue has been formed, the condition may be improved by massage, exercises, or breaking down the adhesions by forcible extension of the joint under an anaesthetic. Severe cases can sometimes be improved by an operation. See Ankle.

ANKYLOSTOMIASIS (Gr. ankylos, hooked; stoma, mouth). Disease characterised by progressive anaemia, due to a parasite which is a worm, the male being about 7 to 11 millimetres in length and the female about 10 to 18 millimetres. The American form is shorter and thinner than the other. The disease is widespread in tropical and sub-tropical countries, and during recent years has much increased in Germany.

ANNA. Indian coin, the sixteenth part of a rupee. It is about equivalent to a penny, and is divided into four pice, or 12 pie.

ANNA COMNENA (1083-1148). Earliest female historian. Born at Constantinople, Dec. 1, 1083, daughter of the emperor Alexius I Comnenus, she was the wife of the Byzantine historian, Nicephorus Bryennius. In 1118, when her brother John succeeded, she intrigued to depose him. The conspiracy was detected,

Anna. The Indian nickel coin, of about one penny in value. Actual size

her property was confiscated, and Anna fled to a convent, devoting the rest of her life to writing the *Alexiad*. This prolix work, in fifteen books, is rather a panegyric of her father than a serious contribution to history. The first two books contain a sketch of the period from 1069 to 1081. Scott made use of the *Alexiad* in Count Robert of Paris.

ANNAM. French protectorate in S.E. Asia; the central littoral of French Indo-China. Extending for 750 m. along the China Sea, with a mean breadth of 98 m. and an area of 40,000 sq. m., it adjoins Tongking on the N., Laos and Cambodia on the W., and Cochinchina on the S.W. Its population is about 5,300,000, but there are a further 800,000 of Annamese race in other parts of Indo-China. Hué is the capital, and Tourane is the chief seaport. The country's products include rice, cotton, silk, sugar, maize, and spices. Copper, coal, iron, and zinc are mined. A railway line runs along the coast.

The government is a native monarchy under French control. The king, Bao-Dai, who succeeded in 1925, resides at Hué. The French resident superior presides over the protectorate council, composed of departmental officials and four members of the comat. A chamber of representatives was set up in 1926. Foreign relations are directed from Paris through the governor-general of Indo-China in council. Each of the fourteen provinces has a resident, but the internal administration is entrusted to Annamese mandarins.

For some centuries Annam was under Chinese rule, but a native monarchy, set up in 968, gradually gained power, and in 1428 the country became independent. In 1787 the French appeared, and in 1884 a French protectorate was established. See Indo-China.

Annam. Two Moïsi, primitive natives of the interior

ANNAN. Burgh and seaport of Dumfriesshire, Scotland. It stands on the Annan, $1\frac{1}{2}$ m. from its mouth, in the Solway Firth, and 18 m. E.S.E. of Dumfries, on the L.M.S. Rly. Its burghers have the right of fishing for salmon in the Solway. Edward Irving, founder of the Catholic Apostolic Church, was a native of Annan, and Thomas Carlyle was a schoolboy here. The town was frequently involved in the wars with England. Pop. 4,219.

Annapolis is the part of Dumfriesshire through which the river Annan flows. It is 30 m. long and about 16 m. broad. Near the source of the river is a hollow known as the Devil's Beef-tub or Beef-stand, which figures in Scott's *Redgauntlet*.

A town of New South Wales, really an industrial suburb of Sydney, is also called Annapolis. Pop. 12,500.

ANNAPOLIS. Town of Nova Scotia, Canada. It is on Annapolis Bay, an arm of the Bay of Fundy, 95 m. by rly. W. of Halifax. Founded by the French as Port Royal in 1604, it became British in 1713, and was the capital of Nova Scotia until 1879. The English renamed it Annapolis in compliment to Queen Anne. It has a good harbour with steamer service across the Bay of Fundy.

Another Annapolis is the capital of Maryland, U.S.A. It is 26 m. from Baltimore and was founded in 1649, its name being changed later from Providence to Annapolis in honour of Queen Anne. Pop. 11,200.

ANI, PAPYRUS OF. Finest extant example, 78 ft. long, of the Egyptian Book of the Dead. Made in honour of a Theban scribe Ani about 1500 B.C., its magnificently coloured vignettes, now in the British Museum, depict the ceremonial at an Egyptian funeral and the

amoebæ, infusorians, and blood parasites. See the articles on the several classes mentioned above, and on the various animals.

ANIMAL INTELLIGENCE. In animals intelligence, or quickness of mental apprehension, is usually measured by aptitude for

rated. Experiments carried out under scientific conditions at a circus in New York showed that, during brief periods of maximum effort, for every pound of its own weight an elephant pulled 729 lb.; a horse, 322 to 1-172 lb.; a camel, 764 lb.; a man, 8 to 1-166 lb. See Horse Power.

Ani. Portion of the magnificent papyrus made in honour of the Theban scribe Ani about 1500 B.C. This papyrus is the finest known example of the Egyptian Book of the Dead. It depicts among other incidents a funeral procession, and, as shown here, the weighing of the soul before the judgement seat.

Standard of work that certain animals can perform. Watt estimated that a horse could do work equivalent to raising 33,000 lb. one foot per minute (33,000 foot-pounds). In practice this is too high. 22,000 ft.-lb. being about an average, but the figure of 33,000 has been adopted as the standard horse-power by which engines are

Animal Worship. Old Egyptian figures showing a king making an offering to the sacred bull, Apis. Above: Snake worship in India

exercise personal will power, apart from a separate soul.

To the savage mind a spirit may be a thing of mystery, but not an abstraction, as when the natives of Danger Island, in the Indian Ocean, employ rope nooses as traps for errant

There are two divisions, hardy and half-hardy. Hardy annuals, if sown in the open ground in spring, flower in the summer, and die in the autumn of the same year. Half-hardy annuals require to be started in heat, that is, sown in boxes in a heated greenhouse, botbed, or frame, and transplanted in the open air when all danger of late frosts is over. See Gardening; Perennial.

ANNUITY (Latin *annus*, year). Periodical payment made for a limited time and carrying with it the repayment of capital by regular instalments. The time during which an annuity is payable may be either a fixed term of years, or the duration of one or more lives. The word is sometimes used for a pension, as when the king grants an annuity to a retiring judge, or Parliament votes one to a member of the royal family.

Annuities are in most cases purchased from either the Government, through the Post Office Savings Bank, or from insurance companies. The cost of annuities is calculated by skilled actuaries. Every £100 will purchase a certain annual income, varying according to the age and sex of the intending annuitant.

ANNULET (Lat. *annulus*, a ring). Architectural term for the fillets at the base of the Doric capital. In heraldry, as a mark of cadency, the word denotes the fifth son and his descendants.

ANNUNCIATION (Lat. *annuntiare*, to announce). Literally, the act of making known or announcing anything officially or publicly. The Feast of the Annunciation was appointed by the Church to commemorate the day on which the angel Gabriel announced to the Virgin Mary that she should bring forth a son and should call his name Jesus (Luke 1). The day, the observance of which dates from the 7th century, has been always observed in the Western Church on March 25, except in Milan. In the Church of England calendar the title is the Annunciation of the Virgin Mary; in the table of Lessons proper for holy days, Annunciation of Our Lady—hence Lady Day. The subject of the Annunciation has inspired some famous paintings. See Incarnation; Lady Day.

ANNUNZIATA, ORDER OF THE. An Italian order dating from 1362. It was founded by Amadeus VI, count of Savoy, as the Order of the Collar. It was remodelled in 1518, and became Italian when the kings of Sardinia and counts of Savoy became kings of Italy. The badge is a representation of the Annunciation, surrounded by knots; the ribbon is blue.

ANNUNZIO, GABRIELE D' (b. 1863). Italian poet and novelist. He was born at Pescara, of Dalmatian extraction, his patronymic being Ragnetta. His first volume of poems, *Primo Vere*, published when he was about fifteen, was followed in 1882 by the prose *Terra Vergine*; then came *Canto Novo*, 1882, and *Intermezzo de Rime*, 1883. Poems and novels, brilliant in quality but frequently marked by sensuousness, followed rapidly, and some of them have been translated into English, notably *The Virgins of the Rocks*, 1899.

d'Annunzio, Italian poet, novelist, and patriot

In May, 1915, Annunzio returned to Rome

from France, where he had become fired with hatred against German vandalism, and his eloquence in speech and print had a great influence in determining Italy's choice. He became a daring airman and flew over enemy towns and bombed Austrian troops, losing the sight of an eye as the result of an accident. In 1919 Annunzio appeared as a new Garibaldi, and led a raid on Fiume in Sept., 1919. He administered its affairs and issued flamboyant manifestoes. In Nov. he occupied Zara, where he acted in a similar manner. In 1924 he became Prince of Monte Nevosa.

One of the greatest of modern Italian authors, Annunzio shows in his poetry that natural magic which is one of the rarest endowments of genius, and in his prose is almost as successful, though it has been said that he is wanting in the creative gift.

ANODE (Gr. *anodos*, way up). Plate of a cell of an electric battery by which the current enters the electrolyte or solution. The anode is, therefore, the positive plate of a cell, but forms the negative pole of the external circuit. In the thermionic valve the anode or plate is usually a metal cylinder. It is maintained at a potential higher than that of the filament or cathode, and attracts the electrons sent out by the filament. See Electrode; Cathode; Thermionic Valve.

ANOINTING. Ceremonial use of consecrated oil or ointment. The practice is often referred to in the Bible. The custom prevailed

in the early Christian Church of anointing at baptism, confirmation (chrism), in time of sickness, and at ordination, and is still so retained in the Roman Catholic Church. In the Anglican Church anointing is retained only at a coronation of the sovereign. See Extreme Unction.

ANORTHITE. A silicate of calcium and aluminium, and an important member of the group of plagioclase feldspars. Like all the soda-lime feldspars, it crystallises in forms belonging to the triclinic system. It is a prime constituent of basalt and other igneous rocks, and also occurs as a product of the thermal metamorphism of calcareous rocks.

ANORTHOCLASE (Gr. *an-*, not; *orthos*, straight; *klasis*, fracture). Feldspar similar to orthoclase, but with soda replacing potash in its composition. Anorthoclase is a constituent of many alkaline igneous rocks. See Rocks.

ANSBACH OR **ANSPACH**. Town of Bavaria. It stands on the river Rezat, 27 m. by rly. from Nuremberg, and trades in agricultural produce. The palace of the margraves, erected 1713-23, now used for public offices, stands in a large park. Ansbach has several fine ancient churches, schools, and a museum. It has some manufactures, and at one time it was famous for its porcelain. The little principality of which it was the capital was ruled by a branch of the Hohenzollern family from 1362 to 1886. It was transferred to Bavaria in 1806. Pop. 20,600.

ANSELM (1033-1109). English saint and theologian. Born at Aosta, he entered in 1060 the Benedictine abbey at Bee, and in 1078 was made abbot. On the death of Lanfranc, archbishop of Canterbury, in 1089 William Rufus appropriated the revenues of

the see until 1093, when he appointed Anselm to be Lanfranc's successor. The king and Anselm were soon in collision, the questions at issue being the relations with the pope and the duty of the archbishop to help the king in his wars. The result was that Anselm left England.

William was succeeded in 1100 by his brother Henry I, who sought a reconciliation with the exiled archbishop, and in 1105 a compromise was reached. The insignia of ecclesiastical offices were to be bestowed only by the pope; but practically, though not as a right, royal appointments would be recognized and prelates and abbots were to do homage for their temporalities to the king. Anselm finally returned to England in 1107, and died April 21, 1109. He was canonised in 1494. Anselm was a great theologian. The most notable of his works is *Cur Deus Homo*, an exposition of the doctrine of the Incarnation. See Investiture; Scholasticism; consult also S. Anselm, R. W. Church, 1888.

ANSON, GEORGE ANSON, LORD (1697-1762). British admiral. Born April 23, 1697, at Shugborough, Staffordshire, he entered the navy in 1712, became a captain 1724, and in 1739, on the outbreak of the war with Spain, was appointed to the command of a squadron of six ships, in one of which he circumnavigated the globe and brought back treasure to the value of £500,000. Anson's next triumph was the defeat of the French fleet off Cape Finisterre, May 3, 1747, in recognition of which he was made Baron Anson of Soberton. From 1751-6 he was first lord of the Admiralty, and again from 1757 until his death at Moor Park, Herts, June 6, 1762. Anson was responsible for the organization of the marines in their present form.

Baron Anson of Soberton, British admiral and naval administrator
After Sir Joshua Reynolds

ANSTEX, F. (b. 1856). The pen-name of Thomas Anstey Guthrie, British humorist and playwright. Born at Kensington, Aug. 8, 1856, and educated at Trinity Hall, Cambridge, his writings, characterised by a fanciful humour, include *Vice Versa*, 1882; *The Giant's Robe*, 1883; *The Tinted Venus*, 1885; *The Brass Bottle*, 1900; *Salted Almonds*, 1906; and *In Brief Authority*, 1915. In 1886 he joined the regular staff of Punch, after which much of his best work appeared in that periodical: *Voces Populi*, rich in penetrating humour; *The Man from Blankley's*; *Baboo Jabberjee, B.A.*, etc. On the stage *The Man from Blankley's* enjoyed considerable vogue, while *Vice Versa* and *The Brass Bottle* were successful. His adaptation of Molière's *Le Malade imaginaire* was produced at the Old Vic, London, in 1929.

ANSTRUTHER. A harbour and market town of Fifeshire, Scotland. It stands on the Firth of Forth, 9 m. S.S.E. of St. Andrews and 19 m. E. of Thornton Junction by the L.N.E. Rly. It consists of the royal burghs of Anstruther Easter, Anstruther Wester, and Kilrenny, has a fine harbour, and is the centre of the Fifeshire fisheries. Market day, Fri. Pop., Easter, 1,011; Wester, 577; Kilrenny, 2,054. Pron. Anster.

ANT. Group of insects belonging to the order Hymenoptera, which includes bees and

S. Anselm's seal
British Museum

Ant. Typical species of the Formicidae family. 1. Brown garden ant, worker. 2. British slave-making ant (*Formica sanguinea*), left, and, to right, one of an enslaved species (*Formica fusca*). 3. Wood ant, worker. 4. Mexican honey-pot ant. 5. Winged male wood ant. 6. Wood ant queen after she has lost her wings and started egg-laying. 7. Section of an ant-hill. 8. Raid of slave-making ants upon a peaceful species. 9. Ant "milking" an aphid on a leaf

wasps. In the ant the first segment of the abdomen is reduced in size to a mere stalk. The queen and males have wings, but the workers, or sterile females, who constitute the bulk of each community, are wingless. About 2,000 species are known.

Ants are regarded as the most intelligent of all insects, and the economy of their communities is even more highly developed than that of the hive bee. Slave-keeping prevails among certain species, and one kind of ant depends entirely upon slave labour for the work of the nest.

At certain seasons the young queens and the males take a nuptial flight. On their return the queens settle down to egg-laying. The eggs are carried about by the workers from one part of the nest to another according to the temperature, and, after they hatch, the legless larvae are fed and tended until in due course they turn into pupae. After some days they emerge as perfect insects, and then go about the work of the community.

The nest consists of a series of passages and chambers constructed in the ground, in masses of fallen leaves and wood debris, or in the trunks of old trees.

Antacid. Term used in medicine for a substance which neutralises acidity. The drug most frequently used is sodium bicarbonate.

ANTAEUS. In Greek mythology, a Libyan giant, son of Poseidon and Gaia (the earth). A mighty wrestler, a fall to the ground only brought him fresh strength from his mother earth. He was conquered by Hercules, who held him out of reach of the earth and squeezed him to death.

ANTALCIDAS (4th century B.C.). Spartan diplomatist and naval commander. In 393 he was sent to detach Persia from Athens, in which he was successful. This agreement and the blockading of their fleet by Antalcidas compelled the Athenians to accept the terms known as the Peace of Antalcidas (387). By this the Greek towns in Asia Minor were to remain under Persian suzerainty, all others being declared independent. Athens, however, was to retain the islands of Imbros, Lemnos, and Scyros. See Greece.

ANTANANARIVO or **TANANARIVO** (French Tananarive). Capital of Madagascar. Situated on a hill, 4,750 ft. above sea level, it is in the central plateau of the island, about 100 m. from the E. coast. Here are the administrative offices, Anglican and Roman Catholic cathedrals, numerous churches, the royal palaces, schools, and colleges. It has several industrial establishments, including a meat preserving factory, and is connected by rly. with Tamatave, the chief seaport. Pop 70,800, including 4,000 Europeans.

ANTARCTICA. The circumpolar continent of the South. Its area is about 5,000,000 sq. m. and it has a coastline of about 14,000 m. Nearly all of it is within the Antarctic Circle, a parallel of latitude drawn about 23½ deg., or 1,700 m., from the South Pole.

Of its various divisions Graham Land is only 700 m. from S. America, and on the other side is Wilkes Land, about 1,700 m. from Tasmania. East of Graham Land is Weddell Sea, one of the great openings of the continent. The other great bay is Ross Sea, fringed by the Great Ice Barrier and bordering S. Victoria Land, which stretches almost to the Pole. At the N.W. corner of Ross Sea are the Balleny Islands, about 1,400 m. from New Zealand, and then going eastward come Oates Land, King

George V Land, Queen Mary Land and Enderby Land. Coats Land fronts Weddell Sea. The great ice barrier, sometimes called Ross Barrier, about the size of France, is the largest sheet of floating ice.

In certain parts, S. Victoria Land, for instance, there are mountains rising to 8,000 ft. or more. Inland of the mountains, round the Pole itself, is a plateau where the overlying ice sheet is between 1,000 and 2,000 ft. thick. The greatest height is 15,500 ft. and the average height about 3,000 and 4,000. There are many extinct volcanoes, but only one, Erebus on Ross Island, is active. Coal has been found. The continent is nearly devoid of life. There are no land animals and only a few birds, notably the penguins on Ross Island and elsewhere. Whales and seals are found. The mosses and lichens seen on the coastal rocks are the only indications of plant life. In addition to coal other payable deposits of minerals are believed to exist.

At the Imperial Conference in 1926 it was declared that by right of discovery the British had a good title to part of Coats Land, Enderby Land, Kemp Land, Queen Mary Land, Wilkes Land, King George V. Land and Oates Land.

Antarctic Circle. This is a parallel of latitude drawn 23½ degrees (approximately) from the south pole, i.e. in latitude 66½° S.

ANTARCTIC EXPLORATION. Exploration in the Antarctic may be said to date from Jan 17, 1773, when James Cook was the first man to cross the Antarctic Circle. The next great step forward occurred in 1819, when William Smith discovered what are now the South Shetland Islands. In 1821 Bollingshausen, a Russian, discovered Peter I Island and Alexander I Land. James Weddell, a Scotsman, reached 74° 15' S. in 1823, in the great bay to which his name has been given. Enderby Land was seen in 1831 by Biscoe, a captain in the service of Enderby Brothers: the next year Biscoe discovered Adelaide Island, the Biscoe Islands, and Graham Land. John Balleny was sent southwards by the same merchants and discovered the islands which bear his name in 1839. D'Urville made Adélie Land in 1840, and in the same year Wilkes, of the U.S. Navy, sailed along the coast of Wilkes Land.

In 1839 the British Admiralty placed James Clark Ross in command of the Erebus and of a British Antarctic expedition. He discovered the Admiralty Mts., Possession Island, Coulman Island, Mt. Melbourne, Franklin Island, and finally the volcanic mts. Erebus and Terror, and Cape Crozier. In each of the following seasons attempts were made by

Antarctic and Arctic circles, showing the way the sun's rays reach them in midsummer and midwinter

Antarctic Exploration. Members of the Amundsen expedition proving themselves to be at the South Pole, Dec. 16, 1911. Scott's expedition reached it one month later

Ross to reach the high latitudes, the best effort being $71^{\circ} 30' S.$ in the Weddell Sea in March, 1843.

On Dec. 21, 1872, the Challenger expedition sailed for the S., and on Feb. 16, 1874, the Challenger was the first steam vessel to cross the Antarctic Circle. King Oscar II Land was discovered by Larsen in 1893. In 1897 the Belgica sailed from Antwerp, under Adrien de Gerlache, with a company which included Roald Amundsen, Dr. Cook, and Henryk Arctowski; the ship was gripped by the ice in March, 1898, and at $71^{\circ} 30' S.$, and for the first time an exploration party spent the winter in the Antarctic.

In 1901 R. F. Scott sailed in the Discovery and landed a party at the foot of Mt. Terror on Ross Island on Jan. 22, 1902. The ship followed the Great Ice Barrier eastward and discovered King Edward VII Land. Winter was passed in McMurdo Sound, and then sledge journeys were made S. over the harrier ice.

Drygalski sailed in the Gauss in 1901 from Hamburg and discovered Kaiser Wilhelm II Land, while Nordenskiöld, in the Antarctic, reached King Oscar II Land, where he wintered. W. S. Bruce sailed in the Scotia in 1902 from the Clyde, wintered at Laurie Island, and in 1904, after refitting at Buenos Aires, the Scotia reached $74^{\circ} 1' S.$ at Coats Land. Mossman remained for meteorological work until 1905 on Laurie Island.

On New Year's Day, 1908, Shackleton, who had been with Scott on his sledge journey over the harrier ice, left New Zealand on the Nimrod, and wintered near Cape Royds. He set out polewards over the barrier ice in Oct., climbed the Beardmore Glacier in Dec., and reached $88^{\circ} 21' S.$ on King Edward VII Plateau on Jan. 9, 1909, an advance on the previous farthest S. of some 420 m. A second sledge party pushed N., ascended the plateau near Mt. Bellingshausen, and discovered the South Magnetic Pole in $72^{\circ} 25' S., 155^{\circ} 16' E.$, at an elevation of 7,260 ft., on Jan. 16, 1909.

Antarctic Exploration. Map of the South Polar region showing the points reached by various explorers and the routes taken by Amundsen, Scott and Byrd in their successful attempts to reach the Pole.

Charcot made a second Antarctic voyage and explored Bellingshausen Sea in 1909-10.

Roald Amundsen left Norway on the Fram in Aug., 1910, and reached the Bay of Whales on the edge of the Great Ice Barrier on Jan. 14, 1911; winter quarters were established, and the dash for the pole began on Oct. 20.

The inner edge of the barrier ice was reached on Nov. 17, at $85^{\circ} S.$, and the pole was reached on Dec. 16, 1911.

Scott left London on the Terra Nova on June 1, 1910, winter quarters being prepared in Jan., 1911, on Ross Island. Sledge parties set out S. in Oct., and on Jan. 4 Scott and four companions, Wilson, Bowers, Oates, and Evans, went onwards from lat. $87^{\circ} 35' S.$ and reached the pole on Jan. 17, 1912.

On Dec. 2, 1911, Mawson sailed from Hobart in the Aurora to explore the area W. of Wilkes Land. Sledging parties explored the neighbouring areas, and the Aurora in her voyages to and from Australia made oceanographical discoveries, and the expedition returned on Feb. 26, 1914.

Shackleton left England in 1914 on the Endurance to attempt a sledge journey from Weddell Sea across Antarctica to Ross Sea. The Endurance was frozen in off the Caird Coast, Jan. 18, 1915, drifted from $76^{\circ} 30' S.$ to $69^{\circ} S.$, where she was crushed on Oct. 27, the crew reaching safety after difficulty.

In 1928 two expeditions set out for the south polar regions, one under Adm. Richard Byrd and the other under Sir Hubert Wilkins. Byrd's first ship left Hoboken in Aug., and he himself left California in Oct. In Nov., 1929, he flew over the pole. In Sept., 1929, Sir Douglas Mawson set out from Cape Town in the Discovery to lead another expedition. A Norwegian expedition also went out for scientific purposes. See Amundsen, R.; Arctic Exploration; Scott, R. F.; etc.

ANTARCTIC OCEAN. Name conventionally applied to the waters of the Atlantic, Pacific, and Indian Oceans which girdle the Antarctic continent. The arbitrary northern limit of the ocean is lat. $60^{\circ} S.$, where it merges with the Southern Ocean. The chief seas of

Antarctic Exploration. 1. Crew of Scott's expedition of 1910-12 in the cabin of the Terra Nova. 2. Sir Hubert Wilkins and his pilot standing by their aeroplane after one of their flights over the South Polar regions in 1929. 3. Shackleton's ship, the Endurance, closely beset by the floating ice and drifting northwards in 1915. She was crushed, but the crew reached safety. 3, from "South," by Sir Ernest Shackleton. London: William Heinemann

the Antarctic Ocean are the Weddell Sea, between Graham Land and Coats Land; the Biscoe Sea, between Coats Land and Enderby

In the larval stage of certain crustaceans the antennae are used as swimming organs, but in adults and in insects they evidently perform

ANTHEM (Gr. anti, against; phonē, sound or voice). Vocal music with sacred words, with or without accompaniment. In the Church of England its place is after the third collect of morning and evening prayer. Modern anthems are very free as to form; they range from the calibre of a simple part song to the dimensions of a sacred cantata.

ANTHOLOGY (Gr. anthos, flower; logeia, to select). Collection of selected poems or prose extracts. The oldest collection is that generally known as the Greek Anthology. It contains selections from 300 Greek poets. There have been several translations into English of selections from the Greek Anthology, notably that of J. W. Mackail.

Anthologies of English poetry are numerous, one of the best known being F. T. Palgrave's Golden Treasury, 1861 and 1897, complete ed. 1909. Another is Sir A. T. Quiller-Couch's Oxford Book of English Verse, 1900. Recent years have seen the production of anthologies on particular themes, something of a new fashion in them being set by E. V. Lucas's The Open Road, 1899. The Great War was responsible for anthologies of war poems.

ANTHONY OF PADUA (1195-1231). Christian saint. He was born at Lishoa of a noble family and entered the Order of Friars Minor (Franciscans) at the age of 25, after he had been for 10 years an Augustinian monk. He was appointed by S. Francis to instruct the order in theology, but he was chiefly famous as a preacher. He died at Vercelli, near Padua, June 13, 1231, and was canonised by Gregory IX in 1232. His tomb is at Padua. Anthony was the friend of all animals, not disdaining to preach to them on occasion. His help is popularly invoked for the recovery of lost goods, and his festival is kept in the Roman Catholic church on June 13.

In medieval times friars of S. Anthony enjoyed the right of allowing their swine to roam at liberty in search of food. Remedy for damage caused by these animals, which were distinguished by a T cross, had to be sought in an ecclesiastical court, and the custom became such a nuisance that many towns compounded with the friars for its extinction.

Antelope. Left the saola antelope, a South African species which is black when adult. Right, the sing, an African waterbuck, grey or reddish in colour. See article below. Gambler Bolton, F.Z.S.

Land; and the Ross Sea, between South Victoria Land and King Edward VII Land. The name Bellingshausen Sea is used for the waters to the W. of Graham Land and N. of Charcot Land. Except in the vicinity of Graham Land there are few islands in the ocean. The Antarctic is the shallowest of all the oceans, the depth averaging 2,000 fathoms.

ANTEATER. Group of animals belonging to the order Edentata. The true anteaters, of which there are three species, all natives of South America, are recognized by the curiously long head and long tube-like muzzle. There are no teeth, and the tongue is long and worm-like, adapted for thrusting into the passages of ants' nests and licking up their inhabitants. The great anteater is about 4 ft. long and 2 ft. in height, with a tail clothed with hair 18 ins. in length, in which it wraps itself when asleep. Another variety, the tamandua, is only half the size and lives mainly in the trees. The pygmy anteater, another arboreal species, is only 6 ins. long.

ANTELOPE. A large group of mammals of the family Bovidae. The term is generally applied to all ruminants that cannot well be described as cattle, sheep, or goats. Most antelopes are graceful and deer-like, bearing horns which are usually long, cylindrical, more or less ringed, and more solid than those of oxen, sheep, or goats. Species are confined to the Old World. In size they range from the hartebeest, which stands about 5 ft. high at the withers, to the little duikers, some of which are no larger than a rabbit with long legs.

sensory functions. Ants appear to recognize one another and possibly communicate by means of these organs.

Antenna is the name given to the aerial wire of a wireless telegraphy sending or receiving station.

Anteater. One of the great anteaters Myrmecophaga jubata, of S. America.

ANTHELION (Gr. anti, against; helios, sun). Concentric rings, halo, or colourless mock sun seen round the shadow of an observer, who, standing with his back to the sun, is gazing upon a moist surface, such as a clond, fog, or dewy grass. The phenomenon is produced by diffraction of light, and is observed when the moist surface has the same angular altitude as is possessed by the sun.

Antenna. Highly magnified feelers of diverse kinds of insects. 1. Antennae of the blow-fly. 2. Whip-like antennae of the hornet. 3. The long antennae of the North European timberman beetle. 4. Antennae of the male cockchafer. 5. Antenna of the silkworm moth. 6. Antenna of a butterfly. 7. Antennae of the male goat. 8. Antenna of the male emperor moth. 9. Whip-like antennae of a worker wood ant. Great care is taken by insects to keep the antennae clean.

ANTENNA (Lat. antenna, sail-yard). Horn-like feeler on the head of insects, crustaceans, and certain other animals. Insects have only a single pair of antennae, but in crustaceans the number is usually more. They are frequently of elaborate structure.

ANTHONY OF THEBES (about 251-356). Christian saint, generally known as S. Anthony the Great. Born at Koma in Upper Egypt of Christian parents, he devoted himself to a religious life, and lived as a hermit until 305. By this time his fame had spread, and many wished to live under his guidance. He therefore established the first Christian monastery near Memphis, which ultimately comprised about 15,000 monks. The community included a number of hermitages, the monks living in solitude in scattered cells. In extreme old age S. Anthony travelled to Alexandria to oppose the Arians. S. Anthony's temptations in the desert have no foundation in history. The main facts of his life are derived from the writings of S. Athanasius. See Monasticism.

ANTHOZOA (Gr. antbos, flower; zoon, animal). A large class of marine organisms, including corals and sea-anemones. See Coral.

ANTHRACENE (Gr. anthrax, coal). Solid hydrocarbon obtained from coal-tar, symbol $C_{14}H_{10}$. Anthracene is employed for the manufacture of alizarin, which on this account is known as anthracene red.

ANTHRACITE. Variety of coal containing a high percentage of carbon. Anthracite burns slowly with very little smoke or flame, and throws out great heat. It is therefore much used by warships and for certain

kinds of household stove, notably in New York, where only anthracite is burned. It is found in great quantities in the western portion of the South Wales coalfield, in Pennsylvania, and in Canada. See Coal.

ANTHRAQUINONE. Substance occurring in the form of yellow needles, symbol $C_{14}H_8O_2$. It is used in the manufacture of artificial alizarin. For industrial purposes anthraquinone is manufactured by treating sublimated anthracene suspended in water with a mixture of sodium dichromate and sulphuric acid.

ANTHRAX (Gr. anthrax, coal, carbuncle). Disease which mainly affects sheep and cattle, but also at times human beings. The disease is extremely rapid, death occurring in a few hours, with rapid decomposition, although cases of recovery are recorded. The temperature rises to a high point; there is progressive weakness, with difficulty of breathing; and blood escapes from the external orifices. In Great Britain horses and sheep are rarely affected, the disease being more common in pigs.

Human beings usually become infected with anthrax as the result of their occupation, e.g. skinning and dressing carcasses, carrying hides, or manipulating wool. The symptoms in human beings vary with the way in which the organisms find an entrance to the body.

Prevention of the disease is exceedingly important, since infection is most often due to germs on pasture. The body of an animal which has died from anthrax should not be dragged over a field, but buried promptly, unopened, in a deep pit surrounded by quicklime; all straw and material known to have been in contact with the animal must be burned; yards should be thoroughly cleaned, and stalls and byres limewashed. Men who have handled the carcass must thoroughly disinfect their hands, and clothes soiled with blood, etc., must be steamed or boiled.

A case of anthrax occurring in a factory or workshop must be notified to the Home Office under the Factory and Workshops Acts

ANTHROPOGEOGRAPHY (Gr. anthropos, man; geographia, geography). The study of physical environment as a factor in the history of mankind. It is concerned with the terrestrial influences underlying human migration in all ages and the variation of man's physical and mental characters. With the aid of physiography it studies differences of stature, pigmentation, muscular energy, viability, capacity for progress, and mental retardation. See Anthropology. Ethnology.

ANTHROPOID APE (Anthropomorpha). The animal that comes nearest to man in form and structure, and is included, together with monkeys and lemurs, in the same natural order (Primates). These apes are tailless, have a single curve to the backbone, and the breast bone is broad and flat as in man.

The fore-limbs end in hands that are larger than the feet; and the thumb and great toe are set at an angle to the other digits, and are opposable to them.

The group includes the gibbons (Hylobates), the orangs (Pitheciens), and the chimpanzees and gorillas (Troglydites). They are natives of the Old World—Africa, Asia, and the islands of the E. Indies. See Animal; Monkey.

ANTHROPOLOGY.

The term anthropology (Gr. anthropos, man; logos, science) was used by Otto Casmann, 1594-5, to denote the mutual relationship of human physiology and human psychology, and it bore that meaning until it acquired a wider one under the impulse given by the appearance of Charles Darwin's *Origin of Species* in 1859. Its two main divisions are (1) physical, the natural history of the human animal. (2) cultural, the study of civilization.

PHYSICAL ANTHROPOLOGY. The student begins by considering the place occupied by man in the animal kingdom. The comparative zoologist points out the similarity of man's physical structure to that of the anthropoid or man-like Primates, and endeavours to trace the course of human evolution.

The oldest fossil bones for which any human characters have been claimed are those of *Sivapithecus indicus*, discovered by Dr. Guy Pilgrim in 1915. The earliest known form in which the lower limbs were adapted for walking on the ground is the Java ape-man, *Pithecanthropus erectus*, of the Pliocene age. To that age, therefore, the origin of two handed, two-footed man is, on our present evidence, to be attributed. That there were Miocene precursors is a necessary inference, but they were probably essentially pre-human.

Existing races have never passed beyond the stage of inherited breeds or zoological varieties. There is to-day but one human species, known as *Homo sapiens* (Lat. man the knowing). The biological test is conclusive—any inter-racial union produces fertile offspring. All breeds, however, are not equally educable, because mental culture is conditioned by brain development. The repugnance of the highest races for mating with the lowest is based upon a reasoned psychology.

CULTURAL ANTHROPOLOGY. Man became differentiated from the brute creation—with its unthinking subservience to environment—when first brain and hand began to react upon each other. His erect posture was inherited from arboreal precursors; when he descended to the ground and walked firmly upon the earth, the hands were released for manual uses, and man the tool-maker began.

In that primeval age which we might call pre-archaeologic family life was already fore-shadowed. The theory of a primal promiscuity of intercourse does not accord with the implications of arboreal life, not to speak of anthropoid usage. The restrictions entailed upon childbearing by considerations of food and shelter fostered maternal care. There was correspondingly imposed an ever-increasing need for the physical and mental nurture which we call education.

The modification of the ape-like jaw proceeded side by side with the introduction of tools in connexion with food, and with the need for eating sparingly and often, due to the position of the abdomen upon a bipedal support. This made it possible for the organs connected with the mouth to utter articulate sounds. Under the guiding intelligence of the brain these came to possess a fixed communicable meaning, and so gave birth to speech, which was aided though not necessarily preceded by gesture.

During the Stone Age, if not before, man acquired the power of producing fire, one of the mightiest events in his history. In that age, too, his inventiveness was displayed in such forms as the spear, the detachable barpoon, the poisoned arrow. He introduced personal adornment as a social no less than a magical device. In tropical lands clothing may have been at first a contrivance for attaching to the person the fool equipment. The protective use of leaves and skins, out of which modesty arose, was also an early institution. When the forest was exchanged, as in palaeolithic Europe, for river valleys and open plains, the camp stations were but seasonal and transient. There is, however, pictorial evidence for the early invention both of the hut and of the tent.

Towards the close of the older Stone Age some progress was made in turning to account the animal herds amid which man lived. This may have been at first the unforeseen and unintended result of the segregation of selected animals for religious purposes. The dog may have domesticated itself by living in companionship with man under conditions of mutual toleration and helpfulness. The taming of other animals for flesh, milk, and locomotion slowly followed.

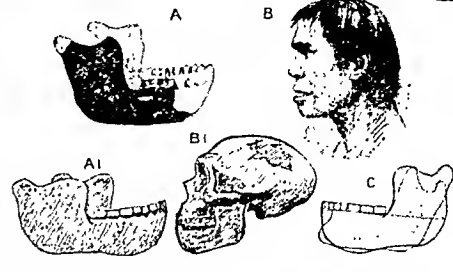

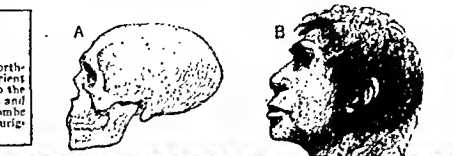

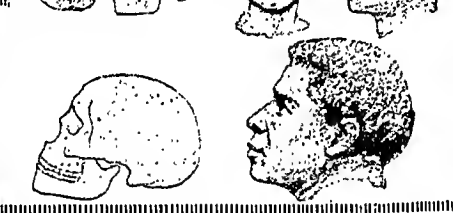

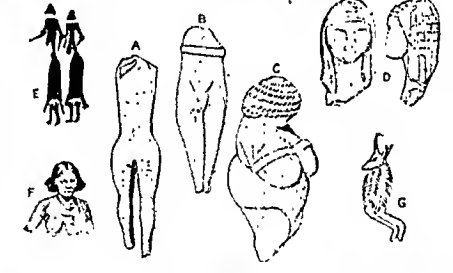

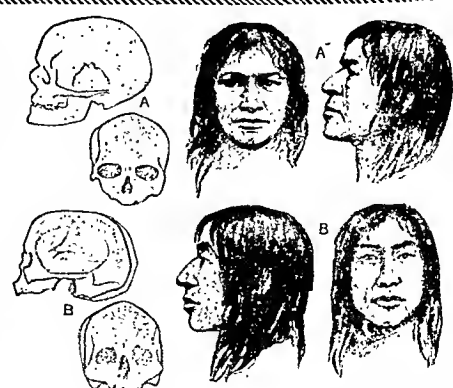

The human family was now able to enter upon a settled existence, and permanent homesteads arose. Around these the women collected their household stuff and their stores of edible grasses and roots. Experience gradually showed that the cereal and fruit supply could be ensured and increased by planting. The domestication of plants meant also the domestication of human life, and turned the hunter into a farmer.

A vigorous crop of inventions now sprang up. The word culture itself denotes in Latin the tillage of the soil. The grinding of corn introduced the staff of life. The digging-stick, still used in Australia, became in tropical Africa the hoe, and in Europe the plough, which in its turn led to the wheeled cart. The use of natural objects (shells, nuts, gourds) for utensils was followed by the invention of basketry, which developed in two directions. From the plaiting of bark and rushes it advanced to weaving. The encasement of the basket in clay for cooking food was one of the contrivances that gave rise to pottery. Lastly, the discovery of the art of smelting and metal-working ushered in the modern world. The practice of pasturage and agriculture brought in its train a new order of social ideas. It led to the practice of food-storage, the parent of capital.

There are chairs of social anthropology in Oxford and Liverpool, of ethnology in Cambridge and London. The Natural History

Anthozoa. 1. *Montipora* (coral). 2. *Coenopiasammia Willeyi* (coral). 3. *Vidiata* (sea-anemone). 4. *Actinoloba Dianthus* (sea-anemone). 5. *Miniata* (sea-anemone).

GEOLOGICAL EPOCH	IMPLEMENTS	RACES	TYPES	SKULLS & RECONSTRUCTIONS
<p>A.—EARLY PLEISTOCENE Epoch of the Hiperopotamus A.—Eolithic Age Period I.—Bentonian Period II.—Maffian Period III.—Meyinian From Reuil, Maffie, and Meyin—Belgian Sites No dules not designedly chipped. Flint held directly in hand, not used as a "chopper."</p> <p>B.—Palaeolithic Age Period I.—Strepyan (After Strepy, Belgium) Very roughly worked flints, marking a transition from the Eolithic to the Palaeolithic form. Nodules generally flaked at the point.</p>	<p>A and B.—Eoliths from the Cromer Forest Bed.</p> <p>C.—An eolith from Mesvivo.</p> <p>A and B.—Strepyan implements from the lower gravels of St. Achel.</p> <p>C.—A pointed nodule from Strepy.</p>	<p>Heidelberg SUSSEX MAN (or Woman); Remains found in a gravel deposit near Pittdown Common, Sussex.</p> <p>HEIDELBERG: The lowest race known. Represented by the Mauer jaw, from the Mauer Sands, near Heidelberg; Maffian Period.</p>	<p>Homo Heidelbergensis A.—The jaw of the Sussex Man (or Woman). B.—A reconstruction of the Sussex Man of the same period as Homo Heidelbergensis. A 1.—The Mauer jaw. B 1.—An adaptation of the Mauer jaw to a Neanderthal skull (the man of Châpelle aux Saints); by Professor Boule. C.—A tracing of the Mauer jaw and of a modern European jaw (the thin line) after Schoetensack.</p>	
<p>Period II.—Chellean (After Chelles, near Paris). Hand-axes, called "bouchers" by Professor Sallas; often pear-shaped or flat ovals; coarsely flaked.</p>	<p>A.—A Chellean "boucher" from front and side views. B.—A Chellean scraper.</p>	<p>Galley Hill Superior to, and co-existent with, the Neanderthal race. Earlier than some of the Neanderthal type. Probably developed into the Cro-Magnon type.</p>	<p>Galley Hill Man A.—The skull. B.—A reconstruction. From Galley Hill, near Northfleet, Kent. Found in ancient river gravel. Belongs to the same group as the Engis and Neander skulls and the Combe Capelle Man (Early Aurignacian).</p>	
<p>Period III.—Acheulean (After St. Achel, near Amiens). Almond-shaped implements, finely flaked and often twisted.</p>	<p>A.—"Amande," or "ovate boucher." B.—Scraper. C.—Flint pick.</p>			
<p>II.—MIDDLE PLEISTOCENE (Epoch of the Neanderthals) Period: Mousterian Scrapers made of flakes worked on one face.</p>	<p>A. Mousterian flake showing the face (A); the convex (A1); and the profile (A11). B.—A Mousterian lance-head.</p>	<p>Neanderthal (After the Neanderthal Cave, near Düsseldorf).</p>	<p>Mousterian Man The Skull and a Reconstruction From Le Moustier rock-shelter, Vézère Valley, Dordogne, France. Belongs to a group less simian than the Heidelberg Man can be supposed to have done.</p>	
<p>III.—LATER PLEISTOCENE (Epoch of the Reindeer) Period I.—Aurignacian (After Aurignac Cave, Haute-Garonne, France). Tartar points, Aurignac points. Advanced Mousterian types. Bone and ivory largely used. Sculpture, painting, and engraving begin. Flakes and tanged spear-heads. Flint bouchers cease.</p>	<p>A.—A curved, pointed flake; known as the Chatelperron Point. B.—A beaked burin. C.—A carinated (keeled) scraper. D.—A bone straight-ener. E.—A bone smoothing implement. F.—A bone pointed implement with a split end; possibly a predecessor of the needle.</p>	<p>Aurignacian (Also called <i>Lüssing</i>)</p>	<p>Homo Aurignacensis Top Row: Negroid type from the Grotte des Enfants, Mentone, France. Prognathism; steatopygous; allied to the Bushmen of South Africa. Second Row: From Combe Capelle Cave, Dordogne, France. Early Aurignacian. Belongs to the same group as the Engis (Belgium), Brunn (Czechoslovakia), and Galley Hill Men. Superior to, and earlier than, some of the Neanderthal type.</p>	
<p>Period II.—Solutrean (After Solutre, near Macon). Flint points with notches. Leaf-shaped blades, finely chipped. First needle.</p>	<p>A and B.—Ivory lance-heads. C.—A leaf-shaped spear-head (saur leaf). D.—A leaf-shaped arrow-head (willow leaf). E.—A point with notch (pointe à cran). F.—A tanged arrow-head. G.—A two-pointed barter. H.—A two-edged scraper.</p>		<p>Aurignacian Statuettes (Showing two different races) A and B.—Figures showing an steatopygous. C.—Difficult to identify, but showing the steatopygous and the tully hair of the Bushmen. D.—Heads showing plaited hair. E.—Paintings of women from a group at Cœcul, Spain; the head-dress resembles that of the women of the Somalis and the Galias (F). G.—A "disguised hunter"—engraving on bone.</p>	
<p>Period III.—Magdalenian (After La Madeleine Rock-Shelter, Vézère Valley, France). Long blades; very small tools.</p>	<p>Flint: A.—A scraper. B.—Hand C.—Penknife. D.—An awl. E.—A lateral burin graver. F.—A burin. G.—Flint for rounding needles. H.—Bone. I.—Barbed harpoons. J.—Needles. K.—Harpoon-heads; perforated for thongs. L.—An arrow-straightener. M.—Bone from which splinters have been taken for needles. N.—A reindeer bone; perforated and used as a whistle. O.—A fish-hook. P.—Supposed "writing."</p>	<p>Magdalenian</p>	<p>Cro-Magnon (A) From Cro-Magnon Cave or rock-shelter, in the Valley of the Vézère, also from the Grimaldi Cave, near Mentone. Men of high stature; Mongoloid. Related to, though distinct from, the Algonkian Indians.</p> <p>Chancelade (B) From the Commune of Chancelade, Dordogne, France. Men of low stature; showing the characteristic Eskimo form.</p>	
<p>Period IV.—Azilian (After the Grotto of Las d'Azil, in the Ariège, France). Disappearance of the reindeer and its replacement by the red deer; serrated harpoons, perforated for the attachment of a cord; pebbles painted with characters resembling letters of the alphabet.</p>	<p>A.—Serrated harpoons. B.—Painted Pebbles.</p>	<p>Azilian Braheocephalic related to the Neolithic (pile-dwelling) races.</p>	<p>Spread all over Europe.</p>	

Museum at South Kensington contains a department of physical anthropology. The British Museum possesses at Bloomsbury, besides its prehistoric collections, an ethnographical gallery which urgently needs expansion before the opportunity for its completion is irrevocably gone. The Anthropological Institute at 52, Upper Bedford Place, London, W.C., is the British headquarters of the study. See Man; consult Antiquity of Man, A. Keith, 1925.

ANTHROPOLOGICAL CHART. The chart on the opposite page illustrates the improvements of the weapons made in successive periods and the changing types of human beings as these have been "reconstructed" from remains found in the earth. The periods covered by the plan bring the story of man to the Azilian time, which is regarded as that when the Palaeolithic Age was merging into the Neolithic—the age of polished stone weapons, of cromlech and stone circle builders and of pile-dwellers.

ANTHROPOMETRY (Gr. *anthropos*, man; *metron*, measure). Measurement of the human body. In modern research it is a branch of biometrics, which embraces the measurement of mental as well as physical characters. Measurements derived from every part of the bony skeleton are utilised by anatomists for comparison with similar data of the anthropoid apes in elucidating the physical evolution of mankind. Anthropometric methods are employed by ethnologists for the comparison and classification of races. The principal instrument employed is called an anthropometer.

The most important branch of this science is the measurement of the head and its organs, especially the skull. This includes the relation of head-length to head-breadth and the classification of races into long-heads, medium-heads, and short- or round-heads; the projection of the upper jaw; the shape of the nose; eye-colour; the form of the ear, the chin, the teeth. In regard to the capacity of the brain-cavity, it is known that large skulls are consistent with low mental development.

ANTHROPOMORPHISM (Gr. *anthropos*, man; *morphe*, form). Term used for the ascription to God of a human form and qualities. Anthropomorphism represents a definite stage in the evolution of religion. In the earlier phases of religious thought the gods were construed in terms of the natural world, and the great forces of nature, e.g. the sun, the moon, the winds, the rainstorm, etc., were deified.

The gods of ancient Greece represent anthropomorphism in its most pronounced form. They were men and women endowed with human passions and qualities on a grander scale. The Iliad of Homer may be described as the Bible of anthropomorphism.

ANTHROPOPHAGI (Gr. *anthropos*, man; *phagein*, to eat). Tribes of man-eaters described by Pliny and others as dwelling N.E. of the Caspian. Of nomadic habit, they observed the custom of eating the flesh of aged parents. This bonorific form of cannibalism, designed to preserve the ancestral soul from decay, survived in some places until recent times. See Cannibalism.

ANTIBES. Seaport and holiday resort of France in the dept. of Alpes-Maritimes, it is 13 m. by rly. S.W. of Nice. Its chief industries are fishing and the making of perfumes. The ancient Antipolis, it was probably founded by Greeks in the 4th century B.C., and, as remains show, was later a Roman settlement. Pop. 12,768.

ANTICHRIST (Gr. *anti*, against or in place of; *Christos*, Christ). Term used in the N.T. (1 John 2 and 4; 2 John) to denote

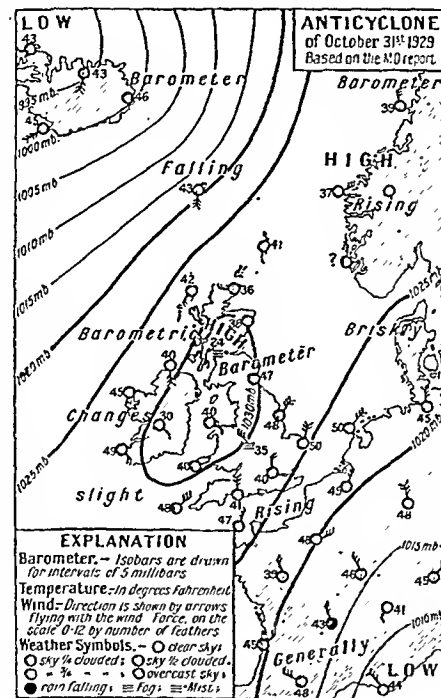

one who originally denies that Jesus is Christ, and, teaching falsehood, claims to teach the truth. Allusion to the coming of Antichrist may also be found in the Gospels (Matt. 24; Mark 13; Luke 21).

Anticline. Diagram illustrating this form of stratification

ANTICLINE (Gr. *anti*, against; *klinein*, to lean). Convex fold in stratified deposits, due to lateral pressure on a portion of the earth's crust. The fold may be symmetrical or otherwise, as in illustration above.

ANTICOSTI. Island of Quebec, Canada. Situated in the Gulf of St. Lawrence, it is 122 m. long by 30 m. broad, and has an area of 2,600 sq. m. The island was discovered in 1535. In 1895 it was acquired by M. Menier, who stocked it with wild animals. Pop. 450.

Anticyclone of Oct. 31, 1929, over Western Europe

ANTICYCLONE. Meteorological term for a type of pressure distribution in which the isobars form closed curves, as a rule circular or oval in shape. Atmospheric pressure is highest at the centre and diminishes towards the margins, so that the movement of air is in a direction opposite to that in a cyclone. Towards the centre of the system the air is usually very still, but nearer the margins the winds—generally light ones—blow outwards in a clockwise direction. Anticyclones, generally regarded as the bringers of fine or fair weather, are marked by an absence of rain, although in a sea-girt land rain may occasionally fall in small amounts.

ANTICYRA. Name of two towns in ancient Greece. One was in Thessaly on the Malian Gulf, another (Aspra Spitia, white houses) was in Phocis, on the Corinthian Gulf. Both were famous for hellebore, a supposed remedy for lunacy; hence a person suspected of insanity was told to sail to Anticyra.

ANTIGONE. In Greek legend, the daughter of Oedipus, king of Thebes. When her father, blinded by his own hand, had to leave Thebes, Antigone was his faithful companion until his death at Colonus. For her disobedience in burying the corpse of her brother Polynices, which had been forbidden by Creon, king of Thebes, Antigone was immured in a cave, where she hanged herself. She figures in plays by the Greek dramatists Sophocles, Aeschylus and Euripides.

ANTIGONUS (c. 380–301 B.C.). General of Alexander the Great. After the death of Alexander in 323 his ambition led to wars against the other generals of Alexander. Though by 306 Antigonus felt sufficiently sure of his position to assume the title of king of Asia, he was defeated and slain at Ipsus in Phrygia five years later. He is not to be confused with his grandson, Antigonus Gonatas, king of Macedonia. 276–239 B.C.

ANTIGUA. Island of the British W. Indies. It has an area of 108 sq. m. and is, with Barbuda and Redonda, one of the five presidencies of the Leeward Islands. It has an irregular coast, fertile soil, and several good anchorages, the best being English Harbour and St. John, the capital. It is the seat of government of the Leeward Islands, and produces sugar, cotton, pineapples, molasses, and rum. Discovered by Columbus in 1493, it was settled in 1632 by the British. Pop. of presidency 32,269. See Leeward Islands.

A small town of Guatemala is also called Antigua. Pop. 12,000

ANTILLES. Name applied to the West Indies exclusive of the Bahama Islands. The Antilles are divided into two groups—Lesser and Greater—the former including Antigua, Barbados, Barbuda, Dominica, Granada, Guadeloupe, Martinique, St. Vincent, Tobago, and Trinidad, and the latter consisting of Cuba, Haiti, Jamaica, Porto Rico, and a number of smaller islands. The Lesser Antilles are subdivided into the Leeward and Windward groups. See West Indies.

ANTIOCHUS. In Greek legend, son of the venerable Nestor. He accompanied his father to the siege of Troy, where he was killed by Memnon or Hector.

ANTIMONY (symbol Sb, Lat. *stibium*). Metal having a bluish-silvery colour and a flaky crystalline structure, showing beautiful facets on fracture. It is a chemical element. Its atomic weight is 120; specific gravity 6.72–6.86; and melting point 1,166° F. (630° C.). Stibnite, or grey antimony ore, is the principal source. It is found principally in France, Sweden, Borneo, Bolivia, Mexico, China, and Japan. The world's output of ore in 1927, expressed in metal content, was approximately 12,000 tons, about one-third of this quantity being produced by Bolivia.

The principal uses of antimony are in the preparation of alloys, particularly Britannia metal, type metal, pewter, and anti-friction metals. Antimony is also used for pigments and in the vulcanizing of rubber. During the Great War it was largely used with lead for shrapnel bullets.

ANTIMONY COMPOUNDS. Three oxides of antimony, the trioxide (Sb_2O_3), the tetroxide (Sb_2O_4), and the pentoxide (Sb_2O_5), are known. From the trioxide is prepared tartar emetic, used in medicine and as a mordant. Antimony trisulphide (Sb_2S_3) somewhat resembles graphite in physical properties. As kohl, this native form has been used in the East from time immemorial for colouring the eyebrows and skin.

ANTINOMIANISM (Gr. *anti*, in place of; *nomos*, law). Term, first employed by Luther against Jobannes Agricola, to express the

doctrine which the reformer denounced, that Christians being saved by faith alone are bound by no obligation to keep the law of God. An exaggerated view of S. Paul's teaching on justification by faith (Romans), and a reaction from Judaism, the tendency to antinomianism is found in early Gnostic sects and in later mystics. It was maintained in Germany in the 16th century, and was rife in England at the time of Charles I and the Commonwealth. See Anabaptists.

Antinous, favourite of the Roman emperor Hadrian, Patican, Rome

ANTINOUS (d. A.D. 122). Favourite of the Roman emperor Hadrian. He was born at Claudiopolis, in Bithynia, and drowned himself in the Nile at Besa. Hadrian enrolled Antinous among the gods, built temples and statues in his honour, and put his name on coins and gems. His name was also given to a constellation.

ANTIOCH. Town of Syria. Called by the Turks Antakia, it stands on the left bank of the Orontes, about 60 m. W. of Aleppo. It was founded by Seleucus Nicator in 300 B.C. in memory of his father Antiochus, one of the 13 kings of Syria of this name, and for a time rivalled Rome in greatness. It lay in a fertile plain 14 m. from the sea, and at its zenith had a population of 500,000.

It played a leading part in the early days of Christianity, and here the followers of Christ were first called Christians (Acts xi, 26). Captured and destroyed by the Persians in A.D. 538, it was rebuilt by Justinian, and conquered by the Saracens about 638, from which time its decline dated. It prospered again under the Christians, but after 1268, when it was taken by the Egyptian Bibars, another period of decline began. Since then it has remained in the possession of the Mahomedans. The modern town, which is of slight importance, has remains of the old Roman walls. Pop. 30,000.

ANTIOCH. Ancient city of Iisidia. Founded, like Antioch in Syria, by Seleucus Nicator in memory of his father Antiochus, it was a free city under the Romans. It was colonised under Augustus and received the name of Caesarea. The place, which was visited by S. Paul, is mentioned in Acts 13 and 14. Its site is about 200 m. E. of Smyrna.

ANTIOPE. In Greek mythology, mother by Zeus of the twins Amphion and Zethus. She afterwards married Lycus, king of Thebes, but owing to the jealousy of Dirce, his former wife, Antiope was cruelly treated. When her sons reached manhood they avenged her by killing Lycus and Dirce.

ANTIPATER (d 310 B.C.). Macedonian general. When Alexander the Great embarked

on his Persian campaigns he left Antipater behind as regent, and after the conqueror's death Antipater shared the government of Macedonia with his son-in-law Craterus. The change inspired the Greeks with the hope of regaining their freedom, but he decisively defeated their forces at Crannon in 322. After the murder of Perdiccas (321) he was declared regent of the empire.

ANTIPHILUS. Greek painter. Born in Egypt, he flourished about 330 B.C. Crossing to Macedonia, he lived at the capital, Pella, and is said to have painted the portraits of Philip and Alexander the Great. He later returned to Egypt, where he enjoyed the favour of Ptolemy I. He was jealous of Apelles, against whom he made a discreditable accusation, but the result was that he was given to his rival as a slave.

ANTIPHON (480-411 B.C.). One of the ten Attic orators. Born at Rhamnus in Attica, he conducted a school of rhetoric which Thucydides the historian is said to have attended. Antiphon enjoyed a great reputation, but his only known public speech is his own defence when arraigned after the fall of The Four Hundred at Athens. Despite this, he was condemned and executed.

ANTIPHONAL (Gr. anti, opposite; phonē, voice). Music in which effects of response are

Antioch, Syria, on the Orontes, about 60 miles west of Aleppo. Known as Antioch the Beautiful, it once rivalled Rome in its greatness

used. Officiant and choir, soloists and choir, or a divided choir, may be employed with this object. Antiphonal singing is heard in the chanting of the Psalms in Anglican and Roman Catholic Churches. Alternate verses or half-verses are allotted to opposite sides of the choir.

ANTIPODES (Gr. anti, against; podes feet). Geographical term meaning directly opposite each other. Points are antipodal to each other when they are at opposite ends of a straight line joining the points and also passing through the centre of the earth. Thus one point is as far N. of the equator as the other is S., while each is separated from the other by 180° of longitude. Australia and New Zealand are, roughly speaking, the Antipodes of Great Britain.

A group of uninhabited rocky isles in the S. Pacific are called the Antipodes Islands. They are about 480 m. S.E. of New Zealand, to whom they belong. The largest is about 5 m. in length.

ANTIOPE. Pope set up in opposition to the canonically elected pontiff. The Roman Catholic Church recognizes an unbroken series of true popes; any opposition popes for whom that title is claimed are accounted antipopes. The Great Schism began in 1378 with the election of the antipope Clement VII in opposition to Urban VI. Clement's successor bore the name of Benedict XIII. See Papacy.

ANTIQUARIES, SOCIETY OF. English learned society. It was reconstituted in 1717, and granted a royal charter in 1761. Its president is an official trustee of the British Museum. The offices are at Burlington House, London, W. Its library is rich in examples of early printing, heraldry, pageantry, and numismatics, and is available for fellows (F.S.A.). Its publications are *Archæologia*, since 1770; and *Proceedings*, since 1849. There is a Scottish society, founded in Edinburgh in 1780. Its fellows are described as F.S.A.Scot.

Antirrhinum. Alternative name for the snapdragon (q.v.).

ANTI-SEMITISM. Modern term for that open hostility to the Jews which has existed in varying degree in every country where they have been found since the 4th century A.D. The word Semite is commonly regarded in Europe as equivalent to Jew, the only Semitic people who have found a permanent home in Europe being the Jews.

As an organized political movement anti-semitism dates from the latter half of the 19th century. In Germany, France, Austria, and Holland it was directed to excluding the Jew from political rights; in Russia, Rumania, and Poland it was displayed in violent attacks upon his life and property. See Jews.

ANTISEPTICS. An antiseptic (Gr. anti, against; septikos, putrefying) is any substance that destroys bacteria or arrests their growth. As Pasteur showed, putrefaction and fermentation are always due to micro-organisms, as is also the group of diseases termed infectious. Antiseptic properties are exhibited by certain physical agencies, such as ultra-violet rays, moist heat, etc., and by a variety of substances, but the term is usually restricted to definite chemical compounds which act in high dilutions.

The general employment of antiseptics in surgery dates from the discovery, in 1862, by Lister that Pasteur's work on putrefaction applies also to sepsis in wounds, i.e. a wound will heal without the occurrence of suppuration, provided that it is not contaminated with virulent bacteria. The attempt to destroy micro-organisms in the living tissues without damaging the latter is termed chemotherapy.

Substances which have come into wide practical use as surgical antiseptics are salts of the heavy metals (e.g. mercury and to a less extent silver), as well as iodine, hypochlorites, chloramines, iodoform, peroxide of hydrogen, formaldehyde, alcohol mixed with 30 to 50 p.c. of water; also various organic compounds of the benzol series, e.g. phenol and the cresols, certain triphenylmethane dyes (brilliant green and crystal violet), and salts of diaminoacridine (acriflavine, and proflavine).

Antiseptics differ greatly in their potency measured by the dilution in which they are effective, and also as regards the rate at which they kill bacteria.

Many antiseptics fail because they are neutralised by the tissues and body-fluids

Antipodes. Map indicating the antipodal relation of London and W. Europe to New Zealand and its Southern islands

before reaching the bacteria, or because, like phenol or mercuric chloride, they are tissue poisons. Hence the value, in wounds, of acriflavine, cuso, Dakin's solution and other antiseptics which are both non-poisonous and unaffected by blood serum. Outstanding examples of chemotherapeutic agents in diseases are quinine in malaria and mercury and arsenical compounds in syphilis.

Antiseptic agencies are largely employed in industry, especially in the purification and preservation of food. See Bacteriology; First Aid; Surgery, etc.

ANTISTHENES (c. 440-370 B.C.). Founder of the Cynic school of Greek philosophy. Born at Athens, originally a pupil of the rhetorician Gorgias, he became a follower of Socrates, after whose death he founded a school. He chiefly devoted himself to the ethical side of his master's teaching, and held that virtue consisted in doing without all but the barest necessities of life and in the avoidance of evil; that the man who wanted little was most like the gods, who wanted nothing.

Antisthenes,
Greek philosopher

ANTITHESIS (Gr. anti, against; thesis, placing). In rhetoric, a sharp contrast or opposition between sentence and sentence, or sentiment and sentiment. It is used much in the forming of maxims or moral sayings. Macaulay's writings are full of antitheses, e.g.: "He had covertly shot at Cromwell, he now openly aimed at the Queen."

ANTITOXIN (Gr. anti, against; toxikon, poison for smearing arrows). Medical term for a substance which has the power of neutralising the action of a bacterial poison or toxin. It consists of the serum obtained from the blood of a living animal which has been rendered immune from the disease to be cured, or prevented, by injections of the toxin of that disease. Antitoxin has been used successfully in the treatment or prevention of diphtheria, lockjaw, etc. In botany the term is used of a secretion in plants which secures them from injury by microbes.

ANTIUM. One of the oldest cities and ports of Latium. It stood 33 m. S.E. of Rome, and was a stronghold of the Volscians and the haunt of pirates until conquered by the Romans. Antium became a favourite watering-place, and numerous remains of villas and art treasures have been found. The seaport of Anzio now occupies this site.

ANTIVARI. City of Yugo-Slavia. It is 3 m. from the Adriatic Sea and 16 from Scutari. It has a wireless station, and its buildings include the citadel built by the Venetians. On the coast is New Antivari, the terminus of a railway from Sentari. In the Middle Ages Antivari belonged to Venice, and there are some remains of a Venetian castle. It was afterwards a possession of Turkey, but in 1878 it was transferred to Montenegro. During the Great War it was occupied by the Austrians in 1916, and by the Italians in 1918. At the Peace of 1919 it was given to Yugo-Slavia. Pop. 2,500.

ANTLER Lat ante, before; oculus, eye). Outgrowth from the frontal bone of the deer, usually in the male

only. Antlers are shed and renewed annually. During the period of growth they are covered with a soft hairy skin called the velvet, which is well supplied with blood vessels. When the antlers are fully developed the supply

Antlers. Annual development of the antlers of the male fallow deer, from the unbranched horn of its second year to the many-tined one of its tenth. Above: Similar development of the antlers of the red deer

of blood is cut off. The skin then dries up and is rubbed off against the branches of trees. Year by year the number of tines or branches on the antlers commonly increases and indicates the approximate age of the animal. Antlers are used by the males when fighting during the breeding season.

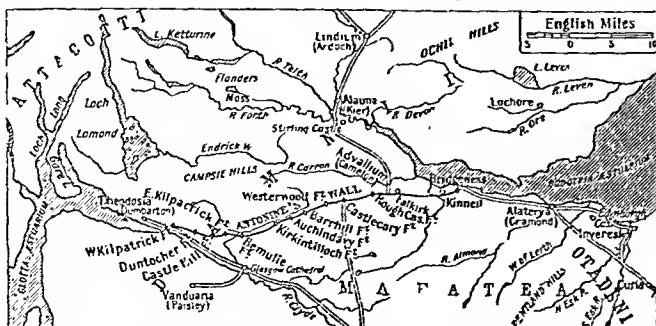

ANT LION (Myrmelcon). Larval form of a neuropterous insect, common to temperate and tropical regions. After making a conical pit in the loose sand, it buries itself at the bottom with only its head showing. When some

Ant Lion waiting at the base of its trap. Above, perfect insect of a species which hunts its prey

passing insect, such as an ant, slips over the edge of the pit, the ant lion throws sand at it to hasten its fall, and then seizes it. After sucking the juices of its prey, the captor hurls the body out of the pit. The ant lion passes through its pupal stage in the sand beneath its pit, and the perfect insect resembles a dragon-fly.

ANTOFAGASTA. Seaport of Chile. The capital of Antofagasta province, it is the ter-

Antonine's Wall. Map showing the line of this Roman rampart from the Forth to the Clyde, and the positions of some of its forts. See text

minus of the Antofagasta and Bolivia Rly. Ships lie in the roadstead and discharge by means of lighters. Much of the trade of Bolivia passes through this port, which is the commercial centre for an extensive mining district. It is a wireless station. Pop. 51,500. The province, the largest in Chile, includes the desert of Atacama, which is rich in nitrate and other minerals.

ANTONINES, AGE OF THE. Period in the history of the Roman Empire covered by the rule of the emperors Antoninus Pius (A.D. 138-161) and Marcus Aurelius Antoninus (A.D. 161-180). An era of peace and prosperity, it came to be regarded as the Golden Age of the empire. Consult E. Gibbon, *Decline and Fall*.

ANTONINE'S WALL. Roman rampart, 36 m. long, between the Forth and the Clyde. Erected by Lollius Urbicus in A.D. 140-1, during the reign of Antoninus Pius, it became the northernmost outpost of Roman Britain. Mainly of turf flanked by a ditch, it was protected by from 10 to 20 forts, some of which, e.g. Camelon and Barrhill, mark the site of Agricola's temporary works of about A.D. 80. The stone-ramparted Castlecary is well preserved. The wall was known in early Scottish history as Grime's Dyke and later as Graham's Dyke.

ANTONINUS PIUS (A.D. 86-161). Roman emperor, 138-161. He held with credit several administrative posts and enjoyed the friendship of Hadrian, who adopted him and designated him his successor. During his reign the only serious military operations were those carried on in Britain. Under Antoninus, reforms were introduced into the Roman system of law, and the harsh code which governed the relations between freemen and slaves was mitigated. The provinces were well governed, the arts and sciences encouraged, and persecutions of the Christians checked.

Antoninus Pius,
Roman Emperor
British Museum

A memorial, known as the Antonine Column, was erected to him in Rome, the marble pedestal of which is preserved in the Vatican. Another Antonine Column, which is still standing in Rome, was set up to commemorate the victory of the emperor Marcus Aurelius Antoninus over the Marcomanni in 176.

ANTONIO, ANTONELLO D' (c. 1414-93). Venetian painter, called Antonello da Messina. After study in Rome and Naples he went to Bruges to learn from Jan van Eyck the new method of painting in oils. He settled in Venice, where he died. He introduced oil painting among the Italians, and happily blended the somewhat hard manner of the

Antrim, the most populous county of Ireland. It is on the N.E. coast and in its most northerly part is the Giant's Causeway

Flemish school with the softness and suavity of the Italian. His S. Jerome in his Study, in the National Gallery, London, is perhaps his masterpiece, and the Portrait of a Young Patrician, at Venice, is also remarkable.

ANTONOMASIA (Gr. anti, instead; onomazein, to name). Use of a descriptive epithet in place of a proper name. Examples are "His Grace of Canterbury" for the archbishop, and "the swan of Avon" for Shakespeare.

ANTRIM. County of Northern Ireland. It has an area of 1,176 sq. m. Rathlin Island and the Skerries, off the N. coast, and the Maiden rocks with two lighthouses, off the E. coast, form part of the co. The chief rivers are the Bann and Lagan, and Lough Neagh is the largest lake. The surface is hilly in the N. and E., and attains its highest alt. in Trostan Mt. (1,817 ft.); much of the interior is bogland. On the N. coast is the Giant's Causeway. Oats, potatoes, flax, and cereals are grown in considerable quantities. Good rock salt is obtained near Carrickfergus.

Belfast, the metropolis, Lisburn, Carrickfergus, Ballymena, Ballymoney, Larne, Antrim, and Portrush are the principal towns. Two members are returned to the British Parliament for the county apart from Belfast, and seven to the Parliament of Northern Ireland. The population, exclusive of Belfast, is 191,618.

EARLS OF ANTRIM. Derived from the county is the title borne by the family of McDonnell since 1620. Randal McDonnell (d. 1636), who obtained land in Ulster from James I, was made a viscount in 1618 and an earl in 1620. A descendant, Randal, the 6th earl, was made a marquess, and for him in 1785 a new earldom was created, which passed on his death in 1791 to his daughters in turn. The younger of these, Charlotte, married Lord Mark Kerr, and their sons, taking the name of McDonnell, became the 4th and 5th earls of

the second creation. The earl's eldest son is called Viscount Dunluce, and his residence is Glenarm Castle, Antrim.

ANTRIM. Market town of Antrim, Northern Ireland. It is 22 m. by rly. N.W. of Belfast, on the Northern Counties (L.M.S.) and G.N.I. Rlys., and lies near the shore of Lough Neagh. In the vicinity are Antrim Castle, Shane's Castle, and a round tower. Market days, Tues. and Thurs. Pop. 1,979.

ANTUNG. Treaty port in Manchuria. It stands on the Yalu river, 7 m. from its mouth in Korea Bay, and is connected with the Korean rly. system. It is the port of entry into Manchuria for coolies from Shanghai. In the Russo-Japanese war a battle was fought near here, 1904. Pop. 75,500.

ANTWERP. Antwerp is the second city and most important port of Belgium, as well as one of the great world ports. Situated on the right bank of the Schelde, here a great tidal

the second creation. The earl's eldest son is called Viscount Dunluce, and his residence is Glenarm Castle, Antrim.

Hanseatic League, and from 1490, in which year the foreign guilds were transferred here from Bruges, became for a time the most important commercial city in Europe, with a population of 200,000. In the 16th century Antwerp became involved in the wars of religion, being the scene of the "Spanish Fury" of Nov. 1576, when 6,000 citizens were massacred and enormous damage done. In 1585 30,000 Protestant citizens left by order of the Duke of Parma, and in 1648, by the Treaty of Westphalia, the Schelde was closed, and Antwerp's trade ruined. At the end of the 18th century the French Republicans freed the river, and by degrees the city recovered commercial prosperity.

The most famous of the old buildings is the magnificent cathedral of Notre Dame, completed in 1518 and containing masterpieces of Rubens. Among other old churches is that of S. Jacques, in which is the chapel of the Rubens family. The Guild Houses, the Hôtel de Ville, and the Plantin Museum all date from the 16th century. The numerous fine modern buildings include the Royal Museum, which contains a wonderful collection of Flemish art, both old masters and works of modern painters. Great extensions and improvements in the harbour works were undertaken after the Great War.

SIEGE OF ANTWERP. Antwerp was besieged by the Germans early in the Great War. On Sept. 27, 1914, their big howitzers started to shell the outer forts, which quickly fell. The Belgian commander then made ready to evacuate the city. On Oct. 3 a force of British marines arrived, followed by 6,000 of the Royal Naval division. Their aim was to delay the fall of the city, and so help the retreat of the Belgian field army. Meanwhile, the defenders were compelled to retire to the inner line of forts, which the Germans bombarded continuously, at the same time shelling the city itself. As further resistance

Antwerp. 1. The Square of the Hôtel de Ville, looking across the Schelde. 2. Part of the quays, with the Steen, a restoration of the old castle and now a museum. 3. The Grand Place, with Lambeaux's celebrated Brabo fountain. 4. Cathedral of Notre Dame, which contains masterpieces of Rubens and much old glass

was impossible, on Oct. 9 the last troops withdrew and the city surrendered and remained in German occupation until Nov. 1918. The British loss was 37 killed, 193 wounded, 1,568 interned in Holland, and nearly 1,000 missing (500 captured); the Belgian loss was more serious, 400 officers and 35,000 men interned in Holland. The movement of the British force to Antwerp prolonged by some days its resistance and at a critical moment of the war detained a large German force which otherwise might have captured the French Channel ports.

ANU. Principal deity of Babylonian and Assyrian myths. His name is found in the earliest of transcribed inscriptions. He was the chief of the upper triad of deities, representing heaven, while Bel or Ellil, and Ea represented the earth and the lower regions.

ANUBIS. Egyptian deity. The reputed son of Osiris and Nephthys, the rising and the setting sun, he was primarily a twilight god.

He is represented as jackal-headed, was the sombre guardian of the dead, and presided over embalmings. He was later identified with the Greek Hermes. Under the New Empire he watched the scales at the weighing of souls before Osiris in the underworld. See Amenti.

ANURADHAPURA.

Ruined city of Ceylon. It is 84 m. N. of Kandy on the rly. from Colombo. The capital of Ceylon from 437 B.C. to A.D. 750, it is famed for its ancient monuments and its Bo tree. It covered 250 sq. m. and in the number and beauty of its temples vied with Babylon and Nineveh.

Anubis,
Egyptian deity
British Museum

ANVIL. Commonly a block of iron having a flat steel surface upon which metals are forged or wrought by hammering, as by blacksmiths, goldsmiths, etc. The block has at one end a substantial conical projection termed a beak or horn, for use in bending operations. The anvil is provided with holes for the reception of tools.

ANZAC. Popular designation of the troops from Australia and New Zealand. The word was generally supposed to have been derived from the initial letters of the words Australian (and) New Zealand Army Corps. It seems to have had an earlier origin in an Arabic word meaning "to cause to jump," possibly suggested by the nickname Kangaroos applied to Australian troops when quartered in Egypt. The name was also given to the cove, N. of Gaba Tepe, Gallipoli, where they landed in April, 1915.

The word was officially adopted by the War Office in 1916, and so popular did it become that in Nov., 1916, a bill was passed into law prohibiting its use for trade purposes.

Anzio. Seaside resort of Italy. It is 33 m. from Rome and occupies the site of the ancient Antium (q.v.).

AOMORI or **AWOMORI.** Seaport of Japan, on the N. shore of Hondo island. It stands at the S.W. angle of Aomori Bay, 22 m. by rly. N.E. of Hirosaki, is connected by rly. with Tokyo, and has a steamer service to Hakodate. Pop. 58,800.

AORTA (Gr. *aerein*, to raise). Main artery of the body. It originates or arises, hence the name, from the left ventricle of the heart, and, having passed over the root of the left lung, descends in front of the vertebral column into the abdomen. There it ends by

dividing into the two common iliac arteries. See Anatomy; Artery.

AOSTA. City of Italy. It is 49 m. direct and 80 m. by rly. N.N.W. of Turin. Its position at the junction of the routes over the Great and Little St. Bernard induced Augustus to found a military camp here in 25 B.C., and it was called Augusta. Its Roman walls and gates are well preserved. It has a 14th century cathedral, the church of Sant' Orso, dating from the 5th but rebuilt in the 12th century, and ruins of a Roman theatre, amphitheatre, bath., bridges, etc. The beautiful Val d'Aosta is noted for its pine trees and mineral springs. S. Anselm was a native of Aosta. Pop. 6,200.

AOSTA, EMMANUEL PHILIBERT, DUKE OF (b. 1869). Italian prince and soldier. Eldest son of Amadeus, king of Spain, 1870-3, and grandson of Victor Emmanuel II, king of Italy, he was born at Genoa, Jan. 13, 1869. He was married in 1895 in England to a Bourbon princess, and, entering the Italian army, rose to a high command. In the Great War he led the Third Army against the Austrians.

APACHE. Group of N. American Indian tribes formerly occupying parts of New Mexico, Arizona, and Texas. Of Athapaskan stock, their name (Zuñi, enemy) properly denotes their Navaho neighbours. They number about 6,500. The name was assumed by Paris hooligans, who became obnoxious by resorting to murder and outrage. See p. 73.

APATITE (Gr. *apatē*, deceit). Calcium fluo- or chloro-phosphate. It is an hexagonal mineral occurring chiefly as segregations from plutonic igneous rocks and in metamorphosed phosphatic limestones. As the name shows, it is deceptive in appearance, and is often confused with other minerals. See Rocks.

APE. Term applied to anthropoid or man-like monkeys, e.g. the gorilla and chimpanzee, and to tailless or short-tailed monkeys. e.g.

Apeldoorn, Holland. Castle of Het Loo, summer residence of the Dutch sovereigns

the Barbary ape. Until the 16th century it was the general word for a monkey (q.v.).

APELDOORN. Town of Holland, in Gelderland province. It is 26 m. by rly. from Amersfoort, and is served by canals. It has numerous paper mills and other industries. The Oranje and Wilhelmine are the finest of several attractive parks. Near is Het Loo, the summer residence of the Dutch sovereigns, and once the favourite hunting lodge of William, prince of Orange. Pop. 51,400.

Aorta, cross section, showing the valves

APELLES. Greek painter. He flourished in the latter half of the 4th century B.C., and was probably born at Colophon in Asia Minor. He painted on panels and not on the wall. His portrait of Alexander the Great wielding a thunderbolt and his Venus rising from the Sea were two of the most famous works of art in antiquity. None of his works has survived.

APENNINES. Mountain range of S. Europe. The mountains traverse the entire

Aphrodite. Bronze head from an ancient colossal statue. See below
British Museum

length of Italy, reappear in Sicily, and have a length of about 800 m. Geographically they are divided into three sections, viz. northern, central and southern. As they traverse the peninsula they bear various local names, e.g. Etruscan, Roman, Neapolitan, and Calabrian Apennines, and form the watershed between the Mediterranean and Adriatic Seas. Always steep where they approach the sea, in central Italy the Apennines broaden out into parallel chains, terraces, and plateaux. They have their greatest height in Abruzzi e Molise, where the E. of the two parallel chains of the Gran Sasso d'Italia attains an altitude of 9,560 ft. in Monte Corno.

The Apennines lack minerals, though they contain various mineral springs. Over most of their area the vegetation is poor, only near the coast is it rich. In some parts wolves and bears are found. Many passes cross the mountains, some following Roman roads, and railway lines run along some of them.

APHASIA (Gr. speechlessness). Disorder of speech due to haemorrhage into the brain from the bursting of a blood vessel or disease of the brain. In this condition the patient's muscles of speech are not affected, and he may show that he quite understands what is said to him, but he is incapable of expressing his thoughts in words. Sometimes there is merely a hurring of speech or hesitancy in utterance; in other cases words are mixed up and wrong words used; and in severe cases the patient may be completely dumb. See Brain.

Aphelion (Gr. *apo*, from; *helios*, sun). Point in an orbit of a planet or a comet farthest from the sun.

Aphis. A family of plant lice of the order Hemiptera, popularly known as green fly (q.v.). See Insects.

APHONIA (Gr. *a*, not; *phonē*, voice). Loss of voice. In the majority of cases this condition is due to either hysteria or neurasthenia. Aphonia may occur in persons who are overworked, worried, or distressed, or it may be the result of sudden severe shock, mental or physical. Rest and freedom from worry are essential in the treatment, and sometimes a sudden stimulus, such as the unexpected receipt of good news, will effect a complete cure. See Voice.

APHORISM (Gr. *apo*, from; *horos*, boundary). Brief definition of a principle, artistic, moral, or scientific, in the most concise terms, e.g. Life is short; art is long. Greek literature contains many aphorisms and Bacon's Essays abound in them.

APHRODITE. In classical mythology, goddess of love and of the fruitfulness of nature. Her Roman counterpart was Venus. According to some she was a daughter of Zeus; according to others she rose from the foam of the sea, near Cyprus; hence the name Aphrodite (Gr. *aphros*, sea-foam).

Aphrodite's husband was Hephaestus (Vulcan), but she had amours with Ares, Hermes, Dionysus, and Poseidon among the gods, and with Adonis and Anchises among mortals. From her connexion with Ares she is also somewhat curiously regarded as a goddess of war, who takes special interest in arms and armour. By Ares she was the mother of Eros or Cupid. During the Trojan War she favoured the cause of the Trojans and constituted herself the guardian of Paris and Aeneas. The worship of Aphrodite appears to have been of Eastern origin, introduced by the Phoenicians. See Adonis; Venus.

APIA. Chief town and seaport of the Samoan Islands. On the island of Upolu, it is the commercial centre of the group and a wireless station. Stevenson died here, Dec. 3, 1894. The town was surrendered to a New Zealand force in 1914. Pop. 1,500, including 400 Europeans. See Samoa.

APICIUS, MARCUS GAVIUS. Roman epicure. He lived under the emperor Tiberius, 1st century A.D., and apparently spent the

growing out of, the Old and New Testaments, but of a different character from the books generally accepted as inspired or canonical. From this to the meaning spurious or heretical the transition was easy. In common speech the Apocrypha denotes the Old Testament Apocrypha. The Apocrypha of the New Testament are not so well known nor so well defined, while most of them are very fantastic.

The Apocrypha Proper are included in the Greek (Septuagint) and Latin (Vulgate) Versions, but not in the ordinary English Bible. The Church of Rome at the Council of Trent (1546) accepted them as "sacred and canonical." The Protestant Churches rejected them, but some of the Reformed Churches, e.g. the Church of England, use them for purposes of edification.

APOLLINARIS. Mineral spring of Germany, in the Rhine province. In the Ahr valley, 10 m. by rly. N.W. of Remagen, its waters are alkaline and contain carbonate of soda. They are beneficial in cases of diabetes and as an aid to digestion. Discovered in 1851, the spring waters average a temperature of 94° F. This and other springs in Germany and Hungary are owned by a British company, which bottles the waters.

APOLLINARIUS

OR APOLLINARIS. Founder of the Apollinarian heresy. Son of an Alexandrian rhetorician and a friend of Athanasius, he transformed the Gospels and canonical Epistles into dialogues in imitation of Plato, defended Christianity against Porphyry, and strenuously opposed

Arianism. In 302 he was made bishop of Laodicea in Syria. His opposition to Arianism, which denied the complete divinity of Christ, led him to put forward the heresy known as Apollinarianism. This denied the complete humanity of Jesus Christ. To do otherwise would be to assume in His nature the possibility of sin and so to negative the Atonement.

APOLLO. One of the greater deities of ancient Greece. The son of Zeus and Leto (Latona), he was born in the island of Delos. In the writings of Homer Apollo is not identified with the sun, but in later mythology became the sun god. He was the god of disease who sent pestilences among men, and, by a not unnatural transition, he was also the healing god. Aesculapius, the god of medicine, was represented as his son. The power to foretell the future was attributed to Apollo in an eminent degree, and there were many oracular shrines of Apollo, notably at Delphi. Probably on account of his gift of prophecy he was the patron deity of colonies, no colony being founded except after consultation with the oracle. Apollo is represented as a tall, handsome, beardless youth, holding in his hand sometimes a bow and sometimes a lyre. As the supreme type of manly beauty, he was the patron deity of athletes. Apollo was also extensively worshipped at Rome.

The Apollo Belvedere is a statue of Apollo discovered in 1503 in the ruins of Anzio. It was acquired by Pope Julius II, who placed it in the Belvedere gallery of the Vatican.

The Apollo Club was a society founded by Ben Jonson about 1616 at the Devil Tavern, No. 2, Fleet Street, London. The rules, written in Latin by Jonson, bade the dullard, the ass, the sad-faced, and the lewd fellow keep away,

and provided that choice women should not be excluded. See Delphi; Oracle.

APOLLODORUS. Greek grammarian. He was a pupil of the grammarian Aristarchus and the Stoic philosopher Panactius. All his works have perished except his *Bibliotheca*, a well-arranged collection of stories connected with the mythical and heroic ages of Greece, based upon the writings of the cyclic poets and the logographers. He also wrote a chronological history of the world in iambic verse, much used by the Romans.

APOLLONIA. The name of several ancient cities. One in Illyria, near the mouth of the river Aous, was founded by emigrants from Corinth and Coreyra. Another, founded in Thrace by the Milesians, was famed for its temple and its statue of Apollo by Calamis. Afterwards called Sozopolis, it is now known as Sozeboli. A third town, the modern Marsa Susa, was the harbour of Cyrene, in N. Africa.

APOLLONIUS OF RHODES (c. 295-215 B.C.). Greek poet and grammarian. He was born at Alexandria, and was a pupil of Callimachus. Later he went to Rhodes, where the people received a revised version of his poem *Argo nautica* with great applause, and bestowed upon him the rights of citizenship. According to the story, he returned to Alexandria, where he acquired great popularity, and was appointed chief librarian. In his epic, which describes the voyage of the Argonauts in quest of the Golden Fleece, he strives to imitate the style of Homer.

APOLLONIUS OF TYANA (c. 4 B.C.-A.D. 97) Greek philosopher. He was born at Tyana in Cappadocia, travelled extensively, and spent some time in Rome. He was accused of high treason against Domitian, but suddenly disappeared during his trial. He died at Ephesus while head of a Pythagorean school. Apollonius was looked upon as a magician, and wonderful tales are told of him in the story of his life by the sophist Philostratus, written in the 3rd century A.D. His life and reputed miracles were often compared with those of Christ.

APOLLOS. Name of an early convert to Christianity mentioned in the N.T. He was a Jew of Alexandria converted to Christianity by

Apis, the sacred bull. Figure in relief found in the tomb of Ephoto Stopte at Sakkara

whole of his time and fortune in inventing and eating new and tasty dishes. Then, his money gone, he hanged himself.

APIS. Sacred bull worshipped at Memphis throughout dynastic Egypt. Symbolising the second life of Ptah, he bore a white forehead mark upon a black hide. At death he became, like human souls, one with Osiris, and his embalmed remains were enshrined in a huge sarcophagus. The Sakkara mausoleum contains 24 Apis tombs. See Animal Worship.

APOCALYPSE (Gr. unveiling). Name given to a particular type of religious literature very popular in later Judaism and early Christianity. The Book of Revelation is the best known example. These works anticipate a time when by divine intervention a new social order shall arise.

Apocalyptic first took shape in the writings of Ezekiel, and found its fullest expression, as far as the Old Testament is concerned, in the Book of Daniel. In the subsequent period between 170 B.C. and A.D. 100 many Jewish Apocalypses were written, e.g. The Book of Enoch. The Book of Revelation represents an attempt to Christianise the Apocalyptic movement. Other attempts of a similar nature were also made, one being The Apocalypse of Peter, fragments of which were discovered in 1892. This is known to have been the source from which Dante derived much of his imagery for the Paradiso and Inferno.

APOCRYPHA (Gr. apokryphos, secret). Term applied first to writings which were kept secret because they were supposed to contain truths which might be imparted only to the duly initiated. Apocryphal then came to denote certain writings connected with, and

Apollo Belvedere. Famous statue supposed to have been sculptured nearly two thousand years ago. Vatican, Rome

Aquila and Priscilla at Ephesus. Later, at Corinth, he preached the Gospel, and is mentioned by S. Paul. (See Acts 18; 1 Cor. 1, 3.)

APOLLYON. Greek term in the N.T. for the Hebrew Abaddon. It means the Destroyer (Rev. 9), and is applied to Satan. In this sense it was used in The Pilgrim's Progress.

APOLOGETICS. The accepted designation of that department of Christian theology which is entrusted specially with the defence of the Christian religion. Alike in theory and in practice, there has been infinite diversity in apologetic method.

In the first age Jewish, Greek, and Roman polemics were met by Clement of Alexandria, Tertullian, Origen, and Augustine. In the Middle Ages Judaism and Islam and free thinking philosophy were dealt with by Abelard and by Aquinas. In the Reformation period and its sequel Islam and cultured freethought had still to be combated. In the 18th century Deism and scientific scepticism were met by Butler and others on behalf of revealed religion.

In the 19th century attacks on a vastly wider front and on a far more comprehensive scale were countered by an apologetic correspondingly widened, so that apologetics in a systematic sense came at last to its own. Then Christian thinkers dealt for the most part with the foundations of religion and cleared the ground for that higher apologetic which consists of a reasoned constructive statement of Christian truth and life.

APOLOGUE (Gr. *apologos*, tale). Short story in which animals, trees, etc., are used as characters, from whose doings a moral lesson is to be deduced. A celebrated apologue is that of the trees called upon to choose a king (Judges 9), while another, of the bee and the spider, is to be found in the early part of Swift's *Battle of the Books*.

APOLOGY. Word derived from the Greek, meaning to take back speech (*logos*). In English law a defendant in an action for libel may in certain cases apologise and plead the apology as a defence or in mitigation of damages. In the same way a newspaper defendant in such an action may plead an apology and pay money into court as amends.

In literature the word is used in a somewhat different sense, meaning rather a plea for a person or thing. In this sense it is employed by Plato in his *Apology for Socrates* and by J. H. Newman in his *Apologia pro Vita Sua*.

APOPHTHEGM (Gr. *apo*, forth; *phthengesthai*, to speak). A terse, sententious expression of philosophic thought, e.g. Cowards die many times before their deaths; the valiant never taste of death but once.

APOPLEXY (Gr. *apo*, from; *plēssein*, to strike). Condition of sudden loss of consciousness and sensation due most frequently to the bursting of a blood vessel in the brain. It is often referred to as an apoplectic stroke. Apoplexy is commoner in men than in women, and occurs often after the fiftieth year of life. Syphilis, alcoholism, and heavy muscular work are predisposing factors. The attack is usually without previous warning symptoms, and occurs while the patient is engaged in his ordinary occupations, though sometimes it is precipitated by extra exertion. Paralysis is a frequent result of an apoplectic stroke.

The treatment during an attack is to keep the patient absolutely at rest with the head slightly raised. Hot bottles may be placed at the feet and an ice bag applied to the head.

APOSTASY (Gr. *apo*, away; *stasis*, standing). Term originally meaning the desertion of a military post. Its later and general application is to the complete and voluntary renunciation of the Christian faith, either in favour of another religion or of none. The persecution of the 3rd century under the Roman Empire induced a considerable apostasy, and in the Middle Ages in Spain many abandoned Christianity to become Jews and Mahomedans. The emperor Julian was the most remarkable apostate.

APOSTLE (Gr. *apo*, from; *stellein*, to send). Name applied specially to the twelve followers

selected by Jesus to be His close and constant companions and to carry on His work after His departure (Matt. xxviii, 16-20). These were Simon, also called Peter; Andrew; James and John the sons of Zebedee; Philip, Bartholomew, Thomas, Matthew; James the son of Alphaeus; Thaddaeus; Simon the Canaanite and Zealot; and Judas Iscariot. Later Jesus appointed seventy others and commissioned them (Luke x, 1). The title was extended to Barnabas. Paul applied it to himself. In later times the term apostle has been applied to missionary founders of the Christian Church in various lands, e.g. S. Boniface, the apostle of Germany. See Christianity.

An apostle jug is a jug with the surface divided into 12 panels, each containing the figure of an apostle. An apostle spoon is a spoon bearing the figure of an apostle. They were usually made in sets of 13, one for each apostle and one bearing the figure of Christ.

APOSTOLIC FATHERS. This is the name used to distinguish those disciples and contemporaries of the Apostles who wrote in the cause of Christianity. They include Clement, bishop of Rome; Ignatius, bishop of Antioch; Polycarp, bishop of Smyrna, and others.

APOSTOLIC SUCCESSION. The term for the doctrine that the mission given to the Apostles by Christ (John 20; Matt. 27) must extend to their legitimate successors in an unbroken line until the end of the world. The Roman Catholic interpretation of this doctrine is that the method of preserving the succession and thereby preserving the Apostolic faith is through the episcopate alone. Many Anglicans hold this view also. It means that only those clergy who have been ordained by bishops who are themselves in the succession can administer the sacraments and perform the other duties of the priesthood.

APOSTLES' CREED (Lat. *credo*, I believe). Confession of the Christian faith. The Creed has been continuously retained in the baptismal service of the Catholic Church since the 7th century, and is part of the order of baptism in the Roman ritual and of the baptismal service of the Book of Common Prayer. It is also recited daily in the morning and evening offices of the Roman Breviary and the Anglican Prayer Book. The Council of Trent endorsed its authority as an essential statement of Catholic belief, and it is required to be believed in the Church of England. The title Apostles' Creed is so given because the belief expressed is the faith of Christendom from the days of the Apostles.

APOSTROPHE (Gr. *apo*, from; *strophē*, turning). A rhetorical figure. If a speaker interrupts his general discourse to address a particular individual who is present, or more generally a real person or personification as though present, this is called an apostrophe. Thus, in Scott's *Marmion* (canto vi), the story is interrupted by the apostrophic "O woman, in our hours of ease."

APOTHECARY (Gr. *apothēkē*, store). One who mixes drugs. The art of mixing drugs for medicinal purposes and of prescribing and administering them is of ancient origin, and those who practised it were recognized as a distinct class as early as the 12th century. At a later stage they became incorporated with the company of grocers, but retained their title of apothecaries and practised as such.

The Society of Apothecaries, which has a charter dating from 1617 and is a city company, conducts examinations for the degree of L.S.A., which allows men and women to practise as doctors. It has a beautiful old hall,

which contains valuable portraits and other treasures, in Water Lane, Blackfriars, London, E.C.4.

APOTHEOSIS (Gr. *apo*, apart; *theos*, god). Elevation of human beings to the rank of gods. The practice existed among most ancient peoples — Egyptians, Assyrians, Greeks, and Romans.

APPALACHIANS. Mountain system of the E. United States. It stretches in a series of parallel ridges and valleys from Georgia to Maine, gradually approaching the Atlantic coast. The western ridge—the Allegheny Mts., includes the Catskills at its N. end. The eastern ridge—the Blue Mts.—rises sharply from the Atlantic coastal lowlands. The Black Mts., which include the culminating peak of the system, Mt. Mitchell, 6,711 ft., form the highest part of the eastern ridge. See Allegheny.

APPEAL, COURT OF (Lat. *appellare*, to call upon). Court of law in which, if desired, the decisions of lower courts are reviewed and, if necessary, reversed.

In England there is a court of appeal manned by lords justices, in which are heard appeals from the Chancery, King's Bench, and Probate, Divorce and Admiralty Divisions of the High Court of Justice, and from certain other courts and judicial bodies. From this court there is the right of appeal to the House of Lords. In Scotland the inner house of the Court of Session is the court of appeal to which cases from the outer house are taken. From this there is a final appeal to the House of Lords. These courts deal only with civil cases, but for criminal cases England has a court of criminal appeal established in 1907, and Scotland one set up in 1926. From the lower courts there is also the right of appeal. From courts of summary jurisdiction cases can go to quarter sessions, and from quarter sessions and county courts to a divisional court. There is a like sequence in Scotland.

Since 1922 there have been two systems of appeal in Ireland. In Northern Ireland the court of appeal is part of the supreme court, and from this there is the right of appeal to the House of Lords. The constitution of the Irish Free State states that the decisions of its court of appeal are final, but persons can petition the King for leave to appeal to the Judicial Committee of the Privy Council.

Canada and Australia, being federal governments, have each a court of appeal to which cases from the provincial courts are referred: the various provinces have also their courts of appeal. From the supreme courts in Canada and Australia, and also from those in India, South Africa, New Zealand, and other parts of the Empire, the final court of appeal is the Judicial Committee of the Privy Council.

APPEARANCE. A term used in English law. Proceedings in the High Court of Justice are begun by a writ or an originating summons, which is served personally on the defendant or on his solicitor. The defendant, if he wished to defend the action, must file, at the appropriate office in the High Court, a paper which says, "Enter an appearance for the above-named A. N. (defendant)," and must serve a copy on the plaintiff or his solicitor.

Apostle Jug. Front and side view of a 17th century specimen made at Kreussen, in Bavaria

Apostle Spoon. Examples of a complete set of 1628 Goldenfist's Company, London

APPENDICITIS. Inflammation of the vermiform appendix, a small blind prolongation of the caecum or large intestine. The immediate cause of appendicitis is a bacterial infection of the wall of the appendix, leading ultimately to suppuration and gangrene of the organ. Appendicitis occurs more frequently in the young than in the old, more than 50 p.c. of the cases occurring before the twentieth year.

In acute appendicitis the symptoms usually begin abruptly with severe pain in the lower part of the right side of the abdomen, fever, and gastro-intestinal disturbance—nausea, vomiting, and often constipation. The symptoms somewhat resemble those of an attack of severe colic, but unless they abate within a very few hours medical advice should always be sought, since prompt treatment is of the greatest importance. Usually the diseased appendix is removed, but sometimes the best treatment is merely to open and drain an abscess, if one has been formed. When the disease is taken early the outlook for complete recovery is good.

Appendix, or vermiform appendix, showing its position at the base of the caecum

Ben Vair (3,362 ft.). Port Appin is a port of call for steamers.

The Appin murder is the name given to the murder of Colin Campbell of Glenure, May 14, 1752. For it, James Stewart was arrested, tried by a jury of Campbells and hanged. He was, however, innocent, and the real murderer was never discovered.

APPLE. Tree of the genus *Pyrus malus*. The apple is a native of Britain and is the most easily grown of all cultivated fruits. There are over 1,600 known varieties, mostly developments from the wild crab apple.

Apples are divided into two main classes, kitchen or culinary, and dessert or table. Some are suitable

for either purpose. When grown in orchards, or upon cultivated market land, the standard tree is the usual form. Where land is cheap and plentiful, and space is not of importance, this is the most economical form; but standards are inadvisable in small gardens, since they not only extract much nourishment from the soil to the detriment of other growths, but at least five years must elapse between planting and fruiting.

The best situation for the formation of an orchard is on the slope of a hill with a S.W. aspect. In gardens, and against walls, the aspect is not so important, though it is never wise to plant fruit trees on the N. side of a wall or fence. Oct. or March is the best month for planting, according to the condition of the soil. Apples require pruning, and are propagated by grafting.

The chief pest of apples is the American blight. Among other enemies is the apple weevil, which lays eggs in the young blossoms

Apple. Above, trees sensibly planted with adequate space for sun and air. Below, laecheing, an elaboration of grafting, the usual method of propagation

trade was the opening of packing stations, one being at Cottenham, near Cambridge.

APPLEBY. Borough and market town of Westmorland, England, being the county town. It is picturesquely situated on the Eden, 30 m. S.W. of Carlisle by the L.M.S. and L.N.E. Rlys. It has a town and ashire hall, a grammar school, and a castle with a Norman keep. It returned two members to Parliament from about 1300 until 1832. Market day Sat. Pop. 1786. See illus below

APPLETON, WILLIAM ARCHIBALD (b. 1859). British labour leader. Born at Nottingham, Dec. 31, 1859, he worked at the lace trade until 1896, when he became secretary to the lace-makers' trade union. In 1907 he was made secretary of the General Federation of Trade Unions. He has written a good deal on industrial topics.

W. A. Appleton
British labour leader

APPLIQUE. In architecture, any decorative feature applied to an object or structure. In decorative art generally it is a piece or pattern of one material set upon or applied to the surface of another for decorative effect.

Appleby. View in the town showing the cloisters and church of St. Lawrence. See article above

Appian Way. Below, part of the ancient highway near Rome. Above, reconstruction as it appeared in the day of Rome's greatness

peoples until their incorporation in the empire. The account of the civil wars of Rome is based on authorities no longer available.

APPIAN WAY. Highway of ancient Rome. It separated the twelfth from the second and first districts, and was begun by the censor Appius Claudius in 312 B.C. Issuing from the Appian Gate, it went from Rome to the port of Brundisium, the modern Brindisi.

APPIN. Mountainous district of Argyllshire, Scotland. It is bounded E. by Glencoe and W. by Loch Linnhe. The highest point is

into, ripe apples. All affected fruit should be collected and destroyed, and all windfalls from infested trees treated in the same way. The remedy is to give the trunk and branches a good spraying with paraffin in the autumn, when the leaves have fallen.

In Canada and the U.S.A. great attention has been paid to the grading of apples according to their qualities for the market. In 1928 a scheme of this kind was introduced into Great Britain, and English apples were graded and marked. Another incentive to the

APPOINTMENT (Lat. ad, to; punctum, point). Term used in English law. Where property is settled so as to give someone called the appointor the right to dispose of it, though the appointor is not the owner, an exercise of this right is called an appointment.

APPOLT OVEN. Appliance used for the production of coke from coal for metallurgical purposes. It was devised by the brothers Appolt, and consists of a series of vertical retorts arranged in two rows in blocks of 24 or more. Each retort is about 3 ft. 8 ins. high, 13 ins. wide at the top, and 18 ins. at the bottom, thus tapering to permit the finished coke to be discharged easily through the bottom. The charge for each is usually one ton of coal, and is put in through hoppers in the top. The process of coking usually takes about 24 hours. The retorts are heated by the gases evolved from the coal undergoing the process; these are consumed in chambers surrounding the retorts. No air enters the latter, and there is therefore no combustion of the solid carbon of the coal in the retort. Thus the yield of coke is high.

APPOMATTOX. River of Virginia, U.S.A. It rises in Appomattox county and flows E. to the James river at City Point. About 150 m. long, it is navigable by small steamers to Petersburg, 15 m. from its mouth, and by smaller vessels to Farmville, which is over 100 m. up.

Appomattox Court House is a village of Virginia, U.S.A. Here the Confederate army under Lee surrendered to Grant, April 9, 1865, thus ending the American Civil War.

APPONYI, ALBERT, COUNT (b. 1846). Hun-

garian politician. Born May 29, 1846, he entered the chamber of deputies in 1872, and in 1878 became leader of the national party. From 1901-04 he was president of the chamber, after which he restored the fortunes of the national party and again acted as its leader. From 1906-10 he was minister for education, and he was again in office in 1917, but in 1918 he retired. In 1920 Apponyi, as head of the Hungarian peace delegation, went to Paris and took part in the negotiations, but he retired, as a protest against its terms, before the treaty was actually signed. In his own country he opposed a restoration of the monarchy.

APPRAISER (Lat. appretiare, to set a price on). One licensed to appraise or value property, real or personal. In English law an appraisement must be made by two sworn, licensed appraisers of goods seized under a distress for rent before the goods can be sold. The cost of the yearly licence is £2, and the stamp duty payable in the appraisement varies from 3d. for £5 value to 20s. for £500 or over. Appraisers are usually also auctioneers and valuers. See Auctioneer.

APPRENTICESHIP. System of training for all skilled trades. It was successfully maintained by the guilds without any statutory sanction behind it from about 1350. When the power of the guilds had begun seriously to decline, the system received definite statutory sanction by the passing of the Statute of Apprentices in 1562. The effect of this statute was to erect into a national system, obligatory on all desirous of entering a skilled trade, that which had previously flourished merely as a guild custom.

The statute of 1562 remained nominally in force for about 250 years, not being finally repealed until 1814. It enacted that a uniform term of seven years' apprenticeship must be served as a condition precedent to the right to practise any manual trade, and until well into the 18th century this was rigidly enforced.

The traditional form of apprenticeship practically placed the master in loco parentis towards the apprentice. This relationship almost necessarily resulted so long as it was customary for the apprentice to board and lodge with his master. Under these conditions the apprentice practically became for the

Apricot. A twig bearing fruit

time being a member of his master's household. The system had the virtue of imposing a most salutary discipline and restraint on the apprentice during the most difficult period of a boy's life.

The indenture was from the earliest times a feature of the system, and there were certain definite covenants entered into by the contracting parties which have endured, with but little alteration, to the present time. In recent years the term apprentice is applied to lads working either under a loose form of agreement of doubtful legal validity, or under no written agreement at all.

After the Great War the Ministry of Labour conducted an inquiry into the training of apprentices, and its conclusions have been published by H.M. Stationery Office in seven volumes.

APPROPRIATION

(Lat. ad, to; proprius, own). Term in English law. Where a debtor owes more than one debt to a creditor and makes a payment, he may appropriate the payment to whichever debt he pleases. If the debtor does not appropriate, the creditor may do so; and he can even apply it to paying a debt which he could not sue for, e.g. a debt barred by the Statute of Limitations.

In Parliament the Appropriation Act is passed at the end of each session, stating the purpose to which the money voted must be applied. Appropriations in aid are cash receipts used by the various Government departments towards meeting their gross expenditure. They are

sums received by one department from another for services rendered.

APPROVER (Lat. ad, to; probare, to test, prove). Legal term used to describe one who has turned king's evidence. Carey, the Fenian, was a noted approver.

APRICOT. A fruit tree of the natural order Rosaceae, genus Armeniaca. A native of Asia, it was introduced into England in 1652. The culture is the same as for peaches, but warm south walls are needed to develop and ripen the fruit. The best soil is loam mixed with sand. Trees should be planted in autumn, and the best system of propagation is by budding in June or July. Under glass the apricot should be planted out in a soil consisting largely of lime and burnt wood ashes, and in such a position that light and air can be regulated easily. Sudden currents of icy wind are fatal to proper ripening.

APRIES. Egyptian king of the XXVIth dynasty (c. 589-570 B.C.). The Greised form of the native name Uahabra, it appears as Pharaoh-hophra in Jer. 44. Capturing Sidon by a sea battle, he entered into a league against Nebuchadrezzar II. He was deposed in favour of Aahmes If by a military revolt in Libya. He was then interned at Sais and finally strangled. See Memphis.

APRON. Cloth or piece of leather worn to protect the garment beneath, or as part of an official dress, as by Freemasons, bishops of the Anglican Church, etc. It is of ancient origin, was mentioned by Chaucer, depicted in 14th century illustrations, and later became a decorative adjunct to a woman's dress.

In engineering, an apron signifies a protective covering, such as the sloping masonry platform at the foot of a dam which prevents water that passes over or through the dam from injuring the foundations.

APSARAS. In Hindu mythology, two classes, divine and mundane, of nymphs and fairies. Sometimes as insubstantial cloudy creatures, or as water sprites, they are regarded as Oriental parallels to the swan maidens of western tradition, or the nymphs of the Greeks. They are also spoken of as attendants on heroes, like the hours of the Mahomedan paradise.

APSE (Gr. apsis, fastening, circle). In ecclesiastical architecture, the semicircular or polygonal termination of the nave or of the aisles of a basilica. In medieval churches it was the space reserved for the altar, and

Apse. 1. The apse of Notre Dame, Paris, notable for its flying buttresses. 2. Romanesque style, as exemplified at the church of S. Vicente, Avila, Spain

usually vaulted. Some Norman churches in England retain semicircular apses at the E. end, for example, Peterborough Cathedral, while the apse of Lichfield Cathedral is a polygon. The apse often had a diameter equal to the width of the church, allowing for aisles to surround the altar, forming what is known as the ambulatory. The apse was revived by Wren in S. Paul's, and the church of S. Mary-le-Strand, London, shows an example, balanced at the W. end by a semicircular portico.

Apsley House, Hyde Park Corner, London. It is the residence of the duke of Wellington, having been presented by the nation to the first duke in 1820

APSLEY HOUSE. London residence of the dukes of Wellington. It is in Piccadilly, at the western or Hyde Park end, and was built in 1771-8 by the Adam brothers for Lord Apsley on the site of Hercules' Pillars Inn. It was presented by the nation in 1820 to the Iron Duke.

APTERA (Gr. apteros, wingless). Order of wingless insects, including the sub-orders collembola (spring-tails) and thysanura (bristle-tails). In many respects they suggest that they have remained in the larval stage and failed to develop into perfect insects. They are all very small.

Aptera. Specimen, much enlarged, of the bristle-tail *Lepisma saccharinum*

APTERYX. A genus of ratite birds found only in New Zealand. The native name is kiwi. The wings are small and rudimentary, hidden beneath the feathers and useless for flight. The feathers are long and narrow, giving the bird the appearance of being covered with coarse hair. The beak is long, and the nostrils are at the tip. The bird is about the size of a domestic hen

APULEIUS, LUCIUS. A Roman writer who flourished in the latter half of the 2nd century A.D. An African by birth, after travelling extensively he settled down as a rhetorician in Carthage. His best known work is *The Golden Ass*, a prose romance, the forerunner of the modern novel, purporting to describe the experiences of one Lucius, whom an enchantress had transformed into an ass. The most interesting episode is the story of Cupid and Psyche. Some philosophical writings and his defence against a charge of sorcery are also extant. Eng. trans. of *The Golden Ass*, 1566, reprinted 1913.

APULIA (Italian Puglia). Territorial division of S.E. Italy. It includes the provinces of Foggia, Bari, and Lecce, and has an area of 7,376 sq. m. The highest point is Monte Gargano, 3,464 ft., and the only large river is the Ofanto, about 100 m. long. The

chief industries are pastoral and agricultural. Marble is worked, and olive oil exported. The chief ports are Bari, Brindisi and Barletta, on the Adriatic, and Taranto on the gulf of that name.

Originally civilized by Greek colonists, Apulia submitted to Rome in 317 B.C., and suffered severely in the Punic wars and also in the Social War of 90-88 B.C., after which it never recovered its ancient prosperity. It became part of the Two Sicilies in 1734 and of the kingdom of Italy in 1861. Pop. 2,344,314.

APUS (Gr. apous; footless). A small freshwater crustacean of the order of Phyllopodas, related to the brine shrimps. It is often nearly an inch in length, with a carapace covering the head and part of the thorax, the abdominal appendages being exposed. It swims on its back, using the legs as paddles.

Apus. *Lepidurus*, or scale-tailed apus (enlarged)

AQUAMARINE.

Popular name of the bluish-green varieties of beryl, topaz, and apatite. The word comes from Latin aqua marina, sea water, in allusion to the colour, and is also used as an adjective to denote bluish green. The aquamarine is found in the Ural Mts. and in Brazil, the latter country also yielding pretty aquamarine chrysolite of a yellowish-green hue.

AQUARIUM (Lat. aquarius, pertaining to water). Vessel constructed as a cage for the observation of living aquatic animals and plants in fresh or salt water; the first known as the fresh-water aquarium, the second as the marine aquarium. It usually takes the form of a four-sided tank, constructed of glass and slate or of glass and zinc. The best form has the front of plate glass, and the bottom, back and ends of slate. The term is also used for a building housing these tanks. Examples are in the Zoological Gardens, London, in Brighton, and at the Battery, New York.

Apteryx australis, or kiwi, known as the wingless bird of New Zealand

AQUARIUS. One of the oldest constellations. The name signifies the water bearer, and from time immemorial the constellation has been represented as a man pouring out a stream of water from a pitcher, apparently on Pisces, the Fish. The water bearer's right arm is stretched backwards so as to reach over almost the entire length of Capricornus. The stream of water trickles down to the star Fomalhaut, one of the four ancient royal stars and the mouth of the Fish. See Constellation.

AQUATINT (Lat. aqua tineta, dyed water). The name applied to a mode of etching on copper with a resin ground resulting in close imitations of water-colour and Indian ink drawings. Aquatints were first produced in France in 1750, and in England by Paul Sandby in 1775. See Etching.

AQUEDUCT (Lat. aquae ductus, conveyance of water). Conduit in which water flows or is conveyed from one point to another. In the generally accepted sense of the word an aqueduct is an artificial channel in which water flows by gravity, at least for a considerable portion of the distance, between the source of supply and the destination.

The most famous builders of aqueducts were the Romans, and many of the ruins of their structures exist in Italy and elsewhere on the Continent. Roman aqueducts followed a uniform slope throughout, the water flowing by gravity. To reduce tunnelling to a minimum, hills were skirted and the water was carried in stone and cement-lined channels cut in the earth and covered over.

In modern practice the original type of aqueduct has for most purposes been superseded by the use of pipes, which are now usually

Aqueduct. Remains of the Roman aqueduct at Pont du Gard, Nîmes, France

of cast iron or steel, or by closed conduits constructed of reinforced concrete. In some cases, however, where the natural slope of the ground permits of the requisite fall, a trench is dug, an inverted arch of concrete is formed on the bottom, side walls are raised on this, and an arched roof is added to exclude polluting matter. The trench is then covered with the excavated earth, which affords protection from heat and cold.

Tunnels are usually lined to promote ease of flow. In undulating country and across valleys sections of pipe line are interposed. Narrow and deep depressions are sometimes spanned by girder troughs. In the Severn

Aqueduct. Above, part of the Birmingham aqueduct. Below, pipes carried across the Storr Valley

siphon of the Birmingham aqueduct the pressure is at one point 250 lb. to the sq. in., the greatest in any British aqueduct

Aquila, Italy. The 13th century facade of the church of S. Maria di Collemaggio

AQUILA. City of Italy. The capital of Aquila province, and a summer resort, it is on the Aterno, 50 m. direct and 145 m. by rly. N.E. of Rome. It has a 13th century cathedral and a citadel built by the Spaniards in 1534. several palaces and old churches, and a 13th century museum. Notable among its churches are S. Bernardino di Siena, dating from 1472, and S. Maria di Collemaggio, built 1280. It was founded by the emperor Frederick II about 1240. Pop. 24,184.

AQUILA (Lat. eagle). Name of a constellation in the northern hemisphere. Figured as an eagle carrying a harp about its neck, it is to the east of the star Vega. Its chief star is Altair, occupying one of the angles of an equilateral triangle, the other two points being Vega and the star Alpha Ophiuchi. See Astronomy. Constellation.

AQUILA. An early convert to Christianity mentioned in the N.T. The husband of Priscilla, with whom he is always associated, he is referred to by S. Paul (Rom. 16. 1 Cor. 16; 2 Tim. 4). Born in Pontus (Acts 18) and a Jew, Aquila was driven from Rome, and with Priscilla entertained S. Paul at Corinth. Later they saved the life of the apostle at Ephesus. A late tradition makes Aquila one of the seventy sent out by Christ.

AQUILEGIA. Genus of perennial herbs of the natural order Ranunculaceae. Native of the N. temperate zone, it contains a few species and numerous hybrids. The leaves are broken up into stalked leaflets, which are again divided into three lobes. A familiar type is the common columbine (*A. vulgaris*), a native of Europe, Asia, and N. Africa, whose inverted flower is supposed to resemble a nest of five doves (Lat. columbae) or eagles (*aquila*).

Aquilegia vulgaris, or columbine

AQUILEJA. Small town of Italy, standing near the Adriatic, 26 m. by rly. N.W. of Trieste. From its foundation as a frontier fortress about 200 B.C. until its destruction by Attila in A.D. 452, Aquileja was one of the great cities of the Roman Empire. Excavations have proved its importance, and the museum contains a valuable collection of antiquities. The bishop of Aquileja attained the rank of patriarch and was one of the most important dignitaries of the medieval Church. The cathedral, dating from the 11th century, occupies the site of an earlier edifice.

Since Roman times the sea has receded and the city is now about 6 m. away, lagoons having been formed in front of it. It was included for centuries in the Holy Roman Empire, and was acquired by Austria in 1806 and by Italy after the Great War. Pop. 2,600.

AQUINAS, THOMAS (1227-74). Saint and theologian. A son of the count of Aquino, he was born near Naples, and at the age of 16 became a friar of the Dominican order. He graduated in theology at Paris in 1248, returned to Cologne, and was ordained to the priesthood, lecturing and teaching in that city for the next four years.

In 1252 Paris was the scene of bitter controversy between the friars and the secular clergy, and the friars, heavily attacked by the latter, called Thomas and S. Bonaventura, the Franciscan, to their assistance. The cause was argued before the pope, and Thomas's brilliant defence broke up completely the case against the mendicant orders. Thomas received the doctorate in 1257. From that time until his death he was teaching, writing, and regulating the theological studies of the Dominican friars, refusing all high appointments in the Church, and remaining a simple friar. He was canonised by Pope John XXII in 1323, his festival being kept throughout the Roman Catholic Church on March 7.

The influence which Thomas Aquinas has exercised on both theological and philosophical thought is enormous. The greatest of all his works, the *Summa Theologica*, is a compendium of all human knowledge in its relation to religion. He taught that for the human soul there were two sources of knowledge, divine revelation (supernatural) and human intellect (natural); and that all our knowledge begins with the senses. With Aristotle, to whom he owed much, Aquinas maintains that ethics is the science of directing the will to the real good, but he makes charity or love the central unity of the virtues. With a literary style marvellously clear and concise, he covers the whole ground of human knowledge, and leaves no question unsolved. To-day his great work is as essential to all students of theology as it was in the 13th century. See Scholasticism.

AQUITAINE. Name given nearly 2,000 years ago to the district between the Pyrenees and the river Garonne. Gradually the name spread farther N., and under the Romans Aquitania, as they called it, was divided into three parts, and in the time of Augustus it reached as far as the Loire.

After the fall of the Western Empire it fell into the hands of the Franks and eventually, through Eleanor, wife of Henry II of England, became united with England, in whose possession it remained until the days of Henry VI. By then the name Aquitaine had almost fallen into disuse, the S. part being known as Gascony and the N. as Guienne. See France.

The name Aquitania was given to a Cunard liner, launched in 1914 and burning oil fuel. Her gross tonnage is 45,647 tons, and her length 868 feet.

ARABESQUE. Style of pictorial or plastic ornament, with some suggestion of the fanciful or grotesque. It is seen in Moorish and Arabic architecture, and lent itself to beautiful patterns. Christian artists introduced into it human forms. See Alhambra; Architecture.

S. Thomas Aquinas, scholastic theologian

ARABI, AHMED (c. 1839-1911) Egyptian nationalist known as Arabi Pasha. He served in the army and became an officer in 1862, winning increasing popularity by his speeches against the employment of foreigners and Turkish ministers in Egypt, and in 1882 he forced the Khedive, Tewfik Pasha, to reconstruct the ministry, himself being made war minister. His hostility to all forms of European control led the British to bombard Alexandria, and on Sept. 12, 1882, Sir Garnet Wolseley defeated Arabi's forces at Tel-el-Kebir. Arabi was condemned to death, but the sentence was commuted to exile in Ceylon. In 1901 he returned to Egypt, where he died Sept. 21, 1911. See Alexandria.

Ahmed Arabi, known as Arabi Pasha

ARABIA. Arabia is the great peninsula forming the S.W. part of Asia and lying between the Persian Gulf and the Gulf of Oman on the E. and the Red Sea on the W. Its area is approximately 1,200,000 sq. m., vast portions of which consist of sandy wastes, rendering about half the country uninhabitable. Except in the north-central part, inhabited Arabia consists of a series of more or less well defined territories lying on the shores of the Red Sea, the Arabian Sea, the Gulf of Oman, and the Persian Gulf. The population is about 7 millions, consisting for the most part of nomadic Beduin tribes, who fit from oasis to oasis, and of Arabs who live in settled communities. There are many Jews.

The low-lying coastal region to the W. produces cereals, cotton, coffee, sugar, tobacco, and indigo, and abounds in aromatic trees and plants. Elsewhere the date palm supplies the chief means of subsistence. Arabia is famous for its horses and camels, and for the pearl fisheries of the Persian Gulf. The climate has extremes of heat and cold, the coastal tracts being in summer among the most torrid regions of the world. The country is almost destitute of means of communication: there are only the pilgrim roads, and, in the W., the Hejaz rly. and a short line in the Yemen.

HISTORY. The Arabs are undoubtedly of ancient race, one strain being Ishmaelite, the other derived from the descendants of Shem,

Arabesque. Part of the elaborate Moorish decorations of the Hall of the Ambassadors in the Alhambra, Spain

Arabia. Map of the peninsula which lies between the Red Sea and the Persian Gulf, and forms in its northern portion the land link between the continents of Asia, to which it properly belongs, and Africa

but until the development of Islamism Arabia figures hardly at all in history. Her greatest prosperity was during the reigns of the first three caliphs. With the removal of the seat of Mahomedan government from Damascus to Bagdad, Arabia's importance gradually declined, until in the 16th century Hejaz and Yemen came into the hands of the Turks. During that period and in the following century the Portuguese took Oman and acquired a footing in the Persian Gulf, which they virtually lost to the British, who took Ormuz, on the Persian side of the gulf, from 1801 to 1802. The Wahab movement for reform in Arabia of the 18th century saw the Turks and Islamism. Arabia held of the secure, any part of pilgrims never very Mecca and for the in the traffic to railway; and, to consolidate her interests the latter century, Turkey built the Hejaz 1914 Ibn Saud, setting Damascus with Medina, captured the Hejaz being reached in 1908. In 1916 Hussein province from the Turks, with his son Feisal grand sheriff of Mecca, of the Turks, and proking of the Hejaz and the British. His army, a valuable ally to Lawrence, repeatedly defeated the Turks, who were ejected from the Hejaz, and the Yemen. After the Great War, and in the end, the Turkish empire was

overthrown by Ibn Saud of Nejd, who united Hejaz to his own state.

To-day Arabia comprises a number of independent states and protectorates, the largest of which is the State of Nejd and its dependencies. The Hejaz rly. runs from Medina through the desert to Damascus and Beirut, and is connected with the projected Bagdad Railway at Aleppo. Subsidies were paid by the British Government to King Ibn Saud during 1917-1923, in the first instance in consideration of assistance in the war against Turkey, and later subject to conditions in regard to his relations with other Arab countries. (See Feisal; Hejaz; Hussein; Lawrence. T. E.; Nojd.)

LANGUAGE AND LITERATURE. The Arabic language is an offshoot of the original Semitic speech. The earliest Arabic writings that can be described as literature are the productions of the Arabian poets and minstrels. The oldest poems (5th century A.D.) were preserved for centuries simply by oral transmission.

The custom of writing poetry did not begin until about A.D. 700 (i.e. towards the end of the first century after the Flight), when it was felt to be important to collect and preserve the utterances of the famous pre-Islamic poets. Several collections of these have come down to us.

The earliest prose work is the Koran. To preserve and explain the text of the sacred book bequeathed to the Moslems by Mahomet, it was necessary to invent a science of grammar and lexicography, and to collect the pre-Islamic poems,

the language of which provided Mahomet with his model. The language of the poets came to be regarded as classical Arabic, and it was this language that was spoken and written by cultured Moslems until the 13th century, when it had to give place to a number of colloquial dialects.

The reigns of the caliphs Mansur (754-775), Harun-al-Rashid (786-809), and Mamun (809-833) were marked by a kind of Oriental Renaissance. Literature, art, and science began to receive great encouragement, with the result that during some centuries a vast number of important and original works in all fields appeared, and many translations were made into Arabic from Greek, Syriac, and Persian. The fact that the words alchemy and algebra are Arabic indicates the great part that was played by the Arabs in the cultivation and spread of certain sciences.

The book so well known to Europeans as *The Arabian Nights* (Arabic *Alf Layla wa-Layla*, Thousand and One Nights) seems to have been based upon an old Persian book, *Hazar Afsana* (Thousand Tales).

ARCHITECTURE. Before the time of Mahomet the Arabs possessed no architecture of their own, and later they relied largely on Byzantine and Persian workmen for their buildings. Hence the so-called Architecture arabic in these countries can hardly be considered to have been evolved from purely Arab inspiration. In its earlier stages it was distinguished by the use of the pointed arch; later the horseshoe arch was developed, and as the Mahomedan influence spread, this became the characteristic mark of the several groups of Oriental architecture classified under the heading of Mahomedan Architecture.

Consult: *Travels in Arabia Deserta*, C. M. Doughty, new ed. 1923; *Revolt in the Desert*, T. E. Lawrence, 1927; *Arabia Deserta*, A. Musil, 1927; *Arabia of the Wahabis*, H. St. J. B. Philby, 1928; *Holy Cities of Arabia*, C. E. Rutter, 1928.

ARABIAN SEA (anc. *Mare Erythraeum*). That part of the Indian Ocean lying between Arabia and India. Its N.W. extension is the Persian Gulf through the Gulf of Oman, and its S.W. arm is the Gulf of Aden, connected with the Red Sea by the strait of Bab-el-Mandeb. It contains the Laccadives, the Kuria Muria Islands and Socotra, and receives the river Indus.

ARABIN OR ARABIC ACIN. Chief constituent of gum arabic. It occurs combined with calcium, magnesium, and potassium. It is prepared by adding hydrochloric acid to a mucilage of gum arabic, and alcohol afterwards, when the arabin is precipitated.

Arabia: two native types. Left, a peasant woman, living amongst the ruins of Petra, turns her primitive hand mill. Right, camel breeder from the Thana (Tehama) desert, a region peopled by warlike Aboosiyah tribesmen. Photos: D. McLeish and Maj. Meek.

ARABIS OR **ROCK-CRESS**. Genus of herbs of the natural order Cruciferae, natives of the N. temperate zone. The hairy root-leaves are spoon-shaped, and the four petals of the flower usually white or purplish. The

Arabis. The Alpine rock-cress

ARABLE (Lat. arabilis, fit for ploughing). Land which can be tilled or cultivated. It includes, therefore, permanent grass and a good deal of waste land which could be brought under the plough by suitable treatment.

In official reports the term is restricted to land which, apart from permanent grass, is actually under cultivation. In Great Britain the amount of arable land is steadily decreasing. In 1928 it was 13,241,000 acres, while for the ten years 1901-10 the average was 15,106,928 acres. See Agriculture.

ARACHNIDA OR **ARACHNOIDEA** (Gr. arachnē, spider; eidos, form). Class of the Arthropoda. It includes spiders, scorpions, harvestmen, mites, and certain other animals. They have usually six pairs of limbs, four pairs being walking legs, and the others being used for seizing food. The head and thorax are fused together, and the eyes are generally simple. The abdomen is in some genera segmented, and may bear appendages. In the scorpion its extremity is developed into a sting. The sexes are separate, and nearly all arachnids are carnivorous. See Spider.

Arachnida. 1. Scorpion. 2 and 3. Common garden spider, and enlarged section of same. 4. Harvestman. 5. Water-mite. 4 and 5 greatly enlarged

ARAD. Two towns of Rumania. Both are on the Alföld, and before 1918 belonged to Hungary. Arad, the capital of Arad county, is a municipality on the right bank of the river Maros, 74 m. by rly. E. of Szeged. It is an important rly. and trade centre. Pop. 63,166, of whom 70 p.c. are Magyars and 15 p.c. Rumanians.

Uj-Arad or New Arad, in Temes county, now called Aradul Neo, is on the left bank of the Maros and connected with Arad by a wooden bridge. Pop. 6,000.

ARAGON. Name of one of the kingdoms into which Spain was divided before its union under Ferdinand and Isabella in 1479. It was bounded N. by the Pyrenees, E. by Catalonia and Valencia, S. by Valencia, and W. by Castile and Navarre. To-day it is covered by the provinces of Huesca, Saragossa, and Teruel. The Ebro flows through it, and in it are the highest summits of the Pyrenees. In a general sense the name is still retained by the district. Its capital is Saragossa.

The constitutional history of Aragon is of interest, for one reason because it anticipates that of England. In the 12th century or earlier it had its Cortes, in which the communes were represented, and its justiza was an official whose powers included the right to review the king's actions in certain cases. The nobles, especially the more powerful of them, claimed that their privileges were independent of the king's grant or favour, while the people as a whole appealed, often with success, to their ancient customs or fueros. See Spain.

ARAGONITE. Carbonate of calcium. It is of similar composition to calcite, but differs in having orthorhombic crystalline form. It is

found in nature deposited from solutions and is secreted by marine mollusca and other organisms to form their calcareous shells and skeletons. It was first found in Aragon.

ARAGUAYA. River of Brazil. Rising in the Serra do Cayapó, it flows for 1,100 m. to the Tocantins, whose chief tributary it is, entering that river at São João. Known in its upper reaches as the Rio Grande, it bifurcates towards the middle of its course, the two branches, which form the island of Bananal with an area of 8,000 sq. m., uniting again about 100 m. lower down. Navigation is obstructed by rapids.

ARAKAN. River of Burma, better known as the Kuladan (q.v.). It gives its name to a division of the country and to a range of mountains, the Arakan Yoma.

ARAL, **SEA OF**. Large inland sea or lake of Russian Central Asia. It derives its name from the Khirgiz-Aral Denghiz, meaning the island sea. It has a greatest length of 235 m., extreme breadth of 180 m., and a depth varying from 50 ft. to 220 ft. It covers an area of 26,000 sq. m., which is continually decreasing through evaporation. Only slightly saline, it contains a variety of fish, sturgeon, carp, and herring abounding. Seals are caught. It is fed by the Amu-Daria and Syr-Daria, but has no outlet. It contains many islands, the largest being Kug Aral.

ARAM OR **ARAMAEA**. Semitic name for Mesopotamia and part of Syria. Its vernacular was Aramaic or Aramaean. Originally spoken by the inhabitants of Aram, in early times Aramaic extended over a wide area. In Babylonia, Assyria, and part of Persia it was the official language, and was used in Syria, Cappadocia, and also in Palestine. The Galilean dialect, not the cultivated literary language of Jerusalem, was used by Christ and the disciples.

There are two main dialects: (1) Western, comprising Palmyrene and Nabataean, known only from inscriptions; Biblical Aramaic (wrongly called Chaldean), in which parts of Daniel and Ezra were written; the dialect of the Targums and the Samaritan version of the Pentateuch; (2) Eastern, including Syriac, the literary language of the Syrian Christians of Edessa, which split up into Jacobite and Nestorian; of the Gnostic Mandaeans in lower Babylonia; and of the Babylonian Talmud.

After the rise of Islam Aramaic mainly gave place to Arabic, and is now only spoken near Damascus, in part of Mesopotamia, by the Nestorians of Mosul, and on the banks of Lake Urmia in Persia.

ARAM, **EUGENE** (1704-59). English philologist and murderer. Born at Ramsgill, York-

Eugene Aram, English murderer

shire, he was the son of a gardener. He became a schoolmaster, and while so engaged at Knaresborough had to leave the town in 1745 under suspicion of being associated with frauds perpetrated by Daniel Clark. Subsequently a man named Houseman was arrested for the murder of Clark, and on stating that Clark had been murdered by Aram and his body hidden in S. Robert's Cave, Knaresborough, search was made and the skeleton was found. In 1758 Aram, then an usher at

Lyme Regis, was apprehended. Brought to trial in 1759, Aram defended himself with great skill. He was condemned, and executed on Aug. 6, before his death confessing his participation in the crime, though maintaining that Houseman was the principal murderer.

In his spare time Aram had acquired an amazing knowledge of languages, especially of Latin, Greek, Hebrew, French, Arabic, and Celtic, which he intended to utilise in the compilation of a comparative dictionary. His case is the subject of Lord Lytton's novel and of Thomas Hood's *Dream of Eugene Aram*.

ARAN ISLANDS (OR **ARRAN**). Three small islands of Galway, Irish Free State. Known also as South Aran Islands, they stretch across the entrance to Galway Bay and have an area of 18 sq. m. The largest and northernmost is Inishmore or Aranmore, the middle island is Inishmann, and the smallest is Inisbeir. Archaeological remains abound, the most noteworthy being Dun Angus, a remarkable round cyclopean fortress on Inishmore. Pop. 2,679.

ARANJUEZ (Lat. Ara Jovis, Jupiter's altar). Town of Spain. It stands on the Tagus, 29 m. S.S.E. of Madrid, on the rly. to that city. Its palace, standing in one of the most beautiful parks in Europe, was a favourite seat of several Spanish sovereigns. The scene of Schiller's *Don Carlos* is laid here. Aranjuez has a wireless station. Pop. 13,550.

ARAN MAWDDWY. Mt. of Merionethshire, Wales. It is the summit of the Berwyn range, and is 2,970 ft. high. To the N. is Aran Benllyn, 2,901 ft. high.

ARANY, **JANOS** (1817-82). Hungarian poet. The son of peasant folk, he joined a company of strolling players, and then became a notary. In 1845 he obtained with his satire *The Lost Constitution* the prize offered for a poem on current events, and two years later the prize for the best Magyar epic with the first part of his trilogy *Toldi*. He became secretary to the Hungarian Academy in 1865, and died Oct. 24, 1882. His later works include *The Siege of Murany*, the second and third parts of *Toldi*, *King Buda's Death*, an epic, and hallads, all reflecting nationalism.

ARARAT. Region in Armenia watered by the river Aras (Araxes). The name has been erroneously applied to the highest mt. in the

Ararat. Culminating point of the Armenian plateau, known to the Persians as the Mountain of Noah

district, on which the Ark is supposed to have rested, but the Bible (Gen. 8) speaks of the "mountains of Ararat." The double-peaked volcanic summit of Ararat is known to the Armenians as the Massis, to the Turks as the Aghri Dagh, and to the Persians as the Koh-i-Nuh, or Mountain of Noah. The first complete ascent was made in 1829. See Noah.

ARARAT. Town of Victoria, Australia. It stands near Hopkins river, 130 m. by rly. W.N.W. of Melbourne, surrounded by a region

given over mainly to growing wheat and rearing sheep. Pop. 5,100.

ARATUS OF SIOXON (271-213 B.C.). Greek general and statesman. From 245 he was many years general of the Achaean League, which he strengthened by securing several new members. Unfortunately he alienated Sparta, and sought alliance with the Macedonians, depriving the league of its distinctive character as the champion of Greek freedom.

ARAUCANIAN (Quichua, rebels). Group of S. American Indians inhabiting S. Chile. The name shows their independent character.

Araucanian woman from S. Chile

Caupolicán, a warlike chief of the Araucanians, offered so fierce a resistance to the Spanish until his capture and execution in 1558, that his name and exploits became legendary, and were made the theme of a fine Spanish epic, *La Araucana*, by the poet Ercilla. The figure of Caupolicán, typifying his race, is a favourite and much copied sculpture in Chile. After an attempt by a French adventurer to found an Araucanian kingdom in 1861, the Araucanians formally acknowledged Chilean rule in 1870. They number about 100,000 and give their name to Arauco, a province of Chile. See American Indians.

ARAWAK. Tribe of S. American Indians, inhabiting parts of British and Dutch Guiana. They are in general a weak-bodied, peace-loving people, who at one time extended from Bolivia to the W. Indies and Florida, where they were in process of displacement by the Caribs at the Spanish conquest. They use bows and arrows and blow-guns. Their dress is little more than an apron; ornament is furnished by feathers, seeds, and shells. See American Indians.

Arawak. Types of S. American Indians inhabiting British and Dutch Guiana

ARBACES. Median chieftain. The statement of Ctesias that he revolted against the Assyrian king Sardanapalus, destroyed Nineveh about 876 B.C., and founded the Median empire, is unhistorical. Xenophon mentions a Median satrap Arbaces in the army of Artaxerxes Mnemon at Cunaxa in 401. Arbaces is the name of a character in Lytton's *Last Days of Pompeii*.

ARBALEST (Lat. arcus, bow; ballista, projectile machine). Ancient weapon, also known as a cross-bow, for discharging short arrows, stones, or bullets, which obtains its power from a spanned bow of spring steel. It is believed to have been introduced into England by William the Conqueror, and began to assume military importance during the Crusades. In England it was almost completely superseded by the long bow in the 14th century; in most other countries it was displaced by firearms towards the end of the 15th. Its last appearances were in 1807, against Napoleon in Poland, and by the Chinese at Taku in 1860. The ordinary type of weapon was sufficiently powerful to kill a man or horse at 250 paces and had a maximum range of 400 paces. There were also larger ones which were fixed on the walls of forts and castles and discharged arrows 12 ft. long.

The arbalest was used in hunting long after firearms had been greatly improved, owing to the absence of noise and smoke

ARBELA. Ancient town of Assyria. Known to the Assyrians as Arbailu, the city of four gods, it lies 40 m. S.E. of Mosul. It gave its name to the battle in which Alexander the Great defeated Darius, 331 B.C. The small town of Arbil or Erbil in Iraq occupies the site.

ARBER, EDWARD (1836-1912). English man of letters. He was born in London, Dec. 4, 1836, was for over 20 years in the Civil Service, and Professor of English at Mason College, Birmingham, 1881-94. He died Nov. 23, 1912. Arber is known as the editor of literary works hitherto almost inaccessible to the general public, chief of which is the series known as *English Reprints*, 1868-71. He also edited *British Anthologies*, 1899-1901; and *An English Garner*, 1877-96.

ARBINO. Mountain of Switzerland near Bellinzona. In Sept., 1928, this mountain mass began to move, and on Oct. 2 its top crashed into the valleys below. Three peaks disappeared completely and many buildings were destroyed, as was the Gesno highway for about two miles.

ARBITRATION. In English law, the decision of a matter in dispute, not by a judge sitting in a law court, but by a person called an arbitrator. The general law relating to arbitration is contained in the Arbitration Act, 1889, which forms a code. Under it two kinds are provided for: (1) voluntary, (2) compulsory.

Certain statutes, e.g. the *Friendly Societies Act*, provide for the settlement of disputes by arbitration, and arbitration is frequently employed in cases when the price of land required by railway companies and other public bodies is in dispute.

Industrial arbitration is an arrangement of industrial differences between employers and employed, to prevent strikes, lock-outs, etc. It is of two kinds, voluntary and compulsory, and is usually distinguished from conciliation, which tries to settle these difficulties without the intervention of an arbitrator. The essential principle of voluntary arbitration is that the disputing parties agree to submit their case to an arbitrator or board of arbitrators, and to abide by his or their decision. Compulsory arbitration means that, under certain conditions, they must take this step or incur penalties for breaching the law.

Industrial arbitration in Great Britain actually dates from 1896. The Conciliation Act of that year was concerned only with voluntary arbitration, and by it all the previous Acts of the kind were repealed. It gave the Board of Trade power, as soon as a dispute arose, to take steps to bring the parties together, and, if desired by them, to appoint an arbitrator. In 1908 a further step was taken by the appointment, under the Board of Trade, of a permanent court of arbitration.

This consisted of three panels, one of chairmen, and one each of representatives of employers and employed. The work is supervised by the Chief Industrial Commissioner, who is an official of the Ministry of Labour.

Compulsory arbitration was introduced in 1894 into New Zealand, where all industrial disputes must be referred to courts of arbitration presided over by a judge, those unwilling to accept the award being fined, both as associations and as individuals. Australia took compulsory arbitration from New Zealand, New South Wales in 1901 being the first state to adopt it, and in 1904 a law made it obligatory throughout the Commonwealth.

Canada proceeded rather upon English lines the Acts passed there being meant to encourage voluntary arbitration. But the Act of 1907, known as the Lemieux Act, made it illegal for a strike or lock-out to take place before the dispute has been investigated.

INTERNATIONAL ARBITRATION. At the first Hague Conference (1899), which met to consider the reduction of armaments and the methods of averting war, the 26 Powers represented agreed to a convention for the pacific settlement of international disputes, comprising provisions for the use of the mediation and good offices of third Powers, for the institution of international commissions of inquiry, and for the adoption of arbitration.

At the second Hague Conference (1907), to which 44 States sent delegates, this convention was amended and renewed. It amounted, however, to nothing more than this: the Powers recognized the equitable character of the procedure, when diplomacy failed, in questions of a legal nature, especially those arising out of the interpretation or application of treaties: they recommended its adoption so far as circumstances permit, and left it open to themselves to conclude special agreements for compulsory arbitration so far as possible.

Since 1919 many arbitration treaties have been signed, especially by the countries of Europe and S. America. In 1927 the general arbitration treaty between the United States and France was renewed.

The court of international arbitration was set up at the Hague, 1899. For its members each of the Powers appoints four persons for six years, who are inscribed on a list notified to all the other Powers. The arbitrators are chosen from this list. Failing agreement, each appoints two arbitrators, who choose an umpire; if they cannot agree as to the umpire he is to be chosen by a third Power agreed upon by the parties. See *Hague Tribunal*.

ARBOGAST (d. A.D. 394). Frankish general. Under the emperors Gratian and Valentinian II he distinguished himself by victories over the Goths and by overthrowing the usurper Maximus. He is said to have contrived the murder of Valentinian in 392 and set up Eugenius, a puppet of his own, as emperor. Theodosius, the emperor of the East, then intervened and Arbogast was defeated near Aquileia, in 394.

ARBOR DAY (Lat. arbor, tree). Day officially appointed in the U.S.A. for the annual planting of trees, especially by school children. The custom seems to have been suggested in 1865, and in 1872 a day was set apart in Nebraska for the purpose, and now in almost every state and territory Arbor Day is

Arbalest. 1. Lever arbalest, a cross-bow fitted with a cranequin. 2. Arbalest with windlass and compound pulley-gear. 3. Simple arbalest. 4. Bullet arbalest. 5. Arbalest for stones (16th century)

recognized as a legal or school holiday. The date varies in different localities. Arbor Day is kept in Canada and New Zealand.

ARBORETUM. Term applied specifically to a collection of growing trees and shrubs arranged for purposes of scientific study or picturesqueness, and less strictly to a park or wooded pleasure ground.

ARBOR LOW. Megalithic structure near Bakewell, Derbyshire. A circle of 30 stones, now overturned, enclosing a megalithic ruin, is surrounded by a fosse and rampart 250 ft. across. It is of late Neolithic age.

ARBOR VITAE (Lat. tree of life). Popular name for cypress-like evergreen coniferous trees, of which the principal species are the American (*Thuja occidentalis*) and the Chinese (*T. orientalis*). The leaves are minute scales which overlap one another and are closely pressed to the twigs and branches. Their under-surface is coated with wax. Both species have a strong aromatic odour.

Arbor Vitae, or the tree of life

ARBROATH OR **ABERBROTHOCK.** Burgh and seaport of Angus, Scotland. It stands on the river Brothock, near its mouth, about 17 m. N.E. of Dundee, on the L.N.E. and L.M.S. Ryds. The industries are chiefly concerned with shipping, and the educational establishments include an art school. The harbour is accessible to vessels of 1,000 tons: the old harbour is now a wet dock. There are ruins of an abbey. It is a popular holiday resort, with good sands, golf links, etc. Arbroath, the Fairport of Scott's Antiquary, has a signal tower, 50 ft. high, in communication with the lighthouse on Bell or Incheape Rock, 12 m. S.E. Market day, Sat. Pop. 19,499.

ARBUTHNOT, SIR ROBERT KEITH, BART. (1864-1916). British sailor. Born March 23, 1864, he entered the navy in 1877. In 1889 he succeeded his father as 4th baronet in a Scottish title dating from 1823. In 1913 he commanded part of the 2nd Battle Squadron; in 1914 he took over the 1st Cruiser Squadron and led this to the battle of Jutland. About 6.15 p.m. on May 31, 1916, his ship, Defence, was sunk while fighting some German light cruisers, and Sir Robert Arbuthnot and all his crew lost their lives. See Jutland, Battle of.

Sir Robert Arbuthnot, British sailor

ARBUTUS (Lat. wild strawberry). Genus of evergreen trees and shrubs of the order Ericaceae. Natives of the N. temperate regions, they have alternate leaves, and bell-shaped or globular white or reddish flowers. *A. unedo* is the strawberry tree of S. Europe, which bears large orange-red, edible fruits.

Arbutus unedo, or the strawberry-tree

ARCACHON. Town of France. On the Bassin d'Arcachon, a shallow opening of the Bay of Biscay, it is 34 m. by rly. S.W. of Bordeaux. A pleasure resort in summer, it is also popular for invalids in winter. The dunes are covered with pine woods and the sands and bathing are good. Arcachon is a fishing centre and has extensive oyster beds. Pop. 10,266.

ARCADE (Lat. arcus, bow, arch). Range of arches standing on piers or columns, either free-standing or attached as decoration to the

ArCADE. Front of the doge's palace at Venice, showing the open colonnades, which form two long loggias. The building, dates from the late 15th century

surface of a wall. In the latter sense the arcade was a feature, though a rare one, of Greek architecture, but it assumed no real importance until Roman times. The Romans transmitted it to the Italians, and the Italian cities are still rich in this feature.

Araedes are usually built round public courts or squares, market places, and in other situations where they can serve a utilitarian purpose. Medieval ecclesiastical architecture abounds in instances of the arcade as an ornamental dressing to the wall, taking the form of moulded arches supported by colonnettes. A more modern application of the term is to covered streets of the type of the Burlington Arcade in London, or the Royal Arcade at Newcastle.

ARCADIA. Country of ancient Greece. It occupied the centre of Peloponnesus and, a very mountainous country, its physical characteristics enabled the inhabitants continuously to preserve a semblance of independence. The chief towns were Mantinea, Tegea, and Orchomenus. According to ancient tradition the inhabitants were racially the oldest in Greece. They were devoted to pastoral pursuits and fond of music; hence the poetic identification of Arcadia with romantic simplicity. The modern Arcadia forms a division of Greece, and has an area of 2,020 sq. m. Pop. 166,141. (See Greece.)

Arcadia was the name given to several pastoral romances, written partly in prose and partly in verse. All owed something directly or indirectly to the Greek romances of Heliodorus (3rd century A.D.) and Achilles Tatius (3rd century A.D.). The most notable of all, that by Sir Philip Sidney, appeared in 1590.

ARCADIUS (377-408). First East Roman emperor. The elder son of Theodosius the Great, on the division of the empire at his father's death in 395 he received the eastern part and his brother Honorius the western. Arcadius played a subordinate part, the real rulers being the prefect Rufinus, who was murdered in 395, the eunuch Eutropius, executed in 399, and Eudoxia, the emperor's wife, who died in 404.

ARCH. Term employed in architecture to denote a structural member spanning vertically an opening or recess. It is divisible into two main species, round and pointed, as exemplified by the Roman and the Gothic, but there are many varieties of each.

Historically, the arch is identified with Roman building, though the Romans adopted it from the earlier Etruscan architecture. They confined themselves almost exclusively to the semi-circular arch.

A peculiarly Roman product was the triumphal arch. These arches were generally erected to commemorate a victory, but occasionally with other objects, e.g. as entrances to towns or great market places. The triumphal arches erected by Napoleon, and the Marble Arch facing Hyde Park, London, are all based on Roman models.

In Byzantine architecture the round arch was further developed in conjunction with the column. Norman arches are nearly always semi-circular and plainly moulded. Different varieties of the round arch are found in Moorish architecture. Here the horseshoe form is a favourite one, and it frequently occurs also in Buddhist architecture, where it is better known as the lotus-leaf arch.

The pointed arch obtained no considerable footing in western Europe until the 10th century, when it figures very conspicuously in the religion-inspired architecture of both East and West. The lancet form of pointed arch has given its name to the first period of English Gothic, that of the 13th century. See Architecture; illus. p. 114.

ARCH, JOSEPH (1826-1919). British labour leader. The son of an agricultural labourer, he became the organizer and leader of his fellow labourers in their struggle for better conditions. Not until 1872 was he able to establish the National Union of Agricultural Labourers. He was elected Liberal-Labour M.P. for N.W. Norfolk, 1885, 1892, and 1895. He died Feb. 12, 1919. Consult his Autobiography, 1898.

Joseph Arch, British labour leader
Elliot & Fry

ARCHAEOLOGY. Archaeology, strictly the science of ancient remains, must now be defined, in view of its modern development, as the study of human handiwork of the past.

The science of systematic archaeology owed the first stage of its radical emancipation to the antiquaries of the North. In Sweden and Denmark there was an exceptional wealth of unmixed archaeological remains, which could not readily be explained by the methods current in the classical areas. Application of the processes of induction and new methods of comparison resulted in the fundamental demonstration of a general uniformity in the evolution of primitive culture, of a natural sequence in the use of stone, bronze and iron in the normal development of human experience.

Archaeologists now held a master key which was applied in turn to the locked secrets of other lands with almost unvarying results, exceptions being noticed only where special metals or materials were indigenous or relatively easy of access. But while the principle of the evolution of primitive culture became admitted, the survival of primitive types until recent times in various sequestered spots on the globe indicated that the evolution of human culture was not generally contemporaneous. Meanwhile, the horizon of the archaeologist widened considerably. The discoveries of Layard in Mesopotamia, of Newton in the Levant, of Mariette in Egypt, of Schliemann in Western Asia Minor, and of other pioneer explorers in these fields produced a profound impression, and archaeology became the accepted handmaid of ancient history.

The modern development of archaeology has thus manifested itself in three separate directions. First, expansion of field, leading to the division of the whole science into branches corresponding with known civilizations of culture areas—Assyrian, Egyptian, Hittite, Greek, Roman, Gallo-Roman, Celtic, etc. Secondly, extension of scope, admitting the consideration of the culture-products of historic times and so involving a further subdivision by sections corresponding to the subjects concerned, e.g. architecture, art, coins, cults, etc. Thirdly, improved methods and ever-increasing results in practical investigation, fostering more and more the tendency to specialisation.

The whole function of a practical archaeologist is three-fold: (a) investigation, (b)

Arch. Evolution of this structure from the primitive lintel to the intricate Gothic example. See text p. 113

exposition (c) interpretation. Investigation includes exploration, excavation, examination of material, whether concrete or documentary, comparisons, analyses, and all that contributes to increase of material information. Since 1922 aerial photography has proved of incomparable value in archaeological investigation. Exposition is the making public of the results of investigation. It may be effected by arrangement and classification of material remains in museums, conservation of curios, or publication of plans, photographs and memoranda. Interpretation is the further synthetic treatment of the materials rendered available by investigation and exposition. Such treatment will involve the domains of anthropology and of history, and will demand a preliminary handling by specialists.

In Great Britain the science of archaeology receives much academic encouragement. There are professorships in archaeology at the

universities of Cambridge, of London, of Dublin and of Liverpool, where the foundation of an Institute of Archaeology facilitates collaboration between the staff and representatives of special fields of research. The British Museum maintains an organization proportioned to modern requirements. There is the British School of Archaeology at Jerusalem to promote the study of the archaeology of Western Asia; the British School at Athens; the British School at Rome; the British School of Archaeology in Egypt, under Sir Flinders Petrie, and the Imperial British Institute of Archaeology for Egypt. France, Germany, Italy and America all have similar schools for the promotion of the science.

The British Archaeological Association, with offices at 22, Russell Sq., London, was founded in 1843. The Royal Archaeological Institute of Great Britain and Ireland, whose headquarters are at 18, Queen Anne's Gate, London,

publishes The Archaeological Journal. There is also the Archaeological Society, founded in 1856, with offices at 207, Bath St., Glasgow.

See Anthropology; Bronze Age; Iron Age; Man; Neolithic; Palaeolithic; Stone Age; etc.

ARCHAEOPTERYX (Gr. *archaios*, ancient; *pteryx*, wing). Primitive lizard-tailed bird. It was about the size of a pigeon. The jaws were furnished with conical teeth, showing affinities with the reptilia. The wings were small and exhibited three digits, each terminating in a claw. The hind-limbs were like those of a bird, and the vertebral column extended to form a long tail.

ARCHANGEL (Gr. *archi*, chief; *angelos*, angel). The title of the highest order of angel. The Jews named seven: Michael, Gabriel, Raphael, Uriel, Chamuel, Jophiel, and Zadkiel, the last three being unrecognized in the Christian Church. See Angel.

ARCHANGEL. A popular name given to two common British wild flowers belonging to the genus of labiates known as dead-nettles. They are respectively *Lamium Galeobdolon* and *L. purpureum*, the first with yellow and the other with purple flowers. It is also sometimes given to *L. album*, with white flowers. The names archangel and archangelica are also sometimes given to the angelica (q.v.).

Archangel. *Lamium Galeobdolon*, the yellow blind nettle

ARCHANGEL (Russ. Arkhangelsk). Seaport and city of the Russian Federal Soviet Republic, capital of the province of Archangel. It stands on the Dvina, at the head of the Gulf of Archangel, 696 m. N. of Moscow by the Archangel-Moscow Rly. It has a good harbour, free from ice from June to Sept., shipbuilding yards, wharves, fisheries, and a wireless station. Timber, wheat, flax, pitch, and tar are exported. Pop. 72,634.

Archangel came into prominence in the last year of the Great War (1918), when it was occupied by the Allies. The objects of the expedition were the safeguarding of military stores in the town, and to assist those Russians who were opposed to Bolshevism. On Aug. 2, 1918, Allied warships anchored in the harbour, and the Red troops having fled a British force was landed. The main force of the Reds was defeated some miles S. of Archangel by the Allies, who by the beginning of Oct. had pushed up to Seletskaya 160 m. S.

During the winter the Allied front stretched in a curve which was deepest at Shenkursk, 180 m. S.E. of Archangel. In Jan., 1919, the Bolsheviks attacked and compelled the abandonment of Shenkursk. A British relief force reached Archangel on May 26, in June the Allies advanced up the Dvina, and on Aug. 10 won a brilliant victory, taking 2,000 prisoners. However, the attempt to join forces with the anti-Bolshevik armies W. of the Urals was a failure and evacuation was ordered. On Sept. 27 the British base at Archangel was closed and the Bolsheviks occupied the town.

Archangel. Russian seaport on the Dvina, at the head of the Gulf of Archangel

ARCHBISHOP (Gr. archi-, chief; episkopos, overseer). Principal bishop of a province, who while governing his own diocese, presides

Archbishop. The archbishops of Canterbury and York (Dr. Davidson and Dr. Lang) in their robes at the coronation of King George V and Queen Mary

Russell

over the bishops of a group of dioceses. In the Church of England the archbishop of Canterbury is primate of all England and metropolitan. He ranks as a prince immediately after the princes of the blood royal and before all other subjects. He has the right of crowning the sovereign. His brother of York, as primate of England, has precedence of all dukes save those of the blood royal and all officers of state save the lord chancellor, and the right of crowning the queen consort.

The Protestant archbishop of Armagh is primate of all Ireland; the archbishop of Dublin is primate of Ireland. On the disestablishment of the church in Wales, which came into effect in 1920, Wales was constituted a separate province under its own archbishop. The episcopal church of Scotland has no archbishop, but its bishops elect a primus, to whom is given metropolitan authority.

In England and Wales there are four Roman Catholic archbishops; in Scotland, two; and in Ireland, four. See Episcopacy.

ARCHDEACON (Gr. archi-, chief; diakonos, minister). Official of the early Christian Church and existing to-day in the Roman Catholic, but more especially in the Anglican Church. In the former the archdeacons, where they exist, are titular dignitaries, their only duty being to present candidates for ordination.

Archer Fish, which shoots its insect prey with squirted drops of water

In the Anglican Church, on the other hand, the archdeacon is still a prominent official. His duties include the visitation of the parishes, the supervision of church buildings, the hearing of cases in their courts, and the admission of churchwardens. Archdeacons are members of Convocation and almost invariably hold a canonry or other living in the diocese. Archdeacons are appointed by the bishops, and their dress includes gaiters. See Church of England.

ARCHDUKE (Gr. archi-, chief; Lat. dux, leader). Title borne by princes of the family

of Hapsburg, rulers of Austria, until 1918. It was assumed about 1358 by one of the dukes of Austria; later came the practice of calling all the princes of the Hapsburg family archduke, and so we have the archduke Charles, the archduke Francis Ferdinand and others who were not rulers. The title has never been borne by any other family.

ARCHELAUS. King of Egypt. Of the Ptolemaic dynasty, he was a son of the Cappadocian Archelaus, one of Mithradates' generals, and Pompey made him high-priest of Comana in Pontus. In 56 B.C. he wedded Berenice, daughter of Ptolemy Auletes, who had been raised to the throne in place of her father, but after six months both were slain, during an invasion led, at Ptolemy's instigation, by the Syrian pro-consul Aulus Gabinius.

Archelaus was also the name of a son of Herod the Great by the Samaritan Malthace. His succession being disputed by his brother Antipas, to whom Judaea had been assigned by an earlier will, Archelaus appealed to the Roman emperor Augustus, who in 4 B.C. made him ethnarch of Judaea, Samaria, and Idumaea, and appointed Antipas tetrarch of Galilee and Peraea.

Fred Archer, British jockey

ARCHER, FREDERICK JAMES (1857-86). British jockey. Altogether he rode in 8,084 races and won 2,748, heading the list of winning jockeys during the seasons from 1873 to 1885. He was successful in five Derbys, six St. Legers, and was on the back of four Two Thousand Guineas and Oaks winners. He shot himself at Newmarket, Nov. 8, 1886.

ARCHER, WILLIAM (1856-1924). British critic. He was dramatic critic of the London Figaro, 1879-81, and of The World, 1884-1905, and also served in the same capacity on The Tribune, The Nation, and The Star. It is, however, as a disciple of Ibsen that he is best known. He edited Ibsen's prose dramas in five volumes and the complete works in 11 volumes, besides collaborating in a translation of Peer Gynt. He was also the author of a Life of W. C. Macready, 1890; Poets of the Younger Generation, 1902; Through Afro-America, 1910; India and the Future 1917, and other books; also a drama, The Green Goddess. He died Dec. 27, 1924.

ARCHER FISH. Name given to several small East Indian fishes which catch insects by squirting drops of water at them from their mouths. The true archer fish, *Toxotes jaculator*, has been known to squirt a drop of water as far as five feet.

ARCHERY. Art and practice of shooting with a bow and arrow. Employed from the earliest times in warfare and hunting through-

out the world, until superseded by the invention of gunpowder, it was revived as a pastime in 1780 by Sir Ashton Lever and some friends at Leicester, and in the following year the Royal Toxophilite Society was instituted, which has ever since been regarded as the controlling authority. Its headquarters are in Regent's Park, London. The Royal Company of Scottish Archers, which constitutes the sovereign's bodyguard for Scotland, goes back to about 1650. Its headquarters are in Edinburgh. The Society of Archers, which dates from 1673, still holds an annual archery meeting.

The implements used for the sport in its modern form comprise the bow, arrows, tips for covering the fingers, the bracer or arm-guard, and the target. Bows, if made of one piece of wood, are termed "self"; but if composed of two or more strips of wood glued are described as "backed." The former are invariably made of yew, the latter of various combinations. Arrows are made of deal, of four different shapes according as they are of the same thickness from end to end, or barrelled or tapered in different parts. The target is circular, 4 ft. in diameter, stuffed with straw, having a canvas face on which are painted five rings; the centre or bull's-eye being gold (technically called the gold), then red, blue, black, and white, and counting respectively 9, 7, 5, 3, and 1. The distances shot over vary from fifty to one hundred yards.

ARCHES, COURT OF. English court of law, so named from being held in the church of S. Mary-le-Bow (Maria de Arcubus). It is the appellate court of the archbishop of Canterbury. The presiding officer is commonly called dean of the arches, though his real title is official principal. He must be a judge, or ex-judge, or a barrister of at least ten years' standing. Most important ecclesiastical cases are decided in this court, from which there is an appeal to the Judicial Committee.

Archery. 1. Early English bow, period Edward IV. 2. Two English arrowheads. 3. Grecian bow. 4. Bow of whalebone and wood, N.W. American. 5. Egyptian quiver. 6. Greco-Egyptian quiver. 7. Egyptian arrow. 8. Theban bow-case and quiver. 9. Etruscan bow

ARCHIL or **ORCHIL**. Purple dye prepared from various lichens of the genus *Rocella*. It appears in commerce as archil, a pasty mass: persis, a drier paste: and eudhear, which is a red-brown powder.

The dye is prepared by treating the finely chopped lichens with dilute ammonia and keeping at the temperature of the air until a dark, violet paste forms. The mass is then thinned with more ammonia and pressed, the liquid obtained being blue archil. Red archil is obtained by heating this solution, when the ammonia is driven off. When carbonate of soda is used, litmus results. After the discovery of aniline dyes archil lost its importance. See Dyes.

ARCHILOCHUS (c. 700 B.C.). Greek lyric poet. He was an Ionian of Paros by birth, and went to Thasos in early life. There he wrote the verses satirising the family of Neobulë, whose father Lycambes had forbidden her marriage with Archilochus after giving his consent. Only fragments of his poetry survive, but he was regarded as one of the great poets of Greece. Although not its inventor, he was the first to perfect iambic verse, especially as a vehicle of sarcasm.

Archilochus,
Greek lyric poet

ARCHIMANDRITE (Gr. archi-, chief; mandra, fold) Title in the Eastern Church for the superior of a monastery, or for an abbot who presides over more than one monastery. It dates from the 4th century. See Greek Church.

ARCHIMEDES (c. 287-212 B.C.). Greek mathematician. Born at Syracuse, Sicily, he wrote on nearly all the mathematical subjects known in his period, and his theory of the lever supported the science of statics for some 1,700 years, until the time of Stevinus (A.D. 1586). His theory of hydrostatics was nearly as long-lived, for little advance was made in it until Stevinus investigated the pressure of liquids. His geometrical discoveries of the quadrature of a parabolic area, and of a spherical surface, as well as of the volume of a sphere, were notable achievements. The Archimedean screw for raising water, and the apocryphal burning glasses which set fire to ships by focussing the rays of the sun on their sails, are attributed to him.

Among his numerous extant writings, consisting of detached essays, are three on plane geometry: on the circle, the parabola, and spirals; two on three-dimensional geometry: on the sphere and cylinder; two papers on arithmetic; and two works on mechanics and hydrostatics.

ARCHIPELAGO (Gr. archi-, chief; pelagos, sea). Name originally given to the island-studded Aegean Sea. It is now applied generally to groups of islands, e.g. the East Indian Archipelago.

The British Isles are strictly an archipelago, which rises above the shallow continental shelf of Western Europe. This fact is an illustration of the circumstance which gives

a geographic unity to an archipelago; the islands are all joined by submarine shelves, banks, or ridges.

ARCHITECT (Gr. archi-, chief; tekton, worker). Term for a master builder in classical and medieval times, and at present for one who designs buildings and superintends their erection.

The divorce of architect from builder has not proved an unmixed benefit, since a century ago it produced a number of architects whose qualifications were mainly academic. But architectural training to-day is well guarded by the various professional institutions, and the tendency is to insist on a practical no less than a theoretical knowledge of building.

The Incorporated Society of Architects was founded in 1884, its aim being to provide a means of association for practising architects and surveyors. In 1925 the society was merged in the Royal Institute of British Architects, the chief architectural society of Great Britain and Ireland. The R.I.B.A. awards a gold medal each year to an architect of distinction, British or foreign, and holds examinations. Associateship follows the passing of the final examination. The offices are at 9, Conduit Street, Hanover Square, London. In October, 1917, the Architectural Association (34, Bedford Square, London, W.C.) opened its school for the first time to women students.

ARCHITECTURE. Architecture is not mere building. It is the result of the artist's knowledge and skill brought to bear on his work, giving it distinctive character and style and raising it to the rank of an art.

The most ancient records of architecture are found in Egypt, the best-known examples being the Pyramids and the Sphinx, near Cairo, over 5,000 years old, the temple of Karnak (c. 2000 B.C.), with its vast pillared hall, and across the Nile more Rameses temples, the colossal Memnons, and the tombs of kings. The last are descending passages cut in the limestone, leaving a smooth face for the biographer to tell his story in hieroglyphics. The temples of ancient Chaldaea were towers rising in steps or stages, and such was the tower of Babel. Assyrian temples also were of this type. The Phoenicians were temple builders, and probably helped in the building and decoration of Solomon's great temple about 1000 B.C.

In India the formulation of the Buddhist religion was the source of much architectural activity. This took the form of monolith

pillars, domed, stonied-covered mounds containing a chamber for the sacred relic, rock-cut temples and monasteries and later temples covered with sculpture. The famed Taj Mahal, a mortuary raised over a favourite wife, is perhaps the most complete example of ideal Indian architecture.

Of all the early civilizations the most refined and most magnificent was that of Greece, which reached its zenith in the golden age of Pericles. Though influenced in many ways by Egypt and Assyria, Greek architecture was nevertheless an original development. Three styles are distinguished, each denoted by its particular form of column: Doric, Ionic, and Corinthian. In a Greek structure, laws minutely defined the exact size of its mouldings and parts. In addition to this study of form, the whole was subjected to colour.

The Etruscans, an Asiatic and nomadic race, migrated through Greece to Umbria, and they and their art spread through Italy. Few of their works remain, but they had a wide influence in the country of their adoption. The Romans borrowed the Doric and Ionic orders from the Greeks, making their own version of the same, while the richer features of the Corinthian were more in favour. The monuments of ancient Rome are of diverse kinds, and include the Colosseum, a great oval circus, adorned on the outside with successive tiers of the different orders of columns; the Pantheon, a beautiful domed building; aqueducts, tombs, triumphal arches and sumptuous baths.

The style of building known as Romanesque prevailed in Europe from the 4th to the 12th centuries. Based on Roman architecture, it followed two lines of development. That of the east was known as Byzantine, two outstanding productions being the early Christian church of S. Sophia at Constantinople, and the shrine of S. Mark at Venice. The western line of development can be traced, for example, in the famous early churches of Ravenna, and in the arcades of the N. Italian and Rhenish towns, the latter feature being the result of Lombard influence combined with Roman.

In England in the 7th century Saxon style was inspired by the remains of the buildings erected during the Roman occupation, and by the work of masons who were brought over from Gaul. In the same way Norman architecture, characterised by the round arch and plain column, was introduced into England by builders and artists from abroad.

Archimedean screw,
for raising water

Architecture. Historical development of the column from the massive Egyptian structure to the tapering Roman shaft

In the 12th century Norman architecture gave way to Gothic, with its lighter character of construction. The round arch was gradually superseded by the pointed arch; the adoption of buttresses did away with the necessity for massive walls; and windows, either single or grouped, filled the spaces between the buttresses. A perfect achievement of this period is Westminster Abbey. Gothic went rapidly through its various changes of Early English, Decorated and Perpendicular.

After the eclipse of Imperial Rome, the Romanesque, Lombard and Gothic prevailed for about a thousand years. Then with the Italian Renaissance there came a new development in architecture which produced palaces and churches in Rome, Florence and other parts of Italy, each stamped with the individuality of the master's hand, until the period culminated with Michelangelo in the great cathedral of S. Peter at Rome.

In France the Italian revival made a strong impression. In England Inigo Jones became imbued with its spirit, and with his pupil John Webb designed for Charles I the palace of Whitehall, of which the Banqueting Hall still remains, and many other buildings of grace and beauty. After the Great Fire in 1666 Sir Christopher Wren, while using elements of Roman origin, developed a treatment distinctly his own, which became the English mode of building for 150 years.

There was no interruption to the continuous order of able designers until, in the 19th century, came a lack of public interest in architecture. A Greek revival produced the stately S. George's Hall, Liverpool, the British Museum and Sir John Soane's Bank of England. In the middle of the century

Britain entered upon a Gothic revival, notable buildings of the time being the Houses of Parliament and the Law Courts in London. Modernist interpretation of Gothic principles in ecclesiastical architecture has found expression in Liverpool Cathedral.

To-day revolutionary changes are being effected in modern architecture by the use of concrete and steel in construction. This has produced the American skyscraper, and is being increasingly adopted for commercial and other buildings in Britain and other parts of Europe. See Barry, Sir C.; Scott, Sir G.; Wren, Sir C., etc.

ARCHITRAVE (Gr. archi-, chief; Lat. trahs, beam). A term in classical architecture, signifying a member of the entablature, i.e. the stone beam carried by the capital of the column and supporting the frieze above it. The architrave is essentially a feature of lintel and post construction, and disappears with the rest of the entablature from the matured styles of arch construction wherein the arch springs directly from the capital.

ARCHIVOLT (Gr. archi-, chief; Ital. volto, vault, arch). In Roman and medieval architecture, a term applied to an architrave which is carried round a curved opening. The archivolt's development follows that of the round arch, and in Romanesque, Italian, Gothic, and Mahomedan architecture great attention was paid to its decoration.

ARCHON (Gr., ruler). Name of the chief magistrate in many Greek towns, especially of the nine chief magistrates of Athens. When the kingship was abolished,

Archivolt, or architrave carried round a curved opening

ARCHITECTURE : STYLES, PERIODS, SUBDIVISIONS AND FEATURES

GREEK
7th century B.C. to 3rd century A.D.
Archaic Period, lasting to the 5th century B.C.
The Golden Age, 5th to 4th centuries.
Hellenistic Period, 4th century B.C. to 4th century A.D.

ROMAN
2nd century B.C. to 4th century A.D.

BYZANTINE
4th to 12th centuries.
Neo-Byzantine, 8th to 12th centuries.

ROMANESQUE
9th to 13th centuries.
Norman, 11th to 13th centuries.

GOthic
11th to 15th centuries.
French Gothic.
German Gothic.
English Gothic: (1) Early English or "Lancet" (13th century), (2) Decorated (14th century), (3) Perpendicular (15th century).
Italian Gothic.
Neo-Gothic (English), 1830-1860 A.D.

RENAISSANCE
15th to 18th centuries.
Italian Renaissance.
French Renaissance.
English Renaissance: (1) Tudor (16th century), (2) Jacobean (17th century), (3) Georgian (18th century).

ORIENTAL
6th century B.C. to 18th century A.D.
Mohomedan 7th to 17th centuries A.D. (Syria, Mesopotamia, Persia, Asia Minor, North Africa, Sicily, Spain, Turkey, India).
Buddhist 6th century B.C. to 7th century A.D. (India).

one archon was appointed for life, the term being subsequently limited to ten years and finally to one, when a board of nine was instituted (683 B.C.). As the powers of the democracy increased, their functions became mainly judicial and religious.

ARC LAMP. A form of electric lamp. In it the source of light is a luminous arc produced in a gap between two carbon points by an electric current.

ARCOLA. Village on the Alpone, a tributary of the Adige, about 16 m. from Verona. It is famous for the victory gained by Napoleon, in his invasion of Italy, over the Austrians Nov. 15-18, 1796.

Arcos. Short name for the All Russian Cooperative Society. Its London office is Bush House, Strand, W.C.2.

ARCOT. City of Madras, India. The capital of N. Arcot district, and a military cantonment, it stands on the Palar, 65 m. W.S.W. of Madras, on the rly. to Beyer. Formerly the capital of the Carnatic, it was taken by Clive in Aug. 1751 and was held by him against repeated French attacks. In 1758 it was taken by the French, who lost it in 1760. Hyder Ali captured it in 1780, and it became British in 1801. The

Principal materials: Wood, clay, stucco, and stone. The basis of Greek architecture was lintel and post construction, the use of the arch being practically unknown. The column and capital were of three kinds, known as the orders: Doric, Ionic, and Corinthian. The last was developed, to the exclusion of the others, during the later (Hellenistic) period. The greatest period of Greek architecture was the 5th century B.C., during which the Parthenon was built.

Roman architecture took from the Greeks their three orders: Doric, Ionic, and Corinthian, and added a fourth ("Composite") order of its own. From the Etruscans it borrowed the arch and vault, and these were developed into the outstanding feature of the Roman style. Massiveness and solidity were characteristic of their buildings, which consisted of temples, baths, aqueducts, theatres, etc. The finest monuments were erected during the Imperial regime. Traces of these may be found wherever the Roman power penetrated.

The great feature of Byzantine building is the dome, more particularly the dome fitted on to square or octagonal apartments, by means of pendentives. By means of the "cushion" capital, they were also the first builders to "spring" the arch direct from the summit of the column without the employment of an intervening entablature. Brick is the principal material in Byzantine building. The most notable monument of the style is the Cathedral of S. Sophia at Constantinople, completed A.D. 537.

Romanesque is really the continuation in the North and West of Europe of the Byzantine style, and its development was largely in response to the needs of religious ritual. The cushion capital and the barrel vault are both characteristic of Romanesque, as of Byzantine, and similarly the apse is a prominent feature of the Romanesque church.

The distinguishing feature is the Pointed Arch, as opposed to the Round Arch. Windows are filled with tracery work, the massive piers of Norman architecture give place to clusters of columns, and capitals are rounded. Verticality is the principle underlying Gothic architecture and the walls and towers of Gothic cathedrals rise to a great height, the buttress often being employed as a support. In English Gothic, the extensive use of ornament was developed during the Decorated and Perpendicular periods.

A reversion to the Classic Principles, modified by the general humanistic influences of the time. Fine planning, proportion, and scale were aimed at, and ornament selected with discrimination.

Assumed a great number of local characteristics, differing according to diversities of climate and material. The cupola, horseshoe arch, and minaret are outstanding features. Construction is mainly light and flimsy compared with Western architecture. Ornamentation is generally very rich and, particularly as regards Indian varieties, fantastic. Colour is freely employed.

siege of 1751 is regarded as the turning point of the British fortunes in India.

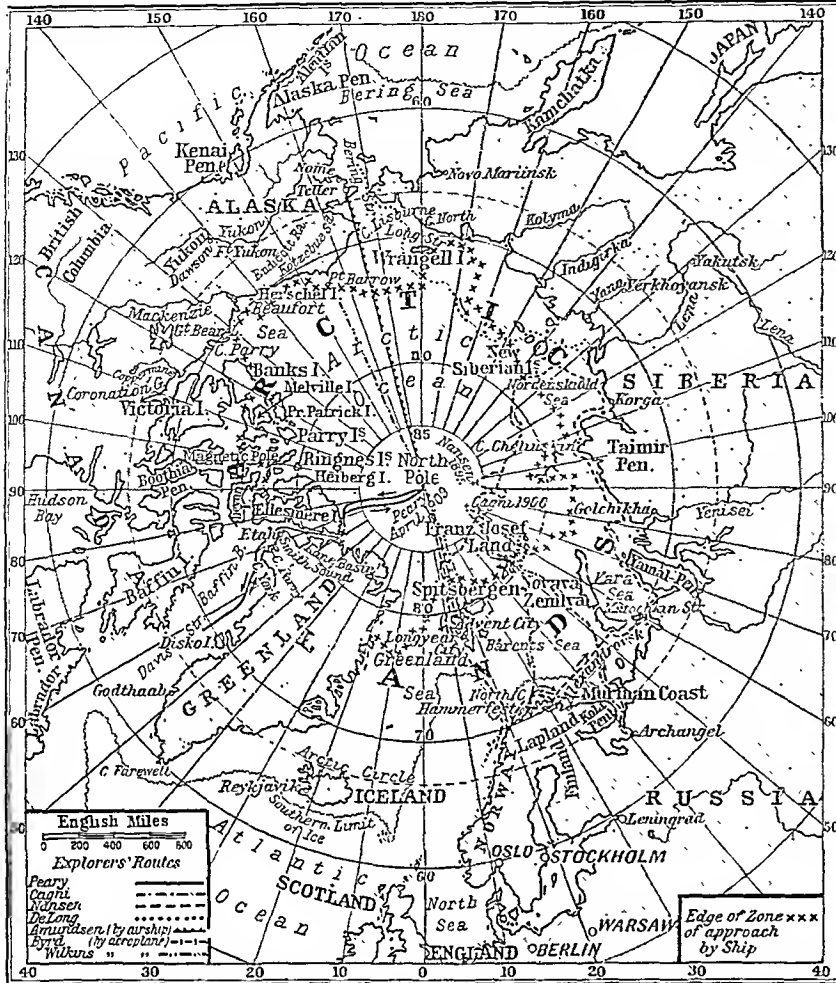

ARCTIC EXPLORATION. The exploration of the North Polar region has been actuated by two motives, the need for new trade routes or new trade commodities and a spirit of geographical inquiry. After the early searches for the N.W. passage and the discovery of Newfoundland by Cabot in 1498, John Davis achieved a farthest north at 72° 41' N., and explored long stretches of the coasts of Greenland and Labrador. Henry Hudson explored the east side of Hudson Bay and was left to his fate by mutineers after a winter in the ice of James Bay, 1610-11. Baffin

Arc Lamp

attained on July 5, 1616, the lat. 77° 45' N., which was a record in that area for 236 years. Parry in 1819 traversed Lancaster Sound and reached 114° W. in 1820 among the Parry Islands, after spending the winter on Melville Island, and by so doing earned a reward of £5,000 offered by the British Government to the explorer who first went westward beyond 110° W.

Other explorers penetrated among the islands north of Canada, and in 1831 James

Arctic Exploration. Map showing the North Polar region and various explorers' routes, including those followed by the Amundsen airship expedition in 1926 and by Wilkins, who in 1928 flew over the Pole in an aeroplane

Clark Ross located the North Magnetic Pole in Boothia Peninsula in $70^{\circ} 5' N$ and $96^{\circ} 44' W$. In 1845 Sir John Franklin sailed with the ships Erebus and Terror, but failed to return.

The search for Franklin marks an epoch in the story of the N.W. passage. On one of the voyages McClure in the Investigator in 1850-3 reached Banks Island, which had been discovered by Parry, and demonstrated that there was a continuous N.W. passage by sea north of Canada. The passage was discovered, but it was not until Roald Amundsen navigated the Gjoa from sea to sea in 1903-5 that a ship made the complete voyage.

The 19th century saw many attempts to reach the Pole, which were chiefly made from the Spitsbergen area on the east and by Smith Sound, north of Baffin Bay, on the west. Parry sailed in the Hecla in 1827 and reached $82^{\circ} 45' N$. north of Spitsbergen, on a sledge journey which kept him 61 days away from the ship. Kane left New York in 1853 in the Advance with the intention of using Eskimo help in a journey to explore N.W. Greenland; he spent two winters in the Arctic, passed through Kane Basin into Kennedy

Channel, and reached $80^{\circ} 10' N$, a record for that region. In 1871 the Polaris in the Hall expedition had the good luck to sail through Kane Basin, Kennedy Channel, Hall Basin, and Robeson Channel into the Polar Sea and to achieve the record for a ship of $82^{\circ} 11' N$.

This success led to the British Nares expedition of 1875; with great difficulty the

ships were taken through the unfavourable ice conditions and the Discovery wintered in Discovery Harbour and the Alert wintered at Floeberg Beach, $82^{\circ} 24' N$. and established a new record; sledge journeys were undertaken and Aldrich beat Parry's farthest by attaining $82^{\circ} 48' N$, and A. H. Markham the next year reached $83^{\circ} 20' N$; coast lands were explored and scientific observations of considerable value were made.

Meanwhile Swedish expeditions had been at work north of Spitsbergen: von Otter took the Sofia to $81^{\circ} 42' N$. in 1868, and Nordenskiöld tried to reach the Pole by reindeer sledging in 1872. In this year Weyprecht and Payer started on an Austrian expedition with the Tegetthof, discovered Franz Josef Land, and reached in 1874 Cape Fligely, $81^{\circ} 51' N$, the nearest known land to the Pole; Leigh Smith in the Eira explored much of this archipelago in 1890-1.

Scientific work in the Arctic received a great impetus by the establishment in 1881-3 of international circumpolar stations. The importance of the scheme lay in the attempt to make throughout a whole year systematic and simultaneous observations by trained scientists at as many spots as possible.

The most notable of these expeditions was that of Greely. Lockwood, his second in command, explored the Greenland coast and discovered Lockwood Island in $83^{\circ} 24' N$, and set up a new record for nearest the Pole; and both made land journeys and explored some 6,000 sq. m. of newly discovered land.

In 1893-6 Nansen made one of the most famous of polar voyages. He had a specially constructed ship, the Fram, and set out deliberately to have his ship beset by the ice in order to drift over the Arctic Ocean and, if lucky, to float over the Pole. Frozen in about $79^{\circ} N$, the Fram drifted along the track shown on the map. Nansen and Jobansen attempted a dash for the Pole over the ice: they reached $86^{\circ} 14' N$. and were ultimately rescued by Jackson in Franz Josef Land. The Fram, under Sverdrup, drifted on, gained $85^{\circ} 57' N$, rounded the N.E. of Spitsbergen and safely reached Norway. In 1899 Sverdrup took the Fram west of Greenland and explored Jones Sound. In the same year the duke of the Abruzzi's expedition sailed for Franz Josef Land, and Cagni reached $86^{\circ} 34' N$. by sledge in 1900. In 1897 a risky attempt to gain the Pole by balloon was made by Andr  ; in it he lost his life.

Robert E. Peary commenced operations in 1886 by a journey on the Greenland ice cap. In 1891-2 and 1893-6 he made journeys

Arctic Exploration. Top left, Peary's ship, Roosevelt, fast in the ice in Robeson Channel. Bottom left, flag hoisted by Peary at the North Pole, April 6, 1909. Right, the airship Norge, used in Amundsen's transpolar flight, 1926, landing at King's Bay, Spitsbergen, en route for the Pole. Rechristened Italia, she was destroyed in Nobile's ill-fated expedition of 1928

across N. Greenland; in 1898-1902 he explored Ellesmere Land, rounded the N. end of Greenland, reached 84° 17' N. He wintered his ship, the *Roosevelt*, in the Arctic Ocean in 1905, and gained 87° 86' N. In 1908 he took the *Roosevelt* to the earlier winter quarters, organized a thorough series of relay expeditions, and gained the Pole on April 6, 1909. Some doubt has been cast upon this exploit, notably by J. G. Hayes in a book published in 1929, but the balance of opinion is that Peary actually reached the Pole.

After the Great War aircraft were much used for polar exploration. In 1926 Amundsen led an expedition in the airship *Norge*, which flew over the Pole on May 11, and landed at Teller, Alaska. Two days before Adm. R. E. Byrd, in an aeroplane flying from Spitsbergen, had also reached the Pole. In 1928 an Italian expedition under General Nobile went out in the *Norge*, renamed the *Italia*. This flew over the Pole, but was forced down on the return journey and destroyed. Several of the crew were lost. In a seaplane Amundsen set out to search for his former colleague Nobile, but was never heard of again. In April 1928 Sir G. H. Wilkins flew over the Pole in an aeroplane, travelling from Port Barrow in Alaska to Spitsbergen, the reverse route from that taken by Nobile.

ARCTIC OCEAN. Term applied generally to the waters N. of Europe, Asia, and America. These include the Greenland or Norwegian Sea between Greenland and Norway, the Barents Sea N. of Europe, the White Sea, the Kara Sea between Novaia Zemlia and Yamal Peninsula, and the Beaufort Sea N. of Alaska. It communicates with the Atlantic by Davis Strait, Denmark Strait, and the sea between Iceland and Norway. Its only connexion with the Pacific is by Bering Strait.

The Greenland Sea and the Barents Sea are the only parts of the ocean which are not blocked by ice in winter. In summer the pack-ice of the Arctic Ocean is more or less loose, but dense enough to prevent navigation except in the Greenland, Barents, and White Seas, along the N. coasts of Europe, Asia, and Alaska, and in Davis Strait and Baffin Bay. For this reason the north-west and the north-east passages, although both accomplished by exploring vessels, are useless for commerce. See Baffin; Novaia Zembla; Spitsbergen; Wrangell, etc.

The Arctic circle is a parallel of latitude drawn 23½ degrees (approximately) from the North Pole. See Antartica.

ARCTURUS OR **ALPHA BOÖTIS** (Gr. arktos, bear; ous, guard). Principal star in the constellation of Boötes, the Herdsman, and the brightest star in the northern sky. Its speed of movement has been estimated at 257 m. a second, and its light must be many hundred times that of the sun. Starting from the pole star, the last star in the handle of the plough leads straight to Arcturus.

ARDAGH. Village of Limerick, Irish Free State. Here in 1868 was found a chalice the sole surviving chalice of Celtic craftsmanship. Of the 8th or 9th century, it is a two handled pede stalled cup, 7 ins high, 9½ ins. across composed of 354 pieces silver (20½ oz.), bronze, gold, lead, enamel, glass, amber and mica. Its ornament includes scrollwork, filigree interlacings, and the names of the apostles.

Ardagh Chalice. Richly decorated vessel of 8th or 9th century Celticwork
Dublin Museum

ARDECHE. Department of S.E. France. Bounded E. by the Rhône and named after its tributary, the Ardèche, it contains part of the ancient prov. of Languedoc and has an area of 2,144 sq. m. Privas is the capital, Annonay is a manufacturing town, and Viviers is the seat of the bishop, whose diocese is equivalent to the department. Pop. 289,263

ARDEE. Market town of co. Louth, Irish Free State. On the Dee, 48 m. N.W. of Dublin by the G.N. of Ireland Rly., it has a grain trade, distilleries, and tanneries, and manufactures baskets. Formerly the seat of a Carmelite friary, it has a 13th century castle, now the town hall, and was chartered in 1377. Market day, Tues. Pop. 1,729.

ARDEN, FOREST OF. A district of Warwickshire, England. To the N. of the Avon, it was formerly a much larger forest tract. Still well-wooded, it is known as the woodland country, as distinct from the feldon, or open country to the S. of the river. Shakespeare was well acquainted with the forest, which inspired his description of forest scenery in *As You Like It*.

ARDENNES. A range of wooded hills in France, Belgium, and Luxembourg, on either side of the Meuse. It is the remains of a great forest which, extending probably to the Rhine, is mentioned by Caesar and other early writers. The Belgian Ardennes, i.e. the woods to the E. and S. of Dinant, were, before the Great War, a popular holiday resort. Game and wild animals are plentiful, and include the wild boar, for which the district was once noted. Coal, iron, lead, and other minerals are worked.

A department of France, situated on the Belgian frontier, called Ardennes. Area 2,027 sq. m.

ARDGLASS. Town of co. Down, Northern Ireland, formerly important. Picturesquely situated at the head of a small bay, 6 m. S.E. of Downpatrick, it is served by a branch line of the Belfast and County Down Rly. The harbour is a station for the herring fishing fleet. There are ruins of several old castles or forts, said to have been built as stores by an English trading company in the reign of Henry IV. Pop. 786.

ARDNAMURCHAN. Parish of Argyllshire, Scotland. The estate of Ardnamurchan is noted for its deer forests, beautiful rocky scenery, and salmon fisheries, and contains the ruins of Mingary Castle, the ancient seat of the MacLans. Ardnamurchan Point, with a castle-like lighthouse, is the westernmost extremity of the mainland of Great Britain.

ARDOCH. Village of Perthshire, Scotland. It is 12 m. N.N.E. of Stirling, and has the best-preserved Roman camp in Britain. The camp is 500 ft. long by 430 ft., has huge ramparts and deep ditches, and retains three of its four gates.

ARDRISHAIG. Village and port of Argyllshire, Scotland. It is 19 m. S.W. of Inveraray, on the W. shore of Loch Gilp, near the S. end of the Crinan Canal. A little N. is the port of Lochgilphead, with a large cattle trade and a fishing industry. Pop. 1,285.

ARDROSSAN. Burgh, seaport, and watering place of Ayrshire, Scotland. It is 30 m. by rly. S.W. of Glasgow, on the L.M.S. Rly. Shipbuilding, engineering, and fishing are the leading industries, and chemicals and coal the chief exports. The town owes its rise to the harbour, which was begun in 1806 by the 12th earl of Eglinton and completed in 1833. Ardnassan has ruins of the castle of the Montgomeries. Pop. 7,214.

ARDSLEY. Urban dist. of Yorkshire. It is 4 m. N.E. of Wakefield, by the L.N.E. Rly., has extensive collieries, and manufactures woollens and bricks. It is divided into East and West Ardsley. Pop. 7,058.

ARECA. Genus of lofty tropical palms. They have a crown of long, graceful leaves which are broken up into numerous slender leaflets in two rows. A catechu, of India, produces betel nuts and catechu.

Areca catechu, Indian palm which produces betel nuts

ARENA (Lat. sand). Term specially applied to the sanded circular space reserved for gladiatorial combats in the centre of the ancient Roman amphitheatre. It is also used generally for any space or enclosure in which public contests are held, and figuratively for the scene of action of political or other struggles. The sand was to prevent the combatants from

slipping. See Amphitheatre; Circus

Areng. Fibre of the East Indian palm *Arenga saccharifera*, known in commerce as Gomuti fibre. See Gomuti.

ARENIG. Mountain in N. Wales. In Merionethshire, its highest peak is 2,800 ft. high. The railway station of Arenig, on the G.W. line, is 7 m. from Bala.

The Arenig series, the lowest major subdivision of the Ordovician system, is seen here. It is composed mainly of grits and dark shales, which yield a highly characteristic fauna of graptolites and trilobites. Rocks of this age occur in Western Europe, Bohemia, the Eastern U.S.A., Canada, Australia, and New Zealand. In Britain the Arenig was a period of widespread volcanic activity.

AREOPAGUS (Gr. Hill of Arēs). Hill in Athens, W. of the Acropolis, on which stood a temple to Arēs. It was the meeting-place of the famous council of the Areopagus, an assembly of elders drawn exclusively from the noble classes. Originally the governing body of Athens, its powers were limited by the constitution of Solon, later by that of Cleisthenes, and further reduced by Epialtes in 462 B.C. See Athens.

AREQUIPA. City of Peru. The capital of Arequipa department, it is 107 m. by rly. N.N.E. of Mollendo, its port, and stands on the Rio Chile, 7,750 ft. high, at the foot of El Misti or Arequipa volcano. It is the seat of a bishop, and has a university. It was founded in 1540 by Pizarro and has suffered severely from earthquakes. Near are hot mineral springs and an observatory founded by Harvard University. Pop. 58,000

ARES. In Greek mythology, the god of war, identified by the Romans with the old Sabine deity Mars. Arēs was the son of Zeus and Hera, and the lover of Aphrodite. In the struggle between Zeus and the Titans he was kept prisoner in Hades for 15 months by the giants Otus and Ephialtes. During the Trojan War he sometimes took the field on behalf of the Trojans. He had a temple on the Areopagus, but the original home of his worship is supposed by some to have been Thrace, by others Boeotia. In art Arēs is represented sometimes as a bearded man, sometimes as a beardless handsome youth.

ARETHUSA. In Greek mythology, a nymph of Elis. While bathing she was seen and amorously pursued by the river god Alpheus. At her entreaty, Artemis changed

her into a fountain which disappeared underground, rising again in the island of Ortygia, near Syracuse in Sicily. Alpheus is said to have mingled his stream with that of Arethusa, and it was popularly supposed that anything thrown into the river came up again at Ortygia.

ARETHUSA. British warship, the first of her type of fast, lightly armoured cruisers specially designed to operate against hostile destroyers. She left the dockyard on Aug. 26, 1914, to hoist the broad pennant of Com-modore R. Y. Tyrwhitt, commanding the Grand Fleet destroyer flotillas. Two days later she took part in the battle of Heligoland Bight. She assisted in conveying into Heligoland Bight the seaplanes which raided Cuxhaven on Dec. 25, 1914, and on Jan. 24 following played a creditable part in the Dogger Bank battle. On Feb. 11, 1916, she was mined in the North Sea.

Arethusa. British fast cruiser completed in 1914. She was wrecked by a mine in the North Sea on Feb. 11, 1916

AREZZO. Town of Italy. The capital of Arezzo province and an episc. see, it stands near the junction of the rivers Arno and Chiana, 54 m. by rly, S.E. of Florence. It is the ancient Arretium, and was one of the twelve Etruscan cities. The Gothic cathedral, begun in 1277, contains fine sculptures and the tombs of Gregory X and Tarlati di Pietramala, its warlike bishop. Other buildings are the 11th century church of S. Maria della Pieve, and the museum. The industries include pottery and silk and cloth manufactures. Famous natives are Maecenas, Petrarch, Vasari, and Spinello Aretino, the painter. Pop. 58,296.

ARGAEUS, MOUNT (Turk. Arjish Dagb). Extinct volcano, and the loftiest summit in Asia Minor. It has two craters and is regarded as 11,480 ft. high; one estimate makes it nearly 2,000 ft. higher. On a spur on the Taurus range, a few miles from Caesarea, it has not been in eruption for many centuries but the neighbourhood shows abundant signs of its past activities.

ARGALI. Wild sheep found in the Altai Mts. and on the steppes of Siberia. It is about the size of a small donkey, and has magnificent,

Argali. Wild sheep of the Altai Mountains

closely ribbed horns, which form almost a complete circle. It is pale brown in colour with a white face, and in winter a large ruff of white hair develops round the neck. The argali is found at an altitude of from 3,000 ft. to 4,000 ft., the flocks keeping to the same feeding ground from year to year. The flesh, very dark in colour, makes good mutton.

ARGALL, SIR SAMUEL (c. 1585-1626). English adventurer. He went to Virginia in 1609, and in 1612 he abducted the Indian princess Pocahontas, and held her a willing prisoner as a means to secure peace with the Indians. He was deputy governor and admiral of Virginia, 1617-19, and served in an expedition against Algiers in 1620. He was knighted in 1622.

ARGAND BURNER. Oil lamp and gas-burner, named after Aimé Argand of Geneva (1755-1803). Its cardinal principle was a cylindrical wick and the admission of air below to the inside of the cylinder, thus giving the maximum of contact surface between the

fuel and the flame for the space occupied, and also increased illumination through the admission of air to the inside of the flame. The better class oil lamps of to-day are improvements on the Argand burner.

ARGAUM OR ARGAON. Town in Berar, India, 31 m. N. of Akola. It is notable for the battle fought Nov. 28, 1803, between the British under General Wellesley, afterwards the duke of Wellington, and the troops of the Mahratta chieftains, who were defeated. The name Argaum means the city of wells.

ARGENSON. Name of a French noble family, some members of which were noted politically in the 18th and 19th centuries.

Marc René de Voyer. Marquis d'Argenson (1652-1721), was appointed lieutenant-general of the Paris police in 1697. In 1718 he was made president of the council of finance, but had to resign in 1720.

His elder son, René Louis de Voyer (1694-1757), was made councillor of state in 1719 and in 1744 member of the council of finance and foreign minister. The friend of Voltaire and the philosophers, he endeavoured unsuccessfully to establish a European alliance of nations.

Marc Pierre de Voyer (1696-1764), younger son of the lieutenant-general of police, was made councillor of state in 1724 and minister of war in 1743. He introduced important army reforms. He died Aug. 22, 1764.

Marc René Marie de Voyer (1771-1842), grandson of the minister of war, entered the army in 1789: he supported the Revolution, and was for a time aide-de-camp to Lafayette. In 1809 he was made prefect of Deux-Nèthes (Antwerp), and helped to drive the English from Walcheren. He was deputy for Belfort during the Hundred Days, and in 1830 represented Strasbourg as an advanced Radical. He died Aug. 1, 1842.

ARGENTEUIL. Town of France, in the department of Seine-et-Oise. It stands on the Seine, 7 m. N.N.W. of Paris, of which it is a suburb. In its church is a garment said to be the seamless coat of Christ. Pop. 32,173.

ARGENTINA OR THE ARGENTINE. A vast republic occupying the greater part of the southern extremity of South America. It is separated from Chile by the Cordillera, from Uruguay by the river of that name, from Paraguay by the Paraná and its great affluents. The Brazilian frontier, but for a small intervening stretch, is marked by the rivers Uruguay and Iguaçu and their affluents. The Pilcomayo runs along part of the Bolivian frontier.

The area of the Argentine is 1,153,119 sq. m., and the pop. exceeds 10,000,000, of which about 2,280,000 are foreigners. Most of the population is Roman Catholic. Buenos

Argand burner

Aires is the capital: Rosario, Córdoba, and La Plata are the next largest cities. In 1919 the country became a member of the League of Nations.

Apart from the Pampa, or prairie, which contains the chief towns, the greater part of the population, and the bulk of the commerce

and industry, Argentina extends N. into the tropical forests and S. to the shores of the Antarctic Ocean. Westward, it climbs to more than Alpine heights, where the summits of the Cordillera divide it from Chile. Thus, within its limits are to be found every conceivable variety of climate, altitude, and physical features: the towering volcanic snow-clad peaks of the Andes, rivers winding through the tropical forests and swamps of the Chaco, the sub-tropical wooded region of Andine slopes and spurs, the lofty desert plateau embraced between the mountain chains, the irrigated vineyards of Mendoza, the salt deserts and lakes which border upon the Pampa, with their peculiar basins of inland drainage and disappearing rivers, and finally the windy terraces of Patagonia stretching away to the islands and rocky capes of the Southern Ocean.

The population of Argentina is more distinctly European in origin than that of any other Latin-American country. At the epoch of independence the people were chiefly of Spanish race, and the flood of later immigration has come chiefly from the Latin countries of S. Europe. More than half the people have been born in Europe or of European parents settled in Argentina. Spanish is the official language, the tongue of the bulk of the people, of the press, and of literature.

The outstanding fact in Argentine conditions is the prodigious recent economic development, the great creation of new wealth.

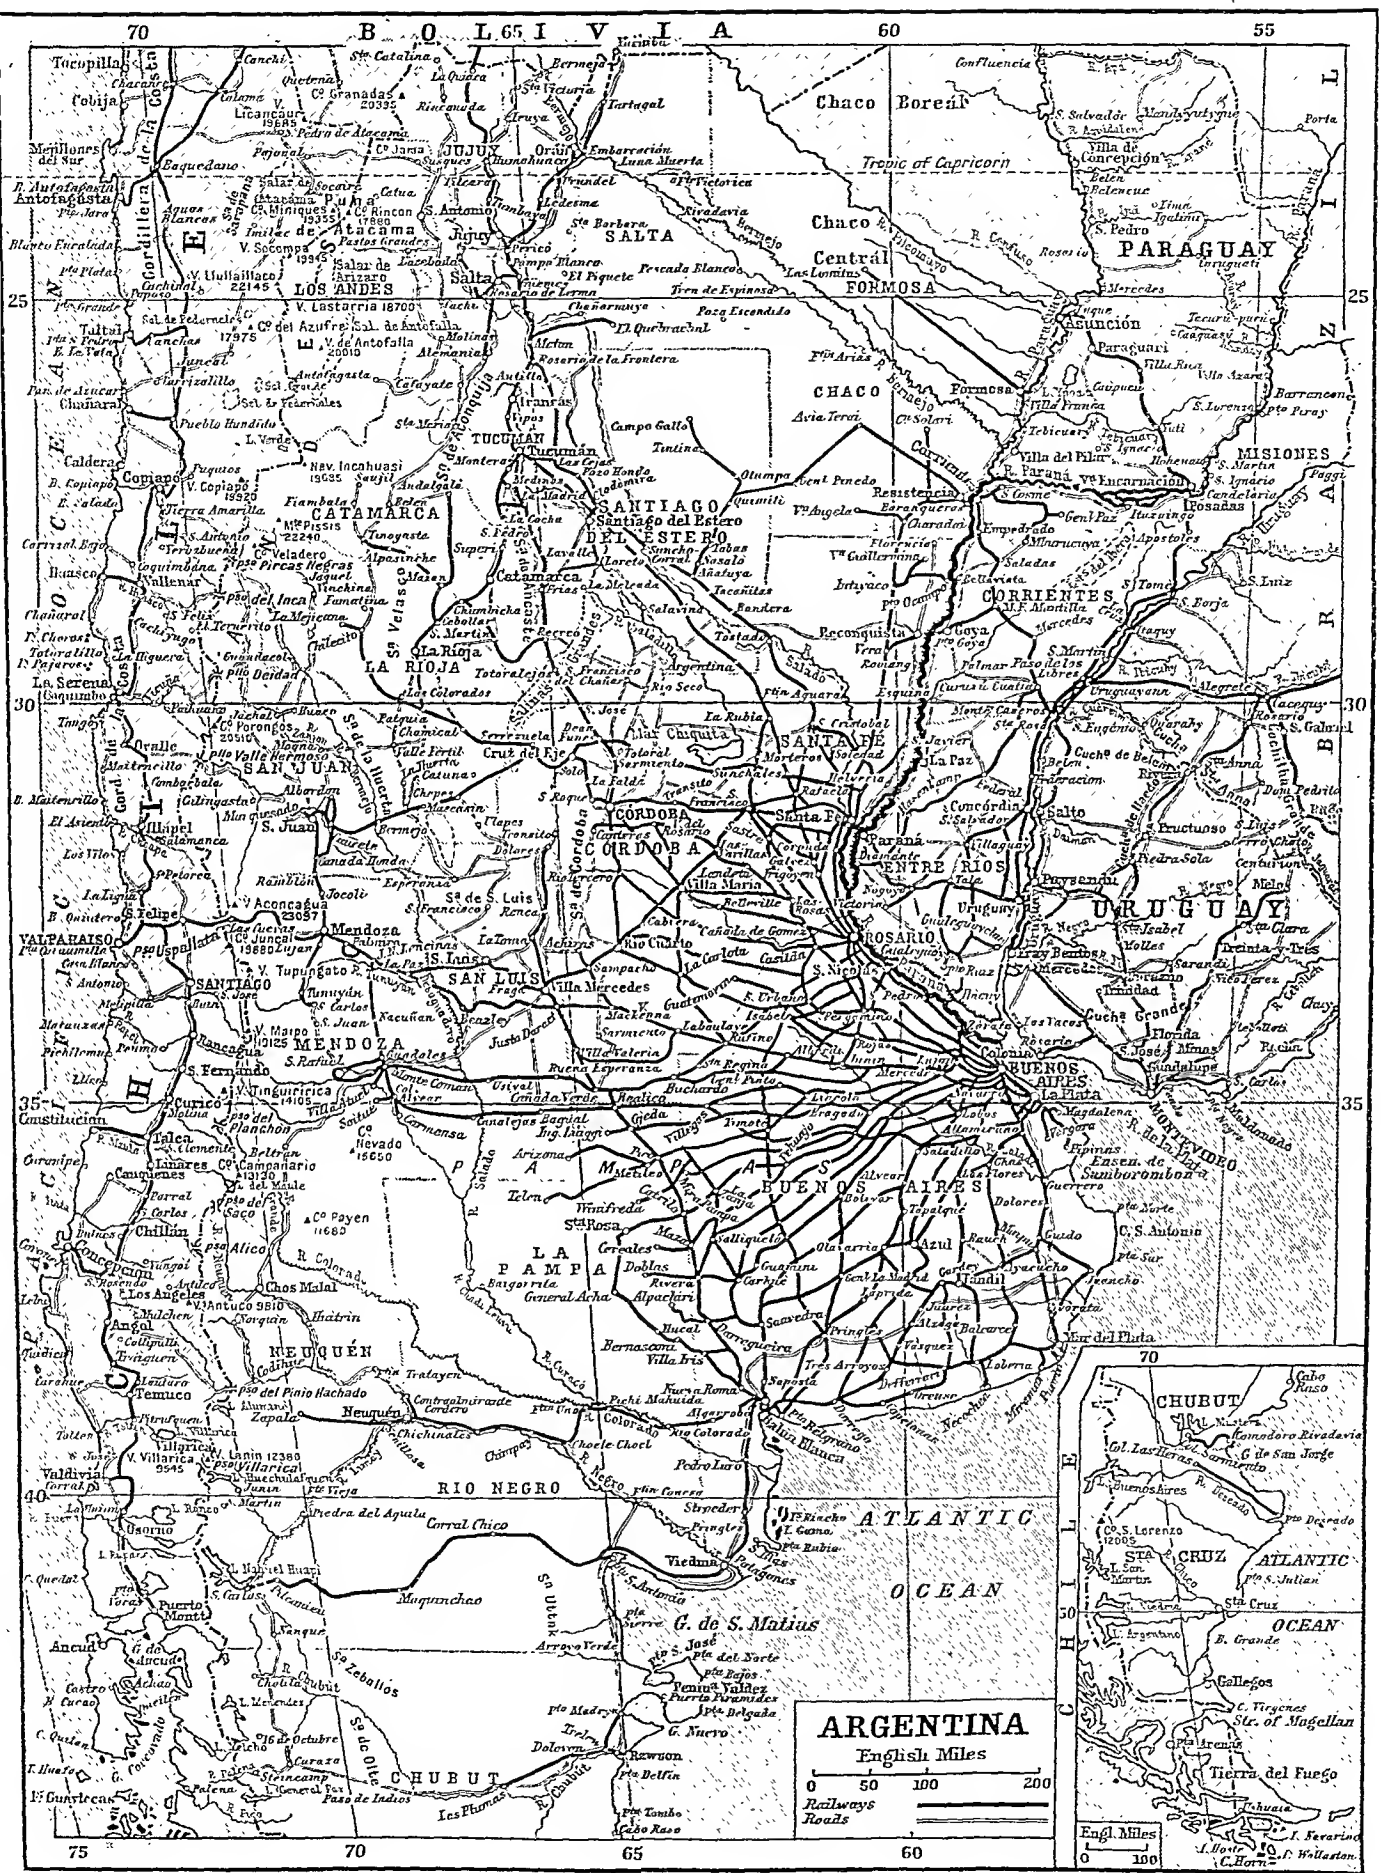

Argentina. Left, types of one of the few native Indian races. Right, a Gaucho, Spanish-American horseman of the Pampas

To-day Argentina is in the forefront among countries producing and exporting food and raw material. Wheat, oats, maize, linseed, wool, chilled or frozen meat, hides—these spell her wealth and prosperity. Cotton, sugar, and tobacco are also cultivated. The principal industry is meat refrigeration, and flour milling ranks next. Exports consist largely of live stock products and agricultural products, while textiles, iron and steel, foodstuffs, glassware, and oil are the chief articles imported. On Jan. 1, 1928, there were 22,971 miles of railway lines in the republic, of which 4,418 belonged to the state. Aviation has developed rapidly. Aerial routes have been established from Buenos Aires to Salta, Catamarca, Posadas, Corrientes, Mendoza, and San Juan, and there is an aerial post service between Buenos Aires and Montevideo. There are over a dozen stations for wireless telegraphy.

HISTORY. Argentine history begins in 1535, when Pedro de Mendoza was sent out by the King of Spain and founded a settlement which he named Buenos Aires. Famine and the attacks of savages compelled the settlers to migrate and, sailing up the river, they founded Asunción. Soon some returned, and Buenos Aires became the centre of a province under a Spanish governor responsible to Peru. It soon acquired a predominating position.

In 1806 a British expedition from Cape Town captured Buenos Aires, but the troops were soon forced to surrender, and in the next year another British expedition, failing to regain

the lost city, signed a treaty and departed. These events prepared the way for independent movement. The invasion of Spain and the seizure of the Spanish royal family by Napoleon precipitated such a movement. In May, 1810, the deposition of the viceroy virtually effected the bloodless revolution which was completed six years later, when the congress of Tucuman, representing most of the provinces, solemnly proclaimed independence.

After twenty years of civil wars, confused personal rivalries, and ephemeral attempts at constitution making, Buenos Aires sank into uneasy tranquillity under the rule of the Gaucho tyrant Rosas. The fall of Rosas in 1853 brought relief, but not immediate peace. The other provinces resented the preponderance of Buenos Aires, and for seven years that province formed a republic apart from the confederation, which made Paraná its capital.

Reunion followed, but the cause of trouble remained, until the question was settled by forming the capital of the republic into a federal district. This arrangement of the federal system may be said in a large sense to have brought about internal tranquillity, notwithstanding some disturbance in 1890 and occasional troubles in the provinces. A steady influence was found in the astonishing economic growth, a minor influence being the introduction of wire fencing, which impeded the movements of Gaucho cavalry.

The disputes concerning the Chilean frontier, which menaced the peace of the country, were amicably adjusted. The last and most troublesome of these, the delimitation of the Andine boundary, was settled by the arbitration of King Edward VII in 1902. Simultaneously with the completion of the federal system in 1880 the republic practically acquired a great increase of rich territory through the conquest of the desert by General Roca in 1878. Previously the Indian frontier was in parts scarcely 200 m. from the capital. Roca in an organized campaign swept the country as far as the Rio Negro, and made the Pampa safe.

The Great War upset the republic's economic equilibrium. But the shock imposed the need of thrift and self-dependence, and the recovery which followed was remarkable. The meat freezing industry received a great stimulus. Argentina became in a limited degree a creditor nation by advancing credits to the Allies for the purchase of Argentine cereals. The restriction of imports and the consequent increase of money in the country produced a notable industrial or manufacturing movement. For Argentina, possessing money at home and unable to purchase abroad, proceeded to supply herself by weaving wool and cotton, tanning leather and manufacturing boots and other articles.

CONSTITUTION, ETC. The republic consists of 14 provinces, 10 territories and the federal district of Buenos Aires. With certain slight exceptions its constitution is identical with that of the U.S.A. The executive power is in the hands of a president elected for a year and a council of ministers appointed by him. The president must be a Roman Catholic and a native. The legislative authority is vested in Congress, which consists of a Senate and a House of Deputies. In 1928 Hipolito Irigoyen became president in succession to M. T. Alvear.

The army consists of a national militia, in which all males must serve. There is an air force. The mint of currency is the gold dollar, five going to the pound sterling. It is divided into 100 centavos. The metric system of weights and measures is compulsory.

Consult *The Argentine Republic*, A. S. Pennington, 1910; *Argentina*, W. A. Hirst, 1914; *The Argentine Through English Eyes*, J. A. Hammerton, 1916; *Argentina of To-day*, L. E. Elliot, 1926.

ARGENTITE. One of the principal ores of silver. It is a sulphide, composed of about 86.5 silver and 13.5 sulphur, and is always found combined with other sulphides, particularly those of copper and lead. See Silver.

ARGENTORATUM.

Latin name for Strasburg. It was used by the early printers. Most of the books printed at Strasburg in the 15th, 16th, and 17th centuries bear the impress Argentoratum. See Strasburg.

ARGESUL, ARGESH or **ARJISH.** River of Rumania. Rising in the Transylvanian Alps, it flows for about 150 m. S. and S.E. to the Danube below Oltenita.

An important battle was fought on Nov. 30-Dec. 3, 1916, between the Austro-Germans and the Rumanians on the Argesul. Unable to hold the line of the Oltu, because it had been turned from the S. by Mackensen's passage of the Danube at Sistova, Nov. 23, 1916, the Rumanians made a stand so as to save Bukarest. At first they were successful and it looked as if the Germans would meet with a serious defeat, but they were reinforced in time, whereas the Rumanian reinforcements failed to come up. The result was a heavy defeat for the Rumanians and the evacuation by them of their capital, Bukarest, which was occupied by Mackensen on Dec. 6.

Argives. (Gr. Argeioi; Lat. Argivi). Inhabitants of Argos in Greece. Homer uses the term for the Greeks in general. See Argos.

ARGOL. Crude acid potassium tartrate deposited from wine. When grape juice ferments argol is deposited as a crystalline crust on the sides of the vat, and when this is recrystallised it is known as tartar; from tartar, by further purification, cream of tartar is obtained. Argol is also used for the preparation of tartaric acid.

ARGOLIS. A district of ancient Greece. Occupying the N.E. part of Peloponnesus, bordering the Gulf of Aegina or the Saronic Gulf, and the Argolicus Sinus or Gulf of Nauplia, it was the territory surrounding Argos. It became part of the Roman prov. of Achaia in 146 B.C. It has many legendary associations, including that of the Lernean Marsh, where Hercules slew the Hydra. Argolis, with Corinth, now forms a nome of modern Greece. Its capital is Nauplia. Pop. 174,320.

ARGON (Gr. argos, inert). One of the gases which go to make up the atmosphere. It exists in the proportion of one part in 160 parts of air. It is classed as an element, symbol A, with an atomic weight of 39.91, and the atomic number is 18.

Argon is a colourless inert gas, and does not combine with any other element. It can be liquefied and solidified. Argon is prepared from the air, and is of com-

mercial use in filling the bulbs of the tungsten electric lamps, for which purpose it is better than nitrogen.

ARGONAUT. Cuttle fish of the genus *Argonauta*. The ribbed, translucent shell is secreted by the flat expansions of two of the tentacles, and is not attached to the body. It serves as a receptacle for the eggs. The argonaut is common in the tropic seas; one species, the paper nautilus, inhabits the Mediterranean.

Argonaut, or paper nautilus. The upper figure shows the animal swimming

ARGONAUTS (Gr. sailors of the Argo). In Greek mythology, the heroes who, under the leadership of Jason, sailed to Aea or Colchis, on the Black Sea, in search of the Golden Fleece. They were so called from the name of the 50-oared ship Argo, which was built by Argos, one of the heroes.

After an eventful voyage Jason and the Argonauts arrived at Colchis, whose king, Aeetes, consented to surrender the Fleece to Jason provided he fulfilled certain conditions. By the help of the magic powers of Medea, the king's daughter, Jason succeeded in this, and, obtaining possession of the coveted prize, started on the return journey, taking with him Medea and her young brother Absyrtus. In spite of the pursuit of Aeetes, the lures of the Sirens and of storms, the voyagers returned to Iolcus. See Jason; Medea.

ARGONNE. District in E. France, known from its wooded character as the forest of Argonne. In the departments of Ardennes and Meuse, between Toul and Mézières, on high ground between the basins of the Meuse and the Aisne, it is about 10 m. wide from east to west and 40 m. long.

The Argonne was the scene of incessant fighting throughout the Great War. It had strategic importance, as a successful advance through it would have made Châlons and Verdun untenable. Throughout 1915 and 1916 the fighting here was of a minor character.

Argonauts. Jason and his companions speeding between the Symplegades, cliffs which closed on anything that attempted to pass. See article above. After an engraving by Picart

though the Germans attacked in June, 1915, in considerable strength. The greatest fighting in the Argonne was in the autumn of 1918, when Foch determined to clear the district and to strike at the vital Mézières-Montmédy rly. A large force was employed, consisting principally of American troops supported by a French force. The initial American attack on Sept. 26 was successful, and after experiencing set-backs the troops of the U.S.A. steadily advanced, so that by the end of October the Germans had fallen back on the W. bank of the Meuse. Early in November the combined French and American forces achieved a decisive victory, and the whole of the Argonne region was cleared of the Germans.

ARGOS. City of ancient Greece. In Argolis, 3 m. inland from the head of the Gulf of Nauplia, and said to be the oldest city of Greece, it became the nucleus of a kingdom, with Mycenae as capital. It fell in the 7th century B.C. under the influence of Sparta, but remained independent until conquered by the Romans in 146 B.C. Remains include those of the Heracum or temple of Hera. Argos was famed for its sculptors in bronze and for its musicians. The modern Argos has remains of its cyclopean walls and rock-hewn amphitheatre. Pop. 9,038. See Greece.

ARGOSTOLI. City and seaport of the Ionian Islands, Greece. The capital of Cephalonia Island, it stands on the E. shore of the Gulf of Argostoli, and has a good harbour and a naval school. It has a ship-building industry, exports currants, wine, and oil, and is noted for its mills, driven by sea-water flowing through an artificial cut. In the neighbourhood are the ruins of Craniil. Pop. 7,404.

ARGOSY. Term used, generally figuratively, in the sense of a richly laden ship. Though popularly connected with the vessel Argo in which Jason bore off the Golden Fleece, the word was said in the 17th century to be derived from Aragouse, a corruption of Ragosie, by which was meant a ship from the wealthy medieval port of Ragusa, on the Adriatic. The name is given to a monthly magazine issued by the Amalgamated Press.

ARGOT. French term for slang. It is applied to the colloquial language of general society; the special vocabulary of a class, community, profession, or calling; and—the earliest meaning—the jargon of thieves, rogues, and vagabonds, intelligible only to the initiated. Villon wrote some poems in argot.

ARGUS. In Greek mythology, a being with 100 eyes, of which only two slept at a time. Hera appointed him guardian of Io, whom Zeus had changed into a heifer, but all his eyes were lulled to sleep by the lyre of Hermes, whom Zeus had sent to fetch Io. Hera thereupon put his eyes on the tail of a peacock, the bird sacred to her. Argus was also the name of the dog of Ulysses, who died from joy when his master returned.

The argus pheasant, a species found in Malay and Sumatra, is so called by reason of the beautiful eye-like spots on its plumage.

ARGYLL, EARL AND DUKE OF. Scottish titles

borne by the family of Campbell. Duncan Campbell, of Lochow, was made a lord of Scotland about 1400, and his grandson Colin earl of Argyll in 1457. The title passed down from his son Archibald, the 2nd earl, who was killed at Flodden in 1513, to another Archibald, the 5th earl (1530-1573), a prominent figure during the troubled reign of Mary Stuart. The 8th earl (1607-1661) figured largely in

Scottish history in the time of Charles I and Charles II. After the Restoration he was beheaded and the titles and estates were forfeited, but these were restored to Archibald, the eldest son of the 9th earl, after the revolution of 1688. At this time he was of great assistance

Argyll: four members of a notable family. Left to right, Archibald Campbell, Marquess of Argyll; Archibald Campbell, 8th Earl; George Douglas, 8th Duke; John Douglas Sutherland, 8th Duke, after a painting by Sir John Millais

to William of Orange, who rewarded him with a dukedom in 1701.

John, the 2nd duke, was also duke of Greenwich, a title which became extinct when he died in 1743. When the 3rd duke died in 1761 the senior line became extinct and the inheritance passed to a descendant of the 9th earl. John, the 5th duke, who married Elizabeth Gunning, was made a peer of Great Britain in 1766. He was succeeded by his two sons in turn and then by a grandson, George (1823-1900), who became the 8th duke in 1837.

Prominent in public life for many years, this duke was regarded as one of the great orators of his day. He was secretary for India, 1868-74, and filled other positions before he became a Unionist on the proposal to give Home Rule to Ireland. His books include *The Reign of Law*, and he died April 24, 1900. His son John, the 9th duke, was long known as the marquess of Lorne. He married Louise, a daughter of Queen Victoria, and was governor-general of Canada 1878-83. When he died in 1914 the titles and estates passed to a nephew, Niall Diarmid Campbell (b. 1872), who became the 10th duke.

The duke is hereditary master of the royal household in Scotland. He owns estates in Argyllshire, his chief seat being Inveraray Castle. His eldest son is usually known as the marquess of Lorne.

ARGYLL AND SUTHERLAND HIGHLANDERS. Kilted regiment, a union of the old 91st (Argyllshire Highlanders) and the 93rd (Sutherland Highlanders). The former was raised in 1794 by the duke of Argyll, and the latter by the earl of Sutherland in 1800. The old 91st specially distinguished itself in the Peninsular War. In the Crimean War the 93rd Sutherland Highlanders won renown at the Alma and Balaclava. The regiment bore an honourable part in quelling the Indian Mutiny, and went through the South African War. Many battles fought in the Great War. The regimental depot is at Stirling.

A. and S. Highlanders' Badge

ARGYLLSHIRE. A western maritime county of Scotland. It includes most of the Inner Hebrides, Mull, Islay, Jura, Tiree, Coll, Lismore, Colonsay, and its area is 3,110 sq. m. Inland communication is afforded by the L.M.S. and L.N.E.R. and the Crinan Canal. The coast is broken by many sea-lochs (Linnhe, Fyne, Moidart, Sunart, Long) and land projections (Ardnamurchan, Morven, and Kintyre, etc.).

The surface is generally rugged and mountainous (Bidean nam Bian 3,766 ft., Ben

Cruachan 3,689 ft., Stob Ghabhar 3,565 ft., Ben Ime 3,318 ft., Ben More 3,169 ft.), with low-lying coast districts. Loch Awe is the largest lake, and the principal streams are the Orchy and Awe. Sheep and cattle rearing and herring and salmon fishing are the main

industries. Slate is quarried at Easdale and Ballachulish, and coal is worked near Campbeltown. Kinlochleven has aluminium works. Inveraray is the county town. Pop. 79,000.

LITERARY ASSOCIATIONS. Dr. Johnson's Journey

to the Western Highlands touches upon Inveraray and other places. The Scott associations include *The Legend of Montrose* and *The Lord of the Isles*. Campbell wrote *Lines on Visiting a Scene in Argyllshire*, and *Loch Gail is the scene of Lord Ullin's Daughter*. Glen Croe has a seat which inspired Wordsworth's *Rest and be Thankful*. See map. p. 124.

ARIADNE. In Greek mythology, the daughter of Minos, king of Crete. Theseus, on his arrival in Crete with the tribute of young men and maidens to be devoured by the Minotaur, was shown by Ariadne how to find his way out of the labyrinth, the monster's dwelling-place, by means of a ball of thread. He took Ariadne away with him, but deserted her on the island of Naxos while she slept. Here the god Dionysus (Bacchus) found her, took her to wife, and set her crown among the stars. Ariadne was a nature goddess, whose desertion by Theseus and marriage to Dionysus symbolise the death and revival of vegetation in winter and spring respectively. See Minotaur; Theseus.

The name Ariadne was given to a British protected cruiser of the Diadem class. She was torpedoed July 26, 1917.

ARIANISM. Name given to the doctrine, maintained by Arius, a priest of Alexandria, in the 4th century, denying that Christ was equal to or was of the same substance with God the Father. Athanasius was its great opponent. The controversy became acute, and in 325 the Council of Nicaea condemned Arius and formulated the earliest published declaration of the Catholic Faith—the Nicene Creed. Words of anathema were added.

Arianism, however, lived on. The heresy spread among the Goths in Thrace and Italy, the Vandals in Africa, and in parts of Spain and Gaul, until suppressed under Clovis. It reappeared in the 16th century in Poland, and had its supporters in England in the 17th, 18th and 19th centuries. To-day it exists only in the forms of Unitarianism, Socinianism, and Deism. See Athanasius.

ARIEGE. A department of S. France. It is bordered on the S. by the Pyrenees, of which it includes some of the highest peaks, and is watered by the Ariège and the Salat. Agriculture, the rearing of cattle, sheep, and goats, the cultivation of the vine, and the mining of iron and other minerals are the chief industries. Foix is the capital. The area is 1,892 sq. m. Pop. 167,498.

ARIEL. Man of Moab whose two sons were slain by Benaiah, son of Jehoiada (2 Sam. 23; 1 Chron. 11. R.V.). The name occurs on the Moabite stone in allusion to an altar, is used as the name of a man in Ezra 8, and applied symbolically to Jerusalem in Isaiah 29, and in Ezek. 43 to the altar of burnt offerings. The word means lion, or altar, of God.

In English folk tales Ariel is the name given to a delicate, gossamer-winged fairy, such as the sprite who waits on Prospero's commands in Shakespeare's comedy, *The Tempest*.

Argus Pheasant, bird of beautiful plumage. It is a native of Malaysia

the lost city, signed a treaty and departed. These events prepared the way for independent movement. The invasion of Spain and the seizure of the Spanish royal family by Napoleon precipitated such a movement. In May, 1810, the deposition of the viceroy virtually effected the bloodless revolution which was completed six years later when the congress of Tucuman, representing most of the provinces, solemnly proclaimed independence.

After twenty years of civil wars, confused personal rivalries, and ephemeral attempts at constitution making, Buenos Aires sank into uneasy tranquillity under the rule of the Gaucho tyrant Rosas. The fall of Rosas in 1853 brought relief, but not immediate peace. The other provinces resented the preponderance of Buenos Aires, and for seven years that province formed a republic apart from the confederation, which made Paraná its capital.

Reunion followed, but the cause of trouble remained, until the question was settled by forming the capital of the republic into a federal district. This arrangement of the federal system may be said in a large sense to have brought about internal tranquillity, notwithstanding some disturbance in 1890 and occasional troubles in the provinces. A steadying influence was found in the astonishing economic growth, a minor influence being the introduction of wire fencing, which impeded the movements of Gaucho cavalry.

The disputes concerning the Chilean frontier, which menaced the peace of the country, were amicably adjusted. The last and most troublesome of these, the delimitation of the Andine boundary, was settled by the arbitration of King Edward VII in 1902. Simultaneously with the completion of the federal system in 1880 the republic practically acquired a great increase of rich territory through the conquest of the desert by General Roca in 1878. Previously the Indian frontier was in parts scarcely 200 m. from the capital. Roca in an organized campaign swept the country as far as the Río Negro, and made the Pampa safe.

The Great War upset the republic's economic equilibrium. But the shock imposed the need of thrift and self-dependence, and the recovery which followed was remarkable. The meat freezing industry received a great stimulus. Argentina became in a limited degree a creditor nation by advancing credits to the Allies for the purchase of Argentine cereals. The restriction of imports and the consequent increase of money in the country produced a notable industrial or manufacturing movement. For Argentina, possessing money at home and unable to purchase abroad, proceeded to supply herself by weaving wool and cotton, tanning leather and manufacturing boots and other articles.

CONSTITUTION, ETC. The republic consists of 14 provinces, 10 territories and the federal district of Buenos Aires. With certain slight exceptions its constitution is identical with that of the U.S.A. The executive power is in the hands of a president elected for a year and a council of ministers appointed by him. The president must be a Roman Catholic and a native. The legislative authority is vested in Congress, which consists of a Senate and a House of Deputies. In 1928 Hipolito Irigoyen became president in succession to M. T. Alvear.

The army consists of a national militia, in which all males must serve. There is an air force. The mint of currency is the gold dollar, five going to the pound sterling. It is divided into 100 centavos. The metric system of weights and measures is compulsory.

Consult The Argentine Republic, A. S. Pennington, 1910; Argentina, W. A. Hirst, 1914; The Argentine Through English Eyes, J. A. Hammerton, 1916; Argentina of To-day, L. E. Elliot, 1926.

ARGENTITE. One of the principal ores of silver. It is a sulphide, composed of about 86.5 silver and 13.5 sulphur, and is always found combined with other sulphides, particularly those of copper and lead. See Silver.

ARGENTORATUM.

Latin name for Strasbourg. It was used by the early printers. Most of the books printed at Strasbourg in the 15th, 16th, and 17th centuries bear the impress Argentoratun. See Strasbourg.

ARGESUL, ARGESII or **ARJISH.** River of Rumania. Rising in the Transylvanian Alps, it flows for about 150 m. S. and S.E. to the Danube below Oltenitsa.

An important battle was fought on Nov. 30-Dec. 3, 1916, between the Austro-Germans and the Rumanians on the Argesul. Unable to hold the line of the Oltu, because it had been turned from the S. by Mackensen's passage of the Danube at Sistova, Nov. 23, 1916, the Rumanians made a stand so as to save Bukarest. At first they were successful and it looked as if the Germans would meet with a serious defeat, but they were reinforced in time, whereas the Rumanian reinforcements failed to come up. The result was a heavy defeat for the Rumanians and the evacuation by them of their capital, Bukarest, which was occupied by Mackensen on Dec. 6.

Argives. (Gr. Argeioi; Lat. Argivi). Inhabitants of Argos in Greece. Homer uses the term for the Greeks in general. See Argos.

ARGOL. Crude acid potassium tartrate deposited from wine. When grape juice ferments argol is deposited as a crystalline crust on the sides of the vat, and when this is recrystallised it is known as tartar; from tartar, by further purification, cream of tartar is obtained. Argol is also used for the preparation of tartaric acid.

ARGOLIS. A district of ancient Greece. Occupying the N.E. part of Peloponnesus, bordering the Gulf of Argos. Homer uses the term for the Argives in general. See Argos. Sinus or Gulf of Nauplia, it was the territory surrounding Argos. It became part of the Roman prov. of Achaia in 146 B.C. It has many legendary associations, including that of the Lernean Marsh, where Hercules slew the Hydra. Argolis, with Corinth, now forms a nome of modern Greece. Its capital is Nauplia. Pop. 174,320.

ARGON (Gr. argos, inert). One of the gases which go to make up the atmosphere. It exists in the proportion of one part in 100 parts of air. It is classed as an element, symbol A, with an atomic weight of 39.91, and the atomic number is 18.

Argon is a colourless inert gas, and does not combine with any other element. It can be liquefied and solidified. Argon is prepared from the air, and is of com-

mercial use in filling the bulbs of the tungsten electric lamps, for which purpose it is better than nitrogen.

ARGONAUT.

Cuttle fish of the genus Argonauta. The ribbed, translucent shell is secreted by the flat expansions of two of the tentacles, and is not attached to the body. It serves as a receptacle for the eggs. The argonaut is common in the tropic seas; one species, the paper nautilus, inhabits the Mediterranean.

Argonaut, or paper nautilus. The upper figure shows the animal swimming

ARGONAUTS (Gr. sailors of the Argo). In Greek mythology, the heroes who, under the leadership of Jason, sailed to Aea or Colchis, on the Black Sea, in search of the Golden Fleece. They were so called from the name of the 50-oared ship Argo, which was built by Argos, one of the heroes.

After an eventful voyage Jason and the Argonauts arrived at Colchis, whose king, Aeetes, consented to surrender the Fleece to Jason provided he fulfilled certain conditions. By the help of the magic powers of Medea, the king's daughter, Jason succeeded in this, and, obtaining possession of the coveted prize, started on the return journey, taking with him Medea and her young brother Absyrtus. In spite of the pursuit of Aeetes, the lures of the Sirens and of storms, the voyagers returned to Iolcus. See Jason; Medea.

ARGONNE. District in E. France, known from its wooded character as the forest of Argonne. In the departments of Ardennes and Meuse, between Toul and Mézières, on high ground between the basins of the Meuse and the Aisne, it is about 10 m. wide from east to west and 40 m. long.

The Argonne was the scene of incessant fighting throughout the Great War. It had strategic importance, as a successful advance through it would have made Châlons and Verdun untenable. Throughout 1915 and 1916 the fighting here was of a minor character.

Argonauts. Jason and his companions speeding between the Symplegades, cliffs which closed on anything that attempted to pass. See article above. After an engraving by Picart

In its older sense the word was used by Aristotle to define one of three forms of good government. An aristocratic government may be also the rule of a single man, provided that man is the best man—for instance, the philosopher king of Plato's Republic. See Plato.

ARISTOPHANES (c. 445-385 B.C.). An Athenian comic dramatist. In all, 54 comedies were attributed to him, 11 of which survive.

Aristophanes,
Greek dramatist

The first, *The Banqueters*, was produced in 427 B.C. His earlier comedies, such as *The Knights*, *The Clouds*, and *The Wasps*, contain violent personal attacks upon those who in his eyes stood for the democratic tendencies he deplored. The demagogue Cleon and the philosopher Socrates, whom he unjustly identified with the Sophists, were particularly obnoxious to him. Later he appears to have learned caution, for his plays during the next period of his dramatic career, such as *The Birds* and *The Frogs* in the second of which Euripides is held up to ridicule, were much less outspoken, while in his last personal satire almost disappeared.

Not only was Aristophanes a supreme comic genius, he was also a great poet: for beauty and delicate fancy some of his lyrical passages, especially in *The Birds*, challenge comparison with those of Shakespeare. There is a spirited English verse translation by B. B. Rogers, with Greek text and notes, 1902-15.

ARISTOTLE (384-322 B.C.). A Greek philosopher. He was born at Stagira in Macedonia. In 367 he went to Athens and spent 17 years in association with Plato. Several years of adventure in Mysia followed, including a romantic marriage. In 343 he was called to Macedonia by Philip to undertake the education of his son, then a boy of fourteen. When Alexander, in 334, passed into Asia "to subdue the world," Aristotle returned to Athens, founded his Peripatetic School at the Lyceum, and there, supported by gifts from his royal friend, lived for the next twelve years absorbed in lecturing and scientific research. In 323 he retired to Euboea to spend the last months of his life in peace.

Aristotle distinguishes three kinds of philosophy: (1) Theoretic, subdivided into (a) "first" philosophy, that is, enquiry into God and being, later termed metaphysics; (b) mathematics, the study of being so far as it was determined by number and geometrical form; and (c) physics, the study of material and movable objects. (2) Practical, subdivided into (a) politics, the study of the right conduct of man in society; (b) ethics, the theory of individual conduct; and (c) economics, the practical science of household management, including the science of wealth. (3) Productive, (a)

Aristotle, Greek philosopher who took
all knowledge for his province
Statue in Spada Palace, Rome

poetics, or the philosophy of art; and (b) rhetoric. He also devoted a number of works to the study of logic, included as a whole under the name of *Organum*. This system of philosophy which Aristotle taught at Athens is contained in a number of extant books, though these form not more than a fifth of his total output. See *Ethics*; *Metaphysics*.

ARIZONA. State in the S.W. of the U.S.A. It has an area of 113,810 sq. m. The Colorado river, which forms most of the W. boundary, traverses a lofty plateau from 6,000 ft. to 8,000 ft. high in the N.W. Most of the surface exceeds a height of 5,000 ft., and the greatest alt., 12,795 ft., is attained in the San Francisco Mts. In the S. and W. many low valleys separate the short mountain ranges. Several cañons of the Colorado river are within the state, the chief of these being the Grand Cañon, which has been made a national park.

Agriculture is retarded by a limited rainfall, and irrigation is resorted to. Reservoirs for the storage of water have been constructed, notably the Roosevelt dam, and extensive tracts have been and will be reclaimed by the Yuma and other irrigation schemes. Sheep breeding is engaged in, and copper, gold, silver, asbestos, lead, and zinc are recovered in large quantities. There are 2,400 m. of railway. The chief cities are Phoenix, the capital, and Tucson, the seat of the state university. The pop. at the census of 1920 was 334,162; latest estimate 474,000. Arizona was organized as a territory in 1863, and admitted to the Union in 1912.

ARJISH OR ARGESH. River of Rumania, also called the Argesul (q.v.).

Ark of the Covenant. After the drawing in Tissot's Illustrated Bible
Copyright de Brunoff

ARK OF THE COVENANT. Sacred chest of shittim or acacia wood, made by the Israelites according to the command of the Lord as given to Moses (Ex. 25). It contained the Tables of the Law and was placed in the most holy place of the Tabernacle and of the first Temple. It was the most solemn emblem of the Jewish faith, and the waters of the Jordan divided at its approach (Josh. 3). After being set up at Gilgal, the Ark was removed to Shiloh, and later fell into the hands of the Philistines, who returned it with gifts (1 Sam. 4-7). Its final resting-place was Jerusalem, where it was placed in the Temple (1 Kings 8; 1 Chron. 15). It is believed to have been destroyed when the Temple was burnt by the Babylonians. The word Ark as applied to the Ark of the Covenant is from a Hebrew root different from that used to define the ark of Noah (q.v.). See Jerusalem.

Arkaig. Lake in Inverness-shire, Scotland. It is 10 m. N. of Fort William, 12 m. long, and nearly 1 m. wide.

ARKANSAS. One of the S. central states of the U.S.A. It has an area of 53,335 sq. m. The surface is swampy and well wooded on the E., hilly in the N.W. and W., and centrally and S. undulating. Navigable rivers besides the Mississippi are the Arkansas, Red, White, Washita, and St. Francis, and there are upwards of 5,000 m. of railway.

Mainly agricultural, Arkansas produces maize, wheat, cotton, oats and hay. The state has a wide coal area, and also produces

manganese ores and lead, whetstones from novaculite, bauxite, petroleum and natural gas, and limestone, granite and slate are worked. Lumbering is an important industry, as also is fruit growing. The largest cities are Little Rock, the capital, and Fort Smith; Fayetteville is the seat of the state university. The pop. at the census of 1920 was 1,752,204, of whom 472,220 were negroes; the latest estimate is 1,944,000. Arkansas was organized as a territory in 1819, and was admitted to the Union in 1836.

ARKLET. Small lake of Stirlingshire, Scotland. Its water, raised 22 ft. by a dam 1,050 ft. long, is conducted by tunnel into Loch Katrine, and thence to Glasgow.

ARKLOW. Market town and seaport of co. Wicklow, Irish Free State. It stands on the mouth of the Avoca, 49 m. S. of Dublin by the Gt. Southern Rly. It has herring fisheries and oyster beds, manufactures explosives, and is engaged in the shipment of copper and lead from the neighbouring mines. Traces remain of the castle of the Ormondes, razed by Cromwell in 1649. During the insurrection of 1798 the rebels sustained a heavy defeat near Arklow Bridge. Pop. 5,042.

ARKWRIGHT, SIR RICHARD (1732-92). Inventor of the machinery which made possible the great cotton industry of to-day. Born at Preston, Lancashire, he learned the trade of barber, but becoming interested in

Sir R. Arkwright,
British inventor

the slow and clumsy processes then employed for spinning and weaving cotton he turned his attention to the design and construction of a spinning machine. With the help of John Kay and John Smalley, one was put together at Preston, and when it was perfected Arkwright obtained a patent and took it to Nottingham, where he built a factory and began to spin cotton, later moving to Cromford, in Derbyshire. His invention quickly proved its utility, and the industry went ahead by leaps and bounds. In 1775 Arkwright took out another patent which further improved the machinery for the industry. In 1790 he introduced steam power into one of his factories. In 1786 he was knighted.

Arkwright's spinning machine, the original one made by him in 1769

were Armenians and his name was Dikran Kouyoumdjian. He was educated in England (Malvern College) and in 1922 became naturalised, taking his present name. His reputation was made with his novel *The Green Hat*, but he had already written several others. Later books are *Young Men in Love*, *Lily Christine*, and *Babes in the Wood*, 1929. His plays include dramatised versions of his books *These Charming People* and *The Green Hat*.

ARLEN,
MICHAEL
(b. 1895).
British novelist.
Born in
Bulgaria, Nov.
16, 1895. Arlen's
parents

Arles. Remains of the Roman amphitheatre in the ancient town which was at one time capital of the kingdom of Burgundy

ARLES. Town of S.E. France, in the department of Bouches-du-Rhône. On the Rhône. 53 m. by rly. N.W. of Marseilles, it has flour, silk, hat, and shipbuilding industries. The 7th century church of S. Trophimus and the hotel de ville are of interest.

Arles, the ancient Arelate, was important in Roman times and earlier; Roman remains include ruins of an amphitheatre, an imperial palace, and an aqueduct. In the 10th century it was the capital of the kingdom of Burgundy. Pop. 31,014. See Burgundy.

ARLINGTON, HENRY BENNET, EARL OF (1618-85). English politician. He joined the Royalists at the outbreak of the Civil War, and in 1658 went to Madrid as Charles's agent. After the Restoration he was made keeper of the privy purse and in 1662 secretary of state. He was raised to the peerage in 1663, was a member of the Cabal ministry, and later lord chamberlain. Arlington Street, London, is built on the site of Goring House, where he resided. He died July 28, 1685.

ARLON. A town of Belgium, capital of the province of Luxembourg. It stands on a hill, 17 m. by rly. N.W. of the city of Luxembourg. The ancient Orolaunum, its museum contains many relics of Roman occupation. Pop. 11,160.

ARM (Gr. harmos, shoulder joint). Limb extending from the shoulder of the human body to the hand. The bones consist of: the humerus, or upper arm bone, which articulates at the shoulder joint with the shoulder blade; and the bones of the forearm, the radius and ulna, articulating with the humerus above to form the elbow joint, and with the carpal bones of the hand below to form the wrist joint.

The more important muscles are the deltoid, which raises the arm from the side and also assists backwards and forwards movement of the arm; the biceps, forming the principal muscle which raises the arm at the shoulder joint, and bends the elbow; and the triceps, acting mainly by straightening the elbow.

The main arteries are the axillary, the brachial, the ulnar, and the radial artery, which, just before it reaches the wrist, forms the well-known pulse. The superficial veins of the arm are the radial, basilic, and cephalic. The principal nerves are the circumflex, the cutaneous, the musculospiral, the median, and the radial.

Fracture of the shaft of the humerus is usually due to direct violence. The two bones of the forearm are more frequently broken together than is either the ulna

Armadillo. Priodon gigas, or the giant armadillo of South America. See above

or radius alone. Fracture of the lower end of the radius, known as Colles' fracture, is most often due to putting out the hand to break a fall.

ARMADA or **ARMADO.** Spanish word meaning originally any armed force. It was applied then to a fleet, and especially to the fleet sent against England by Spain in 1588, known as the Great or Spanish Armada.

The command of the expedition was assigned to a perfectly incompetent landsman, the duke of Medina Sidonia. The fleet set sail finally on July 12, 1588, and on July 19 was sighted off the Scillies by an English scout. The number of ships was between 127

and 130, many of them being rowed by galley slaves. The soldiers on board numbered about 20,000.

The English fleet had been ready in Feb., its backbone being the small but efficient Royal Navy. In the number of men and guns the Spaniards doubled the English; but the English ships were constructed to deliver broadsides, which the Spaniards were not, and could fire three times as quickly.

On the news of the approach of the Spanish fleet, the English at Plymouth, under the command of Lord Howard of Effingham,

Armagh, Ireland. One of the inland counties of Northern Ireland. It has many ancient remains

They cut their cables and in the morning were scattered far and wide along the N.E. coast. The English fell upon their rear off Gravelines, and sunk or destroyed a number of ships. The Spaniards were quite unable to re-form; their last chance was destroyed by a gale bursting, which dashed the already battered and crippled vessels upon the coasts of Scotland and Ireland on their way home.

The overthrow of the Armada signalled a maritime revolution, and placed England at the head of the maritime nations. See Drake, Sir F.; Sea Power.

ARMADALE. Burgh of Linlithgowshire, Scotland. It is 2½ m. S.W. of Bathgate, on the L.N.E. Rly., lies in an extensive coal,

iron, and limestone district, and has paraffin and chemical works. Pop. 4,927.

ARMADILLO (Spanish diminutive of armado, armed). Genus of mammals included with sloths and ant-eaters in the order Edentata. The armadillo is a burrowing animal, with powerful digging claws, and inhabits the forests and pampas of S. and Central America. The body is protected by two shields formed of bony plates embedded in the skin, to which are attached external horny scales. One shield covers the shoulders and fore part of the back, and the other the hind quarters. Between these are flexible scaly girdles, which enable the armadillo to roll up like a hedgehog. The head, tail, and limbs are similarly protected. The piciciego or fairy armadillo is about 6 ins. in length; the priodon or giant armadillo measures 3 ft. from snout to base of tail, and the tail is about 20 ins. Armadillos feed mainly on ants, termites, beetles, and other insects. See illus. below.

ARMAGEDDON or **HAR-MAGEDON** (Heb. mountain or mountain district of Megiddo). Scene of the battle between the forces of good and evil which, according to Rev. 16, is to precede the millennial reign of Christ on earth. It was the scene or near the scene of the defeat of the Canaanites by Barak (Judges 4), of the Midianites by Gideon (Judges 7), of the death of Saul in the Philistine invasion (1 Sam. 31), and of the death of Josiah in the Egyptian invasion (2 Kings 23; 2 Chron. 35). In popular usage the name Armageddon is applied to a battle or campaign involving great slaughter and was so used in reference to the Great War. See Megiddo.

ARMAGH. Small inland county of Northern Ireland. It has a greatest length of 35 m. and a greatest breadth of 20 m., and an area of 512 sq. m. Hilly in the S. and S.E., where the highest summit, Slieve Gullion, reaches 1,893 ft., the surface is generally undulating as it recedes towards Lough Neagh, partly in the county, and mainly bog-land in the N. The salmon fisheries of the Bann and Blackwater are important, the linen industry thrives, but agriculture is backward. Oats, potatoes and wheat are grown, and cattle are reared. The G.N.I. Rly. traverses the county, while additional communication is afforded by the Newry and Ulster canals. Armagh is the county town, and others are Lurgan, Portadown, Bessbrook, and Tanderagee. Armagh contains many relics of antiquity, including Danes Cast, a defensive work in the S.E. on the co. Down border, and Tyrone's Ditches, near Poyntz Pass. Pop. (1926) 110,070.

ARMAGH. City, market town, and co. town of Armagh, Northern Ireland. It is 89 m. N.N.W. of Dublin on the G.N.I. Rly. The eccles. metropolis of Ireland, it is the seat of a Roman Catholic and a Protestant archbishop, both primates of all Ireland, and has two cathedrals and two archiepiscopal palaces. Linen weaving is the only industry of importance. Market days, Tues., Wed., and Sat. Pop. 7,356.

ARMAGNAC. Former prov. of S. France, now mostly included in the department of Gers. The region is hilly but fertile, and noted for its wine and brandy. Its capitals were Auch and Lectoure.

The Armagnacs were a faction which came into existence about 1396. It was first known, from the name of its leader, as the Orleanist party, but afterwards it took a new name from Bernard, count of Armagnac, who became its real head. In opposition to the Burgundians, the Armagnacs became the national party of France, and remained so until the treaty of Arras in 1435. The name was afterwards given to bands of adventurers.

ARMANT. Town of Egypt, also called Erment. It is 450 m. from Cairo, quite near Luxor and the ancient city of Hermonthis. Excavation work done here during 1926-30 resulted in the discovery of a sarcophagus containing the remains of one of the sacred bulls. These finds show that the sacred bull Buchis was worshipped by Alexander the Great and two Roman emperors.

ARMATURE. In a dynamo or an electric motor, that part which rotates in the magnetic field. In alternators of one type the armature rotates, but in another the magnetic field revolves while the armature remains stationary. An armature consists of a core of laminated iron round which coils of insulated copper wire are wound; the iron acts as a conductor of the magnetic lines of force, and the current induced is transmitted to the external circuit. A bar of iron placed across the poles of a horseshoe magnet is also known as an armature. See Alternator; Dynamo; Magnet.

ARMED NEUTRALITY. The name given to a league formed by most of the maritime powers in 1780. At that time Great Britain was at war simultaneously with the American colonies, France, and Spain, and the object of the league was to resist British doctrines of the rights of belligerents in their treatment of neutrals at sea. The prime mover was the Tsarina, Catherine of Russia, who was joined by Denmark, Sweden, Holland, Prussia, Portugal, and Naples. The critical questions at issue were formulated in the demands of the neutrals that the declaration of a blockade should not be recognized unless the blockade was effective, and that all goods other than contraband of war carried in neutral vessels should be free from seizure. At the end of 1800, when Great Britain was left isolated in her struggle with France, the Armed Neutrality was revived, but it was dissolved after the battle of the Baltic in that year.

ARMENIA. Soviet republic and a member of the Union of Socialist Soviet republics. It is situated S. of the Caucasus mountains and is bounded on the N. by Georgia, on the S. by Persia, on the E. by Azerbaijan, and on the W. by Turkey. Its area is 11,945 sq. m. and its pop. 876,557.

In modern times, until after the Great War, the term Armenia was given generally to the territory comprised within the six provinces of the Turkish empire in the E. half of Anatolia known as the Armenian vilayets, and the S. part of Caucasia, which belonged to Russia. To these districts was usually added the N.W. corner of the Persian province of Azerbaijan. The meeting point of the

territories was on Little Ararat. In Jan., 1920, the Allies recognized Armenia's independence, which was embodied in the treaty of Sévres in August, 1920. In 1921 Armenia was proclaimed a Soviet republic, and in 1922, with the republics of Georgia and Azerbaijan, formed the Transcaucasian federation.

Armenia consists of a fairly level plateau with mountain ranges from about 8,000 to 12,000 ft. and wide fertile valleys. Rain is scarce, and irrigation has been necessary from the earliest times. Fruits, grain, tobacco, cotton and flax are grown. The country is rich in minerals, which await development. Erivan is the capital, other towns including Kars and Leninahan or Alexandropol and Emiadzim.

The Armenian Church is the oldest established Christian Church, Christianity having been introduced into Armenia in the 3rd century by S. Gregory the Illuminator, who became patriarch. Armenia has suffered much persecution from Islam, and wholesale massacres of the inhabitants have frequently taken place. The Armenians have their own alphabet. This consists of 38 letters, and is particularly strong in consonants. See Caucasus.

ARMENTERIES. Town of France, in the department of Nord. On the river Lys, 20 m. by rly. N. of Lens, it was held by the British despite furious German attacks in 1914, and continued in their possession until, on April 2, 1918, they evacuated it in the great German offensive for the Channel ports. It was reoccupied by the Allies in Oct., 1918. Pop. 28,625. See Ypres.

ARMIDALE. Town of New South Wales, Australia in Sandon county. It is 313 m. by rly. N. of Sydney, and stands on the New England tableland, 3,314 ft. high. It has a Roman Catholic bishop. Pop. 5,850.

ARMILLARY SPHERE. Skeleton celestial globe made up of circular metal hoops representing the equator, the ecliptic, the tropics, and arctic and antarctic circles, and colures. It revolves on an axis and has a circumscribing wooden horizon.

Armillary sphere

ARMINIANISM. Doctrine of man's free will and salvation by faith. Taught by Jacobus Arminius in opposition to the dogma of predestination to eternal salvation, or eternal punishment, taught by the extreme Calvinists, it gave rise to bitter controversy in Holland in the first half of the 17th century.

Arminius, its founder, was a Dutchman whose baptismal name was Jacob Harmensen or Hermanns. He studied at Geneva and was a professor at Leyden from 1603 until he died, Oct. 19, 1609.

Immediately after the death of Arminius, in 1609, his followers, of whom Simon Episcopius became the chief, addressed a remonstrance of five points

to the States-General, hence their name of Remonstrants. Conferences were held at The Hague in 1610 and at Delft in 1613, without producing harmony. The States-General issued a decree to enforce toleration and suppress controversy, but the decree was ignored. Political differences added to the bitterness of the feud. Then the synod of Dort was convened. It sat from Nov. 13, 1618, to April 30, 1619, but as it was composed entirely of extreme Calvinists, Arminianism was condemned, and its adherents were imprisoned or banished for refusing to subscribe to the finding of the synod.

Their persecution did not cease until about 1630.

ARMINIUS (17 B.C.-A.D. 21). German national hero. He belonged to the tribe of the Cherusci and became an officer in the Roman army. In A.D. 9 he led a revolt of the Cherusci against their Roman governor, Quine-

Armenia. Above, fruit merchants of Bitlis. Below, Armenian lady in the semi-oriental dress of her race

tilius Varus, whom he defeated in the Teutoburg Forest. In A.D. 16 he was defeated by Germanicus, but the Romans were obliged to withdraw. He was eventually assassinated. There is a colossal monument to Arminius, completed in 1875, on the Grotenburg, near Detmold.

ARMISTICE (Lat. arma, arms; sistere, to put a stop to). Agreement between two belligerents to suspend hostilities temporarily either for some local reason, e.g. to bury the dead and succor the wounded, or as a preliminary to negotiations for peace.

An armistice applies only to the troops under the immediate command of the officers who agree to it. A neutral zone is fixed and a road is indicated by which all communications between the belligerents shall take place while the armistice is in force.

The most notable armistice was that signed between Germany and the Allies in France, Nov. 11, 1918. Nov. 11 is now kept as armistice day, a general cessation of work taking place for two minutes at 11 o'clock.

ARMORICA (Celtic, land by the sea). Old name for Brittany, which was at one time inhabited by the Armorici. It was given by the Romans. See Brittany.

Jacobus Arminius, Dutch theologian

ARMORICAN FOLDING. This is the name applied to a system of folds that affected the rocks of N.W. Europe in Permo-Carboniferous times, and is seen typically in N.W. France.

ARMORICAN GRITS. This is a subdivision of the Ordovician rocks of France, underlying the Angers Slates, and of Arenig age.

ARMOUR. Name given to the covering which protected the bodies of fighting men in former days. The term is also used for the protective covering of warships. Body armour was worn by the ancient nations of the East, and by the Greek and Roman soldiery. The Greek equipment consisted of a short bronze

ԱՐԴԴԵԶԼԵՐԲԻԼԻՆԿԷԶԷԶ
ՍՈՆՆՈՂԳԵՐՍՊՏԻՓՐՈՅ

աբգդեզէթթիլկհչձշտ
յնչզւղևւմրցւփթ

Armenian alphabet as used in ordinary books. The characters were invented by Mesrob in the 5th century

cuirass with a high-erected helmet. The legs were protected by bronze greaves. The Roman equipment was similar, but far more practical, and was frequently made of iron. After the decline of Rome the warrior of Europe went back to the leather and fabric defences of Assyria and Egypt.

Chain mail had come to the Romans from the East, though never used by them to a large extent. It returned to the West with the reviving skill of the smiths about the 8th century, and formed the body equipment of the wealthier Saxons and Normans, and of the Crusaders. By about 1400 we find definite additions of plate armour, first on the knees,

was enclosed in a sort of citadel; while the ends of the ship remained unarmoured. In the modern battleships and battle-cruisers the armour belt extends from end to end, in combination with gun-turret armour and transverse bulkheads. In the Royal Sovereign class completed during the Great War the belt is 13 ins. thick amidships, tapering to 4 ins. at the bow and stern; in the Hood, which embodies all the experiences of the war, the gun-houses have a maximum protection of 15 ins., with 12 ins. on the barbettes.

The original naval armour consisted of plates of cast iron, then came compound armour, hard-faced steel plate to resist perforation, cemented to a soft wrought-iron backing to give toughness. In 1895 came the Krupp process of cementation, whereby a deep hard face is combined with a tougher back of the plate. This process was acquired by the Sheffield firms, and almost all the armour used in modern navies is produced on this principle. In 1929 experiments were made at Woolwich with a new type of naval armour which was said to possess exceptional resisting power. See Battleship; Cruiser; and illus. p. 210.

ARMOUR, PHILIP DANFORTH (1832-1901). American merchant. He entered the provision business at Milwaukee, and later became head of a firm of pork packers. In 1870 he moved to Chicago, where he joined his brother in the firm of H. O. Armour & Co. As Armour & Co. this business under his direction became probably the largest firm of provision merchants in the world. Armour founded and endowed the Armour Institute of Technology at Chicago. His son, Jonathan Ogden Armour (b. 1863), succeeded him as head of the firm. The latter wrote *The Packers, The Private Car Lines, and The People*, 1906.

ARMoured CAR. Automobile vehicle for use in warfare. It has armour plate to protect the mechanism, and light armament for offensive action. Before the Great War these vehicles had been considerably developed and were equipped with completely enclosed bodies of armour plate, surmounted by a revolving turret in which a machine gun was mounted. Vehicles of this type were most useful in the war, especially during the Belgian retreat of 1914, in Mesopotamia, Egypt, Palestine and Russia. They fought rearguard actions and engaged in patrol work. The driver of the car is protected by a movable screen in which observation slits are provided for use when driving with the screen closed.

In the Austin armoured car two turrets are fitted and there is accommodation for a crew of five. The latest type used in the British army is intended for reconnaissance work by cavalry units, but capable of employment against the rear and flanks of marching forces. Twelve batteries of field artillery and four of heavy artillery have also been mechanised, and nine batteries have been supplied with tractors known as "dragons." There are also armoured machine-gun carriers with a speed of 30 m. an hour. See Tank.

ARMOURER (Fr. armurier). One skilled in the manufacture and care of weapons. A military armourer is a non-commissioned officer of the Royal Army Ordnance Corps who is attached to a unit of combatant troops for inspecting, repairing, and maintaining in efficient order the small arms and any mechanism in their charge.

A naval armourer is a skilled warrant officer who has charge of the rifles, cutlasses, and other small arms aboard a warship. His duties are similar to those of an armourer in the army, though he also acts as blacksmith.

The Armourers' and Braziers' Company is a London livery company, incorporated June 17, 1708. The Armourers' Company was incorporated about 1423: the Braziers appear

to have been separately incorporated about 1479. The hall, in Coleman Street, London, E.C., was founded about 1450 and rebuilt 1840. It contains rare specimens of armour.

ARMOURY (Lat. armarium, chest, safe). Apartment in which weapons or instruments of war were stored until required for service.

The Wallace Collection (q.v.) contains a very choice collection of arms and armour, and at the Tower of London are some 6,000 exhibits. Among other collections are those at the Royal United Service Museum in Whitehall, Windsor Castle, and Warwick Castle. Foreign collections include that in the Kunsthistorisches Museum, Vienna, the Royal Armoury at Madrid, the Historical Museum, Dresden, the Metropolitan Museum, New York, the Musée de l'armée, Paris, the Armeria at Turin, and the Zeughaus at Berlin. The private armoury in the castle at Churburg, Tirol, has descended from the Middle Ages, and the Landes-Zeughaus at Graz in Styria is another example of a true armoury, as opposed to a collection. See Armour.

ARMS. This word refers to weapons of all kinds, which are divided into small arms, firearms, and other classes. It describes, too, the armorial bearings of noble and other families, and of cities, corporations, etc., which are in full coats of arms.

Grants of arms are made by the College of Arms in Queen Victoria Street, London, E.C. The recipient of a coat of arms must pay £10 and an annual sum of £1 ls. for the licence. If the arms are used on a vehicle the licence costs £2 2s. a year. Coats of arms are also granted in much the same way to municipal corporations, professional organizations, schools, and other public bodies. In Scotland grants are made at the court of the Lord Lyon at the Register House, Edinburgh. See Allusive Arms; College of Arms; Heraldry; Sword, etc.

ARMSTRONG, WILLIAM GEORGE ARMSTRONG, BARON (1810-1900). British engineer and inventor. In 1847 he established works at Elswick, near Newcastle, for the manufacture of hydraulic machinery, and in 1863 he took over neighbouring works and began to make guns and ammunition. In 1882 the firm united with the shipbuilding firm of Mitchell & Swan, and began to build warships. In 1897

it took over the Manchester engineering firm of Joseph Whitworth & Co., and took its name of Sir W. G. Armstrong, Whitworth & Co., Ltd. In later life Armstrong devoted much attention to the construction and improvement of naval guns and warships. He spent much time also in researches into the possibilities of electricity. In 1859 he was knighted, and in 1887 was made a peer. His title became extinct when he died, Dec. 27, 1900, but his heir, his great-nephew, W. H. A. F. Watson-Armstrong, was made Baron Armstrong in 1903.

Armstrong College, originally called Durham University College, an educational establishment at Newcastle-upon-Tyne, was founded in 1871 and given its present name in 1904 in honour of Lord Armstrong. Science figures largely in the college curriculum.

ARMY. Word denoting a body of men organized for warfare. It includes every branch of land forces, such as cavalry, infantry, artillery, engineers and men engaged in transport and supply. The term is also used for a large or small body of troops employed in a particular region or under a noted leader, e.g. the Crimean army, Wellington's army.

Armour. Full suit of German make, c. 1470, with the special names applied to the various parts
Wallace Collection

then on the arms and shins, and finally, by the end of the 14th century, the knight is completely encased in plate armour hinged or jointed at knee and elbow, and his head protected by a visored helmet.

The Golden Age of armour was the middle of the 15th century. The finest representation of the equipment of this period is the effigy of Richard Beauchamp, earl of Warwick, in St. Mary's Church, Warwick. Armour was in great use in the 15th and 16th centuries in connexion with tournaments, and was made heavier than that employed on the battlefield. In the 16th century the increasing use of firearms made itself felt. Piece by piece armour was discarded, until in the 17th century only the cuirass and helmet remained.

The Great War revived the use of armour. The steel helmet was used in varied forms by all belligerents, and heavy breastplates were employed in the German army, similar to those of the 17th century. The brigandine was resuscitated as a bullet-proof tunic composed of small plates of steel.

NAVAL ARMOUR. This is a modern development. The French constructed armoured floating batteries in the Black Sea, during the Russian war, in 1854, and subsequently built the Gloire, first of all armour-clads. The British replied with the Warrior and the Minotaur classes. Then ensued the long conflict between the gun and the armour. At first systems of distributing armour were introduced to give greater protection to the vital parts of the ship. The main armament

Civil Engineers

During the Great War, when enormous forces were in the field, the term army was used for a group of three or four army corps, and so we had the First, Second, Third and other armies. The French and German armies were similarly organized. Before the Great War most European nations had large conscript armies, but in Britain the principle of compulsory service was only put into force during the war, and following its termination was discontinued.

BRITISH ARMY: HISTORY. In England in Saxon times military service was obligatory upon all free landowners between the ages of sixteen and sixty. In medieval England the feudal class supplied the cavalry, and the men of the national militia the infantry. Throughout the reign of Elizabeth the army remained defective in both organization and armament, and in the first years of James I a new Militia Act practically destroyed the old national force, though without impairing the obligation of all citizens to military service. The Civil War showed that the entire military system was chaotic, and in 1645 Parliament created the New Model professional army of about 24,000 men. At the Restoration it was disbanded, but one regiment of foot was saved, and a regiment of horse was formed by enlisting discharged troopers. These, together with a regiment of footguards levied from among the King's adherents, formed the nucleus of the present standing army.

During the seventeenth and eighteenth centuries the army organization was very lax. Regiments were the property of their colonels, the civil population was averse to joining, and to induce men to enlist a bounty had to be given and a commission offered to individuals to raise new regiments. The Duke of York, taking over the army in a hopeless state in 1795, reorganized the staff at headquarters, restored discipline and added a second bat-

talion to almost every regiment in the line. In 1870 Lord Cardwell introduced real reforms. Among them he abolished the purchase system, reduced the long service system, inaugurated the linked battalions, and swept away the old numbers and substituted territorial titles for them. Lord Haldane in 1907 effected reforms by creating an Imperial General Staff, and converted the Volunteers into a Territorial Army.

THE GREAT WAR. At the outbreak of the Great War the regular army, including those serving in India, numbered about 255,000, and behind them were an army reserve of 146,000 and a special reserve of 62,000. In addition the Territorial Army numbered about 250,000 men. The infantry consisted of Guards, four regiments of nine battalions, and infantry of

the line, 69 regiments or 148 battalions. The cavalry was organized in 31 regiments, the artillery was divided into field and garrison, the former further into horse and foot, i.e. for service with cavalry and infantry respectively.

Other branches of the service included the Army Service Corps, 80 companies; the Army Medical Corps; and the Army Ordnance Corps. The Engineers were a separate unit with 85 troops or companies, and there was also a department for chaplains. The expeditionary force consisted of five divisions of infantry and one of cavalry. With the various units attached it probably numbered 100,000 men. It was completed in Sept. by the arrival of the 6th Division. At the beginning of the war Lord Kitchener organized a new army, originally known as Kitchener's Army. The strength on Sept. 15, 1914, was:

Regulars	314,000
Army Reserve .. .	80,000
New Army	500,000
Territorial Force ..	313,000
	1,207,000

Some new units added to the army attained great proportions. The Tank Corps had a numerous personnel, as had the Machine-Gun Corps. Labour battalions were formed for duties behind the lines. The Canadians, Australians, and other overseas troops kept their own organizations. They were not, therefore, included in the total of 3,704,416, which is the number of those who served in the ranks during the Great War. With these, the grand total of British troops was 7,130,380, and with coloured troops the total employed on all fronts was 8,354,567. On Nov. 11, 1918, the day of the armistice, the mobilised strength was 5,680,247, of whom over 4,000,000 belonged to the British army proper. Then came the great demobilisation, and by Oct. 15, 1919, the number of troops was 757,000. In 1928-29 the strength was 520,453, of whom 190,000 were regulars. Its cost for the year was estimated at £41,030,000. Consult History of the British Army, J. W. Fortescue.

Army. The evolution of uniform in the British Army from 1558 to 1802. Left to right—Mounted: Cromwellian Trooper, 1648; Dragoon, 1751; Light Dragoon, 1792. Foot: Infantry, 1558; Royalist and Parliamentary, 1619; Musketeer, 1685; Infantry of the Line, 1742, 1792, and 1802

Specially drawn by Charles M. Sheldon from sketches by R. Simkin

Army. Development of British Army uniform during the 19th and 20th centuries. Left to right—Mounted: Hussar, 1832; Lancer, 1890; Cavalry Trooper, 1914. Foot: Representatives of the Infantry of 1812, 1836, 1854, 1864, and 1890; service dress, 1914, and trench kit, 1917

Specially drawn by Charles M. Sheldon from sketches by R. Simkin

ARMY AGENT. Any firm appointed by the War minister to receive a lump sum from the Treasury sufficient to pay all the officers of all the regiments for whom it acts as bankers. The two existing army agents are Lloyds Bank, Ltd., Cox's & King's Branch, 6, Pall Mall, London, S.W.1, and Glyn, Mills & Co., Holt's Branch, 3, Whitehall Place, London, S.W.1. The former have branches in India at Bombay, Calcutta, Karachi, Rawal Pindi, Murree and Seringar (Kashmir). Agents credit each officer with a month's pay in advance.

ARMY CORPS. Second largest unit into which a modern army is divided. It usually consists of two or three divisions, with cavalry, artillery, engineers, and other auxiliary services, and is in practice an army complete in every way. An army corps may contain as many as 60,000 men, but more generally it has about 40,000. During the Great War Britain had over 20 of these corps in the field. The French and Italian armies are organized on an army corps basis, the country being divided into districts, in each of which one corps is recruited. This until the end of the Great War was also the German system.

ARMY COUNCIL. Controlling body of the British Army. Established in 1904, when the office of commander-in-chief was abolished, it is, in constitution, something like the Board of Admiralty. It consists usually of nine or ten members. The civilian members are the secretary for war, who acts as president, the under-secretary, and the financial secretary to the War Office. The military members include the chief of the Imperial general staff, the quartermaster-general, the adjutant-general, the master-general of the ordnance, and the deputy chief of the general staff.

ARMY EDUCATIONAL CORPS. Separate unit of the British army. It was formed in 1920, in recognition of the principle that education, general as well as vocational, is an essential part of a soldier's training. The corps consists of a staff of officers from second-lieut. to lieutenant-colonel, warrant officers, and sergeants. The badge is an open book resting upon crossed rifles and lances. The headquarters are at Shorncliffe.

ARMY MEDICAL CORPS, ROYAL. Unit of the British army the duties of which are the prevention of disease and the care and treatment of the sick and wounded. The outbreak of war with Russia in 1854 found the medical organization very deficient, and thus led to the formation of the Army Hospital Corps with its first school at Chatham. Many changes and reforms were introduced. The regimental system was superseded by the Army Medical Corps in 1873, converted into the Royal Army Medical Corps in 1898.

The duties of the corps include advice on all questions of the welfare of the troops, barracks, billets, camp, water supply, cooking, rations, latrines, etc., as well as the many items in connexion with the care of the sick and wounded and their removal from the scene of action and treatment in hospital. Distinct from this is the Army Dental Corps, with headquarters at Woking.

The Royal Army Medical College is an Institution for the technical education of officers on probation for permanent commissions in the Royal Army Medical Corps and Indian Medical Service. Formerly attached to the hospital at Netley, it is now situated at Millbank, London, S.W.

ARMY ORDNANCE CORPS, ROYAL. Non-combatant unit of the British army, which supplies the fighting forces with munitions of all kinds. The corps was constituted as a separate unit in 1881, but its origin is of considerable antiquity. In 1875 it formed a branch of the Army Service Corps as Ordnance Store Companies; these companies being constituted a separate unit, the Ordnance Store Corps, in 1881. The title was afterwards changed to Army Ordnance Corps, the prefix Royal being granted in Nov., 1918, as a recognition of services rendered in the Great War.

The duties of the corps consist in providing, receiving, holding, and issuing munitions of war and military matériel of all descriptions, clothing for camps, and clothing and necessaries for use in the field. Its headquarters are situated at Woolwich, where there are extensive depots; clothing is stored at Pinlco, London, small arms at Weedon, Northants, and there are subsidiary depots. The corps is directly under the director-general of ordnance and its officers belong to the Army Ordnance Department. The Ordnance College, Woolwich, provides special courses for officers. See Artillery.

ARMY PAY DEPARTMENT. That branch of the War Office responsible for paying the troops of the British regular army. Known also as the Royal Army Pay Corps, it works through officials stationed in districts and commands at home and abroad, and is controlled by a chief paymaster and his staff in Whitehall, under the general direction of the finance member of the Army Council.

ARMY RESERVE. Trained soldiers allowed to quit the colours on condition of engaging to rejoin in time of national emergency. In the British standing army every soldier enlists for 12 years, but as only a certain number of men can appear on the pay roll in any one year, according to the establishments sanctioned by Parliament in the Army (Annual) Act and the votes in Army Estimates, men who have completed about six years with the colours are granted a permanent furlough on half-pay for the remainder of the term, their places in the ranks being taken by recruits. This is called the short service system, and it is thus possible to train two men in twelve years for little more than the cost of one under the old system.

ARMY SERVICE CORPS, ROYAL. Department of the British army. The corps carries on the duties of a number of earlier army departments, the Corps of Royal Wagoners, later known as the Royal Wagon Train; the Commissariat Department, and the Military Train, which superseded the Land Transport Corps formed during the Crimean War. In 1888 the corps as now organized became a definite unit of the British army, responsible for both transport and supplies. Its duties range from horse and motor transport to clerical work, and include the conveyance of food and forage to the armies in the field. The prefix Royal was added to its title in Nov., 1918.

At the outbreak of the Great War the corps consisted of 500 officers and 6,000 warrant officers, non-commissioned officers and men. At the cessation of hostilities these figures had expanded to 11,408 officers and 311,478 other ranks. The most striking increase occurred in the Mechanical

Transport branch. The corps was administered by the Supply and Transport Department, one of a number of directorates at the War Office.

ARMY VETERINARY CORPS, ROYAL. Unit of the British army which is concerned with the medical treatment of army horses. Officers of the corps have to undergo a course of special training at the Army Veterinary School. They were granted adequate military rank in 1891. In Nov., 1918, the prefix Royal was added to the title. The headquarters are at Caxton House, Westminster, London.

ARNAUD, HENRI (1641-1721). Leader of the Piedmont Waldenses. On the expulsion of the Vaudois by Victor Amadeus of Savoy, Arnaud organized and commanded the military expedition, 1689, for their return from Switzerland, but from 1690-8 he cooperated with Victor Amadeus against the French. When Amadeus again turned against the Vaudois, in 1698, Arnaud took refuge in Württemberg, and became a pastor near Stuttgart. See Waldenses.

ARNAULD, ANTOINE (1612-94). French theologian. He was ordained in 1641. Supporting Jansen, bishop of Ypres, he attacked the Jesuits, and his book on Frequent Communion, a practice he opposed save after very rigid preparation, at once provoked much controversy. When Jansen's work was condemned as Calvinistic by Rome, Arnauld denied that interpretation and the power of Rome to decide on questions of fact. He made outward submission in 1664, but lived at Port Royal and remained Jansenist. In 1678 he retired to the Netherlands, and wrote in opposition to the Jesuits, the Protestants, and William of Orange. His eldest brother, Robert Arnauld d'Andilly (1588-1674), poet and historian, lived as a layman at Port Royal. Another brother was Henri Arnauld (1597-1692), bishop of Angers, who had a long struggle with the Jesuits.

ARNAULD, JACQUELINE MARIE ANGÉLIQUE (1591-1661). Abbess of Port Royal. Often known as Mère Angélique, she was a sister of Antoine Arnauld, the theologian. In 1599 she became a novice in the Cistercian convent of Port Royal, near Versailles, and at the age of eleven was nominated abbess by her father. In 1623 she came under the influence of the Jansenist abbot of St. Cyran, du Vergier. After resigning to become head of a convent in Paris, she eventually returned to Port Royal as prioress under her sister Agnes. Her niece, Angélique Arnauld (1624-84), became successively prioress and abbess of Port Royal, and was chief author of the *Memoirs of Port Royal*, 1742. See Port Royal.

ARNDT, ERNST MORITZ (1769-1860). German poet. The son of a former serf, he first attracted attention by the publication in 1803 of an attack on serfdom in Pomerania and Rügen, which led to its abolition. He was a bitter critic of Napoleon and helped in Russia to organize the coalition against him. He wrote various songs and poems, including the famous *What is the German's fatherland?*, which helped largely to revive the spirit of nationalism in Germany. In 1818 Arndt was appointed professor of history at Bonn, but was soon suspended for his liberal opinions. At the revolutionary movement of 1848 he was elected to the national assembly at Frankfurt. He died Jan. 29, 1860.

ARNE, THOMAS AUGUSTINE (1710-78) British musician. His first composition was the music to Addison's opera *Fair Rosamond*, 1733. He was the composer of two oratorios, *Abel*, 1755, and *Judith*, 1761, of the music to Milton's *Comus*, 1738, and of many operas and operettas, in addition to the music for plays of Shakespeare and others. His *Rule Britannia*, in *The Masque of Alfred*, 1740, and the Shakespearean songs, *Under the greenwood tree*; *Blow, blow, thou winter wind*; *When daisies pied*, and *Where the bee sucks*, are immortal contributions. Arne died March 5, 1778, and is buried in S. Paul's, Covent Garden, London.

Thomas A. Arne, British musician

ARNEE. Native name for the long-horned Indian buffalo. It is found wild in many parts of India, where it lives in swampy jungles, but is better known in the domesticated form, of which there are many breeds, differing greatly in appearance.

Arnee. Long-horned buffalo, an Indian draught animal

ARNHEM or **ARNHEIM** Town of Holland, capital of Gelderland. It stands on the Rhine, 35 m. by rly. E. of Utrecht, is connected by tram with that city and Zutphen, and by steamer with Amsterdam, Rotterdam, Cologne, and other ports. It manufactures tobacco, cotton and woollen goods, paper soap, furniture, and carriages. Sir Philip Sidney died here in 1586. The Roman *Arenacum*, it was often captured, destroyed, and re-fortified. Pop. 76,619. Arnhem Land is a district in Northern Territory, Australia.

ARNICA. Dried root of *Arnica montana*, a plant which grows in middle and southern Europe. Tincture of arnica is a popular application for bruises and sprains.

ARNIM, MARY ANNETTE, COUNTESS VON, British novelist, generally known as *The Author of Elizabeth and her German Garden*. Daughter of H. Herron Beauchamp, she married first Count Henning August von Arnim, who died in 1910, and then, in 1916, the second Earl Russell. In 1898 she won immediate popularity with her delightful story, *Elizabeth and Her German Garden*. Her stories, mostly marked by keen appreciation of character, grace of style, and lively humour, include *The Solitary Summer*, 1899; *Princess Priscilla's Fortnight*, 1905; *Fraulein Schmidt and Mr. Anstruther*, 1907; *Christopher and Columbus*, 1919; *The Enchanted April*, 1923; and *Introduction to Sally*, 1926.

ARNO. A river of Italy. It rises in the Apennines, flows S. nearly to Arezzo, curves N.W. and then W. to the Mediterranean, 7½ m. below Pisa. It is 150 m. long and is navigable by barge to Florence.

ARNOLD. Urban district and market town of Nottinghamshire, England. It is 4 m. N.E. of Nottingham and has lace and hosiery factories. The church of S. Mary is partly Norman but chiefly Early English, and has a 15th century tower; it was partly restored in 1868 and 1877. In the town is the house in which R. P. Bonington was born. Market day, Sat. Pop. 11,800.

ARNOLD, SIDNEY ARNOLD, 1ST BARON (b. 1878), British politician. Born Jan. 13, 1878, the son of a Manchester stockbroker, for a time he followed his father's business. During 1912-21 he was Liberal M.P. for the Holmfirth Division of Yorkshire. In 1922 he joined the Labour Party and in 1924 was under-secretary for the Colonies in the Ministry formed by Mr. Ramsay MacDonald, being then made a peer. In the second Labour Government (1929) Lord Arnold became paymaster-general, and in Oct. went to the U.S.A. with Mr. MacDonald.

ARNOLD, BENEDICT (1741-1801). American general. He joined the American army in the War of Independence, distinguished himself in the fighting at Ticonderoga and Quebec, and became a major-general. In 1780 he entered into negotiations with the British, through John André, for the betrayal of West Point. André was taken and hanged, but Arnold made his way to the British lines, received a command in the British army, and fought against the Americans. He sailed for England in 1782, and died in London. See André, John.

ARNOLD, SIR EDWIN (1832-1904). British poet and journalist. After spending five years in India as principal of the Government College at Poona, he joined the staff of *The Daily Telegraph* in 1861, and was connected with that journal for the rest of his life. His reputation as a poet rests on *The Light of Asia*, 1879, an epic dealing in florid blank verse with the life of Buddha.

ARNOLD, MATTHEW (1822-88). British poet, critic, and educationist. Eldest son of Thomas Arnold of Rugby, he became fellow of Oriel in 1845, and from 1847 to 1851 was private secretary to Lord Lansdowne, president of the council, by whom in 1851 he was appointed inspector of schools. He held this post for over 30 years, retiring in 1883, and from 1857 to 1867 was professor of poetry at Oxford. He died Apr. 15, 1888.

Matthew Arnold, British poet

After G. F. Watts

Amid his more noteworthy poems are *The Strayed Reveller*, *Thyrsis*, a monody on his poet friend Arthur Hugh Clough and one in the language:

Sohrab and Rustum, Mycerinus, Tristram and Iseult, The Forsaken Merman, Rugby Chapel, Requiescat, The Scholar Gipsy, Stanzas from the Grand Chartreuse, Westminster Abbey, Heine's Grave, and some beautiful sonnets, including one on Shakespeare. In his prose writings he consistently opposed Victorian smugness and what he called philistinism; he pleaded for classic ideals, restraint, and for a standard of mind instead of material comfort.

ARNOLD, THOMAS (1795-1842). British schoolmaster and educationist. He was educated at Winchester and Oxford, being

elected fellow of Oriel College in 1815. In 1828 he was elected headmaster of Rugby school, at a time when public opinion was largely adverse to public school education. Chosen professor of modern history at Oxford in 1841, he held this office with his headmastership until his death, June 12, 1842. Arnold's works were mainly religious and historical.

Sidney Arnold, 1st Lord Arnold

Arnold defined the aim of education as a union of moral and intellectual excellence, and a public school must therefore be a place where not only classical and general learning were obtained, but a sphere in which character was formed and the ability to deal with the responsibilities and duties of adult life. The remarkable influence which he exercised over his pupils is depicted in T. Hughes' *Tom Brown's School Days*.

ARNOULD, MADELEINE SOPHIE (1744-1802). French singer. Born in Paris, she first appeared in public at the Grand Opera House, Paris, Dec. 15, 1757, and until her retirement, in 1778, was one of the most popular opera singers. She was the first to play the title-part in Gluck's *Iphigenia in Aulis*. A beauty and a wit, her salon was the resort of distinguished writers. Many of her witty sayings are preserved in the collection known as *Arnouldiana*.

Sophie Arnould, French beauty and wit, who was a popular opera singer
J. B. Greuze, Wallace Collection

AROLLA. Village and mt. resort of Switzerland, in the canton of Valais. Near the Arolla Glacier, at the head of the S.W. branch of the Val d'Herens, it is four hours by mule path from Evolena.

AROSA. A summer and winter resort of Switzerland, in canton Grisons. It is 19 m. E. of Coir, in the Schanfigg valley. Surrounded by pine woods, it is 5,900 ft. high, and is visited by consumptives.

ARPAD (d. 907). Soldier and founder of the Magyar monarchy. Little is known of him beyond his appearance with his hordes in 896 and his conquest of the country afterwards named Hungary about 906. On his death his son succeeded him as duke of Hungary, and the dynasty lasted until 1301. Arpad's Monument, overlooking Brasso, was erected in 1896.

ARQUEBUS or **HARQUEBUS.** An early form of firearm. It appeared in the 15th century soon after the discovery of gunpowder, and varied in size from a cannon to a musket. It was carried by the soldiers, but in the field was supported on a rest. The earliest arquebus was merely a small cannon fired by matchcord

Thomas Arnold, English schoolmaster and educational reformer

East by Do in Temple Speech Room, Rugby

or tinder; but a 16th century Italian made great improvements, and in his time it was effective up to 400 paces. It was the chief infantry weapon in the battles of the earlier part of the 16th century, but in the 17th was supplanted by the musket. See Artillery; Musket.

ARRACK OR RAKI (Arab. araq, juice). Name of any locally made spirituous liquor in the E. Indies, especially that distilled from Palm toddy, from rice or molasses fermented with palm-juice, or from flowers of the mahwa tree. Usually imperfectly prepared, it is an inferior but potent, injurious spirit, containing from about 53 to 75 p.e. of alcohol.

ARRAIGNMENT (late Lat. arrationare, to call to account). English legal term. It means bringing a prisoner who has been indicted, or found guilty on a coroner's inquisition, before the court which is to try him. The accused must be brought to the bar of the court, or placed in the dock. The charge is read or explained to him by the clerk, and he is asked to plead guilty or not guilty. Where the indictment also charges the prisoner with having been previously convicted of felony, this must not be mentioned on the arraignment, for fear of prejudicing the prisoner on his present trial. See Trial.

Arquebus. The lower one is an early form, with a brass barrel in a wooden stock. The upper, of the time of Henry VIII, has the recess for bullets in the side of the stock shown open.

by rly. N.E. of Amiens. Its 16th century town hall and its cathedral were laid in ruins during the Great War. It was afterwards adopted by Newcastle-on-Tyne. Before the Great War the manufactures included hosiery, agricultural implements, pottery and china, and lace, and Arras was one of the biggest corn markets in the whole country. Pop. 24,835.

During the 14th and 15th centuries the tapestries of Arras were so famous that the name arras was used in England as the general term for tapestry wall-hangings. The arras was often hung a considerable distance from the wall, thus providing a lurking-place for eavesdroppers. Polonius, in Shakespeare's Hamlet, was stabbed while hiding behind the arras, which was a tapestry fabric woven with figures and scenes. See Tapestry.

BATTLES OF ARRAS. Throughout the Great War there was intense fighting in front of Arras, an important strategic centre. The first battle was fought in Sept.-Oct., 1914. On Sept. 18 French cavalry entered Arras, which was thenceforth in the hands of the Allies. The French attempted to advance beyond the town, but after a severe engagement on Oct. 1-3 were compelled to abandon Lens, and were forced back to Arras. The Germans then made desperate efforts to break through, divide the French and British armies, crush the latter, and seize the Channel ports. On Oct. 21 they made their greatest attack on the French position, which ran in a semicircle round the town, but were repulsed at most points. Another attack on Oct. 24 gave them the important Vimy Ridge. The Germans then made their great attack at Ypres, and the first battle of Arras ended.

The second battle, fought in June, 1915, was an attempt by the French under Foch to carry the intricate German trench system, 2 m. N. of Arras, known as the Labyrinth. Here for a week French and Germans fought hand to hand, with bomb, knife, and bayonet. By June 23 the greater part of the system was in the hands of the French, and ultimately the salient N. of Arras was flattened out.

The third battle was fought in April-May, 1917. In accordance with the general plan of campaign the task set the British was to capture the dominating position of Arras and reduce the salient between Arras and the Ancre. On April 9 the third army attacked from Croisilles on the right to near Souchez on the left, and the Canadian Corps assaulted Vimy Ridge. Within an hour the British had stormed practically the whole German advanced line, and by noon Vimy Ridge was cleared as far as Hill 145 at the N. end. The British line on the first day was carried to Feuchy village, which opened a breach in the German third line, while the capture of Fampoux created a second gap. The first day of the battle brought results greater

than any previous British victory of the war, 13,000 prisoners and many guns being taken.

On April 10 the Canadians cleared the last part of Vimy Ridge, and on succeeding days further positions were carried by British troops. On April 23 Haig attacked at Lens and E. of Arras, capturing Guvrelle and Guémappe and important ground E. of Lens. More ground was captured on April 28, on which day Arras was stormed by the Canadians. The advance was continued into May, the German line from Fresnoy to Bullecourt, on a front of 16 m., being stormed on May 3, and Roenx on May 14. Heavy fighting continued for many days about the Hindenburg line at Bullecourt, but the ground was held and the British position improved. The main result of the battle was to make Arras secure from German capture.

The fourth battle coincided with the German offensive on the Somme in March, 1918. Two attacks were made on the British lines, on Mar. 21 and Mar. 28, but beyond slight gains the Germans were unable to break the British front, though the latter was withdrawn in places. The last battle was a British victory. It was part of the great Allied offensive in the autumn of 1918. During the battle the Canadians stormed the formidable Drocourt-Quéant line early in Sept., and carried important sections of the Hindenburg line.

ARRASTRA. Machine used in Mexico and S. America for the fine grinding of the complex silver ores which occur in those regions. Its working parts consist of a vertical shaft fixed in the centre of a floor or bed about 12 feet in diameter, so paved with stones (usually porphyry) as to leave no interstices. This shaft carries projecting from it two or four arms, at least one of which projects beyond the edge of the floor. From these arms depend stones, weighing from 100 lb. to 200 lb., resting on the paved floor. Mules are harnessed to the projecting arm, and the stones are dragged round on the floor, grinding the crushed ore. See Silver.

ARREST (Lat. ad, to; restare, to remain). In English law, when a person is compelled, by a restraint on his bodily liberty, to attend before a court of justice, or to fulfil a legal obligation, he is said to be arrested. With few exceptions, there is now no arrest in England, apart from criminal cases. A person accused of any crime may be arrested on a warrant under the hand and seal of a justice of the peace, before whom sworn information has been laid. See Warrant.

Arrestment is a process of the law of Scotland. By it the goods of a debtor are arrested in the hands of anyone who holds them, until the debtor has given his creditor caution or security to the value of the debt or claim.

ARRHENIUS, SVANTE AUGUST (1859-1927), Swedish chemist. He was born Feb. 19, 1859, at Schloss Wijk, near Upsala, and studied at Up-

sala, Stockholm, and elsewhere. In 1895 he became a professor at Stockholm, and he died Oct. 2, 1927. Arrhenius made a special study of electrolysis, and suggested that electrolytic action may be found in atmospheric phenomena.

Arran. Glen Sannox, from the bridge. The glen, remarkable for its Alpine-like grandeur, is 5 miles north of Brodieck.

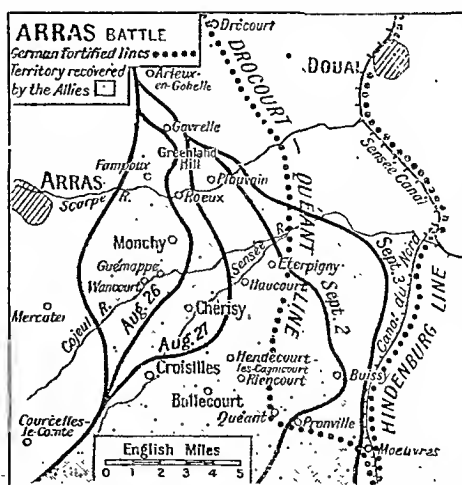

ARRAN, Largest island in the Firth of Clyde, Scotland. It forms part of Buteshire, is 20 m. long, from 8 m. to 11 m. broad, and has an area of 165 sq. m. The N. and N.W. are rugged and picturesque, with glens of great beauty. Lamlash Bay is one of the finest natural harbours in the British Isles. Loch Ranza is a lovely bay.

Agriculture, cattle and sheep rearing and fishing are the chief industries. The castle of Brodieck, the chief village, was long a seat of the dukes of Hamilton, afterwards passing to the duke of Montrose. Kildonan Castle is a ruin of the 14th century. Pop. 4,600.

The Scottish title of earl of Arran was held by several men famous in Scottish history and is now a secondary title of the dukes of Hamilton. It was given in 1503 to James Hamilton, but its most noted bearer was his son James (d. 1575). He was protector of Scotland, and was made duke of Châtellerauld by the French king. See Hamilton.

The Irish title earl of Arran is taken from the Aran or Arran Islands, Galway. It has been borne since 1762 by the family of Gore.

ARRAS. City and episc. see of N. France. The capital of the department of Pas-de-Calais, it stands on the river Scarpe, 38 m.

Arras. Map showing British gains in the fifth battle of Arras, Aug. 26-Sept. 3, 1918. In it the Drocourt-Quéant line was stormed by the Canadian Corps, and the main Hindenburg line reached

James Hamilton, 2nd Earl of Arran. C. Kell, Hamilton Coll.

ARRIAGA, MANOEL JOSÉ DE (1839-1917). President of the Portuguese republic. After qualifying as a lawyer, he practised at Lisbon. Early professing republican convictions, he was deputy for Funchal, 1882-4, and for Lisbon, 1890-2. He was elected first president of the Portuguese republic Aug. 24, 1911, on the retirement of the provisional president, Dr. Braga, and resigned May 28, 1915. He was noted as a lawyer, a poet, and a writer on politics and economics.

ARRIANUS, FLAVIUS, OR **ARRIAN** (c. A.D. 100-180). Greek historian. Born at Nicomedia in Bithynia, he lived for some time at Nicopolis in Epirus, where he studied under the Stoic Epictetus. His chief works are the *Philosophical Lectures* of his master Epictetus in eight books, four of which are extant; the *Encheiridion* Epictetou, a handbook of the ethical philosophy of Epictetus, still extant; and the *Anabasis* Alexandrou, almost complete, a history of the campaigns of Alexander the Great, based on contemporary narratives.

ARRIS (Latin *arist*), fish-bone). Term used by builders and joiners for a raised edge or line formed by the junction of any two sides of a wood or stone body, which together make an external angle. The raised edges that separate the flutings in a Doric column are describable as arrises.

ARROL, SIR WILLIAM (1839-1913). British engineer. In 1868 he founded the firm of Wm. Arrol & Co., which was responsible for the Forth Bridge, the Tower Bridge, and the Manchester Ship Canal. Arrol was knighted in 1890 and sat in Parliament as Liberal Unionist for South Ayrshire 1895-1906. He died Feb. 20, 1913.

ARRONDISSEMENT (Fr. *arrondir*, to make round). French term for a local government district. Every department consists of a number of arrondissements, most of these being governed by a subprefect with a council, the chief duty of which is to allot to the various communes their respective share of the taxes required from the arrondissement as a whole. Each elector in an arrondissement votes for one deputy only.

ARROW. Projectile fired from both the long bow and the cross-bow, referred to in the Bible as artillery. In the Imperial Service Museum, London, are some arrows used by the Crusaders in the 12th century. Made with a light, straight shaft of wood, they are fitted with feathers at the neck, the object being to steady the flight by imparting a rotary movement to the projectile, a principle adopted by the makers of modern firearms. The arrow-head was of hard wood, flint, iron, or steel, and often barbed, and some arrows had heads of ivory. Arrows were carried in a quiver sometimes elaborately ornamented. Poisoned arrows are still used in fighting and hunting by savages.

From its shape, the term arrow-head has been given to the apex of a primitive missile implement. Made at first of bone and flint, they were displaced during the early metal ages by copper, bronze and iron. See *Archery*.

ARROWHEAD (*Sagittaria sagittifolia*). Aquatic perennial herb, a native of Europe and N. Asia. It has large leaves shaped like an arrow-head. The flowers are white. The plant hibernates in the form of small round tubers in the bottom mud. See *Sagittaria*.

ARROW INCIDENT, THE. Seizure of a ship which led to war between Great Britain and China. On Oct. 8, 1856, the *Arrow*, a ship rigged for service in Chinese waters, was lying off Canton, when a mandarin came on board and arrested her crew as pirates. As the Chinese refused the demands of Britain for reparations, Canton was bombarded, and by way of reprisal British property was destroyed. On Dec. 28, 1857, China still refusing Britain's demands, Canton was again bombarded, and occupied. The treaty of Tientsin, June 26, 1858, ended the affair.

ARROWROOT (*Maranta arundinacea*). A perennial herb of the natural order Marantaceae. It is a native of tropical America, and is largely cultivated in the W. Indies. From its tuberous rootstocks a very pure starch is obtained. Dissolved in boiling water it is converted into a fine jelly as a food for invalids. Other related plants are cultivated for the same purpose, while inferior or spurious arrowroot is obtained from the tubers of several plants of other orders, e.g. English arrowroot from the potato, and Portland arrowroot from the corns of the wake-robin, or arum.

ARSACES. Founder of the Parthian empire. A Scythian by birth, he induced the Parthians to revolt from the Seleucid Antiochus II about 250 B.C. Under his descendants the empire which he founded ultimately extended from Bactria to the Euphrates. Among his descendants, who were called Arsacidæ, were Mithradates, Phraates, and Artabanus.

ARSENAL (Arab. *dār assnā'ah*, from *dār*, house or place of; *al*, the; and *snā'ah*, mechanical industry). Establishment designed or utilised for the manufacture, repair, receipt, storage, and issue of arms, ammunition, and other stores employed in warfare by the military and naval forces of a country—the modern equivalent of the mediæval armoury.

The principal British arsenal for naval and military requirements is at Woolwich, while for purely naval matters there are large depots at Portsmouth, Chatham, Plymouth, Deptford, and Sheerness. Of foreign arsenals that of Venice, with its museum, is famous, while until 1919 Krupp's and the Skoda works were notable. Arsenals are supplemented by the work of private firms undertaken on contract.

ARSENAL. Association Football Club. It was founded in 1886, at Woolwich,

Arrowhead (*Sagittaria sagittifolia*), water plant with arrow-shaped leaves

Arrowroot. A plant of tropical America, from the tuberous roots of which is obtained the starch food arrowroot

ARSENIC (Gr. *arsenikon*, yellow orpiment). Chemical element, symbol *As*, atomic weight 75. The term arsenic, sometimes distinguished as white arsenic, is applied also to arsenious oxide. Metallic arsenic is a steel-grey substance, which darkens on exposure to air. When strongly heated it gives off a yellow vapour and a garlic odour. It occurs in the free state in nature and is found in combination in many ores and minerals. The principal ores are: arsenical antimony, arsenical iron, arsenical nickel, arsenical pyrites, cobalt glance, nickel glance, orpiment, realgar, and tin-white cobalt.

Metallic arsenic is generally prepared from native arsenic, or by heating arsenical iron. It is chiefly used as a constituent of alloys. Arsenic is used in the aniline dye industry; in calico printing; in the manufacture of pigments; as a weed-killer, rat-poison, and sheep-dip; in glass manufacture and in enamelling metals.

Arsenic is one of the poisons placed in Part I of the Poisons Schedule, and therefore cannot be sold except under certain restrictions. See *Poisons*.

ARSINOË. Name of several Egyptian princesses. (1) Daughter of Ptolemy Lagus, wife of Lysimachus, king of Thrace, and after his death of her brother, Ptolemy Philadelphus. (2) Daughter of Lysimachus and wife of Ptolemy Philadelphus. Convicted of conspiring against her husband, she was banished. (3) Daughter of Ptolemy Auletes, and queen of Egypt (47 B.C.), put to death at Miletus by Mark Antony. Arsinoë is also the name of cities in Egypt and Cyprus, founded in honour of the above or other princesses. See *Ptolemy*.

ARSON (Lat. *ardere*, to burn). In English law, the wilful and malicious burning of the dwelling house of another, or place of worship, or public building, or building belonging to any railway, dock, or harbour. It is a felony and is usually punishable by penal servitude, in serious cases, for life. Arson also covers the act of setting fire to coal mines, and crops, whether standing or stacked; and to any vessel. In Scotland arson is known as fire-raising.

ART. Art is one of the characteristic instincts and manifestations of man; though no date can be assigned to the first appearance of artistic expression, it is chiefly on such expression that our knowledge of primeval man is based. The earliest relics of prehistoric sculpture and drawings are calculated to belong to the Mousterian and Aurignacian periods. The best Palæolithic art, assigned to the Magdalenian era, is represented by the cave drawings and paintings at Altamira and Font de Gaume, etc., which exhibit a surprising freedom and mastery of line in realistic renderings of boars, wolves, bison, etc.

The earliest date assigned to prehistoric Egyptian art is 8000 B.C.; between 5500 and 4000 B.C. the greatest time of Egyptian art was born and had passed over. The renaissance under the XII dynasty, the general decline after the XVIII and XIX dynasties, and the gradual merging into Roman art are the points marking the course of Egyptian art from 3400 B.C. to the Christian era. Its function was almost entirely religious, its purpose the furnishing of the tombs to equip the dead for their future life. Assyrian art is famous for its bas-reliefs of the wars and sports of the Assyrian kings. A development of Babylonian and Assyrian art was Old Persian art.

Sir William Arrol, British engineer
Elliott & Fry

The greatest manifestation of ancient art is Greek; in its beginnings it borrowed from Egyptian conventions. Again generally in the service of religion, its highest pitch was reached in the 5th century B.C., at Athens, where sculpture at least attained a majesty and technical perfection never again equalled. Greek art declined from the great Hellenic period to the Hellenistic (2nd century B.C.) and thence to the Greco-Roman, to which most of the so-called antique statues belong. Barely a trace of the great period of Greek painting exists; but its greatness is inferred from the peculiar excellence of the vases.

Succeeding manifestations of ancient art are Roman art, the outcome of Greek and Etruscan, specially notable for its superb engineering quality of architecture and for its portrait busts; Byzantine art (best periods between A.D. 330 and 700, and between 867 and 1200), in which Hellenistic tradition blends with Arabic and Persian; and Arab art, in which Chinese, Byzantine, Coptic, and Persian influences mingle with Syrian.

Chinese art, which to Far Eastern painting was as Grecian art to European, dates possibly from 2700 B.C.; its greatest periods, the Tang and Sung, are A.D. 618-905 and 960-1290, in which Buddhist ideals are expressed most perfectly. From Chinese roots were sprung the arts of Tibet and medieval Persia. The greatest eras of Japanese art were the 9th to 14th centuries.

In the West, Gothic art, sprung from Byzantine and Romanesque, and soaring to its height in the 11th to 13th centuries, is the richest, most mystic, and most imaginative manifestation of Christianity. Following on the great period of Gothic architecture, painting, and sculpture, pictorial art is found definitely outgrowing the old Byzantine feeling. By the close of the 13th century in Italy the Renaissance was established; about the same time, it should be noted, a noble school of mural painting flourished at Westminster. In France and the Netherlands a purely national Renaissance was at its best early in the 15th century.

In modern European art, as for convenience is designated the art of the 14th century and onwards, religion at first played a very large part. Very rarely was a work of art, before the 16th century, commissioned or executed save as a contribution to the Christian faith, though a reservation in the case of portraiture has to be made. This lasted, roughly, until the close of the 15th century, when artists found fresh outlets for their interest in the writings of the humanists and in the beauty of the world outside religious themes. Now Romantic art made its appearance and a constant delight in painting scenes of everyday life: now also the distinctive nationality of the schools was broken down, Italian influence flowing out to paralyse northern art. During the 16th century in Italy mastery of design, decoration, and draughtsmanship reached a pitch never again approached.

Art societies are associations formed to further the practice, study, and appreciation of the fine arts. Among the principal British exhibiting societies are the Royal Academy, the Royal Society of Painters in Water Colours, and the Royal Society of British Artists.

See Aegean Civilization; Aesthetics; Archaeology; Architecture; Assyria; Babylon; China; Cubism; Egypt; Etruria; Futurism; Greek Art; Impressionism; Japan; Painting; Persia; Phoenicia; Rome; Sculpture; and under the names of individual artists.

ARTAXERXES. Name of three Persian kings: (1) A. Longimanus (long-handed), 464-424 B.C., third son of Xerxes I. He was a successful and energetic ruler, and is generally supposed to be the Biblical Abasuerus of Ezra and Nehemiah. (2) A. Mnemon, 404-358, was

a son of Darius II Nothus. The revolt of his younger brother Cyrus, who was defeated and slain at the battle of Cunaxa, 401, is described in the Anabasis of Xenophon, who took part in it with the Greek mercenaries in support of Cyrus. His life was written by Plutarch. (3) A. Ochus, 358-338, son of Artaxerxes Mnemon. He was a weak and cruel despot, entirely under the influence of the Egyptian, eunuch Bagoas, by whom he was put to death in Egypt.

ARTEL. Russian word denoting a company or gang, originally used to describe associations of labourers who worked without a master and shared the profits.

ARTEMIS. In Greek mythology, a goddess identified by the Romans with Diana. The reputed daughter of Zeus and Leto, she was born in the island of Delos with her twin brother Apollo. In Greek literature she is usually associated with hunting and, like her brother, is represented with bow and arrows. In earliest times she appears to have been regarded as a nature goddess. Diana or Artemis of the Ephesians, mentioned in the Bible (Acts 19), had more of the attributes of an eastern goddess. The worship of Artemis is reminiscent of human sacrifice, notably on the shores of the Black Sea and in the groves of Nemi on the Alban hills. See Diana.

ARTEMISIA (d. 350 B.C.). Wife and sister of Mausolus, king of Caria. Her sorrow for the death of her husband was so great that she is said to have mixed his ashes with what she drank. The Mausoleum which she erected at Halicarnassus to his memory was one of the seven wonders of the ancient world; and from it has come the word mausoleum, to denote a magnificent tomb. Another Artemisia, queen of Halicarnassus, fought on the side of Xerxes at Salamis (480 B.C.).

ARTERIO-SCLEROSIS (Gr. arteria, artery; sclerosis, hardening). Thickening and hardening of the coats of the arteries, to some extent a natural change as age increases. Syphilis is an important contributory cause of the condition, other influences being alcoholism and gout. Arterio-sclerosis may lead to disease of the heart, disease of the kidneys (Bright's disease), and apoplexy. An advanced stage of the condition in the larger arteries is sometimes spoken of as atheroma.

ARTERY (Gr. airein, to raise). Vessel which conveys blood from the heart to another part of the body. The main artery of the body, the aorta, which springs from the left ventricle of the heart, conveys arterial blood through its branches to all parts of the body. The pulmonary artery conveys venous blood from the right side of the heart to the lungs. In structure the wall of an artery consists of three coats: (1) the external coat or tunica

adventitia, the strongest and toughest part, formed mainly of areolar tissue; (2) the middle coat or tunica media, composed of muscular and elastic fibres with some areolar tissue; and (3) the internal coat or tunica intima, formed of elastic tissue. The smallest arteries are called arterioles.

ARTESIAN WELL. A small-diameter well sunk with a boring or drilling apparatus into water or oil-bearing strata from which the liquid rises by its own pressure to the top of the bore. Such wells are so called from having been first sunk in Artois. See Well.

ARTEVELDE, JACOB VAN (c. 1290-1345). A Flemish popular leader. In 1337, when the import of English wool for the Flemish weaving industry was stopped by the opening of the Hundred Years' War, he headed a movement against Louis, count of Flanders, a supporter of France, banded together the Flemish towns, and made a commercial treaty with England. He was designated Captain-General of Ghent, and by 1340 the whole of the Netherlands had joined the federation. His despotic government and his suggested deposition of the count of Flanders in favour of the Black Prince provoked a popular rising, in which he was killed by the mob, July 24, 1345.

His son Philip (c. 1340-82) led the burghers of Ghent against the count of Flanders in 1381, but they were defeated and their leader was killed, Nov. 27, 1382.

ARTHRITIS (Gr. disease of the joint).

A term which, strictly speaking, should be applied only to inflammation of a joint, but which is in practice used to signify almost any disease of a joint. Gouty arthritis and gonorrhoeal arthritis are common forms. Arthri-

Arthropoda. The general structure is shown in these photographs of the Lobster and (above) a Brazilian species of Ant (Eciton hamatum)—the body composed of segments with jointed limbs and other appendages

tis deformans, or rheumatoid arthritis, is a definite disease, the cause of which is unknown; it has probably little relation to true rheumatism. See Gout; Rheumatism.

ARTHROPODA (Gr. arthron, joint; pous, foot). A phylum of the Invertebrates. It includes arachnids, insects, centipedes, and crustaceans. Jointed feet or appendages are a distinguishing feature of the class, and the body is segmented. One or more pairs of appendages are modified to form jaws, and in many cases others are adapted for seizing prey. The body and limbs are covered with a

horny cuticle. Nearly all the arthropods are active in habit, and some pass through a series of metamorphoses. Propagation is usually sexual, and in most cases life begins as an egg. See Arachnida; Spider.

ARTHUR. British king or chief. His name first occurs as that of a military leader in *The History of the Britons* by Nennius, ascribed to the close of the 8th century. There he is said to have been twelve times chosen as commander of the British kings against the Saxons, and to have been as often victorious. It was after battle with his nephew Mordred in 542 that Arthur, mortally wounded, passed to the island of Avalon. A popular belief that he did not die, but would return when needed, connects his story with those of several other national heroes.

The earliest detailed account of Arthur is in the *Historia Regum Britanniae* of Geoffrey of Monmouth, 1147. Geoffrey's history contains much of the legendary story of Arthur, as the son of Uther Pendragon, the friend of Merlin, the conqueror of all enemies, and the founder of a court of chivalrous knights. Here is found the earliest ascertained foundation of much of the Arthurian legend. The knightly king of chivalry, Arthur of the Round Table, became definitely established in literature as a British figure of romance by the compilation of the *Morte d'Arthur*, completed 1469 or 1470 by Sir Thomas Malory, and it is this romance figure which is celebrated by Tennyson in *The Idylls of the King*.

The name has been borne by several princes. Arthur, duke of Brittany (1187-1203), the nephew of King John, figures in Shakespeare's play. Arthur (1486-1502), the eldest son of Henry VII, was married to Catherine of Aragon just before his death.

ARTHUR, CHESTER ALAN (1830-86). President of the U.S.A. During the Civil War he served as inspector-general and quartermaster-general of New York State. Appointed collector of customs for the port of New York in 1871, he was dismissed in 1878 for opposition to civil service reform. Elected vice-president on the republican ticket in 1881, he became automatically president on the death of Garfield, holding office 1881-5. His presidency was marked by the passing of the Tariff Act, 1883, and by a law prohibiting polygamy in the territories. He died Nov. 18, 1886.

Chester A. Arthur, American President

ARTHUR'S SEAT. Hill in Scotland overlooking Edinburgh. From the summit,

Arthur's Seat, the commanding hill near Edinburgh, as seen from St. Leonard's Gate
Valentine

said to be named after King Arthur, an unrivalled view is obtained of the city and its surroundings. At its base is the palace of Holyrood, and close by are the Salisbury Crags. See Edinburgh.

ARTICHOKE (Arab. al kharshuf). Name of two distinct edible vegetables, the globe artichoke (*Cynara scolymus*) and the Jerusa-

lem (girasole, sunflower) artichoke (*Helianthus tuberosus*). Globe artichoke is propagated from seed. The edible portion is the leaves or scales of the flower heads, which are produced from about June to August.

Jerusalem artichoke was introduced from America, and is prepared and grown similarly to the potato. The root resembles a turnip in colour, and a sweetened swede in flavour.

ARTICLE. A distinct proposition, statement, or condition, usually one of a series. Such are articles of apprenticeship and the articles which are signed when a person is articleed to a solicitor or other professional man in order to learn the business. Another kind are the articles of a creed, such as the 39 Articles.

Articles of association are rules and regulations drawn up for the conduct of a limited liability company. Under English law they deal with the number, qualifications, and remuneration of directors, payment of dividends, matters affecting capital, and the general conditions of management and organization. The articles must be circulated among those interested, and a copy deposited with the registrar of joint-stock companies. A stamp duty is payable on them. The Companies Acts provide a model set of articles which may be adopted wholly or in part. See Company Law.

ARTICLES OF WAR. This is a code of discipline for the British army. It was drawn up in the 15th century or earlier, for the period of a war, foreign or domestic, at a time when the troops were ordinarily subject only to the law of the land, i.e. before the passing of the first Mutiny Act in 1689. The present code dates from 1881.

ARTIFICER. In the British navy, a skilled rating of the engineer branch. The majority enter between the ages of 21 and 28 as engine-room artificers, 4th class, ranking as chief petty officers on passing a thorough examination in their trade. There are opportunities for rising to warrant and commissioned rank (artificer engineer and engineer lieutenant) and accelerated promotion is possible for artificers of exceptional ability.

ARTIFICIAL LIMB. The functions of artificial limbs are twofold: first, to perform as far as possible the work of the lost part, and, secondly, to conceal mutilation.

Modern artificial arms may be divided into two classes: (a) working, (b) ornamental. The well-known bucket and hook is the prototype of the first class. The second kind is made to fill the sleeve with as close an approach to natural appearance as is possible and terminates in an artificial hand. In a combination of the two the ornamental part can be detached and the working appliance substituted. Artificial legs also may be divided

into two classes: peg-legs or pylons, and complete limbs with artificial feet.

The cardinal difficulty in the application of artificial limbs lies in their attachment to the living stump. This is generally obtained by enclosing the latter in a hollow bucket or socket, either rigid or adjustable, which is made to fit as closely as possible, and is retained in position by straps encircling other parts of the trunk or of the limb.

Some control of movements of the forearm and hand is obtained by attaching cords which move an artificial elbow joint or thumb by means of movements of the shoulders. By perseverance and skill wonderful results may be achieved with these mechanical arms.

In an artificial leg the most important desideratum is accurate fitting of the stump. With a long enough stump the patient can control the movements of the thigh socket, but the power of extending the leg on the thigh, and so bringing the shin forward, has to be supplied either by elastic webbing in front of the knee, or, better still, by braces passing over the shoulders which are connected with a strap running over a roller attached inside the knee-piece to the top of the shin. By this means the patient is able, by throwing back his shoulders, to counteract any tendency of the knee to give. With practice this movement becomes instinctive.

The type of limb chosen varies greatly with the site of the amputation. Strength and lightness must be studied, and the mechanical construction must be sound. The materials used for artificial limbs are, besides steel for joints and uprights, wood, leather, and alloys of aluminium. Celluloid and fibre have been used, while the Belgians make a bucket of shavings and glue.

At Roehampton, London, S.W., soldiers maimed in the Great War are provided with artificial limbs and trained in handicrafts. It was estimated in May, 1919, that the number of artificial limbs so supplied was between 40,000 and 50,000. Consult *Artificial Limbs*, A. Broca and Ducroquet, trans. and ed. by R. C. Elmslie (*Military Medical Manuals*), 1918.

ARTIFICIAL RESPIRATION. Method of restoring breathing to the apparently drowned. The finger is introduced into the mouth in order to clear out any mud or froth, and the patient is then placed face downwards, the head being turned toward the side. The attendant kneels either by the side of or astride the patient and throws his weight forward so as to exert a firm, steady pressure upon the thorax. He then swings backwards, so as to relax the pressure and allow the lungs to expand. This backward and forward movement should take about five seconds, and should be repeated at the rate of about twelve times a minute. It should be continued for at least 30 minutes, unless the patient revives before. The above is known as Schaefer's method. See Drowning.

ARTIFICIAL SILK. Fibre mechanically produced, which ranks in utility with the natural fibres. In the U.S.A. it is often called rayon.

The idea of making a fibre more or less in the same

Artichoke. Two heads of the globe artichoke and (above) tubers of the Jerusalem artichoke

Artificial Respiration. In Schaefer's method the ribs are alternately compressed from behind (2) and released, (1) this last causing chest expansion

way as the silkworm does was suggested in 1743 by the French physicist Réaumur. A British patent for the production of a nitro-cellulose silk from mulberry wood was taken out by a Swede in 1863, but led to no practical success. An Englishman, Swan, in 1883, patented a system of forcing jelly through small orifices in order to dry the jets and utilise them as fibre.

Henri do Chardonnet of Besançon was the first to make a commercial success of artificial silk, producing by his process an extraordinarily brilliant fibre, suitable for the manufacture of trimmings and articles exposed to little actual wear. Chardonnet worked upon a base of cotton waste, first bleaching and purifying, and then drying it in ovens. The resultant is a pure cellulose, which is convertible into nitro-cellulose, or gun-cotton, by treatment in sulphuric and nitric acids. In this form the material is soluble in a mixture of ether and alcohol, and is in fact collodion. Chardonnet forced a purified collodion through fine capillary tubes, drying the fibres into the solid state again, and combining several to form a thread. His process was completed by denitrating the fibre in sodium sulphide, bleaching, washing, dyeing, and winding the yarn.

Viscose silk is made from wood pulp. The latter is converted by the aid of caustic soda and carbon bisulphide into a yellow jelly, xanthate of cellulose. Fine streams of the jelly are forced into a hardening and purifying solution, and these are brought together to form a single thread.

In 1928 the world's output of artificial silk was estimated at 157,000 metric tons, of which Britain produced 25,000 tons and the U.S.A. 42,000 tons. Italy came next. In 1929 it was 134,000 tons. Since 1925 there has been a duty of 33½ per cent on all goods made from artificial silk imported into Great Britain.

ARTILLERY. Artillery is properly the name for every form of missile, but its use is now confined to cannon. It is the most powerful auxiliary that infantry, the decisive factor in battle, possess. By breaking down hostile defences and overcoming opposition it facilitates their advance, and by the heavy casualties it inflicts on troops in the open, it is the most potent factor in checking a hostile attack. In naval warfare it is the decisive factor.

Although England possessed metal cannon before 1621, they must have been obtained from abroad, for the first brass cannon were cast that year in England, to be followed in 1643 by the first casting of iron cannon.

For practising their weapons, archers, musketeers, and gunners had places termed artillery gardens, one of the most important of these being at Moorgate, London. In 1683 the Board of Ordnance adopted the broad arrow B A O as their mark on all their stores.

Owing to the long and ever-increasing ranges of modern guns, they are the first weapons employed in battle. Modern artillery is divided into guns and howitzers. Guns are long-range weapons firing projectiles of high velocity with a comparatively flat trajectory. Howitzers are in themselves shorter weapons than guns; they fire at high angles of elevation, and their projectiles fly at a slower rate and take a steeper curve in their flight than the shells from guns. The function of the gun is to fire at long or short ranges, and destroy personnel and matériel in the open.

In all armies artillery is attached to units of infantry and cavalry. Normally, what is termed field artillery is allotted to the infantry, while specially light guns, with gun teams mounted on horseback, follow the cavalry wherever they can go. The latter are the horse artillery. Almost all the heavier kinds of ordnance which are outside the horse and field artillery are tractor-drawn. In the field a British infantry division has from 48 to 54 field guns and field howitzers.

Artillery schools are maintained for the technical training of the personnel of artillery units and the elucidation of gunnery problems. The chief British school is the Royal Military Academy, Woolwich, founded and endowed by a warrant of George II in 1741, though it was in existence before that date. The experimental station conducts the proof tests of ammunition, guns, and armour, and makes practical tests of new weapons, etc. The School of Gunnery, at Shoeburyness, provides instruction for selected officers and N.C.O.'s which will fit them to act as instructors, courses for junior officers, special courses, and quick-firing practice. A branch school for siege artillery was established at Lydd in 1900, and elsewhere there are schools of instruction for reserve and territorial units.

The Royal Regiment of Artillery is the name of the corps or body of artillery in the British Army. Organized in two small companies in 1716, horse artillery was added in 1793. Its headquarters are at Woolwich. Divided at one time into Royal Horse, Royal Field, and Royal Garrison Artillery, the Field and Garrison artillery were amalgamated into one branch in 1925. There is an anti-aircraft section and a survey company.

The king is colonel-in-chief of the regiment. Its mottoes are Ubique (Everywhere), and Quo Fas et Gloria ducunt (Where Duty and Glory lead). During the Great War the regiment expanded from 13,000 of all ranks to over 500,000. Its casualties were 34,844 killed; 129,156 wounded; and 6,689 missing and prisoners of war. See Ammunition; Gun; Howitzer; Shell; Shrapnel.

ARTISTS' RIFLES. Name given to the 28th battalion of the London regiment. Founded as a volunteer corps in 1859 by Lord Leighton and other artists, it was originally recruited from artists and sculptors. The uniform is grey with black and silver facings. A contingent fought in the S. African War. Mobilised on the first day of the Great War, the Artists went to France, Oct., 1914, and were established as a training corps for officers in the field. In 1915 the regiment was reorganized as an officers' training corps, and the 2nd battalion was created a school of instruction for officers. This school supplied over 10,000 officers. In 1917 the 1st battalion became part of the 63rd (Royal Naval) division. During the Great War eight V.C.'s and over 700 military crosses were gained by the Artists, and about 2,000 members died on service.

ARTOIS. One of the provs. into which France was divided before the Revolution. It was the district around Arras, its capital. At present the name is used in a vague sense for the district, as Wessex or East Anglia are used in England.

Artois gives its name to a battle fought in May-June, 1915. It was undertaken by the Allies in order to hold the German forces in France and prevent the dispatch of troops to Russia, then hard pressed. The attack was from Arras to Notre Dame de Lorette. On May 9 the French began the assault, the British cooperating by a demonstration in force against Aubers Ridge. The French advanced rapidly and stormed La Targette, while fierce house-to-house fighting took place in Neuville-St. Vaast and Carency. A furious struggle took place for the height known as Notre Dame de Lorette, and at first only a portion was carried by the French. Ablain and Carency were finally captured, and by

May 15 most of Neuville-St. Vaast had been taken. On May 22 the whole of the plateau of Notre Dame de Lorette was in French hands. This victory gave the Allies good observation of Lens and paved the way for an attack on Vimy Ridge. Further advance was held up by the German system of trenches known as the Labyrinth, which was later captured in the second battle of Arras (q.v.).

ARTS, ROYAL SOCIETY OF. Abridged name of a British learned society, the Royal Society for the Encouragement of Arts, Manufactures, and Commerce. Founded in 1754 and incorporated in 1847, it assists scientific and kindred interests by inviting eminent men to lecture and read papers before it, by issuing a weekly Journal, and by conducting examinations. Its headquarters are in John Street, Adelphi, London, W.C.

ARTZ, DAVID ADOLF CONSTANT (1837-90). Dutch painter. He studied at the Amsterdam Academy, and was much influenced by Joseph Israels, whom he accompanied to Zandvoort in 1859, in which year he exhibited at Amsterdam for the first time. He rendered genre subjects with fidelity and charm, and holds a high place among Dutch realists of the 19th century. Among characteristic works are *With Grandmother and Scene at the Orphanage of Katwijk* (Amsterdam Gallery), *In the Dunes* (Rotterdam), and *The Return of the Flock* (The Hague). He died Nov. 5, 1890.

ARU OR ARKU. Group of more than 80 islands in the Dutch E. Indies. Situated about 80 m. S.W. of New Guinea, they cover an area of 3,250 sq. m., and are separated by narrow channels. Low lying, with steep and rugged coasts, they are well wooded, and on the E. are bordered by coral reefs. Dobbo is the chief town. Pop. 25,000.

Arun. In botany, variant name of the wake robin (q.v.).

Arun. River of Sussex, England. Rising in St. Leonard's Forest, it flows W. and S. for 36 m. to the English Channel at Littlehampton.

ARUNDEL. Mun. bor. and market town of Sussex, England. It stands on the declivity of a hill overlooking the Arun, 10 m. E. of Chichester by the S. Rly. At the summit of this hill is the castle, formerly the seat of the Fitzalans, earls of Arundel, and now that of the Howards, dukes of Norfolk. The Perpendicular church of S. Nicholas dates from the second half of the 14th century. The Fitzalan chapel is the private property of the duke of Norfolk. The Roman Catholic church of S. Philip Neri was built by the 15th duke of Norfolk. Market day, Mon. fortnightly. Pop. 2,741. See Norfolk, duke of.

ARUNDEL, EARL OF. English title now borne by the duke of Norfolk. It dates from the 12th century, and with it went Arundel Castle. Passing to the family of Fitzalan, it was retained by them until 1580, when, in default of male issue, it passed to the Howards.

Arundel Castle, Sussex seat of the Howards, dukes of Norfolk. It dates from the 10th century

FRID

Richard, Earl of Arundel (c. 1346-97) and his brother Thomas, Archbishop of Canterbury, were leading figures in the reign of Richard II. Richard was one of the lords appellant who in 1389 overthrew the king's ministers. In 1397 he was beheaded for treason.

Henry Fitzalan, Earl of Arundel (c. 1518-80) was leader of the party that secured Mary's accession. He was succeeded by his grandson, Philip Howard, who was beatified as a martyr in 1929.

His son Thomas (1586-1646) is best known as an art collector. His collection, ultimately arranged in Arundel House, London, comprised statues, busts, engraved stones, pictures, etc. His grandson, Henry, 6th duke of Norfolk, who had inherited the major part of his treasures, was induced by John Evelyn in 1667 to leave the bulk of the sculptures to the university of Oxford, where they are housed in the Ashmolean Museum and known as the Arundel Marbles.

Thomas Howard, second Earl of Arundel and Surrey, English royalist
After the original by Rubens

praised for his religious zeal. In alliance with Benhadad, king of Syria, whose services he repaid with the treasures of the Temple and the royal palace, he defeated Baasha, king of Israel (1 Kings 15).

ASABA. Town of Nigeria. It is on the right bank of the Niger, about 150 m. N. of its mouth. Under the Royal Niger Chartered Company it was the seat of the supreme court. It is a growing commercial town, and near are important lignite deposits. Pop. 8,000.

ASAPH. Levite who was chief musician at David's festival sacrifice when the ark was brought up to Zion (1 Chron. 15 and 16). The superscription of the name of Asaph to Ps. 50, 73-83 suggests that these were sung by the Asaphite choir of the Temple. See Psalms.

ASAR or **OSAR.** Swedish term for steep-sided banks and ridges of stratified deposits of sand and gravel. They are believed to have been formed in tunnels made by streams under the great glaciers and ice sheets of the Ice Age. In the lower parts of Sweden they traverse the land like great embankments which attain an elevation of from 50 ft. to 100 ft. and follow a sinuous course comparable to that of a river, often for more than 100 m. In Scotland similar ridges are called kames, and in Ireland they are known as eskers.

ASARABACCA. (Lat. asarum, hazel-wort; bacca, berry). Perennial herb of the order Aristolochiaceae. It has a creeping fleshy rootstock and dark green permanent

Ascension Island. View showing its myriads of seabirds, known as wideawakes

leaves, with a stalked, greenish-purple flower having a bell-shaped, three-lobed perianth. Both leaves and root are acrid and aromatic, and the rootstock has been used in medicine.

Asben. Variant name of the oasis in the French Sahara, known also as Air (q.v.).

ASBESTOS (Gr. inextinguishable). A silky fibrous mineral belonging to the group of amphiboles. Usually found in veins in association with serpentine and other rocks rich in magnesia, its value lies in its high melting point and low conductivity to heat. Woven into a kind of cloth, asbestos serves as a fireproof covering for machinery, for filtering corrosive acids, and as gloves and clothing for furnace men and firemen. Asbestos, moulded into various shapes, is employed in gas fires. The main supplies of the mineral come from Canada, South Africa, Russia, and the U.S.A. See Amphibole.

ASCALON or **ASHKELON.** In Biblical times, one of the five chief cities of the Philistines. It is situated about 14 m. N.W. of Gaza, on the Mediterranean, and was the birthplace of Herod I. It was prominent during the Crusades. The city was captured by Saladin in 1187 and was demolished by Beibars in 1270. During the Great War it was occupied on Nov. 9, 1917, by the British, who found only a few squalid huts among the ruins. The shallot or eschalot onion is named from Ascalon, where it was first grown. See Crusades.

ASCANIUS. In classical legend, son of Aeneas. According to the popular story, he sailed westward with his father after the fall of Troy to Italy, where he founded Alba Longa, and ruled over the Latins. He was also called Iulus, and the great Julian gens or clan at Rome regarded him as its ancestor. See Aeneas.

ASCARIS (Gr. maw worm). A genus of round worms belonging to the order Nematoda, some species of which infest the intestinal canal in man and other animals. *Ascaris lumbricoides* is a common human parasite. The male is from 4 ins. to 8 ins., the female from 7 ins. to 12 ins. in length. A few worms may be present in the body for years without causing symptoms, but when present in large numbers, especially in children, they may cause diarrhoea, colic, and vomiting.

ASCENSION. British island in the S. Atlantic. It is situated about 700 m. N.W. of St. Helena, in lat. 7° 55' S. and long. 14° 25' W., and has an area of 34 sq. m. Of volcanic origin, it rises 2,820 ft. in Green Mt., in the S.E., which has a sanatorium on its slopes. Administered by the British Colonial Office, the island is a coaling and supply station. Sea-turtle, land-crabs, rabbits, wild goats, partridges, and sooty terns or wideawakes abound. Georgetown is the capital and the only secure anchorage. Discovered by the Portuguese on Ascension Day, 1501, Great Britain acquired it in 1815. Pop. about 250.

ASCENSION (Lat. ascensio, an ascending). Christ's miraculous disappearance forty days after His resurrection. The apostles being assembled together, He conducted them to Mt. Olivet, where, having bade them go into all the world and preach the gospel to every creature, He lifted up His hands and blessed them; and while He blessed them He was parted from them and carried up into heaven, and a cloud received Him out of their sight.

Famous paintings of the Ascension include those of Giotto di Bondone, at Padua; and Antonio Allegri (Correggio), at Parma. A festival of the Christian Church commemorating the Ascension is observed on the 40th day after Easter Sunday.

ASCETICISM (Gr. askēsis). Word meaning literally the discipline and training of athletes, and applied to the conquest of animal desires and appetites in man for the purpose of developing the faculties of the soul. Christian monasticism imposed asceticism.

Extravagances of asceticism were practised by the Encratites, the Montanists, and the Manichaeans. They and the flagellants who wandered over Europe in the 14th and 15th

Ascension Island. Map of this little British possession in the S. Atlantic

ASA. Third king of Judah, 9th century B.C. An energetic and capable ruler, he is

centuries, scourging themselves in public processions, were all condemned by the Church.

In India the Brahmins have carried asceticism to its greatest lengths on the contention, never admitted by the Christian Church, that the greater the austerity the greater the holiness. See Christianity: Monasticism.

ASCHAFFENBURG. A town of Bavaria. It stands on the Main at its junction with the Aschaff. 26 m. by rly. S.E. of Frankfurt. It has a cathedral dating from the 12th and 13th centuries and the castle of Johannisburg, built in the 17th century, formerly a summer seat of the electors of Mainz, and now a museum and picture gallery. It manufactures paper, clothing, and tobacco, and is a centre for the trade carried along the Main. In the Middle Ages it was the capital of a principality, part of the electorate of Mainz. Pop. 34,056.

ASCHAM, ROGER (1515-68). An English classical scholar. In 1538 he was appointed Greek reader at St. John's College, Cambridge, and in 1545 published *Toxophilus*, a treatise on archery, written in the purest English and dedicated to Henry VIII, who gave him a pension of £10 a year. Tutor to Princess (afterwards Queen) Elizabeth at Cheshunt, 1548-50, Ascham then spent three years on the Continent, mainly at Augsburg, as secretary to Sir Richard Morysin (Morison), ambassador to Charles V. The remaining years of his life, passed as Latin secretary and tutor first to Queen Mary and then to Queen Elizabeth, were clouded by poverty. In 1570 his widow brought out *The Scholemaster*, his treatise on classical education, in which he pleads for a more intelligent teaching of languages.

ASCHE, OSCAR (b. 1872). Anglo-Australian actor. He made his first appearance in London in 1893 at the Opéra Comique in *Man and Woman*. After eight years in Sir Frank Benson's Repertoire Company, he joined Sir Herbert Tree in 1902. He became manager of the Adelphi Theatre with Otho Stuart in 1904, of His Majesty's Theatre in 1907, and later of the Globe Theatre. He married the actress Lily Brayton. He staged a number of spectacular plays, and played the title-role in his own successful play *Chu Chin Chow*, 1916-21. In 1929 his life by himself appeared.

ASCHERSLEBEN. Town of Germany, in the Prussian prov. of Saxony. It stands on the Elbe near its union with the Wipper, and is 36 m. by rly. N.W. of Halle. Founded in the 11th century, it possesses one of the old Latin schools and a 15th century church. It manufactures sugar, beer, earthenware, and woollen goods, and carries on a trade in agricultural produce. In the district coal is found and beet-root grown. Pop. 28,269.

ASCIDIAN (Gr. askidion, little skin bag). Order of tunicates or sea-squirts. Found attached to the rocks round the shore, they resemble in appearance a leathery bottle with two necks, but in the larval stage, when they swim about freely, they possess a tail which contains a notochord—the embryonic representative of the backbone in vertebrates.

The common sea-squirt has a leathery cuticle, largely composed of cellulose. Food is taken in with the water inhaled through an orifice in the cuticle. The particles adhere to the slime in the mouth-tube, and are thus passed into the stomach.

ASCITES. Accumulation of fluid within the peritoneal or abdominal cavity. Most frequently it is the result of chronic Bright's disease, heart disease, cirrhosis of the liver, or a tumour pressing upon the veins and obstructing the circulation. In mild cases ascites can be relieved by the administration of drugs, which abstract water from the body through either the urinary or intestinal systems. In severer cases the abdomen must be tapped and the fluid drained off.

ASCLEPIADACEAE.

A large natural order of shrubs, herbs, and trees, mostly with poisonous, acrid, milky juices, and chiefly natives of the tropics. There are many genera and more than 1,000 species. They agree in having the pollen grains aggregated in waxy masses, sometimes enclosed in a bag which is the lining of the anther cells. These masses become attached to the disk of the pistil, and self-fertilisation is effected. The name is derived from Asclepios (Aesculapius), the mythical Greek god of medicine. See Carrion-flower, Swallow-wort; Wax-flower.

ASCOLI PICENO. City of central Italy. The capital of the province of Ascoli Piceno, it stands on the Tronto, 20 m. by rly. W. of Porto d'Ascoli and 73 m. by rly. S.S.W. of Ancona. The Aesulum Picenum of the Romans, it retains portions of its walls, gateways, and bridges. It has a cathedral said to have been founded by Constantine the Great, several churches, a communal palace containing a museum, a castle, a fortress, a convent, and a picture gallery. Majolica, silk, glass, cloth, and leather are manufactured. Pop. 36,397.

ASCOMYCETES (Gr. askos, bag; mykētes, fungi). Large primary division of fungi. It contains many genera and thousands of species, most of them very small and little known. The character of the order is that the spores are contained in a microscopic cell (ascus) embedded in the spore-bearing membrane (hymenium).

Ascomycetes. *Gyromitra esculenta*, of this division of fungi

because larger, forms are truffles, morels, and the saucer-shaped Pezizas.

ASCOT. Village of Berkshire, England. It is 29 m. S.W. of London and 6½ m. S.W. of Windsor by the Southern Rly. By order of Queen Anne a racecourse was laid out on Ascot Heath in 1711, and the annual meeting in June, notable for the royal procession instituted in 1820, is one of the most popular and fashionable fixtures under the auspices of the Jockey Club. It is a right-hand circular course of a little less than 1½ m., the last mile being straight and slightly uphill.

The principal event of the meeting is the Ascot Gold Cup, run over a course of 2½ m. See Horse Racing.

ASEPSIS (Gr. a, not; sepsis, putrefaction). The treatment of wounds by solutions and dressings which have been made absolutely sterile, i.e. free from micro-organisms. See Antiseptics.

ASGARD (Old Norse äss, god; gardhr, home). In Norse mythology, city of the Æsir, Sited high in the heavens, it was reached from the lower worlds by the bridge Bifröst. Round its walls was a moat with inflammable vapour floating upon it (clouds and lightning). In the city the gods first built a great hall shining with gold, in which were twelve lofty seats; and then beautiful houses for themselves. See Æsir; Bifröst.

Ash. Study of ash trees, by John Constable, R.A.

The flowers are degenerate, having lost their petals and sepals to adapt them for wind pollination. They are of several kinds: male, female, and bisexual, the two latter producing each a strap-shaped fruit, 1½ in. long. Botanically known as samaras, these fruits are popularly called "ash-keys" or "spinners." A secretion from the inner bark of the ash is known as manna—an old-fashioned laxative. The tough, elastic timber, which is harder and more durable when grown on limestone soil, is used in farm, carriage, and furniture work.

ASH. Village of Surrey, England. It is 4 m. N.E. of Farnham, on the Southern Rly. Rifle practice is here engaged in by the troops from Aldershot.

ASHANTI. British possession in West Africa. It is attached to the Gold Coast colony, and has an area of 24,560 sq. m. and a pop. of 407,000. The French Ivory Coast colony is on the W., Togoland on the E., and the Gold Coast colony on the S. Much of the country is thickly covered with forests. The Volta is the only navigable river. Kumasi, the capital, is connected by rly. with Sekondi and Accra in the Gold Coast colony. The chief products are gold, rubber, cocoa, palm oil, bananas, and timber, especially mahogany and cedar. The Ashantis are a number of associated tribes akin to the Fantis.

In 1896 Ashanti was made a British protectorate, and in Sept., 1901, it was annexed. It is governed by a chief commissioner at Kumasi, subject to the governor of the Gold Coast. It is divided into two provinces, an eastern and a western, with headquarters at Kumasi and Sunyani respectively.

ASHANTI WARS. There have been four wars between Great Britain and the Ashantis. The first began in 1821, but it was ten years before the Ashantis recognized Britain's authority over the neighbouring Fanti tribes. The second (1873-74) was conducted by Sir Garnet Wolseley because the Ashantis invaded territory under British protection. In the third (1896), a bloodless campaign, King Prempeh, who had refused to accept the treaty of 1874, was made prisoner and his capital entered. In 1900 a British force marched to relieve Kumasi (q.v.), which was besieged by turbulent tribesmen.

ASHBOURNE. Urban district and market town of Derbyshire, England. It stands on the Henmore, near its junction with the Dove, 13 m. W. by N. of Derby, on the L.M.S. Rly. It has a cruciform church, dating from 1241, with a central tower surmounted by a spire, 212 ft. high, referred to locally as the Pride of the Peak, and a grammar school founded 1585. Ashbourne Hall was occupied by Prince Charlie in 1745. The manufactures include cotton and corsets. Market day, Sat. Pop. 4,137

Ascot Gold Cup

ASHBOURNE, EDWARD GIBSON, 1ST BARON (1837-1913). Irish lawyer and politician. He was called to the Irish bar in 1860, sat in Parliament 1875-85 as member for Dublin University, and was attorney-general for Ireland from 1877 to 1880. In 1885 he was made lord chancellor of Ireland with a seat in the Cabinet, and was raised to the peerage. A strong advocate of land purchase, he was largely responsible for the Ashbourne Acts. His son, William Gibson (b. 1868), the 2nd baron, as president of the Gaelic League of London, was a conspicuous adherent of the Gaelic revival.

ASHBURNHAM, EARL OF. British title borne by the family of Ashburnham 1730-1924. John Ashburnham was made a baron in 1689, and his son John an earl in 1730. John, the 2nd earl, was a courtier under George III, and from him the later earls are descended. Bertram Ashburnham, the 5th earl (1840-1913), succeeded to the peerage in 1878, having become a Roman Catholic in 1872. He was prominently associated with the Carlist movement in Spain. Ashburnham Place in Sussex was the family residence. On the death of the 6th earl in 1924 the peerage became extinct.

ASHBURTON. River of Western Australia. Rising S.W. of the Great Sandy Desert, it flows 400 m. N.W. and enters the Indian Ocean at Onslow. It traverses Ashburton goldfield, but is not navigable.

ASHBURTON. Urban district and market town of Devonshire, England. It lies in a beautiful valley, near the Dart. 24 m. N.W. of Plymouth, on the G.W.R., and close to Dartmoor and Holne Chase. The 15th century church of S. Andrew has a tablet to the first Baron Ashburton, who was educated at the grammar school. Serge is manufactured, and close by amber is worked. Market day, Sat. Pop. 2,362.

Another Ashburton is a town of South Island, New Zealand, in Canterbury county. It stands on Ashburton river, 53 m. by rly. S.W. of Christchurch. Pop. 2,851.

ASHBURTON, ALEXANDER BARING, BARON (1774-1848). British statesman and financier. He was the second son of Sir Francis Baring, founder of the financial house of Baring Brothers & Co. He sat in Parliament 1806-35 for Taunton, Callington, Thetford, and North Essex, and opposed the Reform Bill. In 1834 he was president of the Board of Trade and master of the mint, and in 1835 was raised to the peerage. In 1842 he was sent to America to inquire into the north-west boundary and other questions, the treaty which ended the dispute being known as the Ashburton or Webster-Ashburton treaty. It provided for the cession of about seven-twelfths of the 12,000 sq. m. of disputed territory to the U.S.A. He died May 13, 1848, and the title is still in the Baring family.

The Ashburton Challenge Shield is a trophy competed for annually at Bisley by the public schools officers' training corps. It was presented in 1861 by the third Lord Ashburton.

ASHBY-DE-LA-ZOUCH. Market town and parish of Leicestershire, England. It stands on the Mease, 21 m. N.W. of Leicester, and 118 m. N.N.W. of London by the L.M.S. Rly. The church of S. Helen has monuments to the Huntingdon family. The Moira mineral springs supply the Ivanhoe baths, frequented by sufferers from rheumatism. Coal, lead, and other minerals are worked and hosiery and leather manufactured. There are remains of Ashby Castle, which figures in Scott's *Ivanhoe*. Market day, Sat. Pop. 4,983.

ASHDOD. Philistine city, about 3 m. from the sea between Gaza and Joppa (Josh. 15). Here, in the temple of Dagon, the Philistines placed the ark (1 Sam. 5-6). On a hill commanding the road into Palestine and Egypt, it was repeatedly captured (2 Chron. 26;

Is. 20), and its idols and temple were destroyed by the Maccabees. It became a centre of Greek civilization as Azotus, and is so called in Acts 8. Its modern name is Sdud.

ASHDOWN. Park and seat of the earl of Craven in Berkshire, 3 m. N. of Lambourne. As Aescandune or Assandune it was the scene in 871 of the defeat of the Danes by Ethelred and Alfred. Near are ancient camps and a cromlech, Wayland the Smith's Cave, the legend of which is referred to in Scott's *Kenilworth*. See Wayland the Smith.

Ashdown Forest is a district in Sussex. It lies between Crowborough and E. Grinstead, and is the only remaining part of the forest known to the Saxons as the Andredsweald. It covers about 14,000 acres.

ASHFIELD, ALBERT HENRY STANLEY, 1ST BARON (b. 1875). British business man and politician. Born at Derby, he spent his early years in the United States, where he entered the railway world. His success there led to his return to England in 1910, when he became managing director of the Underground Electric Rly. Co. and the London General Omnibus Co. He was knighted in 1914, and in 1916 was invited to join Mr. Lloyd George's Cabinet. He became president of the Board of Trade and M.P. for Ashton-under-Lyne. In 1919 he resigned office and seat, and was made a peer as Baron Ashfield of Southwell.

ASHFORD. Urban district and market town of Kent, England. It stands on the Stour, 14 m. S.W. of Canterbury, on the Southern Rly., and has agricultural implement works, brickfields, and engineering works of the Southern Rly. It has a fine Perpendicular church and an old grammar school. During the Great War there was a Canadian ordnance depot here. Market day, Tues. Pop. 14,355.

ASHFORD. Parish and village of Middlesex, England. The ancient Exeфорд, it is 2 m. E. of Staines on the Southern Rly., and has a Gothic church. Pop. 7,673.

ASHINGTON. Urban district of Northumberland, England. It is 4 m. E. of Morpeth by the L.N.E.R., in a coal-mining district. There was an aerodrome here during the Great War. Pop. 29,583.

ASHLAR (Lat. axilla, small board). A term generally used to denote hewn and squared blocks of stone, as opposed to unfinished stone from the quarry. More particularly, ashlar is such stone used to face a wall composed of less durable materials.

ASHLEY, ANTHONY EVELYN MELBOURNE (1836-1907). British politician. Usually known as Evelyn Ashley, he was the fourth son of the 7th earl of Shaftesbury. He was private secretary to his uncle, Lord Palmerston, 1858-65, and in 1876 completed the standard biography of that statesman begun by Lord Dalling. In 1864 he cooperated with Algernon Borthwick (afterwards Lord Glenesk) in founding *The Owl*, a pioneer society newspaper. He entered Parliament in 1874 as Liberal member for Poole, Dorset, and became under-

secretary to the Board of Trade in 1880 and to the Colonial Office in 1882. He died at

Ashmolean Museum, built for the collection presented to Oxford by Elias Ashmole. See below

Broadlands, Hants, which he had inherited from Palmerston, Nov. 15, 1907.

ASHLEY, SIR WILLIAM JAMES (1860-1927). British economist. He was professor of political economy at Toronto, 1888-92, and of economic history at Harvard, 1892-1901. In 1901 he returned to England as professor of commerce in the new university of Birmingham. He supported Chamberlain's proposals for Tariff Reform, and in 1914 helped to draw up the report of the Unionist Social Reform Committee on industrial unrest. He was knighted in 1917. His writings include: *Introduction to English Economic History and Theory*, 1888-93; *The Rise in Prices*, 1912. He died July 23, 1927.

ASHLEY, WILFRED WILLIAM (b. 1867). British politician. Born Sept. 23, 1867, he was a son of the Hon. Evelyn Ashley, from whom he inherited Lord Palmerston's old home, Broadlands, near Romsey. Educated at Harrow and Magdalen College, Oxford, he served in the Grenadier Guards before entering Parliament in 1906 for the Blackpool Division. In 1918 he was elected for the Fylde Division of Lancashire and in later elections for the New Forest Division. After having filled subordinate ministerial positions, he was Minister of Transport 1924-29. Ashley's first wife was a daughter of Sir Ernest Cassel, and one of their daughters married Lord Louis Mountbatten.

ASHMEAD-BARTLETT, SIR ELLIS (1849-1902). Anglo-American politician and writer. Born in Brooklyn, New York, he came to England in boyhood and was educated at Christ Church, Oxford. After being a government inspector of schools, 1874-77, he was called to the bar. He entered Parliament as Conservative M.P. for Eye, 1880, and from 1885 sat for Ecclesall (Sheffield). In 1885 and 1896 he was civil lord of the Admiralty, and in 1892 was knighted. His younger brother, William

Sir Ellis Ashmead-Bartlett, Anglo-American politician
Elliott & Fry

Lehmann Ashmead-Bartlett (1851-1921), married the Baroness Burdett-Coutts (q.v.).

Sir Ellis's son, Ellis Ashmead-Bartlett (b. 1881), was a well-known war correspondent and author of *Despatches from the Dardanelles*; *The Riddle of Russia*, etc.

ASHMOLE, ELIAS (1617-92). English antiquary. Born at Lichfield, May 23, 1617, he became a solicitor, and as a royalist was captain of horse and comptroller of the ordnance during the Great Rebellion, being appointed Windsor Herald after the Restoration. Although he declined the office of Garter king-at-arms, his chief work deals with *The Institutions, Laws and Ceremonies of the Order of the Garter*, 1672. In 1677 he presented to his university, Oxford, the first

Ashby-de-la-Zouch. Ruins of the 15th century castle, in which Mary, Queen of Scots, was imprisoned

public collection of antiquities in England, now in the Ashmolean Museum, a structure erected 1893-4, adjoining the Taylorian Institute. His books and natural history exhibits were taken to the Bodleian and the University Museum respectively. The Ashmolean Museum contains Egyptian, Greek, Roman, British and other antiquities, which were gradually added to Ashmole's gift.

Elias Ashmole,
English antiquary
Contemporary print

ASHMORE, EDWARD BAILEY (b. 1872). British soldier. He served with the R.H.A. in the South African War, being severely wounded at Sanna's Post in 1900. Having passed through the Staff College, he joined the general staff in 1908, and in 1914 was assistant secretary to the inspector-general of Oversea Forces. He had, however, joined the reserve of the R.F.C., and joined that corps in Nov., 1914. He remained at the front, as commander of a brigade, until the middle of 1917, when he returned to England as a major-general to take charge of the air defence of London. In 1924-28 he was G.O.C. Territorial Air Defence Brigades. He published *Air Defence, 1929*

Ashridge Park, given to the Conservative Party as an educational centre and training college

ASHRIDGE PARK. Estate in Hertfordshire, England. It was long the property of the dukes of Bridgewater, and later of the Earls Brownlow. When the last Earl Brownlow died in 1921 the park was sold. About 2,200 acres, including Ivinghoe Beacon, were bought for the National Trust, and another tract by the Zoological Society for an outdoor garden. The house and the gardens were presented by Mr. U. H. Broughton to the Conservative party for a training centre as a memorial to Mr. Bonar Law. The stained glass of the chapel was presented to the S. Kensington Museum. There was a monastery at Ashridge in the 13th century, and later this became a royal residence.

ASHTAROTH. Ancient city of Palestine. It is named in the Bible (Deut. 1; Joshua 9, 12, 13) as the capital of Og, king of Bashan, 6 m. from Abila, and has been identified with Ashteroth-Karnaim (horned Ashtaroth), Carnion or Carnain, scene of Chedorlaomer's defeat of the Rephaim (Gen. xiv. 5); but Eusebius mentions Ashtaroth and Karnaim Ashtaroth as two villages between Adara (Edrei) and Abila, Karnaim Ashtaroth being in Bashan.

ASHTAROTH. The plural of Ashtoreth, Hebrew name for the Sidonian goddess Astarte, referred to in the O.T. (1 Kings 11; 2 Kings 23). The plural is used because the later mythology made separate deities of her several manifestations. See *Astarte*.

ASHTED. Village of Surrey and a residential suburb of London. It has a station on the Southern Rly., and is 15 miles from London. Near the village is a large common on which, in 1925, remains of a Roman villa were found. Excavations have brought to light a quantity of coins, pottery, ornaments, etc., of Roman times. Pop. 3,226.

ASHTON-IN-MAKERFIELD. Urban district and market town of Lancashire. It is 4 m. S. of Wigan by the L.N.E. and L.M.S. Rlys., has coal mines, potteries, and cotton mills, and manufactures nuts, locks, hinges, files, and nails. Market day, Sat. Pop. 22,489.

ASHTON-UNDER-LYNE. Borough and market town of Lancashire. It is on the Tame, 6 m. E. of Manchester, on the L.M.S. and L.N.E. Rlys. Cotton and silk spinning, dyeing, bleaching, iron-founding, and hat making are the chief industries, and there are considerable collieries in the neighbourhood. The 13th century church has been almost entirely rebuilt. The old manor hall, with prison, and the Gallows Meadow recall the feudal powers of the Ashtons, lords of the manor. On Hartshead Hill there is a tower, 80 ft. high, formerly used for a signalling station. Stamford Park, the gift of Lord Stamford, is the joint possession of Ashton and Stalybridge. It returns one member to Parl. Market days, Mon. and Sat. Pop. 52,274.

ASHURNANIPAL. King of Assyria 668-626 B.C. The Biblical Asuapper—Osnapper in R.V.—(Ezra iv), son of Esarhaddon, his campaigns were marked by much barbarity. He plundered Thebes, 666; sacked Babylon, 648; and destroyed Susa, 644. Under him Assyrian art and literature reached their zenith. See *Assyria*; *Babylon*.

ASHURNATSIRPAL OR ASHURNAZIRPAL. Name of three Assyrian kings. The greatest, Ashurnatsirpal III, 883-858 B.C., greatly extended the empire northward and westward. With the capture and tribute brought from Lebanon, Phoenicia, and elsewhere he rebuilt Calah, and erected luxurious palaces. He was succeeded by his son Shalmaneser III.

ASH WEDNESDAY. Day observed in the Christian Church since the beginning of the 9th century, partially, and since 1191 generally, as the first day of Lent. The name dies cinerum or day of ashes (Fr. mercredi des cendres) originated in the custom in the primitive Church, still practised in the Roman Catholic Church, of strewing ashes on the head as a sign of penitence. In the Church of England the Communion Service was substituted for this ceremony in the 16th century.

ASHWELL, LENA (b. 1872). British actress. The third daughter of Commander Pocock, R.N., she studied at the Royal Academy of Music. Giving up music for the stage, on the advice of Ellen Terry, she made her début in 1891, became manager of The Savoy Theatre in 1906, and in 1907 obtained a lease of The Great Queen Street Theatre, Holborn, which she reopened as The Kingsway Theatre. One of her greatest parts was Mrs. Dane, in Mrs. Dane's Defence, 1900. In 1908 she married Sir Henry Simson. During the Great War she organized concert parties, and later touring companies to act in London suburbs. In 1929 she published her experiences as *The Stage*.

Lena Ashwell,
British actress
Russell

ASIA. The largest of the world's continents. Its area is more than 17,000,000 sq. m. and its pop. over 1,000,000,000. It is bounded on the N. by the Arctic Ocean, on the E. by the Pacific, on the S. by the Indian Ocean, and on the W. by Europe, with water-fronts on the Caspian, Black Sea and Mediterranean, and by Africa, to which it is joined by the isthmus of Suez, and from which it is separated by the Red Sea.

Asia includes some of the hottest and some of the coldest lands in the world, some of the most productive regions and some of the most barren, some of the grandest scenery,

as in the Himalayas, and some of the dreariest, as in the Gobi desert. It contains the highest mountain peaks in the world—Mt. Everest and Godwin-Austen, the most elevated plateaux where life is supportable, and depressed areas that have sunk to a lower level than that of the sea. For its size, it is not rich in rivers suitable for inland navigation. In the N. all the rivers are icebound for months. China is well served by its mighty central river, the Yang-tse-Kiang, but the Hwang-ho has been rendered useless for access to and from the sea by sandbanks. In India inland steamer navigation is almost entirely confined to the Irawadi and to the Ganges-Brahmaputra-Meghna group of waterways. The Indus is not navigable by steamers. Asia has few lakes of consequence, and Baikal, the largest, is ice-bound for a great part of the year.

The fauna and flora of Asia comprise nearly every known tree, plant and animal. Typically Eastern trees are the palm, cedar and oak, in the production of which India and Indo-China rank highest, while spice trees, tea and indigo are not found in commercial quantities outside Asia. The oak, ash, walnut and other western trees are plentiful, and coffee, cotton, sugar cane, the poppy, camphor, fruit, wheat, rice and other cereals have been cultivated from time immemorial. The animals of Asia include the lion, tiger and leopard, as well as several beasts of burden not found in Europe, such as the elephant, camel, buffalo and yak. Among the fur-bearing animals of the N. are the sable, ermine, marten, bear, seal and fox. Asia is very rich in minerals, having long been famous for diamonds, rubies, emeralds, pearls, gold and silver. There are vast coalfields in China and iron and lead deposits in Asiatic Russia.

The countries of Asia include Turkey, Syria, Palestine, Caucasia, Arabia, Iraq, Persia, Baluchistan, Afghanistan, the Central Asian states, the Indian Empire, Burma, Siam, Malaya, Indo-China, China, with Mongolia and Tibet, Korea, Japan and Siberia. These may be considered in five divisions—the Middle East, which includes broadly the first seven countries mentioned above, is agricultural and pastoral. Its characteristic exports are carpets, mohair and fruit, chiefly figs, from Turkey; coffee, dates and spices from Arabia, and carpets and rugs from Persia.

India includes in its economic range Afghanistan, Baluchistan, Siam, Malaya and Ceylon. Its trade and commerce, though increasingly directed by natives, are fostered and controlled mainly by the British. The country is covered with a network of railways, and its ports—Karachi, Bombay, Madras, Calcutta, together with Colombo in Ceylon and Singapore in the Straits Settlements—are among the most important in the world. In the Far East, comprising Indo-China, China and Japan, the prevailing political influence is Japan, except in Indo-China, which is under French control, and at Hong-Kong, which is a British possession. Considering its vast size and population and its wealth of natural resources the economic development of China is imperfect, although its commerce and trade are enormous. Canton, Shanghai, Chefoo and Tientsin are the principal ports of China. In Dalny Japan has a good port on the mainland, the chief ports of the islands being Yokohama, Nagasaki, Kobe and Hakodate.

Russian Asia includes territories settled or occupied by Russians, such as Siberia and Caucasia. In Siberia cattle raising and dairying are the main industries. The forests produce timber and furs, and gold is found in some of the rivers. Caucasia is rich in oil. In the Dutch East Indies, which include Borneo, Sumatra, Java and the Celebes, the Dutch are predominant, although Britain has a part of Borneo. The islands produce rubber, tobacco and coffee and some contain oil.

Asia. Map showing the relative positions of the countries that make up this vast continent. Fuller details will be found on the larger scale maps which accompany the articles on the different countries, e.g. Arabia, Afghanistan, Japan, etc.

The Royal Asiatic Society was founded in 1823 for the investigation and encouragement of science, literature, and the arts in relation to Asia. Its offices are 74, Grosvenor Street, London, S.W.1. The Society of Biblical Archaeology was amalgamated with it in 1918.

Consult *The Empires and Cities of Asia*, A. G. Forbes, 1873; *Problems of the Far East*, Lord Curzon of Kedleston, new ed., 1896; *Through Asia*, Sven Hedin, 1898, and numerous other works; *The Nearer East*, D. G. Hogarth, 1902; *The Face of the Earth*, E. Suess, Eng. trans. H. B. C. Sollas and W. J. Sollas, 1904-9; *The Far East*, A. Little, 1905; *Asia*, A. H. Keane, 2nd ed. rev. 1906; *A Third Journey of Exploration in Central Asia*, 1913-16, M. A. Stein, 1916, and numerous other works; R. G. S. *Proceedings and Journals*.

ASIA MINOR. Geographical expression sometimes applied to the peninsula forming the W. extremity of Asia. The territory so designated corresponds broadly to the Turkish territory in Asia known as Anatolia. See Anatolia; Angora; Turkey.

ASIAGO. Town of Italy, in the prov of Vicenza. The chief town of the district known as the Seven Communes, it lies 25 m. by rly. N. of Vicenza, at an alt. of 3,280 ft. It has a museum of antiquities. Pop. 2,500.

BATTLES. On the Asiago plateau battles were fought between the Austrians and the Allies, 1917-18. In the first battle the Austrians endeavoured to repeat the success they had recently won at Caporetto by a break-through from the Asiago Plateau to the plain. On Nov. 10 they captured what was left of the town of Asiago and the village of Gallio, and compelled the Italians to fall back to a line reaching from Monte Sisemol to Monte Meletta, which they unsuccessfully attacked on Nov. 13. The battle was renewed on Dec. 4, when the Italians drove back the enemy from Monte Sisemol, but were defeated at Monte Badeneceh and elsewhere, with a loss of 15,000 prisoners. A few days later the Austrians took Sisemol, and on Dec. 23 stormed Col del Rosso and Monte Molaga, which the Italians later retook. In Jan., 1918, they took the offensive and gained

a little ground around Col del Rosso. The battle then died down.

The second great battle began on June 15, when the Austrians attacked from S.W. of Asiago to the Brenta, from the latter to E. of Monte Grappa, and from the Montello to below San Dona di Piave, a front of 45 m. Opposed to them were Italian, British and French troops. At first the Austrians made progress, taking the Col del Rosso and Costalunga, but Allied counter-attacks won back the latter. Fierce assaults on the British sector were defeated, and soon the two British divisions advanced, the enemy retreating in confusion. The effect of the Allied victory was profound, leading to riots in Austria, and relieving Foch from the necessity of sending more troops to the Italian front.

In the third battle the Allies took the offensive. On Oct. 30 the British occupied Asiago and stormed Monte Catz on Nov. 1, while the Italians steadily advanced. On Nov. 4 the Austrians were in retreat northwards, pursued by the Allies until the armistice put an end to hostilities at 3 p.m. on Nov. 4.

ASIENTO (Span. *asentar*, to place, or make a contract). Agreement signed between Great Britain and Spain in 1713. By this Britain obtained for a period of thirty years the privilege of importing 4,800 slaves annually to the Spanish colonies of America, and also of sending each year to S. America one ship filled with wares. By various tricks more goods were sent to America than the treaty allowed, and this caused much trouble between the two countries. At length war broke out, and when this came to an end in 1748, the Asiento was renewed for four years. Shortly afterwards Spain paid Britain £100,000 and it was cancelled.

ASIR. Principate of Arabia. Much encroached upon by Ibn Saud and the Imam of Sana, it now consists of a mere strip of coast on the E. shore of the Red Sea between Hali Point and Jizan. Ruled by an amir of the Idrisi family, it revolted against the Turks when Turkey entered the Great War and co-operated with the Hejaz Arabs and the Allies. In 1926 it was placed under the protectorate of Ibn Saud. See Arabia; Hejaz.

ASKARI (Arab. *askar*, army). Term used in Africa for a native soldier trained and officered by Europeans. They were employed effectively in the Allied forces in the campaign against the Germans in East Africa, 1914-18, and also by the Germans.

ASKE, ROBERT (d. 1537). Leader of the English Pilgrimage of Grace. When the popular discontent at the suppression of the smaller monasteries developed into an insurrection, he was chosen as leader. York was occupied Oct. 16, 1536, and on Oct. 20 Pontefract Castle surrendered to Aske, who proposed to lead the rebels to London. Aske was then invited to London by Henry VIII under a safe-conduct pass, and he returned to Yorkshire in Jan., 1537, with the promise from the king that a parliament should be held in York. Later the same year he was again invited to London, arrested, tried for high treason, and hanged at York, in spite of promises of pardon from Henry VIII and Thomas Cromwell. See Pilgrimage of Grace.

ASKERN. Village of Yorkshire (W.R.), it is 6 m. north of Doncaster with a station on the L.N.E. Rly. It has developed from a small village into a mining centre owing to the opening of coal mines, and here the mine-owners, the Askern Coal and Iron Co., have built over 500 houses for the workers. There are works here for the low temperature carbonisation of coal.

ASKJA. The largest volcano of Iceland. Its crater is 34 sq. m. in area, over 700 ft. deep, and 4,633 ft. high. Intermittently and sporadically active, its old lava floods cover an area of 1,500 sq. m. Ashes from the eruption in 1875 floated as far as Sweden.

ASKRIGG. Market town of Yorkshire (N.R.). It stands on Ure river, 11 m. W. of Layburn by the L.N.E.R. It is noted for its grouse moors. Market day, Thurs. Pop. 481.

ASKWITH, GEORGE RANKEN ASKWITH, 1ST BARON (b. 1861). British civil servant. Born Feb. 17, 1861, and educated at Marlborough and Oxford, he became a barrister in 1886. In 1907 he entered the Board of Trade as assistant secretary; and he was chief industrial commissioner, 1911-19. In 1908 he was made a K.C. and in 1911 a K.C.B. In March, 1919, he was raised to the peerage as Baron Askwith of St. Ives. He published *Industrial Problems and Disputes*, 1920; *Taverns, their History and Laws*, 1928.

Baron Askwith,
British civil servant
Russell

ASMARA. Capital of Eritrea, N.E. Africa. It is 75 m. by rly. S.W. of Massawa, stands 7,765 ft. above sea level, and is strongly fortified and garrisoned by Italian and native troops. Occupied in 1889 by the Italians, it has a wireless station, and is a busy agricultural and trading centre, with gold mines in the neighbourhood. Asmara superseded Massawa as the capital in 1900. Pop. 14,711, of which about 2,500 are Europeans.

ASMODEUS. Evil genius of Hebrew tradition. The name is supposed to be derived from the Aeshma daeva, or demon of evil, of ancient Persian religion. In the Book of Tobit the seven husbands of Sarah, daughter of Raguel, are said to have been successively killed by Asmodeus, hence he is sometimes regarded as the spirit opposed to matrimonial happiness. He is the principal character in Le Sage's romance, *The Devil on Two Sticks*.

ASODAKE OR **ASOSAN.** Volcano of Japan, in Kiushiu. It is situated 27 m. E. of Kumamoto, and consists of one active, Nakadake, and four quiescent peaks, the highest, Takadake, being 5,500 ft. above sea level. The outer crater, 17 m. N. to S., 10 m. E. to W., contains the five peaks and is the largest in the world.

ASOKA (d. c. 228 B.C.). Buddhist emperor of India. He was the grandson of Chandragupta, the founder of the Maurya dynasty, and began to reign 264 B.C. After conquering the kingdom of Kalinga, c. 261, he was so distressed at the horrors of war that he turned Buddhist, devoting himself to spreading the principles of Buddhism. More than thirty of his edicts, mostly concerned with his code of practical morality and his methods of disseminating it, have been found inscribed in the local vernaculars on pillars, rocks, and caves. See Allahabad; Consult Lives, V. A. Smith, 2nd ed., 1909; J. M. Macphail, 1918.

ASOLO. Town of Italy. The ancient Aceluun, it stands on a ridge 685 ft. high, 10 m. E. of Bassano, and has ruins of Roman baths and a theatre. The 13th century castle was once the home of Caterina Conaro, the last queen of Cyprus. Asolo was a favourite resort of Robert Browning: his house is marked by a tablet and the street bears his name. The parish church has a fine altar-piece by Lorenzo Lotto. Pop. 6,500.

ASP. Term for various poisonous snakes. It is applied to the *Vipera aspis* of S. Europe, and especially to the Egyptian snake used by Egyptian jugglers. Cleopatra's asp is believed to have been the N. African horned viper. Asp and the variant aspie are used in poetry to denote any venomous snake. See Snake.

ASPARAGINE OR **AMINO-SUCCINIC ACID.** Crystalline nitrogenous body originally discovered in asparagus. It also occurs in the juices, growing buds, and germinating seeds of many other plants.

ASPARAGUS. Genus of plants of the order Liliaceae. The best-known species is the common asparagus (*A. officinalis*), a native of the sandy S. and W. districts of Britain, and of the sea-shores of Europe generally. The young, tender shoots are cut and eaten as a vegetable. Asparagus is grown from seed, and a period of five years must elapse from the sowing until the plant is fully matured for cutting. *Asparagus plumosus* and *A. spre-*

Asparagus. On the left is a clump of the cultivated vegetable, showing the way the edible shoots spring from the roots. On the right are two pieces of wild asparagus, showing the partly opened and fully developed upper growth

gheri are two climbing greenhouse perennials known as asparagus ferns, and grown for their feathery foliage.

ASPASIA. The wife of Pericles. The daughter of Axiochus and a native of Miletus or Megara, she removed to Athens, where her wit and intelligence captivated Pericles, who divorced his wife and married her. Her influence with Pericles was greatly exaggerated by contemporary writers, Aristophanes accusing her of instigating the Samian and Peloponnesian wars. When Pericles was indirectly attacked by an accusation of impiety brought against Aspasia, he successfully defended her.

Another Aspasia was the wife of Cyrus the Younger. On his death she became the mistress of Artaxerxes, who later gave her up to his son Darius. Later Artaxerxes took her back and made her priestess of Artemis at Ecbatana.

ASPATRIA. Urban district and market town of Cumberland, England. It is on the river Ellen, 7½ m. N.E. of Maryport, by the L.M.S. Rly. It has an agricultural college, established 1874, and engages in coal mining. Market day, Wed. Pop. 3,525.

ASPEN (*Populus tremula*). Tree of the natural order Salicaceae. A native of Europe, N. Asia, and N. Africa, it attains a height of from 50 ft. to 80 ft. It has a grey bark and spreading branches. The leaves are oval or roundish with irregularly toothed edges. They are moved by the slightest breeze, and to this is due the popular im-

Aspen leaves, which are set in motion by the faintest breeze aspen leaf and physical trembling. See Poplar.

ASPERGES (Lat. *Thou shalt sprinkle*). Service preceding the principal Mass on Sundays in the Roman Catholic Church. The celebrant, having entered the sanctuary, sprinkles holy water from a portable vessel called the aspersorium, by means of a kind of brush called aspergill or aspersol, on the altar, clergy, and people. During the ceremony the choir sing the antiphon, *Asperges me, Domine, hyssopo, et mundabor*, etc. (*Thou shalt purge me, O Lord, with hyssop, and I shall be clean*).

ASPERN. Village of Austria. Here a battle between the French under Napoleon and the Austrians under the Archduke Charles was fought, May 21-22, 1809. The French had occupied Vienna, but the Austrian army was in being on the other side of the Danube. Napoleon sent his army across the river, and though unmolested while they crossed, as soon as they were over the last branch of the river, early on the 21st, the Austrians came on in five columns. Fighting ensued round the two villages, which were lost and regained, the Austrians in the end holding one and the French the other. Napoleon then attacked and broke the Austrian centre, but the battle ended in the defeat of the French, the first ever suffered by Napoleon. The losses on both sides were heavy.

ASPHALT. Material consisting of a natural mixture of hydrocarbons and mineral substances. Of natural asphalts there are two principal varieties: (a) soft asphalt, consisting of bitumen and earthy matter, which is used, with other ingredients, as a paving material and for other purposes; (b) rock asphalt or bituminous limestone, which is a stone of liver-brown hue containing 5-20 p.c. of natural mineral tar.

The most useful quality is that consisting of pure carbonate of lime uniformly mixed with 10-12 p.c. of mineral bitumen, which merely requires the application of heat and subsequent ramming to render it one of the most durable paving materials known. Asphalt is also employed for roofs, floors, and damp courses, and for covering arches. Large quantities of asphalt are obtained from a lake in Trinidad. Artificial asphalt often consists of a mixture of coal tar, powdered chalk or slaked lime, and fine sand. This is boiled and poured, while hot, over the surface to be covered. See Roads.

ASPHODEL (*Asphodelus*). Small genus of perennial herbs of the natural order Liliaceae. Natives of the Mediterranean region, they have

Asphodel. *Asphodelus ramosus*, one of the species of this Mediterranean genus

They have fleshy roots in bunches and long, slender leaves. The white or yellow blossoms are clustered around the upper part of the tall stem, and are very showy. They are old-fashioned garden flowers, particularly the white asphodel (*A. albus*) of S. Europe and the yellow asphodel (*A. creticus*) of Crete. The name daffodil is a corruption of asphodel. The bog asphodel belongs to the genus *Narthecium*.

ASPHYXIA (Gr. a, not; sphyx, pulsation). Condition produced by arrest of the respiratory functions ultimately terminating in death. Asphyxia may be due to natural causes, or to violent causes, such as drowning, suffocation. See Artificial Respiration; Drowning.

ASPIC. Savoury jelly made from calves' feet, containing meat, fish, etc., flavoured with herbs, vinegar, and sherry. Aspic is also a poetical form of asp, and the jelly is perhaps so called from its being cold to the touch, like a snake.

ASPIDISTRA.

Foliage plant of the natural order Liliaceae. A native of Japan and China, it was introduced into Britain in 1822. Ordinary garden

Aspirator. Surgical form, used for the removal of fluid matter from the body

soil with a mixture of leaf mould suits it best. The pot should be plunged in water weekly, and the leaves sponged.

ASPIRATOR. Appliance employed in ventilating, filtering, and in several industrial and chemical processes. It is used to draw a current of air from one vessel or from the open into or through another vessel. In the usual form the flowing out of water from a receptacle causes air or some other gaseous fluid to be drawn in from another vessel.

The name aspirator is also given to a surgical instrument used to remove fluid matter from the body.

ASPIRIN. Short name for acetyl-salicylic acid ($C_9H_8O_4$), also sold under other names. The drug is used in rheumatism and to relieve neuralgia, headache, sciatica, etc.

ASQUITH. Family name of the earl of Oxford and Asquith. Raymond Asquith (1878-1916), Lord Oxford's eldest son, a brilliant Oxford scholar and a barrister, was killed while serving with the Guards near Ginchy in Sept., 1916. His son Julian became the 2nd earl on his grandfather's death in 1928. Lord Oxford's second son, Herbert, has published volumes of verse and several novels, including *Wind's End* and *Young Orland*. The third son, Arthur Melland, won the D.S.O. in the Great War, and rose to be a brigadier-general; afterwards he became a director of Sudan Plantations and other companies. Lord Oxford's two daughters are Violet, the wife of Sir M. Bonham-Carter, and Elizabeth, who married Prince Antoine Bibesco, Rumanian minister in Madrid. See Oxford and Asquith, Earl of.

ASS. Name applied generally to one of the four divisions of the genus *Equus*, the other three being the horse proper, the zebra, and the quagga. Asses differ from horses in the possession of an erect mane, a tufted tail, and long ears, and in the absence of the chestnuts or callosities below the hock; and from zebras and quaggas in the suppression of the striping.

In the wild state the ass inhabits Asia and Africa and includes several subspecies. The kiang of Tibet is the largest. The dziggeta of Mongolia and the onager of Persia, Syria, and W. India are smaller and more lightly

built. The African wild ass inhabits Nubia, the Sudan, and Somaliland, and is of rather stouter build. It is from this species that the domestic breeds have been derived. The largest of the domesticated asses is that of Poitou, which attains a height of from 14 to 16 hands, and is mainly used for mule breeding.

ASSAB. Harbour of Eritrea. It stands on the W. coast of the Red Sea, at the entrance to Assah Bay. Its wireless station communicates with the radio-telegraphic system of Italian Somaliland and with Italy. In 1928 Italy leased land here to Abyssinia to give that country a port on the Red Sea. The commissariat of Assab has an area of 5,523 sq. m. and a native pop. of 3,926. See Eritrea.

ASSAGAI OR **ASSEGAI.** Missile of the javelin kind employed by certain African tribes. The word is Berber, and came into English through Arabic and Portuguese, the form assagai being the more correct. The name was originally given to a Berber weapon adopted by the Moors, a kind of slender spear or lance of hard wood, usually pointed with iron.

ASSAI PALM (*Euterpe edulis*). Native of Brazil. It is a slender, graceful tree from 40 ft.

Assai Palm, Brazilian tree, parts of which are edible

to 100 ft. in height, the bare cylindrical stem being surmounted by a head of long pinnate leaves with narrow leaflets. The centre of this leafy tuft, including the growing point and leaf-buds, is plucked out to be cooked as a vegetable or pickled, this entailing the sacrifice of the tree. It is more profitably allowed to flower and produce its sloe-like fruits, whose pulp, kneaded in water, and mixed with sugar and cassava farina, forms a nutritious food.

ASSAM. Northern prov. of British India. In the extreme N.E. of the peninsula, bounded N. by Bhutan and Tibet, W. and S.W. by Bengal, and E. and S.E. by Burma, comprises numerous valleys, mainly watered by the Brahmaputra and its tributaries and the Surma, and their elevated watershed. Its area, exclusive of the native state of Manipur,

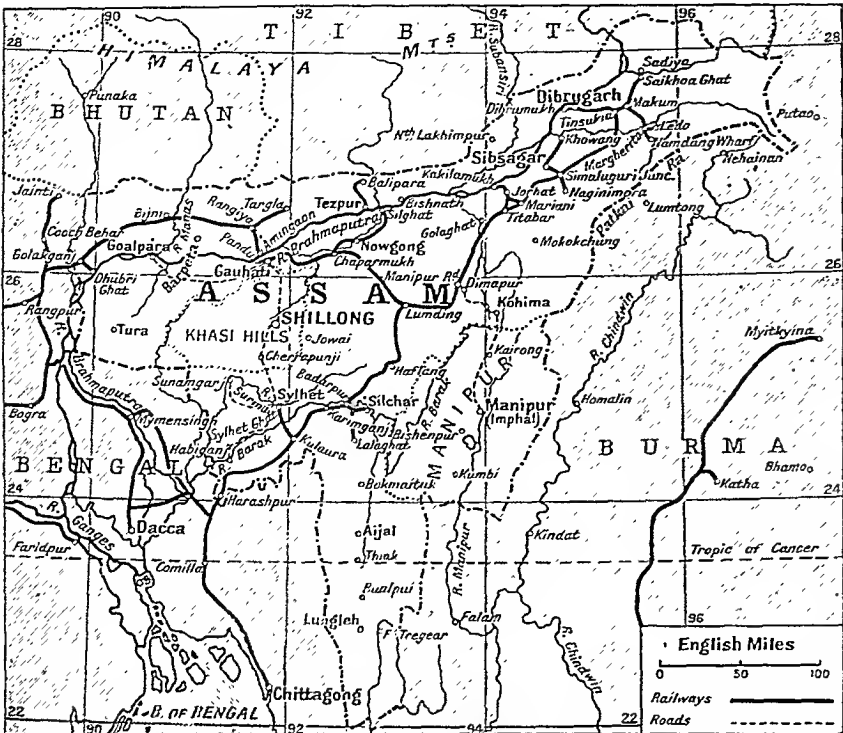

is 53,015 sq. m. Tea and rice are the principal products, and silk weaving and cotton weaving the chief home industries. There is an important system of railways. In 1927 24½ million gallons of crude oil were extracted. Pop. 7,606,230, of which over half are Hindus. The capital is Shillong.

Originally attached to Bengal, Assam became a separate province

Ass. African wild ass and her foal. From this species the domestic breeds have been derived

Gambier Bolton, F.Z.S.

Assam. Map of a province of British India which is a great centre of the tea-growing industry, more than half of the entire area given up to tea cultivation in India lying within its boundaries. See article p. 143

in 1874; part of the new province of Eastern Bengal and Assam in 1905; in 1912 again a separate province under a chief commissioner, and in 1921 was placed under a governor.

ASSASSINS. Name originally given by Europeans to the members of a powerful secret sect among the Mahomedans in Syria. It is a corruption of Hashishin (hashish eaters), since it was the custom to intoxicate the votaries of this sect with hashish before they discharged their tasks. Their law was unquestioning obedience to their head; their method mainly the organized murder of the victims selected by him. Their founder was Hassan Ibn Sabbah, who took the title of Sheikh-al-Jahal, the "old man of the mountains." He settled in Persia towards the end of the 11th century, but later the seat of authority was transferred to Syria. The sect was suppressed in the 13th century.

Assam. A chief's house in North Cachar. The large basket is used as a grain measure. See p. 143

ASSAULT. In English law, a present threat of using force to the person of another, accompanied by a real or apparent intention

and ability to carry the threat into effect. Words alone cannot be an assault. But the raising of a band, with the apparent intention of striking a blow, is an assault, though the blow is never struck. If the blow is struck it is a battery, though in common speech it would be called an assault. Assault with intent to rob is a felony.

ASSAYE. Village in Hyderabad, India. It is about 260 m. N.W. of the city of Hyderabad. It is notable for the battle between British and Mahrattas, Sept. 23, 1803. In this the Mahrattas were totally routed.

ASSAYING. Method of determining the fineness or purity of a metal and the metallic value of an ore. A wet assay is one in which chemical solvents, liquid at normal temperatures, are used to separate from the ore the metal which it is the object of the assay to determine. The dry assay is one in which solid reagents are used; the process involves putting the sample of ore and the reagents into a state of fusion. The residue of metal remaining after treatment of the ore is weighed to determine its percentage.

In a volumetric assay the final result is measured, the percentage of metal in a solution of the ore, for example, being determined by the quantity of a standard reagent added to the solution to produce a given reaction. See Gold; Silver; Metallurgy.

ASSEMBLY (Lat. ad, to: simul, at one time). In general, a meeting of any kind. The term is used especially for an organized body of persons meeting together for some common purpose. In a more particular sense the word is used to describe the second or upper house of certain legislative bodies. It has a wide vogue in ecclesiastical matters. Presbyterians especially adopted it about the time of Knox, as in the case of the Assembly of Divines or Westminster Assembly. To-day the governing body of most of the Presbyterian churches is called the General Assembly. See National Assembly.

The phrase unlawful assembly has a legal significance. The best definition is by Stephen: "An assembly of three or more persons (a

with intent to commit a crime by open force: or (h) with intent to carry out any common purpose, lawful or unlawful, in such a manner as to give firm and courageous persons in the neighbourhood of such assembly ground to apprehend a breach of the peace." An unlawful assembly may be dispersed by force.

ASSENT, ROYAL. Final stage in the passage of a bill through Parliament. The ceremony takes place in the House of Lords, and the assent is given at one time to a group of bills which have passed three readings in each house. The king is represented by three commissioners, who sit in front of the throne, while the Speaker and members of the House of Commons stand at the bar. A clerk reads out the king's commission empowering the three peers to act for him, and the clerk of the crown reads out the title of each bill. The clerk of the parliament replies in Norman French, *Le roy le veut* (the king wishes it), and the bill is law. See Act of Parliament.

ASSER (d. c. 909). English historian and bishop. A monk of St. David's, he was invited to court by King Alfred about 885, where he assisted the king in his studies. Some time before 900 he was appointed bishop of Sherborne. He was the author of a *Life of Alfred*, *De rebus gestis Aelfredi Magni*, the best edition of which is that of W. H. Stevenson, 1904.

ASSER, SIR JOSEPH JOHN (b. 1867). British soldier. Attached to the Egyptian army, he first saw active service in the expeditions down the Nile in 1897, '98, and '99. In 1907 he was made adjutant-general of the Egyptian army, and had just retired from that position when the Great War broke out. He was employed as a commandant on the lines of communication from Aug., 1914, to July, 1915, and from then until Dec., 1916, as a commandant at the base. Later he was promoted to supervise the departments behind the lines. Knighted in 1917, he was commander-in-chief in France and Flanders in 1919 and governor of Bermuda, 1922-27.

ASSESSMENT (Lat. ad, to; sedere, to sit). Term used in Great Britain chiefly in connexion with the levying of rates and taxes. A person's income is assessed for income tax, and on the sum assessed he must pay. Business premises, houses and land are assessed for rates. Here the assessable value, which is something less than the rent, is fixed, and on this the rates are paid. Thus if a house is assessed at £60 a year and the rates are 10s. in the £, the owner or occupier must pay £30 a year in rates. Since the passing of the Rating Act of 1925 every county, borough and other rating authority must have an assessment committee which is responsible for valuing property for rates. See Rates.

The word is also used for the damages fixed by a jury in a law case.

ASSESSOR. Name given to one called in by a court to assist in technical matters. The assessor is not a judge. Thus, in Admiralty cases the Elder Brethren of Trinity House may be, and always are, called in as assessors to advise the judges on matters of navigation and the like. In workmen's compensation cases the county court judge can call in a medical man to advise him on medical or surgical matters. Under the Clergy Discipline Act, 1892, lay assessors sit with the bishop's chancellor as a sort of jury to determine questions of fact.

ASSETS (Latin ad, to: satis, enough). Commercial term most frequently employed when an account of debts and credits is made. Such occasions are when the estate of a bankrupt is being investigated, or a company is in liquidation, or the property of a dead person is being distributed.

ASSHUR or **ASSUR**. Greatest of the ancient gods of Assyria. He was regarded as self-created, and the father and king of the other gods. There was a great temple to him in Nineveh. See Assyria (illus. p. 146).

ASSHUR or **ASSUR**. The earliest Assyrian capital. It stood at Kalat Sherghat, on the right bank of the Tigris, 55 m. S.E. of Mosul, Irak. Spelt more correctly Ashshur, it gave its name to Assyria. A prehistoric settlement, it was occupied by Semitic Babylonian migrants before Hammurabi, was deserted for Calah by Shalmaneser I, and was rebuilt by Tiglath-pileser I. Andrae's excavations, from 1904 onwards, revealed its Asshur temple, royal palaces and tombs, and house foundations. See Patesi.

ASSIGNAT (Lat. assignatus, assigned). Name given to a species of paper money issued in France during the Revolution. The security behind the notes was the land forfeited to the state, which was assigned to the holders of the assignats, hence the name. The nation's creditors were paid by assignats, and with them they could buy blocks of the public land. On the notes interest at the rate of five per cent was promised.

In 1790 more public debts were discharged by a larger issue of assignats. They were made legal tender, and soon the country was flooded with them. By 1796 the assignats had become almost valueless, a state of affairs made worse by the circulation of forgeries.

ASSIGNATION. In Scots law, the transfer of rights or movable property to another, the equivalent of the English assignment. Such a transfer must be notified to the debtors concerned in order to make it valid. The word is also used for an appointed meeting, e.g. a secret meeting of lovers.

ASSIGNMENT. Word used to indicate the legal transfer of property from one person to another. Every species of property has its own legal mode of assignment or transfer. Thus personal chattels are assignable by delivery or by a writing called a bill of sale. Freeholds are assigned by deed of grant; leaseholds by deed of assignment: choses in action, except negotiable instruments, by writing under the hand of the assignor, and notice thereof to the debtor whose debt has been transferred.

ASSINIBOIA. Former district of the North-West Territories of Canada. It was bounded N. by Saskatchewan, S. by the U.S.A., E. by Manitoba, and W. by Alberta. Under the Dominion Act of 1905 the greater portion of the district was merged into the new province of Saskatchewan, and the remainder in the new province. The name is derived from the Assiniboins, a native tribe, who also gave their name to the Assiniboine, a river of Manitoba, Canada, that enters the Red River at Winnipeg and is 700 m. long.

Assisi. The town is built upon a hill, dominated by a castle. To the left are seen the church and monastery of S. Francis. See above

It is navigable by ships of 100 tons to Fort Ellice. See Alberta: Saskatchewan.

ASSISI. City of Italy, in the prov. of Perugia. It is 15 m. by rly. E. by S. of the town of Perugia, and is the birthplace of S. Francis (1182-1226). The monastery has two churches, built one above the other, with frescoes and pictures by Cimabue, Giotto, and others. Other ecclesiastical buildings are the cathedral, erected in 1140 and restored in 1572, and the churches of S. Maria, converted from a temple of Minerva, and S. Chiara, containing the remains of S. Clara, founder of the Poor Clares. To the S.W. is the church of S. Maria degli Angeli, built over the oratory of S. Francis. Pop. 18,537.

ASSIUT, **ASYÛT** or **SIÛT**. Town of Upper Egypt. It is situated near the Nile, 248 m. S. of Cairo, in the province of Assiut. The Greek Lycopolis, Assiut has been, and still is, a centre for caravan trade with Darfur and the interior. Below El Hamra, its port, is a harrage across the Nile. In the hills behind the town are rock tombs. Pop. 57,132.

ASSIZE (Lat. assidere, to sit beside). In early England, a word with several meanings. It denoted an assembly, the decisions or laws of such an assembly, a method of judicial procedure, and a jury. The first sense passed into the second, hence the assize or laws of Clarendon and the assize or law of arms, by which, in 1181, every freeman was ordered to provide himself with arms and armour suited to his rank and wealth. Prices were fixed by an assize, and so we have the assize of bread, ale, etc. The assize meaning a legal action was not finally abolished in England until 1835, and in Scotland the criminal jury is still called the jury of assize.

ASSIZES. Word, the plural of assize, used in England for the periodical visits of the judges to various provincial towns, where they try the more important civil and criminal cases. The whole of England and Wales, outside the metropolitan area, is divided into circuits which are visited by the judges twice, or sometimes three or four times a year. The towns at which they sit are called assize towns. Scotland and Northern Ireland similarly are divided into circuits for the holding of assizes. The official who records the doings of the judges is called the clerk of assize, one being appointed for each circuit. See Circuit.

ASSOCIATE (Lat. ad, to; socius, companion). Name given to certain clerks of the Crown Office, and certain officials of circuits. They may be either barristers or solicitors, and their business is to help the court by drawing up a list of causes, drawing the jury ballot, entering the verdict, making a note of the judgement, and the like. The associate always sits robed, under the judge, and facing the court. The word is also used for a member of a society, e.g. the Royal Academy, whose status is not that of a full member.

ASSOCIATION. Term for any society or combination existing for a common purpose. Thus there are business associations, of both masters and men, religious and philanthropic associations, political associations, sporting associations, and so on.

The word is used in a special sense for associations formed to protect the life of a sovereign in times of marked danger, e.g. in 1584, for the protection of Elizabeth against Roman Catholic plots and in 1696, after the failure of a plot to murder William III. The word was also applied to a union formed by the eastern counties of England in the early days of the Great Civil War.

ASSOCIATION CUP. Trophy competed for annually by football clubs in England playing the Association game. It was arranged in 1871. Fifteen clubs, all amateur, entered, and the first final was played at Kennington Oval, March 16, 1872.

Association Cup, English football trophy

There are six rounds in the competition, in addition to the final and semi-final. From the first two, the more important clubs are excused, leaving the others to fight for places in the third round. In this 64 clubs, including those hitherto exempt, compete. The games for the Cup are controlled by the Football Association, and since 1923 the final tie has been played in the stadium at Wembley. There are other cups—Amateur Cup, Scottish

Cup, etc.—competed for by football clubs.

WINNERS OF THE ASSOCIATION CUP			
1900 Bury	1913 Aston Villa		
1901 Tottenham Hotspur	1914 Burnley		
1902 Sheffield United	1915 Sheffield United		
1903 Bury	1920 Aston Villa		
1904 Manchester City	1921 Tottenham Hotspur		
1905 Aston Villa	1922 Huddersfield		
1906 Everton	1923 Bolton Wanderers		
1907 Sheffield Wednesday	1924 Newcastle United		
1908 Wolverhampton Wanderers	1925 Sheffield United		
1909 Manchester United	1926 Bolton Wanderers		
1910 Newcastle United	1927 Cardiff City		
1911 Bradford City	1928 Blackburn Rovers		
1912 Burnley	1929 Bolton Wanderers		

ASSONANCE (Lat. ad, to; sonare, to sound). Repetition of vowel sounds without regard to the consonants, as a substitute for rhyme. Instances are dwell and tread, sleep and feel, gloaming and boating. It is a distinguishing characteristic of the lyrical and dramatic literature of Spain and Portugal. In

Assuan. Sluice gates in the great dam constructed across the Nile at the head of the First Cataract

France, assonance is found in the romances of the trouvères, but was rejected early in the history of French poetry. Assonance is found in Celtic poetry. See Poetry; Rhythm.

ASSOS. Ruined city of Asia Minor. It stands at the entrance to the Gulf of Adramyti, opposite Mitylene, near the modern village of Bahram. It was founded by colonists from Mithymna. In 1881-83 the American Institute of Archaeology found fragments of bas-reliefs of the Doric Temple of Athene, and enabled a plan of the temple to be outlined. Some sculptured panels of the temple are in the Louvre, Paris.

ASSUAN or **ASWÂN**. Town in Upper Egypt, in the province of Assuan, on the right bank of the Nile, near the first cataract. It is the ancient Syênê. Near are granite quarries whence materials for monuments and temples were obtained. The neighbourhood is rich in

archaeological remains, especially some of the islands in the Nile, such as Elephantine and Philae. Pop. 16,453.

Assumption of the Virgin. Famous painting by Andrea del Sarto in the Pitti Gallery, Florence.

Three m. S. is the dam across the Nile, opened Dec. 10, 1902. It is $1\frac{1}{2}$ m. long, with 180 steel sluice gates, and was planned by Sir William Willcocks. In 1912 it was made higher and the capacity of the reservoir increased from 1,000 to 2,420 million cubic metres. In 1929 a contract for raising again the height of the dam was signed.

ASSUMPTION (Lat. ad, to; sumere, to take). Term used for the taking up into bliss of the souls of departed saints, but more distinctively applied to the festival of the Assumption of the Virgin Mary, Aug. 15. It is the principal festival in her honour, and a day of obligation for Roman Catholics, but it has no place in the prayer book of the Church of England.

The Assumption is the theme of many famous pictures, e.g. by Perugino, in the Academy at Florence; Guido Reni, in the Munich Gallery; Titian, in the Academy at Venice, regarded as this artist's masterpiece.

Assumptionists is the name given to several Roman Catholic religious communities, e.g. that of the Little Sisters of the Assumption, or Nursing Sisters of the Poor, founded at Paris in 1864.

Assurance (Lat. ad, to; securus, safe). Alternative name for insurance of life. See Insurance.

ASSYNT. Loch of Sutherlandshire, Scotland. It is 6 m. E. of Lochinver, lies 215 ft. above sea level, is $6\frac{1}{2}$ m. long by about $\frac{1}{2}$ m. wide, and contains sea and loch trout. On its shores Montrose was captured in 1650.

ASSYRIA. Ancient empire of Mesopotamia. The Assyrian homeland was an arid, treeless, upland region. It stood high above the alluvial plain of Babylonia to the S., and was bounded on the N. by the Armenian highlands, on the E. by the Zagros ranges, and on the W. by the middle Tigris. Originally Assyria embraced no more than the city Asshur, which occupied a spur guarding the right bank of the Tigris. It was long a dependency of Babylonia, but under Tiglath-pileser I, who came to the throne about 1120 B.C., the positions were reversed.

Vast accessions of territory were made by the usurping general Tiglath-pileser IV (745-727 B.C.), with Nineveh as the centre of government. The campaigns of another usurper, Sargon II (722-705 B.C.), were eminently successful, and his son Sennacherib, (705-681 B.C.), kept the empire intact. Under Sennacherib's son Esarhaddon (681-668 B.C.) Egypt was added to the Assyrian empire, which then attained its greatest extent and power.

At Esarhaddon's death the empire was divided between his two sons. But dangers were threatening. The Medes and other enemies were gathering on the borders, Egypt was lost, and other parts of the empire were tottering to their fall. A Chaldaean prince became king of Babylon and added continually to his gains. Finally, in 612 B.C., the Medes and Babylonians made a united and successful attack on Assyria, and Nineveh was taken and destroyed.

The Assyrian language is essentially the same as that of Babylonia. The cuneiform script employed in Assyria and Babylonia was peculiarly suitable for Babylonia, where the writing material was clay, there being no rocks in Babylonia. Assyria copied, though without the same necessity, the Babylonian custom of writing on clay, which was afterwards dried in the sun or in kilns. Assyrian literature consists chiefly of dried bricks or tablets and of inscriptions

on palaces, temples and rocks. Much of the contents of the great library of Nineveh (Kuyunjik) is in the British Museum. Examples of an Assyrian palace and a ziggurat (temple-tower) are those of Sargon II in his capital Dursharrukin (Sargon's fortress), the modern Khorsabad, 10 m. N. of Nineveh. The Assyrian sculptors usually worked in bas-relief; their work is seen chiefly on slabs covering the walls of palaces and temples, and on rocks.

The religion of the Assyrians, like the language, was virtually that of the Babylonians. The chief god of Assyria was Asshur (Assur), the chief god of Babylonia Marduk. Both Assyria and Babylonia recognized and to some extent worshipped evil spirits, astral gods, and gods representing natural forces. This ancient religion was polytheistic in that each city had its own deity, but with the progress of thought Asshur and Marduk became each the supreme deity of his own country, inferior

Assyria. Sculptures from the Royal Palace at Nineveh. Below, the ruthless monarch Ashurnasirpal II with an attendant; above, Assur, chief Assyrian deity, holding a basket. British Museum.

gods being regarded as their representatives. Worship consisted of sacrifices accompanied by prayer for protection against evil spirits. See map p. 147.

Consult: Assyria: its Princes, Priests, and People, A. H. Sayce, 1885; History of Babylonia and Assyria, R. W. Rogers, 2 vols., 1900 (6th ed. much enlarged, 1915); Ancient Assyria, C. H. W. Johns, 1912; History of Assyriology, Sir E. A. W. Budge, 1925.

ASTARTE. Principal female deity of the Phoenicians, her male counterpart being Baal. She is identified with the Ashtoreth of the O.T. (1 Kings 11 and 2 Kings 23), with Ishtar, the Assyrian goddess, Hathor, the Egyptian goddess, and later with the Greek Aphrodite.

Astarte. Ancient bronze statuette of the goddess.

Assyria. Map showing the position of the ancient empire, with its capital, Nineveh, midway between the Mediterranean and Caspian seas. See p. 148.

ASTER (Gr. star). Large genus of mainly perennial herbs of the order Compositae. Natives of most of the temperate and cold regions of the earth, particularly America, they have undivided leaves and daisy-like flower-heads, the disk-florets of which are always yellow, and the ray-florets lilac, blue, purple, or white.

Many species are cultivated in gardens. From their general habit of flowering in autumn they are popularly known as Michaelmas daisies. The garden plants known as China

asters are summer annuals belonging to another genus (*Callistephus*).

ASTERIA. In Greek mythology, daughter of one of the Titans. When pursued by Zeus, she was changed into a quail, flung herself into the Aegean Sea, and became a floating island, called Asteria, star island, or Ortygia, quail island. Later, this was known as Delos, the birthplace of Apollo and Leto (Latona).

The name asteria is given to certain rubies and sapphires which appear to be divided by six rays, spreading from the centre outwards, producing a star-like effect.

ASTERISK (Gr. asteriskos, little star). Mark (*) in printing or writing to indicate a marginal reference or footnote, the omission of a letter, word, or words, or, placed at the foot of a page, to indicate, for binders' guidance, an inset. In guide-books places of special interest are indicated by an *; and the mark is used with an obelus or dagger (†) in lists of names to denote respectively the birth or death of the person against whose name one sign or the other is placed.

ASTEROID (Gr. aster, star; eidos, form). Name given to a minor planetary body. The first was discovered in 1801, and the search and discovery have gone steadily on until there are now nearly 900. All circulate between the orbits of Mars and Jupiter, and there is reason to believe that they are the larger members of an innumerable swarm of small bodies rotating round the sun. The four largest are Ceres (485 m. in diameter), Pallas, Vesta, and Juno. See Astronomy; Star; Sun.

emanations or odours from flowers or animals, may bring on a paroxysm. Errors in diet, fright, or violent emotion are other causes.

The attack may last for a few minutes to several hours. In those who have long suffered from the disease chronic bronchitis may occur, with permanent changes in the lungs. Many drugs relieve attacks of asthma. Belladonna, henbane, or stramonium may be given in the form of solution, or inhaled in cigarettes. Inhalation of nitrate of amyl is often useful. To prevent an attack particular attention should be paid to diet, and the conditions known to act as exciting causes should be avoided. In 1923 an Asthma Research Council was founded in London.

ASTI. City of Italy, in Alessandria province. It stands on the Tanaro, 34 m. by rly. S.E. of Turin. The ancient Asta Pompeia, it has a cathedral dating from the 13th and 14th centuries, with two fine altar pieces by a master of the Verelli school; the church of San Giovanni, built over a 6th century Christian basilica; and an 11th century baptistry. The birthplace of the poet Alfieri (1749-1803), it has an Alfieri museum. Anciently famous for its pottery, its manufactures now include silk, leather, hats, and matches, and it is celebrated for its sparkling wine. Pop. 41,000.

ASTIGMATISM (Gr. a, not; stigma, a mark). Defect in the refracting surfaces of the eye. It most frequently occurs in the cornea, but sometimes in the lenses, which are unequally curved in different directions. The result is that rays of light are not all focused at one point, and vision is blurred. The condition can be corrected by the use of cylindrical glasses. See Eye.

ASTLEY. District of Lancashire. It is 8 m. W. of Manchester on a section of the L.M.S. Rly. It has coal mining and cotton industries. Dam House, now called Astley Hall, has been made into a hospital. Pop. 3,902.

ASTLEY, SIR JOHN DUGDALE (1828-94). British sportsman. Joining the army in 1848, he served throughout the Crimean War. He was devoted to sport, an excellent sprinter, owned several famous racehorses, and won many important races. He inaugurated the go-as-you-please races at the Agricultural Hall in 1877, in which Weston and other pedestrians

ASTHMA (Gr. gasping). Disease characterised by sudden paroxysms of difficult breathing. The disease is essentially due to a neurosis or disorder of the nervous system which brings about a spasm of the bronchial muscles, and is associated with swelling and congestion of the smaller bronchial tubes. The exciting causes of an attack are varied. Inhaling a dusty atmosphere, or air containing pollen from hay or certain

took part. He was Conservative M.P. for N. Lincolnshire 1874-80, and died Oct. 10, 1894. Consult his Fifty Years of My Life. 1894.

ASTLEY, PHILIP (1742-1814). Equestrian performer and circus manager. Born at Newcastle-under-Lyme, and brought up as a cabinet maker, in 1759 he joined the light horse in Holland during the Seven Years' War as a breaker-in and rough-rider. After serving with distinction, he went round England giving exhibitions of horsemanship. At different periods he had amphitheatres in London, Dublin, and Paris, including Astley's Royal Amphitheatre near Westminster Bridge, London. He died in Paris.

ASTON MANOR. Formerly a borough of Warwickshire. In 1911 it was incorporated with Birmingham and forms one of its parliamentary divisions. Its manufactures include arms, cycles, and motors. Aston Hall is now a museum and art gallery, and the public grounds contain the Aston Villa football ground. See Birmingham.

ASTON VILLA. Name of an English football club. Founded in 1874 at Villa Cross, Handsworth, Birmingham, by some youths connected with a Wesleyan church, and playing under Association rules, it won many local trophies, including the Birmingham Association Cup in 1889. The club adopted professionalism in 1897, and since then has won both the Association Cup and League Championship on six occasions. The club was reconstructed in 1896. Its ground is at Aston. See Association Cup; Football.

ASTOR, JOHN JACOB (1763-1848). American merchant. Born near Heidelberg, of humble parentage, Astor went to New York in 1783 and acquired a fortune by trading with the Indians for furs. His business grew rapidly; he founded Astoria in Oregon as a trading centre, and sent his wares all over the world. Much of his wealth was in land in New York City, which increased enormously in value during the 19th century. His chief heir was his son William Backhouse Astor (1792-1875). A great-grandson, another John Jacob Astor (1864-1912), was drowned when the Titanic was lost in 1912.

Another great-grandson, William Waldorf Astor (1848-1919), in 1899 became a British subject. He owned The Pall Mall Gazette and The Observer, contributed largely to war charities, was made a baron in 1916 and a Viscount in 1917. His elder son, William Waldorf Astor (b. 1879) was M.P. for Plymouth 1911-19, and Parliamentary Secretary to the Ministry of Health, 1919-21. The 1st Viscount Astor's younger son, John Jacob Astor (b.

Aston Villa. The team that won the Football Association Cup in 1887-8. Back row (left to right): F. Coulton, F. Dawson, G. Kynoch, M.P. (president), J. Warner, R. Davies, J. Borton. Middle row: D. Hodgkiss, H. Vanghton, A. Hunter, J. Simmonds. Front row (on ground): H. Yates, A. Brown

(1886) became principal proprietor of The Times after the death of Lord Northcliffe. In 1922 he was elected M.P. for the Dover division.

ASTOR, NANCY WITCHER ASTOR, VISCOUNTESS. Anglo-American politician. She was the daughter of Chiswell Dabney Langhorne, of Mirador, Greenwood, Virginia, U.S.A., and married, secondly, in 1906, W. Waldorf Astor. Interested in social work, she helped her husband in his political career, and when he succeeded his father in the House of Lords in 1919, Lady Astor was chosen as Coalition candidate for his constituency, the Sutton division of Plymouth. On Nov. 28, 1919, she was elected M.P., with a majority of 5,203, and she took her seat on Dec. 1, 1919, the first woman to sit in the British House of Commons. She was again returned in 1922, 1923, 1924 and 1929.

ASTORIA. City and port of Oregon, U.S.A. It is on the S. side of Columbia river, about 9 m. from the open sea. Grain and lumber are exported, and the canning of salmon is a big industry. Astoria owes its origin and name to John Jacob Astor, who here founded a fur trading station in 1811. It was the first settlement in the region, and was for some years in possession of the English. It became a city in 1876. Pop. 14,027.

ASTRAEA (star-maiden). In Greek mythology, daughter of Zeus and Themis. The last of the deities to leave the earth at the beginning of the Iron or Bronze Age, after her return to Olympus she was placed among the stars as the constellation Parthenos or Virgo. Dryden's poem *Astraea Redux* (Astraea brought back) celebrates the Restoration as the revival of a Golden Age.

ASTRAKHAN. Skin of certain lambs. When this is cured and the short curly wool dyed, the so-called fur is very suitable for clothing. The natural skin is imitated in astrakhan woven and knitted goods, in which curls of mohair are supported upon a foundation of threads.

ASTRAKHAN. Town of the Union of Soviet Socialist Republics, capital of the province of Astrakhan. It is situated on an island of the Volga river, about 50 m. from the Caspian Sea. It was formerly the seat of Greek and Armenian archbishops. A university was established in 1919. Astrakhan is an important entrepôt for fish, timber, grain, petrol, and other products, and for the Persian trade. There is now a through steamer service from the Baltic. Nearly half of the population live by the Volga fisheries. The speciality of Astrakhan is caviare. The city gives its name to a fine kind of fur made from the skins of young sheep. Cattle breeding, fishing and the extraction of salt from the lakes are the chief industries of the district. Pop. 176,530.

ASTRINGENT (Lat. *astringere*, to bind fast). Drug which causes contraction of vessels and thus lessens the amount of exudation from them. Astringents are most often used to stop bleeding, but are also employed to check diarrhoea and reduce discharges from mucous membranes. Alum, salts of iron, and tannic acid are examples.

ASTROLABE (Gr. *astron*, star; *labein*, to take). Instrument used by the Greeks and Arabs and in medieval Europe to take altitudes and to mark the positions and movements of sun, moon, and stars. In its simplest form it consisted of a circle with two radial pointers, one fixed and the other movable, and both fitted with sights. This was called the mariner's astrolabe. For astronomical observations the astrolabes used were more complicated

and embodied various circles (armillary circles), the rims of which lay on the surface of a sphere. The place of the astronomical astrolabe has been taken by the equatorial instrument. See Astronomy.

ASTROLOGY (Gr. *astron*, star; *logos*, science). Science professing to establish a connexion between the changing aspects of the stars and the changing course of human life, and thence to predict events and advise on the conduct most likely to achieve desired ends. It was the forerunner of astronomy.

The cardinal assumption of astrology was that a man's life was governed primarily by the aspect of the stars at the hour and place of his birth; this aspect was represented by a figure called a horoscope. For the purpose of the horoscope the celestial sphere was considered in relation to the horizon visible from the birthplace, and divided, in a way on which agreement was not general, into twelve parts called houses, six being above the horizon and six below.

The astrological planets—Saturn, Jupiter, Mars, Sun, Venus, Mercury, and the Moon—had each its own peculiar influence, Jupiter being the most propitious and Saturn the most unfavourable. The twelve signs of the zodiac were allotted to the governance of the various planets, the sun and moon ruling one each, and the other five each ruling two. The planet whose sign was rising, and therefore occupying the upper portion of the first house or ascendant, was considered to be the governing planet of the individual. It had an intimate relation to his temperament; he might be, e.g. of a saturnine, a jovial or a mercurial disposition—words which have permanently left the mark of astrological ideas on the English language. Consult *The Mystery and Romance of Astrology*, C. J. S. Thompson, 1929.

ASTRONOMY. Science dealing with the celestial bodies, their positions and motions, apparent and real, and the phenomena resulting therefrom, and with their physical conditions and characteristics and their arrangement in space. It deals also with the earth as a planet revolving round the Sun.

There are three main subdivisions. (a) Telescopic astronomy, dealing with direct observation. (b) Spectroscopic astronomy or astrophysics, treating of the celestial bodies observed with the aid of the spectroscope attached to the telescope. (c) Photographic astronomy. The celestial bodies can be divided into two great systems: (1) solar and planetary; (2) stellar.

The solar system is composed of eight primary planets and their satellites and an indefinite number of asteroids, comets and meteors, in revolution round the Sun at various distances and in varying periods. The Sun (q.v.) is the central body of the solar system.

The planets fall into two well-defined groups.

(a) The inner planets, whose orbits lie at mean distances of from 26 million to 141 million m. from the Sun. Of these the Earth is the largest, with a mean diameter of 7,918 m.; Venus, Mars, and Mercury are the other three. Of the inner planets only two possess satellites. The two attendants of Mars are very tiny, and for many years escaped the notice of astronomers. Our own satellite, the Moon, is, relatively to the size of our world, the largest secondary in the solar system.

(b) The outer planets, Jupiter, Saturn, Uranus, and Neptune, are situated at

mean distances from the Sun ranging from 484 to 2,792 millions of miles. They are much larger than the inner planets and appear to be in a much earlier stage of development. They are also much less massive than the inner planets in proportion to size, and are further characterised by their extremely rapid rotation. The

Astronomy. Reflecting telescope at Mount Wilson Observatory, California. Its mirror measures 100 in. Royal Astronomical Society

outer planets all have satellites, and Saturn possesses the wonderful ring system, composed of myriads of tiny meteorites.

The stars are divided into types, according to their spectra. The classification of Secchi divides the stars roughly into four spectral types: (1) Sirian or white stars; (2) solar, or yellow stars; and (3) and (4) red stars. That these types represent a real evolutionary sequence admits of no reasonable doubt.

The stellar system is composed of several hundreds of millions of stars and a large number of gaseous nebulae. The Milky Way or Galaxy is the ground-plan of the stellar system—the equatorial zone of the universe. The stars composing the system are in ceaseless motion, and there appears to be a preferential motion in two well-defined directions. Star-clusters are outlying subordinate systems.

HISTORY. Astronomy is the oldest of the sciences. The first effort to co-ordinate the known facts was made, in Greece, by Eudoxus of Cnidus (4th century B.C.). His theory of the motion of the celestial bodies on concentric spheres was accepted by Aristotle, who made it the basis of his theory of the universe. Hipparchus (190–120 B.C.) was probably the greatest of ancient astronomers. He discovered the precession of the equinoxes and developed theories of solar and lunar motion.

Ptolemy developed (A.D. 137) the theory that the earth was fixed in the centre of creation, rejected later by Copernicus (1473–1543), whose theory that the Sun and not the Earth was the centre of the planetary system roused fierce hostility. Kepler (1571–1630) discovered the three great laws of planetary motion, and Newton (1642–1727) proved that they are the result of universal gravitation. Galileo (1564–1642), working with the newly discovered telescope, was the founder of observational astronomy, and still further confirmed the Copernician theory.

In 1676 Greenwich observatory was founded, with Flamsteed as astronomer royal. Great names of the 18th century were those of Halley, famous for the first prediction of the return of a comet, and Herschel, who discovered the planet Uranus. In the 19th century astronomic progress was unparalleled, and since then it has been very rapid.

Astrolabe. The astrolabe of Regiomontanus, an instrument to measure the angular distance between two heavenly bodies

From the original made in 1462, in the Museum at Nuremberg

partly due to the invention of the spectroscope and to the great telescopes of America.

The astronomer royal for England is the head of the Royal Observatory at Greenwich. The office was founded in 1675. Scotland has an astronomer royal also, who is the head of the observatory on Blackford Hill, Edinburgh. There are astronomers in charge of observatories at Oxford, Cambridge, Hendon, Dublin, Cape Town, Poona, and elsewhere. Societies founded for astronomical observation include the British Astronomical Association, and the Royal Astronomical Society. See *Altazimuth*; *Asteroid*; *Observatory*; *Planet*; *Relativity*; *Spectroscopy*; *Star*; *Sun*. Consult also *General Astronomy*, H. S. Jones, 1922; *Astronomical Physics*, F. M. Stratton, 1925.

ASTROPHYSICS. Science of the physical properties of the stars. The introduction of the spectroscope and the photographic camera has made it possible to investigate the constitution of the stars, the structure and composition of nebulae, and the hypothetical structure of the universe more precisely than could have been attempted before. The new science is called astrophysics. See *Spectroscopy*; *Star*.

ASTURIAS. District in northern Spain, bordering on the Bay of Biscay. At one time a small kingdom, it is now represented by the province of Oviedo, although the older name is retained in a general sense.

When the Moors completed their conquest of Spain, the few remaining Christians maintained their independence in Asturias. In 910 the capital was transferred from Oviedo to Leon, and soon the kingdom of Asturias became the kingdom of Leon. Asturias is thus the nucleus of the kingdoms of Christian Spain and the heir to the throne bears the title of prince of Asturias. See *Spain*.

ASUNCION. Capital of Paraguay, S. America. It stands on the Paraguay, at the head of navigation for sea-going vessels. It has through rly. connexion with Buenos Aires, and communicates with Encarnacion, on the Paraná, by the Central Paraguayan Rly. It has a cathedral, a university, the headquarters of the Bank of Paraguay, a wireless station, shipyards, distilleries, foundries, and mills, and trades in maté, tobacco, sugar, hides, cedar, and fruits. It was founded on Assumption Day, 1536. Pop. 103,750.

Aswān. Alternative name for the town in Upper Egypt more generally known as Assuan (q.v.).

ASYLUM (Gr. *a*, not; *sylē*, right of seizing). Place of refuge. Among the ancient Hebrews asylum was afforded in the cities of refuge—three on each side of the Jordan—to those who had committed homicide unawares. In Greece slaves, debtors, criminals, and others sought asylum at temples, altars, sacred groves, and statues of the gods, from which it was sacrilege to drag them. In Rome statues and other representations of the emperors, and also the Roman eagles, were deemed inviolable refuges. In modern times the name is specially applied to institutions for the care of the mentally afflicted.

The right of asylum is the right of a state to receive and protect those who have broken the law in other lands. It is to-day much limited by extradition treaties.

An asylum board is a body of men and women chosen to manage the asylums for a group of local authorities. The principal was the Metropolitan Asylums Board, which was abolished in 1929, its duties being transferred to the London County Council, as from April 1, 1930. See *Extradition*; *Sanctuary*.

ATACAMA. Desert of N. Chile. It comprises the greater part of the provs. of Atacama and Antofagasta, and covers an area of about 70,000 sq. m. It rises from the coast in rocky plateaux, broken by mt. ridges, and attains

an elevation of from 7,000 ft. to 13,000 ft. in the Cordillera. Rain seldom falls, except in the E. It is almost devoid of vegetation, and is partly covered with saline, nitrate, and borax deposits. dried lake beds, and shallow ponds. The province of Atacama has an area of 30,711 sq. m. Its capital is Copiapo.

ATAHUALPA (c. 1495-1533) Last Inca ruler of Peru. Born probably at Cuzco, he was the son of the Inca sovereign Huayna Capac. On his father's death in 1525 he received Quito, and his half-brother, Huascar, the rest of the realm. In the spring of 1532, refusing to recognize Huascar as overlord, Atahualpa defeated and captured him and became sole ruler. In Nov., 1532, Pizarro invited Atahualpa to a friendly interview, and took him prisoner. After paying a large ransom, Atahualpa, still in captivity, plotted to murder Huascar; but his plans were discovered and he was condemned to be burned. On professing Christianity this sentence was altered, and he was garrotted Aug. 29, 1533.

ATAKPAME. Town in British Togoland, W. Africa. A terminus of the rly. from Lome, it is the centre of a rich agricultural and rubber- and cotton-producing district. Its powerful wireless station was destroyed by the Germans during the Great War. Pop. 8,000.

ATALANTA. In Greek mythology, the name of an Arcadian maiden. Wishing to avoid marriage, she made it a condition that her suitors should run a race with her. The one who beat her in the race was to have her hand; those whom she overtook she slew with a spear-thrust in the back. At last she was beaten by Milanion, who as he ran dropped three golden apples given him by Aphrodite. Atalanta, stopping to pick them up, lost the race, and became the wife of Milanion. She is said to have accompanied Jason on the Argonautic expedition and to have taken part in the Calydonian boar hunt, an incident which forms the subject of Swinburne's poem *Atalanta in Calydon*. See *Calydon*; *Meleager*.

Ataman. A variant form of hetman, a Cossack chieftain. See *Cossacks*; *Hetman*.

ATARGATIS. Syrian goddess. This Greek name, often transliterated Derceto, embodies the Aramaic form of Ishtar with the Syrian *Atē* or the Lydian *Attis*. Goddess of life-giving water, her chief temples were at Hierapolis, Edessa, and Ashteroth-Karnaim. Mostly represented in human form as the Philistine Ashkelon, she became fish-tailed.

ATAULF (d. 415). King of the Visigoths. He was the brother-in-law of Alaric, whom he succeeded in 410. After assisting Alaric in his invasion of Italy, Ataulf crossed into Gaul. In Jan., 414, he married at Narbonne his captive Placidia, sister of Honorius, emperor of the West, and later went to Spain to quell a revolt of the Vandals and Suevi. He was assassinated at Barcelona in 415. The name, variously spelt, appears in the latinised form *Adolphus*. See *Visigoths*.

ATAVISM (Lat. *atavus*, father of a great-grandfather). Term used in biology. It expresses the occurrence in an organism of some feature or structure not usually present in the existing generation of that species, but suggesting reversion to a type present in former generations. See *Biology*; *Heredity*; *Life*.

ATAXIA or **ATAXY** (Gr. *a*, not; *taxis*, order). Term for defective coordination of the muscles of movement and balance, or loss of the power of coordinating them. It is a late symptom of the disease locomotor ataxia. See *Locomotor Ataxia*.

ATBARA. Tributary of the Nile. Rising near Lake Tana (Tsana), in Abyssinia, it joins the Nile below Berber, and is the last tributary to enter the Nile before that river reaches the Mediterranean Sea.

The town of Athara is a rly. junction, 388 m. from Wady Halfa to Khartoum.

The battle of the Athara was fought April 8, 1898, between a British and Egyptian army under Sir Herbert (afterwards Earl) Kitchener and the followers of the Mahdi under Mahmud. The force, consisting of four brigades of infantry, one British under General Gatacre, and three Egyptian, with cavalry and artillery, arrived in front of the Mahdi's zareba just before dawn. The zareba was stormed, and by 8.30 the fight was over and Mahmud a prisoner. The losses of the Anglo-Egyptians were 34 officers and 525 men, out of about 12,000 engaged, mostly incurred during the passage through the zareba. Consult *With Kitchener to Khartoum*, G. W. Stevens, 1898; *The River War*, Winston S. Churchill, 1899.

ATE (Gr. *infatuation*). In Greek mythology, daughter of Zeus, or of Eris (strife). The goddess of mischief, *Atē* figures in Greek tragedy as the power who lures the guilty to further deeds of evil until they compass their own doom.

ATEF. Symbolic crown or headgear worn by Egyptian gods. It consists of a tall white cap with a plume at each side, and bearing the solar disk and uraeus, or serpent emblem.

ATELIERS NATIONAUX. French national works or workshops, especially those set up in Paris in 1848. In Feb. of that year the provisional government guaranteed work and subsistence to all, starting experimental works in Paris and in the neighbourhood.

The number of unemployed increased until there were more than 115,000 names on the pay roll, while many of those employed did as little as possible. In May the new National Assembly dismissed all single men under 25 years old who refused to join the army, all who refused offers of private employment, and all who had been in Paris for less than six months. These and other changes led to the insurrection of June, 1848, and the system collapsed.

These ateliers must be distinguished from the ateliers de charité, societies formed to assist destitute workmen; and from the ateliers sociaux, productive societies established by Louis Blanc, who was also largely responsible for the ateliers nationaux.

ATH or **AATH.** Town of Belgium, in Hainaut prov. It stands on the canalised Dender, 32 m. by rly. S.W. of Brussels. The Tour du Burbant dates from the 12th century, and the church of S. Julian from the 14th century, although it has been almost wholly rebuilt since its destruction by fire in 1817. Ath is noted for its annual procession of giants. During the Great War it was the scene of the last fighting on the western front, Nov. 11, 1918. Pop. 10,672.

ATHABASKA. Former district of the North-West Territories of Canada. It covered 251,000 sq. m. In 1905 the W. part was merged into the new prov. of Alberta, and the E. part, with the exception of a strip on the extreme E., was united with the district of Saskatchewan to form part of the new prov. of that name. The remainder was absorbed into the North-West Territories, and was acquired in 1912 by Manitoba. It is watered by Athabaska, Peace, Reindeer, and other rivers and the Athabaska, Reindeer, and other lakes. The name, sometimes spelled *Athapascan*, is that of an Indian tribe who lived in the district and are still found in N. America.

The Athabaska river, also called the Elk, rises in the Rocky Mts. and, after a course of 776 m. through Alberta and Saskatchewan, enters Lake Athabaska. It is navigable from McMurray. Lake Athabaska, also in Alberta and Saskatchewan, is 195 m. long and covers 2,840 sq. m. The Slave river carries its waters to the Great Slave Lake. Athabaska Pass in the Rockies leads from British Columbia into Alberta. It is 10,500 ft. high.

ATHALIAH. Daughter of Ahab and wife of Jehoram, king of Judah (2 Kings 8). A worshipper of Baal, after the assassination of her son and Jehoram's successor, Ahaziah, she seized the throne and had all the royal children killed except Joash, who was rescued by his nurse. After she had reigned six years, the high priest Jehoiada arranged with the officers of the army to have Joash suddenly proclaimed king and crowned. When Athaliah appeared on the scene she was seized and slain (2 Kings 11; 2 Chron. 22-23).

ATHANARIC (d. 381). Ruler of the Visigoths. After three campaigns against the East Roman emperor Valens he was compelled in 369 to sue for peace, the negotiations between the emperor and the Goth taking place on a barge on the Danube. In 376 Athanaric was defeated by the Huns and fled to the court of Theodosius I. He died at Constantinople in 381.

ATHANASIUS (c. 297-373). Saint and doctor of the Church. Born at Alexandria, he was present as a deacon at the council of Nicea, 325, and was made bishop of Alexandria the same year. For his refusal to recall Arius from exile in 330 he was banished by the Emperor Constantine in 336, but on the deaths of Arius and Constantine he was allowed to return. The Arian party drove him out of Alexandria again in 340, but he was again restored in 346.

For ten years he laboured in his diocese, and then by the decree of the council of Milan, 355, he was once more banished. From 356-362 he withdrew to the desert, to be restored in 363, exiled, and finally restored in 364. His last nine years were spent in Alexandria, where he died May 2, 373—the date of his festival. It is due more to Athanasius than any other man that the faith as defined at Nicea prevailed in the Church. The saying, Athanasius contra mundum, Athanasius against the world, passed into a proverb, so considerable was the Arian majority against whom he contended. See Arianism.

ATHANASIAN CREED. This symbol of the Christian faith contains a short exposition of the doctrines of the Trinity and the Incarnation. It is one of the three creeds of Western Christendom, and in the Church of England is ordered to be recited at Morning Prayer in place of the Apostles' Creed on Trinity Sunday

and on twelve festivals during the year. In the Roman Catholic Church it is said at Prime every Sunday, and in the old Sarum rite it was said daily at Prime. Its authorship remains problematical. Known sometimes by its opening words, *Qui cum vult—Whoso wills or wishes*—its so-called "damnatory" clauses have provoked considerable criticism in the Church of England and in some churches it is not used. See Apostles' Creed.

ATHEISM (Gr. a, not; theos, God). System of thought opposed to theism or belief in God. The term has been applied in an accusatory sense to the denial of current beliefs on divinity—e.g. to Socrates by his accusers, and to the early Christians by the supporters of Roman mythology. Atheism is not the declining to assert an affirmative belief in theism, but is the assertion of the negative to theism. See Christianity: Freethought.

ATHELING (A.S. of noble birth). The root of the word appears in the names of some early kings, e.g. Ethelbert and Ethelred. Before the 8th century atheling was used of anyone of noble birth, but later was employed only for members of the royal family.

ATHELNEY. Tract of land in Somersetshire. It lies within the angle formed by the confluence of the Tone and Parret rivers. After his defeat by the Danes in 878-9 King Alfred (q.v.) took refuge here. In gratitude for the asylum, he later founded a Benedictine monastery on the site. In 1693 the Alfred Jewel was found here.

ATHELSTAN (c. 895-940). Anglo-Saxon king, the first to be called King of the English. The son of Edward the Elder and grandson of Alfred the Great, he was crowned at Kingston, Surrey, in 925. In 937 he overthrew all his

rivals at Brunanburh. He died at Gloucester, Oct. 27, 940, and was buried in Malmesbury.

ATHENA. Major deity of ancient Greece. Also called *Athēnē*, *Pallas Athene* or *Pallas*, she was identified by the Romans with *Minerva*. A daughter of *Zeus*, she is represented as having sprung fully armed from the head of her father. Pre-eminently the goddess of wisdom, she was also the goddess of war, regarded as a master of strategy and tactics, not, like *Arēs* (*Mars*), the deity of blood and slaughter. *Athena* was also patron of the useful arts and the protectress of Athens.

A magnificent temple, the Parthenon, was erected in her honour on the Acropolis. In the Trojan war, *Athena* espoused the cause of the Greeks, and *Achilles*, *Odysseus*, and *Dionedēs* were under her special protection. She was always regarded as *Parthenos*, or the maiden goddess, and in art she is represented as of a somewhat masculine appearance, wearing a helmet and shield. There were three famous statues of *Athena* by *Pheidias*. See *Athens*, *Minerva*; *Mythology*.

ATHENAEUM (Gr. temple of *Athena*). Name given in classical times to schools of science and art. Such institutions existed at Athens, Alexandria, Rome, and elsewhere, one of the most famous being that founded by the emperor *Hadrian* at Rome (A.D. 135). At first much used for the recitation of their productions by poets and rhetoricians, they developed into something like the modern teaching university, with a system of lectures and salaried professors.

The Athenaeum Club, London, was founded in 1824, and its house at the corner of Pall Mall and Waterloo Place was built soon afterwards, the frieze of the building being a copy of that of the Parthenon at Athens. Persons eminent in public life, science, literature, and art are eligible for membership. The club contains a fine library.

A weekly journal, *The Athenaeum*, existed from 1828 until incorporated with *The Nation* in 1921.

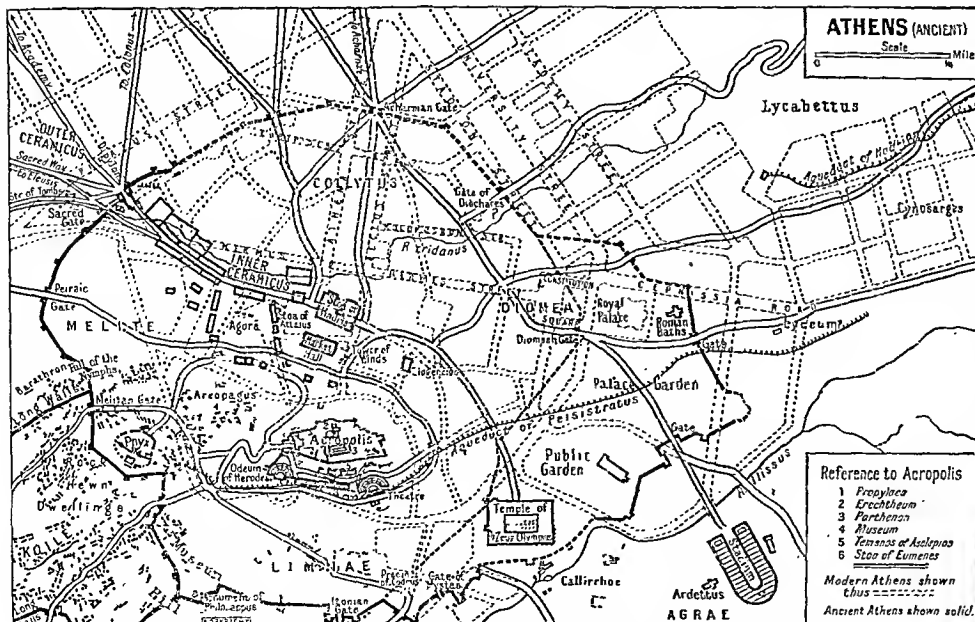

ATHENS. The most famous of Hellenic cities, and now the capital of the Greek republic. It is situated in Attica on and around a group of hills, about four miles from its harbour town, the Piræus (*Peiræus*).

The earliest town consisted, according to *Thucydides*, of the Acropolis and its immediate surroundings. The tyrant *Peisistratus* began the great temple of *Zeus Olympius*. Shortly before the Persian invasion in 480 B.C. the Athenians became the chief sea power of Greece. It was one of the great achievements of *Themistocles* that he made them realize the value of the Piræus. The age of *Pericles* was the time of the highest artistic activity. The Parthenon was built between 447 and 433 B.C., and the great columned gate house, or *Propylæa*, was begun in 437 B.C. The Erechtheum was probably begun in an interval of the *Peloponnesian* war.

In the Hellenistic age Athens had become the literary and artistic metropolis of the world. The rebuilding of the temple of

Atheaa. "The Mourning Athena," a 5th century B.C. Greek memorial to fallen soldiers

Athens. Plan of the ancient city superimposed upon a slightly defined plan of the modern one

Zeus Olympius was continued by Antiochus IV Epiphanes of Syria. In the Roman age the chief period of artistic activity was the reign of Hadrian (A.D. 117-138), during which the temple of Zeus Olympius was completed. The buildings of Athens remained practically unchanged until the 5th or 6th century A.D., when the old religion was officially abolished. After the capture of Athens by the Turks in 1456 the Parthenon became a mosque. In 1687 the Venetians exploded the powder magazine which had been placed in the Parthenon by the Turks, destroying all the central part of the temple.

Athens was a small provincial town until 1834, when it was made the capital of the new kingdom of Greece. Modern Athens occupies for the most part the N. and E. sides of the ancient city. It is the seat of a Greek metropolitan, the railway and financial centre of the country, and a centre of international archaeological study. In 1930 the city was provided with a new water supply. A dam, built at Marathon, formed a lake which feeds a reservoir capable of passing out 9,000,000 gallons a day. In 1929 a scheme was set on foot to modernise the Piraeus and to create a new port (see map, p. 152). The population, including the Piraeus, is approximately 750,000. See *Acropolis*; consult also *Ancient Athens*, E. A. Gardner, 1902; *Modern Athens*, G. Horton, 1902; *Athens and its Monuments*, C. H. Weller, 1913.

ATHERSTONE. Market town of Warwickshire, England. It is on Watling Street, 102 m. N.W. from London, on the L.M.S. Rly. It has a milestone equidistant from London, Liverpool, and Lincoln. The church of S. Mary, dating from the 12th century, was rebuilt in 1849, except for the tower and

Athens: notable remains of some of the temples. 1. Ruins of the second Erechtheum, an Ionic temple. 2. Monument set up in 334 B.C. to commemorate the victory of Lysicrates in a musical contest. 3. Temple of Wingless Victory on the Acropolis. 4. Corinthian columns of the Temple of Olympian Zeus. 5. Part of Hall of Coré on the S. side of the Erechtheum, supported by Caryatides

chancel. The remains of Merevale Abbey are near. The town gives its name to a hunt. Market day, Tues. Pop. 5,957.

ATHERTON or **CROWBENT.** Urban district and market town of Lancashire. It is 5 m. S.W. of Bolton, on the L.M.S. Rly., and has cotton factories, iron works, and collieries. Market day, Fri. Pop. 19,863.

ATHERTON, GERTRUDE FRANKLIN (b. 1857). American novelist. Her maiden name was Horn, and Benjamin Franklin was her great grand-uncle. Born at San Francisco, she wrote many novels of Californian life, several of a political or sociological tendency. Alexander Hamilton, some of whose letters she edited (1903), is the hero of *The Conqueror*, 1902; and her other works include *Patience Sparhawk* and *Her Times*, 1897; *American Wives and English Husbands*, 1898; *Senator North*, 1900; *Tower of Ivory*, 1910; *The Avalanche*, 1919, *The Immortal Marriage*, 1927.

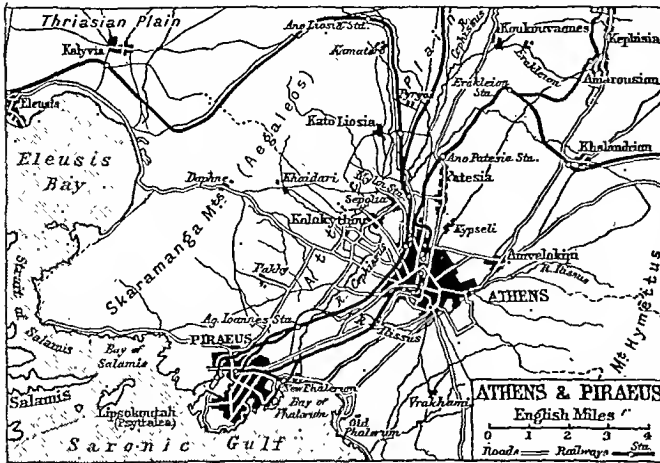

ATHGARH. Feudatory state of Orissa, India. It covers an area of 168 sq. m. on the forested Chota Nagpur plateau. The ruler is a rajah. Pop. 46,813.

ATHLETICS (Gr. *athlētēs*, contestant). Art or practice of physical games or exercises. The Olympic games of the Greeks are traceable to the forms of exercise usual among the Egyptians. Running, leaping, throwing the discus, boxing, and wrestling were popular among the early Greeks and Romans.

Young Londoners in Henry II's time indulged in leaping, wrestling, and casting the stone. During the reign of Elizabeth sports of this kind were more popular among the humbler classes than with the nobility. There was a great vogue for foot racing in the time of the Stuarts, probably due to the fashion of noblemen keeping running footmen and to the desire to match the speed of their respective servants one against another. Pepys describes a match between one of these footmen and a professional runner in Hyde Park in 1660

Athens. General view showing how the Acropolis still dominates the city. Above, white marble dam at Marathon Lake, with the Parnes Mts. in the background. The engineers have been able to make use of the aqueduct which the Emperor Hadrian began to build about A.D. 120

Athens and the Piraeus. Map showing the position of the capital of Greece and its relation to its port on the Saronic Gulf. See page 151.

One of the first athletic meetings properly so called was that convened by Major Mason in 1807, in connexion with an athletic society called the Necton Guild, at Necton, Norfolk. The various events included wrestling, jumping in sacks, foot races, etc.

Exeter College, Oxford, was the pioneer in instituting annual athletic meetings at that university; the first, held in 1850, comprised two miles cross-country, a quarter-mile flat, 300 yards, 100 yards, 140 yards, and one mile over ten fifties of hurdles. The first athletic meeting at Cambridge took place March 16-18, 1857; and the annual Inter-University Meeting began at Oxford, March 5, 1864.

In Great Britain one of the principal athletic functions of the year is the Inter-University Meeting just before Easter, at Stamford Bridge. Another important fixture is the Amateur Championship Meeting, held annually on the first Saturday in July at Stamford Bridge, just after the Scottish and Irish Meetings. Another is the public schools meeting.

In 1896 an international athletic meeting was held at Athens in the form of Olympic Games (q.v.) and except for the war period meetings were held every four years. At these gatherings, in addition to the events of an ordinary athletic meeting, were included almost every sport and game practised by the competing countries.

The governing body for amateur athletics in Great Britain is the Amateur Athletic Association, 10 John Street, Adelphi, London, W.C. The Irish Free State has the Taltann Games, and in Scotland there are Highland games at various centres. See Jumping; Running, etc.

ATHLONE. Urban district and market town of co. Westmeath, Irish Free State. It is 78 m. W. of Dublin, on the Gt. Southern Rly., and is divided by the Shannon, which river and the Grand and Royal canals enable it to trade with Limerick and Dublin. A fine bridge spans the Shannon. Athlone has linen and woollen manufactures, and salmon fishing is engaged in. Market days, Tues. and Sat. Pop. 7,472.

The title of earl of Athlone was borne from 1692 to 1844 by the family of Van Reede. Godard van Reede, a Dutch general in the service of William III, distinguished himself at the siege of Athlone in 1691, and was created earl in 1692. In 1917 the title was given to Prince Alexander of Teck, brother of Queen Mary. He was governor-general of the Union of S. Africa, Oct., 1923-30.

ATHMALIKH. Feudatory state of Orissa, India. It covers an area of 730 sq. m. on the Chota Nagpur plateau. Trade is carried on in timber, rice, and oil seed. Pop. 53,766.

ATHOLL. District in Perthshire, Scotland. It surrounds Ben Dearg in the Grampians, and

has an area of about 450 sq. m.

The Scottish title of Duke of Atholl has been borne since 1703 by the family of Stewart-Murray. The first earl of Atholl was Sir John Stewart. One of his descendants was made a marquess, and in 1703 the 2nd marquess was made a duke. In 1714, on the accession of George I, he was deprived of his offices, but did not join the rebellion in 1715. Three of his sons did so, and in consequence the dukedom, on his own death in 1724, passed to his second son James, and through his descendants to John George Stewart-Murray (b. 1871), who became the 8th duke in 1917. As Lord Tullibardine, the 8th duke had been Unionist M.P. for West Perthshire from 1910. He served in the Sudan campaign of 1898, and in the S. African War. During the Great War the duke raised mounted troops among his clansmen and served in the Gallipoli campaign.

As Lord Tullibardine, the duke married Katherine Marjory, a daughter of the historian, Sir J. H. Ramsay, Bart. She took an active part in local affairs in Perthshire and in 1923 was elected Unionist M.P.

John, 4th Duke of Atholl
After J. Hopner, R.A.

Man. In 1765 this sovereignty and certain rights were sold to the British Government for £70,000, and John, the 4th duke, sold the remaining rights for a further £417,000 in 1828. The duke's chief seat is Blair Castle, near Blair Atholl, Perthshire. His eldest son is called the marquess of Tullibardine, and he himself sits in the House of Lords as Earl Strange.

ATHOLSTAN, HUGH GRAHAM, 1ST BARON (b. 1848). Canadian newspaper proprietor. Born at Huntingdon, Ontario, he started life in 1863 in the office of The Montreal Daily Telegraph, of which he became general manager. In 1868 he projected The Montreal Star, which was first issued Jan. 16, 1869, which he

controlled for the next 50 years. Created a knight in 1908, he was made a baron in 1917.

ATHOR or **HATHOR.** Egyptian goddess, sometimes identified with the Greek Aphrodite. Associated with the rising and the setting of the sun, she was symbolised by a cow, and as one of the deities of the dead the sycamore was sacred to her. See Aphrodite.

ATHOS. Mt. of Greece, famous for its monasteries. It is about 80 m. S.E. of Salonica. The majority of the monks are Greek; they engage in farming, fishing, and weaving, in addition to their religious offices. Each monastery is ruled by an abbot elected for life or a board of overseers elected for a term of years. Pop. 4,858. See Monasticism.

ATHY. Urban district and market town of Kildare, Irish Free State. It is 45 m. S.W. of Dublin, by the Gt. Southern Rly., and has water communication with Waterford by the Barrow river, and with Dublin by a branch of the Grand Canal. It engages in a brisk grain trade. There are monastic and other remains, including those of Woodstock and White Castles. Market day, Tues. Pop. 3,535.

ATITLÁN. Lake in the S. of Guatemala. About 24 m. long by 10 m. broad, it is 64 m. in circumference. It occupies a crater of great depth, and lies about 4,700 ft. above sea level. On the S. side is the Indian town of Santiago de Atitlán. Pop. about 10,000. At the S. end of Lake Atitlán is the volcano Atitlán. It is 11,720 ft. high, and was occasionally active during the 19th century.

ATLANTA. Capital and largest city of Georgia, U.S.A. It is situated in the N.W. part of the state, is the centre of several rlys. and the seat of the Atlanta and Clark Universities. It exports cotton, tobacco, and mules. Pop. 253,783.

The battle of Atlanta was fought July 22, 1864, during the American Civil War, when the Northerners under Sherman besieged Atlanta. To relieve the pressure the Confederates under Hood made desperate attacks, but on Sept. 1 were forced to abandon Atlanta. See American Civil War.

ATLANTIC CITY. City and seaside resort of New Jersey, U.S.A. It is 56 m. S.E. of Philadelphia, on the Atlantic City rly., and stands on a long, narrow, sandy island. It has a splendid beach, six long ocean piers, and a promenade 8 m. long. Atlantic City has an aerodrome covering 160 acres, and was the scene of the Pan-American Aeronautic Expedition in May, 1919. Pop. 53,287.

ATLANTIC OCEAN. Second largest of the four great oceans. From N. to S. it is about 8,500 m. and from E. to W. between 2,500 m. and 4,500 m.; its area is about 30 million sq. m.

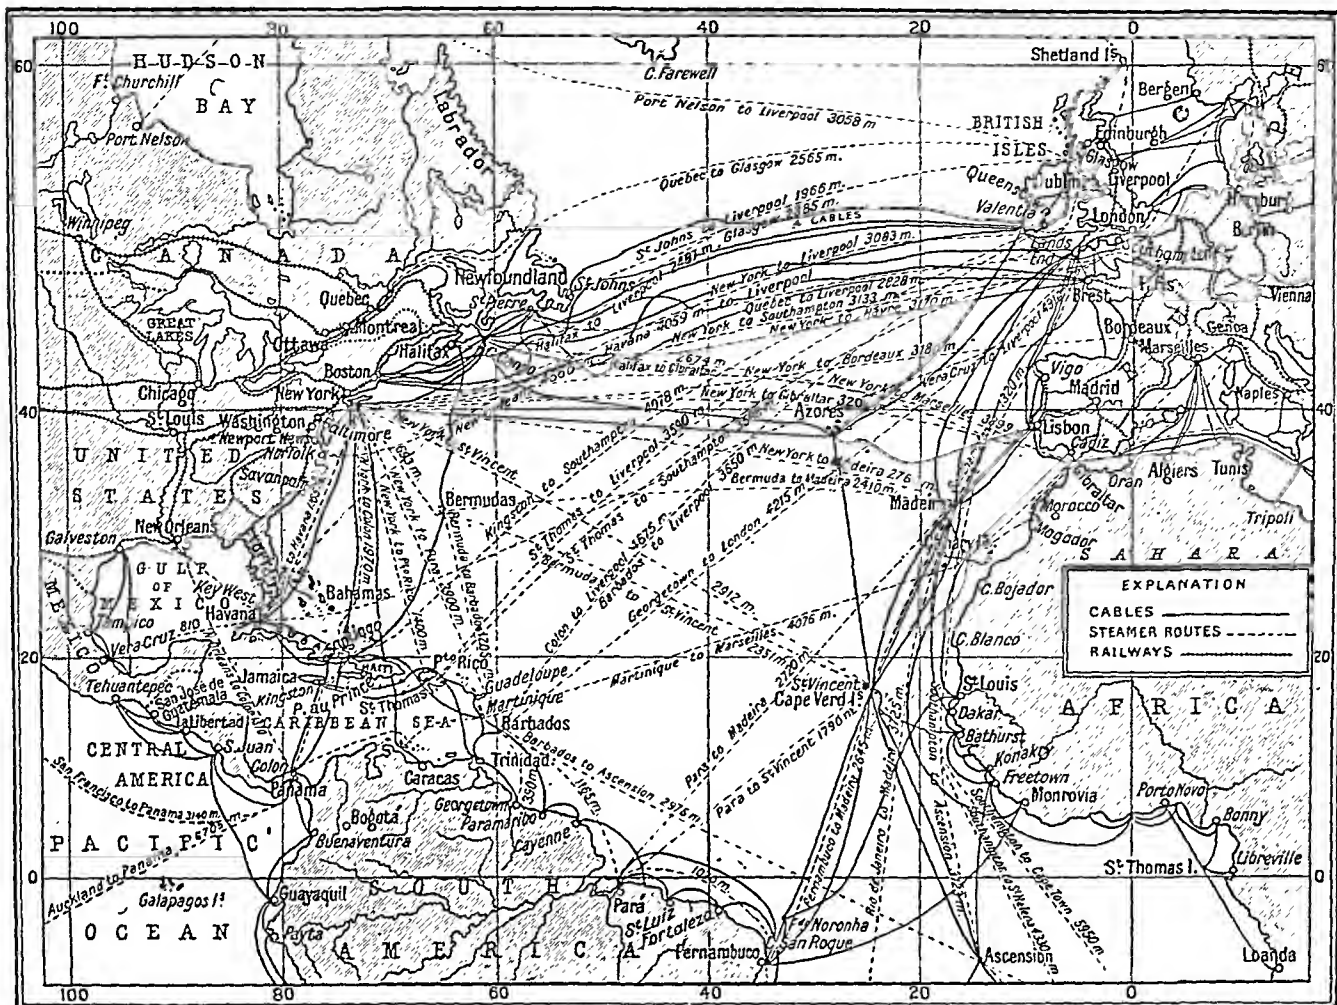

Roughly midway between the E. and W. margins, a long ridge rises from the floor of the Atlantic to within about 1,700 fathoms, nearly 2 m., of the surface. The N. end of this edge forms the Telegraph Plateau between Ireland and Newfoundland; farther S. the Azores rise above it, whence to the Equator it is called the Dolphin Ridge. Near the Equator the ridge is less definite, but as the Challenger Ridge stretches beyond lat. 50° S.; from it rise Ascension and Tristan da Cunha.

Between the ridge and the margins the hollows contain a series of deeps more than 3,000 fathoms, 3½ m., below the surface; in two places the floor slopes steeply beyond 4,000 fathoms. The border seas of the north—Hudson Bay, the Baltic and North Seas—are shallow; the Gulf of Mexico and Caribbean Seas are deep. The British Isles and Newfoundland rise from extensive continental shelves which are the most important fishing grounds of the world.

The first cable across the Atlantic was laid between Ireland and Newfoundland in 1858,

Duchess of Atholl,
British politician
Russell

Atlantic Ocean. map showing the relation of the European, African, and American continents to this ocean, with the principal cable lines and steamer routes

but it was a failure. The one laid by the Great Eastern in 1866 was, however, a success.

ATLANTIC FLIGHTS. The first aircraft to fly across the Atlantic was an American seaplane which flew from Newfoundland to Plymouth in May, 1919. In June 1919, J. Alcock and A. W. Brown won The Daily Mail prize of £10,000 by crossing in an aeroplane in 15 hours, 57 min. On May 20-21, 1927, Charles Lindbergh flew from New York to Paris—a distance of 3,700 m.—in a monoplane, having been in the air 33 hours, 50 minutes. On June 4-6, 1927, Clarence Chamberlain, with Charles Levine as passenger (the first to cross the Atlantic by air) flew from New York to Eisleben in Germany, a non-stop flight of about 3,906 m., in 42½ hours.

On June 29, 1927, Adm. R. Byrd, with three companions, left New York in the aeroplane America and having crossed the Atlantic made a forced landing near Ver-sur-Mer, Normandy, on July 1. On April 12, 1928, Capt. Köhl and Baron von Hünefeld, German airmen, accompanied by Com. Fitzmaurice, of the Irish Free State Air Force, left Dublin in the German aeroplane Bremen and landed on Greenly Island, off Labrador, having accomplished the first east to west aeroplane flight across the Atlantic. In June, 1928, the seaplane Friendship flew from Trepassy Bay, in Newfoundland, to Burry Port, near Llanelli. It carried Miss Amelia Earhart, who was the first woman to fly across the Atlantic. The ocean has also been crossed by airships.

ATLANTIS. Mythical island in the Atlantic. Larger than Asia Minor and Libya together, according to Plato it was populous and flourishing. But its immortality brought

upon it the wrath of the gods, and it was swallowed up in a day and a night. The island has been variously identified with the Azores, the Canaries, and Crete, but some modern scholars believe that Plato's idea of it as a great land mass in the Atlantic is correct. (Consult Our Wonderful World, Vol. I, 1930.) Bacon's New Atlantis is a description of an ideal commonwealth.

ATLAS. In Greek mythology, a giant. Having, with other Titans, rebelled against Zeus, he was condemned to hold up the heavens on his shoulders in the extreme far west, near the garden of the Hesperides (q.v.).

Atlas. Giant of Greek mythology compelled to hold up the universe
National Museum, Naples

upon it the wrath of the gods, and it was swallowed up in a day and a night. The island has been variously identified with the Azores, the Canaries, and Crete, but some modern scholars believe that Plato's idea of it as a great land mass in the Atlantic is correct. (Consult Our Wonderful World, Vol. I, 1930.) Bacon's New Atlantis is a description of an ideal commonwealth.

Atlantes are sculptured figures of men used as supports in place of columns, corresponding to caryatides. Examples are on the great temple of Zeus at Girenti in Sicily. The word is the plural of Atlas.

ATLAS. Term first applied by Mercator to a collection of maps. It was derived from the figure of the giant Atlas bearing the

universe on his shoulders, which was used to decorate the title page of the early volumes in which maps were collected. See Map.

ATLAS. In anatomy, the first cervical vertebra, supporting the globe of the head. It articulates above with the condyles of the occipital bone, two processes at the base of the skull; below, with the axis or second cervical vertebra; and in front with the odontoid process of the axis.

ATLAS MOUNTAINS (Berber adrar, a mountain). Mountain system in the N. of Africa. It consists of two main ranges with many minor ramifications, and extends for about 1,500 m. from the Atlantic coast through Morocco and Algeria to the E. coast of Tunisia on the Mediterranean. Tagharat, nearly 15,000 ft. high, is the culminating peak of the entire system. The minerals include copper, iron, antimony, salt, and marble. Vegetation is mostly of the Mediterranean and African varieties, but Alpine flora occasionally occurs. The well-watered valleys are fertile.

ATMOMETER (Gr. atmos, vapour; metron, measure). Instrument for measuring the rate of evaporation, also called an evaporimeter. Piche's evaporimeter is used to determine the rate of evaporation in the atmosphere, and measures the rate at which water from a closed vessel replaces the water evaporating from a vetted or saturated surface. The Babington atmometer, another type, reveals the evaporation by a form of balance.

ATMOSPHERE (Gr. atmos, vapour; spaira, sphere). The gaseous envelope which surrounds the earth. Samples of air freed from water vapour have been found to

Atmosphere. Diagram showing condition of the air at different elevations, based on that published by the Meteorological Office. Ballons sondes generally rise until they burst and drop their self-registering instruments. Temperatures are recorded on the Absolute Scale on which 273° A. = 0° C. and 221° A. = - 52° C. At the highest altitude reached by an aeroplane, 40,000 ft., the temperature was 220° A.

contain approximately the following percentages by volume: nitrogen, 78·03; oxygen, 20·99; argon, 0·94; carbon dioxide, 0·03; and other gases in minute amounts.

Nitrogen appears to act as a diluent of the oxygen. Oxygen is directly concerned with the phenomenon of combustion and respiration. Carbon dioxide is derived from the respiration of animals, from the combustion of organic matter, and from volcanoes or earth fissures. It is taken in by the green cells of the leaves of plants, and under the influence of sunlight it is decomposed, the oxygen being freed and the carbon retained for food. Helium neon, krypton, and xenon are also present in minute quantities in the air.

Water vapour is invariably present, but is constantly changing in both quantity and condition. The moving air conveys water vapour from the ocean surface to the land; the water is absorbed from the sea surface until the atmosphere is full, and the wet air moves landwards to drop the rain from the clouds. Solid impurities held in suspension in the atmosphere as dust play a part in

all very low. Usually the reef is closely grown with coconut palms, which take root in the sand formed by the decayed coral. The shallow lagoon often contains numerous pearly oysters. Frequently the coral ring is broken, and the atoll is horseshoe in shape. See Coral.

ATOM (Gr. a, not; temnin, to cut). Term formerly used to denote the smallest particle of matter, incapable of further division. It is now used to mean the smallest portion of any element which goes into and out of combination and still retains its identity. An electron is called an atom of electricity.

John Dalton (1766-1844), who formulated the atomic theory, perceived that elements always combined in definite proportions: he framed the working hypothesis that molecules of a compound consisted of atoms of the elements composing the compound. Dalton assigned atomic weights to the elements, taking hydrogen as unity, with a value of 1. In 1827 Berzelius showed that many atomic weights were not whole multiples of the hydrogen unit, and proposed a new series of weights, which came into general acceptance about 1833.

producing the glows of sunrise and sunset, in illuminating the sky and forming its blue colour.

At the earth's surface the temperature of the air varies with the latitude, ranging from about 80° F. at the tropics to a point below freezing near the poles. Temperature decreases with altitude, so that the air surrounding a mountain is colder by about 1° C. for each 600 ft. of elevation. The warmth of the air is obtained by direct contact with the land and water surfaces. The air layer below 30,000 ft. is subject to continuous movements. Near the earth's surface the edges of the great atmospheric streams produce whirls and eddies which largely govern the weather.

The pressure of the air decreases with altitude, so that at a height of about 3½ m. the pressure is half, and at a height of 7 m. it is less than one-quarter of the sea-level pressure. There is clear evidence that the atmosphere extends to considerable heights. Meteorites are invisible until they come into contact with the atmosphere, when they become incandescent; some have become luminous at a height of nearly 200 m. See Meteorology: Relativity.

ATOLL. Ring-shaped coral reef which constitutes an island enclosing a lagoon in the middle. Atolls vary considerably in size, but are

Dulong and Petit discovered in 1818 that there is a more or less constant relation between the specific heat of an element and its atomic weight; the specific heat multiplied by the atomic weight yields as product a number approximating to 6·3. To this product the name atomic heat has been given. Avogadro in 1811 put forward a theory that the molecular weights of gases were proportional to the densities of the gases, and that equal volumes of gases under like conditions would contain the same number of molecules. Ten years later Mitscherlich found that the salts of related elements showed a similarity of crystalline structure.

Avogadro's law, the rule of Dulong and Petit, and the discovery of Mitscherlich all assisted in the determination of the atomic weights of elements. Experimentally the combining proportions of an element may be found out by chemical analysis or by positive ray analysis. (See Isotope.) In 1905 oxygen, with a nominal value of 16, was substituted for hydrogen as a standard; although the actual atomic weight of oxygen, as compared with hydrogen, is 15·878, it was found convenient to use the round number 16.

When the elements are set down in a serial order according to their atomic weights a marked periodicity of those elements having like chemical and physical properties is noticeable. Mendeleef postulated the Periodic Law, which states that the properties of elements are functions of their atomic weights. A serial number, called an atomic number, is assigned to an element according to its position in the periodic classification.

In 1878 Sir W. Crookes, experimenting with the electrification of rarefied gases, found in the cathode rays what he termed a fourth state of matter—radiant matter. J. J. Thomson in 1897 demonstrated that the cathode rays consisted of particles two thousand times smaller than the atom of hydrogen. These particles, called electrons, are now recognized to be atoms of negative electricity. The atom of an element consists of one or more such electrons revolving in orbits about a globular mass of positive electricity—the nucleus of the atom—some-what in the manner of a planetary system.

These discoveries paved the way to the acceptance of the idea of the disintegration of the atom, and the study of radio-active phenomena provided examples of atoms disintegrating within view. Rutherford and Soddy showed that some atoms of uranium, for example, break up every second, throwing out an alpha particle, which is a charged atom of helium, and leaving a residual atom which throws out two kinds of rays, the beta rays, which are electrons, and the gamma rays, which have great penetrating power, and resemble X-rays. Later discoveries show that the element uranium passes in progressive degradation through a series of forms until it is ultimately transmuted into an end-product identical with lead. See Electron; Molecule.

ATONEMENT. Word used in a religious sense to imply reconciliation with God through sacrifice. The conception of atonement, as it meets us in the history of religions, is not merely at-one-ment, or reconciliation, a restoration of the interrupted relation, moral and religious, of God and man; reconciliation is the result, but atonement is the means by which the end is brought about. The complementary conceptions of expiation and propitiation must not be excluded. In offering the sacrifice the sinner offers a compensation for the wrong he has done; by thus recognizing his own ill-desert, and the claim the deity has for some such compensation, he turns displeasure into favour: in expiating his sin, he propitiates the god worshipped, and so his sacrifice atones in restoring him to that relation to his god which his sin had interrupted.

The day of atonement is the great fast day of the Jews. Defined in the Talmud as The Day, and observed on the 10th day of the seventh month of the sacred year, or Tishri (Sept.-Oct.), it is the one day of humiliation or expiation commanded in the Mosaic law. It is said to have been instituted either on account of the sin and punishment of Nadab and Abihu, or as commemorating the day on which Moses came down from Sinai with the tables of the law and proclaimed forgiveness for the worship of the golden calf. The day is known as Yom Kippur.

ATREK. River of Persia. It rises in Khurasan (Khorassan) and flows into the Caspian after a course of 350 m. At its mouth it is normally only 30 ft. wide, but when flooded in spring spreads to a width of 2 m.; during the rest of the year the river is almost exhausted by evaporation.

ATREUS. In Greek mythology, son of Pelops and grandson of Tantalus. He became king of Mycenae, whither he had fled with his brother, Thyestes. Owing to jealousy he banished Thyestes, and after frustrating the latter's attempt to have him slain, took his revenge by causing his brother's own children to be served to their father at a banquet. This crime called down upon the house of Atreus the curse of the gods. The tragic fortunes of the Atreidae, notably Agamemnon and Orestes, were favourite subjects of Greek drama. See Agamemnon; Orestes.

ATRIUM. Originally the entrance hall of a Roman house. In a building of the simple type it was the principal room, and contained the hearth whereon the cooking was done. The more elaborate atria of Pompeian houses were courts partly covered by a roof. In the early days of Roman Christianity many upper-class houses were places of reunion for converts, and in the atrium penitents had to await their turn. Hence, when the basilica was adopted as the model of the Christian place of worship, the atrium or forecourt became essential to the ritual. It was usually surrounded by covered ambulatories or cloisters.

ATROPHY (Gr. *a*, not; *trophē*, nourishment). In biology, a change in the living process of a plant or an animal, as the result of which the individual diminishes in size or function, either as a whole or in part. General atrophy is usually the result of lack of nutrition or disease. Local atrophy may affect either a single organ or tissue in whole or part, or a group of allied tissues. Examples of normal local atrophy are to be found in certain organs, which disappear or become smaller at definite periods of life. Thus, the thymus gland diminishes during childhood. Certain bones, such as the lower jaw, undergo the same process in old age, constituting senile atrophy. Local atrophy may also occur as the result of disease, especially if nourishment cannot reach the part affected.

Atropine. Alkaloid prepared from the deadly nightshade (*Atropa belladonna*). See Belladonna.

ATROPOS (Gr. *a*, not; *trepein*, to turn). In Greek mythology, the eldest of the three Fates, the others being Clotho and Lachesis. Clotho spun the thread of life, Lachesis distributed men's lots, and Atropos, the inflexible, cut the thread. See Fates.

AT SIGHT. Commercial term meaning payable on demand. It applies chiefly to bills of exchange and promissory notes. If on these the words "at sight" are written they are not entitled, like ordinary bills of exchange, to the customary days of grace. See Bill.

ATTACHÉ (Fr., attached). Subordinate official attached to an embassy to gain diplomatic experience, and enjoying some of the privileges appertaining to the official diplo-

matic service. Military and naval officers are also detailed for duty as attachés on the staffs of ambassadors, to observe and report on matters of professional interest. See Diplomacy.

ATTACHMENT. In English law, the writ by which a person against whom a judgement has been given or order made by the court is arrested, or attached, to compel his obedience. It can only be issued by leave of the court. See Writ.

ATTAINDER (Old Fr. *ataindre*, Lat. *attingere*, to attack). Legal term now obsolete. In feudal times any person found guilty of treason or felony of a capital kind was declared attainted, i.e. his lands were forfeited, and no one could inherit land from or through him. Attainders began in England about the time of Edward II, and were common during the Wars of the Roses, when each party condemned its opponents in this way, thus securing their lands. In 1459 bills of attainder were first introduced into Parliament, this being a legislative, not a judicial, method of removing obnoxious persons and acquiring their land. The last case of this kind was in 1697, but attainders were only formally abolished in 1870. See Treason.

Attar of Roses. Alternative name for Otto of Roses (q.v.).

ATTERBURY, FRANCIS (1662-1732). English divine and politician. He was ordained in 1687 and became one of the royal chaplains. In 1701 he was made archdeacon of Totnes, and in 1704 dean of Carlisle. He was the principal composer of Sacheverell's defence before the House of Lords in 1710, and in 1712 was appointed dean of Christ Church, Oxford, and in 1713 Bishop of Rochester and dean of Westminster. In 1722 he was imprisoned in the Tower for plotting the restoration of the exiled Stuarts. He defended himself before the House of Lords, but was condemned, on certain compromising letters, and banished for life. He died in France, Feb. 22, 1732, and was buried privately in Westminster Abbey. Consult Francis Atterbury, H. C. Beeching, 1909.

ATTESTATION (Lat. *ad*, to; *testis*, a witness). Subscribing, testifying, or witnessing, either by signature or oath. By the Wills Act, 1837, all wills are required to be attested by two witnesses, who are to be present at the same time and subscribe their names in the testator's presence.

The word attest had another application in Great Britain in 1915-16. Under the Derby scheme for obtaining recruits for the army during the Great War, men were invited to enlist, not for immediate service, but to be called up in order of age. This deferred form of enlisting was called attesting. See Derby Scheme; Will.

ATTICA. District of ancient Greece, bounded by Boeotia on the N., Megara on the N.W., and the Aegean Sea on the E. and S.W. The surface is partly plain and partly mountainous, among the well-known mts. being Hymettus, Penteliceus, and Cithaeron. Attica and Boeotia together form a modern dept. of Greece with a pop. of 1,024,667.

The language of the people of Athens and Attica was considered to represent the highest standard of literary Greek, and correct diction was therefore called Atticism. A refined incisive form of wit was characterised as Attic salt. See Greec.

ATTICUS, TITUS POMPONIUS (109-32 B.C.). Roman literary man and publisher. His most intimate friend was Cicero, whose letters to Atticus are a model of familiar correspondence. An Epicurean in philosophy, familiar with Greek and Roman literature, and a man of great wealth, he possessed a large library and carried on an extensive publishing and

bookselling trade. He was the author of a chronicle of Roman history, and of an account of Cicero's consulship written in Greek.

ATTILA (c. 400-453). King of the Huns. He succeeded to the chieftainship in 434, when his people were masters of E. Europe N. of the Danube and the terror of the west up to the Rhine, and of W. Asia. Attila broke over the Danube (447) into the Balkan peninsula, compelling the emperor at Byzantium to cede him territory and pay a huge tribute. In 451 he stormed westwards. But the Roman general Aëtius and Theodoric of Toulouse, the king of the West Goths, united to resist the invading horde. On the Catalaunian plains near Châlons, in June, 451, a terrific battle took place, and the eastern hordes were decisively defeated. Next year (452), with reorganized hosts, he devastated northern Italy and threatened Rome.

ATTLEBOROUGH. Market town of Norfolk. It is 16 m. S.W. of Norwich by the L.N.E. Rly. The ancient capital of Norwich, it had a Holy Cross college, founded 1387. Market day, Thurs. Pop. 2,453.

ATTOCK. District of the Punjab, India, in the Rawal Pindi division. Bounded on the W. by the river Indus, it contains over 500,000 people, mostly Mahomedans, within an area of 4,025 sq. m., of which only two-fifths are cultivated. The rainfall is scanty and the crops insecure. Attock bridge across the Indus links Peshawar with Lahore.

ATTORNEY (late Lat. *attornatus*, turned to). In English law and kindred systems, one who acts as agent for another, especially in legal matters. As a rule, an agent is not now called an attorney unless he is appointed under a deed, called a power of attorney, to act in the absence of his principal abroad or in similar circumstances. Before 1873 an attorney was a person entitled to conduct proceedings on behalf of his clients in the common law courts. The Judicature Act, 1873, abolished attorneys-at-law in England, and made them all solicitors of the Supreme Court.

The attorney-general is the chief law officer of the British Government, and head of the English bar. Chosen from among the prominent lawyers who belong to the party in power and sit in the House of Commons, he is a member of the Government of the day, and is usually included in the Cabinet. He conducts cases on behalf of the Crown, advises the various departments of state on legal matters, and, if necessary defends such advice and action in Parliament. He receives a salary of £7,000 a year and professional fees.

The various British Dominions and the duchies of Lancaster and Cornwall have each an attorney-general. In Scotland the lord advocate is the equivalent of the attorney-general, who was first appointed in England in the reign of Edward I, when there was a king's attorney to look after his interests.

ATTRACTION (Lat. *ad*, to; *trahere*, to draw). Tendency of two or more bodies to approach each other. When some stress exists between two bodies and no material connecting link can be traced it is usual, if the stress tends to make the bodies move towards one another, to say that the bodies attract one another. If the stress tends to make the bodies separate, they are said to repel one another.

ATWOOD'S MACHINE. Device for verifying the velocities and accelerations of falling bodies. Invented by George Atwood (1746-1807), it consists of a light pulley balanced very truly on its axis and moving with very little friction. A cord passes over it and carries two equal weights, one of which passes in front of a graduated vertical scale. Attached to the scale are two movable platforms, the lower of which will bring the descending weight to rest; the upper is ring-shaped.

and can detach small brass slips placed on the top of the main weights and too long to pass through the ring.

The brass slip, when placed on one of the main weights, makes that side heavier and causes it to descend with a uniform acceleration; thus, when this weight reaches the upper platform, it has attained a certain velocity. The brass slip is now automatically detached, and the weight moves on with constant speed until it reaches the lower platform. This constant speed can be calculated by means of a stopwatch, and thus the acceleration due to the brass slip may be measured.

ATYS or **ATTIS**. In Greek mythology, a shepherd beloved by Cybele, the Great Mother of the Gods. Driven mad by her in revenge for his amour with a nymph, he mutilated himself and died. Atys was originally a Syrian divinity, and the myth, like that of Adonis, symbolises the death of vegetation in winter and its revival in the spring. His cult early made its way into Greeco and was introduced into Rome with that of Cybele. Consult Adonis, Attis, Isis, J. G. Frazer, 1906.

AUBE. Department of France. In the N.E. of the country, it is an agricultural district watered by the Seine and the Aube, a river 150 m. long. Much of it is sterile soil, but the vine, vegetables, wheat, and other cereals are grown. Fruit is cultivated and cattle and horses are reared. Troyes is the capital. Aube was formerly part of Champagne. Its area is 2,326 sq. m. Pop. 238,253.

AUBERGINE. Plant of the natural order Solanaceae. It is a half-hardy annual growing to a height of 2 ft.-3 ft., with blue flowers and white or purple fruit shaped like an egg, whence its familiar name egg-plant. It prefers light rich soil and sunny positions, but may be grown as a greenhouse plant. The so-called eggs are edible.

AUBERS RIDGE. A line of low heights overlooking the plain of the river Lys in France. It came into prominence in the Great War when on May 9, 1915, the British attacked the German positions here. Their object was to assist the French army operating N. of Arras, and to hold the German forces on the British front. The artillery opened a bombardment which did not destroy the German parapets. The troops went over the top with the intention of creeping up to the German works while the bombardment continued, but owing to many projectiles falling short, this plan could not be carried out. The Germans opened a terrific fire on the British. Notwithstanding this, the infantry at points broke through the wire and reached the German positions. The 13th London Regiment carried in succession three lines of trenches, but was caught by a deadly flank fire. Further attacks were made later in the day, but with no better success. The British losses were very heavy. Early in Oct., 1918, the village of Aubers and the ridge were occupied by the Allies. See Arras; Artois.

AUBERVILLIERS. Town of France, in the dept. of Seine. It lies near the river Seine, on the canal St. Denis, and is a N.E. suburb of Paris. Pop. 40,832.

AUBIGNÉ, JEAN HENRI MERLE D' (1794-1872). Swiss ecclesiastical historian. Of Huguenot stock, he became court preacher at Brussels in 1823. He returned to Geneva in

1831 to assist in the foundation of the Evangelical Church and to occupy the chair of church history in its theological college. His most popular work was the History of the Reformation in the 16th Century, 1835-53.

AUBIGNÉ, THÉODORE AGRIPPA D' (1552-1630). French historian and soldier. Of Huguenot family, he enlisted in 1567 under Condé, and rendered distinguished services to Henry IV. The last years of his life he spent in exile at Geneva, pursuing his studies and superintending the fortifications of Berne and of Basel. He died April 29, 1630. He is best known by his Universal History from 1550-1601 (1616-1620), the third volume of which was so outspoken that it was burnt by the common hangman in Paris.

AUBREY, JOHN (1626-97). English antiquary. Born at Easton Piers, Wilts., March 12, 1626, he was educated at Blandford Grammar School and Trinity College, Oxford. He described the stone circle at Avebury, 1649, but his voluminous notes upon the antiquities of Surrey and Wiltshire were not utilised until 1718 and 1847. He published his Miscellanies in 1696, and furnished Minutes of Lives for the Athenae Oxonienses of Anthony à Wood.

AUBURN or **LISBOY**. Village in co. Westmeath, Irish Free State, 7 m. N.E. of Athlone. The name is derived from the popular association of Lissoy with the sweet Auburn of Goldsmith's poem The Deserted Village. There is a town of the same name in New South Wales.

AUBURN. City of New York, U.S.A., the co. seat of Cayuga co. It is 24 m. W.S.W. of Syracuse, on the New York Central and other rlys., and manufactures woollens, cottons, twine, and farming implements. It has a state prison, which adopts the Auburn or silent system of treatment. Water power is supplied by Lake Owasco. Pop. 35,677.

Another Auburn is on the Androscoggin river in Maine. It is 34 m. from Portland and is a manufacturing town. It dates from 1786. Pop. 17,000.

AUBUSSON. Town of France, in the dept. of Creuse. It stands on the river Creuse, 24 m. by rly. S.E. of Guéret, and is noted for its manufacture of carpets, an industry 400 years old. Pop. 6,485.

Pierre d'Aubusson (1423-1503) was grand master of the Knights Hospitallers of St. John of Jerusalem and defender of Rhodes.

AUCHINLECK. Town of Ayrshire, Scotland. It stands on Lugar Water, 4½ m. S.E. of Mauchline on the L.M.S. Rly., in a rich coal district. Auchinleck House was the ancestral home of the Boswells, lairds of Auchinleck, one of whom was the biographer of Johnson. Sir Alexander Boswell established in 1815 the Auchinleck Press for rare works in early Scottish and English literature. The Auchinleck MS., consisting of old English poetry, presented by Alexander Boswell to the Faculty of Advocates, is in their library at Edinburgh. Pop. 7,178. See Boswell, James.

AUCKLAND. Largest city of New Zealand. The capital of the prov. of Auckland and formerly of the dominion, it is in North Island, standing on the river Waitemata, which here makes a magnificent harbour. It is over 13,000 m. from London and the passage takes just over 40 days. It was founded in 1848, was named after Lord Auckland and, as the first borough in the country, was the capital until 1865, when Wellington (q.v.) superseded it. In addition to being the distributing and banking centre of the island, Auckland has shipbuilding yards, various manufactures, and does a large import and export trade.

Auckland, New Zealand. Plan of the capital of the province

The inner harbour is over 5 m. long and possesses graving and other docks, equipped with modern appliances for handling the cargoes. There is railway connexion with Wellington and a service of electric tramways. The chief buildings are the cathedrals, Anglican and Roman Catholic; the art gallery and museum; banks and other commercial edifices. The city has a university college and a wireless station. Pop. 206,800

Auckland. Queen St., a fine thoroughfare. Above, the Museum, an imposing building set upon a height overlooking the city and erected as a war memorial. Courtesy of the High Commissioner for New Zealand

The province of Auckland covers nearly half of North Island; the area is 25,364 sq. m.

AUCKLAND, BARON. British title borne by the family of Eden. William Eden, one of Pitt's associates, held a series of public offices between 1772 and his death May 28, 1814. In 1789 he was created an Irish baron and in 1793 a British one. His younger son, George, 3rd Baron (1784-1849), was president of the board of trade 1830-34, governor-general of India 1835-41, and first lord of the admiralty 1846-49. He was made an earl in 1839, but this title became extinct when he died Jan. 1, 1849. The barony passed to a brother and is still held by the Edens.

AUCKLAND ISLANDS. Volcanic group of uninhabited islands in the S. Pacific. Situated 180 m. S. of New Zealand, to which they politically belong, and discovered in 1806, they have an area of 329 sq. m. The largest, Auckland Island, covers about 280 sq. m.

AUCTION BRIDGE. A card game, developed from ordinary bridge. The chief differences between the two lie in the scoring and declaration. Instead of the dealer or his partner making trumps, the determination of the suit in which the game shall be played is put up to auction, the highest bidder obtaining the privilege of playing the hand with his partner's cards lying exposed on the table.

Since 1914 the game has been known as royal auction bridge, American players having in 1910 introduced a variation called royal spades or lilies, whereby the old value of spades, two points a trick, was increased to 10 points in a call of royal spades, ranking next to no trumps, 12. The committee of the Portland Club in May, 1914, framed a new code of laws and the following scoring values:

	C's.	D's.	H's.	S's.
Each trick above six scores ..	6	7	8	9
Three honours	12	14	16	18
Four honours	24	28	32	36
Five honours	30	35	40	45
Four honours in one hand ..	48	56	64	72
Five honours, four in one hand	54	63	72	81
Five honours in one hand ..	60	70	80	90

No trumps.—Each trick above six scores 10; three aces, 30; four aces, 40; four aces in one hand, 100.

The game consists of 30 points, obtained by tricks only. Tricks are counted below and honours above the scoring line. Little slam is 50, grand slam, 100, and rubber, 250.

Since January, 1928, no honours score has been allowed for chicane, which means the entire absence from a hand of any trump card. The penalty for each trick which a declarer fails to make less than his declaration is 50 points above the line, proportionately increased if the call has been doubled or re-doubled. When a player who has been doubled makes his declaration, he scores 50 points above the line, and 50 for each extra trick beyond his declaration. If he or his partner has re-doubled the bonus is doubled. The penalty for a revoke is 100 points above the line. When one of his adversaries revokes a declarer may score 100 points above the line or take three tricks from the offending side and add them to his own to make good his contract. See Bridge; Contract Bridge; consult Royal Auction Bridge, W. Dalton, 1919.

AUCTIONEER. One licensed to sell property by public auction. In England an auctioneer pays £10 a year for his licence, which is renewable every July 5; no licence is required for selling under an order of the court, or for fish when landed. An auctioneer is liable for negligence in the custody of goods or misrepresentations in particulars of sale.

In the case of real estate, land, houses, leases, shares, mining or fishing rights, etc., particulars are printed and distributed beforehand, together with the conditions of sale. The signing of the memorandum of sale accompanying this paper by purchaser and auctioneer constitutes a legal binding sale.

A bid may be withdrawn any time before the fall of the hammer. The seller may fix a reserve price below which he will not sell, but this must be stated in the particulars of sale.

A mock auction is a sale by persons who illegally act together to make the public believe it a genuine auction, and by puffing, etc., obtain higher prices than the articles are worth. A knock-out, which is not illegal, is an arrangement by a number of buyers who depute one to bid, and afterwards privately dispose of the property among themselves. Scottish auctions are called rousps, and the vendor is the exposer, and upset prices are usual. Auctions were practised by the Romans.

In 1928 an Act of Parliament dealing with rings at auction sales came into force. It states that a dealer offends against the law if he offers an inducement to any other person to abstain from bidding. The person who receives the inducement can also be punished. The punishment may be up to a fine of £100 or imprisonment for six months.

The Auctioneers' and Estate Agents' Institute of the United Kingdom, founded in 1886, has its headquarters at 29, Lincoln's Inn Fields, London, W.C., and branches throughout the kingdom. It holds examinations in March for associates and fellows.

In London the chief estate mart was long at 19, Tokenhouse Yard, London, but in 1921 it was moved to Queen Victoria Street.

AUCUBA JAPONICA. Evergreen shrub of the order Cornaceae, a native of Japan.

Aucuba Japonica, garden shrub

The large elliptical leaves are of a leathery texture, pale green in colour, variously spotted and blotched with yellow. The inconspicuous flowers have petals and sepals in fours, some bearing pistils only, others stamens only. These two forms of flower are borne on separate plants; only those with pistillate flowers bear the red berries.

AUDACIOUS. British battleship. Launched in 1912, she displaced 23,000 tons, was 555 ft. long, 89 ft. in beam, and had engines of 27,000 i.h.p., giving a speed of 21.5 knots per hour. Her armament was ten 13.5-in. and sixteen 4-in. guns, and three submerged torpedo tubes. On Oct. 27, 1914, the Audacious was sunk off the N. coast of Ireland by enemy mines. Her loss was not officially admitted until the end of 1918.

AUDE. Department of France. Formerly part of the old prov. of Languedoc, it has an area of 2,448 sq. m. Comprising mainly the valley of the Aude, the S. contains the slopes of the Pyrenees. From Carcassonne westwards a lowland gap, the gate of Toulouse, followed by the Canal du Midi, separates these hills from the S.W. corner of the Cévennes. The coast is flat and marked by lagoons, and the climate is somewhat unhealthy. Carcassonne is the capital. Pop. 291,951.

AUDENSHAW. Urban district of Lancashire. It is 5 m. E. of Manchester, has engineering works and cotton mills, and manufactures hats. The church of S. Stephen is Early English. Pop. 8,050. See Manchester.

AUDIOMETER (Lat. *audire*, to hear; Gr. *metron*, measure). Electrical device for obtaining a balance of induction of two coils acting upon a third placed between them so that it is free to move towards either. By

means of a telephone, inserted in circuit with the middle coil, it can be ascertained when a current or no current is induced in it. One of the applications of the audiometer is for testing the sense of hearing. It was invented in 1879 by the electrician David E. Hughes.

AUDIPHONE (Lat. *audire*, to hear. Gr. *phōnē*, sound). Apparatus for improving defective hearing. It is usually made of ebonite and is applied to the front teeth. The sound vibrations are carried to the brain through the teeth and the bones of the head. See Ear.

AUDITOR (Lat. *hearer*). In English law, a person whose duty is to examine the accounts of a company, firm, or person. An auditor is liable for negligence if he fails in his duty. Under the Companies Acts every limited liability company is bound to have an auditor, appointed by the shareholders. This auditor must examine the company's books and report thereon annually to the shareholders, and must, in such report, state whether in his opinion the balance sheet is a proper one and exhibits a full and fair account of the company's position.

An audit is the annual examination of the accounts of a company, society, or other undertaking by a person or persons appointed for the purpose. The periodical payment of rent and settlement of accounts between landlord and tenant is also known as an audit, in many cases celebrated by a dinner or festivity. In the United Kingdom the public accounts are audited by officials under the comptroller and auditor general, and his department is sometimes known as the audit office. It developed from the audit board established in 1785. See Accountant.

AUDLEY. Urban district of Staffordshire. It is 4 m. N.W. of Newcastle-under-Lyme, on the L.M.S. Rly., and has a mining industry. Pop. 14,738.

AUDLEY, SIR JAMES (d. 1386). English soldier, one of the knights of the Order of the Garter on its institution in 1344. Mentioned by Froissart, he won renown at Poitiers. In 1367 he was governor of Aquitaine and in 1369 great seneschal of Poitou.

AUDLEY END. Hamlet of Essex. It is situated 1½ m. S.W. of Saffron Walden, on the

Audacious. British battleship of the Dreadnought class. She was launched in 1912, and sunk by enemy mines off the north coast of Ireland on Oct. 27, 1914

L.N.E. Rly., and contains Audley End, the seat of Lord Braybrooke. This beautiful Jacobean house was built early in the 17th century and contains treasures of great value and interest.

AUDOUX, MARGUERITE. French novelist. In 1910 she published *Marie Claire*, the autobiography of a poor provincial girl, told with simplicity and considerable art; Eng. trans., 1911, by J. N. Raphael, who also translated her *Valserine* and *Other Stories*, 1912.

AUDRAN, EDMOND (1842-1901). French composer. Born at Lyons, his earliest dramatic composition was *L'Ours et le pacha*. Later he found his vocation in opera comique, starting in 1879 in Paris with *Les Noces d'Olivette*, which had a successful run at the

Strand Theatre, London, as Olivette, and was followed by The Grand Mogul, La Mascotte, La Cigale, and La Poupée.

AUDUBON, JOHN JAMES (c. 1780-1851). American ornithologist. Born at Mandeville, Louisiana, he became a planter in Pennsylvania. He explored the forests in search of birds, his art training enabling him to make valuable drawings. His *Birds of America*, 1827-38, made his reputation. His later years were devoted to a study of the mammals of America. He died in New York, Jan. 27, 1851.

J. J. Audubon,
Ornithologist

AUERSTÄDT. Village in Saxony, 25 m. from Weimar. It was the scene of the victory of the French with a single corps under Davout over the Prussians, Oct. 14, 1806. The French lost about 7,000, the Prussians perhaps double that number. Davout was made duke of Auersstädt. See Jena; Napoleon.

AUGEAN STABLES. In Greek legend, stables belonging to Augeas, a king in Elis. One of the twelve labours imposed on Hercules was the cleansing of these stables, which contained stalls for 3,000 oxen. He accomplished his task in one night by turning through them the rivers Alpheus and Peneus. As a reward Augeas had promised Hercules 300 oxen, and on his refusal to keep his word he was slain by Hercules. See Hercules.

AUGHRIM. Village about 4 m. from Ballinasloe, Galway, Irish Free State. Here, July 12, 1691, a battle between the English and the Irish was fought. The Irish, about 20,000 strong, under a French general, Saint Ruth, were in position at Aughrim; the English, under Ginkel, marched from Athlone to attack them. A strong Irish position was attacked in vain, and then, just before nightfall, the English horsemen found a path across the bog and turned the Irish flank. Saint Ruth was killed, and, encouraged by the success of the horsemen, the English infantry stormed the breastwork. The defeat soon became a rout. The Irish lost from 4,000 to 7,000 men. Out of 25,000 men the English lost under 2,000.

AUGITE (Gr. *augē*, lustre). A calcium, iron, magnesia, aluminium silicate which, as a rock-forming mineral, enters largely into the composition of basalts and other lavas, gabbros and dolerites. Generally black when in large crystals, it exhibits various shades of yellow or brown when in thin splinters or sections. See Pyroxene.

AUGMENTATION (Lat. *augmentum*, increase). Addition to armorial insignia granted specially by royal licence. Such additions may be placed in small shields, as in the cases of the dukes of Marlborough and Wellington, in cantons or chiefs, or may merely be extra charges—a crest or supporters. In blazoning arms these are always described last, “and for augmentation” being prefixed.

The court of augmentations was a court of law established by Henry VIII in 1536, after the dissolution of the monasteries. Its function was to hear cases arising out of the disposal of monastic lands. Its records were kept in the Augmentation Office, and it was dissolved in 1553.

AUGSBURG. City of Bavaria. Capital of the district of Swabia, it stands high, about 40 m. by rly. N.W. of Munich, and between the rivers Lech and Wertach. Formerly one of the wealthiest of the free cities of Germany, its buildings include the cathedral, partly dating from the 10th century, the churches of S. Ulrich and S. Anna, the episcopal palace, the 17th century town hall, with its magnificent Golden Hall, and the Fugger Haus. The

Fuggerei is a little enclosed town for needy Roman Catholics. Cotton, linen and silk goods, paper and machinery are among the chief manufactures. Pop. 165,522.

Augsburg owed its early importance and its later commercial prosperity, when part of Swabia, to its situation at the junction of several roads, much of the trade from Italy to the N. passing through it. It was a free city from 1276 to 1806, when it became part of Bavaria. During the 14th and 15th centuries it was the great money market of Europe.

The statement of the Lutheran doctrine drawn up in 1530 and presented to Charles V during the diet of Augsburg is known as the Confession of Augsburg, and the coalition of European princes formed at Augsburg in 1686 against Louis XIV was the League of Augsburg.

AUGUR (Lat. *avis*, bird; *garrare*, to chatter). Member of a college of priests in ancient Rome. In late Republican times consisting of sixteen members, its functions included the inauguration of temples, priests, etc., and the taking of auspices from observations of the manner of flight and of the cries of certain birds before important public business. A report of unfavourable manifestations to the president made it necessary to adjourn the meeting.

AUGUSTA. City and winter resort of Georgia, U.S.A., the co. seat of Richmond co. It stands on the Savannah river, at the head of navigation, 231 m. from its mouth, and is 132 m. N.W. of Savannah, on the Southern and other rlys. Water-power for factories is brought by canals from a dam by the river, and a hydro-electric plant of 30,000 h.p. has been laid down. Augusta is the chief cotton manufacturing centre of the southern states, and one of the largest cotton markets. Lumber, flour, silk, and cotton-seed oil are produced. Pop. 55,245. Another Augusta is the capital of Maine, U.S.A. Pop. 14,144.

AUGUSTA OR AGOSTA. Seaport of Sicily, in Syracuse prov. It stands on an island connected with the mainland by a bridge, and is 19 m. by rly. N. of Syracuse. It has a spacious harbour, a fishing industry, and exports salt, oil, wine, and sardines. Off here in 1676, in a fight between the French and a Spanish-Dutch fleet, De Ruyter was killed. Pop. about 16,000.

AUGUSTAN AGE. Name given to a period of literary excellence during the reign of the Roman emperor Augustus. The writers included Virgil, Horace, Ovid, Propertius, and Livy. The reigns of Anne in England and of Louis XIV in France have been also described thus. See Latin Literature.

AUGUSTINE (354-430). Father of the Church and bishop of Hippo. Aurelius Augustinus, formerly known in England as S. Austin and now more generally as S. Augustine, was born Nov. 13, 354, his parents being Patricius, a pagan, and Monica, a Christian, both Latin-speaking citizens of the Roman empire. Augustine's education began at his native town, Tagaste, and was continued at Madaura and Carthage. After his conversion to Christianity in 386 he returned from Italy to his native land and went into a retreat, where he studied Scripture and philosophy. In 391 he was called against his will to be a presbyter, and in 395 to be bishop of Hippo Regius. In that place and office he remained until his death, Aug. 28, 430.

Of Augustine's numerous works, the most interesting to moderns are two that take rank among the world's classics, the *Confessions* (Confessiones) in thirteen books, and the *City of God* (*De Civitate Dei*) in twenty-two books. In the *Confessions*, Augustine traces his progress from childhood to conversion. The last three books deal with the Book of Genesis. The *City of God* is an elaborate answer to the charge that the Christians were responsible for the fall of Rome in 410.

Augustine was the first to transform the authority of the Church into a factor in religion. He changed the current conception of piety into a deep and firm trust in God by faith. His doctrines are those of S. Paul reaffirmed and developed, and, after S. Paul, he has had the greatest influence on the theology of the West.

AUGUSTINE OR AUSTIN, SAINT (d. 604). First archbishop of Canterbury. He was prior of the Benedictine monastery of S. Andrew at Rome when chosen by Pope Gregory I to lead a band of missionaries for the conversion of England. He set out in 596 and reached the Isle of Thanet in the spring of 597. Accompanied by 40 monks, he had a courteous reception from Ethelbert, king of Kent. Augustine then went to Arles to receive consecration as bishop. In 601 Gregory gave him jurisdiction as archbishop over England. He was instructed also to divide the country into dioceses, though the new religion actually extended but little beyond the borders of the kingdom of Kent. Augustine died May 26, 604, and was buried at Canterbury. His bones were later translated to the N. porch of the abbey, a site now occupied by a hospital. His festival is May 26.

AUGUSTINIAN. Full name of the Austin canons, a religious order of R.C. clergy. The Augustinians follow the rule of Augustine, and while living in community are occupied with ordinary clerical work. They were reorganized in the 12th century, and in the 15th century were entitled canons regular. At the Reformation they had 34 houses in Scotland and 91 in England. The hospices on the Great St. Bernard and the Simplon are served by monks of this order. The canonesses regular of S. Augustine, communities of women living by rule, are of similar origin. The name is also given to the Austin Friars, a religious order of mendicants dating from the 5th century. Their habit was black, and the site of their house in the City of London is commemorated by the street Austin Friars.

AUGUSTÓW. Town of Poland, in the district of Suwalki, formerly in Russia, also called Augustovo. The town is in the lakes region W. of the Niemen, and has canal connexions with this river and by the canalised Biehrza (Bohra) with the Vistula. It is 18 m. S. of Suwalki, and has cattle and horse markets and a timber trade. It was founded in 1557 by Sigismund II. Pop. 12,000.

It gives its name to a battle fought between the Germans and the Russians. Sept. 14-Oct. 3, 1914. A Russian reserve army, having retreated from Lyck through Grajewo to the line of the Bobra, made a stand against the Germans at Augustów about Sept. 14-15, but was defeated. After further fighting the Russians crossed the Bobra and drove the Germans back on Augustovo. On Oct. 1 the Russians bombarded the town, and captured it on Oct. 3. The Germans then fell back to the frontier.

AUGUSTULUS, ROMULUS. Last Roman emperor of the West. He was the son of the powerful Pannonian Orestes, who deposed the emperor Julius Nepos and set his own son on the throne (475). The young emperor proved utterly incompetent, and the Romans expressed their contempt by changing his name from Augustus to the diminutive Augustulus. Orestes was killed in 476, and Augustulus abdicated and retired to Campania.

AUGUSTUS, GAIVS OCTAVIVS, commonly known as Augustus, the first of the long series of Roman emperors, was born Sept. 23, 63 B.C. He was the son of another Gaius Octavius by a niece of Julius Caesar, who by his will made the boy his adopted son and heir. During the years between the murder of Julius (March 15, 44) and his own assumption of the imperial dignity in 27, he is generally named Octavian.

The murder of Julius Caesar threw the Roman world into chaos. The young Octavian, who had been absent from Italy, returned at once to Rome, accompanied by his friend and counsellor Agrippa, to claim his inheritance. Caesar's partisans were already in arms under the leadership of Antony, who at first imagined that Octavian could be disregarded. The veterans soon gave their allegiance to Caesar's adopted son, with the result that an alliance was quickly made between him and Antony.

In 42 Antony and Octavian, who with Marcus Lepidus had been recently chosen triumvirs to restore order, carried their armies from Italy to the Balkan Peninsula to fight the two chiefs of the republican party, Brutus and Cassius. The victory of Philippi (42) made the Caesarians all-powerful. Octavian and Antony in effect divided the Roman world between them.

Meanwhile, Octavian was organizing his supremacy in the W. In 31 the arrogance of Cleopatra, the Egyptian queen, provided the excuse for an attack upon her, which was in effect an attack upon Antony. Agrippa won a decisive victory over Antony's fleet at Actium (Sept. 2, 31); and when Octavian advanced against Egypt in the following year Antony and Cleopatra committed suicide, and Octavian at 33 stood without a rival.

After the fall of Antony, Octavian returned to Rome, and the Senate conferred upon him titles of honour which in themselves did not imply power: Augustus, the name by which he is known to posterity; pater patriae, father of his country; princeps, first citizen.

Augustus reigned from 27 B.C. to A.D. 14, when he died, Aug. 19. He did not aim at any extension of the Empire, though there were frequent and sometimes serious wars with the German and other barbarian tribes upon its confines, in the course of which there occurred one grave disaster, the annihilation by Arminius of a great Roman army under Quintilius Varus (A.D. 9). Within the empire itself Augustus established the Pax Romana, the Roman Peace, and the provinces were for the most part admirably governed. See Rome.

AUGUSTUS (1670 - 1733). King of Poland and elector of Saxony, known as the Strong. Born at Dresden, May 12, 1670, he was the second son of John George III, elector of Saxony. In 1694 he succeeded his brother John George IV as elector, and in 1697 was elected king of Poland. In 1702 he was defeated at Clissow by Charles XII of Sweden, who forced him to give up the Polish crown, which he regained in 1709 after defeating Charles at Pultowa. Marshal Saxe was the most famous of his many illegitimate children. He died at Warsaw, Feb. 1, 1733.

His son Augustus (1696-1763) succeeded him in Saxony and was elected King of Poland, where he mainly lived.

AUK. Name of two birds of the family Alcidae. The great auk or gare-fowl (*Alca impennis*) is now extinct. It was the only bird of the northern hemisphere incapable of flight, its wings being little more developed than those of the penguin, which it somewhat resembled in general appearance. The auk ranged from the Bay of Biscay to Greenland, but was found in greatest numbers on rocky islands near Iceland and off Newfoundland. The last known example in Europe was killed in 1844. The eggs are highly valued by collectors.

Auk. Extinct Great Auk and egg

The little auk (*Mergulus alle*), a small bird of the same family, is only about 8 ins. in length and has flying wings. It is a winter

Augustus, first of the Roman emperors. He was the great-nephew and adopted son of Julius Caesar
Vatican, Rome

visitant to the northern shores of Scotland. The word auklet is used for still smaller birds.

AULDEARN. Village of Scotland, about 3 m. from Nairn. Here, May 9, 1645, was fought a battle between the royalists under Montrose and the Covenanters. Montrose, after his retreat from Dundee, found that his pursuers had divided their forces. Thereupon he turned against Hurry and lured on by him reached Auldearn on May 8. During the night the Covenanters sought to surprise their foes, but they failed, and early on the 9th the battle began. The cavalry of the Covenanters were routed; in the centre the infantry were killed almost to a man. See Montrose.

AULD LANG SYNE. Song by Robert Burns. Written in the summer of 1789, he sent it to a friend as an old Scottish song, having found his inspiration in the line: Should old acquaintance be forgot. The song was probably set to its present tune in 1799. See Burns, Robert.

Auk. Auld Licht Auk

AULD LIGHTS (Old Lights). Minor branch of Scottish Presbyterianism. In 1799 there was a dispute among some of the Presbyterians about making the Solemn League and Covenant a term of communion. The objectors were dubbed Auld Licht Burghers and Auld Licht Anti-burghers. These Auld Lights held aloof from each other and from all other sects until they coalesced in 1842 as the Original Secession Church. Four presbyteries still continue: Aberdeen and Perth, Edinburgh, Ayr, Glasgow. The Auld Lights have received

fame in the stories of Sir James Barrie. See Presbyterianism; consult also Barrieland. J. A. Hammerton, 1929.

AULD REEKIE. Name by which Edinburgh is often called. It is due to the smoke or "reek" from the crowded buildings of the old town. See Edinburgh.

AULIC COUNCIL (Gr. aulē, court). Court of justice of the Holy Roman Empire, known in Germany as the Reichshofrat. Established as a kind of privy council by the emperor Maximilian I in 1497, the duties of its members were to assist him in governing his dominions. See Empire.

AULIS. Seaport of ancient Greece, in Boeotia. It stood on the Euripus, the channel separating Euboea from the mainland. It was here that the Greek fleet assembled before it set out for Troy, and Agamemnon prepared to sacrifice his daughter Iphigencia.

AUMALE. Town of France. It stands on the river Bresle, 47 m. by rly N.E. of Rouen. The English titles of earl and duke of Albemarle were derived from it.

There were counts and dukes of Aumale in France until 1631, when Charles, the last duke, died in exile. In 1850 Louis Philippe revived the title for his son Henri (1822-97), who distinguished himself as a soldier in Algeria, of which he was governor, and held high offices in France before the royal family was exiled in 1883. He died in Sicily May 7, 1897, leaving his estate at Chantilly, with the wonderful treasures in the house there, to the nation. See Albemarle; Chantilly.

A town in Algeria is also named Aumale. It stands on the site of the ancient Ausia.

AUMONIER, STACY (1887-1928). British novelist. The son of a sculptor, William Aumonier, he was educated at Cranleigh and for a few years worked as an artist. He exhibited at the Royal Academy and elsewhere and at the same time appeared at the theatres as an entertainer, chiefly in his own dramatic sketches. In 1913 he began to write and soon made a reputation. He

Aurangabad, India. Ancient gateway and stone bridge of this city in the native state of Hyderabad

published novels, but is chiefly famous for his short stories. A volume of these, Ups and Downs, appeared in 1929. Aumonier died Dec. 21, 1928.

AURA. Term used for any subtle emanation. In medicine, it is applied to symptoms which may precede an epileptic attack or attack of hysterical fits, such as flashes of light, odours, sounds or voices, peculiar sensations in the pit of the stomach, twitching of the muscles, and psychic changes.

AURANGABAD. District and city in the N.W. of the native state of Hyderabad. The district is highly cultivated, chiefly for cotton and native food grains. The city stands on the Dudhna, 235 m. by rly. E. of Bombay. Pop. 40,000.

AURAY. Town and harbour of France, in the dept. of Morbihan. It is a road and rly. junction near the mouth of the Auray river, 12 m. by rly. W. of Vannes. There are valuable oyster beds, and fishing is carried on. The church of S. Anne d'Auray, in the neighbourhood, is a place of pilgrimage. Auray was the scene of an English victory over Charles of Blois in 1364. Pop. 6,949.

AURELIAN. Roman emperor, A.D. 270-275. Born about A.D. 213, the son of a Pannonian peasant, his full name was Lucius Domitius Aurelianus. He became one of the chief officers of his predecessor Claudius, upon whose death he was proclaimed emperor by the soldiers. Aurelian first attacked the barbarians in Italy and obtained a decisive victory (271) over them. After quelling a rebellion in Rome, he turned his attention to Zenobia, queen of Palmyra, and a brilliant campaign ended in the capture of Zenobia and the destruction of Palmyra. The defeat of Tetricus, the rival emperor of Gaul, near Châlons (273), brought the whole empire again under Aurelian's rule. The title of Restitutor Orbis (Restorer of the World) was conferred upon him, and his triumph in 274 was the most splendid ever celebrated in Rome.

Aurelian's Wall in Rome was begun by Aurelian A.D. 271, and was completed by

Prohus in 280. It was more than 12 m. in circumference, about 60 ft. high, and had some hundreds of towers. Much of the original circuit is still standing.

The Aurelian Wall was the name of a road in Italy. Beginning at the foot of the Palatine Hill at Rome, it left the city at the Aurelian Gate, and after traversing Latium, Etruria, and Liguria along the coast, ended at Arletê (Arles).

AUREOLE (Lat. aureolus, golden). Name given in Christian art to the radiance encircling the entire figure of divine and holy personages. It is distinguished from the nimbus, which surrounds the head only, though the two terms are often interchanged. See Nimbus; Saint.

AURICULA (*Primula auricula*). Perennial Alpine herb. A native of the Swiss Alps, it has a thick root-stock and a rosette of smooth, fleshy leaves, dusted on both surfaces with white powdered wax. The yellow flowers are borne in a small cluster at the top of a leafless stem. The garden varieties are derived from an original hybrid between *P. auricula* and *P. hirsuta*, the hairy primrose.

AURIGA. Driver of a chariot in the races in the Roman circus. The charioteers were divided into four parties or "factions"—the Blues, Whites, Greens, Reds—who in imperial times exercised a strong political influence.

The name is also applied to one of the northern constellations. Figured as a kneeling charioteer, it is described in Ptolemy's star list as a shepherd carrying a goat.

AURIGNACIAN. The early period of the Upper Palaeolithic Age in Europe. The flint implements—gravers, awls, and spokeshaves—are associated with bone shaft-straighteners and personal ornaments. The graphic arts were developed.

Named from a grotto at Aurignac in Haute Garonne, the stations extend from S. Wales to the Danube. See Anthropology.

AUROCHS (Gr. ouros, buffalo; Ger. ochs, ox). Extinct wild ox of Europe, progenitor of domesticated cattle; it is mistakenly identified with the European bison. The aurochs was a huge animal, as is proved by the bones found in many parts of Britain. By the 15th century it was found only in Lithuania, where the last survivors died early in the 17th century. It is represented in Great Britain by the half-wild cattle of Chillingham and Cadzow.

AURORA. Latin name for Eos, the Greek goddess of the dawn. She dwelt in the East, and every morning rose from the ocean or from the couch of her husband Tithonus and traversed the sky in a chariot drawn by two horses. She was also the goddess of youth and beauty.

AURORA. Luminous phenomenon seen in the sky chiefly at night. There are two of these phenomena which are almost identical. One is the aurora borealis or northern lights and the other the aurora australis. In general, the northern lights appear as either a whitish arc of light or quivering, rapidly moving beams. Sometimes a faint illumination without definite form is seen, and again it takes the form of clouds or patches of light. The colour may have a reddish, yellowish, or greenish tinge. It is sometimes carmine, and more rarely violet. The auroras are thought to be electro-magnetic phenomena, most strongly manifested at the poles. See Light; Spectroscopy.

AURUNGZEBE (1618-1707). Mogul emperor of India. His original name Mahomed was changed by his father to Aurungzhe, or throno ornament. He was made governor of the Deccan in 1655, and in 1658 he seized the throne. His reign is often regarded as a kind of golden age, but the distrust and suspicion fostered under his despotic rule caused the decay of the Mogul empire. He died at Ahmadnagar, Feb. 21, 1707. Consult Life, S. Lane-Poole, 1901.

AUSPICES (Lat. avis, bird; spicere, to see). Observations made by the augurs in ancient Rome from the flight and cries of birds. Auspices were also taken by observing the manner in which the pulli, or sacred chickens, ate their food. If they devoured it greedily, the omen was regarded as favourable; but if they were unwilling to leave their cage, it was unfavourable. See Augur.

AUSSIG. Town of Czecho-Slovakia. It is situated amid mountains at the union of the Biala and Elbe (Labe), 68 m. by rly. N. of Prague. It is a centre of the chemical industry, trades in coal, has a fruit drying and

Aurora. Wonderful effect of the auroral curtain (Aurora Australis), a manifestation of luminous phenomena observed in the sky during Captain Scott's first Antarctic expedition, almost identical with the Aurora Borealis. By permission of the Royal Society.

preserving industry, is a railway centre, and carries on an active river trade. It is also known as Usti. Pop. 39,815.

AUSTEN, JANE (1775-1817). English authoress. The seventh child of the Rev. George Austen, she was born in his rectory at Steventon, Hampshire, Dec. 16, 1775. In early childhood she had some brief experience of school, but her education was chiefly obtained at home; her accomplishments, from the conventional standpoint of her time, being music, dancing, French, and a little Italian. She never left England. She paid occasional visits to London, but Bath and Southampton were the only towns in which she ever resided, and her life was mainly spent, whether in villages or in country houses, with people whose comfortable incomes were derived from rural rent rolls or from tithes.

Of Jane Austen's six authorised novels *Pride and Prejudice* was completed in 1797, and *Sense and Sensibility* in 1798. In 1798, too, much of Northanger Abbey, also a satire, in great part, on other women novelists, was written. *Mansfield Park* was completed in 1813, *Emma* in 1815, and *Persuasion* in 1816. The first to be published was *Sense and Sensibility*, which came out in 1811. In 1871, Jane Austen's nephew, Mr. J. E. Austen Leigh, gave to the world her epistolary novel *Lady Susan*, written before she came of age. An unfinished hook, *The Watsons*, was completed by Edith and Francis Brown and published in 1928.

In appearance Miss Austen was tall and slight, with small, regular features, hazel eyes, dark curling hair, and a fine complexion. The evidence goes to show that her life of forty-two years, which ended at Winchester, from rapid decline, on July 18, 1817, was one of intelligent happiness, usually spent in those

Aurungzebe, Mogul emperor. British Museum.

Auricula. Swiss Alpine perennial from which the familiar garden flowers are derived.

Jane Austen, whose novels gently satirise provincial family life. From an engraving.

easy circumstances which, on her own showing, were essential to her contentment. She is buried in the N. aisle of Winchester Cathedral. Consult Life, F. Warre Cornish, 1913.

AUSTERLITZ. Small town in Moravia, about 14 m. from Brünn. Here on Dec. 2, 1805, Napoleon won one of his greatest victories, defeating the combined Russians and Austrians. The battlefield lies to the S.W. of this; the ground is mainly hilly, but to the S. it slopes to a region of lakes and marshes.

The two forces came into contact on Nov. 28, and during the next three days prepared for the coming battle. On the night of Dec. 1 the French were drawn up behind the little river Goldbach, and the allies were between that stream and Austerlitz. Early on Dec. 2 four allied columns advanced to the main attack on the French right. The latter, much inferior in numbers, were worsted, but were not routed, although the enemy got across the Goldbach.

As the last and most northerly of these four allied columns advanced, Napoleon delivered his main attack, striking at the Russian flank. The latter turned towards the foe, and on the plateau of Pratzen there was a desperate struggle, the Russians being at length beaten back. With this plateau in their possession, the French were able to move forward to the help of their right wing. Elsewhere the French left was engaging the Russian reserves. Here cavalry were used on a considerable scale, but eventually the French succeeded in driving their enemies back on to Austerlitz and in seizing the road that led to Olmütz.

The numbers engaged were about 83,000 Russians and Austrians and 65,000 French. The former lost about 35,000, of whom half were prisoners, and the victors about 7,000.

AUSTIN. Capital of Texas, U.S.A., and the co. seat of Travis co. It stands on the Colorado river, 145 m. W.N.W. of Houston on the Missouri, Kansas and Texas and other rlys. It is the seat of the co-educational state university. The city exports livestock, hides, cotton, wool, and grain, and has a large lumber industry. Two miles up the river is one of the largest dams in the world. Pop. 45,145.

Alfred Austin,
English poet
Elliott & Fry

AUSTIN, ALFRED (1835-1913). English poet. Born at Headingley, near Leeds, May 30, 1835, he was educated at Stonyhurst and at Oscott. Editor of *The National Review*, 1883-93, he was for many years on the staff of *The Standard*. He published many volumes of mediocre verse, lyrical and dramatic. He had a genuine love of nature, and expressed this happily in prose works such as *The Garden that I Love*. 1894. He succeeded Tennyson as laureate in 1896 and died June 2, 1913. Consult his *Autobiography*, 2 vols., 1911.

AUSTIN, SIR HERBERT (b. 1866), British manufacturer. Born at Little Missenden, Bucks, Nov. 8, 1866, he was educated at Rotherham and then trained as an engineer. After a few years in Australia he returned to England in 1890 and for sixteen years was connected with the Wolsley Company. In 1906 he began to make motor cars on his own account at Northfield, Birmingham, and in a few years the Austin car was known everywhere. In 1929 his works employed something like 4,000 men. During 1919-24 Austin was M.P. for the King's Norton Division of Birmingham.

Sir Herbert Austin,
British manufacturer

AUSTIN, JOHN (1790-1859). British jurist. He was born near Ipswich, May 3, 1790, the son of a prosperous miller. He became a barrister, and included Bentham and James and John Stuart Mill among his friends. He was professor of jurisprudence at University College, London, 1826-32, and died at Weybridge in Dec., 1859.

Austin's lectures, published in 1832 as *The Province of Jurisprudence Determined* and as *Lectures in Jurisprudence*, are authoritative. His definitions of legal and juristic terms were famous, one of the best known being that of sovereignty. He sought to find the essential distinction between law and morals, and according to his conception all law comes from the command of the sovereign. His theory is opposed by the historical school, which regards customary law as existing quite independent of sovereignty and anterior to it.

His brother Charles Austin (1799-1874) was a successful lawyer. See *Jurisprudence*.

AUSTRALASIA. Term comprising the Commonwealth of Australia, the Dominion of New Zealand, and their dependencies. (See *Australia*; *New Zealand*; *Fiji Islands*, etc.) The Bank of Australasia was incorporated by royal charter in 1835, has branches throughout the six states of Australia and in New Zealand, and has a paid-up capital of £4,450,000. Its head office in England is 4, Threadneedle Street, London, E.C.2.

AUSTRALIA. The greatest isolated mass of land S. of the equator. Its total area, including the island of Tasmania, is 2,974,581 sq. m., with a coastline of about 8,800 m. Its extreme measurements are from Cape York in the N. to Wilson's Promontory in the S., about 2,000 m., and from Steep Point in the W. to Cape Byron in the E., 2,450 m.

It is divided politically into six states, including Tasmania, and two territories, which together constitute the Commonwealth. The seat of government is now Canberra (q.v.). The area and population, excluding about 60,000 aborigines, of the separate divisions are as follows:

Division	Area. sq. m.	Population Latest Estimate
New South Wales	369,432	2,413,898
Victoria	87,884	1,748,610
Queensland	670,500	903,119
South Australia	380,070	576,576
Western Australia	975,920	395,851
Tasmania	26,215	212,043
Northern Territory	523,620	4,238
Federal Capital Territory ..	940	8,385
Totals	2,974,581	6,262,720

In 1927 Northern Territory was divided into North Australia and Central Australia. North, with its capital at Darwin, covers 287,220 sq. m. and Central, with its capital at Alice Springs, covers 236,400. Papua belongs to the Commonwealth, which governs part of New Guinea, New Britain, New Ireland, some of the Samoan Islands, the Solomon Islands, the Admiralty Islands, and Nauru Island under mandate from the League of Nations.

There are indications that Australia was at one time united with Asia through Malaysia, and perhaps also with S. America. But this conjunction was so remote that the unbroken isolation of Australia from a period long before historic times is the key of its whole development, and forms of vegetable and animal life survive in Australia which have become extinct elsewhere. With few exceptions, the indigenous animals are monotremes and mar-

supials. Of the monotremes, the most primitive form of existing mammals, the ornithorhynchus, or duck-billed platypus, and the echidna, or spiny ant-eater, are the chief; of the marsupials, the characteristic Australian animals, the wombat, opossum, and kangaroo are the most important. Of the rich and varied bird life, the lyre-bird, laughing jackass, and emu are typical. The typical vegetation of the forest is the eucalyptus, the gum, and the jarrah wood.

The climate is generally good. The coastal regions in the tropics are warm and humid; the inland plains are very hot in summer, but not unhealthy. The chief mountain ranges are the Australian Alps, the Blue Mts., the Liverpool and New Zealand ranges, and the Great Dividing Range. The principal rivers are the Darling, Murrumbidgee, and Murray, smaller streams being the Fitzroy, Burdekin, Diamantina, and Barcoo or Cooper's Creek.

CONSTITUTION. Australia is a self-governing Dominion and its constitution is "an indissoluble Federal Commonwealth under the Crown of the United Kingdom." It is governed by a governor-general appointed by and responsible to the Crown, assisted by an Executive Council of twelve—in practice, the Commonwealth Cabinet of the day.

The Australian Parliament consists of two Houses, the Senate and the House of Representatives. The Senate consists of 36 senators (6 for each of the States voting as one electorate), chosen for 6 years. The House of Representatives consists, as nearly as possible, of twice as many members as there are senators. The Northern Territory elects a member who may not vote, but who may join in debates.

DEFENCE. As regards the army, the principle adopted is universal compulsory training of a citizen army by a small permanent force. In 1928 the strength of the citizen force was 45,273, and of the permanent force 243 officers and 1,339 other ranks. Since 1913 the Commonwealth has built and maintained its own fleet. Sydney is a first-class naval station. The naval forces, including reserves, total over 11,000. The Air Force is administered by the Air Board. In 1928 the permanent establishment was 125 officers and 777 airmen.

TRADE AND FINANCE. The main industry of Australia is the production of wool. Cattle breeding forms a great though less important industry, which has led to the manufacture and export of Australian butter. General agriculture has long been the second industry, and wheat is grown for export. In recent years wines have become an important subsidiary industry and a considerable amount is exported to England. Australia is one of the great metal producing countries, enormous quantities of gold having been found in Western Australia and of silver at Broken Hill in New South Wales.

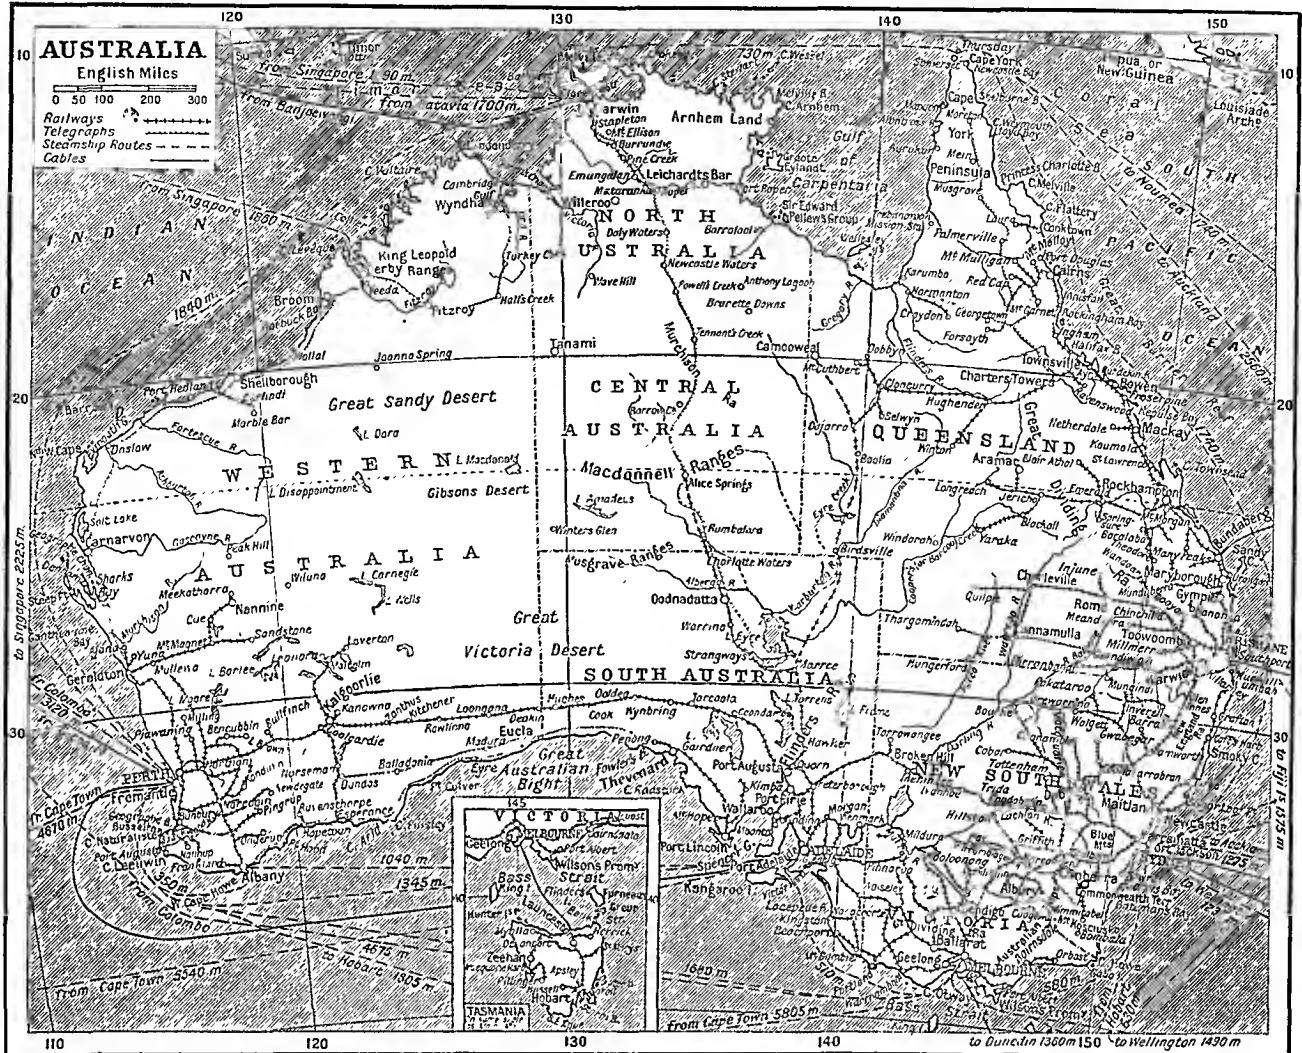

The rlys. are nearly all State or Government property, and upwards of 25,000 m. of Government rlys. are open to traffic, Queensland having 6,302 m., New South Wales 5,750 m., and Victoria 4,634. The transcontinental line from Kalgoorlie to Port Augusta, 1,050 m., was completed in 1917. Privately owned undertakings have a length of 3,143 m., but only 967 m. are available for general purposes. All the State capitals have wireless telegraphy stations. Two beam stations have been erected for direct communication with London and with Montreal, and direct beam wireless service has been established with London.

In 1928 the public debt of the Commonwealth was £494,000,000. The Commonwealth Bank, a state institution, was opened at Sydney in 1913.

HISTORY. The first English seaman to reach Australia was William Dampier, who visited Roebuck Bay in 1688; but his report was unfavourable, and Australia was practically deserted until Captain Cook arrived in 1770.

Arms of Australian
Commonwealth

Australia. Map of the Commonwealth showing the boundaries of the different states, larger scale maps of which appear under their respective headings

In 1788 the first settlement was made at Sydney Cove, now Port Jackson, New South Wales. The passage of the Blue Mts. in 1813 ushered in the era of pastoral development. The gold mining era began in 1851, followed by the development of copper, coal, silver and tin mines. The mining era gradually emerged into a period when pastoral, agricultural and mining industries were almost equal in importance. The creation of the Commonwealth in 1900 was the beginning of the present era.

On the outbreak of the Great War Australia's response to the call was instant. She

contributed men, ships, and material; 416,000 men and women volunteered, and of these 330,000 journeyed overseas. Australian troops distinguished themselves in Gallipoli, Egypt, Palestine, and on the Western front. The casualties were: deaths 58,132; wounded 135,684; gassed 16,487; prisoners of war 4,057; missing 212. Of the death-roll the total for the western front was 50,000. The total war bill was about £464,000,000.

In 1922 Mr. Bruce formed a nationalist ministry. Its chief difficulties were due to unrest on the part of the seamen and waterside workers. In 1927 the railway workers of Queensland struck, and very serious constitutional questions were at stake. The general elections of 1925 and 1928 were favourable to Mr. Bruce, but in Oct., 1929, he was defeated and Mr. J. H. Scullin, leader of the labour party, became prime minister. See Canberra.

AUSTRALIA. Battle cruiser, flagship of the Royal Australian navy. She was built to the order of the Australian Government, who paid the cost of her manning and upkeep. Throughout the Great War she served with the Grand Fleet. A new cruiser of this name was completed in 1928, having eight 8-in. and four 4-in. guns. Her sister ship is the Canberra, and they are of the Kent (q.v.) class.

AUSTRALIA DAY. Sometimes called wattle day, Jan. 26 is a national holiday in Australia. It commemorates the founding of Sydney in 1788.

AUSTRALIA HOUSE. Building in the Strand, London, headquarters in Britain of the Australian Government. It stands at the east junction of Aldwych and the Strand, and was opened in 1918. It contains an exhibition hall, a library, and offices for the High Commissioner. It has also a cinema theatre used to give information about Australia.

Australia House, Strand, London. Headquarters of the Australian Government in Great Britain

AUSTRALIAN BIGHT, GREAT. Opening of the ocean S. of Australia. From Cape Arid in W. Australia to Eyre Peninsula in S. Australia the bight is 1,600 m. long. E. of Fowler's Bay are headlands, bays, islands, and inlets

Australia. The Rising Sun badge

Australia. Battle Cruiser of the Australian Navy, which served with the Grand Fleet in the Great War

Austria. Map showing the boundaries of the Republic as defined by the Peace Treaty of 1919, including the south portion, which, after a plebiscite of the inhabitants, remained Austrian territory

In 1928 and 1929 there were serious disturbances owing to disagreements between the Heimwehr, a Fascist organization, and the Socialist Schutzbund, the former demanding a drastic revision of the constitution. In Sept., 1929, Dr. Johann Sebober became chancellor and in order to avert civil war, secured the assent of the assembly to constitutional changes. By these the president of the republic obtained larger powers and a longer term of office. See illus. p. 164

AUSTRIA-HUNGARY. The empire of Austria-Hungary, which existed from 1867 to 1918, consisted of the empire of Austria, then including Bohemia and other dependencies, and the kingdom of Hungary, with its dependent province of Croatia-Slavonia. It was therefore called the Dual Monarchy. In addition to this it included between 1909 and 1918 the provinces of Bosnia and Herzegovina. In 1878 these Turkish districts were placed by the Berlin Conference under the rule of Austria-Hungary, and in 1908 Austria-Hungary annexed them. In 1910 the empire covered 261,260 sq. m. and had 51,350,000 inhabitants.

GOVERNMENT. The matters administered by a joint or common organization were foreign affairs, military affairs, and certain financial questions necessarily associated with them. At the head of each of these three departments was a minister appointed by the emperor, but responsible to two joint bodies known as delegations, one for Austria, and the other for Hungary. Each delegation consisted of 60 members, 20 chosen from the upper house of each legislature and 40 from the lower house. They were elected for one year, and met alternately in Vienna and Budapest.

Austria-Hungary arms

HISTORY. The arrangement of 1867 which founded the Dual Monarchy was the outcome of much unrest in Hungary, but was only accepted after the Hungarians had been guaranteed the use of their own laws and customs. In 1897, the date for another revision of their arrangements, the differences between Austria and Hungary were the most serious that had yet arisen. While the ordinary methods were in suspense the business of state was carried on by imperial decrees. Between this arrangement and the one of 1907, the last of all, there was trouble over the proposals for increasing the strength of the army.

In 1907 the monarchy entered upon the last stage of its foreign policy—greater interference in the Balkans coupled with a closer union with Germany. The crowning act came in 1908, two years after Austria-Hungary had been the only power to support Germany at the conference of Algeiras—viz., the annexation of Bosnia and Herzegovina. In 1912 the first Balkan War began and Austrian interests,

real and imagined, were again threatened.

Internally the position was equally unsatisfactory. Serious disorder in Croatia early in 1912 led to a policy of repression there, while elsewhere local diets were suppressed and constitutional methods of government were replaced by an autocracy. Hungary was again discontented with her place in the Dual Monarchy, the state of which was perhaps never more unhappy

than when in July, 1914, the action of the ruler and his advisers precipitated the outbreak of war.

Within the Dual Monarchy the Great War told with terrible severity. Food was getting short, and the paralysis of industrial activity was perhaps more complete than anywhere in Europe outside Russia. The troops fought well when in the field, but some of the peoples in the empire had never liked the war, nor the German alliance, and four years of privation had not mitigated that feeling.

Austria. Above, native of the mountainous district of Styria; below, girl from a Tirol valley. See page 163

On Oct. 27, 1918, the government at Vienna accepted the American conditions, not only without reserve, but without awaiting the result of other negotiations. Three days later application for an armistice on the Italian front was made, and on Nov 3 this was arranged. Its terms were drastic. Austria's army and navy were in the power of her foes, who could use her territories for their operations of war. The emperor abdicated on Nov. 12, 1918, and his empire broke into pieces. The independence of its separate parts was formally recognized by the treaty of peace, and by their boundaries were defined. See Czecho-Slovakia; Hungary.

AUTEUIL. Suburb of Paris, S.W. of the city, between the Seine and the Bois de Boulogne, it is connected with Paris by rly. and tramway, and can be reached by river. It is famous for its race-course and railway viaduct. Boileau and Molière lived here

AUTO (Spanish, act). A form of morality play which flourished in Spain and Portugal, being especially represented at the festival of Corpus Christi. The religious nature of the pieces was emphasised by the full name, Autos Sacramentales (Sacramental Acts) See Morality Play.

AUTOBIOGRAPHY (Gr. autos, self; bios, life; graphēin, to write). Account of any man's life written by himself. Letters and diaries, though providing much autobiographical material, can be classified as autobiographies only with a qualification that applies to many of the memoirs or reminiscences in which the individuality of the writer is subordinated to the events or people of whom he writes. Some autobiographies are concerned more with the writer's spiritual than with his material life, as the *Apologia Pro Vita Sua* of Cardinal Newman. Specially notable autobiographies are those of Benvenuto Cellini, Edward Gibbon, Casanova, Chateaubriand, Wm. Cobbett, Thomas De Quincey, Leigh Hunt, and J. S. Mill.

AUTOCHTHONES (Gr. autos, self; eithōn, earth). Term used by some Greek peoples, especially those of Athens, Argolis, and Arcadia, to suggest that their first ancestors were sons of the soil, and not immigrants from another land. In modern ethnology the term in its absolute sense is used mainly in connexion with the discarded theory of polygenism. See Aborigines.

AUTO-DA-FÉ (Port. act of faith). Name of a public ceremony associated with the Spanish Inquisition (q.v.). It followed passing of sentence on heretics and others, and took the form of a procession and a service. The chief figures were the condemned persons, and those who had recanted. The term auto-da-fé is also applied to the carrying out of the sentence of the Inquisition, and more especially so when that sentence was the public burning of the heretic or heretics.

Autogiro. A windmill aeroplane. See Helicopter.

AUTOGRAPH (Gr. autos, self; graphēin, to write). General term for a document or signature in the author's own handwriting. The Greeks and Romans, and also the Chinese, were eager collectors of autographs. In Germany in the 14th century autographs began to be collected in little books known as *alba amicorum*, albums of friends—the forerunners of the modern visitors' book—

Austria-Hungary. Map showing the extent of the Dual Empire at the outbreak of the Great War. 261,259 sq. m., over 51,300,000 inhabitants were included in its administration. With an area of

and such collections became popular in Europe generally in the 16th century. In Great Britain the finest public collection is in the British Museum.

AUTOLYCUS. In Greek mythology, a famous thief, son of the god Hermes. Detection of his robberies was difficult, as he had the faculty of transforming the articles he stole. He was overreached at last by Sisyphus (q.v.). In Shakespeare's *The Winter's Tale*, Autolycus is a pedlar, a snapper-up of unconsidered trifles.

The *Wares of Autolycus* was the title of a series of discursive essays which appeared in *The Pall Mall Gazette* of 1894, etc.

AUTOMATIC MACHINE (Gr. *auto-matos*, self-acting). Contrivance in which mechanical is substituted for human control. The Jacquard loom, governed by the spacing of holes punched in a card, will reproduce a design, however complicated, again and again. Hardly less remarkable is the monotype, a machine which casts separate type, sets them as words, and spaces the line correctly.

The manufacture of small metal articles has been revolutionised by the use of automatic lathes, etc., which bring a number of tools to bear in succession on a piece of metal, and so shape it to a required form. Calculating machines operated by depressing keys add columns of figures, divide, multiply, and tabulate with superhuman accuracy. Here, too, may be mentioned the machine used at mints to sort out coins that vary from correct weight, and the automatic machines for issuing tickets, sweets, fruit, and other commodities, which deliver an article only when a coin of the proper weight and size is put into a slot.

Automatic Writing. In psychical research, term used for writing executed without the volition of the writer. See *Spiritualism*.

AUTOMATON. Literally, any automatic mechanism. The word, however, is applied specifically to an automatic machine constructed to resemble a human being or an animal and capable of self-movement.

In 1733 Jacques de Vaucanson showed in Paris an automatic flute-player, a tambourine-player, and a mechanical duck. In 1875-7 J. N. Maskelyne, the London entertainer, produced several remarkable automata which played cards, chess, and draughts, worked arithmetical problems, and drew portraits.

Automatism is the name given to the theory of Descartes that men and animals are mere automata and their actions involuntary.

AUTOMOBILE (Gr. *autos*, self; Lat. *mobilis*, moving). Word invented to describe a vehicle propelled from within, or a horseless carriage. The shorter word motor has taken its place in popular language.

Automobile Association badge

The Automobile Association, founded 1905, is a British society formed "to protect and advance the legitimate interests of motorists and in particular to assist in enforcement of the laws affecting the highways and the users thereof." There are more than 100,000 members.

The head offices are at Farnham House, New Coventry Street, London, W.1.

The Automobile Club is the recognized authority and governing body of motoring in the United Kingdom. The headquarters are 89-91, Pall Mall, London. See *Motor Car*.

AUTOPLASTY (Gr. *autos*, self; *plastsein*, to mould). Surgical operation for mending or replacing a diseased, injured, or lost part from a sound part of a patient's body. Autoplasty is usually employed to remedy facial disfigurement, the operation for

the nose called rhinoplasty (q.v.) being the best known. During the Great War great advances were made in autoplasty, and hospitals for facial wounds were opened, bone as well as skin and flesh being grafted.

AUTOPLATE. Machine for producing curved stereo plates rapidly for newspaper printing. Before the invention of the autoplate by H. A. W. Wood, of New York, in 1900, each plate had to be made by one of two processes—one known as the wet flog and the other as the dry flog. By the wet process, the flog, or prepared paper used for a matrix, is placed over the type-page, on to which it is beaten by brushes until the type-impression is perfect. It is then curved, dried, and placed in a casting box, which is afterwards filled with molten metal. When the metal plate has cooled, the edges have to be trimmed and finished. The dry flog process takes less time. In the case of the autoplate, when the flog has been placed in this machine and it has been started, the above-named processes are performed automatically. See *Stereotyping*.

AUTUN. City of France. It stands on the river Arroux. 62 m. by rly. S.W. of Dijon.

The ancient Augustodunum, it has a cathedral begun in 1060, but mainly of the 12th and partly of the 15th century, two magnificent gateways, Porte d'Arroux and Porte St. André, dating from Roman times, and remains of walls and of a theatre. A fair is held in Sept. on the feast of St. Lazare, the city's patron saint. In Roman times the rhetorical schools of Autun were celebrated. Pop. 13,856.

Autun, France. The cathedral, notable for its fine 15th century spire

AUVERGNE. Former prov. of France. It is now represented by the departments of Cantal, Puy-de-Dôme, and part of Haute-Loire. By the 13th century Auvergne was divided into four parts. One of these was ruled by a dauphin and called the Dauphiné of Auvergne; the second, called the Terre d'Auvergne, was added to the crown lands by Philip Augustus; the third was the county of Auvergne, and the fourth the county of Clermont. Until the Revolution Auvergne was a government in two parts, Upper and Lower, each with a capital.

The district contains the Auvergne Mts., which rise from the general level of the great plateau of central France, and are of volcanic origin. Lava covers many sq. m. of country.

AUXANOMETER (Gr. *auxanein*, to increase; *metron*, measure). Scientific instrument for recording the rate of growth of plants. A weighted thread attached to the growing point of a stem passes over a wheel, which actuates a pointer on a cylinder

Automobile Club of Great Britain and Ireland. Front and reverse of badge

covered with smoked paper, which makes partial revolving movements at intervals. The pointer scrapes away the carbon, leaving a white record of the stem's growth.

AUX CAYES. Seaport and city of Haiti. On the S. coast, 93 m. S.W. of Port-au-Prince, it exports coffee and logwood. The anchorage is good, but exposed to squalls. Pop. 12,000.

AUXERRE. Town of France, the capital of the department of Yonne. The ancient Autissiodorum, it stands on the river Yonne, 105 m. by rly. S.E. of Paris. Until 1790 Auxerre was the seat of a bishop, and its Gothic cathedral, the church of St. Etienne, dates from the 13th-15th centuries. It has finely sculptured portals, magnificent rose windows, an exquisite Gothic choir, and many fine pictures. The church of St. Eusebius dates in part from the 12th century. The choir has some beautiful painted glass. Some remains exist of the abbey of St. Germain, built in the 13th century. Pop. 21,203.

Ava. Variant name for kava, a plant native to Polynesia, and for an intoxicating drink made from its root. See *Kava*.

AVA. Ruined city of Burma. It stands on the Irawadi river, here about 4,000 ft. wide, opposite Sagaing, and 10 m. S.W. of Mandalay. Founded in 1364, it was the capital of the Burman empire until Amarapura superseded it in 1782. In 1823 it again became the capital, but lost the honour in 1837. It is surrounded by walls, and has several Buddhist temples, crowned by gilded domes. Lord Dufferin took his title from here.

AVALANCHE (Lat. *ad*, to; *vallis*, valley). Fall of masses of snow or ice or large quantities of earth from mountain slopes to the valleys. Snow which remains on steep mountain slopes after a snowfall is so unstable that when a further snowfall occurs the additional weight may set the whole mass in motion and send the snow, accompanied by loose earth and rocks, crashing into the valley.

An avalanche also occurs when quantities of ice break away from a glacier and rush down the valley. Rock avalanches take place when large masses of rock fragments slide down mountain slopes. See *Glacier*.

AVALON. In Celtic mythology, place of rest and reward for departed heroes, similar to the Valhalla of the Norsemen. Thither, according to the Arthurian legend, King Arthur was taken to be cured of his wounds. Legend described it as a green isle in the west; one conjecture identifies it with Glastonbury. Tennyson terms it the island valley of Avilion. See *Arthur*.

AVARIS. Ancient city of Lower Egypt. Sometimes identified with Tanis, it stood E. of the Nile delta. Long a stronghold of the Hyksos or shepherd kings, it was captured by Aahmes (Amasis) I, the founder of the XVIII dynasty. See *Egypt*.

AVARS. People belonging to Asiatic races commonly called Tartar, Mongolian, or Turanian, who poured in succession into Europe during the early Middle Ages. The Avar group became powerful during the 6th century, and disappeared in the 9th. As with the Huns before them and the Magyars after them, the seat of their dominion was the middle Danube and in Hungary.

AVATAR (Skt. *avatāra*, descent). In Hindu mythology, an earthly manifestation or incarnation of a deity. The word also expresses the embodiment of an idea.

AVEBURY or *Avbury*. Parish and village of Wilts., 7 m. W. of Marlborough. It contains the ruins of a supposed Druidical temple, a large outer circle of stones and two lesser inner circles, forming one of the most remarkable examples of stone monuments in the United Kingdom. The stones vary from

5 ft. to 20 ft. in height and from 3 ft. to 12 ft. in thickness, and the diameter of the outer circle is about 1,400 ft. Sir John Lubbock took his title from here. Pop. 525.

AVEBURY, JOHN LUBBOCK, 1ST BARON (1834-1912). British banker and scientist. The eldest son of Sir John William Lubbock, Bart., he entered the banking house of Robarts, Lubbock & Co. in 1848 and succeeded his father as head of the firm in 1865. He was Liberal M.P. for Maidstone, 1870-80, and for London University 1880-1900, sitting as a Liberal Unionist from 1886. In 1900 he was raised to the peerage. His chief work in Parliament was to secure the passing of the Bank Holidays Act of 1871. His writings on natural history include *Ants, Bees, and Wasps*; but his most popular works were *The Use of Life and The Pleasures of Life*. He died May 28, 1912. Consult *Life*, H. G. Hutchinson, 1914.

Lord Avebury, British scientist

AVELLANEDA. Town of Argentina, in the prov. of Buenos Aires. On the river Riachuelo, it is connected by rly. and tramway with Buenos Aires. An important manufacturing town, it has a handsome town hall, a market hall for agricultural produce, and cold storage and meat-canning industries. Pop. 46,277.

The town was named after the Argentine statesman, Nicolas Avellaneda (1836-85), who was president of the republic from 1874 to 1880, when he became involved in a civil war, in which his party crushed the opposition in Buenos Aires.

AVE MARIA or **AVE MARY** (Hail, Mary!). Latin form of the opening words of the angel Gabriel's salutation of the Virgin Mary (Luke 1), and the familiar name of the prayer or form of devotion, known also as the Angelical Salutation, introduced as it now stands into the Roman Catholic breviary in 1568.

AVENGER OF BLOOD. Ancient Hebrew institution based on the words in Gen. 9: Whoso sheddeth man's blood, by man shall his blood be shed. The execution of the sentence was held to devolve on the nearest male relative of the person slain. To provide protection for those guilty of accidental homicide, cities of refuge were provided (Num. 35). The custom of retaliation for bloodshedding still prevails among the Arabs, being sanctioned by the Koran.

AVENS. Name of two species of Geum—common avens or herb bennet (*G. urbanum*) and water avens (*G. rivale*). The first named is found in copses and hedgerows and has bright yellow, buttercup-like flowers, which are succeeded by a head of nutlets, each ending in a long hooked awn. Water avens has larger, drooping flowers with dull purple calyx and orange petals.

Aventine Hill (Lat. Mons Aventinus). One of the seven hills of ancient Rome, inhabited chiefly by plebeians. See Rome.

AVENTURINE (Italian *avventura*, chance). Variety of naturally occurring silica used as an ornamental stone. It consists of chalcedonic silica, or crystalline quartz, traversed by innumerable minute fissures that reflect light and produce a spangled appearance, and is usually reddish-brown or greyish-brown in colour. It is called aventurine from having been accidentally discovered.

AVERAGE. Business word used in two distinct senses. Ordinarily, an average is the mean proportion, or the arithmetical mean, of a number of figures, e.g. the average number of hours of sunshine, or the average earnings of a workman over a certain period. The insurance business is based on averages.

In international maritime law the term originally meant the contribution made by all to the loss sustained by one. The case arose when, to lighten a ship in a storm, certain goods had to be cast overboard to save the ship and the rest of the cargo. The owners of ship, freight, and cargo saved had to contribute pro rata to make good the loss of the cargo jettisoned.

AVERESCU, ALEXANDER (b. 1859). Rumanian soldier. In the Russo-Turkish War of 1877-78 he served as a volunteer and then went to Italy to be trained as an officer. In 1907, as minister of war, he put down a rising in Rumania, and in 1913, as chief of the staff, he was responsible for the expedition against Bulgaria that ended the second Balkan War. When Rumania joined the Allies he had a large share in checking the Austro-German attacks in 1916-17.

A. Averescu, Rumanian soldier

In 1918, as foreign minister, he conducted the peace negotiations, and in 1920 he was prime minister. He resigned in Dec., 1921, but remained president of the People's Party, in which capacity he shared in the political crisis of 1928. See Rumania.

AVERNO or **AVERNUS.** Lake of Italy, in Campania. The ancient Laeus Avernus, it is 10 m. W. of Naples, and stands at the N.W. foot of Monte Nuovo. It is an old volcanic crater. Agrippa, in 37 B.C., made it a naval harbour, connecting it with the sea by a canal to Lake Lucrino. The upheaval of Monte Nuovo in 1538 destroyed the canal and harbour. The lake was regarded by the ancients as the entrance to the infernal regions, and is referred to by Virgil.

AVERROES (1126-98). Name given to the Arabian philosopher and physician Abul ibn Roshd. Born at Cordova, he was cadi of his native city and a favourite of the emperor of Morocco. Suspected of heresy, he was exiled, but again summoned to Morocco, where he died, Dec. 12, 1198. Known as a commentator on Aristotle, he combined religious belief with a philosophy compounded of Aristotelianism and neo-Platonism.

AVEYRON. Department of southern France. The rivers Lot, Tarn, and Aveyron flow through it to the Garonne. The limestone plateau is typical Causse country, with sink holes, subterranean streams, and caves rich in stalactites. The chief industries are mining, the making of cheese and wine, and the rearing of sheep, mules, and cattle. Coal is worked. Rodez is the capital, and the area is 3,385 sq. m. Pop. 328,836.

AVIARY (Lat. *aviarium*). Cage or enclosure for keeping birds in captivity. Aviaries range in size from the small wire cage to large netted enclosures containing trees and shrubs, where a large number of birds can live under fairly natural and healthy conditions. Among British birds, the most suitable for an aviary of modest dimensions are the thrush, blackbird, starling, goldfinch, bullfinch, canary, and linnet.

AVIATION. The use of aeroplanes for the transport of passengers and goods is usually known as commercial aviation, the term aeronautics being used to describe the history and science of flying. Before the Great War commercial aviation had hardly become a practical proposition. During that struggle aeroplanes were much used for fighting and observing, but scarcely at all for transport. However, much was learned about them, and after the war their possibilities as means of transport were again considered and greatly developed.

On Aug. 25, 1919, the first passenger flying service from London to Paris was begun, the machine being a converted De Havilland bomber. Two passengers were carried in a small cabin, and the scheduled time for the journey was 2½ hours. Other services to Paris and to Brussels were started soon afterwards, the first air mail commencing in November, 1919. Early in 1920 a regular service from London to Amsterdam was instituted. In 1921 a French company which enjoyed a subsidy from its government reduced the fare on the London-Paris route by nearly half, and the British lines ceased running for a time. As a consequence the British government subsidised two British operating companies under a temporary scheme, and regular flights began again. Later in the same year another company was included in the scheme.

During 1922 and 1923 the British routes were linked up with extended continental routes, to Cologne, Berlin, Basel, and Zurich. In March of the following year the three subsidised companies, together with another, were joined into a concern henceforth known as Imperial Airways, Ltd., with a state grant for a period of years. Parallel developments in commercial aviation took place during the post-war years on the Continent, Germany linking up with Scandinavia and with Poland.

Typical aeroplanes employed by the British companies have three engines and carry 18 passengers. The journey from London to Paris takes 2½ hours; to Zurich just over 7 hours; to Cologne 4½ hours; to Berlin 8½ hours; and to Moscow 33½ hours. In addition to the continental routes a weekly service is run between London and Karachi. The section Basel-Genoa is covered by train, since the passage of the Alps by aeroplane presents some difficulty. Over the Mediterranean a flying-boat is used. During 1928 27,650 passengers were carried in British commercial aircraft, and the total mileage was 1,011,000.

AVICENNA or **IBN SINA** (980-1037). Arabian philosopher and physician. He was minister to the prince of Hamadan, but was imprisoned as the result of political intrigue. Having escaped to Ispahan, he became court physician and lectured on medicine and philosophy. Avicenna wrote commentaries on Aristotle, whose works he was one of the first to introduce to the Eastern world. He also wrote medical treatises.

AVIGNON. City of France, capital of the dept. of Vaucluse. It stands on the left bank of the Rhône, 53 m. N.W. of Marseilles, and on the rly from that city to Paris. It is sur-

Avignon. The fortress palace of the Popes and the 12th century Romanesque cathedral

rounded by massive walls built in the 14th century. In the 12th century Romanesque cathedral of Notre Dame des Doms is the tomb of Pope John II. St. Pierre is a fine Gothic church. The ancient Avénio, its bishopric was founded in the 3rd century, and it became the seat of an archbishop in 1475. In 1309, when driven from Rome, Pope Clement V chose it

as his residence, and here the popes lived for seventy years. Their palace still survives. Pope Clement VI bought Avignon in 1348, and it remained papal property until its annexation to France in 1791. It was the meeting place of Petrarch and Laura. John Stuart Mill died here. Pop. 51,685.

Avila, Spain. View of the town, showing part of the old Moorish granite walls which surround it

AVILA. City of Spain. It stands on the Adaja, 54 m. by rly. N.W. of Madrid, on the route to Paris. Almost surrounded by mts. and encircled by granite walls, with 9 gates and 86 towers, its buildings include a Gothic cathedral and Moorish castle. The ancient Abula, it flourished under the Moors, and has a convent named after S. Teresa, who was probably born here. Pop. 12,000.

AVITUS, MARCUS MAECILIUS (d. A.D. 456). Roman emperor. While holding a military command he was sent by the Roman general Aëtius to Theodoric the Visigoth, whom he persuaded to join the Romans against the Huns. He fought by the side of Aëtius at the Catalaunian Plains in 451, and in 455 was proclaimed emperor. In 456 he was defeated by Ricimer at Placentia and was deposed.

AVLONA OR VALONA. Seaport and city of Albania. The ancient Aulon, it lies on the Bay of Avlona in the Adriatic, about 60 m. S. of Durazzo. It has an excellent harbour, and exports oil, wool, and tortoise-shell. From the acorn cups of its oak woods valonia, used in preparing leather, is obtained. It belonged to Turkey from 1464 to 1913, when it was included in the new principality of Albania. In 1915, during the Great War, it was occupied by the Italians as a naval and military base against the Austrians. Pop. 6,300.

AVOCA OR OVACA. River of co. Wicklow, Irish Free State. Formed by the union of the Avonmore and Avonbeg, it flows 9 m. S.E. to the Irish Sea at Arklow, through the "sweet vale" of Moore's poem. A rly. and lead and copper mines detract from its beauty.

AVOCET (*Recurvirostra avocetta*). Bird related to the snipe, characterised by its long upward-curved beak. The beak is used for fishing in the mud for worms. Formerly common in the fen districts of England, it is now rare.

AVOGADRO'S LAW. Chemical law named after its discoverer, the Italian chemist and physicist, Count Amadeo Avogadro (1776-1856). Avogadro's Law is: that under like conditions of pressure and temperature equal volumes of all gases contain an equal number of molecules.

AVOIRDUPOIS. British and American system of weighing all substances except precious metals and stones and medicines. The basis is the grain, originally a wheat corn taken "from the midst of the ear"; 7,000 grains making 1 lb.; 27½ grains one dram; 16 drams one ounce; 16 oz. 1 lb.; 112 lb. one hundredweight; 20 cwt. one ton.

AVON (Wel. afon, river). Name of several rivers in England and Scotland. The Lower or Bristol Avon, 75 m. long, rises in the Cotswolds, in Gloucestershire, and flows through Wiltshire and Somerset, past Malmesbury, Chippenham, Melksham, Bath and Bristol, to the Severn estuary at Avonmouth.

The Upper or Warwickshire Avon, 96 m. long, rises near Naseby, in Northamptonshire, and flows through Leicestershire, Warwickshire, Worcestershire, and Gloucestershire, to the Severn at Tewkesbury. Stratford, Shakespeare's birthplace, is on its banks. The East or Wiltshire Avon, about 50 m. long, rises near Devizes, and flows past Salisbury to the English Channel at Christchurch. Of the Scottish Avons, there is one in Banffshire and another in Lanarkshire.

AVONMOUTH. Seaport of Gloucestershire, England. It stands at the mouth of the Lower Avon, 6 m. N.W. of Bristol by the G.W. and L.M.S. Rlys. It is the outport of Bristol and dates from 1877. The Royal Edward and Avonmouth Docks, forming part of the Bristol Corporation system, have extensive accommodation for the storage and handling of grain and oil, and large cold stores. A new arm of the Royal Edward Dock was opened by the Prince of Wales in 1928. A number of important industries formerly carried on in Germany have been established, notably spelter manufacture. See Bristol.

AVORY, SIR HORACE EDMUND (b. 1851). British judge. Born Aug. 31, 1851, he was educated at King's College, London, and Cambridge, was called to the bar in 1875, and in 1889 became junior counsel to the Treasury at the Central Criminal Court and K.C. in 1901. He made a great reputation as a prosecuting counsel, and was made a judge of the King's Bench Division in 1910.

Avranches, France. Place where Henry II of England promised expiation for the murder of Thomas Becket

AVRANCHES. Town of France, in the department of Manche. On the river Sée, on a hill overlooking Mont St. Michel, 87 m. by rly. S. of Cherbourg, it is on the coast road from St. Malo to Granville. Formerly an important place in Normandy, it had a magnificent cathedral wherein Henry II was absolved of all complicity in the murder of Thomas Becket. An inscribed stone in the open square marks the spot where he knelt. The cathedral was destroyed in the Revolution and the bishopric abolished. Pop. 6,597.

AWAJI OR AVADSI. Island of Japan. At the E. end of the Inland Sea, between Hondo and Shikoku, it is 33 m. long, 16 m. broad, and 218 sq. m. in area. Very fertile and low, it has a dense population and many ferry and steamer services with the main island. It is a tourist resort, and manufactures pottery.

AWARD (Old Fr. *esgarder*, to adjudge). In English law, the finding or decision of an arbitrator or arbitrators, corresponding to the judgement of a court of law. The award, which must be made within three months except in special circumstances, states the decision of the arbitrator or arbitrators by whom it is signed. See Arbitration.

AWE. Lake or loch of Argyllshire, Scotland. The longest freshwater lake in the country, it extends N.N.E. for 22½ m. from Ford to the foot of Ben Cruachan, is from ½ m. to 3 m. broad, and covers an area of 15½ sq. m. Its many islands include Fraoch-Eilean, with remains of castle (1267), and Inishail, with ruined convent and church. The ruins of Kilchurn Castle stand on an island at its N.E. end. The river Awe, noted for salmon, drains Loch Awe into Loch Etive.

AWLWORT. Small perennial aquatic plant (*Subularia aquatica*) of the order Cruciferae. It lives submerged on the gravelly bottom of lakes and is found in the north of Gt. Britain and in Ireland. The flowers are small and the leaves shaped like an awl.

AXE. Name of two rivers of England. One, 25 m. long, rises in the Mendip Hills, Somerset, and flows past Cheddar and Axbridge to the Bristol Channel, near Weston-super-Mare. The other, 21 m. long, rises in Dorset and flows S. past Axminster to the English Channel near Seaton.

AXENSTRASSE. Road in Switzerland, the part of the St. Gottard carriage road which is carved out of, or tunnelled through, the rocky cliffs on the Bay of Uri, Lake of Lucerne.

AXHOLME, ISLE OF. Level tract of land in Lincolnshire. Between the Trent, Idle, and Don rivers, it was formerly afforested and later became a marshy swamp, which was drained (1625-34) at the command of Charles I by Cornelius Vermuyden, a Dutchman. It covers about 48,000 acres and is of great fertility, corn and potatoes being grown.

AXIM. Town of the Gold Coast Colony, British W. Africa. It lies E. of the mouth of the Ankobra river, 70 m. W. of Cape Coast, has a good harbour, and exports timber. Gold is mined near. Built by the Portuguese, it was taken by the Dutch in 1642 and ceded to Britain in 1872. Pop. about 3,500.

Axes of reference XOX' and YOY', by which the positions of P and R are determined. See below

AXINITE (Gr. *axinē*, axe). A calcium aluminium borosilicate. Axinite is generally found in acuto-edged, somewhat tabular transparent crystals of pale plum to pale brown colour. It is usually associated with minerals such as garnet and pyroxene. Its chief localities are Cornwall, France, the Pyrenees, and New Jersey.

AXIS (Lat. *axle*). In geometry, any line in a figure which divides the figure into two symmetrical parts. In analytical geometry, an axis of reference is either of two intersecting

Awe. View of the north-eastern end of the Argyllshire loch, with the ruined castle of Kilchurn

straight lines by reference to which the position of any point in a curve is determined. In conic sections, the axes of the curves have a specific meaning. See Geometry.

AXIS DEER. Species of Indian deer, somewhat resembling fallow deer, but with short sharp antlers. Its fawn-coloured coat is abundantly spotted with white. It is easily domesticated.

Axis Deer. Indian species which resembles the common fallow deer

AXLE. Beam or shaft of wood or metal connecting a pair of wheels of a road or railway vehicle. By means of it the weight is usually transferred to the wheels and the latter are maintained at their correct distance apart. In motor-cars a bar of steel, with the ends formed as jaws so as to grip the steering pivots of the wheels. The back or live axle consists of two separate shafts fitted end to end in a casing and rigidly connected at one end to the road wheels; at their inner ends they are fitted with cog-wheels which engage a live cog-wheel driven by the engine, and with it form the differential gearing. These back axles do not support the weight of the vehicle, which is carried by the axle casing. See Motor Car.

the front axle consists of a bar of steel, with the ends formed as jaws so as to grip the steering pivots of the wheels. The back or live axle consists of two separate shafts fitted end to end in a casing and rigidly connected at one end to the road wheels; at their inner ends they are fitted with cog-wheels which engage a live cog-wheel driven by the engine, and with it form the differential gearing. These back axles do not support the weight of the vehicle, which is carried by the axle casing. See Motor Car.

AXMINSTER. Parish and market town of Devonshire. On the Axe, 27 m. E. of Exeter, on the Southern Rly., it was famed for its carpets until 1835, and now makes tooth and nail brushes and has flour, corn, and saw mills. The church of S. Mary the Virgin, with several styles of architecture, was restored in 1871. Axminster's midsummer fair dates from 1246. Market day, alternate Thurs. Pop. 2,049.

AXOLOTL. Larval form of the Amblystoma, a species of salamander common in Mexico and among the Rocky Mts. It usually resembles a large black newt with external branching gills. It was long supposed to be a mature animal of the newt tribe, since it reproduces in the larval stage, and may remain a larva. Both larval and adult forms exist together. If deprived of water the axolotl loses its gills and changes into the typical salamander. Larvae have been caused to develop into the adult form by feeding them on glandular extracts.

Axolotl. *Gyrinus edulis*, the larval form of a Mexican salamander

AXUM or **AKSUM.** Ruined town of Abyssinia, in the prov. of Tigré. It was once the capital of an Ethiopian kingdom and contains monoliths, apparently associated with Semitic sun-worship, and ruins of a Christian church. Pop. 5,000.

AYAH. Word of Portuguese origin meaning a nurse or governess, feminine of aio, a tutor. By the Portuguese it was introduced into India, where it is used for a native nurse or lady's maid.

AYE-AYE. Native name of *Cheiromys madagascariensis*, an animal allied to the lemurs, found only in Madagascar. It is about the size of a cat, with rodent-like teeth, a bushy tail, and prominent, almost hairless, ears. Its hands are like those of monkeys, but the

third finger is long and slender, and is used for extracting insects from crevices. Nocturnal in its habits, the aye-aye lives mainly on grubs, but it also feeds on fruits and vegetables.

AYESHA. The favourite wife of Mahomet, the prophet of Islam. She married him when nine years old and obtained great influence over him. On his death in 632 she opposed her son-in-law Ali's claim to the succession in favour of her father, who became the first caliph. She died at Medina about 678. See Mahomet.

AYLESBURY. Borough, market town, and county town of Buckinghamshire. Occupying an elevated site in the Vale of Aylesbury, it is 38 m. W.N.W. from London on the G.W. L.M.S., L.N.E. and Metropolitan Rlys., has thriving dairying and duck-rearing industries, and printing and motor works. During the Great War an aerodrome was established near Aylesbury. A charter was granted in 1554, but the privileges were not enjoyed for long, and only in 1917 was the charter restored. It returned two members to Parliament down to 1885, and now gives its name to a county division with one member. In the vicinity is Hartwell House, where Louis XVIII resided during his exile (1810-14). Market days, Wed. and Sat. Pop. 13,077.

Aylesbury. Market place of this noted agricultural centre

The Aylesbury duck is a large white duck, deriving its name from the district in which it is mainly bred. Its distinguishing features are its weight, varying from 6 lb. to 10 lb., its pure white plumage, flesh-coloured beak, and bright orange shanks and feet. See Duck.

AYLESFORD. Village of Kent, on the Medway, 38 m. from London by the Southern Rly. Here are Kit's Coty House, a cromlech of three perpendicular stones and a covering stone, and a larger group close by, the Countess Stones. There are remains of a 13th century Carmelite friary, and at Horsted is the supposed tomb of Horsa, slain in battle in 455. Pop. 3,013.

The earl of Aylesford is a British title borne since 1714 by the family of Finch. In 1885 Charles Wightwick Finch (1851-1924) succeeded as 8th earl; he was the first who did not bear the Christian name of Henrice. The eldest son is known as Lord Guernsey.

AYLESHAM. Village of Kent. About 4 m. from Dover, it was planned in 1921 as a garden city for workers in the collieries that have been opened near. The name is taken from a wood. Pop. 3,000.

Aye-aye. Animal of nocturnal habits allied to the lemur group which is found only in Madagascar W. S. Berridge

AYLMER. Town and inland watering place of Quebec, Canada. Situated on Lake Deschenes, an expansion of the Ottawa river, it is 8 m. from Ottawa, with which, and also with Hull, it is connected by electric tramway. It has a station on the C.P. Rly. Saw milling and nickel refining are the chief industries. Pop. 2,970.

Baron Aylmer is an Irish title borne by the family of Aylmer since 1718. Its first holder, Matthew Aylmer, was an admiral. Matthew, the 5th baron, became a general in the army. He was governor-general of Canada in 1830. On the death of his brother in 1858 the title passed to a distant kinsman who made his home in Canada.

AYLMER, SIR FENTON JOHN (b. 1862). British soldier. Born April 5, 1862, he joined the Royal Engineers in 1880 and served in Burma, 1886-7, and in expeditions on the Indian frontier. In 1897 he won the V.C. for gallantry at the storming of the Nilt Fort in Kashmir. From 1912 to 1915 he was adjutant-general, and in 1915 went to Mesopotamia in charge of a division. In Jan. 1916, his attempt to relieve Kut failed, and in March he was relieved of his command. He was knighted in 1916.

AYR. Burgh, seaport, and county town of Ayrshire, Scotland. It stands at the mouth of the river Ayr, 41 m. S.S.W. of Glasgow, on the L.M.S. Rly. Of the five bridges, the Auld Brig (15th-century) and the New Brig (1788, rebuilt 1879)

Ayr. The New Brig over the Ayr made famous by the poet Burns

are the two brigs of Robert Burns. The Wallace Tower was erected in 1834 on the site of a former building. Bruce's parliament in 1315 met in the church of S. John. There are commodious docks and harbour, carpet, lace, and woollen manufactures, chemical and engineering works, iron foundries and shipyards. Coal is exported and metals and ores are imported. One member is returned to Parliament. During the Great War an aerodrome was established near. Market days, Tues. and Fri. Pop. 37,500.

AYRSHIRE. South-west maritime county of Scotland. It is popularly divided into Cunningham, Kyle, and Carrick, has a greatest length of 78 m., extreme breadth of 29 m., 70 m. of coast, an area of 1,132 sq. m., and a pop. of 311,600. Off the coast is Ailsa Craig.

The surface, mainly undulating, is mountainous S. and S.E., the highest summit being Black-Craig, 2,298 ft. Loch Doon is the largest lake, and the Garnock, Ayr, Irvine, Doon, Girvan, and Stinchar are the chief rivers. Ayrshire is noted for its breed of cows and dairy-farming. Coal, iron, limestone, and sandstone are worked, and there are numerous blast furnaces and manufactures of woollens.

Ayr is the county town, and other towns are Kilmarnock, Irvine, Saltcoats, Troon, Ardrossan, and Girvan. Ayrshire unites with Bute to return three members to Parliament. The antiquities include ruins of Crossraguel and Kilwinning abbeys and of castles at Turnberry, Dunure, and Loch Doon.

The county is rich in literary associations; the pre-eminent position belongs to Robert Burns, who was born at Alloway. John Galt, author of *The Annals of the Parish*, was born at Irvine. Oehiltree was the birthplace of George Douglas, and scene of his story *The House With the Green Shutters*. (See map, p. 169).

AYTOUN or **AYTON**, **SIR ROBERT** (1570-1638). Scottish poet. Born at Kinaldie, Fife, he was educated at St. Andrews and in Paris. Having won the favour of James I. he became ambassador to the German princes, and was knighted in 1612. He was one of the first Scots to write pure and graceful English. He succeeds best in love poems, such as *Inconstancy Upbraided*. He died at Whitehall Palace in Feb., 1638, and was buried in Westminster Abbey.

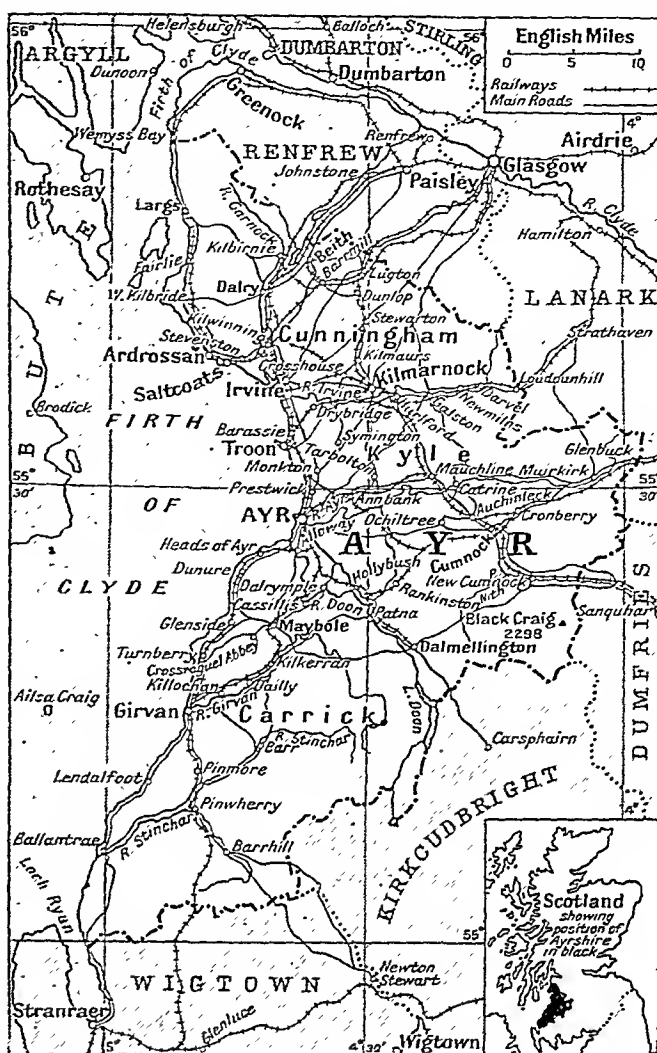

Sir R. Aytoun,
Scottish poet
Westminster Abbey

AZALEA (Gr. azaleos, dry). Genus of shrubs of the order Ericaceae. Natives of America and Asia, they have oval or elliptical leaves, and large showy funnel- or bell-shaped flowers in umbels. Most cultivated azaleas are hybrids, ranged in two classes: American or Ghent azaleas, and Indian or Chinese azaleas. See illus. below.

AZAN or **ADHAN** (Arab., call to prayer). Term for the Mahomedan summons to prayer at the five appointed hours. The call is chanted by a crier (mu'azzin or mu'adhdhin) from the minaret or side of a mosque.

AZARIAH. Name given to a number of persons in the O.T. The more important are: Uziah, son of Amaziah, king of Judah (2 Kings 15); Ahaziah, son of Jehoram, king of Judah (2 Chron. 22); the son of Oded who urged King Asa to the reform of religion (2 Chron. 15); the high priest who forbade Uziah to offer incense at the altar (2 Chron. 26); and Abednego, one of the three Hebrew youths thrown into the furnace (Dan. 1, 2).

AZAZEL. Hebrew word occurring in Lev. xvi, 8, 10, 26 rendered scapegoat in as the name of an evil spirit in the R.V. When Aaron was commanded to take two goats as an offering, he was told to cast lots upon them, one for the Lord and one for Azazel, one to be made a sin offering, the other to have all the iniquities of the children of Israel confessed over it and to be sent out into the wilderness. Milton in *Paradise Lost* makes Azazel one of the fallen angels and standard bearer to Satan. According to the Mahomedans Azazel was chief of the genii who were imprisoned by the angels and refused to render homage to Adam.

Ayrshire. Map of this S.W. county of Scotland. It stretches along the Firth of Clyde, and is an important industrial and agricultural area. See p. 168.

AYTOUN, **WILLIAM EDMONDSTONE** (1813-65) Scottish poet. He published his first volume of verse in 1830. After studying in London and Germany, he became a lawyer, but devoted much time to literature. He did many translations from the German, but the *Bon Gaultier Ballads*, in which he cooperated with Sir Theodore Martin, are better known. Nearly as popular were his own *Lays of the Scottish Cavaliers*. He also wrote much and was a regular contributor to *Blackwood's Magazine*. In 1845 he was made professor of rhetoric at Edinburgh, and in 1852 sheriff of Orkney. He died Aug. 4, 1865.

W. E. Aytoun,
Scottish poet
J. Archer

AYUTHIA. City of Siam. On an island in the river Menam, 42 m. by rly. N. of Bangkok, it is largely built on piles, and has ruins of Hindu temples. Founded in 1351, it was the capital until 1767, when it was sacked by the Burmese. Pop. 50,000.

Azalea. Bloom and leaves of this fragrant flowering shrub. See above

Azores. Maps of the islands forming this group in the Atlantic. See p. 170

the A.V. but explained that the Lord and one for Azazel, one to be made a sin offering, the other to have all the iniquities of the children of Israel confessed over it and to be sent out into the wilderness. Milton in *Paradise Lost* makes Azazel one of the fallen angels and standard bearer to Satan. According to the Mahomedans Azazel was chief of the genii who were imprisoned by the angels and refused to render homage to Adam.

AZERBEIJAN. Since 1922 a Soviet republic and a member of the union of Soviet republics. Azerbaijan covers 32,686 sq. m. and

has a pop. of 2,313,200. It is chiefly an agricultural district, but contains the valuable oilfields around Baku, which is the capital. It is one of the units into which Russia was divided after the revolution, and is peopled partly by Tartars and partly by Armenians and Georgians. See *Caucasus*.

A province of Persia bears the same name. Tabriz is the capital and it covers 40,000 sq. m.

AZIDES. Salts of azoimide (hydrazoic acid), also known as trinitrides. Azoimide (N₃H) is a weak acid with similar properties to hydrochloric acid. It forms many compounds, the majority of which are violently explosive. See *Explosives*.

AZILIAN. Main period of the Mesolithic Age. The climate, moist and warm, encouraged vast pine and birch forests. Many harpoons made from bones of the stag have been found at the Pyrenean type-station of Mas d'Azil. A pygmy-flint industry, best developed at Tardenois (Aisne), provided toothed edges for harpoons. Magdalenian art was replaced by painted pebbles.

Azimuth (Arab. as-sumut, the paths). The distance of a star in angular degrees from the N. or S. point of the meridian.

AZO-COMPOUND (Gr. a, not; zoë, life). Organic substance derived from aromatic hydrocarbons and containing nitrogen in the molecule. Azo is a shortened form of azote, Lavoisier's name for nitrogen. Azobenzene derivatives are important colouring matters.

AZORES (Port. Açores, Hawk islands) Group of islands in the Atlantic. They belong to and form an integral part of Portugal, from which they are about 830 m. distant to the W. Extending some 400 m. and having an area of 922 sq. m., the three clusters comprise St. Michael's and St. Mary, with Formigas, in the S.E.; Flores and Corvo in the N.W.; Terceira, Pico, Fayal, St. George, and Graciosa in the centre. They form a chain of volcanoes and contain hot mineral springs. The climate is mild. Fruit is cultivated; straw baskets and mats, cotton and woollen goods, hats and bricks are manufactured, and fishing is engaged in. The few secure harbours include Angra do Heroísmo, the capital of the Azores, on Terceira, Ponta Delgada, the capital of St. Michael's, and Horta, the capital of Fayal. Pop. 232,012. See map, p. 169.

The Azores were colonised by emigrants from Portugal. In 1591, off Flores, the English ship *Revenge*, under Grenville, met the Spanish fleet, the subject of Tennyson's poem.

AZOV, SEA OF. Shallow gulf of the Black Sea. It is almost enclosed by the Crimea and is entered by the strait of Kerch or Yenikale. It has a greatest length of 220 m., an extreme breadth of 110 m., and an area of 14,520 sq. m. Its greatest depth is about 50 ft. The N.E. extremity is called the Gulf of Taganrog, and in the W. a sandy strip separates it from the Putrid Sea. It receives several rivers, including the Don. Ports on its shores are Berdyansk, Mariupol, and Taganrog. Its comparatively fresh waters abound in fish, the drying of which is a local industry.

The town of Azov, on the Don, 10 m. from its entrance into the Sea of Azov, has a fishing industry and trades in grain, but has declined with the silting up of the harbour. Pop. 31,110.

AZRAEL. Angel of death and, according to Mahomedan belief, one of the four angels most in God's favour. The legend goes that he was sent to obtain the earth from which Adam was to be made. Unlike other angels, he performed his task without remorse, and so came to be appointed by God to separate souls from bodies at death.

AZTEC (crane people). American Indian tribe inhabiting the Mexican tableland at the time of the Spanish conquest.

They spoke a Nabua dialect and the name included all the ancient tribes of Nahuatl stock. The early home of these people was in British Columbia, whence they moved to the Mexican tableland. There they found a people called Toltecs, whose empire was broken up by the advance of the more virile Nahuatlans. The invaders were in several tribes, but in a comparatively short time the Aztecs had become predominant.

The warlike skill of the Aztecs soon gained for them, about 1325, the opportunity of fortifying the Tenochtitlan island, where Mexico city now stands. Electing a king in 1376, they secured the hegemony of the valley and, formed into various confederacies, waged war with organized armies upon the outlying peoples, exacting tribute of cotton, gold, and other products. These confederacies had extended to both oceans when their ruler Montezuma II was overthrown by Cortes in 1519.

The Aztec civilization, taken over from subjugated peoples, embraced several elements, material, intellectual, and social, clearly due to cultural drift from the Old World. The elective chiefs were held in check by a priestly aristocracy, which exploited the servile peasantry. At present they number about 500,000. See Mexico; Montezuma.

AZYMITE (Greek *a*, not: *zymē*, leaven) Controversial term of reproach in the Eastern Churches for those who use unleavened bread in the Eucharist (q.v.). In the 11th century this use was made a ground of separation from the Latin communion by the Greek Church.

Aztec. 1. Illustration from the Zouche Codex, a Mexican manuscript in the British Museum, showing the costume worn, and that men used face paint. 2. Stone carving of the Goddess of Running Waters. 3. Sacrifice demanded by Aztec gods; the heart is being torn from the victim's breast. This and the one above are examples of picture writing. 4. Skull of the Sky God, carved in rock crystal. 5. Elaborate mosaic death mask British Museum; 4, photo, Beck and Macgregor

B. Second letter of the English, Latin, and most European alphabets, corresponding to the Greek *bēta*. The latter, however, had a sound approximating more to the English *V*, which exactly represents it in the pronunciation of modern Greek. *B* is a soft labial or lip-sound, the corresponding hard sound being *P*. In English it always has the same value as in *baby*, but is sometimes not heard when preceded by *m* or followed by *t*, as in *dumb*, *debt*, *subtle*. See Alphabet.

BAAL, BEL, or BEEL. Semitic title meaning possessor, lord, given to various primitive inferior deities. The feminine form is *Baalat* or *Beltis*. Only in Babylon did the term ever become the actual name of an individual god, *Bel*—the Lord, i.e. *En-lil*, the chief Babylonian deity. *Bel* absorbed the identities of many lesser *beālim*, and his prominence led the Greeks to conclude that these local *baals* were variants of the chief deity, instead of being entirely independent and of much older origin. These latter have been classified under ten headings, including *baals* of springs, trees, animals, mountains, stones, and sanctuaries. The word is incorporated in many names of persons and places, e.g. *Jezebel*, *Baalbek*. See Babylon; Semite.

Baalbek. Ruins of the ancient Syrian city, with some of the columns of the great Roman temples

BAALBEK OR THE CITY OF BAAL. Ancient Syrian city. Situated 35 m. N.N.W. of Damas-

cus, it commanded an important Phoenician trade route, and became an early centre of Baal worship. The assimilation of Baal with the Greek sun god *Helios* gave rise to the name *Heliopolis*, sun city. In the 2nd century A.D. Antoninus Pius began the erection of two great temples which impress the beholder, even in decay, by their massive construction and their decoration. In a quarry a mile away an unfinished monolith, 68½ ft. long, and weighing 1,100 tons, is of the exact length of Cleopatra's Needle in London, but six times its bulk. *Baalbek* was captured by Jenghiz Khan, Saladin, and Timur, became Turkish in 1840, and was occupied by the British in Oct., 1918.

BABA (Turkish, father). Mahomedan title of respect. It is a form of address for religious dignitaries, and is sometimes added to names, e.g. *Ali Baba*.

BABA. Old woman or witch in Slavonic folk-lore; in full, *Baba Yaga*. Generally represented as a terrible ogress and cannibal, she is a distorted survival of the *Berchta* of S. German myth. See *Berchta*.

BABAR OR BABER (c. 1483–1530). Mahomedan conqueror. His real name was *Zahir ed-din Mohammed*, and he was called *Babar*, the tiger, from his fighting qualities. When a boy he succeeded his father, a descendant of Timur, as khan of Ferghanah. He captured Kabul and twice conquered and lost Samarkand before invading India. In 1526 he defeated and killed Ibrahim, ruler of Delhi, and in 1527 another victory made him ruler of much of N. India, the empire he established being usually known as the Mogul. He was succeeded by his son Humayun. His tomb is at Kabul. Consult *An Empire Builder* of the 16th century, L. F. R. Williams, 1918.

BABBACOMBE. Pleasure resort near Torquay. Here was committed a crime rendered memorable because of abortive attempts to hang the murderer. John Lee, aged 20, was convicted at Exeter Assizes, Feb., 1885, of the murder of his employer, Miss Keyse, an elderly lady living in a bungalow here. After three attempts to execute him, Feb. 23, 1885, Lee was reprieved and his sentence commuted to imprisonment. He was released in 1907.

BABBITT'S METAL. Alloy, usually of copper, tin, and antimony, belonging to what are known as white or anti-friction metals. It is named after the American inventor, Isaac Babbitt (1799-1862), and is used for the bearings of shafts.

suppressed by the sword in the reign of the shah Nasr-ed-din. The sect, however, was by no means completely suppressed, and has now many adherents in Asia and N Africa. Consult A Traveller's Narrative to illustrate the Episode of the Bah. E. G. Browne, 1891

Babel. Left, reconstruction of the famous temple-tower of Babel. Right, fragment of the temple of Nabu, marking the site of ancient Borsippa, near Babylon, and known locally as the Tower of Babel. Reconstruction modified from Koldewey; photo, Royal Air Force Official, Crown Copyright Reserved

BABEL, TOWER OF. Tower erected after the Deluge by the descendants of Noah (Gen. 11), when in their wanderings they reached the plain of Shinar or Babylonia. The plan was to build a tower reaching to heaven; but Jehovah frustrated it by confusing the language of the builders—hence the diversity of human speech; and by scattering them all over the earth—hence the diversity of race.

It is now known that stage-towers or zikkurats were a characteristic feature of the sacred architecture of Babylonia and Assyria, and the ruins of two such towers, associated by native tradition with the Tower of Babel, have been discovered at Birs Nimrud (Borsippa, near Babylon) and at Akerkul, farther south. See Babylonia; consult also Civilization of Babylonia and Assyria, Morris Jastrow, 1915.

BAB-EL-MANDEB, STRAITS OF. Channel separating Arabia from Africa. Called by the Arabs the Gate of Tears because of its difficult navigation, it leads from the Red Sea to the Indian Ocean through the Gulf of Aden. About 15 m. wide, it is divided by the island of Perim into Large strait and Small strait.

BABEUF, FRANÇOIS NOEL (1760-97). French revolutionist. He was at first identified with the extremist section represented by Marat. From 1793, when he started a paper, *Le Tribune du Peuple*, advocating the displacement of private property by communism, he opposed Robespierre. In 1794 he settled in Paris, and was imprisoned for anarchist propaganda. In 1796, with the outbreak of the distress caused by the cessation of the distribution of free food in Paris and the fall in the value of the assignats, Babeuf demanded a new Reign of Terror and the establishment of communism. Before the rising he had planned could mature he was arrested, and after a long trial was executed, May 27, 1797.

BABI. Name given to a Persian religious sect, from the title Bab-ed-Din, Gate of the Faith, borne by its founder. Its creed, which dates only from 1843, is based upon Mahomedanism, but rejects many of the tenets and practices of the orthodox Moslem. The new doctrines were so repugnant to the Persian authorities that the Bab was imprisoned and executed in 1850, and his followers were

BAEINGTON, ANTHONY (1561-86). English conspirator. He was born at Dethick, Derbyshire, of an old and wealthy family, and was in youth a page to Mary Queen of Scots during her imprisonment at Sheffield. An ardent Roman Catholic, in 1586 he took a leading part in a conspiracy to kill Queen Elizabeth and release Mary. The plot was made known to Walsingham by spies, the conspirators were arrested, Aug., 1586, and Babington was hanged, Sept. 20, 1586.

BABIRUSA (Malay, deer-hog). Wild pig found in the E. Indies. The male is characterized by the extraordinary development of its canine teeth, which grow through the skin of the snout and curve backwards over the forehead. The sow has not these teeth. Its scientific name is *porcus babirusa*.

Babirusa. Wild pig of the E. Indies, having remarkable canine teeth

BABOON. Monkey of the genus *Cynocephalus*, which includes the drill, hamadryad, mandrill, and sphinx. The head is dog-shaped, with strong jaws and formidable tusks. Since fore and hind limbs are nearly equal in length the animal runs easily on all fours. On the buttocks are brightly coloured callosities, and the tail is usually short. Baboons are ugly and ferocious; their predatory habits render them a serious pest, and their bite is unusually severe. All true baboons are natives of Africa and Arabia. See Monkey.

BABU. Anglo-Indian name for a native with a smattering of education, generally for a clerk who writes English. It was originally a term of respect, like Mr., but is now seldom so used.

Babul. Indian name for the *Acacia arabica*, one of the trees which produce gum arabic.

BABUNA. Pass in the Balkan Mts., between Veles and Monastir. Here a battle was fought between the Bulgarians and the Serbians. Nov. 4-16, 1915. The defile was held by a small Serbian force against a strong Bulgarian attack. From Nov. 4-6 a hand-to-hand fight raged in the gorges of the defile, the Bulgarians being driven through Izvor into Veles. Heavily reinforced, the Bulgarians soon returned to the assault. The Serbian leader Vassiteh had no reserves, but held out until Nov. 16, when, to escape envelopment on his flank, he retired on Prilep, and then on Monastir, which Bulgarian pressure caused him to evacuate, Dec. 2. With the remnants of his men he retreated to Elhasan, and reached Durazzo, where he rejoined the main armies.

BABY FARMING. Term for the reception, lodging, and boarding of infants for money considerations. In most countries baby farming is strictly regulated by law.

In Great Britain persons who take children under seven years old into their homes in return for payment must give all particulars about the children to the borough council or other local authority. They must not have any insurable interest in the lives of the children. Inspectors can visit the homes to see that the children are in suitable surroundings.

BABYLON. Ancient city of Asia. It was situated on the Euphrates, in an extensive and fruitful plain about 60 m. S of the modern

Baboon. Ferocious, dog-headed monkey, native of Africa and Arabia

Bagdad. The capital of the Babylonian and then of the Assyrian empire, its period of greatest glory extended from about 1800-539 B.C.: with a short break about 689, when the city was partly destroyed by Sennacherib. Babylon was built on both banks of the Euphrates, and consisted of palaces, temples, and fine streets. Its ruins, among which the modern town of Hilla or Hillah stands, extend over an area of 50 sq. m. Excavations have, among other architectural wonders, brought to light the Ishtar Gate which was built by Nebuchadnezzar

Bab-el-Mandeb. The straits which divide Africa and Arabia, with inset map of the island of Perim, a British possession

Babylon. Air view of the partly excavated city. Across the top is the Euphrates, with a modern hamlet of Iraq on its farther bank. It is stated that three distinct Babylons have been built upon this site

at the N.E. corner of the southern citadel for an approach to the processional road leading to the temple of Marduk, Nebuchadnezzar's fortress palace with its hanging gardens, and the temple of Esagila.

In the rich plains of lower Mesopotamia there dwelt many tribes, and somewhere about 2300 B.C. Babylon became their acknowledged capital. That city endured for more than sixteen centuries, and after the passing of Sennacherib it was rebuilt and again became one of the mightiest cities in the world under Nabopolassar and Nebuchadnezzar. Belshazzar succeeded Nebuchadnezzar; then came Cyrus in 538, and Babylon passed to the Persians, who gave way in their turn to Alexander, who died here. From that time the city dwindled, until nothing was left but ruins buried under gigantic mounds of sand. Consult

The Excavations at Babylon, R. Koldewey, 1914, Eng. trans. A. S. Johns: The Long Road to Baghdad, E. Candler, 1918; Das Ischtartor in Babylon, R. Koldewey, 1925.

BABYLONIA. Ancient empire of Mesopotamia. It was a low-lying country between the Tigris and the Euphrates, made up of alluvial deposits. It was bounded on the N. by Assyria, S. by the sea land and Kaldai (Chaldaea), E. by the mountains of Elam, and W. by the Syrian and Arabian deserts. The oldest inhabitants of the country that came to be called Babylonia were the Sumerians, who dwelt in the S., spoke a Turanian language, and exhibit types of face and costume wholly un-Semitic; in the N. were the Akkadians, a Semitic race whose original home was probably Arabia. The earliest culture of Babylonia was Sumerian, but the Semites of N. Babylonia

took over the cuneiform script, much of their intellectual culture, and their religious ideas.

In early Babylonia there was a large number of independent city states, each seeking to enlarge its borders at the expense of its neighbour or neighbours. Among the most eminent rulers of these states may be mentioned Gudea (c. 2450 B.C.) of Lagash. Another, Sargon I. king of Akkad, styled himself "king of the four quarters of the world." He exercised rule over most of N. Babylonia and over much of Sumer. After the death of Sargon and his son Naramsin (c. 2600 B.C.) the supremacy in Babylonia passed from city to city.

The first Babylonian dynasty, commonly so called, sprang into existence about 2300 B.C. There is from now a continuous history of Babylonia down to 539 B.C., when the supremacy in the East passed to Persia.

The sixth in order, Hammurabi or Khammurapi (c. 2100 B.C.), is the only king of importance belonging to this dynasty. He brought all Babylonia, N. and S., under his sway, becoming suzerain of Assyria, and adding territory in Elam to the E. and other lands in the W. He was the compiler of a famous legal code, which was engraved on stone and set up at important centres e.g. Babylon and Nippur. One of these stones is in the Louvre, and a replica is in the British Museum.

The so-called Kassite or Kassite dynasty, of foreign, perhaps Elamite, origin, occupied the Babylonian throne from about 1750 to about 1169 B.C. Under it the empire declined. Nebuchadnezzar, who lived about 1140 B.C., revived the declining fortunes of Babylonia and handed on to his successor a larger Babylonia than he had received.

Under the Assyrian king Tiglath-pileser I (c. 1100 B.C.) Babylonia became a dependency of Assyria. When, however, in 625 B.C. Nabopolassar, a Chaldean, became king of Babylonia by the help of the Medes, with whom he had fought against Assyria, an era of brilliance for what has been called Neo-Babylonia, or Chaldean Babylonia, set in.

His son and successor, Nebuchadnezzar II (604-562 B.C.), raised the empire to its highest

Babylon. 1. Towers of the Ishtar Gate, ornamented with bulls and dragons in enamelled relief. 2. One of the dragons, also known as Sirrushes. 3. Stone monument of a lion standing over a prostrate man. 4. Reconstruction of the Ishtar Gate. It was erected by Nebuchadnezzar at the north-east corner of the citadel
1, 2 and 4 from Koldewey, 'Das Ischtartor,' J. C. Hinrichs'sche Buchhandlung, Leipzig

pitch of power and prestige. It was this king who, in 606 B.C., besieged and conquered Jerusalem, and in 586 B.C. set fire to the city, including the temple, carrying away the best part of the population to his own country.

Under the rule of his successors the empire gradually collapsed. The last king of all, Nabonidus (555-539 B.C.) was absorbed in intellectual pursuits and religious exercises. His country was invaded by the Persian king Cyrus. The Babylonian army made a show of defence, but was soon vanquished by the Persians, who entered Babylon unopposed. Babylon fell in 539 B.C., never to rise again, just as in 606 B.C. its rival, Assyria, vanished for ever from the page of history. The culture and religion of Babylonia were adopted almost entirely by Assyria (q.v.). See Nebuchadnezzar; consult also History of Babylonia and Assyria from Prehistoric Times to the Persian Conquest, L. W. King, 1910, etc.; Ancient Babylonia, C. H. W. Johns, 1913; Handbook to the History and Antiquities of Mesopotamia, R. Campbell Thompson, 1918; The Ancient History of the Near East, H. R. H. Hall, 4th ed., 1919; By Nile and Tigris, Sir E. A. W. Budge, 1920.

BACCARAT. Gambling card game much played in France, but illegal in the United Kingdom. The most usual method of playing is between a hanker and other players termed punters. The hanker uses several packs of cards, shuffled together, and deals two cards to each player and two cards to the table (himself). The value of the cards is reckoned as one for the ace, two for the 2, three for the 3 and so on up to the 9; the 10 and court cards count 0. The maximum number of points is nine. The banker receives money from all the punters who hold below the value of his own two cards, and also from those players holding over nine, and pays those who are nearer nine than himself.

BACCARAT. Town of France, in the department of Meurthe-et-Moselle. On the river Meurthe, 15 m. S.E. of Lunéville, it is noted for its glass works, established in 1765. Pop. 5,739.

BACCHUS. In Greek and Roman mythology, name of the god of wine and fertility, better known among the Greeks as Dionysus. According to the legend, he was the son of Zeus by Semelē, daughter of Cadmus, king of Thebes. On reaching manhood he travelled in the East as far as India, teaching the cultivation of the vine and other fruits of the earth. He returned to Europe by way of Thrace,

Bacchus. God of wine and fertility in Greek and Roman mythology
British Museum

whence his worship spread to various parts of Greece. On the island of Naxos he found Ariadne, deserted by Theseus, and made her his wife. After his divinity had become fully established he went into Hades to seek his mother, and took her up to Olympus.

Bacchus is frequently represented as attended by frenzied women called Bacchae, Bachelantes, Maenades, and Thyiades, all meaning frantic; Pan, Silenus, and satyrs were also among his followers. The various Bacchic legends are supposed to be forms of the great nature myth, Dionysus himself being a spirit of vegetation. The cycle of his festivals includes the Greater and Lesser Dionysia (q.v.).

BACCHYLIDES (c. 467 B.C.). A Greek lyric poet. Included in the Alexandrian canon of the nine great lyricists, he was the nephew of Simonides. Only about 100 lines of his poems were known until 1896, when a papyrus containing 20 more or less complete odes was discovered in Egypt and sent to the British Museum. In 1897 Sir F. G. Kenyon published the first edition of these odes.

BACH, JOHANN SEBASTIAN (1685-1750). German music composer. Born at Eisenach, March 21, 1685, the youngest son of Johann Ambrsius Bach, a violinist, he is the outstanding member of a family of Thuringian musicians who during six generations produced a continuous line of composers. He was appointed organist at Arnstadt in 1703 and at Mühlhausen in Thuringia in 1707; but these were only preliminary to his three chief posts at Weimar, 1708-17, Köthen, 1717-23, and Leipzig, 1723-50. At Weimar his main duties were connected with the organ, and the bulk of his music for that instrument dates from this period. At Köthen he held no office connected with the church, and wrote mainly secular instrumental music; as cantor of the Thomasschule at Leipzig and director of the music in the two chief churches, his activities were mainly choral. He died at Leipzig, July 28, 1750.

J. Sebastian Bach, German composer

Bach's original compositions, apart from his numerous arrangements, include a High Mass in B Minor, 4 smaller Masses, a Magnificat and other works to Latin words; 3 Passions, of which the Matthew and John are the chief; 202 church cantatas, some also styled oratorios; 21 secular cantatas; 29 concertos and other orchestral pieces; and a vast quantity of music for organ, for clavier, and for stringed instruments.

His third son, Karl Philipp Emanuel Bach (1714-88), became a musician in the household of Frederick the Great before 1740. From 1768 till his death he was director of church music at Hamburg. Another son, Johann Christian Bach (1735-82) was organist at Milan Cathedral, 1760-62, and spent the rest of his life in England, where he was music master to Queen Charlotte.

A Bach Choir, which gives choral and orchestral concerts, was founded in 1876 in London. Dr. Adrian C. Boult is the director.

BACILLUS (Latin, a small rod). Name of a micro-organism in form like a rod. Bacilli consist of cylindrical cells that multiply by division and by the formation of endogenous spores. See Bacteriology.

BACK, SIR GEORGE (1796-1878). British explorer. He entered the navy in 1808, and in 1818 went out with Sir John Franklin to the Arctic. In 1833 Back went out to find Captain Ross, and was away for two years, discovering the Great Fish or Back river. Between his journeys he served in the navy, and in 1835 attained the rank of captain. His fourth and last expedition to the Arctic was made in 1836. He was knighted in 1839, became an admiral in 1857, and died June 23, 1878. He wrote accounts of his several expeditions

BACKGAMMON or TRIC-TRAC. A game, referred to by Chaucer as tables, played on a special board by two persons. Each player has 15 men, one taking black, the other white. A dice box and two dice for each player are necessary. A backgammon board is square, divided into halves, and each player has an outer and an inner or home table, each containing six points marked alternately in black and white; board and men are arranged as seen in the diagram below. The men are moved from point to point, according to the throws of the dice made by the players alternately. The player who first succeeds in clearing all his men from the board wins the game.

BACKSCRATCHER. Toilet implement. Its main use is suggested by its name, but it was also used as a kind of comb for the immense coiffures of the time of George III. It was some 18 ins. in length, made of cane, horn, whalebone, or wood, topped with a hand of carved ivory or other material.

BACON. Flesh of the pig when cured, salted, or otherwise treated. Special brands of bacon, such as Wiltshire and Ayrshire, take their names from the particular process of curing adopted in the districts named. The food value of bacon is high, yielding 2,685 calories per lb.

For curing bacon, factories have been established. The routine of the bacon factory consists of killing, thorough bleeding, scalding for removal of bristles, scraping, singeing, cooling, removal of offal, washing, and chilling. The carcasses are then ready for curing, which essentially consists in

Backscratcher. From a specimen made of horn, 14½ ins. long

saturation of the meat with an antiseptic pickle. Britain obtains bacon from Denmark, the United States, Canada, and Ireland. A good deal is produced at home, and the introduction, in 1928, of a system of grading and marking helped the domestic producer. In Denmark and the U.S.A. all bacon, before it is sold, must be inspected and approved by state officials. A beetle which makes its home in bacon is called the bacon beetle. See Beetle.

BACON, FRANCIS (1561-1626). English jurist and philosopher. Born at York House, London, Jan. 22, 1561, he was the younger son of Sir Nicholas Bacon, and nephew of Sir William Cecil, afterwards Lord Burghley. He entered Trinity College, Cambridge, in 1573, leaving in 1575. In 1576 he went to Paris with Sir Amyas Paulet, but returned to London in 1579 and studied at Gray's Inn, being admitted a barrister in 1582. About 1591 he made the acquaintance of the earl of Essex, but in spite of this he remained in the background during Elizabeth's reign.

Knighted by James I, he eagerly engaged in political intrigues, resulting in his being made solicitor-general in 1607, attorney-general in 1613, a privy councillor in 1616, lord keeper of the great seal in 1617, and lord chancellor in 1618. In that year he was created Baron Verulam and in 1620 Viscount St. Albans. In 1621 charges of corruption and bribery were preferred against Bacon. A heavy fine was inflicted, and for a while he was lodged in the Tower. The king remitting his fine, he retired from public life. He died April 9, 1626, and was buried at St. Albans.

Bacon is regarded by men of science of our day as the originator of the modern school of experimental research. In his Novum

Backgammon. 1. Ace-point of black's home or inner table. 2. Ace-point of white's home or inner table. 3. Bar-point of black's outer table. 4. Bar-point of white's outer table. See above

Organum, 1620, a treatise upon the conduct of the understanding in systems of inquiry, he advocates a true and patient understanding and interrogation of Nature through phenomena and facts.

In his New Atlantis, composed before the Novum Organum, he indicates in allegory a model college under the title of Solomon's House or the College of the Six Dayes Works. Groups of individuals were to be employed in bringing in knowledge to the effecting of things. Some were to sail into foreign countries; some to try new experiments; while others were to formulate things of use and practice for man's life and knowledge.

BACON-SHAKESPEARE CONTROVERSY. The idea that Bacon wrote the plays ascribed to Shakespeare dates from 1856, and since then has been the subject of numerous writings. The arguments in favour of Bacon's authorship are the parallelisms between the writings of the two men, the assumed illiteracy of Shakespeare, and the fact that no authoritative Shakespearean text exists.

BACON, JOHN MACKENZIE (1846-1904). British aeronaut. Born June 19, 1846, son of a Berkshire clergyman, he was educated at Trinity College, Cambridge, and became a clergyman. In Aug., 1888, he first went up in a balloon, and in 1902 he was the second person to cross the Irish Channel in that manner, his journeys being used for experiments in wireless telegraphy and for photographing the bottom of the sea. He died at Coldash, Dec. 26, 1904.

J. M. Bacon,
British aeronaut

BACON, SIR NICHOLAS (1509-79). English lawyer, the father of Francis Bacon. A Suffolk man by birth, he was educated at Cambridge and held lucrative legal offices under Henry VIII. He obtained land when the monasteries were dissolved and in 1558 was made lord keeper and a knight. Bacon lived in style at Gorhambury, near St. Albans, where he was visited by Queen Elizabeth. He died Feb. 20, 1579, and is buried in S. Paul's Cathedral. A son, Nicholas, was made a baronet in 1611, and his descendant ranks as the premier baronet.

Sir Nicholas Bacon,
English statesman
Zuccherro

BACON, SIR REGINALD HUGH SPENCER (b. 1863). British sailor. In the Benin expedition of 1897 he was chief of the intelligence department, and later conducted the first submarine trials. From 1907 he was director of naval ordnance and torpedoes, becoming director of the Coventry ordnance works in 1909. In 1915-18 Bacon was in command of the Dover Patrol. He was controller of the munitions department at the time of the 1919 publication of Lord

Babylon. 1. Towers of the
ment of a lion standing over a

BACON, ROGER (c. 1214-94). English scientist and philosopher, called Doctor Admirabilis. He was born at Ilchester, Somersetshire, studied theology at Oxford and Paris, entered the Franciscan order, settled at Oxford, and began experimental researches into the facts of nature, devoting special attention to alchemy and optics. He invented the magnifying glass and an explosive compound of charcoal, sulphur, and saltpetre which anticipated modern gunpowder. He also declared the possibility of steam vessels, telescopes, microscopes and other later inventions. His advanced ideas made him suspect by the ecclesiastical authorities, and he was imprisoned for many years. Released at length by pope Nicholas IV, Bacon returned to Oxford, where he wrote

Francis Bacon, English philosopher,
statesman, and essayist
After Van Somer

in 1292 his Compendium Studii Theologiae. His Opus Majus, an encyclopedia of the then known sciences, has been edited by J. H. Bridges, 1897-1900, and the Compendium by A. G. Little, 1911.

BACTERIOLOGY. Science and study of bacteria or microbes. Two factors have specially contributed to the extraordinary advance in recent years of this section of biology: (1) improvement in the making of microscopic lenses, resulting in the compound microscope; (2) discovery of aniline dyes, by means of which bacteria can be variously stained to facilitate examination.

Bacteria are grouped into three main classes according to their shape: cocci, or spheres, occurring singly or in chains; bacilli, or straight rods; and spirilla, or twisted forms. They require complex organic substances for their food, and these may be found in the human body. The presence of water also is essential, since most pathogenic organisms succumb to complete drying, although their individual resistance differs. They are sensitive to heat, but even intense cold fails to destroy them. Some bacteria, termed aerobes, thrive only in the presence of free oxygen; others, anaerobes, require its strict exclusion for their growth; others are indifferent to it.

Bacteria are of universal distribution. No exposed portion of nature which contains traces of moisture can be assumed to be free from them. While the great bulk of them are harmless to man, some are definitely disease-producing, and most of the infectious diseases are of proved microbial origin. Were it not for the natural immunity possessed by all living beings, health and life would be impossible. That immunity can also be acquired is due to the discovery that bacteria may be grown in the laboratory by means of cultures for purposes of study and experiment. Out of such experiments have been evolved the methods of treatment known as preventive inoculation or vaccine therapy. The real founder of modern bacteriology was Pasteur, who proved beyond doubt that processes of fermentation were due to living organisms, and was the first to produce bacterial vaccines.

Many bacteria, so far from being harmful, perform services of immense value in the scheme of nature and in industry. Examples of these are soil bacteria and those involved in cheese and butter-making, in alcoholic fermentation and in the treatment of sewage. See Antiseptic; Antitoxin; Immunity; Infection; Pasteur, Louis; Vaccination; consult also Manual of Bacteriology, R. Muir and J. Ritchie, 7th ed. 1919.

BACTON. Village of Norfolk. It is 4 m. N.E. of North Walsham, and attracts visitors in the summer. Each year organized games for children, on the lines of the Olympic Games, are held here. Pop. 473.

Roger Bacon,
English scientist

BACTRIA OR BACTRIANA. In ancient geography, a tract of country comprising the N. slope of the Hindn Kush as far as the Oxus river (Amu Daria). It corresponds nearly to the district of Balkh, which has preserved the name, in the modern Afghanistan. Alexander the Great overran it in 328 B.C., and established Greek garrisons. After a brief Seleucid domination, Diodotus, the Greek satrap of the capital city Bactra (Balk), rebelled and founded the Greco-Bactrian kingdom about 250 B.C. which lasted for a century.

BACTRIS. Genus of slender S. American palms. Growing on swampy land, river banks, and the sea coast, they are mostly small, more like reeds than trees, the stems being furnished with sharp spines. They grow in clumps, owing to their habit of throwing up numerous suckers from the roots. One species (B. minor) has a stem little more than 12 ft. in length and about an inch thick, from which are made the walking-sticks known as Tobago canes. B. maraja, which grows on the Amazon, attains a height of 50 ft. It produces bluish-black succulent fruits which, though acid, have an agreeable flavour and form the basis of a kind of wine.

Bactris. Slender S.
American palm

BACUP. Borough and market town of Lancashire. It stands on the river Irwell, 22 m. N.E. of Manchester by the L.M.S. Rly. Of modern growth, Bacup was incorporated in 1882, and is a flourishing industrial town, with spinning and weaving mills, iron foundries, paper mills, and dye works. Coal mines and stone quarries are in the neighbourhood. Occupying an elevated position near by is Broadclough Dykes, an ancient camp. Market day, Wed. Pop. 21,263.

BADAGRI. Harbour and district of the southern provinces of Nigeria. The district is inhabited by the Egbados, whose chief town is Ilaro. The harbour is on the lagoon running from Porto Novo (Dahomé) to Lagos, about 38 m. W. of the latter, and has a trade in palm kernels. Founded by Benin colonists, it has been superseded as a port by Lagos (q.v.).

BADAJOZ (anc. Pax Augusta). City of Spain. On the Guadiana, here crossed by a fine granite bridge, 315 m. by rly. S.W. of Madrid, it is close to the Portuguese frontier. It has a cathedral, a Moorish castle, an arsenal, and various manufactures. A frontier fortress, it has been several times besieged, notably by the Portuguese in 1660; by the Allies in the War of the Spanish Succession, 1705; by the French, 1808-9 and 1811; and three times by the British. Pop. 38,612.

BRITISH SIEGES. In Feb., 1811, this important frontier fortress was surrendered by the Spaniards to the French, and in May and June two attempts at recovery by the British failed. After elaborate preparations a third attack was begun in March, 1812. At the first attempt the British were beaten back. The second attempt, however, was successful: a dash against the lower part of the wall gave them entrance and the castle was won. This

and other successes decided the fate of Badajoz and on the next day it was formally surrendered. The British lost nearly 5,000 men, and took a terrible revenge in the pillage of the town. Napier's description of this siege (Peninsular War, vol. iv) is one of his finest pieces of descriptive writing. Consult also History of the Peninsular War, Sir Charles W. C. Oman, 6 vols., 1902-22.

BADARI. Settlement near Assiut in Egypt, a home of early civilized man. It was inhabited between 15,000 and 10,000 B.C., and excavations begun in 1925 have brought to light articles which show that the Badarians were a skilled and cultured folk. They made pottery of the finest quality and flint instruments of the most delicate kind, and carved ivory. They could spin and weave, and knew how to grow and store corn. Some of the finds were shown in the British Museum in 1929.

BADBURY RINGS. Prehistoric stronghold 4½ m. from Wimborne, Dorset (Badda's burgh). The hill is 327 ft. high, surmounted by two earthen ramparts separated by a broad berm or pathway from an earthwork, perhaps later, lower down.

Baddow. Two villages of Essex. Great Baddow is 2 m. S.E. of Chelmsford and Little Baddow is 4 m. away.

BADEN. Republic of Germany. Formerly a grand duchy within the German empire, Baden was constituted a republic in Nov., 1918. The Rhine separates it from Alsace, while on the S. it borders Switzerland and on the E. Württemberg and Bavaria. The area is 5,820 sq. m. and the population 2,312,462. Karlsruhe is the capital and Mannheim the most populous town.

The greater part of Baden is mountainous and includes the Black Forest. It is drained by the Rhine and its tributaries, the Main, Neckar, and others, and has many lakes, including Lake Constance. Wheat, rye, barley, oats, fruit, hemp, vines, and tobacco are grown, and salt and building stone occur.

Until 1771 Baden was ruled by margraves. In that year its several portions were united, and in 1806 its ruler was made a grand duke. Its area was enlarged about this time, and in 1818 a constitution was given to it. In 1866 Baden joined Austria against Prussia, but changed sides as soon as the war was over and became Prussia's friend and ally. In 1871 the state joined the new German Empire.

In 1918 the grand duke Frederick II abdicated and a republic was set up. A new constitution was adopted in 1919. This consists of a president and a small ministry responsible to a parliament of one house. All men and women have the vote.

BADEN. Town and watering place of Austria. On the Schwechat, 17 m. by rly. S.S.W. of Vienna, its sulphur springs and baths attract many visitors. At Meierling, about 4 m. away, the crown prince Rudolf committed suicide in 1889. The most picturesque spot is perhaps the Helenenthal valley. The district has an area of 350 sq. m. The inhabitants of town and district are nearly all Roman Catholics. Pop. 22,217.

BADEN. Town and spa of Switzerland. It stands on the river Limmat, at an alt. of 1,260 ft., 14 m. by rly. N.W. of Zürich. Its sulphur baths, known to the Romans, are visited by sufferers from rheumatism, gout, and lung complaints. Baden was the seat of the Swiss diet during 1426-1712. Pop. 9,215.

The treaty of Baden, signed Sept. 7, 1714, was one of the treaties which ended the War of the Spanish Succession. By it the frontier between France and Germany was restored to its position on the outbreak of war in 1702, France retaining Alsace, but giving up certain fortresses. See Utrecht, Treaty of.

BADEN BADEN. Town and pleasure resort of Germany, in Baden. On the little river Oos, 23 m. by rly. S.S.W. of Karlsruhe, it owes its popularity to its climate, its situation near the Black Forest, and its saline waters. There are a pump room (Trinkhalle), assembly rooms (Konversationshaus), and baths for both sexes. The chief of the older buildings are the parish church, with monuments to the rulers of Baden, and the 15th century castle. Baden was a Roman town, and remains show that the Romans used its waters. Pop. 25,692.

BADENOCH. District of S.E. Inverness-shire, Scotland. Roughly 40 m. by 16 m. in extent and wildly mountainous, it is traversed by the Spey, contains Loch Erioch, and has fine deer forests. It was owned by Robert II's son, the Wolf of Badenoch. The marquess of Huntly now bears the title of Lord of Badenoch.

BADEN-POWELL, ROBERT STEPHENSON SMYTH BADEN-POWELL, 1ST BARON (b. 1857). British soldier. Educated at Charterhouse School, he joined the army in 1876, and as a cavalry officer distinguished himself during the Matabele War of 1896-97. When the S. African War broke out in 1899, he was besieged in Mafeking, and held it for seven months until relieved. He was then made chief of the constabulary in S. Africa, and in 1903 inspector-general of cavalry in the United Kingdom. In 1908 he founded, in Great Britain, the Boy Scouts, of which he became the Chief Scout. In August, 1929, he was made a peer. His writings include The Downfall of Prempeh, 1896; The Matabele Campaign, 1896; Scouting for Boys, 1908; and My Adventures as a Spy, 1915. See Boy Scouts; Scouting.

Lord Baden-Powell
British soldier
Russell

BADENWEILER. Town and pleasure resort of Baden, Germany. On the outskirts of the Black Forest, 27 m. by rly. from Basel, it has a fine climate. Pop. 1,033.

BADGE. Word meaning originally the distinctive mark worn by a knight in battle, e.g. the ostrich feathers of the Black Prince. It is now used for a distinctive mark of any kind, especially one showing rank, proficiency, etc., in the army, navy, and air forces; also membership of certain bodies. Most English sovereigns and princes down to the time of William of Orange had a personal badge.

In addition to the royal badges, such as a rose gules, slipped vert, barbed and seeded, for England, and a thistle proper for Scotland, and the badge of the Prince of Wales, there are also badges of honour for the various orders, such as those of the Bath, Star of India, S. Michael and S. George. In the British army every regiment has a badge, worn as a collar ornament by the officers

Badge issued for
ex-service men

DIAGRAM.

Badminton. Diagram of a Badminton Court. See below

living mainly on insects and roots. The common badger is nearly 3 ft. in length, grey, with a white head striped with black.

BADGER (Meles taxus). Mammal of the order Carnivora, but a general feeder, living mainly on insects and roots. The common badger is nearly 3 ft. in length, grey, with a white head striped with black. It hurrows in the ground and is harmless and inoffensive, though a fierce fighter when attacked. It lives in woods and among the hills, and spends the winter in a state of partial hibernation. The sport of badger baiting has been prohibited in Great Britain since 1850. Badger hair is used in the manufacture of brushes.

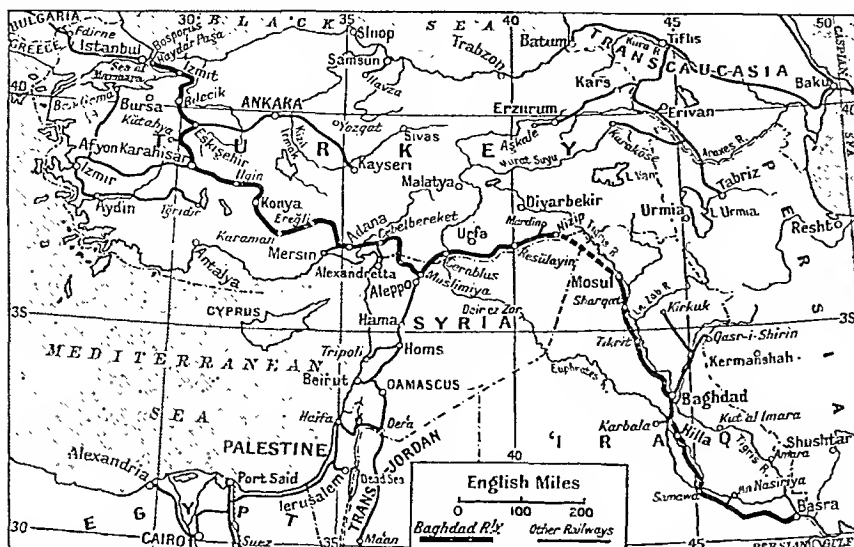

BADMINTON. Game introduced into the United Kingdom in 1873. It somewhat resembles lawn tennis, being played over a net, with a shuttlecock and long-handled racquet strung with catgut. Sometimes a light ball is used instead of a shuttlecock. The game derives its name from the Gloucestershire seat of the duke of Beaufort.

Badminton is played on a space 44 ft. by 20 ft., divided by a net about 5 ft. in height. Two service lines are drawn, one on each side of the net and parallel to it at a distance of 6½ ft.; a central line, connecting the service and base lines, divides those areas into four courts. The shuttlecock is 5 ins long and weighs ½ oz.; the racquet should not weigh more than 5 oz. The shuttlecock is sent backwards and forwards across the net with great rapidity; hence the preference, especially in Great Britain, for a court in a covered building, as a strong current of air interferes with the play. The game is played by one or two persons on a side. Unlike lawn tennis, no faults are allowed in serving. The controlling body in the U.K. is the Badminton Association, founded in 1895. See diag. above; consult Badminton, S. M. Massey, 1911.

BADMINTON. Residence of the duke of Beaufort in Gloucestershire, England. It is in the parish of Great Badminton, on the border of Wiltshire, which has a station on the G.W.R. The house, built on three sides of a square, stands in a park 9 m. in circumference. The Badminton, a London club founded in 1876 (100, Piccadilly), and the Badminton Library, a series of books on sporting subjects, are named after it. See Beaufort, Duke of.

Badge of the Prince
of Wales

Bagdad Railway. The line from the Bosphorus via Aleppo to Bagdad, formerly dominated by Germany, showing the extensions to Basra and to Mosul constructed by Britain after the capture of Bagdad

BADRINATH. Peak of the Himalayas, in the Garhwal district of the United Provinces, India. It is 23,190 ft. high. On its slopes, at an alt. of 10,294 ft., stands the celebrated temple of Vishnu, a conical building crowned by a cupola with a gilt ball and spire surmounting it. It is a place of pilgrimage.

BAEDEKER, KARL (1801-59). German publisher. The son of Gottschalk Baedeker (1778-1841), a bookseller in Essen, where he was born Nov. 3. 1801, he first started in business in Coblenz in 1827. In 1839, by an arrangement with the London publishing house of John Murray, he brought out a small guide book on Holland, Belgium, and the Rhine. This was the precursor of the long list of similar works. The business was removed to Leipzig in 1872. Baedeker died Oct. 4, 1859.

BAFFIN, WILLIAM (d. 1622). An English navigator and explorer. Born in London about 1584, he took part in an expedition in 1612 to Greenland for the discovery of the north-west passage, and in 1613-14 was in command of the English whaling fleet off Spitsbergen. In 1615, under Bylot, he acted as pilot of the *Discovery* in another search for the north-west passage, during which voyage he explored the bay that bears his name. In 1620 he sailed to the E. Indies, and on Jan. 23, 1622, was killed at Ormuz.

BAFFIN BAY. Inland sea of N. America. Within the Arctic Circle, between Greenland and Canada, it opens S. through Davis Strait, N. through Smith Sound and Kennedy and Robeson Channels, and N.W. through Lancaster and Jones Sounds. Whales, seals, and bears abound. About 825 m. long, it has an average breadth of 280 m. and a maximum depth of 6,890 ft.

Baffin Island lies W. of Baffin Bay and Davis Strait, and largely within the Arctic Circle. It is mountainous, extremely indented, and barren. After Australia and Greenland, it is the largest in the world, its area being about 237,000 sq. m. It is uninhabited except for a few Eskimos.

BAFFLE. A plate of a non-resonant material, such as wood, used in a cone-type or moving-coil loud speaker in place of a horn. By means of the baffle the lower sound vibrations are made more audible.

BAGAMOYO. Town and harbour of Tanganyika Territory, E. Africa. It is opposite the island of Zanzibar, between Dar-es-Salaam and Tanga. Before the construction of railways it was the principal starting point

for caravans to the interior. It is now the capital of a district of the same name, which produces oranges, lemons, citrons, and other fruits. On Aug. 15, 1916, it was occupied by British naval forces. Pop. 12,000.

BAGATELLE. Indoor game. Notwithstanding the spelling, it is probably not of French origin, but more likely an improvement upon shovell board.

The oldest and most popular form of bagatelle is played upon a table 10 ft. in length and 3 ft. in width. The bed of the table is of slate, covered with green cloth like a billiard table. The top of the table forms a semicircle, and that and the sides are fitted with rubber cushions. At the top of the table, let into the slate bed, are nine holes or cups, numbered 1 to 9. Some tables are fitted with pockets also, while others have neither cups nor pockets.

In the cannon game three balls are used as they are at billiards, and the method of scoring is the same, a cannon counting two points, while the game is usually from 21 to 50 points up. In another form of the game nine balls are used. Each striker in turn has charge of the whole nine. His object is to hole or cup as many as he can at a break. See Billiards.

BAGDAD OR BAGHDAD. City of Iraq (Mesopotamia). It stands on the Tigris, about 300 m. from the Persian Gulf, and is the capital of a province covering 54,500 sq. m.

Girt with date palms, its mass, from which rise many minarets and towers, is imposing from the outside, but its streets are narrow and its houses mean, the better part being on the E. side of the river. Among its old buildings are the Gate of the Talisman and

the tomb of Zobaida, the wife of Haroun-al-Raschid; its colleges, once renowned, are crumbling into ruins. New buildings include the British Residency and King Feisal's palace.

Recent developments in communication have made Bagdad the great distributing centre for Iraq. It exports wool, gums, galls, opium, dates, skins, hides, and carpets. Its imports include Manchester and Indian cotton goods, coffee, sugar, indigo, pepper, and tobacco. The city is an important link in the air route from Europe to India and has an aerodrome. Pop. about 180,000.

Bagdad was built in 763 on the ruins of the ancient Ctesiphon and Seleucia by the Abbasid caliph Al Mansur, and within a few years it reached a height of splendour under Haroun-al-Raschid. The Turks occupied it in 1638.

Bagdad came into prominence in connexion with the British campaign in Mesopotamia in the Great War. Following his capture of Kut in 1916, General Townshend advanced up the Tigris with Bagdad as his objective, but was forced to retreat. On Feb. 24, 1917, General Maude recaptured Kut, pursued the retreating Turks and, after several engagements, finally compelled them to evacuate their last positions in front of Bagdad, which he entered on March 11. Since then the British have improved the city, which now has a School of Archaeology. Consult Bagdad during the Abbasid Caliphate, G. le Strange, 1900; The Long Road to Bagdad, E. Candler, 1919.

BAGDAD RAILWAY, THE. Railway line in western Asia. The name is generally applied to the whole line running from Haydar Pasa, on the Bosphorus, across Asia Minor and N. Mesopotamia towards Bagdad, although the western part of it from Haydar Pasa to Konya belongs to the system of the Anatolian Rly., the Bagdad Rly. being planned to extend the former.

The length of the line with branches as originally projected was upwards of 1,500 m., the main route going S.E. to Adana, thence almost due E. to Aintab and Biredjik, and S.E. to Mosul, and then nearly due S. along the Tigris to Bagdad and Basra. Germany took the lead in financing and carrying out the scheme, but the Great War interrupted it, and made changes in its ownership necessary.

In Mesopotamia construction was proceeded with by the British after the capture of Bagdad in 1917, lines being built from Bagdad east and west. Parts also were built S. of Bagdad towards Basra, and some progress was made N. of Samarra, towards Mosul. By Oct., 1919, the Bagdad Rly. system had more than 1,200 m. in operation.

After the war extensions were made S. from Bagdad to Basra, and from the former N. to Sharqat and thence to Mosul. The line from Haydar Pasa to Basra has a gauge of 4 ft. 8½ ins., but portions built by the British in Mesopotamia are light rlys.

BAGEHOT, WALTER (1826-77). British economist. Born at Langport, Somersetshire, Feb. 3, 1826, son of a banker and shipowner, he was called to the bar, and then became a partner in his father's business. He wrote for *The Prospective Review*, and was co-editor

Bagatelle board

Bagdad. Left, boat bridge across the Tigris constructed after the British occupation in 1917 and called after General Maude. Right, characteristic flat-roofed houses

with R. H. Hutton, 1855-64, of The National Review. In 1858 Bagshot married the eldest daughter of James Wilson, founder of The Economist, which he edited from 1860 until his death. His English Constitution appeared serially in The Fortnightly Review before its issue in book form in 1867. Physics and Politics, an attempt to apply the principles of natural selection and inheritance to political society, appeared in 1872, and Lombard Street, a Description of the Money Market, in 1873. He died at Langport, March 24, 1877.

BAGGARA (cowherds). African Arabs mainly in S. Kordofan. Claiming unmixed descent from Beduin Moslems, their dark brown skin and fuzzy-wuzzy mop-like hair betoken Hamite-negro infusion.

Baggara. A typical warrior of the Eastern Sudan

BAGIRMI. Country of Africa. Lying S.E. of Lake Chad, it forms the Bagirmi circumscription of French Equatorial Africa. The Bagirmi country extends some 250 m. N to S, and about 170 m. W. to E. The pop. is estimated at about 150,000, but is much larger if former vassal states are included. The surface is generally flat, and is watered by the Shari and Logone rivers and their tributaries.

The country is ruled, under the French, by a sultan residing at Massenia, formerly called Chckna, the former capital. The sultan pays tribute to the French. There is also a sultan at Melfi.

BAGNÈRES-DE-BIGORRE. Town and inland watering-place of France, in the department of Hautes-Pyrénées. Situated on the Adour 13 m. by rly. S.S.E. of Tarbes, it owes its popularity to its hot mineral springs and magnificent scenery. Pop. 8,261.

BAGNÈRES-DE-LUCHON. Town and inland watering-place of France, in the department of Haute-Garonne. In a valley of the Pyrenees, a few miles from the Spanish frontier, and a tourist centre for the Central Pyrenees, it has hot sulphur springs, a bathing establishment, and a casino. Pop. 3,415.

BAGNIGGE WELLS. Former London pleasure garden. It was in King's Cross Road, once Bagnigge Wells Road. The place became fashionable after the discovery here, in 1757, of a chalybeate well. Later the tea gardens, with dancing, etc., became popular attractions.

BAGPIPE. Musical wind instrument. It has a wind reservoir, filled by the breath, and the sound is produced by reed-tongues in pipes, several providing the drone, while one, called the chanter, governed by finger-holes, gives the melody.

A pipe with the bag attached was one of the earliest musical instruments in Europe, and was known in Asia. In Italy it is shown on a famous coin of the days of Nero (A.D. 54-68). The Lincolnshire bagpipe is mentioned by Shakespeare. The Northumbrian pipe was identical with the Lowland Scottish instrument. It was blown by means of bellows, and, like the Highland pipe, had first one and then two drones. The third or great drone and the great size of the whole instrument in its latest stage apparently originated in the Highlands. The Irish pipe is scientifically the most complete form. It is blown with a bellows by a performer who is seated, while the Highland pipe always stands or walks up and down.

The pipes were as popular in the Lowlands as in the Highlands. One or more pipers were employed by every burgh. Perth had its town piper as late as 1837. The office, like that of the clan pipers, was hereditary.

bahamas. Group of coral islands in the W. Atlantic, the first land sighted by Columbus on his voyage of discovery in 1492

BAGSTER, SAMUEL (1772-1851) English publisher. Born and educated at Northampton, he started business in London in 1794, and was the first to supply cheap and portable polyglot Bibles, with notes, to which the patent of the universities and the king's printer did not apply. The first of his many polyglot editions was the English Version of the Polyglot Bible, 1816, containing more than 60,000 parallel references. He died March 28, 1851.

BAHADUR SHAH. Title of two Mogul emperors of Hindustan. The first, named Muazim, was the son of Aurangzebe. On his father's death he defeated his brother Azam, and, adopting the title of Bahadur Shah, was emperor from 1707 to 1712. Bahadur Shah II was nominally emperor of Hindustan at the time of the Mutiny. He was living in Delhi when the mutineers hailed him as their ruler. He was taken prisoner and tried, his sentence of death being commuted into one of transportation. He died at Rangoon, Nov. 7, 1862.

The word bahadur means hero or champion. To-day it is used in India for European officers or high officials as a mark of respect.

BAHAMAS OR LUCAYOS (Span. Los Cayos). Group of islands in the British West Indies. They extend some 650 m. between Florida and Haiti, cover 4,400 sq. m., and have a pop. of about 60,000. The chief islands are New Providence, Great Abaco, Grand Bahama, Eleuthera, Andros, San Salvador or Cat, Acklin, Long Island, Great Inagua, Crooked, and Mayaguana. Geographically the Caicos and Turks Islands belong to the Bahamas, but politically they form a dependency of Jamaica.

The islands are of coral formation. The soil, though poor, produces oranges, lemons, pineapples, and other fruits. Sponge and turtle fisheries are carried on. Sisal and sponges are the mainstay of the islands. Nassau, on New Providence, is the seat of government, and has a wireless station.

The Bahamas were the first land discovered by Columbus in 1492. Settled by the British in 1629, their possession was frequently disputed by the Spanish until their cession to Great Britain in 1783.

The Old and New Bahama Channel, two straits communicating between the Gulf of Mexico and the Atlantic, separate Cuba and Florida respectively from the Bahamas.

Bagpipe. 1. Specimen dated 1409. 2. Modern Scots bagpipe. 3. Old German, c. 1693. 4. Northumbrian pipe. 5. Irish pipes, with bellows attachment

BAHAWALPUR. Native state of India in the Punjab. Bounded N.W. by the Sutlej and Indus rivers and S. by the Rajputana Desert, and with an area of 15,000 sq. m., it produces cotton, sugar, and indigo. The capital, Bahawalpur, is near the left bank of the Sutlej, 69 m. by rly. S. of Multan. The ruler is the nawab and is entitled to a salute of 17 guns. Pop. state, 731,191, mostly Mahomedans: town, 13,494.

BAHIA OR SÃO SALVADOR. Seaport and city of Brazil. On the Bahia de Todos Santos (All Saints' Bay), it has an excellent harbour and is the centre of rly. and telegraph systems.

The seat of an archbishop and formerly the metropolis of the Brazilian Church, it has a handsome marble cathedral, an archiepiscopal palace, numerous churches, a university, museum, and library. Settled in 1510, it was the capital of Brazil from 1549 to 1763. Pop. about 320,000.

Bahia. Cathedral and School of Medicine in the Praça 15 de Novembro

BAHIA BLANCA (Span. white bay). City and seaport of Argentina. On the Naposta, 3½ m. from its mouth in the bay, and 425 m. by rly. S.W. of Buenos Aires, it is served by the B.A. Gt. Southern, the B.A. and Pacific, the Rosario and Puerto Belgrano, and other rlys. There are four subsidiary ports. Puerto Belgrano, which has been taken over by the Argentine Government; Puerto Militar, the naval station of the Argentine; Puerto Galvan (B.A. and P. Rly.); and Puerto Ingeniero White (B.A.G.S. Rly.). The harbour is growing in importance and serves the rich farming area of the neighbouring provinces by exporting wheat and wool. The town has a wireless station. Pop. 44,145.

BAHR. Arabic name for a body of water. The Red Sea is the Bahr-el-Yemen, and the Dead Sea the Bahr-Lut.

The Bahr-el-Abiad, or White Nile, is the river from the junction of the Bahr-el-Jebel and the Bahr-el-Ghazal to its confluence with the Bahr-el-Azrek, or Blue Nile, at Khartoum. The Atbara is the Bahr-el-Aswan, or the Black Nile. The Bahr-el-Ghazal gives its name to a province of the Anglo-Egyptian Sudan, which has an area of 114,000 sq. m. See Nile.

BAHREIN ISLANDS. Group of islands in the Persian Gulf, 20 m. off El Hasa, Arabia. Bahrein, the largest, is 20 m. long and 10 m. wide. Manama, on Bahrein, the capital and chief port, has a pop. of 25,000, and Muharrak, on the island of the same name, has 25,000 inhabitants. The pop. of the group is about 100,000, chiefly Persians and Arabs.

The islands are ruled by a native sheikh, under British protection. In 1927 Persia claimed them, but the claim was disallowed. They produce dates and a fine breed of white donkeys. The pearl fisheries are less valuable than formerly. The islands contain many thousands of conical tombs.

BAIAE (mod. Baia). Ancient Italian town, in Campania. Situated on a bay 10 m. W. of Naples, its natural beauty and hot sulphur springs make it a favourite resort of the Roman emperors and the wealthy. Here Julius Caesar, Marius, Nero, and Alexander Severus built villas, and Tiberius and Hadrian died. It was notorious for its luxury.

BAIKAL (Mongolian Dalai Nor). Largest fresh-water lake in Asia and sixth largest in the world. In S. Siberia, enclosed by the

Baikal Mts., it is 390 m. long, from 18 m. to 60 m. broad, and covers an area of about 14,000 sq. m.; its altitude is about 1,560 ft. above sea level, and soundings have shown a maximum depth of over 5,000 ft. The Selenga is the largest river flowing into it, the Lower Angara carries its outflow to the Yenisei, and Olkhon is its largest island. Salmon, sturgeon, seals, and herrings are caught. The construction in 1904 of a line skirting the S. end of Lake Baikal completed the Trans-Siberian Rly.

BAIL (Lat. baiulare, to carry, take charge of). When a person has been in custody and is released for a time, but is bound to come up to answer the charge at a future date, very often one or more persons undertake, under a pecuniary penalty, that he shall be forthcoming at the proper time. This is called admitting to bail. The surety or sureties have to sign a recognizance binding themselves to pay to the king the sum named if the accused absconds, i.e. the bail is estreated.

BAILDON. Urban dist. in Yorkshire (W.R.). It is 4½ m. N. of Bradford, on the L.M.S. Rly., and is a centre of chemical manufactures. Near is Baildon Hill, with old encroachments. Pop. 8,000.

BAILEY (late Lat. ballium, wall). In architecture, the court of a feudal castle between the outer wall and the keep. The term was originally applied to the wall enclosing such court. In the Norman stronghold there were an outer and an inner bailey; the outer comprised the stables and outhouses of the stronghold, and was separated from the inner by a fortified wall with a gate house; the inner bailey was the area within which stood the keep. See Castle.

BAILEY, SIR ABE (b. 1864). South African mineowner. Born in Cape Colony. Nov. 6, 1864, he became a leading figure in the mining industry, which was developing enormously when he was young. In 1895, for agitating against the Boer rule in the Transvaal, he was sentenced to prison for two years; in 1899-1902 he served in the Boer War and in 1915 in South-West Africa. From 1910-24 he was a member of the Transvaal Legislative Assembly. Sir Abe, who was made a baronet in 1919, did much to found the Institute of International Affairs.

Lady Bailey, a daughter of Lord Rossmore, has made some notable aerial journeys, piloting her own machine.

BAILEY, HENRY CHRISTOPHER (b. 1878). British novelist. Born April 1, 1878, and educated at the City of London School and at Corpus Christi College, Oxford, he joined the staff of The Daily Telegraph in 1901. As an undergraduate he made a reputation by an historical novel, My Lady of Orange. Later novels include: The Gentleman Adventurer, The Highwayman, The Gamesters, The Pillar of Fire, Barry Leroy, and Mr. Fortune Speaking.

BAILEY, PHILIP JAMES (1816-1902). British poet. Born April 22, 1816, his father was the proprietor of The Nottingham Mercury.

Philip J. Bailey, British poet
Elliot & Fry

He went to Glasgow university, but, instead of becoming a minister, he returned home and worked on a poetic version of the Faust legend. In 1839 this, called Festus, was published anonymously and for many years it had a great vogue. Much new matter was added to it, and in 1889 the 11th edition appeared. Bailey died Sept. 6, 1902.

BAILIE. Scottish form of the word bailiff, corresponding somewhat to alderman in England. A bailie of a corporation is, by virtue of his office, a justice of the peace.

BAILIFF (Lat. baiulus, carrier, person in charge). Word now applied to an official employed by a sheriff to serve writs, carry out distrains, make arrests, collect fines, summon juries, and perform other work of that kind. Every county court has a high bailiff, and under him are bailiffs who do the work of the court. These bailiffs give sureties that they will execute their duties, and are consequently called bound bailiffs, or more popularly bum bailiffs.

In England a bailiff is one who looks after an estate or farm for another. In the Channel Islands the bailiff is a high official. In each of the larger islands he presides over the royal court and at meetings of the states.

A bailiwick is the wick (Lat. vicus) or village of a bailiff, and also the district over which his powers extend.

BAILLEUL. Town of France, in the department of Nord. It lies near the Belgian frontier, 46 m. by rly. S.E. of Calais, and before the Great War, during which it suffered much damage, it had woollen, cloth, and leather manufactures. The town gave its name to the Bailleul family. Captured by the Germans, April 15, 1918, it was regained by the British on Aug. 30, 1918. Its war memorial represents a shattered church, with figure of an angel. After the War it was adopted by Bradford.

BAILLIE, JOANNA (1762-1851). Scottish dramatist. Born at Botwell, Lanarkshire,

Joanna Baillie, Scottish dramatist
After Sir W. Newton

the daughter of a professor of divinity, she passed most of her life in London. Her writings include nine Plays on the Passions in three volumes. Her tragedy, De Montfort, was produced in London in 1800, Mrs. Siddons and John Kemble appearing in it, and The Family Legend in Edinburgh in 1810. She died Feb. 23, 1851.

BAILLIESTON OR CROSSHILL. Town of Lanarkshire, Scotland. It is 8 m. E. of Glasgow, on the L.M.S. Rly., and is a mining centre. Pop. 13,390.

BAILMENT. In law, the delivery of a chattel by one person, the bailor, to another, the bailee, to be handed over to a third person, or to be returned to the bailor in a certain event. Thus, a carrier is bailee of goods carried, and a pawnbroker of goods pawned. A borrower, except of money or consumable goods, is the bailee of goods borrowed.

BAILY, FRANCIS (1774-1844). A British astronomer. He was born at Newbury, Berkshire, April 23, 1774. After being on the London Stock Exchange, in 1825 he retired with a fortune, and fitting up an observatory at his house in London, devoted himself to astronomical study. His estimate of the weight of the earth is accepted as a close approximation to the truth. He died Aug. 30, 1844.

BAILY'S BEADS. During the solar eclipse of May 15, 1836, Baily discovered the phenomenon known as Baily's Beads. The phenomenon arises from the fact that the surface of the moon is diversified by mountains; its edge as seen from the earth is thus not a perfect circle but a jagged one. In a total eclipse of the sun the moon gradually obscures more and more of the sun's surface until only a thin crescent remains; at the last moment before disappearance this crescent breaks up into a number of bright points or beads. They are parts of the sun's edge left visible by the lunar inequalities and magnified by irradiation.

BAINES, EDWARD (1774-1848). British journalist and politician. Born at Walton-le-Dale, in Lancashire, Feb. 5, 1774, and apprenticed to a Prestou printer, he became

proprietor of The Leeds Mercury in 1801. He was Liberal M.P. for Leeds 1834-41, and died Aug. 3, 1848, being given a public funeral. His second son, Edward (1800-90), was M.P. for Leeds 1859-74, and was knighted in 1880. He wrote a Life of his father.

BAINSIZZA PLATEAU. Here in Aug., 1917, a battle was fought between the Austrians and the Italians. After a bombardment on Aug. 18 of the whole Austrian positions the Italian infantry were launched N.E. from Plava and got across the Rohot, a small tributary of the Isonzo, at the foot of the Bainsizza plateau. From Canale, N.E. of Plava, Italian forces captured the commanding height known as Kuk 711.

On Aug. 21 the turning movement from Kuk 711 was completed, and next day the Italians were marching W. into the Bainsizza plateau. On Aug. 24 they captured Monte Santo. Part of the second army was then marching across the Bainsizza plateau. Owing to increasing Austrian resistance the battle died down.

BAIRAM OR **BEIRAM.** Turkish and Persian word for the Moslem three-day festival which succeeds the fast of Ramadan. The name is also given to the four-day festival celebrated seventy days later, in the last month of the Arabic year, in memory of Abraham's sacrifice of Isaac. As the Mahomedan year is lunar, in thirty-three years each month runs through all the seasons.

BAIRD, SIR DAVID (1757-1829). British soldier. Born at Newbyth, Scotland, Dec. 6, 1757, he entered the army in 1772 and proceeded to India as a captain in the 73rd regiment in 1779, remaining there until 1799, when, as a major-general, he led the detachment which stormed Seringapatam. The expedition sent from India to Egypt to trap the French army left by Napoleon was under his command, and in 1801 he made his brilliant march from Kossair across the desert to the Nile. He was made a baronet in 1810, and in 1820 became commander of the forces in Ireland. He died Aug. 18, 1829.

BAIRD, JOHN L. (b. 1889). British engineer. The son of a minister of the Church of Scotland, he was educated at the technical college and university, Glasgow. He invented the television, the first practical apparatus for the instantaneous transmission of scenes over a distance by wire or wireless telegraphy. See Television.

BAIREUTH OR **BAYREUTH.** Town of Bavaria. Standing on the Red Main, about 60 m. by rly. N.E. of Nuremberg, it manufactures cotton and woollen goods, beer, spirits, bricks, and

Bayreuth. Interior and exterior of the theatre built for Richard Wagner. It was opened in 1876

earthenware, and trades in grain. Until 1791 it was the chief town of a little principality ruled by margraves of the Hohenzollern

family. Richard Wagner lived and was buried here, as were Franz Liszt and Jean Paul Richter. The chief Wagner memorial is the theatre about a mile away, built, with the co-operation of Ludwig II of Bavaria, on lines suggested by Wagner. The Baireuth Festival, a musical festival in honour of Wagner is held periodically. There was a prisoner-of-war camp here during the Great War. Pop. 35,306.

BAIRNSFATHER, BRUCE (b. 1887). British artist and soldier. Born at Murree, India, in July, 1887, he became a civil engineer. He served in France, and won a reputation by his humorous sketches in black-and-white of life at the front, which first appeared in The Bystander and were afterwards published in volumes entitled Fragments from France. His creations, Old Bill and his two companions, figured in a play, The Better 'Ole.

BAJAN OR **BEJAN.** Name given in medieval universities to new undergraduates or freshmen. Surviving in St. Andrews and Aherdeen, it is supposed to come from the French bec jaune, yellow beak or young bird.

BAKEHOUSE. Place where bread is baked. In Great Britain there are special regulations about bakehouses. Like other factories they must be kept clean and their water supply must not be subject to contamination. In addition no bakehouse may be underground unless by special permission. No place on a level with a bakehouse and forming part of the same building may be used as a sleeping place unless separated from the bakehouse by a complete partition and thoroughly ventilated.

BAKELITE. Artificial resin-like substance invented by a Belgian chemist, L. H. Baekeland, resident in the U.S.A. It is formed by the combination of phenols and formaldehyde, and under the influence of heat becomes a hard, insoluble, infusible substance resisting in a high degree chemical and mechanical agents. Bakelite is used for making ornaments, beads, buttons, pen-holders, umbrella handles, etc. Paper impregnated with a liquid form is used for many electrical insulating purposes.

BAKER. Lake of North-West Territories, Canada. It is the lowest of an extensive system of lakes and rivers, forming the N.W. corner of the drainage area of Hudson Bay (approx. 100,000 sq. m.), into which the lake outflows by Chesterfield Inlet. Its area is 1,029 sq. m.

There is a volcanic, snow-capped and forested mt. in Washington, U.S.A., W. of the Cascade range, called Mount Baker.

BAKER, SIR BENJAMIN (1840-1907). British engineer. Born at Keyford, Somerset, March 31, 1840, Baker in 1861 joined the staff of the engineering firm, under Sir John Fowler, of which he became partner in 1875. He was actively concerned with Fowler in the construction of the London underground rlys., 1861-9, and the Forth Bridge, 1883-90. In Egypt he was consulting engineer for the dam at Assuan, 1898-1902, and similar enterprises, and he designed the vessel that carried Cleopatra's Needle to London. In later life he was associated with Sir J. Wolfe Barry. Knighted in 1890, he died May 19, 1907.

BAKER, NEWTON DIEHL (h. 1871). American politician. He was born at Martinsburg, West Virginia, Dec. 3, 1871, and

Newton D. Baker, American politician

from 1902 to 1912 was city solicitor of Cleveland, and for four years its mayor. A democrat in politics, in 1916 he was appointed secretary of war by President Wilson, and he was chiefly responsible for the training and dispatch of American troops to France.

BAKER, SIR SAMUEL WHITE (1821-93). British explorer. In 1861, accompanied by his wife, a Hungarian, he started from Cairo on a journey of exploration into Central Africa, chiefly with a view to discovering the sources of the Nile. At Gondokoro, Feb. 1863, he met Speke and Grant. Hearing from them of the supposed existence of another immense lake besides Victoria Nyanza, which they had discovered, Baker proceeded on his journey, and on March 14, 1864, sighted the new sheet of water, which he called Albert Nyanza. He returned to Khartoum in May, 1865, and in 1866 was knighted. In 1869 he was commissioned by the khedive, and with the rank of pasha organized a successful expedition to the Upper Nile to suppress the slave trade. His works include: The Nile Tributaries of Abyssinia, 1867; Ismailia 1874; Wild Beasts and Their Ways, 1890. He died Dec. 30, 1893.

Sir S. W. Baker, British explorer

BAKERLOO. Name given to the London electric underground railway between Waterloo and Baker Street. The first section of the line was opened in 1906, and extensions were afterwards made, notably to Watford. It is part of the system of electric rlys controlled by the Underground Electric Rlys. Co.

BAKERS' COMPANY, THE. London city livery company. A company of white bakers existed in 1307, and the guild of white and brown bakers was incorporated in 1509. A separate charter was granted to the brown bakers in 1622, but the two were united again in the second half of the 17th century. Bakers' Hall, Harp Lane, E.C., was burnt in 1715, rebuilt in 1719, and restored in 1825.

BAKEWELL. Urban district and market town of Derbyshire. It stands on the Wye, 25 m. N.W. of Derby by the L.M.S. Rly. The old cruciform church of All Saints, mentioned in Domesday, has a fine octagonal spire and contains monuments of the Vernon and Manners families. In the churchyard is a cross dating probably from the 8th century. The grammar school was founded in 1637, and there are almshouses of earlier date. Bakewell's chalybeate spring is noted. Haddon Hall and Chatsworth are in the vicinity. Market day, Monday. Pop. 3,000.

Bakewell pudding is a sweet pudding named from this town. The foundation of it is pastry which is covered first with jam, and then with a crust made of flour and yolk of egg. It is garnished with castor sugar and white of egg beaten together into a froth.

BAKHUISEN OR **BACKHUYSEN, LUDOLF** (1631-1708). Dutch painter and engraver. At the age of 28 he went to Amsterdam, where he became a pupil of the landscape painter, Albert van Everdingen. But he virtually abandoned landscape in favour of shipping subjects. He is represented in the National Gallery and in the Louvre.

BAKONY WALD OR **BAKONY FOREST** (Magyar, Bakonyerdő). Upland district of Hungary. Running N.E. from Lake Balaton to the Danube near Budapest, it is 70 m. long and 25 m. wide. In its dense forests large herds of swine are fed, and marble is worked.

Baksheesh (Persian, present). Oriental term for a tip or gratuity. Samuel Purchas uses the word in the sense of free or gratis.

BAKST, LEON NICOLAIEVITCH (1866-1924) Russian painter. In 1906 he settled in Paris and devoted his rare imaginative power to the designing of richly decorative stage costumes and settings. He established his reputation by his designs for the productions of the Imperial Russian Ballet in Paris in 1909. He died Dec. 27, 1924.

BAKU. Seaport on the Caspian Sea, capital of the Soviet republic of Azerbaijan. It is also the name of a district within the limits of the republic. The town is connected by rly with Batum. 559 m., and Poti, 535 m., on the Black Sea, and has steamer communication with Krasnovodsk, the terminus of the Transcasian Rly. Astrakhan, and other ports. A fine natural harbour has made Baku a commercial centre for merchandise dispatched from the Transcasian provinces and Persia; but it owes its great prosperity almost entirely to the vast petroleum deposits in the neighbourhood. The oil-bearing area covers 2,700 acres. There are also tobacco, flour, and chemical industries.

Baku came into prominence in the last year of the Great War, when a British force, under Maj.-Gen. L. C. Dunsterforce, occupied the town in July, 1918. The objects of the expedition were to prevent Germany obtaining control of the Caspian Sea and to save the oil wells in the district. This force was withdrawn in Sept., but on Nov. 17 the British aided by Russians and Armenians, reoccupied Baku, the British civil administration lasting until Aug., 1919. In 1920 the Russians occupied it and set up the Soviet republic of Azerbaijan, with Baku as its capital. See Azerbaijan; consult also The Adventures of Dunsterforce, L. C. Dunsterforce, 1920. Pop. (including district) 446,832.

BAKUNIN, MIKHAIL (1814-76) Russian anarchist. He belonged to the aristocracy and served in the Guards, 1832-8. Revolted against government methods, he travelled in Germany and Switzerland and associated with revolutionary leaders. In 1847 his property was confiscated, and in 1848-9 he took part in the outbreaks at Berlin and Dresden. Handed over to the Russian government, he was sent to Siberia in 1855. He escaped in 1859 to the U.S.A. and thence to London. In 1869 he founded the Alliance of Social Democracy, a rival organization to the International. In 1872 Marx secured Bakunin's expulsion from the Workmen's International Congress, and the latter retired to Switzerland, dying at Berne, June 13, 1876.

BALA Lake of Merionethshire, Wales. The chief source of the river Dee, it extends 4 m. S.W. from Bala town, and is about $\frac{1}{2}$ m. broad and 530 ft. above sea level.

Bala is also a market town and urban district of Merionethshire. On the Dee at the N. end of Bala Lake, it is 14 m. S.W. of Colwyn by the G.W.R. It has a theological college and a grammar school founded in 1712, and is a resort for tourists and anglers. Market day, Sat. Pop. 1,408.

Bala Series is the name given the uppermost division of the Ordovician system, since rocks of this series are well developed at Bala, N. Wales. They consist of shales, slates, and grits, with beds of limestone and volcanic ash. The series contains a varied brachiopod and trilobite fauna, and abundant remains of cystids. Rocks of the Bala series occupy a large area in the S. of the Lake district, and in the S. of Scotland. See Caradoc; Cystids.

BALAAM. Semi-heathen magician mentioned in the O.T. Despite divine warning, he was bribed by Balak, king of Moab, to curse Israel; but, against his will, uttered

blessings and foretold Israel's triumph over Moab. While serving with Midian against the Israelites he was slain in battle (Num. 22-24; Micah 6: Rev. 2).

BALACLAVA. Village and harbour in the Crimea. On the shores of the Black Sea 8 m. S.W. of Sevastopol it is famous for the charge of the British cavalry, Oct. 25, 1854.

Obedying a bungled order, Lord Cardigan led the Light Brigade a mile and a half along a valley against the Russian guns at the end and beneath a murderous fire from them and from either side. Some of the men reached their goal and cut down the gunners, but only a remnant returned. Others straggled in later, but the brigade had 110 killed and 134 wounded out of a total of 673. See Crimean War.

Balaclava helmet

A Balaclava helmet is a form of woollen headgear knitted in one piece and pulled over the head. These helmets were first worn in the Crimea, and vast numbers were supplied during the Great War.

BALALAIKA. Popular Russian musical instrument of the guitar type. It has a triangular body and two, three, or four strings, plucked with the fingers. See Guitar.

BALANCE OF POWER. Name given to a theory of international politics, more or less operative in Europe since the end of the Middle Ages, i.e. about 1450. It means that no one state shall be allowed to become sufficiently powerful to threaten the independence of the others. In other words, there must be sufficient strength, actual or potential, on the side of a country to balance that of its rivals. The foreign policy of Britain, more perhaps than any other country, has been influenced by it. Its greatest manifestation was before the Great War, when the Triple Alliance of Germany, Austria, and Italy was balanced by the entente between Great Britain, France, and Russia. See Diplomacy; Europe; League of Nations.

Balalaika, Russian musical instrument

BALANCE OF TRADE. Term used to indicate the difference in value between the imports and the exports of a country. It is closely concerned with the question of the foreign exchanges, as an adverse trade balance causes the rate of exchange to rise against a country. In 1928 the Board of Trade prepared an elaborate memorandum on the trade balance as it affects Great Britain. Taking into account the items classed as invisible exports, such as interest on foreign loans, earnings of British ships, etc., the conclusion was that in 1927 Great Britain was £96,000,000 to the good. In 1928 the balance in favour of Great Britain was £149,000,000.

BALANCER. In electrical work, a motor generator used for balancing or equalising the load on the two sides of a direct-current three-wire system. Sometimes two sets of storage cells are employed for this purpose.

The balancer consists of two shunt-wound dynamos coupled electrically and connected mechanically. The machine on the side which has the light load is made to drive the machine connected to that with the excess load by varying the resistance in the field windings of the machines, increasing it to run the machine as a motor, and decreasing it for generation of current. See Distribution.

BALANCE SHEET. Document showing the financial position of a company, business or other undertaking. The assets are placed

on the right or credit side, and the liabilities on the left, or debit side, and the two should balance. In the case of a public company a balance sheet must be drawn up, save in exceptional cases, every year. It must be approved and signed as correct by the auditors, and a copy sent to each shareholder and to the registrar of companies at Somerset House. The Companies Act of 1929 made it necessary for directors to give fuller information about their assets in their balance sheets. See Book-keeping; Budget; Company.

BALASINOR. State of India, in the Rewa Kantha agency of Bombay. It has an area of 189 sq. m., and its ruler is a nawab entitled to a salute of nine guns. Balasinor, the capital, is 50 m. N. of Baroda. Pop. 40,563, chiefly Hindus.

BALASORE. Coastal district and town of India, in Bihar and Orissa. The district covers 2,085 sq. m., and produces salt and rice.

The town, the capital of the district, is 118 m. by rly. S.W. of Calcutta; in 1633 it was a considerable port on the Burhabalang river. Later it had English, Dutch, Danish, and French trading factories, but the river mouth has silted up so that the town is now seven m. from the sea. The French still own a plot of 38 acres. Pop. 21,362.

BALATA. Substitute for gutta-percha, used in making belting for machinery. It is made from a gum obtained from the bullet tree, *Mimusops balata*, found in tropical America. See Gutta-percha.

BALATON (German, Plattensee). The largest lake of Hungary. Lying 55 m. S.W. of Budapest at an alt. of 426 ft., it has a length of 50 m., maximum breadth of 10 m., and area of about 250 sq. m. or, with adjacent marshes, often inundated. 420 sq. m. fed by over 40 streams, it has a depth of 20 ft., and discharges into the Danube. The scenery is picturesque, and the lake is famous in Magyar poetry and folklore.

BALAWAT. Ruined city 10 m. E. of Nineveh. There in 1879 the two-leaved door of an Assyrian palace was discovered. It is 27 ft. high, of 4 in. cedar, each leaf being adorned with seven horizontal bronze bands, 8 ft. long, 9 ins. wide. It is now in the British Museum. Each band bears a double row of scenes stamped in repoussé, depicting campaigns of Shalmaneser III.

BALBINUS, DECIMUS CAELIUS (d. 238). Roman emperor. He was one of the two emperors chosen by the Senate in April, 238, as rivals to Maximinus, who had been selected by the soldiers on the Rhine. Balbinus, an orator and a poet, prepared to restore order in Rome, while his more warlike colleague Maximus Papien set out against Maximinus. He defeated the rebels and was about to march against the Goths when he and Maximus were killed in Rome, Aug., 238.

BALBOA OR PORT OF ANCON. Port of Panama city. It lies at the base of Ancon Hill, at the Pacific end of the Panama Canal, to the opening of which its existence is due. Its harbour is approached by a channel 4 m. long, 500 ft. wide, and 35 ft. deep at low water. There is no anchorage room, and vessels are moored alongside the wharves. The dry dock is 1,000 ft. long, 29 ft. deep at mean low water, and 110 ft. wide at entrance. The harbour is equipped with floating cranes, coaling plant, and oil tanks. Balboa has a wireless station and railways connecting with Ancon and Panama. It was named after the navigator. See Panama.

BALBOA, VASCO NUÑEZ DE (1475-1517). Spanish navigator. In early life Balboa sailed to the New World and settled in Santo Domingo, but being obliged to flee from his creditors, he joined an expedition to Darien. Of this colony he became ruler. He was

the first European to set eyes upon the Pacific Ocean, Sept. 25, 1513. He named there the Gulf of San Miguel, and took possession of the ocean for the Spanish king. He remained in Darien, but in 1514 was superseded as governor by Pedrarias Davila, by whom in 1517 he was beleaguered.

The chief coin of Panama Republic is the balboa. It is equal in value to the American dollar.

Balboa. Coin showing head of the Spanish navigator

BALBRIGGAN (Gaelic, Brecon's town). Watering place of co. Dublin, Irish Free State. It is 22 m. N.E. of Dublin by the G.N. of Ireland Rly., and has a coastguard station and a small fishing harbour. Its fine hosiery, muslins, calico, and cotton are so noted that the name Balbriggan is used for varieties of cotton knit articles. Market days, Mon. and Sat. Pop. 2,273.

BALBUS. Name of several Roman families. Their two most important members were both Lucius Cornelius Balbus; they were uncle and nephew and natives of Cadiz. The elder was one of Julius Caesar's friends, and was consul in 40 B.C. The younger, who also served Caesar and Augustus, was pro-consul of Africa and a writer.

BALDACCHINO. Canopy borne over the Host in processions of the Blessed Sacrament in the Roman Catholic Church. It consists of a rectangular framework covered with cloth of gold or white silk, and supported by four, six, or eight staves, by which it is carried. The word is derived from Baldaccio, the Italian for Bagdad, which supplied the textile fabrics of which the later canopies were made. The most magnificent example in the world is over the high altar in S. Peter's, Rome, executed by Giovanni Bernini for Pope Urban VIII.

BALDER. Sun god in Norse mythology. In the Icelandic Prose Edda Balder is described as the second son of Odin and husband of Nanna, the moon goddess. Nothing could harm him except mistletoe, so Loki, the mischief maker, having found this out, had a mistletoe twig magically turned into a dart. With this he went to the place where the gods were throwing weapons at Balder to prove his invulnerability, and persuaded Hoder, Balder's blind brother, to join in the game by throwing the mistletoe, and so Balder was killed.

BALDMONEY. Variant name for kinds of gentian. It is also given to an umbelliferous plant, *Meum athamanticum*, found on mountain pastures. The latter is used in medicine. See Gentian.

BALDNESS. In mankind, one of the natural changes associated with advancing years. Sometimes, however, it occurs prematurely, and it may even be present at birth. In the morbid condition known as alopecia universalis, or complete baldness, there is total absence of hair, including the eyebrows, eyelashes, moustache, beard, and axillary and pubic hair.

Premature loss of hair may be the result of severe acute illness, in which case the hair is likely to grow again vigorously when recovery occurs. Chronic diseases, especially syphilis, are often associated with permanent thinning. Skin diseases, particularly scrofula, which may be manifested either by a dry and scurfy condition or by an oily state of the scalp, often cause thinning.

BALDOCK. Urban district of Hertfordshire. It is 37 m. from London and five from Hitchin by the L.N.E. Rly. An ancient place, it has a fine church, S. Mary's, and

was once a market town. Near, in 1925, a Roman cemetery was unearthed, and excavations resulted in some interesting finds, now in the museum at Letchworth. Pop. 3,360.

BALDOVINETTI, ALESSIO (c. 1427-99). Italian painter. Born in Florence, he invented a new, but unsuccessful, method of mixing colours: hence most of his works are badly preserved or have perished. He was more successful in mosaic, and restored the mosaics in the cupola of the baptistry at Florence. He died in Florence, Aug. 29, 1499, and was buried in the church of San Lorenzo.

BALDOYLE. Watering place of co. Dublin, Irish Free State. It is 5 m. N.E. of Dublin, and has fishing and limestone industries. Race meetings are held annually.

BALDRIC (Latin *balteus*, belt). A girdle or belt, now rarely used. Usually of leather, it was worn sometimes hanging over one shoulder, across the breast and under the opposite arm, and sometimes round the waist. It was used to support a sword or bugle. The name was also given to the strap round the neck, which held the shield.

BALDUNG, HANS (c. 1480-1545). German painter and engraver. He was a pupil of Albrecht Dürer at Nuremberg. An altar-piece of S. Sebastian, painted in 1507, which formerly in the cathedral at Halle, passed into the Lippmann collection at Vienna, is the first extant painting ascribed to him. In 1509 Baldung settled at Strasbourg, where he died. His masterpiece is the chief altar-piece in the cathedral at Freiburg. His reputation rests chiefly on his designs for engraving, of which specimens are preserved in galleries at Berlin, London, Paris, and Florence.

BALDWIN. Name of two Latin emperors of Constantinople or Romania. As count of Flanders Baldwin I took part in the crusade in which Constantinople was captured in 1204. He was chosen ruler of the new realm, but was taken prisoner by the Bulgarians while besieging Adrianople in April, 1205, and died in prison.

Baldwin II (1217-73) was the son of the emperor Peter and nephew of Baldwin I. He became emperor in 1228, when only a boy. John of Brienne, king of Jerusalem, was chosen regent, and in 1234 Baldwin married his daughter. His reign ended when Michael Palaeologus took Constantinople in 1261 and the Latin kingdom ended. See Romania.

Balearic Isles. Possessing a chequered history of over 2,000 years, these Mediterranean islands have been Spanish since 1503. See p. 182

Baldwin was also the name of four kings of Jerusalem. Baldwin I was the brother of Godfrey of Bouillon and went on the first crusade. He was succeeded in 1118 by his nephew, Baldwin II.

BALDWIN, STANLEY (b. 1867). British statesman. Born August 3, 1867, son of Alfred Baldwin, head of a large engineering firm, he was educated at Harrow and Trinity College, Cambridge. He succeeded his father as M.P. for the Bewdley division in 1908, and became parliamentary secretary to Bonar Law in December, 1916. A junior lord of the treasury, January, 1917, Baldwin was promoted joint financial secretary to the treasury in June of that year. Made a privy councillor in 1920, he entered the coalition cabinet as president of the Board of Trade, 1921. On the downfall of the Lloyd George administration in October, 1922, Baldwin became chancellor of the exchequer. On Bonar Law's resignation in May, 1923, he succeeded as prime minister.

Stanley Baldwin, British statesman
Lalajetle

On fiscal questions he was in favour of some measure of protection, and to get a mandate to carry out his proposals he advised the King to dissolve Parliament on Nov. 15, 1923. A general election was held on Dec. 6. The result was that the Conservative majority of 77 was converted into a minority of 103. In Jan., 1924, he was defeated in Parliament and resigned. Soon, however, Baldwin was again prime minister, as at the general election of Oct., 1924, his party secured a majority of 227. He remained in office until June, 1929, when, having been defeated at the polls, he resigned.

Baldwin's fair-mindedness, generosity and idealism have showed themselves in various ways notably when, during the Great War, he gave one-quarter of his fortune to the national exchequer. Some of Baldwin's addresses and speeches have been published in volumes called *England, 1926*, and *Our Inheritance, 1928*.

His elder son, Oliver Ridsdale Baldwin (b. 1899), was elected Labour M.P. for Dudley in 1929. His book, *Six Prisons and Two Revolutions*, describes his experiences in Asia Minor. He also wrote on political questions.

BALE (late Lat. *bala*, round body). Term for a canvas-covered package generally bound by hoops and fastened under compression. Packages of textile goods in bale canvas without hoops are known as trusses. The bale is a rough measure of the weight of textile raw materials. Raw cotton is bought and sold in quantities denoted as bales. The American cotton bale is 500 lb., Egyptian 700 lb., W. African 400 lb. The Australian bale of raw wool averages 330 lb. and the S. American wool bale 1,000 lb. The bale of raw jute is 400 lb. The word is also used for the packing material.

BALEARIC ISLES (Span.: Baleares, Slingers' Islands). Group of four large and eleven small islands in the Mediterranean. They are situated off the E. coast of Spain, of which they form a province and a military district; area, 1,935 sq. m. Apart from Majorca, the largest, Minorca, Ibiza, Formentera, and Cabrera, the rest are rocky islets. The climate is fine, but variable, and the flora and fauna are similar to those of the nearest mainland. The soil is moderately fertile. The inhabitants are Spanish, with a mixture of Moorish blood. In ancient times they had a reputation as slingers.

The capital and chief port is Palma; Port Mahón, in Minorca, with an excellent harbour, comes next. Ibiza has a natural harbour.

Colonised by the Phoenicians and Carthaginians, the islands were conquered by the Romans, 123 B.C., and by the Moors in A.D. 798, becoming a Moorish kingdom in 1009. Minorca was a British possession 1708-56, and again 1763-82, being ceded to Spain in 1803. Pop. 350,000. There are ancient and prehistoric remains. See map p. 181

BALFE, MICHAEL WILLIAM (1808-70).

Irish music composer. He was born in Dublin, May 15 1808, and made a name as an operatic baritone in Paris, as Figaro in Rossini's *Il Barbiere*. He is now chiefly remembered by his light opera. His compositions of this class include: *The Siege of Rochelle*, 1835; *The Maid of Artois*, 1836; *The Bohemian Girl*, 1843; *The Enchantress*, 1845; *The Rose of Castile*, 1857; *Satanella*, 1858; *The Puritan's*

Michael Balfe, Irish music composer

Daughter, 1861; and *The Armourer of Nantes*, 1863. He died Oct. 20, 1870.

BALFOUR, ARTHUR JAMES BALFOUR, 1ST EARL (1848-1930). British statesman. Born at Whittingehame, in Haddingtonshire, July 25, 1848, he was the eldest son of James Maitland Balfour by his marriage with Lady Blanche Mary Harriet Cecil, daughter of the 2nd marquess of Salisbury. He was educated at Eton and Trinity College, Cambridge. At the general election of 1874 Balfour entered the House of Commons for the borough of Hertford in the Conservative interest, and three years later became private secretary to his uncle, Lord Salisbury.

During the 1874-80 Parliament Balfour made little mark. In the next Parliament (1880-85) the Conservative party was in opposition, and he attached himself to the little band of independents, led by Lord Randolph Churchill, who became known as the Fourth Party.

When Gladstone fell and Lord Salisbury formed his first short government in 1885, Balfour was given office as president of the Local Government Board, but he soon changed this post for the secretaryship of Scotland. At the 1885 election he was returned for East Manchester, an association which lasted for 21 years. In 1887 he succeeded Sir Michael Hicks-Beach as chief secretary for Ireland. In Oct., 1891, he became leader of the House of Commons on the death of W. H. Smith. From 1892-5 he was leader of the opposition.

In 1895 the Unionist Party was again returned to power, and Balfour became first lord

of the Treasury and leader of the House of Commons, continuing to hold these two posts down to the end of 1905. From July, 1902, when Lord Salisbury resigned, to Dec., 1905, he was also prime minister to Edward VII.

In 1903 Chamberlain raised the Tariff Reform issue, with which Balfour disagreed. The Unionist Party therefore, was split, and at the general election held in 1906 the Unionists were routed and Balfour was rejected at East Manchester. A seat was found for him in the City of London, and he resumed his old place as leader of the opposition. The struggle that followed the rejection of the Budget in 1909 severely taxed Balfour's physical strength, and in Nov. 1911, he resigned the leadership.

During the Great War, when the first Coalition Government was formed in May, 1915, he went to the Admiralty as first lord, and remained there until the formation of the new Government under Lloyd George in Dec., 1916. He was then transferred to the Foreign Office, and in 1917 was head of the British mission to the U.S.A. During the Paris conference a large share of the most responsible duties of the British delegation fell upon him as secretary of state for foreign affairs. He resigned from the Foreign Office in Oct., 1919, but was lord president of the council 1919-22, and again 1925-29. He died March 19, 1930.

Balfour always cherished a devotion to music, philosophy, and golf. He published in 1879 *A Defence of Philosophie Doubt*, and in 1895 *The Foundations of Belief*. In 1915 he issued his Gifford Lectures under the title of *Theism and Humanism*. His honours included the O.M. and the F.R.S. In 1922 he was made a K.G. and received an earldom. In 1919 he was the chosen chancellor of Cambridge University, and from 1921 to 1928 was president of the British Academy.

Balfour's brothers were men of distinction. Gerald William Balfour (b. 1853), a brilliant classical scholar, was a lecturer at Cambridge. From 1885-1906 he was M.P. for Central Leeds. From 1895-1900 he was chief secretary for Ireland; in 1900-05 president of the Board of Trade, and in 1905-06 of the Local Government Board. His wife, Lady Betty, was a daughter of the 1st earl of Lytton.

Another brother, Francis Maitland Balfour (1851-82) was a distinguished scientist, being professor of animal morphology at Cambridge. He was killed in the Alps in July, 1882. Eustace Balfour (d. 1911), an architect, married Lady Frances, daughter of the 8th duke of Argyll, a lady known as a writer and a champion of women's causes.

BALFOUR, SIR ARTHUR (b. 1873). British manufacturer. Born in London, he entered the steel business in Sheffield, where he founded the firm of Arthur Balfour & Co. He helped to direct other large concerns; also became known as a leader in industrial life generally and filled several important positions. In 1924 he was chairman of the committee appointed to inquire into the export trade, and the reports of this Balfour committee were called the Balfour reports.

BALFOUR, JABEZ SPENCER (1849-1916). British company promoter. He became the principal promoter of the *Liberator*:

Building Society, 1868, and an allied group of similarly speculative concerns. These failed in 1892, with total liabilities of £8,360,000, involving in ruin a large class of small investors. Balfour fled to Buenos Aires in 1893, but was arrested. Sentenced at the Old Bailey in 1895 to 14 years' penal servitude for fraud and conspiracy, and released in 1906, he died suddenly in a train at Newport, Mon., Feb. 23, 1916. From 1880-85 he was Liberal M.P. for Tamworth, and 1889-93 for Burnley. See *Liberator*.

BALFOUR, OF BURLEIGH, ALEXANDER

HUGH BRUCE, 6TH BARON (1849-1921) British politician. Born at Kennet, Alloa, Jan. 13, 1849, the son of a commoner, in 1869 he was given the title of Balfour of Burleigh, a title held by his maternal ancestors from 1607 to 1716, when it was forfeited. Educated at Eton and Oriel College, Oxford, he was parliamentary secretary to the board of trade, 1889-92, and from 1895 to 1903 secretary for Scotland, a post he resigned owing to his hostility to tariff reform. He died July 6, 1921.

Baron Balfour of Burleigh, British politician

BALFRUSH, BALFURUSH OR BARFURUSH.

Town of Persia. It lies 12 m. S. of the Caspian, about 100 m. S.W. of Teheran, on the un-navigable Bhalwal. It has a large trade, by caravan and through its port Meshed-i-Sar, and exports silk, cotton, and rice. Commerce with Teheran and the interior is also carried on by road. Pop. 30,000.

BALHAM. Suburb of London. In the borough of Wandsworth, it is an offshoot of the parish of Streatham and it is fringed by Tooting Common. See London.

BALI. Island of the Dutch E. Indies. It lies E. of Java, being separated by a narrow, shallow strait. With Lombok it forms the residency of Bali and Lombok. The chapel

Balfour: three distinguished members of this family. Left, Gerald Balfour, politician; centre, Francis M. Balfour, scientist; right, Lady Frances Balfour, publicist

Russell

between Bali and Lombok (known as Wallace's line), the main division between Asia and Australasia, has a depth in places of not more than 1,020 ft. Bali is mountainous in the centre, the volcano Gunung Agung being 10,497 ft. high.

In climate, flora, and fauna it resembles Java. Rice, cotton, coffee, sugar, and tobacco are produced. Buleleng is the capital. Area (Bali and Lombok) 4,072 sq. m.; pop. 1,544,952.

BALIEL. Name of a Scottish family, two members of which were kings. It is derived from Bailleul in Normandy and some of its members settled in Scotland before 1200. One of them married into the royal family, and another, John Baliol (d. 1269) and his wife Devorgilla, founded Balliol College, Oxford. Their son, John Baliol (1249-1315), was king of Scotland from 1290 to 1296, when his overlord, Edward I, took him prisoner. Edward Baliol (d. 1367) was crowned king in 1322.

BALK. Town of Afghanistan. Its old name was Bactra, and it is the reputed birth-place and burial place of Zoroaster. In the 3rd century B.C. Bactra, as the capital of Bactria, rivalled Nineveh and Babylon. It was destroyed by Jenghiz Khan A.D. 1220, and is now only a small place. See Bactria.

BALKAN MOUNTAINS (anciently Haemus). Mt. range of S.E. Europe. Traversing Bulgaria from W. to E., with the Stara Planina on the Serbian boundary, it extends

Jabez Balfour, company promoter

Earl of Balfour, British statesman

from the Iron Gates of the Danube to Cape Eminch on the Black Sea. Among the loftiest peaks are Yumrukchal, 7,786 ft.; Kadimlia, 7,478 ft.; and Ambarika, 7,317 ft. Troyan, Rosalita, and Shipka are the best known passes. See Rhodope Mts.

BALKAN PENINSULA. Easternmost of the great peninsulas of southern Europe, formerly called the Illyrian Peninsula. It is bounded N. chiefly by the rivers Danube and Save, E. by the Black Sea and the Sea of Marmara, S.E. by the Aegean, S. by the Mediterranean, and W. by the Adriatic and the Ionian Sea. It is regarded as consisting of Bulgaria and Turkey in Europe on the E., parts of Yugoslavia, Albania and Greece, the total area being about 180,000 sq. m.

Most of the peninsula is mountainous. The central range of the Balkans proper runs through Bulgaria from W. to E.; below this are the southern Balkans and the Rhodope Mts. On the W. are the Dinaric Alps, the Albanian Mts., and the Pindus Mts. The Danube, which receives the Morava, Isker, and other streams, flows to the Black Sea; the Maritsa, Struma, and Vardar are the largest of the rivers falling into the Aegean Sea, and the Narenta, Viosa or Voyusa, and Drina the largest emptying into the Adriatic. The principal lakes are Scutari, Ochrida, and Prespa. The products include wheat, maize, cotton, tobacco, plums, grapes, olives, and mulberries, and cattle, sheep, pigs, and goats.

When Constantinople was taken in 1453 by the Turks, they swept across the land. Before the Great War, mainly as a result of the Balkan Wars, they had lost the whole peninsula except a small portion. See Bulgaria; Greece; Rumania; Yugoslavia, etc.

BALKAN WARS. Two wars fought by the Balkan states in 1912-13. In 1912 Bulgaria, Serbia, Greece, and Montenegro formed themselves into a league with the object of liberating Macedonia from Turkish rule, but each ally had also other aims in view. When, on Oct. 8, Montenegro declared war on Turkey the first war began. Turkey declared war on the other allies on Oct. 17.

There were two main theatres of war, Thrace and Macedonia, but there was also fighting in Albania and elsewhere. In three armies the Bulgars moved to the attack. One invested Adrianople, while the others marched on Kirk Kilisse, which was taken on Oct. 24. Lule Burgas was then captured, and the Turks withdrew within the fortified Chatalja lines.

Meanwhile the Serbians and Greeks had been successful in Macedonia and the Serbians

and Montenegrins in Thrace. On Oct. 23-24 the Serbians defeated the Turks at Kumanovo and occupied Uskub, and after another battle Monastir passed to them on Nov. 18. The Greeks also won two battles, and, forcing the Vardar, took Salonica. The Serbians then reached the Adriatic at Durazzo.

On Dec. 3 an armistice was arranged between Bulgaria and Serbia on the one hand and

On July 10 Rumania intervened. Her troops advanced into Bulgaria unopposed; Turkey saw her opportunity and reoccupied Adrianople without resistance. By July 30 Bulgaria was snrounded. Peace was made on Aug. 10 by the treaty of Bukarest.

BALKHASH. Salt lake of Central Asia. About 120 m. from the Chinese frontier, it is 330 m. long and at its widest 55 m. With an area of some 8,500 sq. m., it is fed by the Ili and other streams, but has no outlet.

BALL, ALBERT (1896-1917). British airman. Born in Nottingham, Aug. 21, 1896, the son of a wealthy business man, he had just entered an engineering business when the Great War broke out. In Oct., 1914, he obtained a commission in the Sherwood Foresters, but was transferred to the Flying Corps, with which he remained until his death. He showed remarkable skill as a fighter, and was rewarded by the M.C., the D.S.O. with bar, and, after his death, the V.C.

Albert Ball, V.C.,
British airman

BALL, JOHN (d. 1381). English priest and social rebel. First heard of at York, and later at Colchester, he was for 20 years an itinerant priest, preaching and organizing the social insurrection which took place under Wat Tyler, 1381. His doctrine was revolutionary, and remarkable for its advocacy of social equality, at that time a novel theory. He adopted for his text the couplet: When Adam delved and Eve span, Who was then the gentleman? He was excommunicated by three successive archbishops of Canterbury, and on the suppression of the rising was hanged at St. Albans, July 15, 1381. The Dream of John Ball, by William Morris, is an appreciation in romance.

BALL, JOHN (b. 1863). English amateur golfer. Born at Hoylake, he won the open championship in 1894. He was amateur champion in 1888, 1890, 1892, 1894, 1899, 1907, 1910, and 1912, and won the Irish open championship in 1893, 1894, and again in 1899.

John Ball,
English golfer

BALL, SIR ROBERT STAWELL (1840-1913). Irish astronomer. Born in Dublin, July 1, 1840, the son of the naturalist Robert Ball (1802-57), in 1874 he became royal astronomer of Ireland. In 1892 he was appointed professor of astronomy at Cambridge. Ball's Treatise on the Theory of Screws, 1900, is a lasting contribution to mathematical science.

Sir Robert Ball,
Irish astronomer

A lucid and popular writer and lecturer on astronomy, he was knighted in 1886, and died Nov. 25, 1913. Consult Reminiscences and Letters, edited by his son, W. V. Ball, 1915.

BALLAD. Narrative song or recital. It is distinguished from purely epic verse by its conciseness, its limitation to a single episode, and its impersonal and elementary dramatic character. Its main appeal is to the stronger or more serious passions; is sometimes painfully tragic, and its function is the production of an impressive dramatic climax.

BALLADE. Verse form of French origin. It was developed to perfection by François Villon, Enstache Deschamps, and Charles d'Orléans, and revived in England in the 19th century, notably by Andrew Lang and

Balkan Peninsula. Map showing the Balkan States, with boundaries as at present constituted, the main railways, cable lines, chief towns and rivers

Turkey on the other, but Greece continued the struggle into Feb., 1913, when the general conflict was renewed.

The features of the second phase of the first war were the successful resistance of the Turks at Chatalja, their loss of Janina to the Greeks on March 6, and of Adrianople to the Bulgars and Serbs on March 25-26. Turkey admitted defeat, and a second armistice was signed at the end of March, except by Montenegro. The first Balkan War was ended on May 30 by the treaty of London, whereby Turkey ceded some of her European territory.

The second Balkan War was fought in 1913 between the Bulgarians on the one side and the Serbians and Greeks on the other. The Balkan League went to pieces as its members quarrelled over the division of the ceded territory. In May, 1913, Serbia and Greece signed a military convention for common action, and on June 29-30 the second war broke out. The Bulgarians suddenly attacked the Greeks, but were worsted and forced to give up Kavalla. They were also beaten by the Serbians in a decisive battle on July 9.

Austin Dobson. The ballade consists of three stanzas, usually of eight lines with identical rhyme arrangement. ababbcc and a fourth stanza, called the envoy of four lines rhymed bccc. the last line of all four stanzas being the same. It is an excellent poetic medium for expressing delicate fancy.

BALLANCE, JOHN (1839-93). New Zealand statesman. Son of an Ulster farmer, Ballance emigrated to New Zealand. In

J. Ballance, New Zealand statesman

1875 he was chosen a member of the legislature. In 1878 he joined the ministry of Sir George Grey, and was treasurer until 1879. From 1884 to 1887 he was minister for lands and native affairs in Sir Robert Stout's ministry. Leader of the Liberal party from 1889, he became premier in 1891, and was responsible for much radical legislation. He died April 27, 1893.

BALLANTRAE. Seaside resort of Ayrshire, Scotland. On the Stinchard river, 12 m. S.W. of Girvan, it has a pier and small harbour. It has herring and salmon fisheries, and was notorious for smuggling. It was the scene of R. L. Stevenson's *Master of Ballantrae*. Pop. 1,285.

BALLANTYNE, ROBERT MICHAEL (1825-94) British writer for boys. Born at Edinburgh, April 24, 1825, he was a nephew of James Ballantyne, the printer. After holding a post in the publishing house of Constable of Edinburgh from 1848-55, he devoted himself to literature. He published more than 80 volumes of stories, including *The Coral Island*, *The Lifeboat*, and *The Lighthouse*. Ballantyne died in Rome, Feb. 8, 1894.

R. M. Ballantyne, British author
Fradette & Young

BALLARAT or **BALLAARAT.** City of Victoria Australia. It is 74 m. by rly. N.W. of Melbourne, and is an important rly. junction. Apart from gold mining, it has iron

Ballarat. Start Street, main thoroughfare of a gold-mining centre originally laid out on garden city lines
Courtesy of the Australian Govt.

foundries, woollen mills, flour mills, breweries, and distilleries. It is the seat of Anglican and Roman Catholic bishoprics, has art galleries, a museum, botanic gardens, and a school of mines. Its rise is due to the discovery in 1851 of one of the richest alluvial goldfields in the world. The mines are working auriferous quartz at deep levels. The city and East Ballarat are separate municipalities. Pop. 41,910.

BALLAST (Swed. bar, bare, mere; last, load). Heavy material placed in the bottom

of a ship to steady it. Consisting of iron stone, gravel, or water, it is used when there is not sufficient cargo or other weight carried to bring her to the proper trim for sailing or steaming purposes.

The term is also applied to the sand dropped from balloons for lightening or steadying purposes, and to the gravelly substance used in making roads and as a packing for railway sleepers.

BALLATER (Gael. town on hillside). Burgh and summer resort of Aberdeenshire. It is on the Dee, here crossed by a fine bridge, 43 m. W.S.W. of Aberdeen by the L.N.E. Rly. It was founded in 1770 to furnish accommodation for visitors to the Pannanich medicinal springs. It is the station for Balmoral Castle. Pop. 1,542.

BALLENY ISLANDS. Group of five mountainous islands in Antarctica. They lie 220 m. N. of North Cape, S. Victoria Land. Of volcanic origin, Freeman's Peak, on Young Island, is nearly 12,000 ft. high. They are named after John Balleny, the whale fisher, who discovered them in 1839.

BALLET (Fr. from late Lat. ballare, to dance). Word generally applied to any mimic spectacle accompanied by music. In its Renaissance origins the ballet was essentially a court function. Throughout the next century, at all the royal marriages celebrated at the courts of Paris, Florence, and Milan, a great ballet was produced for the entertainment, not only of the guests, but also when the ballet was in the open, of the populace. This form lasted until the end of the 17th century. Lully (1633-87) introduced women to the ballet stage, and was the first to produce comedy and tragedy ballet.

In Italy the ballet gradually gave way to the opera: in France it existed by the side of opera. It was first introduced into England in the 18th century, and reached its zenith of popularity in the first half of the 19th. A new impetus was thought to have been given to the ballet by a band of Russian dancers, who, headed by Nijinsky and Karsavina, withdrew from the Russian Academy of Dance, under the impresario Sergo Diaghilev, the ballet master Fokine, and the painters Bakst and Benoit. See *Russian Ballet*.

BALL FLOWER. Architectural ornament. It is a ball almost enclosed by flower petals, and is a characteristic feature of mouldings in the English Decorated Period, where its repetition at short intervals gives points of light to a strip of dark hollow. The windows of the tower of Hereford cathedral and the upper parts of the towers and spires of Lichfield provide fine examples of the use of this kind of ornamental work.

Ball-flower ornament in architecture

BALLIN, ALBERT (1857-1918). A German shipowner. Born of Jewish parentage in Hamburg, Aug. 15, 1857, Ballin entered business there, and was afterwards in a shipping office in London. On his return to Germany he secured for his firm much emigrant traffic, and in 1886 the business was taken over by the Hamburg-America line, with

which he was afterwards associated. For many years he was the Kaiser's adviser on maritime policy. Ballin's death, announced on Nov. 11, 1918, was attributed to suicide.

BALLINA. Urban district, seaport, and market town of co. Mayo, Irish Free State. On the river Moy, 8 m. S. of Killala by the Gt. Southern Rlys., it has important salmon fisheries. It communicates by two bridges with Ardnaree, its suburb in co. Sligo. Taken by the French, Aug. 25, 1798, it was held by them for three weeks. Market day, Mon. Pop. 4,505.

BALLINASLOE. Urban district and market town of co. Galway, Irish Free State. On the river Suck, it is 93 m. W.S.W. of Dublin by the Gt. Southern Rlys. Its fair (horses, sheep, and cattle) is one of the largest in Ireland, and it holds an annual race meeting in July. Near is Garbally Castle, the seat of the earls of Clancarty. Market day, Sat. Pop. 5,100.

BALLINROBE. Market town of co. Mayo, Irish Free State. It is on the Robe, 3½ m. from Lough Mask, and 15 m. S.W. of Claremorris by the Gt. Southern Rlys. A race meeting is held in Sept. Market day, Mon. Pop. 1,500.

Balliol College, Oxford, looking on St. Giles, with the Martyrs' Memorial to Ridley and Latimer

Valentine

BALLIOL COLLEGE. One of the oldest and most famous colleges of the university of Oxford. It ranks second on the official list. Founded by John Balliol of Barnard Castle in Durham (d. 1269) and his wife

Balliol College arms

Devorgilla between 1263 and 1268, the society consists of a master, twelve fellows, and a number of scholars. Especially during Dr. Jowett's mastership, 1870-93, Balliol had a great reputation, and another powerful influence was the philosopher T. H. Green. In 1887 New Inn Hall was incorporated with the college, which occupies a site at the corner of Broad Street and St. Giles. The buildings are mainly modern, and include a large hall, chapel, and library. Alone among Oxford colleges, Balliol has the right to elect its own visitor.

BALLISTICS. (Gr. ballein, to throw). Term used for the theory of the motion of projectiles in a resisting medium such as the air. The loss of velocity of a shell in course of flight varies according to the shape, weight, and diameter of the projectile, and the relationship between the shape, weight, and diameter of a shell is called the ballistic coefficient of the gun. The other force acting on a shell during flight is gravity, and the combined

Ballistics. Diagram showing line of sight and trajectory of projectile from a gun firing with elevation

result of initial velocity, the resistance of the air, and gravity is that the projectile travels on a curved path called the trajectory.

A ballistic test is used for the evaluation of certain properties of explosives, propellants, guns, and projectiles. The power of blasting explosives may be determined in an instrument called the ballistic pendulum, which is a heavy mortar suspended so that it forms the bob of a pendulum. A tamped charge of the explosive is fired from a gun, the muzzle of which is nearly touching that of the mortar, and the deflection of the latter is measured. The ballistic properties of propellants are determined by measuring the pressure caused by their explosion in a gun and the velocity with which the projectile leaves the weapon. See Artillery: Gun.

BALLOON. Bag of impermeable fabric inflated with gas lighter than air. The modern balloon owes its inception to the brothers Montgolfier, who constructed a spherical one, inflated with hot air, in 1783. The hydrogen balloon constructed by Charles and Robert in the same year, which rose to a height of 2,000 ft. and remained aloft for two hours, was the forerunner of the spherical type of to-day. In 1825 Charles Green substituted coal gas for hydrogen. Gay-Lussac (1804) made the first scientific ascent of any note, reaching a height of 11,000 ft. Glaisher and Coxwell in 1862 made a series of ascents for the British Association, on one occasion reaching an altitude of 29,000 ft.

Balloons were used for military purposes during the American Civil War, and a number left Paris during the siege of 1870 carrying passengers, letters, and despatches. England used observation balloons in the South African War. Captive balloons are employed for observation, spotting for artillery, etc. The modern kite-balloon is pear-shaped, fitted at the tapering end with hollow, fin-like air chambers which steady the vessel. The fabric of the envelope is made gas-tight with a solution of rubber. Kite-balloons were used by all armies during the Great War.

The chief race for balloons is the Gordon Bennett Cup. In 1928 the trophy was won outright by the U.S.A. with a flight of 460 miles. The British record is 1,117 miles. See Aeronautics: Airship.

BALLOT (Fr. *ballotte*, little ball). System of secret voting. At first small balls were used in balloting, hence the name, and this method still obtains in electing members to private clubs. In elections of other kinds the usual plan is for the names of the candidates to be printed on a voting paper in alphabetical order, and for the voter to make a cross opposite the name of the person or persons whom he supports. This marking takes place in a private compartment at the local polling station, and the marked paper is folded up and placed by the voter in a ballot box, to which no one has access until the votes are counted. Vote by ballot was first used in England in 1870 and the Ballot Act was passed in 1872. See Election: Vote.

BALPLATZ or **BALHAUSPLATZ**. Square in Vienna, in which was the Austro-Hungarian Foreign Office. Hence, until 1918, the term was frequently used in regard to foreign affairs as a synonym of Austria-Hungary, much as Downing Street is used for Great Britain. The square is in the inner city, not far from the Volksgarten.

BALLYBUNION. Village and watering place of co. Kerry, Irish Free State. It is 9 m. N.W. of Listowel, on the Gt. Southern Rlys., has cliff caves, castle ruins, and a wireless station. A mono-rly. runs to Listowel.

BALLYCASTLE. Seaport, market town, and bathing resort of co. Antrim, Northern Ireland. On Ballycastle Bay, opposite Rathlin Island, it is 68 m. N.W. of Belfast by the

L.M.S. (N.C. of I.) and Ballycastle Rlys. The harbour is choked with sand. It has a wireless station and engages in fishing. Pop. 1,500.

BALLYMENA (Gael. middle-town). Urban district and market town of co. Antrim, Northern Ireland. On the river Braid, it is 33 m. N.W. of Belfast by the L.M.S. (N.C. of I.) Rly. It has linen and flax industries, and dyeing and bleaching works. Near is Ballymena Castle. Market day, Sat. Pop. 11,300.

BALLYMONEY. Urban district and market town of co. Antrim, Northern Ireland. On a tributary of the Bann, 53 m. N.N.W. of Belfast, on the L.M.S. (N.C. of I.) Rly., it has a trade in linen and agricultural produce. Market day, first and third Thurs. in the month. Pop. 3,100.

BALLYMOTTE. Market town of co. Sligo, Irish Free State. 14 m. S. of Sligo on the Gt. Southern Rlys. It has remains of a castle built (1300) by Richard de Burgh, earl of Ulster, and of a monastery. Pop. 930.

BALLYNAHINCH (Gael. town on the island). Market town of co. Down, Northern Ireland. On the river Annacloy, it is 21 m. S. of Belfast, on the Belfast and County Down Rly. Close by are chalybeate springs, with baths. Market day, Thurs. Pop. 1,667.

BALLYSHANNON. Seaport and market town of co. Donegal, Irish Free State. On the Erne estuary, in Donegal Bay, it is 15 m. S.S.W. of Donegal by the G.N. of I. Rly. The harbour is obstructed by a bar and available only for small vessels. There are salmon fisheries and a trade in grain and minerals. Market day, Sat. Pop. 2,170.

BALM (*Melissa officinalis*). Perennial herb of the order Labiatae native of both Europe and W. Asia. The annual stems, about 2 ft. high, and the egg-shaped, wrinkled leaves are hairy. The small white flowers are produced in whorls. The whole plant is fragrant. Bastard balm (*Melittis melissophyllum*), another labiate perennial, is a native of Europe including S. and W. Britain. It has a long, creeping rootstock, and stems one to two feet in height, with oval or oblong leaves and large white flowers spotted with pink or purple.

BALM OF GILEAD. This is a yellowish aromatic gum. Extracted from Arabian and Abyssinian trees, it is valued in the East for its fragrance and medicinal properties, and is often known as Mecca balsam. The N. American tree which produces Canada balsam is sometimes called the Balm of Gilead fir.

BALMACEDA, JOSÉ MANUEL (1838-91). Chilean politician. He was born at Santiago, was appointed a minister of state in 1882, and in 1886 was elected president of the republic. He became unpopular, and in 1891, after he had dissolved congress, civil war broke out. Balmaceda's partisans were defeated near Valparaíso, and he committed suicide.

BALMERINO, LORD. Scottish title borne by the family of Elphinstone from 1604 to 1746. The first lord was a younger son of Robert, Lord Elphinstone. His son John, the 2nd lord, was an enemy of Charles I.

Arthur, son of the 4th baron, became 6th baron on the death in Jan., 1746, of his half-brother. He joined the Jacobites after the battle of Sheriffmuir in 1715 and held a commission in the French army, returning to Scotland in 1733. An officer in the Jacobite army, he was taken prisoner at Culloden, and executed on Tower Hill, Aug. 11, 1746. Balmerino is a village on the firth of Tay.

BALMORAL CASTLE. Royal residence in Aberdeenshire. It stands on the Dee, near Lochnagar, 9 m. W. of Ballater, at an alt. of 926 ft. Bought in 1848 by the Prince Consort, it was rebuilt in 1853-5 in the Scottish baronial

Balmoral Castle. Favourite Scottish residence of three British sovereigns, seen from the Dee

style and became a favourite residence of the queen, from whom it passed to King Edward and then to King George. With adjacent deer forests, the estate covers over 25,000 acres.

BALQUHIDDER. Village of Perthshire, Scotland. On Loch Voil, it has a station 2 m. E. on the L.M.S. Rly. The Braes of Balquhider are associated with Rob Roy, who was buried (1734) in the churchyard. Pop. 875.

BALSA. Name for a raft or float used by S. American Indians. Propelled by sails and oars, it usually consists of two floats made of balsa-tree logs connected by a framework.

BALSAM (Impatiens). Large genus of herbs, rarely shrubby, included in the order Geraniaceae. They are mostly natives of tropical Asia and Africa; a few inhabit Europe, N. America, and S. Africa. The flowers are inverted on their stalks and the sepals are coloured like the petals. The seed capsule bursts at a touch when the seeds are ripe, scattering them with some force.

Several species are cultivated, notably the common balsam (*I. balsamina*) and the giant balsam (*I. roylei*), with a thick stem 10 ft. high, and large purple flowers. The yellow balsam or touch-me-not (*I. noli-me-tangere*) is found wild in a few parts of Britain and Ireland. Balsam is also a term applied to various gum-resins and to the oleo-resinous substances produced by certain trees.

The balsam fir (*Abies balsamifera*) is a coniferous tree of the U.S.A. and Canada. It attains a height of 40 to 60 ft. and is of slender proportions. Its turpentine is very pure and clear, and under the name of Canada balsam is used for cementing optical glasses and for mounting objects for the microscope.

BALTHASAR or **BALTASAR.** Greek form of the Hebrew Belshazzar (q.v.). It was also used in the Middle Ages in naming the three magi—Caspar, Melchior, and Balthasar—who came from the East to Bethlehem (Matt. 2).

BALTIC, THE. Association of London merchants; in full, the Baltic Mercantile and Shipping Exchange. In Elizabethan times merchants trading with Baltic ports were in the habit of meeting at the Virginia and Baltick coffee-house. From the association of such merchants arose the exchange called the Baltic. The modern Baltic is a union, made in 1903, of this association and of the Shipping Exchange. It has about 2,500 members, comprising those who deal in coal, oil, grain, and timber, together with shipowners and shipbrokers concerned in carrying the same. They meet in a building in St. Mary Axe, London, E.C.

Balm. Leaves of this aromatic perennial herb

Balsam. Impatiens noli-me-tangere

BALTIC SEA. Shallow inland sea of N.W. Europe. It is bounded N. by Sweden and Finland, E. by Russia, Esthonia, Latvia, and Lithuania, S. by Germany and Poland, and W. by Denmark and Sweden. The Sound, Great Belt, and Little Belt give it entrance by the

of railway radiate from the city, which has direct steamship communication with the principal Atlantic and European ports. Its harbour, defended by Fort McHenry, has a depth of 27 ft. at the entrance.

Baltimore is the sec of a Roman Catholic archbishop and Protestant bishop. Its canning and preserving industry is very valuable, while ship-building and the manufacture of clothing, cotton and woollen goods, cotton duck, boots and shoes, flour, fertilisers, and tobacco comprise a few of its interests. Among institutions giving higher instruction are Johns Hopkins University, the Peabody Institute, Goucher College, Loyola College, Maryland University, and Morgan College. The Memorial Hall commemorates the Great War. Pop. 794,000.

The city dates from 1729, was named from Lord Baltimore, and was granted its first charter in 1797. In 1918 the area was almost doubled by the incorporation of adjacent districts and now covers 95 sq. m.

The American bird known as the Baltimore oriole has black and orange plumage, the colours of the Baltimores' armorial bearings. The village of Baltimore, co. Cork, Irish Free State, has a school of fisheries founded by the Baroness Burdett-Coutts.

BALTIMORE, GEORGE CALVERT, 1ST BARON (c. 1580-1632). English statesman, father of the founder of the colony of Maryland. Born at Kipling, Yorkshire, he entered Parliament in 1609, and was secretary of state 1619-25, when he resigned on becoming a Roman Catholic and was raised to the Irish peerage. During his secretaryship he obtained a grant of land in Virginia. He died April 15, 1632, before the sealing of the charter, which was issued in favour of his son Cecil, the second baron (1606-75).

BALTISTAN OR LITTLE TIBET. Mountainous region of N. Kashmir, India. Between the Karakoram Mountains and the Himalayas, it is drained by the Upper Indus and its tributaries. Among its many high peaks is

K 2 or Mt. Godwin-Austen, 28,278 ft., the second highest known peak in the world, and it has in Baltoro the largest continental glacier. Iskardo or Skardo is the capital. Pop. 50,000.

BALUCHISTAN. Province of India, bounded N. by Afghanistan and the North-West Frontier Province, E. by Sind and the Punjab, S. by the Arabian Sea, and W. by Persia. Its area is 134,638 sq. m. It consists of British Baluchistan proper (area 9,096 sq. m.), British Agency Territories (area 45,132 sq. m.), and the native States of Kalat or Kelat and Las Bela (area 80,410 sq. m.). Pop. 799,625.

Baluchistan. Wandering native musicians with typical instruments

The chief town is Quetta. The country generally consists of barren mts., deserts and stony plains. The climate is subject to extremes of heat and cold, and the rainfall scanty and uncertain. The highest mt. ranges are the Suleiman Mts. The rivers include the Zhob, Bolan, Mula, and Purali.

British Baluchistan contains some fertile valleys. The chief of the Agency Territories are the districts of Quetta and Bolan. The Bolan Pass, traversed by a rly., is one of the main lines of communication to the W. and N.W. from India. The native district of Kachhi is a vast alluvial plain.

The head of the civil administration is the Agent to the Governor-General and Chief Commissioner. Most of the people belong to the Brahui, Pathan, and Baluch tribes. The predominant religion is Islam. The agricultural products include wheat, barley, millet, lucerne, rice, maize, and fruit. Makran is famous for its dates. The N.W. Rly. of India enters Baluchistan near Jhatpat, and proceeds to Sibi, and then past Harnai and Quetta, to Bostan and Chaman. From Nushki a line goes to the Persian frontier.

BALUSTER (Gr. balaustion, wild pomegranate flower). Originally a classic or neo-classic colonnette, with base, shaft, and capital. It formed one of the several supports, collectively called a balustrade, to a handrail,

Baron Baltimore, English statesman

Baltic sea. A shallow and almost land-locked sea which washes the shores of Sweden, Finland, the Baltic States, and Germany, and contains numerous islands. Kattegat and the Skagerrack on the N.W. to the North Sea, with which it is connected also by the Kiel Canal. It has an area of 170,000 sq. m.

Included in the Baltic are the Gulf of Bothnia on the N., the Gulf of Finland and the Gulf of Riga on the E., and several bays, e.g. the Bay of Danzig. Some 200 rivers flow into it, including the Neva, Dvina or Daugava, Niemen or Memel, Vistula, and Oder. The coastline is 5,000 m. long. Its islands include Zealand, Fünen, Bornholm, Gothland, Öland, Ösel, Dagö, and the Ålânds. The seaports include Copenhagen, Stockholm, Helsingfors, Leningrad, Kronstadt, Riga, Memel, Königsberg, Danzig, Stettin, Lübeck, and Kiel.

During the Great War there was considerable naval fighting in the Baltic Sea, especially in 1915, when British submarines cooperated with the Russians against the Germans.

Baltimore. Bird's-eye view of the city with the Federal Reserve Treasury Bank in the foreground

BALTIMORE. Seaport and metropolis of Maryland, U.S.A. On the river Patapsco, it is 185 m. S.W. of New York. Seven lines

Baluchistan. Map of the frontier province which is strategically important as forming a barrier between India and Afghanistan

or the horizontal top member of a low parapet or open screen. Its typical form was a pear-shaped shaft, with the greater circumference at the lower end, but occasionally the shaft consisted of two pear-shaped pieces superimposed. Elaborate English balusters were made in the reigns of Elizabeth and James I, when wood-framed stairways lavishly decorated, came into fashion. Fine examples of English balusters may be seen at the Charterhouse, London, and elsewhere

Baluster, in architecture

Honoré de Balzac, French novelist

to excellent account in his novels.

Refusing to become a lawyer, Balzac led a penurious existence while he strove for literary success. His early work, published under various pseudonyms and in collaboration with other writers, filled about 40 volumes. From 1825 to 1828 he attempted business as a publisher, printer, and type-founder, an enterprise that left him heavily in debt. In 1829 *The Chouans*, a romantic story of the royalist insurrection in La Vendée and Brittany, first brought him recognition, but it was in *The Wild Ass's Skin*, published in 1831 that he showed an immense advance.

He wrote about 80 novels, the best of which include *Eugénie Grandet* (1833), *Father Goriot* (1834), *César Birotteau* (1837), and *Cousin Betty* (1846). The *Human Comedy* contains the completest picture of the social conditions of France during the troublous period of Balzac's own life that has yet been painted. He died Aug. 18, 1850. Consult Balzac, *Emile Faguet*, trans. W. Thorley, 1918; Balzac, *The Man and the Lover*, F. Gribble, 1930.

BAMBERG. City of Bavaria. It is situated on the Regnitz, near its junction with the Main, about 38 m. by rly. N. by W. of Nuremberg. The Main is navigable for barges to within 4 m. of the town, and the Ludwig canal passes the town. The bishopric of Bamberg, founded about 1000, was one of the most important in Germany, the bishops being princes of the empire. The cathedral contains the tomb of its founder, the emperor Henry II, and his wife. From 1648 to 1803 Bamberg had a university. Pop. 50,152.

Bambino (Ital. babe). Term applied to an image of the infant Jesus in swaddling clothes.

Bambino, an image of the child Jesus in swaddling clothes. *Andrea della Robbia, Florence*

BAMBOO (Malay bambu). Genus of grasses of the order Gramineae and genus Bambusa. They are all natives of warm climates, particularly of East India, China, Japan, and Malaya. The stems, which are of rapid growth, agree with the culms of ordinary grasses, but are on a gigantic scale. They are tubular, with solid joints, and are coated on the exterior with a continuous deposit of flint. These stems serve as masts for small sailing craft, and as material for making native houses, furniture, mats, pails, hats, and capes. The seeds and young shoots are used as food. There are great possibilities in using bamboo pulp as raw material for paper. In 1928 it was stated that it could be delivered in Britain from India at £2 or £3 a ton less than the price of wood pulp.

Bamboo. Giant bamboos in the Botanical Gardens, Peradeniya, Ceylon. *H. G. Ponting, F.R.G.S.*

BAMBURGH. Village on the coast of Northumberland. It existed in Saxon times, and its church, S. Aidan's, dates from the

Bamburgh Castle, the ancient home of the kings of Northumbria. It dates from the 6th century

7th century. Grace Darling is buried in the churchyard. The castle, founded about 547 by Ida, king of Northumbria, stands on a rock opposite the Farne Isles, 4 m. E of Belford, on the L.N.E. Rly. In 1894 it was bought and renovated by Lord Armstrong, and became his residence.

BAMFORD, SAMUEL (1788-1872). British politician. He was born near Middleton, Lancashire, Feb. 28, 1788, and was a weaver. He identified himself with the movement for political reform, and in later life he was for a time a newspaper correspondent. He died at Harpurhey, April 13, 1872. His autobiographical *Passages in the Life of a Radical*, 1844, is a valuable source of information on early 19th century working-class movements in England.

BAMPTON, JOHN (1689-1751). British divine and the founder of a course of divinity sermons or lectures at Oxford. The lecturer, who must be a master of arts of Oxford or Cambridge, is chosen by the heads of colleges, and can never be chosen twice. The

lectures are delivered every summer term at S. Mary's church, and must be afterwards published. Bampton is the name of a market town in Devonshire, 7 m. from Tiverton. It has a station on the G.W. Rly.

BAMRA. Native state of India. It was one of the five Uriya states transferred by the Central Provinces to Bengal in 1905, and is now included in the province of Bihar and Orissa. It has an area of 1,988 sq. m., and Deogarh is the capital. Pop. 134,721.

BANANA (*Musa sapientum*). Large perennial herb. It is probably a native of the E. Indies, and is cultivated in most tropical and sub-tropical climates. It grows to a height of 20 ft., but the true stem is very short, and what appears to be a trunk is formed of the bases of the leaves. Each leaf is from 8 ft. to 10 ft. long and 1 ft. wide. The leaf-stalks form a hollow cylinder, up which the flowering stalk rises to the summit in about six weeks. The flowers are in clusters, arranged spirally round the stalk, but only the lowest groups develop into the big bunch. In the upper clusters only the stamens mature. The plantain and the banana are no longer looked upon as distinct species.

The banana grows as a cultivated plant wherever there is a moist hot climate. After the fruit has ripened, the stem dies, but suckers are sent up from the tuberous root-stock.

An acre planted with bananas is estimated to produce nearly 20 tons of fruit. The trade has assumed large proportions, especially from the W. Indies and the Canaries.

Banana is the name of a port of the Belgian Congo, at the mouth of the river Congo.

BANAT. Region in central Europe enclosed by the Danube, the Theiss or Tisza, the Maros, and the Transylvanian Alps. It covers about 11,000 sq. m.

BANBRIDGE. Urban district and market town of co. Down, Northern Ireland. On the river Bann, 24 m. S.W. of Belfast by the G.N.

of I. Rly., it is a centre of the linen industry. Market days, Mon., Tues., Fri. Pop. 5,000.

BANBURY. Borough and market town of Oxfordshire. On the river Cherwell and the Oxford canal, it is 77 m. N.W. of London by the L.M.S., L.N.E. and G.W. Rlys. Famous for its cakes, Banbury has agricultural implement manufactures; also brewing and nursery gardening. An annual steeplechase meeting is held. The parliamentary division of Banbury

Banana. Staking a bunch in order to produce a more luxuriant growth

Banbury. Cross which replaced the famous one of nursery rhyme

returns one member. Traces remain of the 12th century castle, but the original cross commemorated in the nursery rhyme was demolished in 1610, and a modern cross now takes its place. The chief buildings are S. Mary's church and the town hall. Market day, Thurs. Pop. 13,347.

BANBURY, FREDERICK GEORGE BANBURY, BARON (b. 1850). British politician. Educated at Winchester, he became a stockbroker, afterwards becoming chairman of the Great Northern Railway. He entered Parliament in 1892 as M.P. for Peckham; he lost his seat in 1906, but a few months later was elected M.P. for the City of London. In 1902 he was made a baronet and in 1924 was raised to the peerage. In Parliament he specially represented financial interests, and persistently endeavoured to check the growth of expenditure and the tendency to costly legislation.

BANCA OR BANEA. Island and residency of the Dutch E. Indies. Separated from Sumatra by Banca Strait, it is about 145 m. long, from 30 m. to 65 m. broad, and has an area of 4,540 sq. m. The climate is humid and unhealthy for Europeans. Its mountains yield tin and other minerals, and its lowlands produce bananas, wax, sago, and araca nuts. Muntok is the capital. Pop. 161,313.

BANCROFT, GEORGE (1800-91). American historian. He was born at Worcester, Massachusetts, Oct. 3, 1800. In 1845 he became secretary of the navy; from 1846-9 he was minister in London, and from 1867-74 in Berlin. He died at Washington, Jan. 17, 1891. His name rests on his History of the United States, on which he was engaged at intervals for more than 50 years.

BANCROFT, SIR SQUIRE (1841-1926). English actor. Born in London, May 14, 1841, he made his first appearance on the stage at the Theatre Royal, Birmingham, Jan. 1861, as Lieut. Manley, in St. Mary's Eve. He made his London debut, April 15, 1865, as Jack Crawley in A Winning Hazard, at the old Prince of Wales's under the management of Marie Wilton, whom he married in 1867. He appeared in all the Robertson comedies and played such important parts as Joseph Surface, Triplet in Masks and Faces, and Count Orloff in Diplomacy. He was knighted in 1897, and died April 19, 1926.

Lady Bancroft first appeared on the stage at Norwich in 1845. Success in London followed, and in 1865 she became joint manager of the old Prince of Wales theatre, and from 1850-85 she and her husband managed the Haymarket theatre. She died May 22, 1921. Consult The Bancrofts, Recollections of 60 Years, Sir Squire Bancroft, 1909.

BANDA. Group of 12 small volcanic islands in the Dutch E. Indies. They lie in the Banda Sea, 60 m. S. of Ceram, and cover an area of 18 sq. m. Eruptions and earthquakes have frequently done damage to the islands, which produce nutmegs, sago, and mace. Banda, on Banda Neira, is the chief town. Discovered by the Portuguese in 1512, they were occupied from time to time by the British and Dutch, and became Dutch in 1814. Pop. 10,000.

BANDANA (Hindustani bandhna, to bind). Silk or cotton fabric with white or brightly coloured spots, or figures on a ground of red,

blue, green, yellow, or other colour. The term was originally applied to the yellow or red silk handkerchiefs with white or light-coloured lozenge-shaped spots, made in India, by the dyeing process called bandhnu, in which the parts of the material which were to remain undyed were tied up.

BANDA ORIENTAL. Former name of Uruguay. Formed in 1825, the state was called Banda Oriental del Uruguay, i.e. the eastern bank of the Uruguay. See Uruguay.

BANDER ABBAS, BANDAR ABBAS OR BENDER ABBASI (harbour of Abbas) Town of Persia. The ancient Hormuz and formerly known as Gombroon, it stands on the Persian Gulf, near its entrance on an open roadstead where cargo is discharged by lighters. It became a flourishing port under Abbas the Great. It exports dates and other produce, and has a considerable trade with Bombay and the East. Lying in the British sphere in Persia, under the Anglo-Russian agreement of Aug., 1907, the port was occupied by the British and during the Great War was a naval station. Pop. about 10,000.

BANDEROLE (French). Scroll or band, generally in the shape of a streaming flag, found in works of art of the Renaissance.

The word is applied also to a long narrow flag, which flies from the mast-head of a fighting ship; to the streamer attached to the lance of a knight or to a trumpet; and to the square banner. Sometimes termed a bannerol, borne at the funerals of great men and placed on their tombs. In heraldry a bannerol is a streamer hanging from the crozier of a bishop, and in architecture a band used in sculpture of the Renaissance period for an inscription.

banderole. Heraldic form carried at funerals

BANDICOOT (Perameles). Small marsupial peculiar to Australasia.

Bandicoot. The rabbit-bandicoot (Perameles), the largest of these small Australian marsupials

BAND OF HOPE. Name given to societies to promote total abstinence from intoxicating drink among children. They first appeared in England about 1848, and were established in connexion with churches and Sunday schools, especially among Nonconformists. In 1855 the United Kingdom Band of Hope Union was founded. Its offices are 59 and 60, Old Bailey, London, E.C. There is a Scottish Union with headquarters in Edinburgh.

BANDOLEER OR BANDOLIER (Fr. bandoulière). Shoulder belt with loops for holding cartridges. It forms part of the ordinary accoutrements of a soldier in the British army. It holds 90 rounds, weighs 1 lb. 13 oz., and is worn over the left shoulder. In Cromwell's days the powder charges were carried in bandoleers and bullets loose in the pocket. The use of the bandoleer was discontinued about 1640, but revived during the S. African War.

bandoleer. Left, powder-charges hung on belt, 17th century; right, type used in South African War

BANDON OR BONDONBRIDGE. Market town of co. Cork, Irish Free State. It is on the Bandon and is 20 m. from Cork by the Great Southern Rlys. It was founded in 1608 by the earl of Cork for Protestants and has some small industries. Pop. 3,100. The river Bandon, which flows into Kinsale harbour, is 43 m. long. Spenser called it the "pleasant Bandon," and it is noted for its salmon.

The Irish title of earl of Bandon has been borne by the family of Bernard since 1800, when it was given to Francis Bernard, who had been a baron since 1755. The family seat is Castle Bernard, Bandon, and the earl's eldest son is Viscount Bernard.

BANDONG. Town of Java, Dutch East Indies, 74 m. by rly. S.E. of Batavia. Though surrounded by volcanoes, it is a prosperous commercial centre with a technical high school. Pop. about 20,000.

BANDS. In clerical and other official dress, two small oblong pieces of cambric or white linen joined and fastened round the neck so that the ends fall upon the breast. They are part of the full dress of barristers and others. In Scotland, barristers who are not king's counsel substitute a white tie. Bands still form part of the attire of officiating ministers in Presbyterian churches.

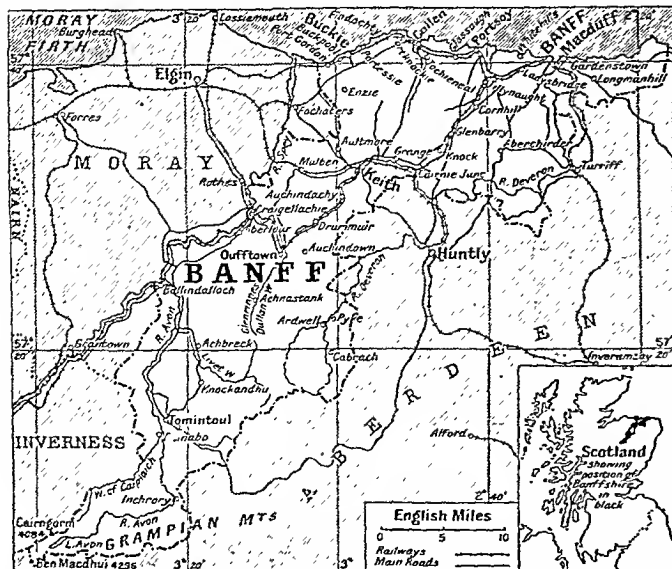

Bands. As worn on clerical attire

BANEERRY OR HERB CHRISTOPHER (Aetæa spicata). Perennial herb of the order Ranunculaceae. It is a native of Europe, and is found as a rare plant in the north of England. The stem is about 18 ins. high. The white flowers are borne in racemes, succeeded by poisonous berries almost black in colour.

BANFF. Royal burgh, market town, seaport, and county town of Banffshire, Scotland. On the Deveron estuary, in Moray Firth, it is 64 m. N.W. of Aberdeen by the L.N.E. Rly. It has a fine town hall, an academy, and a museum. It is a fishing centre. A bridge over the Deveron connects it with Macduff. Duff House was presented to the united towns by the duke of Fife in 1906. Near by is the Bridge of Alvah. Market day, Fri. Pop. 4,100.

BANFF. Village and summer resort of Alberta, Canada. Situated in the Canadian National Park, it stands on the Bow river, 83 m. W. by N. of Calgary on the C.P.R. Its scenery, hot sulphur springs, hotel accommodation, hunting, fishing, and golfing make it a favoured resort. Its alt. is 4,521 ft.

BANFFSHIRE. Maritime county of Scotland. It has a coastline of 30 m. along Moray Firth, a greatest length N.E. to S.W. of nearly 60 m., and an area of 630 sq. m. Ben Macdui (4,296 ft.), the second highest summit in the United Kingdom, and Cairngorm (4,084 ft.) are on the borders of Aberdeenshire and Inverness-shire. The principal rivers are the Deveron, Spey, and Avon. Loch Avon is the largest lake. Fishing and pastoral pursuits and the quarrying of slate and marble are carried on. Oats and barley are the largest crops, and woollens and whisky are manufactured. Internal communication is by the L.N.E. and L.M.S. Rlys. Banff is the county town. The county returns one member to Parliament. Pop. 52,400. See map p 189.

Banffshire. County in N.E. Scotland, containing Ben Macdhui, the second highest mountain in the United Kingdom. See page 188

BANGALORE (city of beans). City and capital of Mysore, India. Situated 3,113 ft. above sea level, it is 220 m. by rly. from Madras. An important British cantonment, with a modern palace, a museum, colleges, schools, and a botanic garden, its manufactures include silk, woollens, and carpets. Bangalore dates from the erection of its fort in 1537. Pop. 237,500.

Bangalore. The great fortress stormed by the British in 1791. To the right are the native quarters and bazaar

BANGKOK. Capital and chief seaport of Siam. It lies on both banks of the Menam or Chao Phraya about 20 m. from its mouth. Over 10 sq. m. in extent, the city proper is enclosed by a wall. Among modern buildings are the royal museum, the government offices, the Pasteur Institute, and the Chulalongkorn University.

Bangkok has telegraph and wireless service. A trading centre for the teak, rice, and ivory obtained in the neighbourhood, Bangkok exports these, also cattle, fish, and pepper, and imports cotton goods, machinery, and mineral oil. Several lines of steamships call, and a special service communicates with Hong Kong. Pop. 628,675.

Bangkok. Part of the grand palace and its gardens. Enclosed by walls, it lies in the centre of the city

BANGOR. City and market town of Carnarvonshire, Wales. It lies at the angle of Beaumaris Bay and Menai Strait, 8 m. N.E. of Carnarvon, on the L.M.S. Rly. The old cathedral was destroyed in 1071; the present cathedral, dating from 1496-1532, was restored in 1869-80. Educational institutions include the university college of N. Wales, which was founded in 1884. During the Great War an aerodrome was established here. Market day, Friday. Pop. 11,032.

Another Bangor is a village of Flintshire, 5 m. from Wrexham, on the G.W. Rly. At one time it had a large monastery. An American Bangor is in Maine, at the head of navigation on the Penobscot river. It is a railway centre with a good harbour and has a large trade. Pop. 27,000.

The Bangorian controversy in the Church of England was between those who took the oath of allegiance to William III and those who did not. B. Hoadley, bishop of Bangor, supported the former and gave the dispute its name. See Nonjurors.

BANGOR. Seaport and urban district of co. Down, Northern Ireland. It is on Belfast Lough, 12 m. from Belfast, by the Belfast and County Down Rly., of which it is the terminus. It is a popular watering place with golf links and has some small industries. Its abbey, until destroyed by the Northmen, was one of the largest in Ireland. Pop. 7,800.

BANGS, JOHN KENDRICK (1862-1922). American humorist. Born at Yonkers, N.Y., May 27, 1862, he was a law student before becoming a journalist. His widely known humorous volume *The Houseboat on the Styx*, 1896, was followed by *The Pursuit of the Houseboat*, 1897; *The Enchanted Typewriter*, 1899; *The Idiot at Home*, 1900; *Alice in Municipalland*, 1907; and several plays. He died Jan. 21, 1922.

BANIA OR BANIYA. Indian caste of moneylenders and dealers in grain and ghi (butter). They are a trading offshoot of the Rajputs, after whom they rank, and number about 4,000,000.

Banian days are days when no meat was provided for sailors. It is derived from the Bania traders, who abstain from meat. Originally there were two banian days weekly in the British navy. They are now abolished, but the term is sometimes used to denote days of meagre fare.

BANISHMENT. Enforced exile. In the Greek and Roman times it was often employed. As a definite punishment for crime in England it dates from the reign of Elizabeth, and was in force until 1853. It is distinct from transportation. It was retained in Russia until the revolution of 1917, and can still be inflicted in some S. American republics for political offences. See Ostracism.

BANJERMASSIN. Seaport and capital of Dutch Borneo, on the Martapura river near its union with the Barito. Large vessels cannot enter the harbour. The town is subject to floods. It exports spices, drugs, rattans, coal, iron, gold, and precious stones. The East

India Co. made a settlement here in 1700. It became Dutch in 1817. The district is hilly inland, but in the valleys and along the coast are rice fields. Pop. city, about 50,000

Bangor, North Wales. Small cruciform cathedral dating from the late 15th century. In the background are seen some of the buildings of University College

BANJO (Gr. pandoura). Stringed instrument. It is played by plucking the strings or striking them with the backs of the nails; sometimes a plectrum or pick is employed. The banjo has five, six, or seven strings.

BANK (Ital. banca, Ger. Bank, bench, moneychangers' table). Legally, a place where a customer opens an account by paying in a sum of money. In return the banker becomes liable for the payment of a like sum to the customer's use, and is bound to honour or cash any cheques or orders for the payment of money which the customer may send to him during business hours to the extent of the sums deposited. It is also a place where the customer may arrange, in agreement with the banker, to obtain advances and overdrafts. A bank has a third legal function, i.e. as a place to deposit valuable securities and even plate and jewelry. In this aspect the banker is a bailee. It is the banker's duty not to disclose the customer's account.

In addition to the state banks in London, Edinburgh, and Dublin, and the great joint stock banks, which have absorbed the old private banks, there are savings banks, including a municipal one in Birmingham, and banks such as Rothschild's and Baring's, that are occupied chiefly with foreign business.

The amalgamation policy reduced the number of large joint stock banks to five, popularly known as the "big five." The Midland is a union of two other great amalgamations, the London, City & Midland and the London Joint Stock; Barclays absorbed the London Provincial & South Western, itself a recent amalgamation; Lloyds took over the Capital & Counties and others; the Westminster is a union of Parr's with the London, County & Westminster, itself a large amalgamation; and the National Provincial is a merger of that bank with the Union of London and Smiths, Smiths having been one of the largest and most successful of the old private banks. These banks have subsidiaries in other countries or alliances with banks there. In Dec., 1929, the ten clearing banks had deposits amounting to £1,810,701,000, and cash in hand of £204,905,000. Their investments were £250,235,000, and advances to customers £989,117,000.

For settling accounts between the various banks clearing houses have been established in the large towns. The chief clearing house is in London, where it was founded in 1775, but the idea had already been used in Edinburgh. The English joint stock banks joined in 1851 and the Bank of England in 1864. It is managed by a committee of bankers, and its office is in Post Office Court, Lombard Street.

To further the interests of persons employed in banking there are Institutes of Banking in London, Edinburgh, and Dublin. The London institute, founded in 1879, holds examinations, has a library, and issues a journal. Its offices

are at 5, Bishopsgate, E.C. There is also an association for employees, the Bank Officers' Guild, at 28, Old Queen Street, S.W.1.

BANKER OR BANK. Card game. An ordinary pack of 52 cards is used, and five or six is the best number of players. The dealer distributes three cards face downwards to each player, and turns up another for himself until an eight or card of lower denomination appears. No player other than the dealer looks at his cards until he has made his bet. Each player, beginning on the dealer's left, may bet, up to the amount of the pool, to which each participant has contributed an equal amount, that there is one of his cards of the same suit which is higher than the dealer's turn-up. Whatever is in the pool at the end of the round goes to the dealer. The deal changes after every round.

BANKET. Beds of gold-bearing conglomerate or pudding stone occurring in S. Africa. Banket is the Dutch word for almond rock, and happily describes the conglomerate, which near the surface is of a brown or reddish colour, due to the decomposition of the iron pyrites it contains. It consists of rounded pebbles of white quartz cemented together by siliceous material. The gold occurs in the cementing material, and is associated with iron pyrites.

BANK HOLIDAY. Day made by law a holiday for banking institutions and taken as such by most business firms. From a business standpoint it is, like Sunday, a dies non.

In 1871 an Act of Parliament, largely the work of Sir John Lubbock (afterwards Lord Avebury), decreed certain days as bank holidays. In England these were and are Easter Monday, Whit Monday, the first Monday in August, and the day after Christmas Day, or, if that day be a Sunday, the following Monday. Christmas Day and Good Friday are also bank holidays. In Scotland the bank holidays are: New Year's Day and Christmas Day or the day following if these fall on a Sunday, Good Friday, the first Monday in May, and the first Monday in August. Other days can be made bank holidays by royal proclamation.

BANKING. Term in aeronautics. It is the act of causing an aeroplane to incline laterally, or to raise one wing above the level of the other, thus facilitating the operation of turning rapidly in the air. The term is derived from the banking or slope on sharp curves of railway tracks or motor-racing courses. See Aeronautics; Aeroplane.

BANK NOTE. Form of paper money issued by the Bank of England and other banks, called hanks of issue, in the British Empire and elsewhere. The notes are really promissory notes payable on demand in gold. This is one essential quality, and the other is that the amount in existence must be limited. By using special paper, such as that made at Laverstoke, Hants, for the Bank of England, and by various ingenious printing devices, precautions are taken against forgery.

BANK OF ENGLAND. Institution that acts as banker to the British Government and performs other state functions. It is divided into two main departments, the banking and the issue. The former transacts much of the ordinary business of a bank, discounting bills, opening accounts for customers, and making advances to them. In addition, it receives on account of the Government all the revenues collected in England and Wales, and manages the National Debt, paying the interest, keeping the registers of stockholders, and selling exchequer bonds, treasury bills, etc. It also acts as banker to other banks, most of which keep substantial balances with it.

The issue department is concerned with the issue of bank notes. Another function is to fix the bank rate. Its affairs are managed by a governor, a deputy governor, and directors, who are elected by the stockholders. Its chief

executive officer is the comptroller. Its headquarters are in Threadneedle Street, London, E.C., and it has ten branches in London and

Bank of England. Sketch, from Sir Herbert Baker's plans, of the reconstructed Bank

the large towns. Its capital is £14,553,000, upon which regular and substantial dividends are paid. It issues a weekly balance sheet. Called the hank return, this appears every Thursday. In 1928 the Bank took over from the Treasury the issue of the notes for £1 and 10s., known as Treasury or Currency Notes. In 1930 the work of reconstructing and enlarging the Bank was in progress.

BANK RATE. Rate at which the Bank of England lends money for short terms, directly or by discounting bills of exchange. As money always seeks its own level it follows that the rate at which the other banks lend money is affected by the bank rate, and a change in the one always means a change in the other. The bank rate is fixed every Thursday, but in most cases the existing rate is confirmed. A similar arrangement is in force in other countries, and a change in the bank rate in any important financial centre, e.g. London or Paris or New York, is quickly reflected in the others.

BANKRUPTCY. Bankruptcy is the status of a person who has been declared by a court of law to be unable to pay his debts. The word is probably derived from the late Latin hancus, a table or counter, and ruptus, broken (Ital. bancarotta), in allusion to the custom said to have prevailed in Italy in the Middle Ages of announcing a tradesman's failure by breaking his counter or bench.

The English law is now contained in the Bankruptcy Acts of 1914 and 1926. The object of the law is to secure and divide the debtor's property equally among his creditors, and, while giving him protection, to make him accountable for his conduct and dealings with his property, and, on his complying with the requirements of the law, to release him from his liabilities.

In Scotland, the law of bankruptcy differs from that of England, although recent legislation has been in the direction of uniformity. The process of realizing and distributing a debtor's property among his creditors is called sequestration.

The Court of Bankruptcy is presided over by a judge of the High Court, who decides difficult questions on appeal from the registrars. The registrars, who are part officials, part judges, transact the ordinary business of the court. It has jurisdiction over all bankruptcy proceedings in the London area except that covered by the Wandsworth County Court. Its headquarters are in Carey Street, London, W.C. Elsewhere bankrupts are dealt with in the county courts.

BANKS. Island of British N. America, in the Arctic Ocean. It is separated by Banks Strait from Melville Island. It was discovered by Parry in 1819 and named after Sir Joseph Banks. There is also a Banks Island off the coast of British Columbia, Canada. It is in the Princess Royal group.

Banks, a group of 17 islands in the South Pacific, a dependency of the New Hebrides, lies between that group and Santa Cruz Islands. Banks is also the name of a headland in New Zealand, on the E. coast of South Island, containing extinct volcanoes. Besides the channel connecting Melville Sound with the Arctic Ocean, there is Banks Strait between Tasmania and Furneaux Islands.

BANKS, SIR JOSEPH (1743-1820). British naturalist. Born in London, Feb. 13, 1743, at the age of 23 he was elected F.R.S. and in the same year started on a botanical exploration of Newfoundland. In 1768 he accompanied Capt. Cook on his voyage round the world. He was, in effect, the first botanical director of Kew Gardens, and was president of the Royal Society from 1778 until his death at Isleworth, June 19, 1820.

BANKSIA. Genus of the natural order Proteaceae named after Sir Joseph Banks. It consists of shrubs and trees with leathery evergreen foliage and flowers massed in thick cylindrical heads resembling bottle-brushes. The leaves are very variable in form in the different species, but are all rigid in texture and clothed on the lower surface with silvery-white or reddish down.

Banksia. Australian flowering shrub

Bankside. District of Southwark, London, S.E. It was noted in Elizabethan times for its theatres, including the Globe (q.v.).

BANN. River of N.E. Ireland. Rising in Mourne Mts., co. Down, it flows N.W., passes through Lough Neagh, forms Lough Beg, and runs N. to the Atlantic 4 m. below Coleraine. It has salmon and eel fisheries.

BANNATYNE, GEORGE (1545-1608). Scottish poetry transcriber. A Burgess of Edinburgh, he wrote the Bannatyne MS. in 1568. This consisted of 800 folio pages, included all the best Scottish poetry from the 15th century, and was subsequently printed.

The Memorials of George Bannatyne were published by the Bannatyne Club, founded in Edinburgh by Sir Walter Scott and others in 1823. Its object was to print rare Scottish works. When it was dissolved in 1861 it had produced 116 volumes.

BANNER (late Latin banderia, bandum, standard). Name given to various kinds of flags, especially those now used in processions

Banner of the Knights Templars

by guilds, friendly societies, and other bodies. They are frequently carried, unlike most flags, between two poles or suspended along the top edge on one pole. In the days of chivalry the banner was a square or oblong flag emblazoned with the owner's arms, and was borne by all ranks above and including knights banneret; under it the owner led his men to battle. See Flag; Knighthood.

BANNISTER, CHARLES (1738-1804). British actor and singer. His first appearance at the Haymarket Theatre was in 1762, and later he joined Garrick at Drury Lane.

His son, John Bannister (1760-1836), was a greater actor. He was at first an art student

at the Royal Academy. In 1778 he appeared at Drury Lane, and from that time until his retirement from the stage in 1815 played constantly at Drury Lane and Covent Garden.

BANNOCKBURN. Village of Stirling-shire, Scotland. It stands on the Bannock, a tributary of the Forth, 2½ m. from Stirling.

Here a battle was fought between the English and the Scots, June 24, 1314. The Scots, under Robert Bruce, were besieging Stirling, and to relieve it Edward II collected a large army and invaded Scotland. Bruce prepared to meet him near Bannockburn, where the Bore Stone, on which Bruce is said to have planted his standard, is preserved.

Bannockburn. Flagstaff beside the Bore Stone (right), on which Bruce planted his standard

The English archers opened the fight, but were soon routed by the Scottish horsemen. The final discomfiture of the English came when a body of Bruce's camp-followers, which came in sight over a neighbouring hill, was mistaken for reinforcements. The English lost perhaps 10,000, and the Scots 4,000. In 1929 the site of the battle was acquired for a national park. Consult Bannockburn, J. E. Morris, 1914.

BANNS (Teut. bannan, to proclaim). Public notice in church, at morning prayer, on three successive Sundays, of an intended marriage. The practice is universal in the Anglican Church, almost so in the Roman Catholic Church, and prevails in the Church of Scotland. It is a necessary preliminary in England, Wales, and Ireland to all marriages celebrated in the Anglican Church, unless an episcopal licence or a registrar's certificate is obtained. When the parties reside in different parishes the banns must be published in the churches of both.

BANSHEE (Gaelic bean, woman; sith, fairy). Folklore term applied in Ireland and the Western Highlands of Scotland to a fairy, generally supposed to be a female. She by wailing sounds gives warning to the house of the approaching death of a member of the family. See Fairy; Folklore.

BANSTEAD. Village of Surrey. It is 14 m. S.W. of London, on the Southern Rly., and has an interesting old church and several preparatory and other schools. Banstead Downs, on which are golf links, stretch away to Epsom. Pop. 7,337.

BANSWARA. Native state in the S.W. of Rajputana, India. Hilly and wooded, it lacks water, the Mahi being the only river. It has an area of 1,606 sq. m., and passed under British protection in 1818. Banswara, the chief town, lies about 7 m. W. of the river. Pop. of state, 190,362. See Rajputana

BANTAM. Residency of Java, Dutch East Indies. At the W. end of the island and including the islands off the coast, it has an area of 3,050 sq. m., is swampy in the N. and hilly to the S., and produces rice, pulse, and coffee. Near Serang, the capital, is the decayed sea-

port of Bantam, where the Dutch settled in 1593. Pop. 897,391.

The fowls known as bantams are reproductions in miniature of larger fowls. Believed to have originally reached Britain from Java, they were long restricted to miniature specimens of the common jungle fowl. Bantams' eggs are delicately flavoured, and their flesh is of fine quality. (See Poultry.)

During the Great War the term bantam battalion was applied to a battalion consisting of men below the normal height and weight.

BANTENG (*Bos sondaicus*). Small species of wild ox found in Burma, the Malay peninsula, Borneo, and Java. While the cows are usually chestnut in colour, the bulls tend to become black. Fierce in its native jungles, it has been domesticated by inter-breeding, especially in Java

BANTING, FREDERICK GRANT (b. 1890). Canadian physician. He graduated M.B. from the University of Toronto in 1916, also obtaining a London degree in 1918. In cooperation with Professor Macleod and others he discovered in 1922 a curative drug for diabetes, which he called insulin. In 1923 he became professor of medical research in the University of Toronto, and he and Professor Macleod were awarded the Nobel prize for medicine in the same year. See Insulin.

F. G. Banting, Canadian physician

BANTOCK, SIR GRANVILLE (b. 1868). British music composer and conductor. Born in London, Aug. 7, 1868, he entered the Royal Academy of Music in 1889, where he was the first to win the Macfarren scholarship for composition. In 1897 Bantock was appointed musical director at The Tower, New Brighton, in 1900 principal of the Birmingham and Midland Institute School of Music, and in 1908 professor of music at Birmingham University. He was knighted in 1930. His compositions include Omar Khayyam, Atalanta in Calydon, Hebridean Symphony, and Scenes from the Scottish Highlands.

Sir Granville Bantock, British composer

BANTRY. Market town of co. Cork, Irish Free State. At the head of Bantry Bay, it is 58 m. S.W. of Cork by the Gt. Southern Rlys. It is a fishing and tourist centre, manufactures tweeds and friezes, and is a station on the coach route to Killybegs. Pop. 2,685.

Bantry Bay contains Bere and Whiddy islands, on the latter of which the U.S. navy had an aircraft station during the Great War. It was the scene of attempts by the French to invade Ireland in 1689 and 1796, and of a landing by King William's forces in 1697. In 1689, on May 1, there was an engagement here between the English and the French fleets. The battle was quite without result and almost without loss. Glengarriff, at the head of the bay, is a famous beauty spot.

BANTU (native word ba-ntu or aba-ntu, men). Name of the main group of languages spoken in Africa S. of a line reaching, on the W., 50° N. and running irregularly to Lake Albert, thence, with a deep curve enclosing the Masai, S.E. to the sea at a point S. of the equator. Bantu languages, in number nearly 400, exclusive of semi-

Bantam fowl. Silver laced bantam, typical specimens of these small fowls

Bantu spoken to the N. and W., are the mother tongue of some 50,000,000 natives.

Bantu is also used as a racial term. It includes all types from the Bahima, a pale-faced people, perhaps only half negro, to the very black Atoŋga of Nyasa, and from the tall Zulu to the pygmies of the forests or the Abongo of Gabun. Generally speaking, however, S. and Central Africa are populated by tribes who are indistinguishable from W. coast negroes.

BANVILLE, THÉODORE FAULLAIN DE (1823-91). French poet and dramatist. His *Les Cariatides*, 1842, *Les Stalactites*, 1846, and *Odes Funambulesques*, 1857, a volume of verse reviving many of the old mediæval metres, made his reputation as a poet. De Banville also wrote plays, including *Gringoire*, 1866, and volumes of short stories, and acted as dramatic critic. He died in Paris, March 12, 1891.

BANYAN (*Ficus indica*). A fig tree of enormous proportions, a native of India. It supports its long, lateral branches with adventitious roots which sprout from the branch and descend to the earth, thicken, and gradually assume the proportions of trunks. By means of these supports the branches lengthen almost indefinitely. The leaves are oblong.

Banyan. Indian fig tree which grows props to support its branches

BAOBAB (*Adansonia digitata*). African tree of the order Sterculiaceae. Its trunk attains a thickness of 30 ft., though it does not reach a height at all in proportion, between 40 ft. and 70 ft. being usual. Its leaves are digitate, the flowers being solitary, white, and about 6 ins. across. The fruit, known as monkey bread, consists of a woody capsule a foot or more long, filled with pulp in which the seeds are immersed. The slightly acid pulp is eaten, and its juice is used as a medicine.

Baobab. Flower and fruit of this African tree

BAPAUME. Town of France, in the département of Pas-de-Calais, 15 m. S.E. of Arras. It was ceded to France by the Treaty of the Pyrenees, 1659, and was the scene of a fierce battle, Jan. 2-3, 1871. In the Great War the Germans held Bapaume from Nov., 1914, to March 17, 1917, and recaptured it March 25, 1918. It was taken by the British, Aug. 29, 1918. After the Great War Bapaume was adopted by Sheffield. Pop. in 1914 3,000.

The battle of Bapaume was fought between the British and Germans in Aug.-Sept., 1918. After his victory in the battle of Amiens (q.v.) Haig decided to follow out the original plan which the British staff had prepared in 1916 and attack from a point S. of Arras, near Boileux, to Lihons. On Aug. 21 Byng's 3rd army, attacking on a front from Moyenneville to near Miraumont, captured the German front line and cleared the N. bank of the Ancre near Beaumont, the river being forced the next day, while a flank attack compelled the Germans to abandon Albert. The 3rd and 4th British armies attacked on Aug. 23 on a front of 33 m. from near Mercatel to Lihons, reached positions astride the Arras-Bapaume road, and neared the formidable German works at Thiépval, which were carried the next day.

The second phase of the battle was the capture by the 2nd Australian division of the powerful Mont St Quentin position on Aug. 30-

view that the ceremony is no more than an act of dedication on the part of the parents

BAPTISTERY (Greek baptistērion bathing-place). Term for the part of a church containing a font and reserved for the baptismal service. From the 2nd century baptisteries as separate circular or octagonal buildings were erected adjoining the church. That attached to the church of S. John Lateran at Rome is one of the oldest extant. The only examples in England are at Cranbrook and Canterbury.

When immersion gave way to affusion, i.e. the pouring on of water, and to aspersion, or sprinkling, separate baptisteries became unnecessary, and the term was applied to that part of the church where the font was placed. Modern Baptists, however, while not employing special buildings, use a tank for immersion in place of the ancient piseina, termed by them a baptistery.

BAPTISTS. Baptists constitute one branch of Evangelical Protestants. They maintain that the only proper subjects of Christian baptism are believers who have personally accepted Jesus Christ as Saviour and King, and that the true mode of baptism is the immersion of the believer in water.

The origins of modern Baptist churches may be traced on two lines, Arminian or General Baptists, who believe in the universal scope of the Atonement, and Calvinist or Particular Baptists, who believe in a restricted Atonement. The former was established in Amsterdam in 1611 by separatist refugees from England, headed by John Smyth and Thomas Helwys. In 1612 they returned to England and formed the first English church practising believers' baptism. The latter was founded by Henry Jacob, who, returning to England from the Netherlands in 1616, formed an Independent church in Southwark. This church was Calvinistic in doctrine.

The main features of the 19th century were : (1) growth of open communion churches, that is, for other than immersed believers. (2) Increased sense of interdependence among the churches, and the formation of the Baptist Union of England and Wales. (3) Growth of institutions for the training of ministers. (4) Rapid extension of foreign missions.

Since 1891 Particular and General Baptists have been amalgamated in home and foreign work. In the British Isles there are some 4,230 churches, with 41,000 members, 60,000 Sunday school teachers, 500,000 scholars and more than 5,000 lay preachers. In the U.S.A. Baptists are one of the chief Christian bodies, members alone numbering 8,347,331.

The British churches are united in the Baptist Union, which has headquarters at 4, Southampton Row, London, W.C.1, where are also the offices of the Baptist World Alliance, an association representing nearly all the countries of the world. The denomination has theological colleges at Leeds, Bristol, and elsewhere. The Baptist Missionary Society, founded in 1792, has its headquarters at 19, Fumival Street, London, E.C.4.

BAR. Name given to the higher branch of the legal profession, i.e. barristers. It originated in the partition or bar which in an English law court divides members and officials of the court from suitors, prisoners, advocates, and the general public, men who become advocates being said to be called to the bar. In England the call takes place at one of the four Inns of Court.

For the Irish Free State there is the King's Inn, Dublin, and for Northern Ireland an Inn in Belfast. Canada, Australia, and other parts of the Empire have their own bars. In Scotland the term barrister is not used, that of advocate taking its place.

A law student is required to produce proofs of a good general education, to pass examinations in legal subjects, and to attend the inn for twelve terms, roughly, three years, attendance being registered by eating a certain number of dinners in hall. The student must then be proposed and seconded by two benchers, after which he is called to the bar.

Barristers are divided into two ranks—king's counsel, those called within the bar; and ordinary barristers, without. A barrister may not accept business direct from a layman, but must be instructed by a solicitor, and is bound by a very strict standard of conduct and

etiquette. The discipline of the bar is in the hands of the Inns of Court individually, with an appeal to the Lord Chancellor or to the judges as visitors. The Bar Council is a body of English barristers elected by a ballot of the whole bar. It has no actual powers over the bar, but is an advisory body.

The admission of women to the English bar was definitely legalised, and in 1922 the first woman, Miss Ivy Williams, was called.

In the House of Commons the bar remains literally a bar, that is, a brass rod dividing that part of the House strictly reserved for members from the outer part. Offenders are occasionally summoned to the bar, and new members wait there before taking the oath.

BAR. In heraldry, a narrow band carried horizontally across the middle of the shield, and a diminutive of the fess. When a shield is divided into a number of horizontal bands it is termed barry.

BAR. In geography, shallowing of the water in, or at the mouth of, a river. Where rivers flow into a shallow sea with high tides, the bar may necessitate dredging operations.

Bar in heraldry

BARABBAS. Jewish robber and murderer, who, on the occasion of the feast of the Passover, was released by Pilate at the request of the Jews instead of Jesus (Matt. 27; Mark 15; Luke 23: John 18).

BARANOVITCHI OR BARANOWICZE. Town of Poland, formerly in the Russian Government of Minsk. An important rly. junction on the Warsaw-Moscow line, it is 125 m. S.E. of Vilna. In the Great War a battle was fought in the vicinity of Baranovitchi between the Russians and Germans, July, 1916. While Brusiloff was carrying on his great offensive on the southern part of the Eastern front in June, 1916, Alexieff, then commander-in-chief, cooperated by directing offensive movements on the central and northern parts of that front, his object being to prevent the enemy from sending reinforcements south. After weeks of heavy fighting the Russians accomplished their purpose

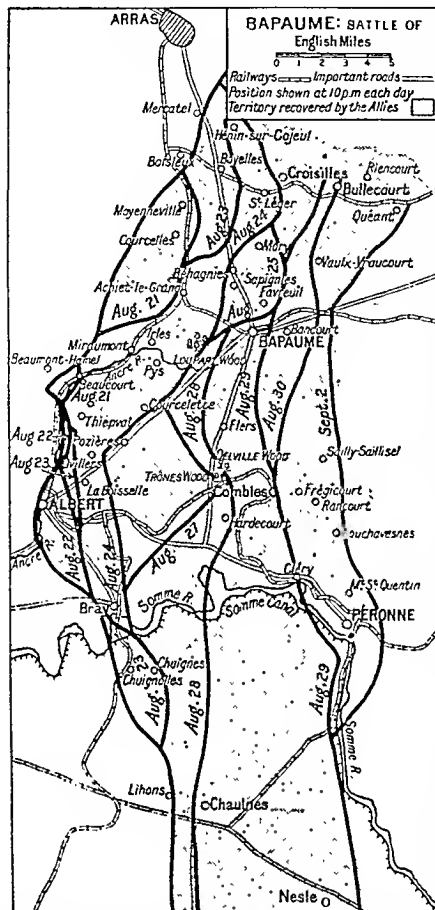

BARBADOS (Port. bearded, from the bearded fig-tree found there). Easternmost of the Windward Isles, British West Indies. It covers an area of 166 sq. m. Sugar, cotton, tobacco, coffee, indigo, and arrowroot are produced, while sugar, molasses, rum, and cotton are exported. Barbados has a healthy climate,

Baptistery at Pisa, completed in 1278.
It has a diameter of 116 ft., and a
dome 190 ft. high

Bar in heraldry

Bapaume Battle. Lines showing the daily advance of Haig's troops in Aug.-Sept., 1918. In ten days they drove the Germans across the old Somme battlefield

Sept. 1, while other Australian troops entered Péronne. To assist them the 3rd and 4th armies pressed the Germans hard and captured many important positions. The battle, which closed on Sept. 2, had far-reaching results.

BAPHOMET. Name of a mystic idol or symbol. Its secret worship formed one of the chief accusations against the Templars. The word is a common mediæval form of Mahomet, but its meaning and origin in relation to the Templars are obscure.

BAPTISM (Gr. baptizein, to dip in water). Rite of initiation into the Christian Church. As such, it is only administered once, and upon this point all Churches that practise baptism are agreed. In the early Church total immersion was the rule, but this has been modified in the direction of affusion (pouring), or of sprinkling, by many Churches. A simple formula is pronounced by the person baptizing, usually the priest.

The belief that baptism washed the soul from all sin led early to the problem of sin committed after baptism; the belief that such sins were particularly heinous developed the practice of deferring baptism until late in life—a practice only checked by the development of infant baptism.

Baptism, regarded as a sacrament in the Anglican, Roman Catholic, and Eastern Churches, implies the action of God through the corporate Church, imparting life. the rite denotes the regenerating power of Christ. The modern position varies from the sacramental doctrine that the rite actually regenerates the unconscious infant, to the opposite and extreme

but is subject to hurricanes and earthquakes. Bridgetown (pop. 13,486) is the capital. The island is chiefly inhabited by negroes. It is administered by a governor, with an executive council and committee, a legislative council of nine members, and a house of assembly of 24 members. It was colonised by the British in 1625. Pop. 168,299.

BARBADOS GOOSEBERRY (*Pereskia aculeata*). W. Indies caetaceous plant with shrubby stems and flat leaves, attaining a height of 15 ft. Its trailing branches bear white flowers, which are succeeded by pleasant-tasting, acid, amber-coloured fruit.

BARBARA Saint, virgin, and martyr of the 3rd century. Her history is entirely traditional, and her veneration dates from the 7th century. According to the legend, on her conversion to Christianity she was beheaded at Nicomedia by her father, who was himself killed by lightning. In France S. Barbara is the protector of gunners and miners. Her festival day is Dec. 4.

BARBARI, JACOPO DE (c. 1450-1515). Italian painter and engraver, identified with Jacob Walech, court painter to Margaret of Austria. His best known work is a still-life subject in the Augsburg Gallery, with the caduceus (q.v.) painted underneath his signature, whence he is sometimes called the Master of the Caduceus. As an engraver, he is the author of about 25 copper plates of sacred and mythological subjects.

BARBAROSSA (Ital. barba, beard; rossa, red). Name given to several historical personages, presumably from their red hair. One was the emperor Frederick I. Others belonged to a family of Turkish pirates.

Horuk or Arouj, the son of a Greek living in Mitylene about 1500, became notorious as a pirate in the Levant, and was joined by two brothers. At the head of a small but efficient fleet they plundered ships, attacked seaport towns, and sold their assistance to anyone willing to pay for it. They were known and feared by the Christians under the name of Barharossa. Horuk was killed by the Spaniards in 1518, and about this time Khizr, the most noted of them all, became a Turkish vassal under the name of Khair-ed-Din. In Africa he obtained possession of Algiers and other territory, and in 1534 seized Tunis, but the emperor Charles V attacked and regained Tunis and destroyed the pirate fleet. Khair-ed-Din afterwards commanded the fleet which assisted Francis I of France to regain Nice in 1543. He died at Constantinople in July, 1546.

BARBARY. Term once applied to the native states of N. Africa, mainly inhabited by Berbers. It included Tripoli, Fezzan, Tunisia, Algeria, and Morocco, extended from Egypt to the Atlantic Ocean, and was bordered on the S. by the Sahara. The history of Barbary is a record of successive wars and conquests by the Phœnicians, Carthaginians, Romans, Vandals, Arabs, and Turks.

The Barbary corsairs became notorious by plundering shipping in the Mediterranean, about the end of the 15th century. They had headquarters at Bougie, Sallee, Tunis, and Algiers. When sailing ships took the place of galleys, they extended their operations beyond the Mediterranean. Their extinction may be said to date from the conquest of Algeria by France in 1830. See *Piracy*; consult also *Barbary Corsairs*, S. Lane-Poole, 1890.

BARBARY APE (*Macacus inuus*). A species of tailless monkey. A native of Morocco and Algeria, it is found also in Gibraltar, and is the only animal of its kind existing in a wild state in Europe. It is yellowish brown on the upper parts, lighter beneath, with flesh-coloured callosities on the buttocks. *See* Monkey.

BARBECUE (Haitian barbacoa, raised scaffolding). Originally, a framework raised above a fire to support an animal when roasted whole. The term is now applied to the animal itself thus roasted and also in America to an open-air feast where meat is cooked in this fashion. Barbecue is also a floor raised in the centre, for drying coffee.

BARBEL (*Barbus*). Genus of fresh-water fishes related to the carp, of which one species is common in a few British rivers. It may be recognized by the four barbels or fleshy growths on the upper jaw. It sometimes attains a length of 2 ft. and a weight of 12 lb., and its flesh is somewhat coarse.

BARBELLION, W. N. P. Pen-name of Frederick Bruce Cummings (1888-1919), British naturalist and author. Born and educated in Devonshire, he became an assistant in the entomological department of the British Museum, retiring in 1914. His *Journal*, with a preface by H. G. Wells, was published shortly before his death. Oct. 22 1919.

BARBER (Latin *barba*, beard). Name given to one who attends to the hair and beard. In early days this trade ranked as a skilled profession, and barbers were also practitioners in surgery and dentistry. When prohibited from practising surgery they still acted as dentists until 1745. The barber's traditional sign, a striped pole projecting from the front of his shop, represented the splint to which the barber-surgeon bound the arm of patients when letting blood; formerly it had a basin suspended from it. The Barbers' Company, a London City livery company, was incorporated in 1462, and united with the surgeons in 1541. The union was dissolved in 1745, after which the surgeons became a separate society. The barbers retained the old hall.

BARBERINI. Name of a Florentine family. Established at Florence in the 11th century, its members amassed wealth and power, and in 1623 Maffeo Barberini became pope as Urban VIII. He conferred on his nephew Taddeo the principality of Palestrina, but the latter was later driven out of Italy, and died in Paris in 1647, leaving three sons, one of whom was a cardinal. The last male member of the family was his grandson Urbano. On Urbano's death in 1722 his daughter Cornelia married Prince Colonna. The Barberini palace and library at Rome commemorate the greatness of the family. The Villa Barberini in the Alban hills was given to the pope in 1930.

BARBERRY (*Berberis vulgaris*). Spiny shrub of the order Berberidaceae, a native of Europe, N. Africa, and the temperate parts of Asia. In England it grows in hedgerows and copses, attaining a height of 5 ft. or 6 ft. The egg-shaped leaves have spiny teeth along their margins. The

spines upon the branches are forked. The small yellow flowers are produced in drooping sprays about May. The berries are orange-red, oblong in shape, and acid in flavour.

BARBERTON. Town of the Transvaal. It lies 2,825 ft. above sea level, on the slope of the De Kaap valley, 283 m. by rly. E. of Pretoria. The capital of Barberton district, it dates from 1886, and owes its existence to the De Kaap goldfields. In 1900 there was some fighting here.

BARBET (Lat. barba-tus, bearded). Family of tropical birds (Bucco) related to the woodpeckers. Found in both hemispheres, these birds have large heads and beaks, and many of them are brilliantly coloured.

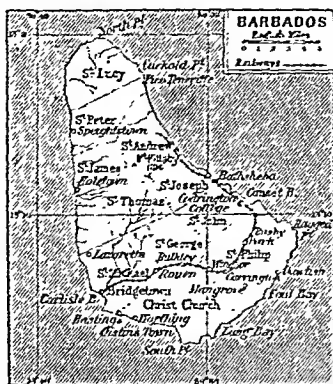

BARBETTE (French, little beard). Heavily armoured citadel or redoubt. Circular in shape, and to-day hooded by an armoured roof, its object is to protect the mountings of the heavy guns of a warship's armament against horizontal fire.

Barbel, fresh-water fish common in some British rivers

BARBICAN (late Lat. *barbacana*, out-work). Circular or semicircular fortification for defending the entrance to a medieval castle. *See* Castle.

The London street called the Barbican, going E. from Aldersgate Street to Redcross

Barbados, Easternmost of the
Windward Isles. British West Indies

Barbet, bird related to the Woodpecker

Barbel, fresh-water fish common in some British rivers

Barbette or armoured citadel of a warship

Street and Golden Lane, E.C., appears to have derived its name from a tower on the N. side. There is also a Barbican at Plymouth.

BARBIERI, GIOVANNI FRANCESCO (1516-1666). Italian painter. Son of a timber merchant, he was born at Cento, near Bologna. In his early work Barbieri was strongly influenced by Michael Angelo da Caravaggio, but his second manner shows a finer taste, combined with expressiveness in his heads and remarkable suavity of colouring. To his second period belongs his masterpiece, the celebrated *S. Petronilla*, in the Gallery of the Capitol, Rome, originally commissioned by Pope Gregory XV for S. Peter's. He died at Bologna, leaving a host of imitators and a vast number of works that have since found their way into the chief European galleries. The Louvre possesses twelve

BARBIZON. Village of France. It stands on the edge of the forest of Fontainebleau, about five miles from the town of that name. A favourite resort of tourists and artists.

A new cathedral, a being erected in one the old palace of the kings of Aragon is now a museum; the king of Spain has a newer one. The meeting place of the diet of Aragon is a notable building, another being the palace of justice. There are several museums and libraries. The city hall, custom house and bourse may be mentioned, as may the modern offices of many banks and other business concerns. The university, founded in 1450, possesses a fine range of buildings, and those for the exhibitions occupy a commanding position. The Rambla is the chief

Barbizon Farm, from a painting by Théodore Rousseau one of the leading representatives of the school of painters named after this French village

school. Their leading tenets were freedom from convention and the interpretation of nature as it appeared to the artist. The leading Barbizon painters were Théodore Rousseau, Millet, Corot, Troyon, and Daubigny. Consult *The Barbizon School of Painters*, D. C. Thomson, 1891

BARBOUR, JOHN (c. 1316-95). Scottish poet. His fame rests on *The Bruce* or *Brus*, a patriotic epic in 14,000 octosyllabic lines, which he composed in 1375. Barbour was for many years archdeacon of Aberdeen.

BARBUSSE, HENRI (b. 1874). French author. Born at Asnières, Seine, he produced a volume of poetry in 1895 and soon had an array of books, both prose and verse, to his credit. His writings concerning the Great War were among the most remarkable renderings of the realities of modern warfare as experienced by the rank and file among the combatants. *Le Feu*, 1916, was trans. into English by F. Wray, 1917. Not less notable was *Clarté*, 1919, Eng. trans. F. Wray, 1919.

BARCELONA. Chief seaport, second largest city, and most important manufacturing town of Spain. It stands on the N.E. coast, at the mouth of the Llobregat valley, 430 m. by rly. N.E. of Madrid, and is connected by railway with France. The capital of Barcelona province, it has a fine Gothic cathedral and nearly 100 churches, some

thoroughfare, and the city has fine parks and open spaces. It consists of an old town, a new town, and a shipping quarter, with new suburbs around. There is a large harbour for the enormous trade of the port. A great international exhibition was opened here in 1929. Pop. 760,348

There is a town called Barcelona in Venezuela, the capital of Anzoategui state.

Barcelona. The University: its foundation dates from 1450, the present building from 1873 only
J. Laureat

BARCLAY, FLORENCE LOUISA (1862-1921) British novelist. Born Dec. 2, 1862, her father was the Rev. S. Charlesworth, rector of Limsfield. She married the Rev. C. Barclay, and died March 10, 1921. The most successful of her novels was *The Rosary*, 1909.

BARCLAY, ROBERT (1779-1854). Scottish athlete. The son of a Scottish laird, Robert Barclay of Ury, who took the name of Allardice on his marriage, he is sometimes known as Barclay-Allardice, but more generally as Captain Barclay. His fame rests on his unusual strength and athletic powers. At Newmarket in 1809 he walked a mile in each of 1,000 successive hours, and twice he walked 64 miles in ten hours. He died May 8, 1854.

BARD. Old-time Celtic poet. Bards celebrated in song the exploits of the chieftains to whom they were attached, and are supposed to have belonged to the Druid hierarchy. Spenser refers to them as flourishing in Ireland in the 16th century, and they long continued in Wales, where their tradition is kept up at the Eisteddfod (q.v.).

Bard. A Cornish bard in his robes

BARDSEY. Island of N. Wales. At the extreme S.W. point of Carnarvonshire, it has an area of 444 acres. Traditionally the last retreat of the Welsh bards, it has a village and harbour, with lighthouse. Pop. 296.

BARDWAN OR **BURDWAN**. Town of Bengal, India, the capital of the district and division of Bardwan. On the Damodar, 67 m. by rly. N.W. of Calcutta, it consists of over 70 villages, and contains the maharajah's palaces and many temples. The district contains the coalfield of Raniganj. Pop. 36,000

BAREBONE'S PARLIAMENT. Derivative name given to an English Parliament summoned by Cromwell after the expulsion of the Rump. It was so called on account of the name of one of its leading members. Praise-God Barebone, a Fleet Street leather-seller. It consisted of 139 members and sat from July 4 to Dec. 12, 1653, when Cromwell dissolved it.

BARÈGES. Inland watering-place of France, in the department of Hautes-Pyrénées. High above the river Bastan, 12 m. S.E. of Pierrefitte, its springs have been used for over 200 years for skin diseases. A gauze-like dress fabric of silk and wool, or of wool only, called *barège*, is manufactured here.

BAREILLY OR **BARELLI**. City, district, and division of India, in the United Provinces. The city is an important rly. junction, 154 m. by rly. N.W. of Lucknow, and has a government college, cantonment, and native schools. It manufactures furniture and textiles, and trades in cotton, grain, and sugar, sugar refining being the chief industry. Pop. 129,459, almost equally Hindus and Mahomedans. The district has an area of 1,579 sq. m., and the division, formerly called the Rohilkhand division, contains 10,829 sq. m.

BARENTS OR **BARENTZ, WILLEM** (d. 1597). Dutch navigator and explorer. In a third unsuccessful attempt (1596) to find the north-east passage to Asia his ship was held in the ice off Novaia Zemlia. Barents and some of his companions perished in the following year. His winter quarters were discovered in 1871, and in 1875 a portion of his journal. Consult *The Three Voyages of Barents to the Arctic Regions*, Gerrit de Veer, Eng. trans. W. Phillip, 2nd ed. 1876.

There is a small uninhabited island called Barents in the Arctic Ocean, one of the Spitsbergen group, lying off the E. coast of the main island.

Barents Land is the northern division of the N. island of Novaia Zemlia.

Barents Sea is a part of the Arctic Ocean, between Lapland, Spitsbergen, Franz Josef Land, and Novaia Zemlia.

BARFLEUR. Small French watering-place and port in the department of Manche. On the Cotentin peninsula, 15 m. E. of Cherbourg, it was a flourishing seaport in the Middle Ages. The *White Ship*, which went down in 1120 with Prince William on board, sailed from here. Outside Cape Barfleur was fought the naval battle of La Hogue, May 19, 1692, in which the French were beaten and all hopes of restoring James II destroyed. This victory has given the name Barfleur to several British battleships. See *La Hogue*.

BARGE (late Lat. *barga*, flat boat). Term applied to a variety of small craft. It was originally reserved for luxuriously appointed rowing vessels used for conveying sovereigns and other dignitaries on short river or coastal journeys. House-boats and college barges permanently moored on the upper reaches of the Thames are modern representatives of this type. A state barge, kept at Windsor, was used by King George V and Queen Mary on Aug. 4, 1919, in the Thames naval pageant to celebrate peace.

Barcelona. Unfinished cathedral, built in the modernist style, in a new quarter outside the city

The three principal types of barge are (1) a long, narrow, flat-bottomed craft used for inland navigation and dependent for loco-

modal, begun in 1025, was rebuilt 1170-S and modernised in 1745. The basilica of San Nicola was founded in 1087. The city is the seat of a state university. Bari manufactures pianofortes, organs, furniture, soap, and wax candles, and exports brandy, wine, olive oil, almonds, grain, cotton, and wool. Pop. 174,619.

BARIATINSKI, LYDIA YAVORSKA, PRINCESS (1874-1921). Russian actress. Born at Kiev, Aug. 3, 1874, she married Prince Vladimir Bariatinski. Coming to London in 1909, she appeared successfully at The Little Theatre, 1910, The Royalty, 1911, The Court, 1912, and The Ambassadors, 1913, and gave notable performances of Rebecca in Ibsen's Rosmers-

holm and of Nora in The Doll's House. She married, in March, 1920, John Pollock, the playwright, son of Sir Frederick Pollock, and died Sept. 3, 1921.

BARILLA (Spanish, barrilla). Plant which grows near the coast in Spain, Sicily, and the Canary Islands. Its botanical name is *Salsola soda*, the specific name soda being due to the fact that the plant yields an ash rich in soda when grown where salt is found in the soil in abnormal quantities. The name harilla is applied to the impure soda obtained from its ash. This contains about 20 p.e. of alkali, and was much employed in soap-making until superseded by soda.

BARING. Name of an English family of bankers. Its founder was John Baring, son of a Lutheran minister at Bremen who, early in the 18th century, migrated to England and became a cloth manufacturer at Larkbear near Exeter. His son Francis (1740-1810), who established the London banking firm, was made a baronet in 1793 and was for many years a Whig M.P.

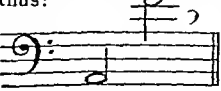

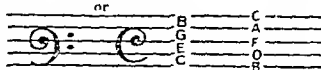

Some of his descendants rose to high positions in the public service, notably his second son, Alexander (1774-1848), created Lord Ashburton in 1835; a grandson, Charles (1807-79), who was bishop of Durham; and another grandson, Francis Thornhill (1796-1866), created Lord Northbrook in 1866. The family acquired two other peerages, both still extant: Edward Charles Baring (1828-97) was created Baron Revelstoke in 1885, and Evelyn Baring (1841-1917) became earl of Cromer, 1901. Maurice Baring (b. 1874), son of 1st Lord Revelstoke, is known as a writer on Russia and Russian literature.

BARING-GOULD, SABINE (1834-1924). British author and cleric. Born Jan. 28, 1834, and educated at Clare College, Cambridge, he was ordained in 1864. In 1872 he inherited the ancestral estate of Lew Trenchard in Devonshire, and in 1881 became rector of the parish. His acquaintance with folklore, especially of the west of England, is shown in his writings.

Among his novels, *Mehalah*, 1880, *John Herring*, 1883, *Court Royal*, 1886, *Red Spider*, 1887, *The Penny-comequicks*, 1889, *The Broom Squire*, 1890, and *The Crock of Gold*, 1899, are the best. He was also the author of a number of hymns, and he died Jan. 2, 1924.

BARISAL or **BURNISOL**. Town and river port of India, capital of the Bakarganj (Backergunge) district of Bengal. On the Barisal river, 118 m. E. of Calcutta, it is a

trade centre. The strange noises called Barisal guns, attributed to breakers, subsidence, or seismic disturbance, have not yet been explained scientifically. Barisal is in a great rice-producing district, and is the eastern headquarters of the great system of navigable channels in the Ganges delta. Pop. 27,000.

BARITONE (Gr. barys, heavy; tonos, pitch, tone). Musical term. It is applied (1) to a man's voice of medium weight and pitch, thus:  and is also used (2) for instruments of similar pitch such as the baritone saxhorn, known in military hands simply as baritone; and the baritone saxophone. The baritone clef is the F clef at one time used on the third line, thus: 

BARIUM (Gr. barys, heavy). Metallic element; symbol, Ba; atomic weight, 137.37; atomic number, 56. Barium is not found native in the metallic state. The chief native forms are barytes or heavy-spar, which consists of barium sulphate, BaSO_4 , and witherite (barium carbonate), BaCO_3 . The metal is obtained by electrolysis of barium chloride. Barium sulphate is a white heavy substance insoluble in water. It is much used as a paint in place of white lead under the name of permanent white or blanc fixe.

Paper coated chiefly with a mixture of blanc fixe and gelatine, and known as baryta paper, is used in the manufacture of photographic printing papers.

BARK. External coating of tree trunks and branches, used in medicine and also as a tanning material. In medicine it more particularly indicates the product of various species and varieties of cinchona—known as Peruvian bark, and the source of quinine.

Bark cloth is the name given to fabric made by primitive peoples from the inner bark of several plants, for clothing, hangings, and matting. It is felted, not woven or plaited. See Cinchona: Cork; Tanning

BARCA or **BARCA**. Region of N. Africa. It is situated between the Gulf of Sidra and Egypt, and forms part of the Italian colony of Libya. Occupying the site of the ancient Cyrenaica, it was at one time fertile, but is now mostly an arid desert. Its industries are agriculture, cattle rearing, and sponge-fishing. Numerous remains testify to a high state of civilization in Roman times. See Libya.

BARKAL or **JEBEL BARKAL**. Hill in the Anglo-Egyptian Sudan. The Holy Mountain of the Egyptian inscriptions, it is situated in the Dongola province, in the neighbourhood of Merawi, and is 302 ft. high. On the plain near the hill are the ruins of nine small pyramids; there are eight more on the hill itself.

BARKER, HARLEY GRANVILLE (b. 1877). British dramatist. Born in London, he took to play-writing after having started as an actor. His earliest piece, *The Marrying of Anne Leete*, was produced in 1901. The impression he made in 1905 with *The Voysey Inheritance* was increased in 1907 by *Waste*. In 1910 came *The Madras House*. He also wrote *Prunella*, with Laurence Housman, 1906, and as theatrical manager staged *Twelfth Night* at the Savoy Theatre in Nov., 1912. His other writings include *Three Short Plays*, 1917; *The Exemplary Theatre*, 1922; and, with his wife, English versions of Spanish plays:

Barge. Royal barge used by King George V and Queen Mary in the peace pageant on the Thames in 1919

tion upon either towage or a small motor. (2) A sailing vessel, broad in beam and of shallow draught, for coastal navigation. (3) A steamboat, as carried by battleships.

BARGE-BEARD. Architectural term for a board suspended from the inner edge of a gable roof where it projects beyond the walls. Barge-boards, often richly carved, were a prominent feature of medieval domestic architecture, especially in England.

BARGHEST or **BERCHEST**. Traditional figure, frequently of a dog or other animal. It is supposed to haunt many places in the north of England, in some of which it is only heard and not seen, when, like the banshee (q.v.), it is said to be a harbinger of death.

BARHAM, CHARLES MIDDLETON, 1ST BARON (1726-1813). British sailor. He entered the navy and in 1745 was promoted lieutenant. He was comptroller of the navy 1778-90, and was made admiral in 1795. In 1805 Pitt appointed him First Lord of the Admiralty and made him a baron. Some of the credit for the prompt measures taken against the French before Trafalgar belongs to him.

Barham is the name of a British battleship of the Queen Elizabeth (q.v.) class. She was the flagship of Vice-Admiral Sir H. Evan-Thomas, commanding the fifth battle squadron at the battle of Jutland, 1916.

BARHAM, RICHARD HARRIS (1788-1845). British author. He took orders in 1813, became a minor canon of S. Paul's in 1821, and in 1842 received the living of S. Faith's, in the City of London. The first series of his *Ingoldsby Legends*, contributed to Bentley's *Miscellany*, then edited by Charles Dickens, in 1837, was published collectively in 1840, and a further series was issued posthumously in 1847. Both have been reprinted. He died June 17, 1845.

BARI or **BARI DELLE PUGLIE** (anc. Barium). City and seaport of Italy. On a peninsula in the Adriatic, it is an important rly. junction, 69 m. N.W. of Brindisi. The old town is closely built, the modern large and rectangular planned. The see of an archbishop, its cath-

Baron Barham, British sailor

Granville Barker, British dramatist

BARKER, THOMAS (1769-1847) English painter, known as Barker of Bath from his long association with that town. A painter of rural genre, his talent is best seen in pictures like *The Woodman* and *A Landscape* at the National Gallery. He is also represented in the South Kensington Museum. Many of his designs were reproduced in pottery and textile materials. He died Dec. 11, 1847.

His son, **Thomas Jones Barker** (1815-82), was also a painter, chiefly of military subjects. Many of his pictures, notably *The Meeting of Wellington and Blücher*, were very popular as engravings.

BARKER'S MILL. An apparatus based on the principle of the hydraulic tourniquet. It consists of a vessel containing water and free to rotate about a vertical axis. Near its base are provided outlet pipes through which the water is discharged horizontally, in a direction tangential to a circle having its centre in the axis of rotation of the vessel. The mill operates upon the reaction principle, the unbalanced pressures at the discharge orifices causing the vessel to rotate.

BARKING. Urban district and market town of Essex. On the Roding, 8 m. E. of London by the L.M.S., L.N.E., and Dist. Rlys., it has market gardens, jute factories and chemical works, and trades in fish and timber. A large station for generating electric power was opened in 1925. At Barking Creek are large sewage works. Its abbey of Benedictine nuns, founded A.D. 670, and one of the richest in England, was burnt by the Vikings in 870. Barking is the sec. of a bishop suffragan, and its church of S. Margaret, a Norman building with later additions, contains fine brasses. Market day, Sat. Pop. 35,523.

BARKLY EAST. Small town of Cape Province, South Africa, capital of Barkly East district. Situated in mountainous country, 5,830 ft. above sea level, it is on the Kraai river 82 m. S.E. by E. from Aliwal North. Sheep pasturing is the chief occupation. Barkly West, in Griqualand West, Cape Province, is an important diamond mining centre. Both towns are named after Sir Henry Barkly, governor of Cape Colony 1870-77.

BAR-LE-DUC. Town of France, capital of the department of Meuse. On the river Ornain, 62 m. W. of Nancy by the Eastern Rly., it is situated on the edge of the Argonne plateau, where the Rhine-Meuse canal comes down to the plain. The upper town, formerly the capital of the duchy of Bar, contains the church of S. Pierre, a clock tower, and the remains of a château. At Bar-le-Duc the Old Pretender lived for a time. Pop. 17,000.

The counts of Barrois or the district of Bar ranked among the most powerful vassals of the French kings. In 1354 Count Robert was made a duke. In the 15th century Bar was united with Lorraine, and in 1633 the two were made part of the royal domain.

BARLETTA. City and seaport of Italy. On an island in the Adriatic, it is about 35 m. N.W. of Bari and in the prov. of that name. It has a considerable trade by sea, exporting wine and other products of southern Italy, and importing coal, petroleum, corn, chemical manures, and timber. It has a Romanesque cathedral, mainly 12th century, and an old Gothic church, S. Sepulchre. The castle dates from the 16th century. The palace of Manfred is now a convent. In 1503, when part of the kingdom of Naples, Barletta was the scene of the combat between thirteen French and Italian knights, led by Bayard and Prospero Colonna respectively. Pop. 51,536.

BARLEY (*Hordeum sativum*). A hardy cereal crop of the grass family. It is grown mostly for malting purposes. Three species are recognized, according to the arrangement of the grains in the ear: six-rowed barley

(*Hordeum sativum hexastichon*), regarded as the oldest cultivated form; four-rowed

barley (*H. sativum vulgare*); two-rowed barley (*H. sativum distichon*), including some of the most noted kinds for malting. The average yield of barley per acre is from 32 to 40 bushels of grain, with about a ton of straw. Barley not up to the malting standard is used for distilling, and is valuable as a stock-food. See *Agriculture*; *Crops*.

Barley flower spikes, unripe and ripe. Below, left, two detached flowers; beneath them a barley corn; right, a fully expanded flower. Between the stalks, barley corns in process of germination

BARLEYCORN, JOHN. Personification of the malt liquor made from barley, a familiar figure in old English ballads and tracts. Often he appears as a knight, as in the tract *The Arraigning and Indicting of Sir John Barleycorn, Knt.*, printed for Timothy Tossput. Robert Burns's well-known ballad represents him as being crushed between two millstones. An old English lineal measure, one-third of an inch, was termed a barleycorn.

BARMECIDE FEAST. Phrase signifying poor hospitality. The expression is derived from an incident in *The Arabian Nights*, in which Schacabac seeks charity from a member of the Barmecides, a noble and wealthy Persian family, and is entertained at a splendid but imaginary feast. Host and guest praise the non-existent dishes, which both pretend to eat; until the guest, having fallen in with the Barmecide's humour, is substantially fed.

Barmen. Train on the Schwebebahn or suspended electric railway, that connects Barmen with Elberfeld

BARMEN. Town of Prussia. It is on the Wupper, about 25 m. N.E. of Cologne. Its port is Düsseldorf on the Rhine. On the main line from Aix-la-Chapelle to Berlin, Barmen is connected by rly. with the busy industrial district round it, one line being an overhead electric one. Its industries include bleaching, dyeing, and the manufacture of ribbon, dress trimmings and linings, cotton and woollen goods, carpets, and beer. Pop. 187,099.

BARMOUTH (Welsh, *Abermaw*). Urban district and market town of Merionethshire. On Cardigan Bay, at the mouth of the Mawddach, it is 9 m. W. by S. of Dolgelly by the G.W. Rly. A popular watering place, it is picturesquely placed near Cader Idris. Old Barmouth, with its parish church, is on a cliff. Market day, Sat. Pop. 3,559.

BARNABAS. Christian saint. Originally a Levite named Joses (R.V. Joseph), a native

of Cyprus, he was converted and became a co-worker with S. Paul, whom he introduced to the apostles at Jerusalem (Acts 4, 9, 11, 13-15; Gal. 2: 1 Cor. 9). Nothing is known of his life beyond the N.T. record. His festival is kept on June 11.

The Gospel of Barnabas is one of the apocryphal gospels. It is based largely on the four canonical Gospels of the Bible and is marked by frequent Jewish and Mahomedan interpolations. The writer makes Jesus Christ disown the Messiahship and confer the title upon Mahomet. The epistle of Barnabas (2nd century) is addressed to the Hebrews.

BARNABITES. Roman Catholic order. Founded in 1530 at Milan, and officially styled the Clerks Regular of S. Paul by Pope Paul III in 1535, the order became known as Barnabites from its early association with the church of S. Barnabas at Milan.

BARNACLE. Name applied to crustaceans of the order cirripedia. The Lepadidae or stalked barnacles attach themselves by a fleshy stalk to floating timber and the bottoms of ships. Akin to them are the sessile or stalkless barnacles, commonly called acorn barnacles

Barnacle. Below, acorn barnacles, large form of *Balanus hansen*. Above, barnacle of the stalked kind

BARNACLE GOOSE (*Bernicla leucopsis*). Bird of the Arctic regions which migrates to the northern parts of Europe in the winter. In the early Middle Ages it was supposed to be produced from the crustacean, hence its name. It is smaller than the wild goose.

BARNARD, EDWARD EMERSON (1857-1923). American astronomer. Born at Nashville, Tennessee, Dec. 16, 1857, he was educated at Vanderbilt University. In 1887 he became an assistant at Lick Observatory, California, and made a name by his discovery of Jupiter's fifth satellite and 16 comets. In 1895 he became professor of astronomy in the university of Chicago and astronomer of the Yerkes Observatory at Williams Bay, Wisconsin. He died Feb. 7, 1923.

BARNARD, FREDERICK (1846-96). British artist. Born in London, May 26, 1846, he began to illustrate for Punch in 1863, but the bulk of his drawings appeared in *Good Words*, *Once a Week*, *The Illustrated London News*, and *Penn*. He illustrated the Household Edition of Charles Dickens's works and died at Wimbledon, Sept. 28, 1896.

Frederick Barnard, British artist

BARNARD, GEORGE GREY (b. 1863). American sculptor. Born May 24, 1863, he studied art in Paris, where he lived for 12

Barmouth. Trestle railway bridge across the Mawddach estuary. Behind is the Cader Idris range

years. Returning to the U.S.A., his works soon attracted notice. The chief are perhaps *The Great God Pan* in Central Park, New York; *A Monument to Democracy*; and *Let there be Light*. He was responsible for the statues that adorn the Capitol at Harrisburg and for the bronze statue of Lincoln at Cincinnati, which evoked much criticism.

BARNARD CASTLE. Urban district and market town of Durham. On the Tees, it is 15 m. W. of Darlington by the L.N.E.R. Dominating the town is the ruined castle founded about 1100 by one of the Balfour family and close by is the Bowes art museum. Barnard Castle is the scene of Scott's *Rokeby*. It gives its name to a county division returning one member to Parliament. Market day, Wed. Pop. 4,737

BARNARD, THOMAS JOHN (1845-1905). British philanthropist. Born in Dublin, July 4, 1845, he was trained in London as a medical missionary. Having taken his degree, he turned his attention to the cause of destitute children, and to this work devoted the rest of his life. He died at Surbiton, Sept. 19, 1905.

The first of Dr. Barnardo's homes was opened, for boys only, at 18, Stepney Causeway in 1866. Soon after girls were admitted, and during the next 40 years the work grew enormously. In addition to large premises in Stepney Causeway, London, E., there are country and convalescent homes and special accommodation for babies and for blind, deaf, and crippled children. In 1929, 18,000 children and young people were dealt with, and altogether 107,000 have passed through the homes. The average number in the homes at one time is nearly 8,000. Some 30,000 have been sent to Canada, and nearly 11,000 served in the Great War. The homes are maintained by voluntary contributions.

BARNATO, BARNETT ISAACS (1852-97). Anglo-Jewish financier. Born in London, the son of Isaac Isaacs, Barnett went to S. Africa in 1873, where he took the name of Barnato, and was known as Barney Barnato. He began to deal in diamonds at Kimberley, and hought up claims regarded by many as exhausted. Other companies were absorbed by his firm and the De Beers, and finally the rival concerns were amalgamated in 1888.

Barnett Barnato,
Anglo-Jewish
financier
Elliott & Fry

On June 14, 1897, while on a voyage to England, he threw himself overboard. Consult Life, H. Raymond, 1897.

BARNAVE, ANTOINE PIERRE JOSEPH MARIE (1761-93). French Revolutionary leader. Born at Grenoble, Oct. 22, 1761. He became a lawyer, and won a reputation by his political writings. He was sent to the states-general, which met at Versailles in May, 1789 and in 1790 was chosen president of the assembly. Barnave's personal contact with the royal family, when he escorted them back from Varennes, inclined him further to moderate courses. Having returned to Grenoble in 1792, he planned a counter revolution, and was consequently arrested, and on Nov. 29, 1793, was executed.

BARNBY, SIR JOSEPH (1838-96). British musician. Born at York, Aug. 12, 1838, he went to the Royal Academy of Music, London, in 1854. From 1871-86 he was organist at S. Anne's, Soho, where he established the annual performance of Bach's *S. John Passion*

Music. Barnby's Choir, the parent of the Royal Choral Society, was started in 1867, and he conducted this up to his death, Jan. 28, 1896. Barnby was precentor of Eton, 1875-92, and principal of the Guildhall School of Music, 1892-6. He was knighted in 1892.

Sir Joseph Barnby,
British musician
Elliott & Fry

people. The tune, which resembles a Scottish air, was composed for a dance in a burlesque at the Gaiety Theatre, London.

BARNES. Urban district of London. On the Thames, in the county of Surrey, it is mainly a residential district, 7 m. S.W. of London by the Southern Rly. Mentioned in Domesday as Barne, it has a restored church, S. Mary's. The old manor house of Barn Elms is occupied by the Ranelagh Club. Barnes Common is a large open space. The district adjoining in the bend of the river is called Castelnau. Pop. 34,299.

BARNES, ERNEST WILLIAM (b. 1874). British prelate. Born April 1, 1874, he was educated at King Edward's School, Birmingham, and Trinity College, Cambridge, where he was fellow and tutor. In 1902 he was ordained, and in 1909 was elected F.R.S. In 1915 he was appointed master of the Temple; in 1918 canon of Westminster, and in 1924 bishop of Birmingham. In religious matters a modernist Dr Barnes has written a good deal on the relations between religion and science. Controversy has also been aroused by his resolute denunciation of the extreme Anglo-Catholics in the Church of England.

E. W. Barnes,
British prelate
Russell

BARNES, WILLIAM (1801-86). British poet. Born Feb. 22, 1801, a member of an old Dorset family, he graduated at Cambridge. He was ordained in 1847, and in 1862 was appointed rector of Winterborne-Came. His first volume of *Poems of Rural Life* in Dorset Dialect was published in 1844, and the collected edition in 1879.

William Barnes,
British poet

In addition to his poems, which are a storehouse of the old Dorset dialect, Barnes wrote several philological works. He died Oct. 7, 1886.

BARNET. Urban district and market town of Hertfordshire. It is 11 m. N. of London by the L.N.E.R. Its horse fair in Sept. is still one of the largest in England. Chipping Barnet is a parish within the urban district, and New and East Barnet are suburbs. Market day, Wed. Pop. 11,772.

Friend Barnet, Middlesex, about 3 m. south, is a separate urban district, with a population of 17,612.

The battle of

Barnet was fought April 14, 1471, between the Yorkists under Edward of York, afterwards Edward IV, and the Lancastrians under Warwick. Edward marched out of London, and the fight began in a fog. Each side gained early successes, but in the end the Yorkists won a great victory and Warwick was among the killed. See *Roses*, Wars of the.

BARNETT, SAMUEL AUGUSTUS (1844-1913). British social reformer. Born in Bristol, Feb. 8, 1844, he was educated at Wadham College, Oxford, and was ordained. From 1872-94 he was vicar of S. Jude's, Whitechapel, and while there he had a great share in founding Toynebee Hall, of which he was warden, 1884-1906. He was canon of Westminster from 1906 until his death, June 17, 1913. In 1873 he married Henrietta Octavia Rowland, who was closely identified with his life work. Barnett House, Oxford, was founded in his memory in 1916. Consult Life, H. O. Barnett, 1918.

Samuel A. Barnett,
British social
reformer
T. R. Hodgner

BARNEVELDT, JAN VAN OLDEN (1547-1619). Dutch statesman. Born at Amersfoort, Utrecht, he qualified as an advocate in 1569. He supported William the Silent in the struggle against Spain, and in 1585 was made advocate-general of the province of Holland. On William's death Prince Maurice of Nassau was made stadtholder by his influence, but differences of policy at once arose. In the end Barneveldt, who supported the Arminians against the Calvinists, was arrested by order of Maurice, and in illegal fashion was sentenced to death as a traitor. He was beheaded May 13, 1619.

In 1623 his two sons, Wilhelm and Reinier, made an unsuccessful attempt to overthrow Maurice. The plot was discovered and Reinier was executed, but Wilhelm escaped from the country. Consult Life and Death of John of Barneveldt, J. L. Motley, 1874.

BARNOLDSDWICK. Urban district of Yorkshire (W.R.). It is 9 m. S.W. of Skipton, on the L.M.S. Rly. and the Leeds and Liverpool canal. Cotton weaving is the chief industry. Pop. 12,590.

BARNESLEY. County borough and market town of Yorkshire (W.R.). On the river Dearne, 16 m. N. of Sheffield, it is served by the L.N.E. and L.M.S. Rlys. The Barnsley canal connects it with Leeds and Wakefield. In a rich coal district, it has textile and other manufactures. S. Mary's church is a Gothic building erected in 1821. There is a grammar school, founded in 1660. Barnsley sends one member to Parliament. Its football club won the Association Cup in 1912. Market day, Wed. Pop. 70,760.

BARNSTAPLE. Borough, seaport, and market town of Devonshire. At the head of the Taw estuary, 40 m. by rly. N.W. of Exeter, it has stations on the G.W. and Southern Rlys., and is the terminus of a light rly. to Lynton. Its bridge is 700 ft. long and has 16 arches. The church of S. Peter and S. Paul, with its twisted spire, is 14th century. Pilton church is largely modern. Adjoining the Pannier Market is Butchers' Row. The town manufactures furniture, gloves, lace, and pottery called Barum ware. There is an annual fair, held in September. Market days, Tues. and Fri. Pop. 14,409.

Barnstaple was a trading centre before the Norman Conquest, was early known for the manufacture of woollen goods, and formerly did a large trade in wine and wool.

Barnet, Hadley High Stone,
site of the Battle of Barnet

BARNUM, PHINEAS TAYLOR (1810-91); American showman. He was born at Bethel, Connecticut, July 5, 1810, and began his career as a showman in 1835, but met with little success until in 1844 he exploited Charles Stratton—General Tom Thumb. In 1871 he began the formation of the Greatest Show on Earth, a monster combination of circuses, menagerie and exhibition of human freaks, and his partners and he amassed a large fortune. Barnum published his Autobiography in 1854, and died April 7, 1891.

Phineas T. Barnum, American showman

BARODA. Native state of India, in the Bombay Presidency. Under a Marhatta chief, called the gaekwar, the territory intermingles with other native states and British districts in Kathiawar and Gujarat, is well supplied with rlys., and covers 8,127 sq. m. Fertile in the N., it produces cereals, cotton, opium, tobacco, sugar, oil-seeds, and a breed of white cattle. Pop. 2,126,522.

In the Great War the gaekwar, Sir Sayaji Rao III, subscribed to war funds and placed his troops at the disposal of the king-emperor.

Barograph made by Negretti and Zambra for the automatic registration of readings of a barometer

Baroda, the capital, is 246 m. from Bombay. It contains temples and palaces as well as schools and colleges

BAROGRAPH (Gr. baros, weight, graphēin, to write). Form of barometer which registers automatically the readings on a weather or other kind of chart.

BAROMETER (Gr. baros, weight; metron, measure). Instrument which measures the pressure of the atmosphere. A mercurial barometer consists essentially of a glass tube closed at one end. This tube is filled with mercury, inverted, and the open end placed in a cup of mercury. The mercury column then falls a little and some of the mercury runs back into the tube, leaving in the tube a column about 30 ins high. When the air pressure upon the surface of the mercury is decreased, some mercury flows from the tube to the cup; when it is increased some is forced into the tube, so that the column stands higher. Another barometer is the aneroid (q.v.).

Barometer. Diagram of mercurial instrument

BARON (late Latin baro, man, vassal). Title in the British peerage. On its introduction into England about 1066 the word meant the man or vassal of a king or lord, one who held land from him. At this time it was used very loosely, but in a century or so a distinction sprang up between greater and lesser barons. The lesser barons were gradually merged into the commonalty.

Barons were first made by letters patent in 1387, and since then all barons have been so

created. In the letters patent the conditions of inheritance are laid down. These usually confine it to male heirs of the grantee's body, but sometimes a daughter and her descendants are allowed to inherit; in a few cases baronesses have been created.

In the case of the older baronies, those by writ, as they are called, they descend, in the absence of a male heir, to daughters equally.

This means that the title goes into abeyance until all the heirs save one are dead or until the Crown selects one of the co-heirs, and, in her favour, or in his, if a male descendant of one of the daughters, calls it out of abeyance.

A baron is addressed as the Right Honourable and all his children are entitled to the prefix Honourable. His coronet has on it six silver balls, of which four are always shown in drawings. Until 1679 and 1716 respectively the earls of Chester and the bishops of Durham, both counties palatine, had their own barons

BARONET (dim. of baron). Hereditary British order. Baronets of England were

Baronet's badge, granted in 1929

created by James I in 1611, ostensibly for settling Ulster, but in reality as a source of revenue, drawn from the fees. Baronets of Ireland date from 1619. Baronets of Scotland or Nova Scotia, originated by James I for settling Nova Scotia, were instituted by Charles I in 1625. Since the union of England and Scotland in 1707 baronetcies of Great Britain have been given to Englishmen and Scotsmen,

and since the union of Great Britain and Ireland in 1800 baronetcies of the United Kingdom to Irishmen. The first baronet was Sir Nicholas Bacon, of Redgrave, Suffolk. Baronets take precedence of all knights except knights of the Garter. A new badge was granted to them in 1929

BARONSCOURT. Seat of the duke of Abercorn in co. Tyrone, Northern Ireland. It is 3 m. S.W. of Newtown Stewart, and the estate is finely wooded. Baron's Court is the name of a London district between Earl's Court and Hammersmith.

BARONY. In England, in feudal times, the land which entitled a man to be summoned to Parliament as a baron. In Scotland the word was used for a large freehold estate, not necessarily the property of one summoned to Parliament. In Ireland the counties are divided into baronies.

BAROQUE. Term meaning originally a pearl of irregular shape, used by jewellers for imitation jewelry. More familiarly it is applied to the neo-classic architecture and sculpture of the late 16th century, which are generally considered to be debased in style. See Architecture; Rococo.

BAROSSA. Ridge about 17 m. from Madrid. Here a battle was fought between the British and the French in the Peninsular War, March 5, 1811. A British force, commanded by Sir Thomas Graham, was holding Cadiz, which was invested by the French under Victor. Graham decided to take 12,000 men by sea to Algeiras, and land them in the rear of the French. Of this force about 4,000 were British, and the rest Spaniards. They marched parallel with the coast from Algeiras for about 12 m. until they reached Barossa. The British infantry moved forward in two masses, delivering a telling fire, and afterwards charged the French, who were driven away in disorder. Other French troops struggled desperately, but the British outfought them.

Baron's coronet

BAROTSELAND. Country in Rhodesia. Formerly a separate administration known as North-Western Rhodesia, it was amalgamated with North-Eastern Rhodesia Aug. 17, 1911, to form Northern Rhodesia. It is watered by tributaries of the Congo and the Zambezi. Mopungu is the chief administrative station and Lealui (Lilalui) the residence of the paramount chief. The Barotse, who gave their name to the country, are a negro race. See Africa; Rhodesia

BAROUCHE. Roomy four-wheeled carriage, with an adjustable hood behind, capable of seating two couples facing each other. It is a modification of German barutsche, adapted from Italian barroccio, a two-wheeled car (Lat. bi, double; rota, wheel).

BARQUE (late Lat. barca, skiff). Three-, four-, or five-masted sailing vessel. It carries square sails on all masts except the aftermost, on which the sails are rigged fore and aft, i.e. in a line with the run of the ship. The

Barque. Sailing vessel with fore and aft rigged sails on the mizzen-mast and square sails elsewhere

word bark is sometimes used in the same sense, but more often for any sailing vessel of fair size. A barquentine is a vessel, usually three-masted, with square sails on the fore-mast only.

BARQUISIMETO. City of Venezuela, formerly called Nueva Segovia. On the Barquisimeto river, it is 103 m. by rly. S.W. of Tucacas, its port on Triste Gulf. Lying high in a healthy, fertile district, it has a cathedral, college, schools, and other public institutions, and a wireless station. A busy trading centre, it exports coffee, cocoa, sugar, rum, hides, skins, and fibre. Pop. 23,109.

BARRA. Island of the Outer Hebrides, Inverness-shire, Scotland. About 4 m. S. of Uist, it contains two villages, and farms, with 20 smaller islands, a parish of 35 sq. m. There is a steamer service with Glasgow. Cattle rearing is carried on. Pop. 2,456.

BARRA. Small kingdom of West Africa, in the British colony of Gambia. It lies N. of the river Gambia and extends to its mouth. Barra Point is opposite Bathurst, and with it forms the inner mouth of the river.

BARRACKPUR OR **BARRACKFORE**. Town and cantonment of Bengal, India, in the district of 24 Parganas. On the Hooghly river, 15 m. by rly. N. of Calcutta, it is a favourite retreat for Europeans and contains the suburban seat of the viceroy. It was the scene of sepoy risings in 1824 and 1857. Pop. North and South Barrackpur, 40,000.

BARRACKS (Ital. baracca, hooth, hut). Buildings for the permanent accommodation of soldiers, sailors, or marines. Until the end of the 18th century the construction of barracks in England was strongly opposed as tending to the increase of a standing army, and the term marching regiment dates from the period when infantry moved from place to place, being quartered for the night upon the inhabitants. With the introduction of barracks certain towns became known as garrison towns.

Modern barracks include houses for senior officers and rooms for junior ones, in addition to mess rooms, billiard room, library and

offices. There are similar quarters for the sergeants and separate accommodation for married soldiers. For the unmarried men there are sleeping quarters, canteens, and recreation rooms. Guardrooms, workshops, store rooms and laundries are also provided. The regulations lay down the amount of cubic space which must be allowed for each man. In Great Britain barrack construction is supervised by the Royal Engineers.

BARRACUDA (*Sphyræna barracuda*). Large fish belonging to the order *Telosteii* or bony fishes. Found in the southern seas, it often attains a length of 5 ft., and is largely eaten in S. Africa, Australia, and S. America.

BARRAGE. Word derived from bar, a hindrance. It is used mainly in two senses. To describe a bar made artificially in a river in order to increase the depth of water. This has been done with success on the Nile (q.v.).

During the Great War the word obtained a new, although allied, meaning, being applied to a regulated volume of artillery fire, falling continuously on a certain area. A moving or creeping barrage, first used in the battle of the Somme, 1916, was directed so as to fall a little way in front of advancing troops in order to protect them from the enemy's attentions. Another form of barrage was that put behind the enemy's position with the object of stopping reinforcements or supplies from reaching him. See Artillery.

Barramunda. Local name for the Queensland mudfish or *craterodus* (q.v.).

BARRANQUILLA. Town of Colombia, S. America. It is on the Magdalena, 7 m. above its mouth, and 16 m. by rly. S.E. of Puerto Colombia, its seaport. The head of navigation on the Magdalena, it is the chief commercial centre of Colombia, is an important seat of the Panama hat industry, and has good wharfage. It is connected by an air service with Buenaventura on the Pacific coast. Pop. 81,330.

BARRAS, PAUL FRANÇOIS NICOLAS, COMTE DE (1755-1829). French Revolutionist. Born of a noble Provençal family, June 30, 1755, he shared in the defence of Pondichéry in 1778. At the outbreak of the Revolution in 1789 he supported the Third Estate, sat in the Convention of 1792, and voted for the death of Louis XVI. He helped to overthrow Robespierre, became one of the five Directors of 1795, and employed Bonaparte to protect the Convention from the National Guard. He died Jan. 29, 1829.

BARRATRY (Old Fr. *barat*). Word meaning literally barter, with the secondary meaning of knavery or cheating. It is used in its primary sense in ecclesiastical law to signify simony. More commonly it signifies constant incitement of suits, disturbances, or quarrels, and is a crime. In maritime law the term is used to denote any wilfully wrongful act by the master or crew with intent to defraud the owner or charterer, e.g. smuggling.

BARREL (Fr. *baril*). An unofficial dry and liquid measure of capacity, varying according to the substance measured. A barrel of beer contains 36 galls., and of wine, 31½ galls. A barrel of flour contains 196 lb.; of pork or beef, 200 lb.; of butter, 4 firkins or 224 lb. A barrel of berrings holds about 800 fish.

BARREL ORGAN. Small pipe organ. It is sometimes portable, and is controlled by a revolving cylinder with pins in suitable positions coming in contact with the levers that admit the wind to the pipes. Occasionally reeds of the harmonium type take the place of pipes. The cylinder (or barrel) and the bellows are actuated by the same motive power, either clockwork or hand-crank.

BARRENWORT (*Epimedium alpinum*). Herb of the order *Berberidaceæ*. It has a creeping rootstock and leaves divided into three sets of heart-shaped leaflets of firm, smooth texture on long stalks.

BARRÈS, MAURICE (1862-1923). French novelist. Born Aug. 17, 1862, he published *Huit Jours chez M. Rénan* in 1888. In 1889 he became deputy for Nancy, and retained the seat until 1893. It was as a writer of fiction of a conservative character that he became known. His stories include *Un Amateur d'Âmes*, 1899; *L'Ennemi des Lois*, 1893; *Les Déracinés*, 1897; and *L'Appel au Soldat*, 1900. He died Dec. 4, 1923.

BARRETT, WILSON (1846-1904). British actor. Born near Chelmsford, Feb. 18, 1846, he made his first appearance at Halifax, in 1864. In 1877

Wilson Barrett as Wilfred Denver in *The Silver King*
Downey

he became lessee of the Theatre Royal, Hull, and in 1878 of the Grand Theatre, Leeds. In Sept., 1879, he became manager of the Court Theatre, London. On June 4, 1881, Barrett began his management of The Princess's, which lasted with some intervals until 1889. From 1886-96 he played chiefly in the provinces and in America, and he achieved a new London success at The Lyric, Jan. 4, 1896, with *The Sign of the Cross*. He died in London, July 22, 1904.

BARRHEAD. Burgh of Renfrewshire, Scotland. On the Levern it is 7 m. S.W. of Glasgow by the L.M.S. Rly. Founded in 1773, it has developed into a prosperous town, with brass and iron foundries and other manufactures. There is an annual fair. Pop. 11,466.

BARRICADE. (Span. *barrica*, barrel). Term for obstacles erected in streets by rioters and others. Barricades to obstruct the progress of troops were characteristic of the street fighting in Paris in 1830 and 1848 and in the suppression of the Commune in 1871. Such consisted of casks, paving stones, rubble, abandoned vehicles, and even furniture.

BARRIE, SIR JAMES MATTHEW (b. 1860). British author. Born May 9, 1860, at Kirriemuir, Forfarshire (Angus), where he received his early education, he went later to Glasgow and Dumfries Academies and Edinburgh University (1878-82), where he graduated M.A. From Feb., 1883, until the end of 1884, Barrie acted as leader writer on *The Nottingham Journal*, settling in London in 1885. In 1887 he published his first book, *Better Dead*, but his reputation was established with *Auld Licht Idylls* (1888), sketches of humble life in Kirriemuir, which he called *Thrums*. This success was followed in the same year by *When a Man's Single* and *An Edinburgh Eleven*, the latter under the pen name of Gavin Ogilvy. Barrie's other books are: *A Window in Thrums*, 1889, *My Lady Nicotine*, 1890. The

Sir James Barrie, British novelist and playwright
Lizzie Caswell Smith

Little Minister, 1891, *Sentimental Tommy*, 1896, *Margaret Ogilvy*, 1896, *Tommy and Grizel*, 1900, and *The Little White Bird*, 1902. The

Barrie's birthplace at Kirriemuir, Forfarshire (Angus), the weaving town he made famous as *Thrums*

last mentioned work contained the germ of what was to prove the greatest of Barrie's stage successes, *Peter Pan*.

After various attempts in the theatre, Walker, London, 1892, a genuine light comedy, scored a success, but not until *The Professor's Love Story*, 1894, did the author show any mastery of the difficult technique of his new medium. With his dramatic version of *The Little Minister*, 1897, which proved immensely popular, Barrie had become as eminent in dramatic authorship as he was in letters. *The Wedding Guest*, 1900, had only a moderate success, but *Quality Street*, 1902, *The Admirable Crichton*, 1902, and *Little Mary*, 1903, all had prosperous runs. *Peter Pan*, 1904, met with a rapturous reception, renewed each succeeding year.

His other full-length plays are: *Alice Sit-by-the-Fire*, 1905, *What Every Woman Knows*, 1908, *A Kiss for Cinderella*, 1916, *Dear Brutus*, 1917, and *Mary Rose*, 1920. He has written many brilliant one-act plays, especially *The Twelve Pound Look*, 1914, and *The Old Lady Shows Her Medals*, 1918.

In July, 1894, Barrie married Mary Ansell, an actress who made her mark in Walker, London; but the union was dissolved at the husband's initiative in 1910. He was made a baronet in 1913 and received the O.M. in 1922. Consult Barrie: *The Story of a Genius*. J. A. Hammerton, 1929.

BARRIE. Town of Ontario, Canada, the capital of Simcoe co. On Lake Simcoe, 64 m. N.W. of Toronto, it is an important junction on the C.P.R. and C.N.R., and a head port for the lake steamers. Pop. 6,420

BARRIER. Term meaning a bar or obstacle. The Barrier Act was an act passed by the General Assembly of the Church of Scotland in 1697, providing that any change in the constitution of the Church must first be approved by the presbyteries.

The term barrier reef is applied to coast formations either encircling an island or extending along a continental land mass. The best example of the latter is the Great Barrier Reef, which follows the coast of N.E. Australia.

The Barrier Treaties were treaties signed between the Dutch Republic and other European countries with the object of keeping a barrier of fortresses between France and the Netherlands. The first was signed in 1709. Among the barrier towns were Namur, Ghent, Lille, Ypres, Menin, and Tournai.

BARRIERE, THÉODORE (1823-77). French dramatist. Born in Paris, he spent ten years in the ministry of war and marine, drawing topographical and hydrographical maps, before the success of a vaudeville, *Rosière et Nourrice*, led him to change his occupation. The author of 100 plays, his chief work is *La Vie de Bohème*, 1849, adapted from the novel of Murger by the author and himself.

BARRINGTON, RUTLAND (1853-1922). Stage name of George Rutland Fleet, a British actor. Born at Penge, Jan. 15, 1853, he made his debut on the stage as Sir George Barclay in *Clancarty* at The Olympic, Sept. 1, 1874. He took leading parts in the Gilbert and Sullivan operas, was a member of George Edwardes's company at Daly's, his own manager at The St. James's, 1888-9, appeared on the halls in 1909, took the part of Falstaff at His Majesty's in 1911, was Chorus in *The Yellow Jacket* at The Duke of York's in 1913, and wrote *Bartomere Towers*, produced at The Savoy in 1893. He died June 1, 1922.

Rutland Barrington, British actor
Bassano

Barrister. In England, Ireland, and other parts of the Empire a member of the senior branch of the legal profession. See Bar.

BARROT, CAMILLE HYACINTHE ODILON (1791-1873). French politician. Born at Villefort of a legal family, he was a believer in constitutional monarchy and signed the address of remonstrance to Charles X in March, 1830. He at first supported the Orleans dynasty, but later turned against it. He acquiesced reluctantly in the Second Republic, but refused to acknowledge Louis Napoleon as emperor, and was imprisoned temporarily. After Napoleon's fall he was made president of the council of state. He died Aug. 6, 1873.

BARROW (A.S. beorg, hill). Term for a prehistoric grave-mound. Sometimes applied to a natural height, e.g. Trentishoe barrow, Barnstaple, 1,500 ft. high, or an early British camp, e.g. Elsworth barrow, Somersetshire, the term denotes more particularly an artificial tumulus, especially one raised in Neolithic, Bronze Age, and late Celtic times in the Mediterranean region and western Europe. There are two types, long and round. Of about 120 long barrows in England, 60 are in Wiltshire and 30 in Gloucestershire. The smaller ones are 120 ft. by 30 ft., and 10 ft. high; West Kennet, Wiltshire, is 335 ft. long. They may enclose small cists, as at Littleton Drew, Wiltshire, or timbered structures, as at Wor Barrow, Dorset. Many are surrounded by a stone circle or a ditch. They have yielded flint implements and rough, non-sepulchral pottery. In Scandinavian and French barrows gold is often found; in British, rarely.

Round barrows may be in small groups, as at Seven Barrows, Hants, or in crowded cemeteries. There are about 2,000 each in Wiltshire and Orkney, and large numbers elsewhere, showing that they were used for single or family interments by the people at large. See Anthropology.

BARROW. River of Leinster, Irish Free State. Rising in the Slieve Bloom Mts., it flows 120 m. E. and S., and at its junction with the Suir broadens into Waterford harbour. At Athy, below which it is navigable for barges, it is joined by the Grand Canal, and above New Ross receives the Nore. With the Suir it drains an area of 3,550 sq. m. It is navigable for small vessels to New Ross.

BARROW, ISAAC (1630-77). British scholar. The son of a London merchant, and nephew of Isaac Barrow (1614-80), bishop of St. Asaph, Barrow entered Trinity College, Cambridge, where he had a great reputation in both classics and mathematics. He was an avowed royalist, like his father, whose loyalty to Charles I cost him his fortune, but in spite of this he was made fellow of Trinity in 1649. In 1659 he was ordained, and in 1660 he was elected professor of Greek at Cambridge and of mathematics at Gresham College, London, and in 1663 Lucasian professor of mathematics at

Cambridge, the first holder of that post. He then resigned his professorship in London, and in 1669 vacated his mathematical chair in favour of his pupil, Isaac Newton. From 1673 until his death, in London, May 4, 1677, he was master of Trinity. Barrow was one of the greatest scholars and preachers of his time. His sermons are models of reasoned argument, occasionally touching the highest notes of oratory.

BARROW, SIR JOHN (1764-1848). British administrator. Born of humble parentage, near Ulverston, where he was educated, Barrow early showed an exceptional facility for mathematics. His first employment was in a foundry at Liverpool, and this was followed by a voyage to Greenland. For three years he taught mathematics at Greenwich, and then went to China and to S. Africa. In 1804 he was appointed second secretary of the Admiralty, a post he held almost until his death, Nov. 23, 1848. An obelisk marks his burial place in the churchyard at Pratt Street, Camden Town.

His name is perpetuated by Barrow Strait, a channel in the Arctic connecting Melville and Lancaster Sounds, and also by Cape Barrow and Point Barrow. He wrote *Voyages of Arctic Discovery* and other works.

BARROW-IN-FURNESS. County, mun., and parl. borough, and seaport of Lancashire. On Morecambe Bay, opposite Walney Island,

Barrow-in-Furness. Town Hall of this industrial centre

Bessemer process, and the development of railway facilities. Copper and slate are recovered. There are engineering, smelting, iron, jute, paper, and flax works, besides shipyards. Railway rolling-stock is manufactured. The Devonshire, Buccleuch, and Ramsden docks afford ample accommodation. Cavendish dock has been leased by the Rly. to Messrs. Vickers for building hangars and manoeuvring airships and dirigibles. There is an airship factory on Walney Island. There are also a graving dock and a depositing dock. Objects of interest are the town hall and the Furness Abbey ruins. One member is returned to Parliament. The borough includes Vickerstown, on Walney Island. Market days, Wed. and Sat. Pop. 69,750.

BARROW-ON-SOAR. Village of Leicestershire. It is 12 m. N. of Leicester by the L.M.S. Rly. Lace, hosiery, and cement are manufactured. It is the centre of a large rural district. Pop. 2,750.

BARRY. Urban district and seaport of Glamorganshire, S. Wales. On the Bristol Channel, 7 m. S.W. of Cardiff, it is a terminus of the G.W. Rly., which owns the docks, and has branch connexions with the L.M.S. line. It owes its commercial importance to the opening in 1889 of the first of its docks, which cover 114 acres and accommodate the largest vessels. There are three large graving docks and some 19,500 ft. of quayage. Coal and coke are exported, and timber, pit props, and iron goods imported. Barry possesses a large market. Pop. 38,945. The Barry Railway, since 1920 part of the G.W. system, was founded in 1884 to connect the rich coalfields of Glamorganshire, then just being developed, with the sea.

BARRY, SIR CHARLES (1795-1860). British architect. The son of a London

stationer, he was born May 13, 1795, and was apprenticed to a surveyor in Lambeth. In 1812 a drawing by him was first shown at the Royal Academy, and after a visit to Italy he began to practise in London. Success came quickly. He was responsible for the Athenaeum in Manchester, the grammar school in Birmingham and the Reform and Travellers' Clubs in Pall Mall, London. In 1836 his design for the new Houses of Parliament was accepted, but he did not live to finish the work. In 1844 he was elected R.A., and in 1852 was knighted. He died at Clapham, May 12, 1860, and was buried in Westminster Abbey.

Two of Barry's sons were architects. Another was Sir John Wolfe-Barry (1836-1918), the famous engineer, and another Alfred Barry, bishop of Sidney 1884-89. See Parliament.

BARRY, ELIZABETH (1658-1713). English actress. Supposed to be the daughter of Edward Barry, a supporter of Charles I in the Civil War, she first appeared on the stage about 1673. Her reputation was made in tragedy, and as the creator of Cordelia in Tate's version of *King Lear*, Isabella in Southerne's *The Fatal Marriage*, and Belvidera in Otway's *Venice Preserved*, she achieved immense success and ranks as one of the greatest of English actresses.

BARRY, ERNEST (b. 1882). British oarsman. His elder brother, W. A. Barry, champion of England, taught him to scull, and one of his first successful races was in 1903 for Doggett's coat and badge. In 1908 he won the sculling championship of England, and in 1912 the championship of the world. He lost the latter to Alfred D. Pelton in 1919, whom he defeated in 1920.

Ernest Barry, British oarsman, former champion of the world

BARRY, JAMES (1741-1806). Irish painter. Son of a shipmaster, he studied art at West's Academy, Dublin. The patronage of Burke enabled him to travel, and he spent four years in Italy. On his return to England, he became an R.A. in 1773. Between 1777-83 Barry decorated gratuitously the Great Room of the Society of Arts in London with pictures illustrating human progress in civilization. In 1782 he was appointed professor of painting to the Royal Academy, but his attacks upon the Academy ended in his expulsion in 1799.

BARRY, MARIE JEANNE BÉOU, COMTESSE DU (1743-93). Mistress of Louis XV. Born at Vaucouleurs, the daughter of a sempstress, she became at 18 a milliner's assistant in Paris, and at 19 went to live with the profligate Jean, comte du Barry, by whom she was introduced to the king. From 1769 she was Louis's mistress and for the rest of the reign made and unmade ministers at will. She was despised by the court for her low birth, but was neither stupid nor vindictive; good nature and beauty were her chief characteristics. She was guillotined Dec. 7, 1793.

BARRY, SPRANGER (1719-77). Irish actor. Born in Dublin, where he made his first appearance in 1744, he went to London in 1746, playing *Othello* at Drury Lane. In 1750 he moved to Covent Garden and continued to challenge comparison with Garrick.

From 1758-67 he played in Duhlin and Cork, and, having ruined himself by theatrical management, returned to London, where, at Drury Lane, under Garrick's management, he again played Othello. In 1774 he returned to London and to Covent Garden.

His second wife, Ann Street Barry (1734-1801), was distinguished between 1774-98 as a tragic actress, and as Desdemona was held to be superior to Mrs. Siddons.

Spranger Barry,
Irish actor
After Sir J. Reynolds

BART OR BARTH, JEAN (1650-1702). French sailor. Born of humble parents at Dunkirk, he served in the Dutch navy, and after 1672 in the French. During the wars towards the end of the 17th century he gained a reputation as a privateer, and did much damage to English and Dutch shipping. He was made an admiral by Louis XIV in 1697, but peace put an end to his activities, and he died April 27, 1702, at Dunkirk.

BARTH, HEINRICH (1821-65). A German explorer. Born at Hamburg, Feb. 16, 1821, and educated at Berlin University, he travelled in Africa and Syria, 1845. From 1850-55 he took part in a mission of the British Government to Central Africa, investigating the remains of ancient civilizations and the modern resources and conditions of the country. In 1863 he was appointed professor at Berlin, where he died, Nov. 25, 1865.

BARTHOLDI, FRÉDÉRIC AUGUSTE (1834-1904). French sculptor. A native of Colmar, of Italian descent, he studied under Ary Scheffer. His first important work was a colossal statue of General Rapp. Others were the monument to the memory of Martin Schongauer, 1861, in the courtyard of the Colmar museum; Lafayette, at New York, 1872; the Lion of Belfort, and the figure of Liberty in New York harbour.

BARTHOLOMÉ, PAUL ALBERT (1848-1928). French painter and sculptor. He studied art in Paris in the studio of Léon Gérôme. His masterpiece is a group of statuary, *Aux Morts* (To the Dead), a beautiful sculpture at Père-Lachaise. As a painter he exhibited at the Salon, but after 1886 he confined himself mainly to sculpture, though he produced a number of fine black-and-white drawings. He died Oct. 30, 1928.

BARTHOLOMEW. Christian saint and one of the twelve apostles (Matt. 10; Mark 3; Luke 6; Acts 1). He is identified by many scholars with Nathanael (John 1), but the evidence is only circumstantial. His festival is kept on Aug. 24. A tradition exists that he was flayed alive in Armenia.

BARTHOLOMEW FAIR. London fair held in Smithfield from 1120-1855. Until 1751 it began on S. Bartholomew's Day, Aug. 24, but after the change in the calendar, on Sept. 3. It was the chief fair for the sale of cloth. To this is due the name of Cloth Fair, an opening off Smithfield.

L. J. F. Barthou,
French statesman

The London thoroughfare of Bartholomew Close, out of Smithfield, is so called from being near the church of S. Bartholomew the Great. Milton and Hogarth lived here. Considerable damage was done on Sept. 8, 1915, by bombs during a Zeppelin raid.

BARTHOLOMEW FAIR. London fair held in Smithfield from 1120-1855. Until 1751 it began on S. Bartholomew's Day, Aug. 24, but after the change in the calendar, on Sept. 3. It was the chief fair for the sale of cloth. To this is due the name of Cloth Fair, an opening off Smithfield.

In 1889. He was minister of public works in 1894-95 and minister of the interior in 1896-98. He was prime minister, Mar.-Dec., 1913. In 1917 he was a leading member of Poincaré's cabinet. In 1921 he was minister for war, and in 1922 he was president of the Reparations Commission and represented France at the conference of Genoa. In 1922-24 and again 1926-29 he served under Poincaré and then Briand as minister of justice and vice-president of the council. Barthou's published works gained for him the reputation of a charming and impressive writer. In 1919 he was elected member of the French Academy.

BARTIZAN (French *bretèche*). In architecture, a small turret overhanging the angles at the top of a tower or projecting from the walls of a building. Sir Walter Scott uses the word in his descriptions of medieval strongholds, and it has been adopted by later writers as the equivalent to machicolation (q.v.).

Bartizan. A small projecting turret

BARTOLOMEO, FRA (1475-1517). Italian painter. He was born near Florence, and became an ardent disciple of Savonarola.

Fra Bartolommeo,
Italian painter

He joined the Dominican order in 1500, though he never became a priest. In 1506 he became acquainted with Raphael in Florence, and devoted his time to painting until his death, Oct. 31, 1517. One of his finest pictures is the figure of S. Mark, now in the Pitti Palace, painted in 1514 under the influence of Michelangelo. The Presentation in the Temple, at Vienna, is another masterpiece, and his decorations for his own convent of San Marco, for the hospital of Santa Maria Nuova, and other Florentine buildings are notable.

BARTOLOZZI, FRANCESCO (c. 1727-1815). Italian engraver. Born at Florence, the son of a goldsmith, he studied painting and engraving at Florence, Rome, and Venice, and settled in England in 1764. He was one of the original painter members of the R.A., and as a stipple engraver he won a high reputation and was responsible for an enormous amount of work. In 1802 he left England to superintend the National Academy at Lishon, where he died, March 7, 1815.

Francesco Bartolozzi,
Italian engraver
J. Vendramini

BARTON, BERNARD (1784-1849). British poet. Born at Carlisle, of Quaker parentage, from 1809 until his death he was clerk in a bank at Woodbridge, Suffolk. He was a correspondent of Southey and a friend of Lamb, having attracted the notice of the one by his *Metrical Effusions* and of the other by his *Napoleon and Other Poems*. He died Feb. 19, 1849. Consult Bernard Barton and His Friends, E. V. Lucas, 1893.

BARTON, CLARA (1821-1912). An American nurse. She organized supplies for the relief of the wounded in the American

Civil War, and on the outbreak of the Franco-Prussian War in 1870 attached herself to the German army and established a number of military hospitals. She was instrumental in founding the American Red Cross Society in 1881, and as its president was actively connected with the work until 1904. She died April 12, 1912.

BARTON, SIR EDMUND (1849-1920). Australian statesman. Born in Sydney, Jan. 18, 1849, in 1879 he became a member of the legislature of New South Wales. From 1883-87 he was speaker, and in 1887 entered the legislative council, being for a time attorney-general. He represented his state in the Federal Convention of 1897-98, and in 1901 became the first prime minister of Australia and minister for external affairs. He held those offices until 1903, when he was made a judge of the high court of Australia. Knighted in 1902, he died Jan. 7, 1920.

Sir Edmund Barton,
Australian statesman

BARTON, ELIZABETH (1506-34). Maid, or Nun, of Kent. She was born at Aldington, Kent, and in 1525 was in the service of a certain Thomas Cohn, whose employer was William Warham, archbishop of Canterbury. Warham's attention was called to her strange religious utterances, and he sent two monks of Canterbury to keep her under observation. One of these, Edward Bocking, decided she might be used to counteract the Protestant movement. Persuaded by Bocking, Elizabeth became a nun at Canterbury, 1527, and attracted wide attention by her revelations. For declaring against Henry VIII she was hanged at Tyburn, April 20, 1534.

BARTON BEDS. Brown, grey, and blue clays, forming part of the Upper Eocene Beds of the Hampshire Basin. About 250 ft.-300 ft. thick, they are noted for the abundance and the beautiful state of preservation of their fossils. The fauna, largely gasteropods, is of a type that indicates a warmer climate than that of the British Isles at present; many of the genera, such as *Conus*, *Murex*, and *Mitra*, are almost entirely confined to the warmer seas. The name comes from Barton, a village in Hampshire where the clays are well exposed.

BARTON-UPON-HUMBER. Urban district and market town of Lincolnshire. On the S. side of the Humber, 6 m. S.W. of Hull, it is a branch terminus of the L.N.E.R. The church of S. Peter is noted for its tower, whose upper part is Early Norman, while the lower probably dates from Saxon times. S. Mary's church dates from the 14th century. The town is connected with Hull by ferry. Market day, Mon. Pop. 6,454.

Barton Beds. Specimens from the fossiliferous Barton clay. See above

BARTON-UPON-IRWELL. Parish of Lancashire, $\frac{1}{2}$ m. W. of Manchester. Here in 1770 Brindley constructed an aqueduct to carry the Bridgewater Canal across the Irwell. This gave place in 1893 to an aqueduct by which the canal is now carried over the Manchester Ship Canal. The aqueduct swings to allow the passage of shipping. Barton is the centre of a rural district (pop. 12,500).

BARUCH. Biblical character. Son of Neriah, he appears in the O.T. as the faithful disciple and friend of the prophet Jeremiah in

the last days of Judah's struggle for existence (604-586 B.C.). He was a man of influence, one of the princes (Jer. 26), and is described as the scribe (Jer. 36).

The Apocryphal work the author of which assumes the name of the Jewish character, Baruch. It became known only in 1866 when the Italian scholar Cerian published a Latin translation of a Syrian version which he had discovered in the Milan library. The Apocryphal is concerned with the fall of Jerusalem and the advent of a new Messianic age. It seems to have been composed, or rather compiled, shortly after A.D. 100.

The book of Baruch is part of the O.T. Apocrypha. Apparently of Jewish origin, and largely concerned with the sins and sorrows of Israel, the earliest extant version is that of the Septuagint. It is believed to have been written between about 150 B.C. and the 1st century of the Christian era. See Apocrypha.

BARYE, ANTOINE LOUIS (1796-1875). French sculptor. Born in Paris, Sept. 24, 1796, he was apprenticed to a goldsmith, but carried off the Salon medal in 1819, and he won the Grand Prix with a relief in 1820. The extraordinarily powerful realism of his animal statuary appealed to the public. His works were largely purchased for America, but in Paris there are several bronzes, including, at the Luxembourg, the celebrated Jaguar Devouring a Hare; a magnificent Lion Seated, in the garden of the Tuileries; and the Combat of the Centaur and Lapitha. He died June 25, 1875.

BARYTES or **HEAVY SPAR**. Natural sulphate of barium. It is noted for its high specific gravity (4.3 to 4.6). More often found in veins than in bedded deposits. It is a common associate of lead ores. Paper coated with a mixture chiefly of sulphate of barium (blanc fixe) and gelatine, and known as baryta paper, is used for photographic printing. See Barium.

BASALT. Name applied to basic lavas that are rich in ferrous and magnesian silicates. In structure they may range from glassy to finely crystalline rocks. In colour they are generally dark grey or black. The constituent minerals are essentially plagioclase feldspars, olivine, and augite, with accessory iron ores. The word comes from basaltis, the Latin form of the native name of a dark species of hard marble found in Ethiopia.

Owing to the fluidity of basaltic lavas when erupted, they most often form sheets of no great thickness but of considerable extent. Successive flows poured out one upon the other often give the country a terraced aspect. The peculiar hexagonal prismatic jointing that gives rise to the basaltic columns of the N. of Ireland, Staffa, and elsewhere is due to the shrinkage of the molten material on solidification and cooling. See Geology; Rocks.

BASE (Lat. basis, step, pedestal). Term applied to the oxides or hydroxides of metals which combine with acids to form new bodies known as salts. Bases very soluble in water are termed alkalis, but the word base is frequently applied to any compound capable of neutralising an acid. A strong base is one which combines with a large proportion of the acid, or reacts with various acids to form very stable salts. A weak base has the opposite meaning. Basic oxides are oxides which react with acids to produce salts. Organic bases are groups of elements containing carbon and nitrogen which exhibit the properties of bases. See Chemistry.

BASE. In war, any frontier town or seaport from which an army moves forward to meet the enemy, and to which it would retreat in case of necessity. British bases in France during the Great War were Boulogne, Calais, Dunkirk, Dieppe, Havre, Rouen and Cherbourg. Mudros was a base for the Gallipoli campaign, Salonica for the Balkan campaign, and Basra for that in Mesopotamia.

In heraldry the base is the lower third of a shield or banner. It is not a charge like the chief or upper third; but any

Basel. The Town Hall, a 16th century building. The frescoes on the façade are reputed to be by Holbein

charge borne below the fess point is said to be in base. (See Shield.)

A base line is a line measured off for the start of triangulation in ordnance surveys. The base line of the British survey is on Salisbury Plain, in Wiltshire.

BASEBALL. National game of America. The game may be roughly described as a combination of rounders and cricket, and is in all probability a scientific form of the early American school game of One Old Cat, with its after developments of Two, Three, and Four Old Cat. The field is marked out in the form of a diamond, 90 ft. square, with a base at each of its four corners, named the home plate (or base), and first, second, and third base. A bat, in the form of a club tapering at the handle end, and a ball 9 ins. to 9½ ins. in circumference, and weighing 5 oz. to 5½ oz., are the implements employed. Various guards are worn to protect the hands and face.

There are nine players on each side, the score being made by runs. The distribution of the fielding side is as follows: the pitcher and the catcher (answering to the bowler and wicket-keeper of cricket), first baseman, second baseman, short stop, and third baseman, and the three outfielders—left, right, and centre. The pitcher delivers the ball to the batsman standing at the home plate, who endeavours to hit it in such a manner and direction as shall give him time to reach at least one of the bases before the ball can be returned to the baseman standing there. If the batsman succeeds in reaching the base in safety, another takes his stroke from the home plate, and the first striker tries in the meanwhile to reach the next base; the last comer at the same time trying to reach second base. A side is out when three batsmen are dismissed. Nine innings are played by each side, and an entire game is generally completed under 2½ hours. Since the Great War the game has been played to some extent in England, especially at Stamford Bridge, London. In the U.S.A. the game is controlled by the National Baseball Association, founded in 1858.

BASEL, BASLE, OR BÄLE. City of Switzerland. On both banks of the Rhine, it is a great railway and distributing centre. The city has large electricity

works and metal, chemical, and ribbon making industries. There are four annual markets and an annual fair. Its muster was a cathedral until 1529. In the cloisters are buried several celebrated men, including Erasmus. The university, founded 1460, was a famous centre in the late Middle Ages. The town hall dates from 1508. The Basel rly. station, completed in 1922, is one of the largest in Europe. In 1929 it was decided to make Basel the seat of the International Bank for Reparations. Basel was founded by Valentinian. It joined the Swiss Confederation in 1501. Pop. 141,150.

The Council of Basel was a general council of the Church summoned by Pope Martin V in 1431. It was the last attempt at control made by those who held the conciliar theory, i.e. that the authority of the Church resided not in the papacy, but in a general council. (See Papacy.)

The Treaty of Basel was signed April 5, 1795, between the French republic and Prussia, and July 22, 1795, between the republic and Spain. By it Prussia was forced to cede from the coalition and surrender all her territory on the left bank of the Rhine. To Spain France gave back her conquests, but received the Spanish part of Haiti.

BASHAN (Hebrew, rich soil). Region of Palestine, E. of the Sea of Galilee, in the upper Jordan valley. It contained cities of refuge (Deut. 4). Extensive remains of its ancient cities have been found. Bashan is frequently mentioned in the O.T. Its most famous king was Og, who was a giant. Its cattle were famed for their ferocity; hence references to bulls of Bashan.

BASHI-BAZOUKS (Turk. bash, head; bozuz, disordered, lawless). Turkish irregular troops. Their atrocities in Bulgaria, in 1876, aroused intense feeling in Britain.

BASHKIR. Autonomous republic of the Union of Russian Socialist Soviet Republics. It is in the S. Ural region, has an area of 90,860 sq. m., and a pop. of 2,741,000. Ufa is the capital. The inhabitants are a pastoral people of Finnish stock. See Russia.

BASHKIRTSEFF, MARIE KONSTANTINOVA (1860-84). Russian painter and author. Born at Gavrantsi, Russia, she was brought up in Italy. She went to Paris in 1877, where she studied painting under T. Robert-Fleury, and, exhibiting her first works under the name of Marie Konstantinova Russ, achieved success in 1883 with Une Parisienne and The Meeting. She died in Paris of consumption, Oct. 31, 1884. Her fame rests rather on her writings, especially her Journal, than on her paintings. They have been translated into English.

Marie Bashkirtseff, Russian writer

Self-portrait, Luxembourg

Basic Liner. Section showing the basic lining to a Bessemer converter

BASIC LINER. Term used in metallurgy. In preparing the furnace or converter in which he carried out his process of producing steel, Bessemer followed ordinary blast furnace practice and lined the converter with fireclay or gunister bricks, i.e. with a material consisting largely of silica. By making the furnace liner of a basic material, it was found possible to utilise other irons containing much larger proportions of phosphorus. The material most suitable as a basic liner is burnt magnesian

limestone, an impure dolomite consisting of carbonates of lime and magnesia, and a little silica. Bricks are made of this material moulded with a small amount of hot tar added to hold them together during the early stages of the firing in the kiln. The small quantity of silica helps to bind the bricks firmly.

BASIC SLAG. Non-acid phosphatic manure obtained as a by-product when steel is manufactured from ores containing phosphorus. The percentage composition is: phosphoric acid, 8 to 20; silica, 5 to 15; sulphuric acid, 0.2 to 1; lime, 35 to 55; iron oxides, 10 to 20; alumina, 1 to 8; magnesia, 2 to 8. Its chief use is on poor pastures. The growth of clover is promoted in a remarkable manner, and, as clover fixes free nitrogen, basic slag indirectly adds to the amount of nitrogenous plant food. See Manure; Soil.

BASIL (Gr. basilikos, royal). Aromatic herb of the order Labiatae, to which most of the culinary sweet herbs belong. Sweet basil (*Ocimum basilicum*), a native of India, has been cultivated in Europe many centuries on account of its clove-like flavour. *O. sanctum*, a shrubby species, is the holy basil or tulsi of the Hindus, who plant it about their temples and make rosaries of beads cut from its wood. The popular names basil thyme and wild basil are given to species of *Satureia*.

BASIL (329-79) (Gr. basileus, king). Saint and bishop. Born at Caesarea in Asia Minor of Christian parents, he was called the Great to distinguish him from his father, S. Basil the Elder. He was educated in Athens and Constantinople, and then returned to Caesarea as teacher and professor of rhetoric. Coming more directly under the influence of religion, he made a tour of the hermitages in Syria, Mesopotamia, and Egypt, and, founding a monastery in his native Pontus, drew the hermits into communities and became the real founder of Eastern monasticism. Ordained priest in 363, in 370 he was made bishop of Caesarea, where he founded schools and hospitals. He died Jan. 1, 379, and his feast is kept on Jan. 30.

The Basilian monks were members of religious communities of men, founded about A.D. 358 by S. Basil. In Russia alone there were about 10,000 monks and 400 monasteries before 1918. Communities of nuns were also formed under S. Basil's rule. They are now found in Poland, Syria, and elsewhere. The habit is a black woollen tunic, and a hood with streamers. See Monasticism.

BASIL. Name of two East Roman emperors. Basil I was chosen joint emperor with Michael in 866. He brought about Michael's murder and ruled until his death, the result of a hunting accident, Aug. 29, 886. Basil II, a son of Romanus II and a descendant of Basil I, was emperor, 976-1025.

BASILDON. Villages of Berkshire, Upper and Lower. Near is Basildon House, long the residence of Alfred Morrison; in 1929, with the estate, it was bought by Sir E. M. Iliffe. It is on the Thames, 8 m. from Reading.

BASILICA. In the Hellenistic age, a large building erected for the accommodation of a number of people gathered together for business purposes, or for the sitting of a court of justice. The Romans adapted the Hellenistic basilica to manifold uses. It was employed by them not only as an exchange, but as a rendezvous for society idlers.

With the conversion of Constantine to Christianity, the basilica suggested itself as

Basilica. Plan of the Basilica Ulpia at Rome. The main rectangle was about 370 ft. long by 180 ft. wide, while the internal height was about 120 ft.

the model for the Christian church. That known as Constantine's basilica in the Forum Romanum was begun by Maxentius and finished by Constantine in A.D. 312. It is vast beyond previous example, the area being about 19,500 sq. ft.

The best preserved basilicas of the early Christians are in Ravenna. There the church of S. John the Evangelist retains the original shape and organism, and in the same town the basilicas of S. Apollinare in Classe and S. Apollinare Nuovo, both of the 5th century, are the oldest extant. See Apse; Clerestory.

BASILICON (Gr. royal). Name of various ointments of alleged sovereign virtue. They are made of wax, resin, and oil mixed with other substances, and used as salves for ulcers, burns, chilblains, etc. The form which contained the four ingredients wax, resin, oil, and black pitch was especially prized, and was known as the great basilicon, or tetrapharmacum (four drugs). The aromatic culinary herb sweet basil is called basilicon.

The basilicon doron or royal gift was a pamphlet written by James I when he was James VI of Scotland. Written for his son Henry, it was printed in 1599, and showed the king's liking for episcopacy.

BASILISK (Gr. basiliskos, little king). Fabulous snake-like creature supposed by the ancients to be king of the serpents. It was so called from the crown or crest on its head. Its

glance was deadly, and it could be attacked only by using a mirror. In the 16th and 17th centuries, when ordnance were named after reptiles, a large brass cannon was called a basilisk. The name is now applied to a genus of crested lizards (*Basiliscus*), natives of Central America. In the A.V. the word is translated by cockatrice (e.g. Jer. 8, 17).

Basilisk. Crested lizard of America, showing the crown or crest on its head

BASIN (late Lat. bacinus, water-vessel). Word employed in several senses. Its main meaning is that of a hollow vessel for holding water, and from this the others are derived. In engineering, a basin is a wholly or partially enclosed area in which water may be impounded or into which it may flow.

In geology, a basin is a region in which the bedded deposits dip towards a centre. The result is that the newest rocks occur in the central portion of the area, and are surrounded by successively older deposits. The phenomenon is the converse of dome. Typical examples are the Hampshire basin, the London and Paris basins, and the great sunken area around Utah lying between the Wahsatch Mts. and the Sierra Nevada.

In geography, basin is the catchment area of a river, or the whole of the land drained by a river and its tributaries. See Dock; Harbour; River.

BASINGSTOKE. Borough and market town of Hampshire. An important rly. junction on the Southern and G.W. Rlys., it is 48 m. by rly. W.S.W. of London, with which it has communication by water through the Basingstoke Canal, the Wey, and the Thames. It trades in malt, corn, and timber, and manufactures farm implements, beer, and clothing. It gives its name to a parl. co. div. returning one member. Basingstoke has a site for an aerodrome in its town planning scheme. Market day, Wed. Pop. 12,718.

Near by are the ruins of Basing House, a residence of the marquesses of Winchester, famous for its resistance to the Parliamentarians during the Civil War.

BASKET. Article for holding something, made usually of rushes or twigs. The most valuable material used in ordinary basket-making is the willow twig or osier, which grows wild in England, but is also extensively cultivated in osier beds, especially in Leicestershire and Nottinghamshire.

The actual making of baskets has altered very little from the earliest times, almost all being made by hand with very simple tools. A shop-knife, a picking knife, bodkin, shears, command-cr, a yard-measure, and an iron for closing up the weaving are the most important. The work is generally done on a broad elm plank, raised a brick's breadth from the floor, upon which lies a lapboard and a tool box. The former is a slightly slanting board about 3 ft. by 2 ft., upon which the

Basket. Making a waste-paper basket. 1. Fitting in byestakes. 2, 3, 4, and 5. Making the fitch. 6. Beginning plaited border. 7, 8, and 9. Plaiting the border. 10. The handle. 11. The finished basket

basket is built. When the bottom of the basket is woven and the stakes for the side are inserted it is fastened upon the lapboard by the bodkin as a pivot.

Basketmakers' Company arms

The Britons were renowned in Rome for their baskets (bascaudae), and the form of the baskets made by them underwent little alteration until late in the 19th century, when innovations in shape and size were introduced.

The Basketmakers' Company, founded in 1569, is one of the London livery companies.

BASKET BALL. Ball game in which only the hands are used in propelling the ball. The goal or basket at each end consists of a net 18 ins. in diameter suspended from a metal ring, backed by a screen. The object of the game is to throw or bat with the hand an inflated leather ball, 18 ins. in circumference, towards the opposite end; a goal is scored when the ball is thrown into the net.

The game can be played on turf or in a covered building, the actual area of play consisting of a space 60 ft. by 40 ft. Indoor matches are usually limited to five players on each side, comprising centre, right and left forwards, and right and left backs. Play begins by the referee tossing the ball over the heads of the opposing centres, who stand within a 4 ft. circle in the middle.

BASQUE. Name of a people of the W. Pyrenees, at the bend of the Bay of Biscay. They inhabit Vizcaya or Biscay, Guipizcoa, and Álava: Navarra, in Spain, and the S.W. third of the Bascos-Pyrénées department, in France. There may be 400,000 in Spain, 150,000 in France, and more than 100,000 in America, mostly in Argentina. The Basques call themselves Euscaldunac, and their speech Euscarian.

Basque. Typical member of this race inhabiting the Western Pyrenees

The Euscarian language is holophrastic, i.e. the sentence is a single verbal unit. It is therefore pre-Aryan. Its ancestry lies in Palaeolithic Europe, and it has developed in geographical isolation, along lines of its own, various agglutinative and polysynthetic elements now tending to decay. Quite two-thirds of the vocabulary is borrowed, but in the remainder affinity with Berber is traceable. While nine-tenths of the Basques are agriculturists, they are also intrepid seamen. They dominated the whale fishery in the N. Atlantic, and took part in establishing the cod fisheries of Newfoundland.

The Basque Provinces, an ancient division of N.E. Spain, comprise the modern provs. of Guipizcoa, Vizcaya (Biscay), and Álava, with an area of 2,739 sq. m.

The Basque Roads is part of the estuary of the French river Charente. Here, April 11, 1809, a British fleet defeated a French fleet.

BASRA, BASSORA, or BUSSORA. Chief port of Iraq, in Mesopotamia. It stands on the Shatt-el-Arab, 60 m. from the Persian Gulf and about 270 m. S.E. of Bagdad. Founded by the caliph Omar in A.D. 636, it later became the capital of a vilayet of the same name. It had a fluctuating prosperity as a port and as

the centre of a large trade in dates, which are still the largest item on its export list. Its population was formerly about 100,000, but

Basra. Aerial view of aerodrome at Shaiba, the station for Basra, on the England to India route Imperial Airways, Ltd.

in 1914 it had fallen to 30,000. At the present time it is about 50,000.

Occupied by the British, Nov. 22, 1914, Basra became a military base for the subsequent campaign in Mesopotamia. By the exertions of the Inland Water Transport Service it rapidly became a great port, equipped in the most modern manner. Since 1920 it has had direct rly. communication with Bagdad. It is an important air-station on the England-India route, the aerodrome being at Shaiba.

BASS (late Lat. bassus, low). In music (1) the lower portion of the series of audible scale sounds; (2) the lowest or fundamental note of a chord; (3) the left-hand portion of the organ or pianoforte keyboard; (4) the lowest and heaviest voice of men.

The name is also given to various instruments of deep tone such as the violoncello or bass viol, bass clarinet, bass saxophone, bass tuba, and bass drum.

BASS OR BASSE. Fish of the perch family, usually from a foot to 18 ins. in length, voracious and fierce. Some species are marine.

Bass. On the left is a bass weighing 320 lb. On the right are: above, common bass; below, stone-bass

others inhabit fresh water. The bass is common around the southern shores of England and Ireland, and often ascends the rivers. The flesh of the marine species is coarse, but that of the fresh-water species in America is superior. Sea bass may weigh up to 400 lb.

BASS OR BAST. Inner fibrous bark of certain trees. The strands are used for making mats and soft baskets, etc., and in the garden for tying up plants.

BASS, MICHAEL THOMAS (1799-1884). British brewer. Born July 6, 1799, he was the son and grandson of brewers at Burton-on-Trent, the business having been started in 1777 by his grandfather, William Bass. Michael Bass took into partnership two of his assistants, and the firm was known as Bass, Ratcliff & Gretton. In 1848 Bass was returned to Parliament as

Liberal M.P. for Derby, and he kept his seat until 1883. He declined a baronetcy, and died April 29, 1884, at Rangemoor, Staffordshire, an estate he had purchased. Bass's eldest son, Michael Arthur Bass, a Liberal M.P., in 1882 was made a baronet, and in 1886 Baron Burton. When he died, in 1909, his baronetcy passed to his nephew, W. A. Hamar Bass, but his barony to his daughter.

The beer brewed by his firm is colloquially known as bass. Its two main varieties are bitter and Burton.

BASSEIN OR BASSIM. Town and port of Lower Burma. Capital of the Irawadi division and of the district of Bassein, it stands on the Bassein river, an outlet of the Irawadi, 75 m. from the sea. It is connected by steamer with Rangoon and by rly. with Rangoon and the interior. Rice is largely exported. Founded about 1250, it was captured by the British in 1852. Pop. 42,563. The district covers 4,127 sq. m. and has a pop. of 489,473.

There is another Bassein, in Bombay presidency, at the S. end of Bassein Island, about 27 m. N. of Bombay. Once a town of considerable importance, with a pop. of nearly 70,000, it has fallen into decay.

BASSENTHWAITE. Lake in Cumberland. A few miles N.W. of Keswick, it lies 224 ft. above sea level, is 4 m. long by $\frac{1}{2}$ m. wide, and has a depth of 70 ft. It has been separated from Lake Derwentwater by the silt deposited by the Greta and Newlands Beck. The village of Bassenthwaite, on the W. side of the lake, has a station on the L.M.S. Rly.

BASSES-ALPES. Department of France, adjoining Italy on the E. Its area is 2,697 sq. m. It is mainly mountainous and thinly populated, sheep rearing being the principal industry. The highest point is the Aiguille de Chambeyron, 11,150 ft. In the fertile valleys grain and fruit are cultivated. Digne is the capital, and the chief rivers are the Durance and Verdon. The largest towns are Digne, Castellane, Barcelonnette, and Sisteron. It was once part of Provence. Pop. 83,347.

BASSES-PYRÉNÉES. Department of France. It lies in the region of the Pyrenees and fronts, between the Adour and Bidasson, the Bay of Biscay. Mainly mountainous, with much forest land, it has an area of 2,977 sq. m. The chief rivers are the Adour, Gave de Pau, and Nive. The valleys are fertile, agriculture flourishes, and horses and cattle are reared. Fruit, including the vine, is grown. Pau is the capital and Bayonne the chief port. Other towns are Biarritz, Orthez, and Oloron, and there are mineral springs. It is largely identical with the old province of Béarn. Pop. 414,556.

BASSETTERRE. Seaport and capital of St. Christopher (St. Kitts), Leeward Isles, British West Indies. Situated on the W. coast, the chief exports are coconuts, sugar, syrup, and cotton. Ships lie in the open roadstead to discharge cargo by lighters. Pop. 7,736.

There is a town called Basse-terro in Guadeloupe, French West Indies. It stands on an open roadstead on the S.W. point of the western of the two islands forming Guadeloupe, the island itself being also known as Basse-terro. It is the seat of the government. Pop. 8,379.

BASSET HORN. Tenor clarinet in F, playing from the treble clef and sounding a fifth below the written pitch. It has extra keys which extend the downward compass to the lower F.

BASSET HOUND. Hound of French origin, employed in covert hunting. Long in the body, with short and crooked legs and

Basset Hound. Queen Alexandra's champion dog, Sandringham Valour

a somewhat heavy head of the bloodhound type, it is remarkably sagacious. It should be black and white, with tan on the head.

BASSOON (Ital. fagotto). Musical instrument. It is the natural bass of the oboe (hautboy) in the orchestra, and in practice the bass of the whole group of wood-wind instruments. The ordinary bassoon is made of wood, with a conical bore a little more than 8 ft. in length. Its tone is produced by a double reed attached to a metal crook about a foot long, in shape approaching the letter S. The scale is controlled by the closing and opening of lateral holes by the fingers, and by keys where the holes are out of reach of the hands.

BASS ROCK. Circular volcanic island in the Firth of Forth, 3 m. E.N.E. of North Berwick. It has an area of 7 acres and a

Bass Rock. Island in the Firth of Forth on which is a lighthouse. To the left is Tantallon Castle

greatest elevation of 350 ft. It has a lighthouse, and is crowded with aquatic birds, especially solan geese. It is penetrated for some distance by a tunnel 15 ft. in height. In 1671 it was purchased by the Government, who converted it into a prison for the Covenanters. Tantallon Castle lies opposite.

BASS STRAIT. Shallow channel between Australia and Tasmania. About 195 m. long, with a greatest breadth of 140 m., it contains many islands and coral reefs. It is named after George Bass, who sailed through it in 1798.

BASSWOOD OR **AMERICAN LIME** (*Tilia americana*). N. American tree of the natural order Tiliaceae. The name basswood was originally given to the common lime, whose inner bark produced bass or bast. See *Lime*.

BAST, BASTET, OR UBASTI. An Egyptian goddess. Symbolising the beneficent solar heat, as distinct from the fiercer heat of the lioness-headed Sekhet, she is usually cat-headed, with sun shield and sistrum (rattle), and is delineated thus on a Pompeian wall-painting. Mentioned under the III dynasty, she was especially worshipped at Bubastis. She was identified by the Greeks with Artemis (q.v.).

BASTAR. Native state of India, in the Central Provinces. Mountainous and covered with jungle, it has an area of 13,062 sq. m. and produces rice, silk, hides, and timber. Pop. 464,407.

BASTARD (Fr. bâtard, from late Lat. bastum, a pack-saddle). One not born in lawful wedlock, or within a competent time thereafter; also a person who has been declared by a competent court not to be the child of its mother's husband. The presumption is that a child born during lawful wedlock is legitimate. The mother is responsible before the law for the child's maintenance.

In Scotland the subsequent marriage of the parents has always made a bastard legitimate in the eyes of the law. This is now so in

England, as a law making this alteration was passed in 1926. (See *Adoption*.)

In heraldry a bastard bar, or bar sinister, is a mark upon the shield to show illegitimacy.

BASTIA. Seaport of Corsica. On the N.E. coast, 98 m. by rly N.E. of Ajaccio, it was formerly the capital and is now the chief commercial town. It has a good harbour at the rly. terminus, and exports tan extracts, citrons, oil, wine, charcoal, copper, and antimony. Coal, grain, and flour are imported. The industries include fishing and the manufacture of tobacco, candles, soap, and macaroni, the distilling of oil, spirits, and liqueurs, and there are tanyards, dyeworks, and marble quarries. Founded by the Genoese, 1383, it became French in 1769, and was captured several times by the English. Pop. 29,998.

BASTIAN, HENRY CHARLTON (1837-1915). British scientist. Born at Truro, April 26, 1837, he qualified as a doctor. From 1867-87 he was professor of pathological anatomy, and from 1887-95 of the principles and practice of medicine at University College, London. He is chiefly known as an advocate of the theory that life could originate from non-living matter. On this he wrote *The Beginnings of Life*, 1872, but his theory was rejected by other scientists. He died Nov. 17, 1915.

BASTIEN-LEPAGE, JULES (1848-84). French painter. He was born at Damvillers, Meuse, Nov. 1, 1848, his father being a small farmer. In 1867, after a few months as a clerk in the Damvillers post office, he went to Paris and joined the École des Beaux Arts. His first picture at the Salon, a *Portrait of a Young Man*, shown in 1870, attracted little attention. On the outbreak of the Franco-Prussian War he served with a company of francs-tireurs. In 1874 his *Spring Song* was bought by the state. In 1877 his *Hayfield* was bought for the Luxembourg, and his *Joan of Arc*, 1880, set the seal on his fame. He died in Paris, Dec. 10, 1884.

J. Bastien-Lepage, French painter. Self portrait

BASTILLE (old French bastir, to build). French term applied originally to any fortress defended by bastions, but finally restricted to the famous Paris fortress-prison.

The Bastille had its origin in two towers on each side of the Gate of St. Antoine. Additional towers were built about 1375 by Hugues Aubriot, provost of Paris. In its final form it had eight towers. From a stato prison it became a general prison, and from the number of persons imprisoned by lettres de cachet it came to be regarded as an emblem of tyranny and oppression. At the outbreak of the Revolution the Bastille was attacked by the Paris populace, July 14, 1789, and destroyed. The anniversary of the taking of the Bastille is kept as a holiday in France.

BASTINADO (Span. bastonada, Fr. bâton, stick). Method of punishment employed mainly in eastern countries. It generally takes the form of blows on the soles of the feet, and its steady continuance is one of the most exquisite kinds of torture known.

BASUTOLAND. Territory in S. Africa, under British administration. It was annexed to Cape Colony in 1871, but in 1879-80 the Basutos revolted, and in 1884 their country was taken over by Great Britain.

Basutoland is a mountainous plateau, with an average elevation exceeding 6,000 ft. and rising on the E. in the Drakensberg above 10,000 ft.; the Orange river rises here in Mont aux Sources (10,763 ft.). It is bounded by the Orange Free State, Natal, and the Cape Province, and covers an area of 11,716 sq. m. Maseru, the capital, is connected by rly. with the Bloemfontein-Natal line. Large herds of cattle are reared. Pop. 540,000.

BAT (old English bakke). Name applied to all the members of the order Chiroptera. The fore limbs are modified to form wings, the fingers being enormously developed, and longer than the mouse-like body of the animal. Between the fingers a membrane extends along the two sides of the animal, and involves the hind limbs and the tail. Most bats are insectivorous, but the large bats of India live on fruit, and certain species will suck the blood of a sleeping animal. All are nocturnal in habit. Sixteen species of bats have been recorded as British, but only four are common. See *illus. p. 206*.

BATAILLE, HENRY (1872-1922). French dramatist and poet. He was born at Nîmes, and published *La Chambre Blanche*, his earliest volume of poems, in 1895, and another volume, *Le Beau Voyage*, in 1904. His long series of stage successes began with *Maman Colibri*, 1904. In 1916 he published *La Divine Tragédie*, and in the following year *Écrits sur le Théâtre*. He died March 2, 1922.

BATAVIA. Old name for Holland, from the Teutonic tribe, the Batavi. The name was occasionally used for Holland and the Netherlands, just as Gaul was for France. In 1795, when the Netherlands were reorganized, the country was called the Batavian Republic, a name it retained until the kingdom of Holland was formed in 1806. This republic was almost identical in size and boundaries with the present kingdom of the Netherlands (q.v.).

BATAVIA. Seaport and chief town of Java, and capital of the Dutch East Indies. It is on the N.W. coast, at the mouth of the

Bastille. The Revolutionary mob storming the famous prison, which was regarded as the symbol of tyranny in France, July 14, 1789

After Prieur

Bat: different species found in various parts of the world. 1. Marine bat. 2. Great leaf-nosed bat; the nose leaf is an organ of perception. 3. Long-eared bat, a common British species. 4. Tube-nosed bat, from Celebes. 5. Abyssinian spotted bat, which feeds largely on figs. 6. Malay fox-bat, the wing span of which measures upwards of 5 feet. See page 205

Jilivong or Jacatra river. The old town comprises the business and native quarter, and the modern city contains the European residential quarter and the chief public buildings. The harbours are at Tanjong Priok, 6 m. N.E. Batavia is the chief emporium of the Dutch E. Indies. Exports include coffee, rice, sago, sugar, tea, tobacco, hides, spices, trepang, rattans, birds' nests, tin, and timber. Founded by the Dutch as a factory in 1610, it was taken by the British in 1811 and restored to the Dutch in 1816. At Buitenzorg, 35 m. S., is one of the finest botanical gardens in the world. Pop. 253,000.

There is a town called Batavia in New York State, U.S.A., pop. 15,600

BATESON, WILLIAM (1861-1926). British scientist. He devoted himself to the study of some of the biological problems raised by Darwin, Mendel, and others. He wrote *Materials for the Study of Variation*, 1894; *Mendel's Principles of Heredity*, 1902; and *Problems of Genetics*, 1913. In 1903 he was made professor of biology at Cambridge, and in 1910 director of the John Innes Horticultural Institution, Merton Park, Surrey. He died Feb. 8, 1926.

Bateson's sister, Mary Bateson (1865-1906), ably edited documents relating to the history of Leicester and other English towns.

BATH, ORDER OF THE. British order given for military and civil service. It was founded at least as early as 1399, but it fell into abeyance and was not revived until 1725. It was remodelled in 1815 and 1855. The military badge is the caliph Omar in A.D. 630, the capital of a vilayet of Persia, and the rose, which are the rose, the

thistle, and shamrock springing from a sceptre between three crowns, within a circle inscribed *Tria Juncta in Uno* (three joined in one), and surrounded by a wreath of green laurel, issuing from a scroll inscribed *Ich Dien* (I serve). The civil badge is an oval circlet with the motto and within this the incised emblems of the rose, thistle, shamrock, sceptre, and three crowns. The ribbon is red. The chapel of Henry VII in Westminster Abbey was assigned to the order in 1725.

BATH. City and county borough of Somerset. In the Avon valley, 107 m. by rly. W. of London, and 11 m. E.S.E. of Bristol, it is served by the G.W. and L.M.S. Rlys., and water communication with London is afforded by the Kennet and Avon Canal, and with Bristol by the Avon river. The city is arranged in a series of natural crescents backed by hills. Its sheltered position and mineral springs have made it popular.

The Perpendicular Abbey Church, dating from 1499, superseded a Norman cathedral, begun in 1090, on the translation of the see of Wells to Bath, and completed 70 years later. It is now the secondary cathedral of the diocese. Other buildings include the Great Pump Room, the Victoria Art Gallery and Library, the Assembly Rooms and the Holburne Art Museum. The Free Grammar School, established by Edward VI in 1552, was removed to its present site in 1752. S. John the Baptist's Hospital was founded in the 12th century and rebuilt in 1728. Other buildings are the guild-

hall, with the banqueting hall therein, and the new municipal offices. The bath chair is named from the city, as also is the oolite or freestone worked in the district. A weekly market is held on Wednesday, and there are two race meetings annually.

Bath was founded, according to tradition, in 863 B.C., and was the *Aquae Sulis* of the Romans. Its modern prosperity is chiefly due to Beau Nash. Pop. 69,920.

BATH, WILLIAM PULTENEY, EARL OF (1684-1764). British politician. The son of William Pulteney, he was born March 22, 1684.

In 1705 he entered Parliament as Whig M.P. for Hedon, and retained this seat until 1734; from then until he was made earl of Bath in 1742 he represented Middlesex. In 1714 he was made

William Pulteney, Earl of Bath

secretary for war, but left office in 1717. Associating subsequently with the Tories, he attacked Walpole vigorously in Parliament and also in Bolingbroke's paper, *The Craftsman*, for which he wrote constantly. He was a minister after Walpole's fall, in 1742, remaining as such until 1746. He died July 7, 1764. His only son having died, the title became extinct.

In 1789 Thomas Thynne, Viscount Weymouth (1734-96), long a secretary of state, was made marquis of Bath, and the title is still held by his descendants. The family seat is Longleat, and the eldest son is called Viscount Weymouth.

BATHBRICK. Light friable brick of sand and clay. Used for scouring purposes, it is

made largely in the neighbourhood of Bridgwater, Somerset, the materials being taken from the bed of the river Parrett.

BATHGATE. Burgh and market town of Lidlithgowshire. It is 25 m. E. of Glasgow by the L.N.E.R. It has foundries and distilleries, and is a centre of an iron and coal mining district. Market day, Mon. Pop. 8,504

BATHOMETER (Gr. *bathos*, depth; *metron*, measure). Instrument for measuring the depth of the sea under a vessel which is in motion. It was invented by Sir William Siemens. Though highly ingenious, it has not superseded the sounding line. See Bathymetry.

Bath. 1. W. front of Abbey church, a masterpiece of Perpendicular architecture. 2. Old Roman bath, ascribed to the emperor Claudius

BASRA. Bath. of Iraq, in Mesopotamia. Shatt-el-Arab, 60 m. about 270 m. S.E. of Basra. The military badge is the caliph Omar in A.D. 630, the capital of a vilayet of Persia, and the rose, which are the rose, the

BATHOS (Gr. depth) In speech or writing, an expression absurdly inadequate to its theme, or one that suddenly falls from the sublime to the ridiculous, for example, the well-known:

And thou, Dathouse, thou great God of War.
Lieutenant-Colonel to the Earl of Mar.

BATHS. The use of baths as a means of recreation and cleanliness has been general from the earliest times. Among many ancient civilized nations it was often a kind of religious ceremonial. Among the Egyptians, Indians, Persians, Japanese, and other Oriental nations it was and is extensively practised.

Discoveries at Crete and Mycenae have shown the existence of baths in pre-Homeric times and the Homeric poems themselves speak of a warm bath being prepared for a guest before a meal. In Sparta a warm bath followed by a cold douche was called laconicon, a term used in connexion with Roman baths.

In Rome, the use of baths constructed after the Greek model grew rapidly after the 3rd century B.C., and under the Empire both private and public baths reached the height of luxury. An idea of their extent can be obtained from the ruins of the *thermae* of Titus, Caracalla, and Diocletian, while the Roman bath at Caerwent in Monmouthshire shows the general arrangement.

BATHS USED MEDICINALLY. Baths afford a useful method of applying cold or heat to the skin in various forms of illness, and of introducing drugs into the body as a special form of treatment. Cold baths may be prescribed where the patient is suffering from high fever. A hot bath has a stimulating effect and increases the rate of the heart beat.

Hot air and vapour baths are largely used in medicine, for the local application of dry heat in chronic rheumatism, sciatica, neuritis, and other forms of illness. In the Turkish bath, which is a special form of hot air bath, the temperature of the hot rooms ranges usually from 125° to 180°, though sometimes 220° is reached in the hottest chamber.

Besides artificial baths, medicinal springs in many parts of the world are used for therapeutic purposes, for example, thermal baths at Buxton, Bath, Aix-les-Bains, etc., salt baths at Droitwich; sulphur baths at Harrogate; and so on.

BATHSHEBA. Wife of Uriah the Hittite. She became the wife of David and the mother of Solomon (2 Sam. 11 and 12; 1 Kings 1 and 2). See David.

BATHURST. City of New South Wales, Australia, in Bathurst co. On Macquarie river, 145 m. by rly. W. of Sydney, it is the centre of a wheat growing district, and is noted for horse breeding. It has rly. workshops, boot factories, tanneries, breweries, and flour mills. The Bathurst goldfields were discovered in 1851; copper and silver also are mined and marble is quarried. Bathurst has an experimental farm. Founded in 1815 it became a city in 1862. Pop. 9,060. There is an island, 30 m. long, called Bathurst off the N.W. coast of Northern Territory, Australia.

BATHURST. Seaport of W. Africa. Capital of the British colony of Gambia, it is situated on St. Mary's Island, a sandbank about 3½ m. long and 1½ m. broad, 7 m. from the mouth of the Gambia river. The island is largely a swamp, but the town is clean and well regulated and trades in rice, flour, cotton goods, sugar, tobacco, nuts, spirits, rubber, hides, guni, and wax. It has cable communication with Sierra Leone and St. Vincent (Cape Verde), and is in wireless communication with Georgetown. Pop. about 9,000. Another Bathurst is a town of Cape Province, S. Africa, 34 m. from Grahamstown.

Bathurst is also the name of an inlet on the

N. coast of Canada, within the Arctic Circle. Here H. V. Radford was killed while exploring in 1912. The Stefansson Canadian expedition reported in 1916 vast deposits of low-grade copper along Bathurst Inlet and Coronation Gulf. There is also a large island of Arctic America, in the Parry Archipelago, called Bathurst. It was discovered by Sir E. Parry, and here Sherard Osborn found the bones of an ichthyosaurus.

BATHURST, EARL. British title borne since 1772 by the family of Bathurst. In 1705 Allen Bathurst became M.P. for Cirencester, with which town his family have since been connected; he was made Baron Bathurst in 1711 and in 1772 an earl. He was a Tory and an opponent of Walpole, and is also known for his friendship with Pope, Swift, Congreve, Sterne, and other men of letters. He was succeeded by his son Henry (1714-94), who was lord chancellor 1771-78.

Henry the 3rd earl (1762-1834) was in

Seymour H. Bathurst
7th Earl Bathurst
Elliott & Fry

office throughout Pitt's long premiership, which ended in 1802. He was in the ministries of Portland and Perceval, and from 1812-27 was secretary for the colonies and for war. From 1828-30 he was lord president of the council. He died July 29, 1834.

The 6th earl married Lillias, daughter of Baron Glenesk, who, on her father's death, became the chief proprietor of The Morning Post. The earl's eldest son is known as Baron Apsley. Cirencester House is the family seat, and around it are the family estates. The family tombs are in Cirencester church.

BATHYMETRY (Gr. bathys, deep; metron, measure) Art of taking soundings of lakes, seas, and oceans. For small depths a plummet attached to a marked hand-line is used. For dealing with great depths recourse is had to the sounding machine, which has a drum, geared to a recording dial and carrying a coil of steel wire with a plummet on the end.

A sounding tube is of glass, closed at the upper end and coated inside with a chemical mixture. The water rises inside the tube as the pressure increases, and the extent of discoloration shows the depth attained. A depth recorder is a cylinder into which a piston is driven against a spring by the water pressure thus moving a non-returning marker along a scale.

BATIK or **BATTIK.** Method used by the natives of the Dutch East Indies to produce curious marbled effects on fabrics. In producing patterns by the batik method those parts of the fabric which are not to be dyed are coated with hot wax. The process has been adopted in other countries for velvets and other materials.

BATISTE. Fine linen or cotton cambric. It is so called either from its alleged inventor, Baptiste, a Cambrai linen weaver, or from its being used for wiping the heads of infants after baptism. It is sometimes dyed and printed.

BATLEY. Borough and market town in Yorkshire (W.R.). It is 12 m. N. of Dewsbury, on the L.M.S. and L.N.E. Rlys. All Saints' church, founded 1482, is chiefly a Perpendicular structure. Batley is an im-

portant centre of the heavy woollen trade, army cloths, shoddy, and druggets being largely manufactured. It has also iron foundries, and in the locality coal mining and stone quarrying are extensively carried on. With Morley it unites to return one M.P. Market day, Wed. Pop. 36,151.

Batley Carr is a district in Yorkshire (W.R.). It lies a little S. of Batley, and has stations on the L.M.S. and L.N.E. Rlys.

BATMAN (Fr. bât, pack-saddle) Originally a man wearing the king's livery hired to take charge of draught and baggage horses during a campaign. The term was afterwards applied to soldiers employed as grooms, and is now used for officers' servants.

BATMAN, JOHN (1800-40). Australian pioneer. Born at Paramatta, New South Wales, Batman went to Tasmania, where he became a prosperous farmer. In 1835 a company was formed and Batman went over to Australia and obtained from some of the native chiefs a grant of about 600,000 acres in what is now the state of Victoria. This arrangement was not recognized by the authorities at Sydney, but some English families settled there.

BATON

(Fr. bâton, stick). Term applied to a field-marshal's staff of authority, to the staff carried by a drum-major, to a policeman's truncheon, and to the wand with which a conductor of an orchestra beats time. The word is used in heraldry for a truncated bend, usually in the old French form, baston.

Baton. 1. Drum-major's baton. 2. Orchestra conductor's baton. 3. Field-marshal's baton. 4. Police-man's baton or truncheon

BATON ROUGE (Fr. red stick). Capital of Louisiana, U.S.A. On the Mississippi, it is 79 m. by rly. and 120 m. by river N.W. of New Orleans. It is the site of the state university. A port of entry, it has a fine harbour, and trades in sugar, cotton, and lumber. The town has a refinery of the Standard Oil Co., sugar refineries, cotton-seed oil mills, brick works, and an ice factory. It was the state capital from 1849 until 1862, when the seat of government was removed by the Confederates to Shreveport. In 1864 the capital was established at New Orleans by the Federals, but in 1882 again transferred to Baton Rouge. Here, in 1862, the Federal troops defeated the Confederates in the American Civil War. Pop. 21,782.

Batrachia (Gr. batrachos, frog). Name applied to the group of amphibian animals including the frog and toad.

BATTALION (Lat. battuere, to strike or beat). Name given to a unit of infantry. In the British army it consists of a headquarters and four companies and is commanded by a lieutenant-colonel. Its nominal strength is 1,021, but its real strength is usually less than this. In the United Kingdom the infantry regiments are divided into battalions, either regular, special reserve, or

territorials. Each battalion is numbered 1, 2, 3, etc., the regulars first, then the others. During the Great War the regiments had also service battalions. The linked battalion system is that under which two battalions of regulars are united in one regiment, of which one serves abroad, the other remaining at home to feed it with recruits. See Army.

BATTAM OR BATANG. Island of the Dutch E. Indies. It is 20 m. S.E. of Singapore, and covers an area of 165 sq. m. It has a small harbour, Bulang Bay.

BATTELS. Word used in the Oxford colleges for the charges made to the undergraduates for board and lodging in college. Battels, therefore, amounts in practice to a bill, and is rendered usually every week. The word meant originally to feed, being connected with batten.

BATTENBERG. Name of a family of German extraction known now as Mountbatten. Alexander (1823-88), a son of Louis

Prince Henry of Battenberg
Dorothy

II, grand duke of Hesse, made a morganatic marriage, and his wife in 1858 was given the title of princess of Battenberg, a small place in Hesse. Alexander's family consisted of four sons and a daughter. Of these Louis (1854-1921) became an admiral in the British navy, was for a time in 1914 First Sea Lord, and in 1917 was created a peer as marquess of Milford Haven. Henry (1858-98) married, in 1885, Beatrice, youngest daughter of Queen Victoria, and died on active service, Jan. 21, 1896. Alexander (d. 1893) was prince of Bulgaria from 1879 to 1886. The fourth son, Francis Joseph (b. 1861), married a daughter of Nichoas I, king of Montenegro. In 1917 the children of Princess Louis and Henry took the name of Mountbatten (q.v.).

BATTERING RAM. Engine of war that preceded artillery for breaching the walls of a castle or other fortress. It consisted of a

Battering Ram. Old picture showing two rams in action, one being pointed for piercing walls

huge beam suspended from horizontals, which were supported by trestles, and the motion given was that of a pendulum. It was called aries (ram) by the Romans from the heavy mass of iron at one end, sometimes shaped like a ram's head.

BATTERSEA. Metropolitan borough of London on the S. side of the Thames, here spanned by the Grosvenor Road, Victoria, or Chelsea, Albert, and Battersea bridges, its area about 3½ sq. m. Chiefly a residential district for the artisan class, it has engineering works, the Morgan crucible works, foundries, and starch, flour, and candle factories, and conducts a considerable river trade. The parish church of S. Mary contains old stained glass and several monuments, including

one to Viscount Bolingbroke. Educational establishments include the Polytechnic. Price's candle factory, now part of the Lever combine, occupies the site of York House, a former residence of the archbishop of York. The open spaces include Battersea Park (200 acres). It is governed by a mayor and council and sends two members to Parliament. Pop. 167,739. See London.

The title of Baron Battersea was given in 1892 to Cyril Flower (1843-1907), who was a Liberal M.P. from 1880 to 1892.

BATTERY. Administrative unit of horse and field artillery. In the British army the battery normally consists of six guns or howitzers. Heavy artillery batteries comprised four 60-pr. breech-loading guns. Machine gun batteries were formed during the Great War, and also trench mortar batteries and siege batteries. A mountain battery consists of light guns transported on backs of mules or horses in rough and mountainous country. See Artillery; Gun.

BATTERY. Group or assemblage of units of machines or appliances. The word is used in electricity, metallurgy, mining, engineering, optics, manufacturing chemistry, and in other connexions. In metallurgy it is particularly applied to a group of stamping mills used to crush ores. One of these mills, a machine consisting of a number of stamping heads in one frame, is loosely called a battery. An electric battery is an assemblage of primary or secondary cells. See Accumulator; Cell.

BATTERY (Lat. battuere, to beat). English legal term for the application of force to the person of another without his consent. If wilful and intentional it is a criminal offence; but even if merely careless it may be a trespass to the person and answerable in damages. A battery is excusable if it is committed in defence of self, wife, husband, child, parent, master, servant, or guest: in defence of one's property, or to retake personal property from a wrongdoer.

BATTLE. Urban district and market town of Sussex. It is 7 m. N.W. of Hastings, by the Southern Rly. Market day, alternate Mon. Pop. 2,891.

Battle Abbey, founded 1067, by William the Conqueror to celebrate his victory at Hastings, was consecrated in 1094. In 1538, at the dissolution of the monasteries, it

Battle. Fourteenth century gatehouse (restored) of the Abbey

was given to Sir Anthony Browne, who pulled down the church and some of the monastic buildings and turned others into a residence.

Battle-axes. 1. Short-handed (11th cent.). 2, 3, and 4. Long-handed (11th and 12th cent.). 5, 6, and 7. Half-moon bladed (15th cent.). 8. Lochaber (Scottish). 9 and 10. German bill-axes (14th cent.). 11. Indian half-moon. 12. Pistol axe (12th cent.). 13. Austrian (17th cent.). 14. Ceremonial (Saxon). 15 and 16. Hammer-headed (Swiss). 17. Cavalry axe (15th cent.). 18. Polish. 19. Bayonet axe (German). 20. Pistol axe (Russian). 21. Axe fitted to trumpet (German 15th cent.). 22. Slavonic half-moon. 23. English (17th cent.). 24. Old Chinese. 25. Half-moon and hook (English). 26. Ceremonial (Polish 17th cent.). 27. English Foot-soldier's, Jedburgh (16th cent.).

The refectory is an isolated ruin, but the modern abbey includes portions of the abbot's house and other remains of the original monastery. Long the seat of the Webster family, it is now a school for girls.

BATTLE AXE. Ancient weapon. It is shaped like a cheese cutter, and fixed to a long handle, which is sometimes of steel. Many examples are in the Tower of London. Among other varieties are the Lochaber axe as used at Prestonpans in 1745, the bardèche, or long-bladed axe, and the Jedburgh axe. Some battle axes from Lahore are chased in gold and silver, and have handles of carved wood mounted with ivory.

BATTLE CREEK. City of Michigan, U.S.A., in Calhoun co. On the Kalamazoo river, at its confluence with Battle Creek, it is 120 m. W. of Detroit, and is served by the Michigan Central and other rlys. In an agricultural region, it enjoys a reputation for cereal foods. Manufactures include agricultural implements, pumps, printing presses, and flour, and there are also rly. repair works. Settled about 1835, Battle Creek was incorporated in 1850 and received a city charter in 1859. During the Great War it was the site of a National Army camp. Pop. 47,200.

BATTLE-CRUISER. Class of warship developed from the old armoured cruisers. The first to be completed for the British navy was the Indomitable, in June, 1908. She and her sisters, the Inflexible and Invincible, were contemporary with the German armoured cruiser Blücher. The ships proved their value on many occasions in the Great War, especially in the battle of the Falkland Islands. The difference between a battleship and a battle-cruiser consists in the lesser protection possessed by the cruiser.

The most famous battle-cruisers were the *Lion*, *Tiger*, and others of that class that fought at Jutland. They carried eight 13.5-in. guns, had a speed of 29 knots and armour 11 ins. thick. Their successors, the *Renown* and the *Repulse*, were a little smaller, 26,500 tons against 28,500, and their armour was only 9 ins. thick. They carried six 15-in. guns and had a speed of 32 knots. The most powerful battle-cruiser in the British fleet is the *Hood*. See *Australia*; *Hood*; illus. p. 210.

BATTLEDORE. Small long-handled racket which is used with a shuttlecock crowned with feathers. The object of the player is to hit the shuttle into the air as many times as possible without letting it drop upon the ground. The game can also be played by two persons hitting the shuttle backwards and forwards to each other.

BATTLEFORD. Town of Saskatchewan, Canada. At the junction of the Battle and Saskatchewan rivers, it is about 254 m. E. of Edmonton, and is served by the C.N.R. It lies in a fertile farming district and is a distributing centre. It was the chief town of the North West Territories, 1876-83. Pop. 1,229.

BATTLEMENT (old Fr. *bastillon*, to fortify). Parapet, about six feet high, above the level of the rampart, with higher and lower parts alternating. The defender of a fortress thus battlemented, while taking shelter behind the higher part, could discharge his missiles over the lower part. The lower part is called the embrasure, formerly the crenelle, the higher part the merlon or cop. See *Castle*; *Fortress*.

Battlement or defensive parapet

BATTLESHIP. Most powerful type of warship. The arrangements of a fleet for battle centre round the battleships, arranged in squadrons, which are its striking force. The modern battleship has developed from the ship of the line, of which *Nelson's Victory* is the outstanding example.

The development of the battleship was greatly influenced by the introduction of iron and steel for shipbuilding and by the use of steam as a substitute for wind power. Another great change was the introduction of the turret, which appeared in a British warship in 1868. The big guns were placed in turrets instead of being arranged on broadsides. This development was followed by an increase in the weight and calibre of the guns, and hence in the armour intended to resist them.

After many trials a type of battleship which remained for many years the standard was introduced. This type had four 12-in. guns mounted in two turrets, one at each end, and a secondary armament of 6-in. guns arranged on broadsides. Examples are the ships of the old Royal Sovereign class, improved in the *Magnificent*, *Formidable*, *Duncan* and *King Edward* classes. Their successors, the *Lord Nelson* and the *Agamemnon*, completed in 1908, carried four 12-in. guns, but instead of having the 6-in. guns mounted on broadsides, they had ten 9.2-in. guns, five on each side, mounted in turrets. These ships were the precursors of the battleship *Dreadnought*, launched in 1906.

With the *King George V* class all ten big guns were increased to a calibre of 13.5-in. and were mounted in double turrets on the middle line, so that all could fire on either side. In the *Queen Elizabeth* and other ships, including the new *Royal Sovereign* and the battle-cruiser *Hood*, guns were increased to

15-in. calibre, but reduced in number to eight. The *Rodney* and the *Nelson*, completed in 1927, had each nine 16-in. guns. (See p. 210.)

Simultaneous developments concerned the speed, the armour and the tonnage of the battleship. The *Hood's* armour is 15 in. thick, the same as the *Queen Elizabeth*. Her tonnage displacement is 41,260, however, against the 27,500 of the *Queen Elizabeth*. The *Nelson* and the *Rodney* have 14-in. armour and a tonnage of 35,000. In 1929 the Germans evolved a new kind of battleship, the *Ersatz Preussen*. Although its tonnage is only 10,000, it is as powerful as vessels three or four times its size. See *Audacious*; *Barham*; *Nelson*; etc.

Battledore and Shuttlecock

BATUM OR BATOUM. Town of the Soviet republic of Georgia. It stands on the S.E. coast of the Black Sea, and is connected with Baku, 600 m. E., by the Transcaucasian rly. It has a good harbour and a wireless station, and exports naphtha products, manganese, maize, salt, and liquorice. It owes its importance to the transport of petroleum and other naphtha products from Baku. In ancient times Batum was called Batis and Petra, and in the Middle Ages Vati. At the Berlin congress it was handed over to Russia.

During the Great War the town, together with Kars, was abandoned by the Bolsheviks, and the Turks occupied it after opposition from Armenian and Georgian bands. The Allies, in Nov., 1918, occupied the port, which in March, 1921, was ceded to Georgia by a treaty between Russia and Turkish Nationalists. Pop. 32,000.

BAUCHI. Prov. of Nigeria. Its area is about 23,700 sq. m. Mountainous in the S.W., the rest of the country is hilly and marked by plateaux forming the principal watersheds of the Northern Provinces. The country is rich in minerals, particularly tin, most of the tin mines of Nigeria being situated in the western portion of the province. These are reached by a narrow gauge line running from the main Iddo-Kano line at Zaria to Bukuru. The chief centres are Bauchi, the capital, founded in 1809, Naraguta, Bukuru, Leri, Pan-yam, Ako, Fali, and Yuli. See *Nigeria*.

BAUCIS. In Greek legend, wife of the Phrygian Philemon. He hospitably received Zeus and Hermes when they visited earth in the form of mortals, after others had driven them from the door. See *Philemon*.

BAUDELAIRE, CHARLES PIERRE (1821-67). French poet. The son of a civil servant, he was born in Paris, April 9, 1821. About 1846 he attracted attention by the boldness and

heterodoxy of his literary opinions, and in 1857 he challenged criticism and conventional morality by his *Fleurs du Mal*. His exquisite feeling for phrase and form, and a certain perverse interest in the morbid, led Baudelaire to an ultimate study of the poems and stories of Edgar Allan Poe, on whom he wrote two essays, and some of whose tales he translated. He also wrote *Petits Poèmes en prose*, a volume of art criticisms. He died Aug. 31, 1867.

Charles Baudelaire, French poet

BAUTZEN. City of Saxony. On high ground above the Spree, about 35 m. by rly. E.N.E. of Dresden, it has many manufactures, among them being woollens and machinery. Its walls and ramparts are used as promenades. Its cathedral dates from the 15th century. The suburbs extend to the left bank of the Spree. It became part of Saxony in 1635. Pop. 40,335.

The battle of Bautzen was fought May 20-21, 1813, between the French under Napoleon and the allied Russians and Prussians under Blücher and Barclay de Tolly. The result was indecisive.

BAUXITE. Clayey, earthy mineral, chemically a hydrate of alumina. It nearly always contains iron and silica and other elements. Bauxite is the principal ore of aluminium. France is the chief source of supply, the U.S.A., Hungary, and British and Dutch Guiana coming next in order. In 1927 the world's output was 1,650,000 tons. It derives its name from Les Baux, a township in the S. of France. See *Aluminium*.

BAVARIA. Republic in federal union with the other states of Germany. The second largest of the German states, its area is

Bavaria, the second largest state of Germany. Inset, the detached Palatinate which lies on the left bank of the Rhine

BATTLESHIP: THE BATTLESHIP NELSON (ABOVE) AND THE BATTLE-CRUISER HOOD (BELOW)

In four diagrams, approximately of relative scale, are shown guns, armour and other details of two of the most powerful units of the British fleet. The upper drawing in each case shows the side elevation; the lower one the plan of the ship. The calibre and class of guns, position of torpedo tubes, and other features are indicated by letters and figures to which there is a key. The thickness of armour is shown by varying degrees of shading, to which also there is a key. The arcs round the big guns of Hood (shown on the plan) indicate the distance within which they can be traversed; the thickness of her deck armour is seen on the elevation. The numbers along the sides are those of the watertight compartments into which the vessels are divided.

pdr. = Pounder

Hood. Completed in 1920, this ship displaces 41,200 tons, has an overall length of 360 ft. and carries a crew of over 1,300 officers and men. She can steam at 32 knots. Her main armament consists of 8 15-in. guns and she carries also 12 5-in. guns and 18 torpedo tubes. Her smaller guns are also in pairs. She has 6 torpedo tubes being submerged. Her machinery consists of geared turbines and Varrow boilers made to burn oil fuel. As the vessel was built to meet the lessons of Jutland, her outstanding feature is the huge area covered by heavy armour

Nelson. Completed in 1927 this ship displaces 33,500 tons, has an overall length of 270 ft., and a crew of over 1,300 officers and men. Her armament consists of 16-in. and 12 6-in. guns with a full complement of smaller ones. She was designed for a speed of 27 knots, and has oil-burning Varrow boilers. Her armour is largely concentrated over the guns and magazines in the fore part of the ship

Armour

29,334 sq. m. and its pop. 7,379,594. Since 1920 the former free state of Coburg has been part of Bavaria. The capital is Munich and the Germans call the state Bayern.

Bavaria proper is bounded N. by Prussia, Thuringia, and Saxony, E. and S. by Czechoslovakia and Austria, W. by Württemberg, Baden, and Hesse. The Rhenish Palatinate is on the W. side of the Rhine, between Hesse, Alsace, and the Rhine Province. The rivers include the Danube and Main, connected by the Ludwig's Canal, the Inn, Isar, and Lech.

The crops comprise oats, rye, barley, wheat, fruit, hops, vines, sugar-beet, and tobacco. Industries include brewing and the manufacture of textiles, machinery, dyes, and colours, and, at Nuremberg, toys. Coal and iron are found. There are universities at Munich, Würzburg, and Erlangen.

Bavaria was long a duchy of the German kingdom. Split into Upper and Lower Bavaria in the 13th century, in 1314 it was united under the Emperor Louis the Bavarian. The Elector Maximilian Joseph was raised to the rank of king by Napoleon in 1806. In 1871 Bavaria joined the new German empire. In 1917 a chancellor for Germany was found in the Bavarian premier, Count Hertling, who, however, resigned in 1918. In Nov. Bavaria was declared a republic. The government was taken over by a cabinet under Kurt Eisner, an independent socialist, who was assassinated the following Feb. The extremists endeavoured to obtain control, but in April, 1919, a moderate government came into existence, and was in office for the next ten years. See Germany.

BAWIAN or **BAWEAN**. Island of the Dutch E. Indies, in the Java Sea, N. of the island of Java. It has hot springs, and produces rice and indigo. Sangapura is the capital. Pop. about 42,000.

BAX, ERNEST BELFORT (1854-1926). British author. Born at Leamington, July 23, 1854, and educated in Germany, he was associated with William Morris in the Socialist League, and later with the Social Democratic Federation. He was the author of important works on philosophy, notably *The Problem of Reality*, 1893; *The Roots of Reality*, 1907; and of *German Society at the Close of the Middle Ages*, 1894; *The Peasants' War in Germany*, 1899. He wrote in addition several books on socialism, and died Nov. 26, 1926.

E. Belfort Bax,
British author
Russell

BAXTER, GEORGE (1805-67). British engraver. He was the second son of John Baxter, of Lewes (1781-1858), publisher of the pictorial Baxter's Bible. In 1836 he invented a method of printing from the wood in oil colours. As many as 20 separate blocks were needed in the production of some of the illustrations for his *Pictorial Album*.

BAXTER, RICHARD (1615-91). English divine. Born of yeoman stock at Rowton, Shropshire, Nov. 12, 1615, he was ordained and became a teacher. In 1640, after a short curacy at Bridgnorth, he settled in Kidderminster, where he developed into a strong puritan. During the Civil War he was with the troops as a chaplain, afterwards returning to Kidderminster, where he exercised an extraordinary influence and his work is still remembered. In 1660 he moved to London and was made chaplain to Charles II. The Act of Uniformity (1662) drove him from the Church of England and he

Richard Baxter,
English divine

lived for some years in retirement. In 1672 he was allowed to return to London, and in 1685 he was imprisoned for over a year by

Bayeux Tapestry. Duke William, with a large fleet of transports conveying horses and fighting men, crosses the Channel to Pevensey, on the Sussex coast between Hastings and Eastbourne

Jeffreys for sedition. He died in London, Dec. 8, 1691. Of his writings the best known is *The Saints' Everlasting Rest*. His followers were called Baxterians. His *Autobiography* was edited by J. M. Lloyd Thomas. Consult also *Life*, F. J. Powicke, 1927.

BAY (late Lat. *baia*). Geographical term for an indentation of the coast or of the shore of a lake. Coastal bays are generally formed by the submergence of the land, and narrow as they advance into the mainland. They are often found between two headlands, the rock waste produced by coastal erosion being deposited between the two prominent points. Bays in lakes occupying river valleys are formed where streams enter the lakes.

A bay window is one, rectangular in plan, placed in or forming a bay. It dates from the Middle Pointed Period and in its earliest form was a projecting window constructed between two buttresses. It is prominent in Tudor architecture.

BAYADERE. Indian dancing girl. The term is applied especially to the temple courtesans of southern India known officially as *devadasis* (slave-girls of the gods), the Indian counterpart of the hierodules or temple servants connected with the shrine of Aphrodite at ancient Corinth.

BAYARD, PIERRE TERRAIL, SEIGNEURDE (c. 1476-1524). French soldier, known as "the knight without fear and without reproach." He was born in Dauphiné, and after being page to the duke of Savoy entered the service of Charles VIII of France in 1487. He was knighted in 1495 after the battle of Fornovo. In 1503, at the battle of the Garigliano, he is said to have defended the bridge single-handed against 200 Spanish troops, and he fought at Ravenna in 1512, and at Marignano in 1515. In 1521 he successfully defended the town of Mézières. He was mortally wounded at the battle of the Sesia, April 30, 1524, and was buried in the Franciscan priory near Grenoble.

BAYARD, THOMAS FRANCIS (1828-98). American statesman and diplomatist. Born at Wilmington, Delaware, Oct. 9, 1828, Bayard became a lawyer, practising in his native town. Chosen in 1869 as senator for Delaware, he was the fifth member of his family to serve in this capacity, one being his grandfather, James Asheton Bayard (1767-1815), who helped to arrange the treaty that ended the war of 1812. He belonged to the Democratic party, and was four times its candidate for the presidency. President of the senate in 1881, in 1893 Bayard went to London as ambassador. He died Sept. 28, 1898.

BAYAZID. Name of two sultans of Turkey. Bayazid I (1347-1403) became ruler on the murder of his father Murad I in 1389. Distinguished as a soldier and the first Turkish ruler to be called sultan, his greatest victory was over the emperor Sigismund and the Christians in 1396 at Nicopolis: this was

followed by the submission to him of the East Roman emperor, Michael Palaeologus. In 1402 Tamerlane defeated him, and, according to the

tradition, perpetuated by Marlowe, kept him prisoner in a cage until his death.

Bayazid II (1447-1512), son of Mohammed II, came to the throne in 1481. During his reign the westward progress of the Turks was largely stopped, although his war with Venice added to his territories. He abdicated in 1512.

BAYBERRY (*Myrica carolinensis*). N. American shrub of the order Myricaceae. It is from 3 ft. to 6 ft. high, with oblong leaves dotted with fragrant resin glands. The flowers are in short sealy catkins and the nuts are encrusted with white wax.

BAYEUX (anc. Augustodurum, later Baiocas, city of the Baiocasses). City of France, in the dept. of Calvados. It stands on

Bayeux. South doorway of the splendid 13th century cathedral

The Bayeux Tapestry is a linen band bearing panoramic scenes in worsted needlework, over 200 ft. long and 19 ins. high. It formerly hung round the cathedral nave. The 72 scenes, with Latin inscriptions, depict English history from Harold's departure for Normandy to his death at Hastings. The borders bear scenes from Aesop's Fables and fabulous figures.

BAYLE, PIERRE (1647-1706). French philosopher and critic. Born at Carlat in Languedoc, Nov. 18, 1647, son of a Calvinist minister, he became professor of philosophy at the university of Sedan, and afterwards at Rotterdam. In 1697 he published his *Historical and Critical Dictionary*, the work by which he is best known. As the result of religious controversy Bayle was deprived of his professorship in 1693. He died at Rotterdam, Dec. 28, 1706.

A follower of Descartes and afterwards a sceptic, by his influence on Voltaire, whose *Candide* was inspired by him, on Helvétius, and others, Bayle was the forerunner of the French materialists of the 18th century.

Pierre Bayle,
French philosopher

BAYLIS, LILIAN MARY. Theatrical manager. A daughter of Edward W. Baylis, a musician, she appeared in public as a violinist when a child. Her aunt, Emma Conn. was responsible for converting the London music hall called the Old Vic into a theatre where good plays were produced and Miss Baylis became associated with this undertaking. In 1898 she became its manager, and her services in keeping the theatre going through some difficult years, including raising money for extensive repairs, were rewarded when in 1929 she was made a Companion of Honour. She was also interested in the reopening of Sadler's Wells (q.v.) theatre.

BAY OF ISLANDS. Harbour of New Zealand. On the N.E. coast of North Island, 112 m. N. of Auckland, the harbour is large, deep, and sheltered. Russell, on the S. side, is the chief port of the N. district. Opua is an emergency coaling harbour. Another bay of the same name indents the W. coast of Newfoundland. It has valuable fisheries.

BAYONET. Stabbing weapon fixed to a rifle for shock action by infantry. Its name is said to be taken from Bayonne, where it was manufactured at the end of the 17th century. In its original form it was a plug bayonet, which fitted into the barrel of the musket and had a guard. Then came the ring and socket bayonet, to slip on outside the barrel.

In length and strength the bayonet has been continually altered to suit various

Bayonets. 1 and 2. English examples of 17th century. 3. Bayonet with ring and socket. 4. Spanish knife bayonet. 5. Four-edged bayonet. 6. Triangular bayonet. 7 and 8. Sword bayonets used in the British army. 9. Long French bayonet. 10. Russian bayonet

patterns of firearm. The British bayonet in 1914 was a sword bayonet; it weighed about 1 lb. and added from 12 ins. to 18 ins. to the length of the infantry weapon, according to the pattern of the rifle in use. The bayonet of the French infantryman was longer and more particularly intended for thrusting. The Russian bayonet, triangular, with no cutting edge, was solely for thrusting.

BAYONNE. City and seaport of France, in the dept. of Basses-Pyrénées. It stands at the junction of the Nive and Adour. 3½ m. from the Bay of Biscay and 124 m. by rly. S. by W. of Bordeaux on the main line from Paris to Madrid. The rivers divide the city into three parts. Great Bayonne, Little Bayonne, and St. Esprit. The Gothic cathedral was restored in the 19th century. The citadel was designed by Vauban. A large trade in local produce passes through the port. Vessels drawing from 18 ft. to 25 ft.

can enter the harbour, but access is rendered difficult by the bar. Shipbuilding, distilling, and the manufacture of leather, sugar, and linen are among the industries. Pop. 28,215.

The Bayonne Decree was an order, issued by Napoleon, April 17, 1808, by which all vessels flying the American flag that entered the ports of France and her allies were to be seized.

BAYONNE. City of New Jersey, U.S.A., in Hudson co. It stands on a peninsula separating New York harbour from Newark Bay, and is served by the Lehigh Valley and the Central of New Jersey rlys. and by the Morris Canal, which separates it from Jersey City. It contains oil refineries, radiator, smelting, and insulated wire works, chemical and silk factories, and extensive docks for the shipment of coal. Part of Bergen until 1861, it was chartered as a city in 1869 and reincorporated in 1872. Pop. 88,767.

BAYOU. Distributary of the Mississippi. In its lower course the Mississippi has made natural embankments called levees, which it may break during floods. Through the gaps a stream may leave the main river and flow across the country, sometimes reaching the sea independently. Such a watercourse is a bayou, a term now also used for other channels. The state of Mississippi is frequently called the bayou state.

BAY RUM. Aromatic liquid used as a toilet article and also to relieve headache. It may be prepared from rum and the leaves of the bayberry, or from the oil from bayberry leaves mixed with alcohol and water and a small proportion of oil of pimento and oil of orange peel.

BAYSWATER. Western residential district of London. It lies N. of Kensington Gardens, its chief thoroughfare being the Bayswater Road, and is part of the metropolitan borough of Paddington. In the Bayswater Road is the Chapel of the Ascension, opened in 1897 for private prayer and decorated with Bible scenes and figures by Frederic Shields (d. 1911), and in the adjacent cemetery is the grave of Laurence Sterne. In Moscow Road there is a Greek church. The name is said to be a corruption of Baynard's Water.

BAY TREE (*Laurus nobilis*). Small evergreen tree of the order Lauraceae. It is a native of S. Europe, and is the victor's laurel of the ancients. It attains a height of 30 ft.-40 ft., but always retains a shrub-like appearance. Its lance-

shaped aromatic leaves are used in cookery. The tiny yellowish flowers dark purple berries, which yield the butter-like substance known as oil of bays, used by veterinary surgeons. The sweet bay or beaver tree of the U.S.A. is *Magnolia virginiana*.

Bay tree, from the leaves of which the victor's wreath of laurel was made

BAZAAR OR BAZAR. Persian word for a market, a collection of stalls, or shops. The word spread to India, Ceylon and other Oriental countries, being sometimes used in its original sense and at others for a single selling establishment. In Britain it is used mainly for a sale of goods for some religious or charitable purpose. It is also used for shops wherein fancy goods, toys, and small utensils are sold.

BAZAINE, FRANÇOIS ACHILLE (1811-88). French soldier. He was born at Versailles, Feb. 13, 1811, and as an army officer saw much active service between 1854 and 1863. On the outbreak of the Franco-Prussian War, 1870, he was appointed to the command of the 3rd army corps. After defeats culminating at Gravelotte, he withdrew his army within Metz on Aug. 19. The city was invested by the Prussians, and on Oct. 27 Bazaine surrendered with 173,000 men. In 1873 Bazaine was tried by court-martial and sentenced to death, but the sentence was commuted. In 1874 he escaped from captivity near Cannes and went to Madrid, where he died Sept. 23, 1888.

François A. Bazaine, French soldier

BAZALGETTE, SIR JOSEPH WILLIAM (1819-91). British engineer. Born at Enfield, of French descent, March 28, 1819, he was appointed chief engineer to the Metropolitan Board of Works in 1855. The question of main drainage for London was then under consideration, and Bazalgette began work on the system in 1858, and completed it in 1875. He then worked upon the Thames embankments, his other great undertaking, and greatly improved the bridges across the river. He retired in 1889, and died March 15, 1891.

Sir J. Bazalgette, British engineer

BAZIN, RENÉ FRANÇOIS (b. 1853). French novelist. Born Dec. 26, 1853, he became professor of law in the Roman Catholic university of his native city of Angers. His reputation was established by *Une Tache d'Encre*, 1888. His later novels, e.g. *De toute son Ame*, 1897; *La Terre qui meurt*, 1899; *Les Oberlé*, 1901, emphasise strongly the sanctities of domestic life. Bazin was elected to the Academy in 1903.

BAZZI, GIOVANNI ANTONIO (147-1549). Italian painter. Known as Il Sodoma and also as Razzi, he was employed to assist in the decoration of the Vatican, and was responsible for the ceiling of the Camera della Segnatura. His greatest achievements were the frescoes illustrating the Life of S. Catherine of Siena, 1526, in S. Domenico, and two paintings in S. Francesco, at Siena.

BDELLIUM (Gr. bdellion). Name given to various myrrh-like gum resins obtained from species of *Balsamodendron* or balsam-tree.

Bayonne. Modern towers at the W. end of the imposing medieval cathedral

African bdellium is very acrid, but has little odour; Indian bdellium, also acrid, smells like cedar wood. The ancients credited bdellium with valuable medicinal properties. The bdellium mentioned in Gen. 2 as occurring with onyx in the gold-bearing land of Havilah may be a precious or ornamental stone

BEACH. Coastal formation due to wave action. The sea is constantly attacking a cliff coast, boulders are broken away, and these are broken into fragments. The set of the currents moves these, which gradually become smaller, along the shore. Wherever an indentation tends to reduce the speed of the water, part of the rock-load is dropped and makes a deposit, which becomes a beach.

Raised beaches, formed by the ancient uplifting of the land, occur especially in the W. of Scotland, S. of Ireland, S. Wales, Normandy, and Brittany. Lake beaches are due to the lowering of the water level. Horizontal notches on the hillsides marking old lake beaches are not uncommon. Notable examples are the Parallel Roads of Glen Roy in Scotland, the Great Lake region in N. America and the Salt Lake district of Utah.

The term beachcomber is applied to a long, curling wave rolling in from the ocean, and also to a person who lives by plunder along the coast, as in the islands of the Pacific. Beachcomber, the writer in *The Daily Express*, is J. B. Morton.

BEACHLEY. Village of Gloucestershire. Between the Severn and Wye, close to extensive coal and iron fields and deep-water channels, Beachley was selected in 1917 as the site of a naval dry dock—part of a scheme for three national shipyards.

BEACHY HEAD. Promontory of the Sussex coast. About 3 m. S.W. of Eastbourne, at the E. extremity of the South Downs, it is a steep chalk cliff, 533 ft. high, with a lighthouse off the base, which replaced the Belle Tout lighthouse on the cliff to the W.

Beachy Head, Sussex, England. A splendid white chalk cliff, it rises 533 feet sheer from the sea

The battle of Beachy Head was a naval engagement between the English and the French, June 30, 1690. Louis XIV, supporting James II, was preparing a great naval armament to threaten London, foment a Jacobite rising, and invade England. The main English fleet under the earl of Torrington was in a position of hopeless inferiority, but his instructions obliged him to seek battle. His plan was to hold the French van while he concentrated an attack on their rear, but his Dutch ships in the van were overpowered. A few were set on fire to escape capture, and the main fleet retired to the Thames.

BEACON (A.S. beacen, signal). Term especially applied to the fires formerly lighted on heights to spread news, as at the time of the Spanish Armada. The beacon-bills came to be known as beacons, e.g. Dunkery

Beacon, on Exmoor, and the Brecknockshire Beacons, often called simply the Beacons.

The word is also used for an artificial seamark. Wireless beacons for the guidance of ships have been erected at various places round the coast. These can direct ships in all kinds of weather over a range of 50 miles.

BEACONSFIELD. Urban district and market town of Buckinghamshire. It is 21 m. by rly. W.N.W. of London (Paddington), on the G.W. and L.N.E. Rlys. It was the home and burial place of Waller and Burke, to whom there are monuments in the church. Market day, Sat. Pop. 3,642.

There is a town called Beaconsfield in Tasmania, in the chief goldfield on the island. The town of Beaconsfield in Griqualand West, S. Africa, is built round the diamond mines.

BEACONSFIELD, BENJAMIN DISRAELI, 1ST EARL OF (1804-81). British statesman. Born December 21, 1804, at 6, King's Road,

now 22, Theobald's Road, Bedford Row, London, he was the second child and eldest son of Isaac Disraeli and his wife Maria Basevi. In 1817 his parents severed themselves formally from the Jewish faith, and all their children were baptized at the church of St. Andrew, Holborn. In 1821 he was articled to a firm of London solicitors. His early literary efforts were unsuccessful, but in 1826 he suddenly burst on the world with his *Vivian Grey*. In 1829 he toured in the east.

On his return to England Disraeli became a figure in society, wrote a good deal and tried to enter Parliament, first as a radical and then as a tory. Five times he failed, but in 1837 he was elected M.P. for Maidstone. His colleague was Wyndham Lewis, whose widow he married in 1839. His political writings attracted attention, and he began to preach the gospel of Young England which animates his romance *Sybil*, the second of a trilogy beginning with *Coningsby* and ending with *Tancred*. In 1846 his career as politician really began, and as M.P. for Shrewsbury he led the protectionists in their struggle with Peel. In 1852 he took office for the first time, being chancellor of the exchequer under Lord Derby. This ministry, however, only lasted a few months, as did the one which the two formed in 1858, but in the intervening years Disraeli had proved himself much the greatest figure on the tory side.

Beaconsfield, Hughenden Manor, Bucks., the house bought by Disraeli from the duke of Portland

Beading. An example of flush beading of semicircular section. See below

In 1866 Derby formed his third ministry, again with Disraeli as chancellor of the exchequer and leader of the House of Commons. The Reform Act was passed, and in 1868 Disraeli became prime minister; but he was soon out of office again. For nearly six

years he led the opposition, the period being also marked by the appearance of his greatest work, *Lothair*, in 1870 and the death of his wife in 1872. In 1874 the tory party won a great victory at the general election and Disraeli again became prime minister, being returned for Buckinghamshire, which he had represented since 1847. In 1876 he accepted an earldom, but he remained premier until 1880, his term of office being notable for the Congress of Berlin.

The general election in the spring of 1880 resulted in a large Liberal majority, and Beaconsfield at once resigned his office. In the ensuing years he appeared from time to time in the House of Lords and in society but most of his time was passed at Hughenden. At this time, too, he published *Endymion*, a book of memories, which brought him in £10,000. In March, 1880, he became seriously ill, and he died on April 19, 1881. He was buried in the churchyard at Hughenden, beside his wife. Consult *Life*, W. F. Monypenny and G. E. Buckle, 1910-24; *Letters to Lady Bradford and Lady Chesterfield*, ed. Lord Zetland, 1929.

BEAD. Generally, an ornament for personal wear. Beads are made in a variety of forms from glass, metal, jet, coral, and other materials, and perforated so that they may be strung on a thread or its equivalent.

The old English word *bede* (prayer) came to be used for the small pierced balls with which the prayers repeated by an individual were counted. Such heads, when strung together, form a rosary. The telling of beads is the recitation of an allotted number of prayers, which are checked off by counting the heads. See *Rosary*.

BEADING. In architecture, bending is a moulding, generally of semicircular section. Many varieties are used. An angle bead is often applied as a finish to the corner of a structure; a cock bead is one that projects beyond the surface, and a flush bead one whose outside surface is flush with the general surface; a double bead is two beads side by side, without any other surface or moulding between them. See *Moulding*; also *illus. above*.

BEADLE (A.S. bydel, herald). English parish officer, now almost obsolete. He was chosen by the vestry and acted as parish messenger and servant. Doorkeepers and other attendants in institutions, and, in Scotland, the church officers are often called beadle.

BEAGLE. Small sporting dog of the foxhound type. It is almost exclusively used for hunting hares and rabbits. Smallness is a strong point in its favour, and a specimen that only tops the measure at eleven or twelve inches is esteemed. The legs should possess ample bone, and in the foreleg absolute straightness. Packs of beagles are kept at several places in England. They meet regularly, and are followed on foot.

Beagle. Prize-winning specimen of this breed of sporting dog

BEAK. Horny sheath covering the elongated jaw processes of the skull in birds. The beak serves the purpose of seizing, and sometimes dividing, the food.

In birds of prey it is usually sharp and hooked at the tip; in some insectivorous birds broad and fringed with hairs; in many aquatic birds flattened and specially designed for sifting particles of food from the water. It is long and slender in birds which probe in the mud for worms and stout and strong in those that feed on seeds and berries. The word is from late Lat. *beccus*, of Celtic origin.

BEAKER (late Lat. *bicarium*, wine cup). Glass vessel resembling a tumbler, larger at the top than at the base. It is now used chiefly in chemical laboratories.

Beaker of Worcester-shire ware painted by T. Baxter

BEALE, DOROTHEA (1831-1906). British educationist. Born in London, March 21, 1831, she became in 1849 mathematical tutor at Queen's College, London, and in 1857 head of the Clergy Daughters' School, Casterton, Westmorland. In 1858 Miss Beale was chosen principal of the Ladies' College, Cheltenham, and under her it was most successful. She supported women's suffrage, and wrote books on education. She died at Cheltenham, Nov. 9, 1906. Consult *Life*, E. Raikes, 1908.

BEAM (A.S. tree). In building, a piece of wood, stone, or metal of which the transverse dimensions are small relatively to its length. A beam is commonly supported, more or less horizontally, at two or more points, and itself serves as a support for some superstructure, such as a roof or a ceiling.

In engineering, a beam is any structure subject to a load causing bending stress.

In naval architecture, a beam is part of the transverse structure of a ship. The beam as a dimension of a ship is her greatest breadth on the water-line. The word is also used for a collection of parallel rays, such as those of heat or light. See *Architecture*; *Light*.

BEAMISH. District of Durham. It is 11 m. S.W. of Newcastle on the L.N.E.R. and is a coal mining centre. The Gothic church of S. Andrew was built in 1876. Pop. 17,646.

BEAM SYSTEM. System of directional wireless telegraphy in which the waves sent out are concentrated in the form of a beam on to the distant station. The transmitting aerial is composed of a line of vertical wires set at right angles to a great-circle line connecting the two stations, and is suitably placed with regard to a reflector formed of other vertical wires so that the majority of the waves travel forward in the desired direction, instead of spreading out in all directions. At the receiving end another reflector focuses incoming waves on to the receiving aerial, only those waves falling within a given angle being capable of reception.

Among the advantages of the beam system are low working cost and capital cost, greater

speed of working, less interference by other stations, and a greater measure of secrecy.

Short wave-lengths are used, and the power needed for transmission is only a small fraction of that required in other systems.

Beam services to Canada, etc., are operated by the British Post Office. See *Wireless*.

BEAN. Seed of plants of the order Leguminosae. French and runner beans belong to the genus *Phaseolus*, and broad beans to the genus *Faba*. They are grown as annuals

and have been introduced from various tropical countries. The broad bean (*Faba vulgaris*) was probably a native of Egypt.

French or kidney beans (*Phaseolus vulgaris*) were introduced into Europe from S. America in 1597, but their culture was first popularised in France; the name kidney bean alludes to the shape of the seeds. Runner beans (*Phaseolus multiflorus*) are among the most easy and economical of vegetables to grow. The unripe seeds of the bean are cooked and eaten, or the entire young pod is sliced and boiled. Beans that are sliced and thrown into water for some time previous to cooking lose much of their nutriment and flavour. Ripened and dried beans are largely used as cattle food.

The carob or locust

bean is sometimes called the bean tree. See *Carob*.

BEAR. Animal of the genus *Ursus*, belonging to a small group of omnivorous mammals. Various species are found in nearly every part of the world. Most of them are heavy,

tinguished by its shape; the neck is long in proportion to the body and the head small.

All bears possess long, sharp talons, and, being able to stand upright, they are able to come to grips and crush their enemies by sheer pressure. They hibernate, and are able to remain throughout the entire winter in a lethargic state without losing condition.

The brown bear grows to a great size, frequently weighing 700 lb. to 800 lb. It is found throughout most parts of Europe and ranges into Siberia. America has several species, including the grizzly and the black bear.

The fur of the Syrian bear is valued for its warmth and beauty, and its fat and gall are in demand for medicinal purposes. The small Malayan bear, often called the honey bear, has a very short coat and is usually of an inoffensive disposition. The sloth bear of India belongs to a different genus. It is of uncouth appearance, having very long hair and a prolonged muzzle resembling a snout.

BEAR BAITING. In England, though mentioned as early as

Henry II's time, the baiting of bears by dogs did not become generally popular until about 1550. Sir Walter Raleigh calls the Bear Gardens in Southwark and Westminster Abbey two of the principal sights of London. It is recorded that Queen Elizabeth in 1575 witnessed a grand display of bear baiting in which a dozen boars took part. The pastime received a check during the Commonwealth, but on the return of Charles II was again in favour, and it is mentioned by Pepys and Evelyn. Paris Garden in Southwark, and afterwards the New Bear Garden in Clerkenwell, were two famous London resorts. Bear baiting

and bull baiting were not actually forbidden by Parliament until 1835.

BEAR or **BJORNGE.** Island of the Arctic Ocean, in Barents Sea. Midway between North Cape, Spitsbergen, and North Cape, Norway, it is said to have been visited by the Scandinavian explorer Thorfinn in the 11th century, and was sighted by the Dutch explorer Willem Barents in 1595. The sovereignty of Norway over the archipelago to which it belongs was recognized in 1920. The extensive coal deposits, discovered in 1916, are worked by a Norwegian company.

BEARBERRY (*Arctostaphylos uva-ursi*). Evergreen shrub of the order Ericaceae, a native of Europe and N. America. The leaves are thick and leathery; the flowers are pink, in few-flowered racemes at the end of the trailing branches, and are followed by small red berries. The Alpine bearberry, which loses its thin, toothed leaves at the end of summer, has white flowers and black berries

Beaks of various birds: 1. Grosbeak. 2. Crossbill. 3. Kingfisher. 4. Macaw. 5. Sea eagle. 6. Pheasant

Bean. Varieties successfully acclimatised in the British Isles. 1. French bean. 2. Broad bean. 3. Scarlet runner

Bear. 1. Polar bear. 2. Grizzly bear, a native of America, which is mainly carnivorous and highly dangerous to man
J. Hayward and Gambler Bolton

cumbersome animals of slow gait, and in general appearance much alike. An exception is the Polar or white bear (*U maritimus*) almost exclusively carnivorous, and dis-

BEARD. Specific term for the hair on a man's chin and cheeks. It is also applied to similar appendages, e.g. the tail of a comet, a part of a printing type, etc.

Among Orientals generally the removal of the beard is considered highly degrading, and the practice common among the giants of medieval European romance of cutting off the beards of captive princes may perhaps be traceable to an eastern source. In England the beard, which for a time was taxed, attained its greatest glory during the 16th and 17th centuries, when it was clipped in fantastic shapes, e.g. the spade, the fork, the stiletto, and the tile or cathedral beard.

BEARD MOSS (*Usnea dasypoga*). Lichen of grey-green colour that hangs from old forest trees in many parts of the world, including Britain. Its threads are a foot or more in length. It has been used to make an orange dye.

Beard moss. Lichen on an old tree

BEARDSLEY, AUBREY (1872-98). British artist. Born at Brighton, Aug. 21, 1872, and self-trained except for a brief apprenticeship

in Fred Brown's school in Westminster, he illustrated Malory's *Morte d'Arthur* at the age of nineteen, and afterwards became the most prominent of the draughtsmen employed on *The Yellow Book*, 1894-96, and *The Savoy Magazine*. Mastery of line and rare decorative sense were the main characteristics of his work. No English artist

Aubrey Beardsley, English artist

has better understood the possibilities of line work. He died at Mentone, March 16, 1898. Consult *Life*, R. B. Ross, 1909; *An Aubrey Beardsley Scrap-book*, G. Derry, 1919; *The Beardsley Period*, O. Burdett, 1925.

Beard tongue. Common name for the pentstemon (q.v.).

BEARING (A.S. *beran*). Nautical term denoting the position of a vessel at sea. To take bearings means to find out that position. Bearing away is changing the course by sailing away, and bearing down upon is sailing with the wind towards anything. See *Navigation*.

BEARINGS. The parts of a machine at which revolving parts make contact with, and support, or are supported by, non-revolving parts. Bearings are of two main classes: (1) plain, in which large surfaces are in contact; (2) those in which balls and rollers are interposed, contact being limited to points or lines.

Cast iron, gun-metal, and brass are used for plain bearings, but for those subject to heavy stresses soft so-called anti-friction alloys, containing tin, lead, zinc, antimony, copper, and bismuth in various proportions, are preferred. A plain bearing is usually made in two halves, with a cap bolted down on top to hold them firmly in their housing. Plain bearings depend for efficiency on good lubrication. Ball and roller bearings offer only about one-fifth of the frictional resistance of plain bearings. The balls or rollers are mounted in cages to separate them and prevent rubbing, and run round with the shaft as well as revolving on their own centres. Roller bearings are used for loads which would be too heavy for balls, and are favoured for the small rolling-stock of mines and quarries.

BEARN. One of the provinces of France before the Revolution. On the S., bordered by the Pyrenees and Navarre, it is now covered by the department of Basses-Pyrénées. It

was at one time part of Gascony and under English rule. After being governed by viscounts, it passed to the family of Foix and then to that of Albret. By marriage it was united to Navarre, then under the Bourbons. Orthez and later Pau was the capital.

Bear's-foot. Variant name of the green hellebore. See *Hellebore*.

BEARSTED, MARCUS SAMUEL, 1st Viscount (1853-1927). British merchant. Born Nov. 5, 1853, he became connected with the oil industry in the East. He obtained control of oilfields, and was the founder of the Shell Transport and Trading Co., of which he remained chairman until 1920. In 1894-95 he was sheriff of London, and in 1902-3 lord mayor. In 1903 he was made a baronet, in 1921 a baron, and in 1925 a viscount. He died Jan. 17, 1927, when his son became the 2nd viscount.

BEARWOOD. Estate at Wokingham, Berkshire. On the outskirts of Windsor Forest, it was bought by John Walter early in the 19th century. The Tudor house was built by his son, John. Mansion and grounds were sold in 1919, and in 1920 were presented by Sir T. L. Devitt and Sir A. Yarrow to the Royal Merchant Seamen's Orphanage.

BEAT. Musical term indicating: (1) the main subdivision of a bar or measure, e.g. 3-4 time has three beats in the bar; (2) the movement of the conductor's baton to indicate the pace of (1); (3) the throbbing or waving effect of two sounds which are not tuned in perfect consonance with each other. In acoustics a beat is produced by combinations of sound waves or simple harmonic motions.

In wireless telegraphy and telephony and in broadcast reception beat denotes a set of oscillations produced by imposing oscillations of one frequency on those of another frequency. Thus in the heat or heterodyne method of receiving continuous wave transmission the incoming waves are imposed upon a set of oscillations produced by a local oscillator, there being a small difference in frequency between the two series. The resultant beats, which are of audible frequency, are rectified and then caused to actuate a telephone or other receiving apparatus.

BEATIFICATION (Lat. *beatus*, blessed; *faccere*, to make). In the Roman Catholic Church, term for an act of the Holy See declaring a person or persons to be venerated as blessed after death. It precedes canonisation and involves a procedure extending over many years. A modern example was the beatification of Joan of Arc, who was beatified in S. Peter's, Rome, April 18, 1909, about 30 years after the formal inquiry had been opened. See *Canonisation*.

Bearings of various kinds. 1. Plain bearing. 2. Roller bearing. 3. Radial ball bearing

to the virtues that qualify their possessors for admission to the kingdom of heaven. The Beatitudes are given at greater length in Matthew than in Luke.

BEATON OR BETHUNE, DAVID (c. 1494-1546). Scottish cardinal. The third son of John Beaton of Balfour, Fife, he was educated at St. Andrews and Glasgow and also in Paris, and was appointed bishop of Mirepoix, France, in 1537. In 1538 he was made a cardinal, and he succeeded his uncle as archbishop of St. Andrews in 1539. As a statesman his policy was to defeat the plans of Henry VIII for bringing Scotland under the English crown, and this involved hostility to the Protestants. George Wishart entered into a plot for the murder of Beaton, and was executed, and in revenge, Wishart's friends murdered the cardinal in his castle at St. Andrews, May 29, 1546.

David Beaton, Scottish cardinal

Beaton's uncle, James Beaton (d. 1539), was archbishop of Glasgow, 1509-22, and archbishop of St. Andrews, 1522-39. From 1513-26 he was chancellor of Scotland and for a time its regent. Like his nephew, he favoured a French and opposed an English alliance. He also tried to check the beginnings of the Protestant movement in his country.

Another James Beaton, the cardinal's nephew, became archbishop of Glasgow in 1522 and died in Paris, April 30, 1603.

BEATRICE. The glorious lady of his mind, of whom Dante wrote in both the *Vita Nuova* and the *Divina Commedia*. Her original was said by Boccaccio to have been a Florentine, Beatrice Portinari. When Dante first saw her, he was a boy of nine and she a child of eight. She was married at an early age to one Simone de Bardi and died in 1290, aged 24.

Beatrice. The painting by D. G. Rossetti, called Beata Beatrix. Tate Gallery

daughter of Queen Victoria, she was her mother's constant companion both before and after her marriage in 1885 to Henry, prince of Battenberg. She succeeded her husband as governor of the Isle of Wight on his death in 1896. When, in 1917, the royal family took fresh names, Princess Henry's sons took the name of Mountbatten instead of Battenberg.

Her four children were Victoria Eugenie (Ena), who married Alphonso King of Spain in 1906 and has three sons. Alexander was made marquis of Borodale, Wexford, he entered the Navy in Jan., 1884. He served as second in command with the naval brigade on the Nile, and in 1898 was in the expedition to Khartoum.

In the Boxer rebellion in China, 1900, Beatty was with the naval brigade at Tientsin, being

BEATITUDES (Lat. *beatitudo*, blessedness). Word used since the days of S. Ambrose in the 4th century to describe the logia or sayings of Jesus Christ in the opening passages of the Sermon on the Mount (Matt. 5, 3-11; Luke 6, 20-22). The passages refer

twice severely wounded, and for his conduct he was promoted captain. He was promoted rear-admiral in Jan., 1910, attaining flag rank at the age of 39. He became naval adviser to Mr. McKenna, when First Lord of the Admiralty, but, owing to differences of opinion, was placed on half-pay; he was recalled to the Admiralty by Mr. Churchill in 1912, when he became naval secretary to the First Lord, which office he held until March, 1913, when he was appointed to command the battle-cruiser squadron. He was in command of this squadron when the Great War broke out.

Earl Beatty,
Admiral of the Fleet
Russell

Beatty's first action was off Heligoland on Aug. 28, 1914. His ships completed the destruction of two German light cruisers, and covered the withdrawal of four damaged British vessels. On Jan. 24, 1915, Beatty fought the battle of the Dogger Bank, in which he brought to action four German armoured vessels, three of them battle-cruisers, and sank the *Blücher*. His flagship, the *Lion*, at a critical moment was disabled. His great hour came on May 31, 1916, when he sighted Hipper's squadron of five German battle-cruisers and opened the battle of Jutland.

In Nov., 1916, Beatty succeeded Jellicoe in command of the Grand Fleet, and on Nov. 21, 1918, under the armistice terms, he received off Rosyth, Firth of Forth, the surrender of 16 of the best German Dreadnoughts, 8 light cruisers, and 50 destroyers.

In 1919 Beatty was promoted to the rank of Admiral of the Fleet, and for his services during the war granted £100,000 by Parliament and given an earldom, receiving also several other honours. From Oct., 1919, to July, 1927, he was First Sea Lord. In 1901 he married Ethel, daughter of Marshall Field of Chicago, and their family consists of two sons, the older being Viscount Borodale. See Dogger Bank; Jutland.

BEAUCE, LA. District of north-central France. A plateau nearly 3,000 sq. m. in extent, bounded on the S by the Loire, it is almost waterless and treeless, and is noted for wheat and sheep. It covers parts of four departments—Eure-et-Loir, Loir-et-Cher, Loiret, and Seine-et-Oise. Chartres is the chief town.

BEAUCHAMP, EARL. British title held since 1815 by the family of Lygon. Reginald Pyndar, having inherited the estates of his kinsmen the Lygons, took that name. His son William, M.P. for Worcestershire 1776—1806, was made Baron Beauchamp in 1806, and Earl Beauchamp in 1815. William, the 7th earl (b. 1872), was a leading Liberal politician. From 1899–1901 he was governor of New South Wales and from 1907–10 lord steward of the household. Afterwards (1910–15) he was First Commissioner of Works and Lord President of the Council. He was made lord warden of the Cinque Ports in 1913, K.G. in 1914, and chancellor of London University in 1929. The family residence is Madresfield Court, Malvern Link, and his eldest son is called Viscount Elmley. The earls are descended from the family of Beauchamp, earls of Warwick from 1268–1445.

William Lygon,
7th Earl Beauchamp
Russell

BEAUCLERK, TOPHAM (1739–80). Friend of Dr Johnson. Grandson of the first duke of St. Alhans, he was educated at Trinity College, Oxford, and in 1768 he married Lady Diana Spencer. In 1757 he made the acquaintance of Johnson, and the friendship lasted until Beauclerk's death in Great Russell Street, Bloomsbury, March 11, 1780. His library of 30,000 volumes, chiefly relating to the history of England and of the stage, was sold by auction the year after his death.

Topham Beauclerk,
Dr. Johnson's friend

BEAUFORT, DUKE OF. English title held since 1682 by the family of Somerset. Charles Somerset, a natural son of Henry Somerset, a natural son of Henry Beaufort, 3rd duke of Somerset, who was a descendant of John of Gaunt, was created Baron Herbert of Raglan in 1506, his wife being a Herbert, and in 1513 earl of Worcester. Henry, the 5th earl, a supporter of Charles I, was made marquess of Worcester in 1642.

Henry Somerset, 3rd marquess of Worcester, was prominent in the reign of Charles II, who in 1682 made him duke of Beaufort. Most of the dukes of Beaufort, especially Henry, the 7th (1792–1853), and his son, Henry, the 8th (1824–99), have been famous sportsmen, while other members of the family, notably Lord Raglan, have won distinction as soldiers. Badminton House, Gloucestershire, is the chief seat of the family; formerly it was Raglan Castle, Mon. The duke's eldest son bears the title of marquess of Worcester.

BEAUFORT, FRANÇOIS DE VENDÔME, DUKE OF (1616–69). French courtier. Son of César de Vendôme, he was a grandson, through Gabrielle d'Estrees, of Henry IV. For his plots he had been exiled and then imprisoned before he became a leader of the Fronde, when, as king of the markets, he was for a brief time the hero of Paris. This led to another exile, from which he returned in 1654. He led the French fleet against the pirates of Algiers in 1664, and was killed when fighting the Turks, June 25, 1669.

BEAUFORT, HENRY (d. 1447). An English cardinal. He was the natural son of John of Gaunt by Catherine Swynford, and half-brother of King Henry IV. Made bishop of Lincoln in 1398 and chancellor in 1403, in 1404 he succeeded William of Wykeham as bishop of Winchester. In 1430 he accompanied Henry VI to France, and in 1431 crowned him king of France in Paris. He died April 11, 1447, at Winchester, where he had completed the cathedral and re-established the hospital of S. Cross.

BEAUFORT SCALE. Device for recording the strength of the wind at sea. It was invented in 1805 by Sir Francis Beaufort. The scale consists of the numbers from 0 to 12, to each of which are assigned a wind designation and the appropriate wind velocity in miles per hour. See Anemometer.

Beaufort Number	Wind	Velocity in m.p.h.
0	Calm	0
1	Light air	1–3
2	Slight breeze ..	4–7
3	Gentle breeze ..	8–12
4	Moderate breeze	13–18
5	Fresh breeze ..	19–24
6	Strong breeze ..	25–31
7	High wind	32–38
8	Gale	39–46
9	Strong gale	47–54
10	Whole gale	55–63
11	Storm	64–75
12	Hurricane	Above 75

BEAUFORT WEST. Town of Cape Province, S. Africa. Capital of Beaufort

West division, it lies at an alt. of 2,792 ft. on the Great Karoo, at the base of the Nieuwveld Mts. It is 339 m. by rly. N.E. of Cape Town on the rly. to Kimberley, and is a centre of the wool trade. Pop. 6,140.

BEAUHARNAIS. French family famous for its connexion with Napoleon. Alexander de Beauharnais (1760–94), a member of an old family of landowners, fought in America against Great Britain and was guillotined June 23, 1794. His widow Josephine married Napoleon and his daughter Hortense became the wife of Louis Bonaparte and the mother of Napoleon III.

Alexander's son, Eugène (1781–1824), was born in Paris Sept. 3, 1781, and was soon on campaign with his stepfather, who adopted him as a son, and declared him heir to the Italian kingdom. Eugène ruled Italy well, and showed military skill when leading an army against Austria in 1809, in the retreat from Moscow, and especially at Wagram and at Lützen. Compensated in 1814 for his Italian lands, he bought the Bavarian duchy of Leuchtenberg, and was succeeded as duke by his elder son on his death, Feb. 22, 1824.

His younger son, Max Eugène (1817–52), who became duke in 1835, married a daughter of Tsar Nicholas I. Their son was domiciled in Russia, and until the fall of the Romanoffs in 1917 the family were Russian nobles.

BEAULIEU OR BEWLEY. Village of Hampshire. It is on the estuary of the Beaulieu, 6 m. N.E. of Lymington, and has ruins of a Cistercian abbey, founded by King John, in which Margaret of Anjou took refuge after the battle of Barnet. Near is the seat of Lord Montagu of Beaulieu. Pop. 1,011.

BEAULIEU. Winter pleasure resort of France. It is on the Riviera, about 4 m. E. of Nice, in the department of Alpes-Maritimes. Electric trams run to Nice and Mentone.

BEAUMARCHAIS, PIERRE AUGUSTIN CARON DE (1732–99). French dramatist. Born in Paris, Jan. 24, 1732, the son of a watchmaker, whose calling he at first followed, his first play, *Eugénie*, 1767, was the outcome of adventures in Spain in 1764. His comedy *The Two Friends*, 1770, was followed by a lawsuit over money which provoked the famous *Mémoires*, 1774–5. The pungent satire of his masterpieces, *The Barber of Seville*, produced in 1775, and *The Marriage of Figaro*, produced in 1784, ensured his fame, a fame extended by the operatic versions by Mozart and Rossini. He died in Paris, May 19, 1799.

Pierre Beaumarchais,
French dramatist

BEAUMARIS. Borough and market town of Wales. The county town of Anglesey, on Beaumaris Bay, near the entrance to Menai Strait, 7 m. N. of Bangor, it has a grammar school, a 13th century church, and golf links. It grew up round the ruined castle, Beaumaris (fine marsh), built by Edward I, 1283. Market day, Sat. Pop. 1,835.

BEAUMONT, FRANCIS (1584–1616). English poet and dramatist. Born at Grace Dieu, Leicestershire, son of Francis Beaumont, a lawyer, he was educated at Oxford, and read for the law. Enjoying the friendship of Michael Drayton and Ben Jonson, he was introduced to the circle of wits and poets who were gathered at the Mermaid

Francis Beaumont,
English dramatist

and Apollo taverns, and thus met John Fletcher, with whom in 1607 or 1608 he began a literary partnership that lasted until two or three years before his death on March 6, 1616.

In the plays commonly known as those of Beaumont and Fletcher, issued in folio form in 1647 and 1679, Massinger and others had a hand. Beaumont's work is found particularly in *The Woman Hater* and *A King and No King*; and he collaborated in *Four Plays in One*, *Philaster*, *The Maid's Tragedy*, *Cupid's Revenge*, and *The Knight of the Burning Pestle*. In addition to providing prologues for several of Jonson's plays, he wrote *The Masque of the Inner Temple* and *Gray's Inn*, 1612. He is buried in Westminster Abbey, and there is a window to his memory in the cathedral of S. Saviour, Southwark. See Fletcher, John.

BEAUMONTAGUE. Name given to a kind of cement used for filling up holes, cracks, or other defects in wood or iron work. Various ingredients are used, e.g. white lead or grease and lampblack for ironwork; white lead, litharge, and linseed oil for woodwork.

BEAUMONT-HAMEL. Village of France. It is 6 m. N. of Albert, near the river Ancre, and defied capture by the British in the opening stages of the battle of the Somme, July, 1916. When the battle of the Ancre was undertaken later in the year it was stormed Nov. 13, 1916. It was the scene of fierce fighting in the German offensive, March-May, 1918. See Ancre; Somme.

BEAUNE. Town of France, in the department of Côte-d'Or. It is on the Paris-Lyons rly., about 23 m. S. by W. of Dijon. It contains two old churches, one, Notre Dame, dating from the 12th and 13th centuries, and the remains of the old castle and fortifications. The hospital, founded 1443, is still used. Beaune is chiefly noted for its wine, which was in high repute as early as the 4th century. It is a fine, full-flavoured wine of good body, having the properties of Burgundy (q.v.) Pop. 11,681.

BEAU SEANT. War banner of the Knights Templars. It was half black, half white and bore the inscription *Non nobis, Domine, sed nomini tuo da gloriam* (Not to us, O Lord, but to Thy name give the glory). It was carried by the balcanifer or standard bearer of the Templars (q.v.).

BEAUVAIS. City of France, capital of the department of Oise. It is 54 m. N.N.W. of Paris on the rly. to Calais, and stands near the union of the rivers Thérain and Avelon. Its chief building is the magnificent Gothic cathedral, begun 1225. Adjacent is a Romanesque building, probably the nave of the earlier cathedral. Of the manufactures, that of tapestry is old and celebrated. In 1472, when Beauvais was besieged by the duke of Burgundy, the women under Jeanne Lainé, or La Hachette (little axe), as she was called, so distinguished themselves that they are commemorated by an annual festival. A banner which Jeanne captured hangs in the town hall, and her statue is in the city. Pop. 19,270.

BEAVER. Genus of large rodents, including two species, the European (*Castor fiber*) and the American (*Castor canadensis*). Both are bulky animals, measuring about 30 ins. in length of body, and weighing about 50 lb. The body is thickly covered with soft brown fur, the legs are short, and the hind feet webbed. The tail is laterally flattened and covered with scaly and hairless skin. The European beaver is found in France about the river Rhône, in Poland, and in Norway; also in N. Asia.

The beaver is nocturnal in its habits, and feeds on the bark of trees and roots of aquatic plants. In Europe it lives in burrows, but in America it constructs lodges of logs of wood

and mud in the streams and lakes. In winter it feeds on food accumulated during the summer, and spends much of its time in sleep. To obtain wood for its lodges the animal gnaws through the trunks of trees and then floats the logs down the river.

The beaver is hunted for its fur. The castoreum from the scent gland is used in perfumery, and the flesh of the animal is an article of food with the Indians of N. America.

At one time the fur of the beaver was used for covering the tall hats worn by men, and these were sometimes called beavers. A heavy woollen cloth, smooth with a superfine face, used for overcoats is also called beaver.

BEAVERBROOK, WILLIAM MAXWELL AITKEN, BARON (b. 1879). British politician. The son of a Presbyterian minister of New Brunswick, he was born May 25, 1879. Educated at Newcastle, New Brunswick, he had had a successful business career in Canada when he settled in England about 1909. In 1910 he was chosen Unionist M.P. for Ashton-under-Lyne, and retained his seat until 1916 when he was made a peer. A close friend of Bonar Law, he was made minister of information and chancellor of the duchy in 1918, but left politics for journalism. Taking control of *The Daily Express*, he raised its circulation enormously before retiring from it in favour of his elder son in 1929. He also founded *The Sunday Express* and bought a controlling interest in *The Evening Standard*. In 1930 he was prominent in advocating a scheme of free trade within the Empire. He wrote *Politicians and the War*, 1928.

Maxwell Aitken, Lord Beaverbrook

Beauvais. The cathedral, one of the finest in France. It is remarkable as an example of Gothic architecture

BEAVER RAT. Local name of the Australian water rat (*Hydromys chrysogaster*), found in Australia, Tasmania, and New Guinea. The body is about a foot long, and the fur is black on the back and yellow beneath.

Beaver in the act of adjusting logs in order to form a dam

BEAVER TREE (*Magnolia virginiana*). N. American shrub of the order Magnoliaceae. It has thick oval leaves and fragrant flowers, about three ins. across, with broad white petals. It is also known as the laurel magnolia and the sweet bay.

BEBEL, FERDINAND AUGUST (1840-1913). German socialist. He was born at Cologne, Feb. 22, 1840, and worked as a turner at Leipzig and elsewhere. A disciple of Karl Marx he helped to found the German Social Democratic party, and was elected in 1867 to the diet of the North German Confederation. From 1871 until his death he was, save for a short interval, a member of the Reichstag. In 1872, on a charge of contemplated treason, Bebel was sentenced to two years' imprisonment. Gradually, after his release, he rose to the leadership, unofficial but undisputed, of the Social Democratic party in the Reichstag, and kept it to the end. He died Aug. 13, 1913.

Ferdinand Bebel, German socialist

BEBINGTON. Part of an urban dist. of Cheshire, comprising the former urban dists. of Higher Bebington, Lower Bebington, and Bromborough. It stands on the river Mersey, 3 m. S. of Birkenhead, on the L.M.S. and G.W. Rlys. Bricks are manufactured and a white free-stone is quarried. See Bromborough

BEC. Benedictine monastery in Normandy, about 26 m. from Evreux. Founded about 1034, it was endowed with extensive lands, some in England. Its founder, Helluin, was its first abbot, but its fame was due to the school opened by Lanfranc, whom S. Anselm succeeded. Its decline set in during the 13th century, but it existed until the Revolution. Talleyrand was its last prior. In its 14th century church is the tomb of Helluin.

BECCAFICO (Italian beccare, to peck; fico, fig). Popular Italian name for the garden warbler, a bird that visits Great Britain in the summer. It is fond of feeding on figs, and is a favourite article of food in the S. of Europe.

BECCAFUMI, DOMENICO (1486-1551). Italian painter and sculptor. Son of a labourer, he was born at La Cartina, near Siena, and was called Beccafumi after his father's employer. His S. Michael in the church of the Carmine at Florence is one of his strongest paintings, but his great work is the designs for the mosaic pavement at Siena cathedral. He worked very successfully in bronze, the six angel lamps in Siena cathedral being by him. He died at Siena, May 18, 1551.

BECCARIA, BONAESA CESARE, MARCHESE DE (1735-94) Italian jurist. He was born in Milan, March 15, 1735, and was educated by the Jesuits at Parma. His fame rests upon his work, *Dei Delitti e delle Pene* (Concerning Crimes and Punishments). Beccaria was the first jurist to advocate that punishment should take into account the person to be punished as well as the crime. He died, Nov. 28, 1794.

Beaver Rat, Australian water rat. It feeds on small fish and insects

Beaver tree, or laurel magnolia

BECCLES. Borough and market town of Suffolk. It stands on the navigable Waveney, 8 m. W. of Lowestoft by the L.N.E. Rly.

Bechuanaland Protectorate. Map of the country of the Bechuana people. It occupies the centre of a great plateau lying S. of the Zambezi river.

The Perpendicular church of S. Michael has a detached belfry tower. The town possesses a grammar school, founded in 1712 a new town hall, the old one being utilised as a library, a corn exchange, and a court house converted from a gaol. Its industries include printing, corn milling, and malting. Beccles received its charter in 1584. Roos Hall, a 16th century moated manor house, is near Market day. Friday. Pop. 7,077.

BÊCHE DE MER (Fr. sea-spade). Name given by the Portuguese to the sea cucumber or Holothuria, otherwise known as the trepang. See Sea Cucumber.

BECHUANALAND. Country of South Africa inhabited by the Bechuana, a group of Bantu negroid tribes. The Bechuanaland Protectorate is bounded S. and E. by the Union of South Africa, N. by Rhodesia and the Zambezi river, and W. by South-West Africa. Its area is about 275,000 sq. m. and pop. 152,983, of whom 1,743 are Europeans. It is administered by the British Government from Mafeking, Cape Province.

South Bechuanaland, formerly the crown colony of British Bechuanaland, is bordered on the N. by the Molopo river, has an area of 51,524 sq. m. and a pop. of 119,911, including 20,804 Europeans. Annexed to Cape Colony in 1895, it is administered by the S. African Government. The principal towns are Serowe, Francistown, Palapye; and Vryburg and Taung in Cape Province, the last four on the rly. from Cape Town to the Congo. Products include cattle, sheep, goats, and Kaffir corn and maize.

Sir Adam Beck, Canadian politician. Elliott & Fry

BECK, SIR ADAM (1857-1925). Canadian politician. Born in Ontario, June 20, 1857, he

entered business life at London, Ontario. He became connected with undertakings for developing and distributing electric power from

Niagara Falls. In 1905 he was appointed to the executive council of Ontario, being a member without portfolio of Sir J. P. Whitney's cabinet. In 1906 he was chosen chairman of the commission on hydro-electric power, and in 1914 was knighted. He died Aug. 15, 1925.

BECK CASE. The Case of mistaken identity which involved a grave miscarriage of justice.

Adolf Beck, a Norwegian financial agent resident in London, was twice convicted at the Central Criminal Court of mean frauds on women, and was sentenced in 1896 to seven years' penal servitude. While awaiting sentence, 1904, on the second conviction, the real delinquent was caught. Beck received two king's pardons and £5,000 compensation.

BECKTON. District of Essex. An industrial area, it is near the north bank of the Thames, 9 m. from London, with a station on the L.N.E. Rly. Here are enormous gas works and the northern outfall of the metropolitan drainage system.

BECONTREE. Estate near Ilford, Essex. After the Great War it was bought by the London County Council and was laid out as a housing estate. It was planned to hold 24,000 houses, and by 1930 its estimated population was 80,000. Communication with London is by tramway, omnibus, and the L.M.S. Rly.

BECQUEREL. Name of a family of French physicists. Antoine César Becquerel (1788-1878) was born March 8, 1788, and was a soldier until 1815. In 1837 he was made professor of physics at the museum of natural history in Paris, and he conducted researches into electricity and magnetism, writing on these subjects. He died Jan. 18, 1878.

His son Alexandre Edmond Becquerel (1820-91) was professor of physics at the Conservatoire of Arts and Crafts, Paris, from 1853 until he succeeded his father at the museum of natural history in 1878. The inventor of the phosphoroscope, he died May 11, 1891. Alexandre's second son, Antoine Henri Becquerel (1852-1908), took a keen interest in the emanations of uranium; and the Becquerel rays, named after him, were the first indication of radio-activity, of which he was the discoverer in 1896. With M. and Mme. Curie he divided the Nobel Prize for physics in 1903. He died in Brittany, Aug. 25, 1908.

BEDALE. Market town of Yorkshire (N.R.). The centre of a rural district, it is 7 m. S.W. of Northallerton, on the L.N.E.R. The Early English church of S. Gregory contains monuments of the Fitz-Alan family. The town gives its name to a hunt. Market day, Tues. Pop. 6,586.

BEDCHAMBER. Term used in royal households. In Great Britain the ladies of the bedchamber attend the queen on ceremonial occasions. They number eight and are usually peeresses. The queen has also six bedchamber women, also ladies of rank. They are in the lord chamberlain's department. See Royal Household.

BEDCHAMBER QUESTION. Name given to a constitutional difficulty that arose in Great Britain in 1839. In May Lord Melbourne's Whig ministry resigned, and Sir Robert Peel formed a Tory one. He intimated that he should expect the Whig ladies of the bedchamber to be replaced by Tories, but to this Victoria objected. She gained her point. Two

William Beckford, British author. After Sir J. Reynolds

Thomas Becket, Archbishop of Canterbury. From a scarce print by Hollar

for strife with the king on the question of the benefit of clergy. Thomas firmly refused to accept the king's demands, and on Nov. 2, 1165, left England to appeal to the pope. He remained abroad until 1170, when peace was made.

The archbishop landed in Kent on Dec. 1, 1170. He excommunicated the De Brocs, who had taken possession of estates in Kent belonging to the archbishopric, and on Dec. 29 four knights arrived at Canterbury. A quarrel ensued and the archbishop was slain, the crown of his head being severed from the skull. Thomas was at once acclaimed a martyr, and Henry II did public penance at the tomb of the murdered archbishop on July 12, 1174. (See illus. p. 167.)

Thomas was canonised in 1173. His shrine was held in the greatest reverence, and the Canterbury pilgrimage was for centuries the most popular in the Western Church. Many churches were dedicated to him, and his name is still commemorated in S. Thomas's Hospital, London. The shrine was destroyed in 1538.

years later Peel came into power, and it was then decided that the mistress of the robes and other ladies holding high offices at court must belong to the party in power, or at least be acceptable to its leaders. In the case of a queen consort the difficulty does not arise.

BEDDGELEERT (Grave of Gelert). Village of Carnarvonshire, Wales, 13 m. S.E. of Carnarvon. It lies at the base of Snowdon, is a tourist centre, and has slate quarries and copper mines. The grave of the legendary hound of Llewelyn, king of Wales, is here shown. It is the scene of Robert Southey's *Madoc*. Pop. 1,055.

BEDDINGTON. District of Surrey. It is on the Wandle, 2 m. W. of Croydon, on the Southern Rly. The Perpendicular church of S. Mary is famous for its chancel and the Carew chapel. The Carews lived at Beddington Hall, which had a celebrated orangery. After the extinction of the family, in 1852, the hall was bought for a female orphan asylum, and only the magnificent dining hall remains. The park is a fine one. With Wallington, Beddington forms an urban district. Pop. 21,770.

BEDDOES, THOMAS LOVELL (1803-49). British poet. The son of Thomas Beddoes (1760-1807), a physician, and a nephew of Maria Edgeworth, he attracted attention in 1822 by his play, *The Bride's Tragedy*, inspired by Ford, Webster, and Tourneur. From 1825 onwards Beddoes lived abroad, and, having studied medicine, practised in Germany. He died at Basel, Jan. 26, 1849. His five-act drama, *Death's Jest Book*, was published in 1850, and a volume of his poems in 1851.

BEDE, VENERABLE (c. 673-735). English historian. Born near Jarrow, Bede passed the whole of his life from the age of seven in the Benedictine monasteries at Wearmouth and Jarrow. There he was educated, admitted deacon and priest, and there at Jarrow he died, May 26, 735. These facts, taken from his own writings, are almost all that is known of his life, although the exquisite story of how he continued his translation of S. John's Gospel in his dying hour is told by one of his pupils. In the 9th century the title Venerable was attached to his name, and May 27 is kept as his festival.

Bede's fame rests upon his *Historia Ecclesiastica*, one of the main authorities for the history of England in early Saxon times down to 731. Simply and at times beautifully written in Latin, it contains much information found nowhere else, and is the source of some of the most popular stories in English histories.

BEDEL OR **BEDELL**. University officer. At Oxford there are four bedels, the junior bedel being the vice-chancellor's official attendant and mace-bearer. Cambridge has two bedels, known as esquire bedels, who carry maces before the vice-chancellor.

BEDFORD. Mun. bor. and co. town of Bedfordshire. It stands on both banks of the Ouse, 50 m. N.N.W. from London, by the L.M.S. Rly. Its grammar school, founded in 1561 and endowed by Sir William Harper, is a leading public school.

The existing buildings date from 1891. There are several other schools. The Bunyan Meeting House occupies the site of the chapel where Bunyan preached, and contains his chair and other relics. There are statues to Bunyan and John Howard. One of the oldest buildings is the Prioratus, a monastic structure dating from the 13th century. Bedford carries on a brisk agricultural trade; other industries include engineering works. Market day, Sat. Pop. 42,450.

John, Duke of Bedford, 1389-1435
Contemporary portrait

There is a town called Bedford in Cape Province, South Africa, near the foot of the

Bedford Grammar School, one of the leading public schools. The new buildings erected in 1891

Kaga Berg (5,105 ft.), 129 m. W.N.W. of East London. It is the centre of a grazing district.

BEDFORD, EARL AND DUKE OF. English titles borne by the family of Russell, the former since 1550 and the latter since 1694. Before 1550 John, son of Henry IV, and for short periods George Nevill and Jasper Tudor, uncle of Henry VII, had been dukes of Bedford.

John Russell, who obtained valuable lands on the dissolution of the monasteries, was the founder of its family fortunes. He was made a lord in 1536 and earl of Bedford in 1550. Francis, the 4th earl (1593-1641), was a leader of the parliamentary party before the Civil War broke out.

William, the 5th earl, a supporter of the Revolution of 1688, was made a duke in 1694. John, the 4th duke (1710-71), was the leader of the so-called Bloomsbury gang of Whigs. From 1748-51 he was a secretary of state and from 1753-61 lord-lieutenant of Ireland. From 1763-65 he was a prominent member of George Grenville's ministry.

Francis, the 5th duke (1765-1802), was a politician and agriculturist; it was to him that Burke's Letter to a Noble Lord was addressed. Herbrand Arthur (b. 1858), who became the 9th duke in 1893, was an authority on army matters. His wife made some notable flights in the air.

The Russells have always been Whigs. Their estates lie in Bedfordshire and Devonshire, and their chief seats are Woburn Abbey, near Bedford, and Endsleigh, near Tavistock. Their tombs are in the church at Chenies, Bucks. Their valuable London property in Bloomsbury and around Covent Garden was sold in 1913. The duke's eldest son bears the courtesy title of marquess of Tavistock.

BEDFORD, JONAS, DUKE OF (1389-1435). Third son of Henry IV of England. He was created duke of Bedford in 1414. On the death of Henry V, in 1422, he became regent of

France, and by his marriage in 1423 with Anne, a sister of Philip, duke of Burgundy, he strengthened the alliance against France. He conducted the war against France, at first with considerable success. He died at Rouen, Sept. 19, 1435, and was buried in the cathedral there.

BEDFORD COLLEGE. London institution for the higher education of women. Founded in 1849 by Mrs. Elizabeth Jesser Reid, it took its name from its first home, 47, Bedford Square, London. There it remained until 1874, when buildings in York Place, Baker Street, were bought and adapted. New buildings, erected on a site in York Gate, Regent's Park, were opened by Queen Mary in July, 1913. Incorporated in 1869, it is a school of the university of London and is recognized as a training college for teachers.

BEDFORD LEVEL. Tract of flat land (95,000 acres) in the counties of Cambridge (including the Isle of Ely), Northampton, Huntingdon, Lincoln, Norfolk, and Suffolk. Formerly a morass, it was drained about 1640 by Cornelius Vermuyden at the expense of Francis, 4th earl of Bedford, and thirteen co-adventurers, who obtained a concession on condition that it was properly drained. It is now fertile and productive of grain, flax, etc. It consists of the north, middle, and south levels, and is intersected by the Nene, Cam, Ouse, and Welland rivers, and some artificial channels. Two cuts, the Old and New Bedford rivers, cross the Isle of Ely from the Huntingdon border to the Ouse, and take a parallel course (1 m. apart) 21 m. in length.

BEDFORDSHIRE OR **BEDS**. South midland county of England. It has an area of 473 sq. m., mainly flat. The Dunstable Downs, a spur of the Chilterns, are in the S. and chalk hills in the NW. Watered by the navigable

Bedfordshire, England. Map of this agricultural county in the South Midlands. Possessing a very fertile soil, it has been a noted farming district from Roman times

Great Ouse and its tributary the Ivel, it is very fertile, especially in the Vale of Bedford. Wheat, barley, and market garden produce

are grown. For sheep rearing the pasture in the S.E. is unrivalled. Minerals include phosphate of lime, stone, fuller's earth, and silver sand. The L.N.E.R. and L.M.S. Rlys. afford communication. Bedford is the co. town; others are Luton and Dunstable. Three members are returned to Parliament. Pop 206,462.

BEDFORDSHIRE REGIMENT. In full the Bedfordshire and Hertfordshire regiment, the latter, a territorial unit, being now united with it. Constituted in the reign of James II under William III the Bedfordshire regiment fought in Holland against Louis XIV of France, and assisted at the capture of Namur in 1695. At Blenheim it was in the thick of the battle, and at Ramillies, Oudenarde, and Malplaquet helped to win the victory. The Bedfordshires saw service at Dettingen, and later, having taken part in the Maroon War (1795), were in the Isazai expedition (1892), and the Chitral expedition (1895). The regiment had a distinguished record in the S. African War, and fought in the Great War, gaining further battle honours. The depot is at Bedford.

Bedfordshire Regiment badge

BEDIVERE. Last knight of the Round Table. Sir Bedivere took part in many adventures told in Malory's *Morte d'Arthur* (c. 1469). He is best remembered for his part in the closing scenes of Arthur's life, when he threw away the dying king's sword Excalibur and carried him to a barge. See Arthur.

BEDLAM. Corruption of Bethlem or Bethlehem, the first English and second European lunatic asylum. Founded at

Bedlam, Bethlem or Bethlehem Hospital, Lambeth, the grounds of which are now a public park

Bishopsgate, London, in 1247, as a priory, it was a mad-house from 1403. In 1676 it was transferred to Moorfields and in 1815 to St. George's Fields, Lambeth. The grounds were purchased and presented as a public park (Geraldine Mary Harmsworth Park) by Viscount Rothermere in 1926. A site for a hospital to house the inmates was bought at Monk's Orchard, Shirley, Surrey and in 1928 the foundation stone of the new building was laid.

BEDLINGTON. Urban district of Northumberland. It stands on the Blyth. Industries include coal-mining and the manufacture of glass, nails, and chains. It gives its name to a breed of terriers. Pop. 26,417.

BEDLOE'S. Small island in New York Bay, U.S.A., 1½ m. S.W. of the Battery, Manhattan Island. On the site of Fort Wood stands the colossal bronze statue of Liberty Enlightening the World, by Bartholdi, given by France to the U.S.A. in 1886.

BEDSTEAD. Framework in which bedding is held. In Egyptian and Assyrian carvings bedsteads

are in the form of low couches with raised straight or outwardly curving beadboards, and sometimes lower footboards. The Greek and Roman day and night couches were of the same general type, the latter frequently being of solid metal. The Anglo-Saxons used large wooden benches, sometimes placed in curtained recesses. Large four-poster bedsteads became common in the 16th century. Fine specimens of Jacobean and Georgian four-posters, some heavily plumed, are to be seen at the Albert and Victoria Museum, South Kensington, and in Hampton Court Palace.

The manufacture of iron and brass bedsteads began on a commercial scale in England about 1840. Many patents have been granted for alarm, collapsible, and adjustable-framed, lattice, spiral spring, and wire spring woven mattresses. Later there was a return to the vogue for wooden bedsteads. See Furniture.

BEDSTRAW (*Galium*). Genus of Rubiaceae, consisting of about 150 species of herbs. They mostly inhabit the temperate regions of the Old and New Worlds. They have four-sided stems, and the leaves are arranged in whorls. The flowers are minute, but often conspicuous by their association in cymes. The calyx is a thickened ring, and the corolla is four-lobed; there are four stamens and two styles. The roots of many species afford a purple dye. Species are crosswort (*Galium cruciata*), lady's bedstraw (*G. verum*), with yellow flowers used to curdle milk, and goosegrass or cleavers (*G. aparine*), with white flowers and with leaves and fruit covered with hooked bristles.

Bedstraw. The crosswort, *Galium cruciata*

BEDUIN. Name given to the descendants of the Arabs of Arabia, who traditionally claim Ishmael as their ancestor. Bedouin is the French form of the Arabic plural, introduced by the Crusaders, and since used as the singular form.

In very early times the Beduins migrated to Egypt and Syria, and to-day they are found not only in the Arabian, Syrian, and Sinaitic deserts and in the Nile valley, but have spread to the Atlantic edge of the Sahara, the southern Sudan, and the Mesopotamian valley. The typical Beduin is a nomadic herdsman, an occasional plunderer of travellers and caravans, his only tribal authority the sheik: but with the development of Arab nationalism and civic life many of the

tribes are giving up their nomadism, and, with that, their right to the Beduin name. In the kingdom of Hejaz and Nejd the Beduins

Bee. 1. Queen bee wandering over the comb, attended on either side by a worker. 2. Queen bee; she may survive for three years. 3. Worker bee, which normally lives for six weeks. 1, Sedgwick; 2 & 3, Bastin

make a steady income by the annual export of camels to Syria and Egypt. See Arabs.

BEDWELLTY. Urban dist. of Monmouthshire. It is 7 m. W. of Pontypool, on the G.W. Rly., lies in a mining district, and has large ironworks. Its Early English church, S. Nannan, was restored in 1858. Market day, Sat. Pop. 34,000.

BEDWORTH. Town of Warwickshire. It is 3½ m. S. of Nuneaton on the L.M.S. Rly., and is traversed by the Coventry canal. Coal and iron are mined. Pop. 11,548.

BEE. Term applied to several groups of four-winged stinging insects of the order Hymenoptera. Bees fall roughly into two classes, social and solitary. In the first group are the honey-bees and the humble bees; in the second the carpenter-bees, mason-bees, mining-bees, etc.

The social bees form colonies in which a highly developed organization exists for building the home, collecting and storing food, and rearing the next generation. The hive bee has been kept in a state of semi-domestication for many centuries. The inmates of the hive consist of three classes, the queen, drones, and workers. The queen bee is the only fertile female. When the comb has been built by the workers she proceeds to lay eggs in some of its cells. Other cells are used by the workers, for storing the honey and pollen needed as food.

Drones are larger in size than the workers. Their function is to fertilise the queen on her nuptial flight. Drones do no work, and are killed or driven out by the workers in the autumn. The workers, who constitute the bulk of the community, are sterile females. Except in the case of some that remain dormant throughout the winter, they live only for six weeks, whereas the queen bee may survive three seasons.

The life history of a worker may be briefly summed up. The egg hatches in about three days, and a white, worm-like grub emerges. This is fed by the workers, and after some days the cell is sealed up and the larva passes into the pupa stage. In rather less than three weeks from its first hatching the fully developed worker emerges, and after a rest of one or two days begins its daily work of gathering nectar and pollen. As a rule the older bees devote themselves to the work of the hive.

BEEKEEPING. Bees were formerly kept in dome-shaped straw hives known as skeps, and destroyed before their combs were taken. Now it is usual to employ standard wooden

Bedstead, English example dated 1593, with wooden canopy and detached posts

hives, containing vertical frames in which the brood combs are made. These are covered by a perforated piece of zinc, on which are placed square sections or supers to contain combs for storage of honey only, the zinc preventing the queen from climbing up to lay eggs in the sections. When filled with honey these sections can be removed and empty ones substituted. *See* Beehive.

When the population of a hive increases inconveniently part of it, headed by the old queen, issues forth as a swarm, while the rest stay in the hive with a young queen reared for the purpose. Bees require winter-feeding with syrup made from cane sugar, and it is essential to keep them dry and warm.

BEECH. Forest tree of the order Amnataceae and the genus *Fagus*. The common beech (*F. sylvatica*) is a native of Britain, but other species have been introduced from Asia Minor, Japan, and N. and S. America. In height the beech varies from 60 ft.-100 ft., and the diameter of its trunk from 6 ft.-9 ft. The leaves are oval or oblong, and their edges are fringed with silvery hairs. The male and female flowers are produced in separate tufts, the male flowers on long drooping stalks, the female on shorter, stouter supports. These flowers develop into the hard, bristly case which in autumn provides the nuts or mast for pig food.

Beech-tar is obtained by the destructive distillation of the wood of the beech. It is used as the source of guaiacol and creosote.

BEECHAM, SIR THOMAS, BART. (b. 1879). British conductor and composer. Born April 29, 1879, the eldest son of Sir Joseph Beecham (1848-1916), he was educated at Rossall and Wadham College, Oxford. In 1910 he gave a series of opera performances at Covent Garden, and in 1915 he started and conducted a series of promenade concerts at the Albert Hall. He made The Aldwych Theatre the headquarters of his opera company, but it soon proved far too small, and he obtained a lease of Drury Lane Theatre, where he provided a remarkable programme in 1917. After the War he devoted his time to the production of grand opera in London and elsewhere. In 1916 he was knighted, and succeeded his father in the baronetcy conferred on him in 1916.

Beecham's grandfather, Thomas Beecham, was the founder of the pill-making business at St. Helens.

BEECHER, HENRY WARD (1813-87). American divine. He was born at Litchfield, Connecticut, June 24, 1813, son of Lyman Beecher, and was educated at Amherst College, Massachusetts, and Lane Seminary, Ohio. Becoming a Presbyterian minister, he officiated at Lawrenceburg and Indianapolis for ten years, and in 1847 was called to Plymouth Congregational church at Brooklyn, where he preached for nearly 40 years to immense audiences. An active orator in the anti-

slavery movement, he edited The Independent newspaper of New York, 1861-3, and The Christian Union, 1870-81. Charges against his moral character made in 1870 were disproved after a long trial in the courts and close investigation. Beecher died March 8, 1887.

His father, Lyman Beecher (1775-1863), was also a famous preacher. From 1810-32 he was a minister at Boston, and from 1832 until 1852 was president of a theological seminary in Ohio. His daughter was Harriet Beecher Stowe (q.v.).

BEECHEY, SIR WILLIAM (1753-1839). British painter. Born at Burford, Oxfordshire, Dec. 12, 1753, he came to London in 1772 to be articulated to a solicitor, but became a student in the Academy schools instead. He had considerable vogue as a fashionable portrait painter, and in 1798 he was knighted and elected R.A. His Joseph Nollekens, R.A., in the National Gallery, is one of the best of the 360 portraits he sent to the Academy. He died Jan. 28, 1839.

His eldest son, George D. Beechey, became court painter to the king of Oudh. Another son, Frederick William Beechey (1796-1856), went into the navy, took part in the Arctic expeditions of Franklin and Parry, and made various naval surveys. A third son, Henry William Beechey, a painter, was also engaged in explorations in Africa.

BEE EATER (Meropidae). Member of a family of birds (Meropidae) comprising five genera with some thirty-five species. All are indigenous to the Old World, being found mainly in S. Europe. In size they vary from 14 ins. to about 6½ ins. Bee eaters levy a toll on bee hives, and lying concealed on dead branches of trees, dart out after any flying insect.

BEEF. Meat obtained from the carcasses of bulls and cows, veal being the name of that obtained from their young. Beef has been the chief meat food of the United Kingdom for hundreds of years, and British breeds of cattle for purposes of beef production are the finest in the world, notably the Shorthorn, Aberdeen Angus, Hereford, Sussex, Devon, Redpoll, Galway, Kerry, and Highland cattle. Of these the Shorthorn cattle represent the type most numerous in Great Britain and in America, into which country they were first imported in 1783. The pure-bred cattle are highly valuable, and cattle cross-bred with Shorthorns produce extremely good results for beef and milk.

Until the end of the 19th century the supplies of beef for the British market were principally home-grown, but with the introduction of freezing methods and refrigerating ships there has grown up an increasing trade in frozen and chilled beef from various parts of

the world for the British market. These supplies come mainly from the United States, Canada, and Argentina. In 1929, to help the home producer, a system of marking and grading home-grown beef was introduced.

Beefsteak. Popular name for a member of the yeomen of the guard (q.v.).

BEEFWOOD (Casuarina). Genus of trees, chiefly natives of tropical Australia, India, etc. They have very slender, jointed and drooping branches, which are leafless so that the trees present the appearance of gigantic horsetails (*Equisetum*). The timber is extremely hard and durable. In their cannibal days the Fijians are said to have made forks of it for the eating of human flesh.

BEEHIVE. Structure in which bees are kept. For centuries it was a dome-shaped construction made of bands of straw fastened to a framework. The modern frame hive is a two-storied wooden box with a roof above to protect it from the weather. Movable frames in the lower part are used by the bees for brood and for honey storage. A sheet of perforated zinc above this, while it permits the workers to pass into the top storey, where they fill the combs with honey, bars the access of the queen, so that no eggs are laid in the cells. As the frames in the upper part are filled they are replaced by empty ones. The frames contain a sheet of wax (comb-foundation) impressed with the hexagonal pattern of the cells. On this the bees work their combs. *See* Bee.

BEEHIVE OVEN. This is an old form of retort used for turning coal into coke. In shape it resembles an ordinary beehive. *See* Coke; Metallurgy.

BEEHIVE STRUCTURE. This is a drystone building roofed with horizontally laid blocks overlapping inwardly, the uppermost course being a single copestone. The plan may be round, oval, or four-sided, the lower courses—and in rectangular structures the end walls throughout—may be vertical.

BEELEBUB OR **BAALZEBUB**. Philistine god of Ekron (2 Kings 1). In the N.T. the name is used as a title of Satan (Matt. 10: Mark 3: Luke 11). *See* Baal.

Bee Martin. Variant name of the king bird (q.v.).

BEE ORCHIS (*Ophrys apifera*). Species of a genus of terrestrial orchids, restricted to Europe, N. Africa, and W. Asia. The short, oblong leaves and flower stem arise from a pair of ovoid tubers. The flower looks like an orange-spotted, brown-bodied bee with pinkish wings. Others are the spider and fly orchis,

BEER. Beverage which is mainly derived from the extract of malted barley together with that from prepared maize and sugars. The solution, termed wort, is boiled with hops, cooled, and fermented with yeast, the product being beer and ale. Lager beer is a matured beverage produced by decoction and low fermentation processes. British beers are produced by infusion and high fermentation processes and are of lower original gravity than formerly, and in consequence the alcohol content ranges from 2.5 p.e. to 4.5 p.e. for draught produce and from 5.5 p.e. to 6.5 p.e. for bottled varieties.

In Great Britain the duty on beer is £5 on 36 gallons of wort of a specific gravity of 1.055, and less or more in proportion to the gravity. Brewers pay 12s. for every

50 barrels brewed after the first 100, on which they pay £1. In 1929 the revenue from the duty on beer was £70,846,978.

Beer money, an allowance to soldiers of a penny a day, was given in the British army from 1800 to 1873.

BEERHOUSE. In England a public house in which beer only is sold. From about 1660 there was something in the nature of a tax on places where wines and spirits were sold; then annual licences from the magistrates were required for the sale of intoxicating liquors. In 1830 a law was passed exempting sellers of beer from the duty of applying for a licence. Any householder could obtain one upon payment of the necessary duties and giving surties, and thus many beerhouses came into existence. In 1869 the privilege was abolished, but the rights of those in existence were untouched. See Licensing.

BEERBOHM, MAX (b. 1872). British caricaturist and author. He was born in London, Aug. 24, 1872, a half-brother of Sir Herbert Tree, and was educated at the Charterhouse and Merton College, Oxford. He contributed to *The Yellow Book*, and his books, *The Happy Hypocrite*, 1897, *More*, 1899, *Zulicka Dobson*, 1911, *A Christmas Garland*, 1912, and *Seven Men*, 1919, added further to his reputation as a writer of satire and of

Max Beerbohm,
British caricaturist

fiction. In caricature Beerbohm is perhaps the most subtle of the modern British school. His collections include: *The Poets' Corner*, 1904; *A Book of Caricatures*, 1907; and *Fifty Caricatures*, 1913. As a dramatic critic he was employed for many years on *The Saturday Review*. See Caricature.

BEERSHEBA (Heb. well of the oath). Ancient town of Palestine. About 50 m. S.W. of Jerusalem. It was the scene of the covenant sworn between Abraham and Abimelech (Gen. 21). Of little importance in the past, the Biblical phrase "from Dan to Beersheba" gave it a place in history it hardly deserved. The modern Bir-es-Saba, built near its site, was captured during the Great War from the Turks by the British, Oct. 31, 1917.

BEESTON. Urban dist. of Nottinghamshire. Close to the Trent and 3 m. S.W. of Nottingham on the L.M.S. Rly., it has motor and telephone works and lace and other manufactures. Market day, Sat. Pop. 14,800. There is a suburb of Leeds called Beeston.

BEESSWING. Filmy crust of tartar and other substances deposited by wine kept long in bottle. It is found chiefly in port and is so called from its resembling a bee's wing. Its presence implies age and consequent improvement of the wine.

BEET (Beta vulgaris). A native root of Portugal and South Europe, introduced into Great Britain in 1548. Beet-root is the most nutritious of all root crops except the potato, containing about 12 per cent of sugar. There are two distinct shapes of beet-root, turnip-rooted, i.e. round and long, and tap-rooted. The stalks and the outside leaves of a variety called spinach beet are used in the same way as spinach. The Chilean beet is a species grown for the sake of its ornamental foliage. The beet

Beet. Examples of
the globe variety

fly is a small fly which deposits its eggs among the leaves of the beet.

The sea-beet (*Beta maritima*) grows mostly on muddy sea-shores, and is widely distributed in S. Europe, N. Africa, India and W. Asia. Its leaves are eaten as a spinach. The mangold wurzel is a cultivated variety.

SUGAR BEET. The sugar beet, a large white-fleshed variety of the common beet, is cultivated for the roots are sliced and then treated with tepid water under pressure, a process which extracts the sugar contents in the form of a liquid. The raw juice is treated with 2 per cent of lime to get rid of organic impurities and after precipitation and filtering the liquid receives a final treatment with sulphurous acid. The clear liquid resulting is evaporated and the crystals separated out by centrifugal machinery. The refuse from the manufacture is used as a food for stock.

In Great Britain the cultivation of sugar beet has been encouraged by a subsidy from the state. In 1924 factories were in operation at Kelham and Colwick, in Nottinghamshire, and Cantley in Norfolk, and later in other places, making 19 in all by 1930. In 1927 130,000 acres were under cultivation, over 1,100,000 tons of beet were delivered to the factories, and over 3,000,000 cwt. of sugar were produced. In 1930 the acreage under cultivation was 315,000. See Sugar.

BEETHOVEN, LUDWIG VON (1770-1827). German composer. Born Dec. 16, 1770, at Bonn, where his father was a tenor singer in the service of the elector of Cologne. He studied music and, while a boy, was appointed opera conductor and organist to the elector. After a short visit to Vienna in 1787, when he had a few lessons from Mozart, he returned thither in 1792, and Vienna remained his home till his death, which took place March 26, 1827.

L. von Beethoven,
German composer

Beethoven's compositions may be divided into nine groups: (1) two masses, an oratorio, *Christus am Oelberge* (*The Mount of Olives*), and some smaller choral works; (2) a large quantity of solo vocal music; (3) the opera *Fidelio* (originally entitled *Leonora*), and overtures and incidental music to various stage pieces; (4) nine symphonies, the last of which includes a setting for solo voices and chorus of part of Schiller's *An die Freude*; and one or two other orchestral works of little importance; (5) 5 concertos for pianoforte and orchestra and one for violin, and a few other works for solo instruments with orchestra, one with chorus also; (6) chamber music without pianoforte, including one string quintet, 16 string quartets, 5 string trios, and a good many works (all early) for wind instruments or strings and wind in conjunction; there are also a couple of string fugues, one of them originally intended for one of the last quartets; (7) chamber music with pianoforte, including 10 sonatas for pianoforte and violin and 5 for pianoforte and violoncello, 6 trios

for pianoforte and strings, one for pianoforte, clarinet, and violoncello, and smaller works for these and for one or two other combinations: (8) 32 solo pianoforte sonatas; (9) many sets of variations, bagatelles, rondos, etc., for pianoforte solo and a few slight pieces for pianoforte duets.

BEETLE (A.S. bitan, to bite). Member of the order of insects known as Coleoptera. The wings are covered by a pair of horny sheaths, really a modification of the front pair of wings. Most beetles have a hard, polished appearance, and their limbs are protected by a thick cuticle of chitin. Beetles are found on land and in fresh water, and about 150,000 species have been recorded. The mouth is provided with strong biting jaws, with appendages for helping to thrust in food, and there is a single pair of antennae. In size beetles vary considerably, some being very tiny, while one South American species is 6 ins. long and broad in proportion. They pass through the usual metamorphoses of insects. A small beetle only about one-third of an inch long is the bacon beetle, which lives in bacon and other dry foods. See illus. p. 223.

Beet. White-fleshed variety, from
which beet sugar is made

BEFANA. In Italian legend, a misshapen old woman who is held up as a bugbear to naughty children and brings gifts to good ones. Her image, in the form of an ugly doll, is put in the windows on Jan. 5, the eve of the Epiphany, of which her name is a corruption. The story places her in a window because she declined to go out to view the passing of the Magi on their way to Bethlehem, and is still waiting to see them return.

BEGA. Town of Auckland co., New South Wales, Australia. It is situated where the Bega river is crossed by the main coast road from Sydney to Eden on Twofold Bay. The Bega Plains are a dairy-farming district which produces cheese.

BEGAS, REINHOLD (1831-1911). German sculptor. Born in Berlin, July 15, 1831, he was the son of Karl Begas (1794-1854), distinguished as a portrait painter. He was the sculptor of the allegorical statues of Strasbourg and Metz erected in the Potsdamer Platz, Berlin, of a statue of William II, and of numerous effigies of other Hohenzollerns. Oskar Begas (1828-83), the painter, and Karl Begas (1845-1916), the sculptor, whose chief works are in Berlin, were his brothers.

BEGHARDS. Communities of wandering beggars. Men organized on lines similar to those of the beguines (q.v.), or possibly guilds of craftsmen, became known as beghards in Germany. Not long after their foundation, early in the 13th century, they degenerated into associations of travelling beggars.

BEGONIA. Genus of succulent herbs and undershrubs, natives of tropical countries with a moist climate, especially S. America.

Begonia. Flower
and irregularly
shaped leaves

The leaves are asymmetrical, the blade on one side being larger than the other. This has led to the name of elephant's-car being applied to the large ornamental-leaved kinds. The flowers, which have sepals and no petals, are brightly coloured—white, yellow, or red—and many are of large size. Hybridisation has produced an enormous number of beautiful garden begonias.

BEGUINES. Communities of women founded about 1170 at Liège by a priest named Lambert le Bègue (the stammerer), which later spread to Germany and France. There are establishments of the sisterhood in Belgium, notably at Ghent and Bruges. They

do not take monastic vows, but live in partial community in cottages known as a beguinage. They devote themselves to the education of children and the care of the sick and aged.

Begum. Title used in India for Mahomedan ladies of rank. It is apparently a feminine form from Turkish beg, lord.

BEHAIM OR **BEHEM**, MARTIN (c. 1436-1506). German navigator. Born at Nuremberg, he was of Bohemian descent, his surname being probably a corruption of Bohemia. For trading purposes he went to Portugal and there settled, soon turning his attention to the study of navigation. His researches resulted in improved navigation tables, but the exact extent of the voyages made by Behaim himself remains in doubt. He died in Lisbon, July 29, 1506. A globe which he made is still at Nuremberg.

BEHAVIOURISM. Name given to the branch of animal psychology that studies the behaviour of animals and men. It has developed chiefly in the U.S.A., although a British psychologist, C. Lloyd Morgan, is regarded as its founder. The work done by E. L. Thorndike and others has shown that there is a marked similarity between the behaviour of men and that of the lower animals. Consult *Animal Behaviour*, C. L. Morgan, 1900; *Behaviourism*, J. B. Watson, 1914.

BEHEMOTH. Name of a large and powerful animal referred to in the Book of Job (40, 15-24), where the description is suggestive of the hippopotamus, and, in some features, of the elephant. The word is the plural form of Hebrew behemah, beast, used in an augmentative sense, a great beast.

BEHISTUN. Place in Persia famous for its trilingual inscription chiselled upon the precipitous face of a rock 1,700 ft. high. Upon a hewn area 20 ft. high and 60 ft. broad, 200 ft. above the cliff base, the characters, 1 in. high, are associated with sculptured panels depicting Darius I and some vanquished rebels overshadowed by the divine Ahuramazda. The inscriptions are in Babylonian, Susian, and old Persian, and their decipherment in 1846 unlocked the secret of cuneiform. At the cliff base Parthian sculptures portray a mounted king unhorsing a foe, about 50 B.C.

BEHN, AFRA OR APHRA (1640-89). English dramatist and novelist. Born July 10, 1640, at Wye, Kent, she was taken when a child to Surinam, where she met the romantic chieftain Oroonoko, the hero of her best novel. After her return to England she married, and on the death of her husband, a Dutch merchant, she went to Holland as a diplomatic agent, but soon abandoned this and supported herself by her pen. She was the first professional woman writer in England.

Aphra Behn.
English dramatist
Portrait by Mary Beale

Her plays include *The Forced Marriage*, 1671, *The Amorous Prince*, 1671, and *The Town Pop*, 1677. She died April 16, 1689.

BEIBARS OR **BIBARS** (d. 1277). Egyptian ruler. He lived in the last days of the Saracen dynasty of the sultan Saladin. He helped sultan Kutuz to defeat the Mongols in Syria, 1260, and, having killed Kutuz, was himself made sultan. He reigned from 1260 to 1277 and completed the expulsion of the Mongols from Syria.

BEIJERLAND OR **BEYERLAND.** Island of Holland, in the prov. of S. Holland. It lies between the Hollandsch Diep and the Oude Maas, or Meuse, 6 m. S. of Rotterdam, and is 15 m. long and 8 m. wide. Flax is grown.

BEETLE. 1. *Hypocephalus armatus*. 2. *Meloe violacea*. 3. *Aromia moschata*. 4. *Crepophilus maxillosus*. 5. *Lucanus cervus*. 6. *Cicindela campestris*. 7. *Dytiscus punctulatus*. 8. *Trichius fasciatus*. 9. *Coccinella septempunctata*. 10. *Anthia sexguttata*. 11. *Carabus nitens*. 12. *Astium aedilis*. 13. *Staphylinus gyllenhalii*. 14. *Typhaeus vulgaris*. 15. *Rhynchophorus ferrugineus*. 16. *Ceratorrhina derbyana*. 17. *Licinus silphoides*. 18. *Polyphylla fullo*. 19. *Clytus urietis*. 20. *Pyrrochroa pulcherrima* (male). 21. *Ditto* (female). 22. *Euchroma goliatha*. 23. *Monochamus versteri* (male). 24. *Ditto* (female). 25. *Catantopus giganteus*. 26. *Acrocinus longimanus*. 27. *Psilidognathus frieudii*. 28. *Carabus hispanus*. 29. *Sagra buquetii*. 30. *Dynastes tityus*. 31. *Eupholus schouherri*. 32. *Aeserina magnifica*. 33. *Aplagiognathus spinosus*. 34. *Chrysina macropus*. 35. *Eriocnemis tridens*. 36. *Goliathus caelestis*. 37. *Helicoprion bucephalus*. 38. *Curculio germari*. 39. *Chrysocroa chiensis*. 40. *Chrysocroa ocellata*. 41. *Euchirus longimanus*. 42. *Anoplognathus viridulae*. 43. *Euema pan*. 44. *Julodis hirsuta*. 45. *Ceratorrhina torquata*.

BEIRA. Town of Portuguese East Africa. At the mouth of the Pungue and Busi rivers, it is 374 m. by rly. S.E. of Salisbury, and is the capital of the territory of the Mozambique Co. Beira is the chief trading outlet of Rhodesia. As the coastal terminus of the Beira-Mashonaland rly. from Bulawayo and Salisbury, it forms an outlet from the Katanga regions, and the extension of the rly. from Blantyre, in the Nyasaland Protectorate, to Beira has made it the chief outlet for the Lake Nyasa regions. Pop. 11,871. There is a province of Portugal called Beira.

BEIRUT OR **BEYROUT** (anc. Berytus). Chief seaport of Syria, the seat of the French High Commissioner for Syria, and of the government of the autonomous state of Greater Lebanon. On the Mediterranean, about 60 m. by rly. N.W. of Damascus, it is a busy commercial centre, exporting silk, oil, gums, and fruits, and importing ironware, cotton goods, coffee, etc. Appearing first as a Sidonian seaport, it has belonged in turn to Greeks, Romans, Crusaders, and Moslems. It has a French and an American university. Pop. 80,000. See illus. p. 224.

BEIT, ALFRED (1853-1906). Anglo-Jewish financier. Born at Hamburg Feb. 15, 1853, of Jewish race, Beit went to South Africa for

Beirut, Syria. Panorama of the city, looking towards the mountains of Lebanon. See article, page 223

a Hamburg firm in 1875, and remained there for three years. Having previously gained some knowledge of the diamond trade at Amsterdam, he started in business as a diamond merchant at Kimberley. In 1884, with Julius Wernher, he founded a similar business in London, which in 1890 became Wernher, Beit & Co. At the same time Beit was associated with Cecil Rhodes in the control of the De Beers mines. He died July 16, 1906.

BEITH. Market town of Ayrshire, Scotland. It is situate 18 m. S.W. of Glasgow on the L.M.S. Rly. It contains the Spier School, founded 1887, and manufactures furniture, upholstery, ropes, linen, thread, leather, and cotton. Market day, Fri. Pop. 6,343.

Beith, JOHN HAY (b. 1876). British writer, better known as Ian Hay (q.v.).

BEL. Babylonian deity. The Semitic name, elsewhere denoting ownership of natural objects, meant, with the Babylonian Semites, lord of men. They applied it to primitive Sumerian gods, and especially to Enlil of Nippur. Hammurabi, about 2250 n.c., transferred Enlil's attributes to the local god of Babylon, Marduk, whom thereafter Bel denotes (Isaiah 46). See Babylonia.

BELASCO, DAVID (b. 1859). American dramatist. He was born July 25, 1859, at San Francisco, where he became an actor and then stage manager. He removed from San Francisco to New York in 1880, there to fill similar positions at the Madison Square and Lyceum theatres. He opened his own house, the Belasco, in 1887. His success as a manager was largely due to his skill in training actors and to his careful attention to stage details. The best known of his numerous plays are: *The Heart of Maryland*, 1895; *On Barry*, 1901; *The Darling of the Gods* (with John Luther Long), 1902; *The Girl of the Golden West*, 1905; *The Return of Peter Grimm*, 1911; *Temperamental Journey*, 1913; and *Fanny* (with Willard Mack), 1926.

BELCHER, JAMES (1781-1811). English pugilist. Born at Bristol, April 15, 1781, he was the grandson of another pugilist, Jack Slack. By trade he was a butcher, but his feats as a fighter attracted attention, and in 1798 he moved to London. In 1803 he lost an eye at racquets, and in 1805 was defeated by Hen Pearce and in 1807 and 1809 by Tom Cribb. He died July 30, 1811. A scarf, blue with white spots, was called a belcher because it was worn by the pugilist. His younger brother Tom (1783-1854) was also a pugilist.

BELEM. Suburb of Lisbon, near the mouth of the Tagus. A monastery was built here to commemorate Vasco da Gama's discovery of the ocean route to India. The church contains his tomb and that of Camoens.

Belem do Pará is also another name of the Brazilian port Pará (q.v.).

BELEMNITE. Genus of fossil cephalopods related to the ammonites and the living Loligo or squid. The portion of the animal's body found as a fossil is a solid eigar-shaped process or guard composed of calcium carbonate, which was enveloped by the soft part of the animal. At the end of the guard was situated a conical chambered attachment, on the front part of which rested the ink-sac.

In form the animal was roughly cylindrical, and somewhat similar to the modern sepia. It had ten arms surrounding the mouth, each furnished with hooklets for grasping food.

BELFAST. Capital of Northern Ireland and of co. Antrim, and before the creation of the Irish Free State capital of the prov. of Ulster. Pop. 415,000. On the Lagan where it enters Belfast Lough, it is a terminus of Northern Counties (L.M.S.), Great Northern, and Belfast and County Down Rlys. and is 101 m. from Dublin. A large part of the centre of the city has been built on land reclaimed from sandbanks and marshes.

The two chief industries are shipbuilding and linen manufacture. Here are the great yards of Harland & Wolff, and in this industry

some 20,000 men are employed. Other works are tobacco factories, engineering shops, bacon-curing works, and distilleries. The city

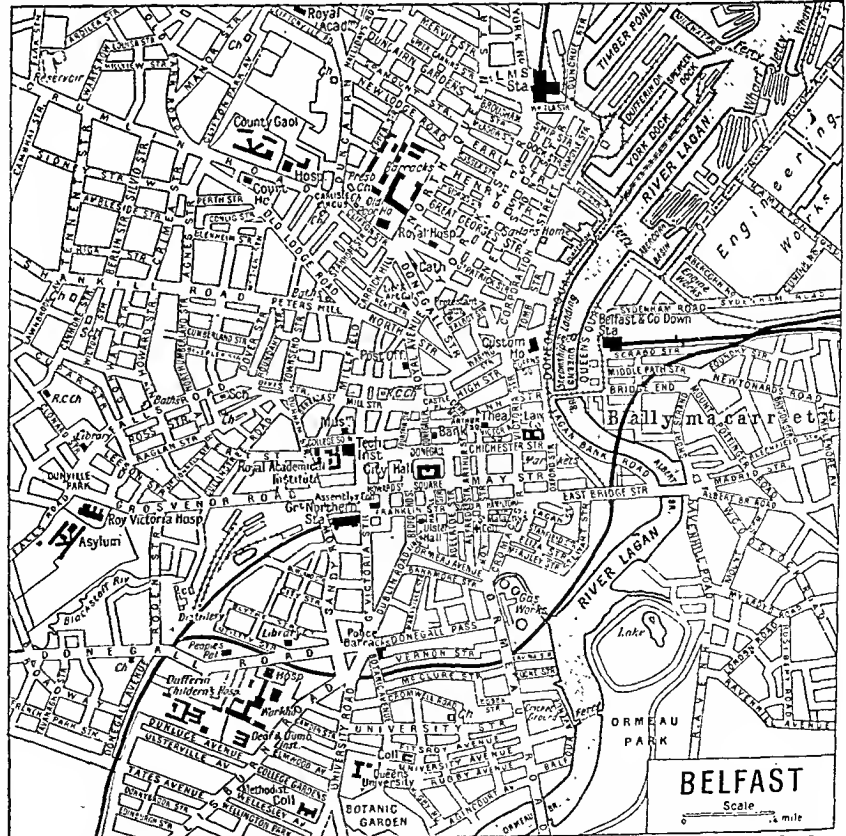

Belfast. 1. West front of the cathedral, completed in 1928. 2. Queen's University. 3. The City Hall; it consists of a quadrangle of classic design, surmounted by a dome

is also the banking, commercial, and distributing centre for Ulster.

Belfast is one of Britain's great ports. Its graving dock, opened in 1911, is one of the largest in the world, and a channel, 4 m. long, has been cut to deep water. Other improvements and extensions have been carried out, and ample docks, sheds, and wharfrage exist for the increasing trade. In 1929 the harbour commissioners decided to build a large new dock.

Belfast's chief church is the Protestant cathedral, the west front of which was completed as a war memorial. The art gallery contains some good paintings, and there is a new museum. The city hall is a fine edifice; others are the Ulster Hall and the public

Belfast. Plan of the business quarter of the great commercial capital of Northern Ireland. It includes the shipbuilding yards, whence some of the world's largest vessels have been launched

library. The Ulster Theatre corresponds to the Abbey Theatre in Dublin. Royal Avenue is the main thoroughfare. The chief educational centre is Queen's University, which occupies a fine modern block of buildings. There is a technical college and several good secondary schools, notably the Royal Academic Institute and Campbell College. The corporation owns the tramways, markets and an abattoir, and maintains parks and the botanic gardens. The city has a broadcasting station (call 2 B E).

The formation of a separate government for Northern Ireland increased the importance of Belfast. At Stormont, just outside the city, the erection of a Parliament House and other buildings for the administration was begun, and there are new law courts in Chichester Street. Belfast was made a city in 1888, and has had a lord mayor since 1892.

Belfast Lough, between the counties of Down and Antrim, is 12 m. long and three broad.

BELFORT. Town of France. On the river Savoureuse, in the Gap of Belfort, 275 m. S.E. of Paris and 35 m. N.W. of Basel. It is

Belfort. The citadel, on a rock above the town, with Bartholdi's lion, a memorial of the siege of 1870-71

an important rly. junction and road centre. Of two memorials of the siege of 1870-71, one is the Lion of Belfort, by Bartholdi.

The chief industries are the making of cotton goods and machinery, and there is trade in agricultural produce. The place is chiefly notable as the fortress commanding the passage between the Vosges and the Jura, known as the Gap of Belfort. Having become French in 1648, the town was fortified by Vauban. In the Franco-Prussian War it was besieged from Nov., 1870, to Feb., 1871, and was only surrendered at the request of the Government. It was recovered at the peace and was fortified. During the Great War the Germans left Belfort untouched. Pop. 39,301.

The Gap (trouée) of Belfort is a plain, 18 m. wide, between the Vosges and the Jura. It has always been an important highway for the invader.

BELFRY (Fr. beffroi, watch tower). That part of the steeple or tower of a church or public building which contains large bells; a bell-tower; or a chamber, below the bells, occupied by the bell-ringers. Indicating in early times a movable wooden tower used in siegecraft, the term was applied later to a fixed tower on which sentinels were

stationed to ring alarm bells in case of attack. At Evesham, Berkeley and Chichester are bell towers completely detached from the church.

Of Belgian towers the most famous is the great tower at Bruges, built at the end of the 14th century, which reaches a height of 300 ft. That at Ypres was destroyed by the Germans in the Great War, and those at Louvain and Malines were damaged. See Campanile.

BELGA. Currency unit of Belgium. It was introduced in 1926 when the franc was stabilized. One belga is equal to five francs and 35 belgas go to the £.

BELGAUM. Town of India, capital of the Belgaum dist. of Bomhay. It stands 2,500 ft. above sea level and is 245 m. by rly. S. of Poona. It is a military station, has an old fortress, temples, and native schools, and trades in cotton cloth, salt, dates, and coconuts. Pop. 48,320. The district has an area of 4,613 sq. m. and a pop. of 952,996.

Belgian Congo. Belgian colony in Central Africa. See Congo, Belgian.

BELGIUM. Kingdom of Europe. It is bounded N. by Holland, E. by Germany and the grand duchy of Luxembourg, and S. by France. Its short, low-lying W. coast-line is washed by the North Sea. The area is 11,755 sq. m. By the treaty of Versailles Germany ceded to Belgium neutral Moresnet and part of Prussian Moresnet, and Belgium also received provisionally the cantons of Malmédy and Eupen, a cession later confirmed by the League of Nations, to which Belgium belongs. The estimated population is 7,932,100.

Much of the country is flat. In the S.E. the Ardennes, which are well-wooded and intersected by river valleys, have an average elevation of 500 ft. The rivers are the Schelde, Meuse, Sambre, and Yser. The principal towns include Brussels (the capital), Antwerp, Liège, Ghent, Bruges, Malines, and Louvain.

The railway system is the oldest on the Continent. It has as its central point Malines, on the most direct route between the coast at Ostend and Liège. During their military occupation in the Great War the Germans constructed a direct line from Aix-la-Chapelle to Louvain, which, avoiding Liège, crosses the Meuse at Visé. There are over 50 canals and five ship canals. Wire-

less is being rapidly developed. In 1927 there were 143 radiographic stations, and the state is linked by air services with other European countries.

PRODUCTION AND INDUSTRY. The soil is fertile, about three-fifths of the country being under cultivation. Agricultural products include wheat, oats, rye, barley, potatoes, sugar beet, flax, hops, horses, and cattle. The chief minerals are coal, iron, zinc, and lead. The coalfields are principally in Hainaut, in a district known as the Borinage (place of boring), and around Liège. A new coalfield has been opened up in the Campine district, in the province of Limbourg.

Of the two branches of the Belgian people, the Walloons speak French and the Flemish the language known by their name, which is almost identical with Dutch. There are universities at Louvain, Liège, Ghent, and Brussels. Ghent and Liège are state universities; the other two are free.

DEFENCE. According to the military law of 1923 the army consists partly of conscripts, partly of volunteers. Compulsory service with the colours is for 10 months in the infantry, 12 in the heavy artillery and engineers, and 13 in the cavalry, horse field artillery and horse transport corps. The duration of military service is 15 years in the regular army and reserve, and 10 in the territorial army. In

1928 the strength of the army with the colours was 4,411 officers and 59,948 other ranks.

HISTORY. Having been part of the Netherlands since 1815, Belgium became an independent state in 1830. The first king of the Belgians, Prince Leopold of Saxe-

Coburg, was elected by the National Congress in 1831, and was succeeded in 1865 by his son Leopold II, who reigned until 1909 and was succeeded by his nephew Albert. The treaty of April 19, 1839, established the status of Belgium as an independent and neutral kingdom.

Belgium is a constitutional hereditary monarchy. The legislative power is vested in the King, the Senate, and the Chamber of Representatives. The executive duties are controlled by a prime minister and a cabinet. After being occupied by the Germans during the Great War, from the early summer of 1919 and onwards reconstruction proceeded in every direction. Railways, canals, and roads were almost restored to pre-war usefulness by the end of 1919. The coal mines had suffered less than other branches of industry. The textile industry had been crippled by the loss of machinery, but here, as also in the case of the metal workers, relief was afforded by the return of plant from Germany.

The years of economic recovery after the Great War were filled with political interest. The Coalition Government, which was in power in 1919, favoured a military alliance with France and an aggressive policy towards Holland. In 1921 the Socialists, under Vandervelde, withdrew, and for the next few years a union of Roman Catholics and Liberals carried on the government. In 1925, after securing many successes at the general election, the Socialists again joined to form a ministry, and under Henri Jaspar a coalition was still in office in 1930. In 1921 the constitution was revised in the direction of an extension of the franchise, and an economic treaty for 50 years was made with Luxembourg.

In 1926 economic recovery was completed by the stabilization of the currency, the franc being pegged at 175 to the £1. A loan for £20,000,000 was floated and the state railways were handed over to a company.

Belgium. Map showing the boundaries of the kingdom as it was restored under the terms of the Peace Treaty of June, 1919

THE GERMAN OCCUPATION. Belgium was occupied by the Germans throughout the Great War. They attacked Liège, which they captured on Aug. 16, and on Aug. 18 the main advance began. Heavy fighting took place near Tirlemont and at other places, and despite a gallant defence the Belgian army was forced back. Brussels was surrendered on Aug. 20, and two days later the 5th French Army was attacked at Charleroi, and the British at Mons on Aug. 23. The fall of Namur on Aug. 25 liberated the main German armies for beginning their wide turning movement into France after leaving a sufficient force to subdue Antwerp, the last remaining stronghold. This city fell early in Oct. and by the 14th the Germans had reached the coast at Ostend. At the end of Nov. all Belgium except Nicuport, Furnes and Ypres was in their hands.

The country was placed under a German governor and deprived of all legal rights and protection. Property was confiscated, bank securities appropriated, and factories and works systematically stripped of machinery and plant. The Germans made no provision for feeding the population, and that it was able to live at all was due to outside help. There were wholesale deportations of men for forced labour in Germany. It is estimated that the cost to Belgium of the German invasion was in excess of £1,000,000,000. The evacuation of Belgium by the Germans was one of the conditions of the armistice.

BELGRADE OR BEOGRAD (White City). Capital of Yugo-Slavia, formerly of Serbia. On the S. side of the Danube at its junction with the Save, it lies opposite Zemun (Semlin). The town is fast losing its Oriental appearance,

having been much modernised since the Great War. Though it has few manufactures, it is the chief centre of the trade of the country.

Belgrade's strategic importance has been long recognized. In Roman times it was a military camp. Passing from the Byzantine emperors, it was occupied by the Hungarians.

From 1330 to 1427 it was in Serbian hands. In 1456 John Hunyady resisted the Turkish efforts to take it, but Soliman captured it in 1521, and with brief interludes it remained in Turkish possession until its transference to Serbia in 1866. As the Serb capital it had grown into a flourishing town of nearly 100,000 inhabitants by the beginning of the Great War, during which it underwent two bombardments and changed hands four times. Pop. (1921) 111,740; estimated pop. (1927) 250,000.

BELGRAVIA. District of S.W. London. It lies around Belgrave Square. Once The Five Fields, forming part of Ebury Farm, about 1825-35 it was laid out by Thomas Cubitt, and includes Belgrave and Eaton Squares. It is part of the London property of the duke of Westminster. See London.

Belgrade. Panorama of the quays and shipping on the Danube. In the background is the cathedral. Above, the statue of Prince Michael, second son of Milosh Obrenovitch, the Serbian national hero

BELIAL. Word used in the O.T. to define the wicked or worthless, e.g. sons of Belial (1 Sam. 2 and 25; 2 Sam. 20; 1 Kings 21); and in the N.T. as a synonym for Satan (2 Cor. 6). In Milton's *Paradise Lost*, Belial is the spirit of lust.

BELISARIUS (c. 505-565). Byzantine general. In command of the imperial troops he gained some notable victories against the Persians, and, later, almost annihilated the Vandals in Africa (533). He drove the Ostrogoths from S. Italy and occupied Rome in 536. There he was beleaguered by a huge army, but he forced the Goths to raise the siege when it had lasted for more than a year. He drove the Goths back to the north, and in 540 captured Ravenna, where he refused an offer of the crown. After a brief absence he returned to Italy, where for five years he fought the Goths under Totila. In 588 Belisarius was recalled to Byzantium, to beat back an invasion of Slavs and Huns. He was imprisoned on a charge of treason, but had been restored to his possessions before his death.

BELIZE OR **BALIZE.** Seaport and capital of British Honduras. At the mouth of the Belize river, in the Caribbean Sea, it is surrounded by swamps, which render the climate unhealthy. The harbour is accessible only to small vessels through a channel. Mahogany and other woods are exported, also sugar and bananas in large quantities. There is a wireless station. Pop. 12,661.

BELL (A.S. *bellan*, to bell, bellow). Generally a hollow, cup-shaped body of east metal emitting one clear, pealing note, termed

Belgium invaded: map showing the German advance. By Aug. 24, 1914, the S. and E. were overrun, but the enemy were unable to advance their line in the N.W. until the fall of Antwerp Oct. 9, 1914. See p. 228

Bell. 1. Japanese bronze bell. 2. Assyrian bell. 3. Chinese bell, 6th cent. B.C. 4. S. Patrick's bell, the oldest specimen of Irish Christian metal work. 5. Great Bell of Moscow. 6. Bell in a Burmese pagoda, weighing about 80 tons

the fundamental, when struck by an attached clapper or hammer. Bells of this type are made with a slightly turned-up edge and are struck by the clapper at the thickest part, known as the sound bow. Another form of bell is saucer-shaped, against which the hammer is driven by a spring, as in clocks.

At Nimrod, Layard unearthed copper cauldrons containing 80 bronze bells with iron tongues, the bell-metal containing 14 p.c. of tin and 86 p.c. of copper. Small golden bells were used during the time of the Israelites for ornamenting the robes of the high priest. In Greece and Rome bells were in common use. Church bells were in use in the 6th century. In England bells were first cast in 940 A.D.

Enormous bells are in a pavilion at Mingoon, in Burma, and at Peking. Compared with these the largest English bells are pygmies. Great Paul in S. Paul's Cathedral weighs 16½ tons, Big Ben at Westminster 13½ tons, Great Peter in York Minster 12½ tons, and Great Tom at Oxford 7½ tons. All these are exceeded

by two bells in Paris, Le Savoyard in the basilica of the Sacré Coeur at Montmartre, 19 tons, and the 17-ton bell of Notre Dame; and these again were eclipsed in size by the Kaiser bell of Cologne cathedral, which weighed 27½ tons and was melted down in 1917.

BELL

METAL This is an alloy of copper and tin. The proportions usually employed are from three to four parts of copper to one of tin. In some small bells found by Layard in the ruins of Nineveh, the tin appears to have been only one-seventh the weight of the copper; but bells have been made in which the proportion of tin has been as high as half the weight of the copper. An alloy largely used for machinery bearings and for small axles, where steel would not be admissible owing to the risk of corrosion, is substantially bell metal; this may contain zinc or lead.

ELECTRIC BELLS. The vibrating electric bell continues to ring while current from a battery is allowed to pass through its circuit. The hammer is an extension of the armature, A, of an electro-magnet, M, and is normally held away from the magnet and in contact through spring, S, with a screw terminal, P, tipped with platinum. When the bell-push is depressed current flows from the battery to terminal T₁ through the coils of the magnet and thence by the armature spring and contact screw to terminal T₂, and back to the battery. The magnet is energised and attracts the armature, pulling the spring away from the contact

Bell. Diagram showing construction of the electric bell. Inset, left, contact breaker. See text

screw just as the hammer strikes the bell and breaking the circuit, so that the magnet ceases to attract the armature, and the armature with its spring returns to the former position and closes the circuit once more. This cycle in rapid sequence causes the continuous ringing of the bell as long as the push is depressed or some other form of switch is operated. See Battery.

BELL, ALEXANDER GRAHAM (1847-1922). Scottish scientist. Born in Edinburgh, Mar. 3, 1847, he was educated at the High School and University, and graduated as a doctor of medicine. Having settled in America, he became in 1872 professor of vocal physiology in the university of Boston. Inheriting an interest in sound from his father, Alexander Melville Bell (1819-1905), and his grand father, Alexander Bell, he studied the problem of transmitting sound, and in 1876 patented an apparatus which developed into the telephone. He died Aug. 2, 1922. See Telephone.

Alexander G. Bell,
Scottish scientist

BELL, CHARLES FREDERIC MOBERLY (1847-1911). British journalist. Born in Alexandria, April 2, 1847, he was for some years associated with a business firm in that city. In 1880 he founded The Egyptian Gazette. Correspondent of The Times in Egypt, 1885-90, he became manager in 1890, and was managing director from 1908 until his sudden death in his office, April 5, 1911. Consult Moberly Bell and his Times, F. Harcourt Kitchen, 1925.

C. F. Moberly Bell,
British journalist

BELL, GERTRUDE MARGARET LOWTHIAN. British administrator. A daughter of Sir Hugh Bell, Bart., she was educated at Queen's College, London, and at Oxford. Her travels in Arabia gave her an acquaintance with that country possessed by no other woman. In 1915 she joined the military intelligence department in Cairo, whence she transferred to Iraq. In 1917 she was appointed assistant political officer at Bagdad, and she was still in Mesopotamia when she died, July 12, 1926. An authority on the East, Miss Bell wrote several books, and her Letters, ed. by Lady Bell, appeared in 1929.

Gertrude Bell,
British administrator

BELL, HENRY (1767-1830). Scottish inventor. Born at Torphichen Mill, Linlithgow. Bell became a millwright and then worked as a shipbuilder. In 1791 he started in business at Glasgow and experimented on a vessel which could be propelled by steam. After some failures he built the Comet, which in 1812 began to run from Glasgow to Greenock. This was the first steamship to run regularly on a European river, although not the first steamship of any kind.

Henry Bell,
Scottish inventor
James Tolloch

BELL, JONAS (1811-95). British sculptor. He was born at Hopton, Suffolk, studied at the Academy schools, and exhibited at the Royal

Academy in 1832. The Guards' Memorial in Waterloo Place, 1858-60, was his work, and others were the Wellington Monument at Guildhall, 1855-56, the statue of Lord Clarendon at the Foreign Office, and those of Lord Falkland, 1847, and Sir Robert Walpole, 1854, at S. Stephen's Hall, Westminster. He presented a collection of his own sculptures to the Kensington Town Hall, and died at Kensington, March 14, 1895.

BELL, ROBERT ANNING (b. 1863). British artist. By birth a Londoner, he was educated at University College School, and studied art in England and abroad. Apart from his painting, he made a reputation as a designer, notably by his mosaic panels in the Houses of Parliament and in Westminster Cathedral. In 1914 he was elected A.R.A., and he became R.A. in 1922.

Belladonna, or deadly
nightshade

BELLADONNA (*Atropa belladonna*). Variant name of the deadly nightshade. Atropine is an alkaloid prepared from the leaves and root. Medicinal preparations of belladonna or atropine are made up mainly for external application. All parts of the plant are poisonous and narcotic. See Deadly Nightshade.

BELLADONNA LILY (*Amaryllis belladonna*). Bulbous plant belonging to the order Amaryllidaceae, the sole member of its genus. It produces in Sept. a flower scape about 18 ins. high bearing an umbel of handsome funnel-shaped flowers.

Belladonna lily
Amaryllis belladonna

BELLAGIO (anc. Bilacus). Town of Italy. At the point of the promontory separating the two lower arms of Lake Como, and some 15 m. by steamer N.E. of Como,

Bellagio. Beautiful Italian resort situated on Lake Como and encompassed by forested mountains

it is a favourite tourist resort. The natives are famous for carving in olive wood and make silk. Pop. 3,936.

BELLAMY, EDWARD (1850-98). American author. Born at Chicopee Falls, Massachusetts, from 1871 he was occupied with journalism, and in 1888 published Looking Backward, a romance of socialism which had an enormous vogue and has been translated into French, German, Dutch, and Italian. Dating his Utopia A.D. 2000, Bellamy sketched the process of change in society from capitalism to socialism, emphasising the will to

Edward Bellamy
American author

change, the ease of the new order, and the increase of material comfort. He also wrote a number of novels.

BELLARMINE, ROBERT (1542-1621). Italian theologian. Born at Montepulciano, he entered the Society of Jesus. As professor of theology and preacher in Louvain he won a great reputation. In 1576 he was moved to Rome and made professor of controversies at the Roman College, his lectures being the first serious attempt to combat the Protestant

Belle Alliance Farm, where Wellington and Blücher met after the battle of Waterloo. See below

position. In 1590 he went to France with the papal legation, and nine years later was made cardinal. For three years he was archbishop of Capua, and then returned to Rome as chief theological adviser to the pope.

BELLARY. City of India, capital of the Bellary dist. of Madras. A military station and important rly. junction, 305 r.n. by rly. N.W. of Madras, it has a 16th century fort built on a rock 450 ft. high. Cotton and silk are manufactured. Pop. 39,842.

BELLAY, JOACHIM DU (c. 1525-60). French poet. Born at Liré, near Angers, in 1549 he published *La Délicieuse et Illustration de la langue Françoisse*, the manifesto of the famous constellation of French poets known as the Pléiade. They claimed to be able to naturalise the ode and the sonnet and to introduce the fullness and elegance of Greek and Latin into French. He died at Liré, Jan. 1, 1560. His works are mainly sonnets written in the Petrarchian form.

Bell Bird (*Chasmorhynchus nivicus*). Genus of birds found in S. America. They are famed for their resonant metallic note.

Bell Bird, notable
for its curious cry

BELLE ALLIANCE. Name by which the battle of Waterloo is known to the Germans, Belle Alliance being a farm on the battlefield. The Belle Alliance Platz in Berlin was named in commemoration of the victory. See Waterloo; illus. above

Belle de Nuit. Variant name of the marvel of Peru (q.v.).

BELLECK. Village of Fermanagh, Northern Ireland. It is on Lough Erne, 22 m. from Enniskillen, and is famous for its pottery. This was opened in 1857 to use local clays. Parian and biscuit wares were made: also glazed pottery. The decorative motifs were mostly marine subjects, dolphins, sea horses, tritons, etc. Belleck Falls on the river Erne is a beauty spot. See illus. p 229.

BELLE-ILE-EN-MER. Island of France, off the W. coast of Brittany. It is 11 m. long and from 2½ m. to 7 m. broad, and 33 sq. m. in area. In the department of Morbihan. It is about 8 m. from Quiberon Point. Le Palais, a small port, with fortifications and a prison, is the chief town. Off the island the English fleet defeated the French in 1759, and from

1761-63 it was held by the English. It is also called Gueuvreur, a corruption, through its medieval name Guedol, of its Roman name Vindilis, and contains remains of prehistoric man. There are some remarkable grottoes along the coast. Agriculture, fishing, and the preserving of sardines and anebovies are the chief industries. The island has a fine breed of draught horses. Pop. 11,000.

BELLE ISLE. British island in the Atlantic, between Newfoundland and Labrador, at the entrance to the strait of Belle Isle. Rocky, 700 ft. high, and 21 m. in circumference, it has two lighthouses and a wireless station. There is another Belle Isle in Conception Bay, Newfoundland. It is 6 m. long and 3 m. wide, has cliffs rising to 400 ft., and contains large beds of iron ore. The Strait of Belle Isle is the shortest route from Europe to the St. Lawrence. It is 85 m. long and about 12 m. broad, and is open only in the summer.

BELLENDEN, WILLIAM (c. 1555-1633). Scottish scholar. Born at Lasswade, he was for some years a professor at Paris University, and was employed on various diplomatic missions by Mary, and also by her son, James. His Latin writings, a survey of Roman history from Cicero's works, were published in 1616. His last book was *De Trihus Luminibus Romanorum*—the three luminaries being Cicero, Seneca, and Pliny.

John Bellenden (d. 1587) was also a noted scholar. He translated Hector Boece's history and part of Livy for James V.

BELLENGLISE. A village of France, in the department of Aisne. It is 6 m. N. by W. of St. Quentin. It was the scene of two notable feats in the Great War. In Sept., 1918, British troops of the 46th Division, equipped with lifebelts and carrying mats and rafts, stormed the western arm of the canal at Bellenglise. Here, too, the 4th Australian Division penetrated the Hindenburg line. A memorial in the form of an obelisk was erected by the Australian Government to mark this feat. The village was captured by the British, Sept. 29, 1918.

BELLEROPHON. Greek legendary hero. Falsely accused by Anteia, whose advances he had rejected, he was sent by her husband, Proetus, king of Argolis, to her father, Iobates,

king of Lycia, with a sealed letter requesting Iobates to compass the death of Bellerophon. To this end, Iobates sent him to kill the fire-breathing monster Chimaera. But, with the help of the goddess Athena, Bellerophon caught and bridled the winged horse Pegasus, on which he rose above the monster

and slew it with his arrows. After further feats Iobates gave him his daughter in marriage and made him his successor. But having incurred the displeasure of the gods, Bellerophon fled and led a wandering life.

BELLEROPHON. British battleship. Launched in 1907, her length was 490 ft., beam 82 ft., displacement 18,600 tons, and she had engines of 23,000 h.p., giving a total speed of 21 knots. Her armour was an 11-in. belt, with 12 ins. on the gun positions, and a protective deck 2½ ins. thick. Her armament was ten 12-in. and 20 smaller guns, and three torpedo tubes, and her complement was 850. The *Superb* and the *Temeraire* were sister ships. Bellerophon has been a famous ship name in the Navy since 1794, the first being the ship on which Napoleon surrendered to the British.

BELLEVILLE. City and port of Ontario, Canada. At the mouth of the Moira river, on Lake Ontario, 106 m. E.N.E. of Toronto, it is served by the C.N.R. Pop. 12,206.

H.M.S. Bellerophon, super-Dreadnought, built in 1907, lying in Portsmouth harbour alongside the old Victory of 1785
Cribb, Southsea

Another Belleville is a manufacturing town in Illinois, U.S.A., the co. seat of St. Clair Co. Pop. 25,000, mostly Germans.

BELLEV, HAROLD KYRLE (1857-1911). British actor. He was a younger son of John Chippendall Montesquieu Bellev (1823-74), a Church of England preacher who became a Roman Catholic. After a varied career, which included a naval cadetship and life in Australia, Bellev went on the stage, and won quick recognition in London. He played in America, 1885-6, and was associated with Mrs. Brown Potter in many successes. After 30 years' professional work he died at Salt Lake City. He was the author of several plays, including *Hero and Leander*, 1892.

BELLEWAARDE. Lake, wood, and ridge of Belgium, N. of Hooge and E. of Ypres. They were the scene of much severe fighting in the battles of the Ypres salient. See Ypres.

Bell-flower, Campanula rotundifolia

BELL FLOWER (Campanula). Genus of the order Campanulaceae, mostly perennials, with white, blue, or idae bell-shaped flowers. They are found in all the temperate regions and in most tropical countries. Harebell is the best-known example of the genus.

See Harebell.

BELLINGHAM. District of London. In the borough of Lewisham, it is 9 m. from the City and has a station on the Southern Rly. It owes its existence to the London County Council, which has built a large number of houses here. Another Bellingham is a village in Northumberland.

BELLINGSHAUSEN, FABIAN GOTTLIEB VON (1778-1852). Russian explorer. Born on the island of Oesel, Sept. 9, 1778, he entered the Russian navy in 1797. In 1803 he sailed round the world, and in 1819-21 commanded a Russian expedition to the Antarctic regions, when he discovered and named Alexander Land and Peter Island. In 1828 he took part in the Russian attack on Varna, and was afterwards commander of the Baltic Fleet and governor of Kronstadt. He died Jan. 13, 1852. The portion of the Antarctic Ocean S.W. of Drake Strait and W. of Graham Land, called Bellingshausen Sea, is named after him.

BELLINI. Name of a family of Venetian painters. Giacomo or Jacopo Bellini (d. 1468) was born in Venice and his few existing paintings show him as a rich and harmonious colorist and a careful draughtsman. He was the father of Gentile and Giovanni Bellini and his daughter married Andrew Mantegna.

The elder son, Gentile Bellini (1429-1507), studied under his father, and in collaboration with his brother Giovanni restored the frescoes by Gentile da Fabriano in the great council hall of the doge's palace (1474). His existing

works lack the poetic colour and profound sentiment of Giovanni's paintings, but his detail is carefully rendered. He was fond of introducing Oriental accessories into his works. He died at Venice, where much of his work remains, Feb. 28, 1507. He is represented at Milan, by the famous Preaching of S. Mark, and also in the National Gallery, London.

The younger son, Giovanni Bellini (d. 1516), was the greatest of the three. His early pictures, mostly in tempera, follow the austere traditions of the Paduan school. After 1476, when he began to use oil

colours, his art became broader and more full of colour. The change was accelerated after 1488, when Giorgione and Titian became his pupils. He died at Venice, Nov. 29, 1516. Bellini's most famous paintings are *The Madonna and Saints*, 1488, in the Academy at Venice; the altarpiece of S. John Chrysostom in Venice, 1513; and *The Agony in the Garden*, in the National Gallery, London. His famous portrait of the doge Leonardo Loredano is also in the National Gallery, London.

Giovanni Bellini, self-portrait by this Venetian painter
Capitoline Museum, Rome

BELLINI, VINCENZO (1801-35). Italian composer. Born at Catania, Sicily, the son of an organist, he studied at the Naples Conservatoire, and produced his first opera while still a student. His *Bianca e Fernando*, produced in 1826 at the Naples Opera House,

Bellerophon watering Pegasus. From a medieval relief
Spada Palace, Rome

achieved a considerable success, while II Pirata, written for Milan, brought him European fame, which was greatly increased by the production of La Sonnambula, 1831. Norma, 1831, and I Puritani, 1835. He died Sept. 24, 1835. Consult Memoir, W. A. C. Lloyd, 1909.

BELLINZONA (Ger. Bellenz). Town of Switzerland, capital of the canton of Ticino. On the Ticino river, it is 105 m. S.E. of Lucerne, on the St. Gotthard rly., and about 20 m. N. of Lugano. The old key to the St. Gotthard and San Bernardino passes, it was defended by castles and walls. In 1503 it became politically Swiss, though in character, climate, and language it is Italian. San Biagio, a 13th century church, has a curious 14th century fresco. The abbey church is a fine building. Pop 11,600.

BELLOC, JEAN PIERRE HILAIRE (b. 1870). British author. Born July 27, 1870, the son of a French father and an Irish mother, he was educated at the Oratory School, Edghaston, and at Balliol College, Oxford. Between school and college he served for a period in the French artillery. From 1906-10 he sat in Parliament as Liberal M.P. for S Salford. Belloc's best literary work is to be found in his books of essays and travel, which are charming in style and matter, especially The Path to Rome, 1902, and Hills and the Sea, 1906. Prejudice affects his writings as an historian but his Danton, 1899, and Robespierre, 1901, are good literature. Later work included his History of England. Vols. I-III, 1925-28. The Cruise of the Nona, 1925, and The Missing Masterpiece 1929.

Hilaire Belloc.
British Author
E. O. Hoppe

BELLO HORIZONTE OR MINAS. City of Brazil. At the foot of the Espinhaço range, about 48 m. by rly. N.W. of Ouro Preto, the former capital, and some 390 m. N. of Rio de Janeiro by the Central of Brazil Railway, it has cotton factories and meat canneries, and gold is mined in the vicinity. It has a law school. Pop. 55,663.

BELLONA (Lat. bellum, war). In Roman mythology an old Italian—probably Sabine—divinity, goddess of war, sister or wife of Mars. She had a temple at Rome, on the Campus Martius, where foreign ambassadors and triumphant generals were received by the senate, and near which war was declared by the priestly college of fetiales. Originally an Asiatic deity.

Bellona, afterwards confused with the Italian, was worshipped at Comana in Cappadocia.

BELLOT, JOSEPH RENÉ (1826-53). French explorer. Born in Paris, March 18, 1826, he studied at Roebefort, and entered the navy. In 1851 with Captain Kennedy and in 1852 with Captain Inglefield he joined the Arctic expeditions to find Franklin. In 1852 he discovered the strait between Boothia Felix and North Somerset Island, leading from Franklin Strait to the Gulf of Boothia, which was named after him. He fell into a crevasse Aug. 18, 1853, and was never heard of again.

Bellona. Roman goddess of War
From a bust by Auguste Rodin

BELLOWS (A.S. baelig, bag). Apparatus for creating a draught by the compression of a flexible or collapsible chamber to which air has been admitted. The work formerly done by bellows is now done largely by fans. In the smith's bellows the upper and lower walls are of wood and the sides of flexible leather. By means of a hand lever the chamber is alternately expanded and contracted, air being drawn in and expelled in turn.

Bellows. Hand variety
for domestic use

In music the bellows is an essential part of the mechanism for supplying wind to the pipes and reeds of the organ, harmonium, and kindred instruments, including the wind-bag of bagpipes. See Organ.

Bell Rock. Rock off Angus or Forfarshire, Scotland. It is better known as the Inchcape Rock (q.v.). See Arbroath.

BELLS. Term used on board ship to denote the hour of the day. A bell is struck every half-hour, the number of strokes indicating the number of half-hours that have passed in the particular watch then being kept. Thus, 4.30, 8.30, and 12.30, whether a.m. or p.m., are each "one bell," and the number of strokes is increased by one every half-hour until "eight bells," which marks the end of the ordinary watch. "Five bells in the morning watch" would thus be 6.30 a.m.

BELLSHILL. Town of Lanarkshire, Scotland. It is 10 m. S.E. of Glasgow, on the L.M.S. and L.N.E. Rlys., and has coal and iron mining industries. Pop. 17,411.

BELLUNO (anc. Belunum). City of Italy, capital of Belluno prov. On a hill above the junction of the Piave and Ardo, 72 m. by rly. N. of Venice, it has a Renaissance cathedral, several palaces and a museum. Leather, silk, and straw are manufactured. Pope Gregory XVI was born at Belluno, which gave the title of duke to Marshal Victor. Captured by the Austrians, Dec., 1917, it was reoccupied by the Italians, Nov. 2, 1918. Pop. 30,189.

BELLWORTS (Uvularia). Small genus of bulbous herbs of the order Liliaceae. Natives of N. America, they have bell-shaped, lily-like, drooping yellowish flowers, produced singly or in pairs in spring. The bruised leaves of *U. grandiflora* are considered a remedy for rattlesnake bites.

BELMONT. Town of Cape Province, South Africa. It is 50 m. by rly. S. of Kimberley and about 25 m. N. of the Orange river. A narrow gauge rly. to Douglas was completed in 1923. Belmont was the scene of an early battle in the S. African war. Nov. 23, 1899, when the British, advancing to the relief of Kimberley, pushed back the Boers.

BELOMANCY (Gr. belos, dart; manteia, divination). Divination by arrows. It was practised in ancient Greece and by idolatrous Arabs, although forbidden in the Koran. It is referred to in the O.T. (Ezek. 21).

BELOW, OTTO VOX (b. 1855). German soldier. Born at Danzig, he entered the army in 1875, and became a general in 1909. During the Great War, after fighting on the Eastern front, he replaced Bülow as commander of the German forces between Arras and Soissons in 1916. In Oct., 1917, he led the Austro-German offensive against Italy and won the battle of Caporetto (q.v.). Transferred to the Western front, he led an army in the second battle of the Somme, Mar., 1918.

His brother Fritz (1853-1918) also had a noted career in the war. He was prominent in the early operations in East Prussia, and in 1917-18 commanded an army on the

Western front. He was responsible for the German offensive in the third battle of the Aisne in May-June, 1918, and on its failure was superseded. He died in Nov., 1918.

BELPER. Urban district and market town of Derbyshire. It stands on the Derwent, 8 m. N. of Derby by the L.M.S. Rly. Its prosperity is chiefly due to cotton works established in 1776. The town has engineering works and hosiery, cotton, and nail factories. Market day, Sat. Pop. 12,329.

Jedediah Strutt, the inventor, helped to establish the cotton industry in Belper, and when his grandson, Edward Strutt (1801-1880), was made a peer in 1856 he took the title of Baron Belper, still held by his descendants. The family seat is Kingston Hall, Derby.

BELPHEGOR (Bēlphegor, Greek form of Baal-peor). Syrian idol, who is believed to have symbolised the sun, and was worshipped by the Moabites, the Ammonites, and the Midianites. The name is also borne by a demon who married a mortal and fled from her, and whose story is told in Nacchiavelli's Marriage of Belphegor and in La Fontaine's tales.

BELSHAZZAR OR **BEL-SAR-UZUR**. Last king or prince regent of Babylon, at whose profane feast Daniel read the handwriting on the wall (Dan. 5). He has been identified as son of Nabonidus, the last king of Babylon. He was killed when Babylon fell to Cyrus's general, Gobryas, 538 B.C.

BELT (Lat. baltens). Girdle for the waist, either for confining the clothing, or for acting as support for a sword, etc. It is sometimes worn as a mere ornament. In English pugilism a belt is a badge of championship, e.g. the Lonsdale Belt.

In aeronautics the belt is the safety strap which secures the pilot to his seat in the aeroplane. Quick release clips are fitted so that in emergency the pilot can instantly open the belt.

The belt filler is a machine for fixing cartridges in the belts of fabric or metal that are used to feed certain types of automatic machine-gun. See Machine Gun.

BELT, GREAT. Channel separating the Danish islands of Zealand and Fünen. It is dangerous to navigation owing to the presence of currents, shoals, and ice. It connects the Kattegat with the Baltic Sea, and is 40 m. long and 10 m. to 20 m. broad. Its maximum depth is 26 fathoms.

The Little Belt is a channel between the Danish island of Fünen and the mainland. It forms the western and less direct route between the Kattegat and the Baltic Sea, and is more difficult to navigate than the Great Belt. It is 30 m. long, from 1 m. to 18 m. broad, and from 5 to 20 fathoms deep.

BELT AND ROPE DRIVE. Method of transmitting power to machinery. A pulley is secured to the driving shaft, a corresponding pulley is fitted to the machine, and an endless belt or rope is passed round the two pulleys, which must be in correct alignment. When the driving shaft revolves, friction between the pulley and the belt or rope draws the latter round, and the pulley on the machine is in turn rotated. See Pulley.

BELTANE OR **BELTAIN**. Celtic and pagan festival. It long survived in Scotland, Wales, Ireland, and elsewhere, and the name is still used in Scotland for May day. Fire played a most important part. A banquet was held and a fire lighted at the top of a hill; a cako was then cut up, and the person to whom a special piece fell by lot was regarded as one to be shunned and even threatened with death. Other ceremonies consisted in driving cattle between two fires, or compelling a young man to leap through the flames three times. The Romans had a similar festival. The etymology of Beltane is uncertain, the idea that it means Bel or Baal-fire being now rejected.

Beluga. Variant name of the white whale, a large dolphin. See Whale.

BELUS. Legendary king of Babylon, who was deified after death. He was regarded as the son of the Osiris of the Egyptians, and had a magnificent temple, supposed to have been the Tower of Babel. He is not to be confounded with the Greek Belus, father of Aegyptus and Danaus.

BELVEDERE (Italian for beautiful view). Architectural term for that part of a building, such as a turret or lantern, from which a clear view of the surrounding country can be enjoyed, and for the whole of a high structure of which only the top part offers this facility. The name is also applied to a summer house in a garden. The court of the Belvedere in the Vatican gives its name to the famous antique statue, the Apollo Belvedere, which it contains. Some of the Florentine palaces have belvederes on their summits.

Belvedere. District of Kent. It is on the Thames, $1\frac{1}{2}$ m. N.W. of Erith and 14 m. S.E. of London by the Southern Rly.

BELVOIR CASTLE. Seat of the duke of Rutland, in Leicestershire, 7 m. S.W. of Grantham. On a hill overlooking the Vale of Belvoir, it is a large, quadrangular modern

Belvoir Castle. The Duke of Rutland's seat in Leicestershire. It is in the centre of a hunting country.

Gothic mansion. It was built in 1808 to replace an earlier structure destroyed by fire. It contains valuable tapestries and old masters. The original castle was built by Robert de Toeni, standard-bearer to William I.

The Belvoir Hunt has its district in Lincolnshire and Leicestershire. Founded in 1750, it took its name from the duke of Rutland's castle. Successive dukes have been masters, and the kennels are at Belvoir. The country covered by the hunt lies between Melton Mowbray and Newark.

BEMBRIDGE. Village of the Isle of Wight. On the E. coast of the island, it has a station on the Southern Rly. During the Great War it had an aerodrome and a sea-plane station. There is an old fort on Bembridge Down. Pop. 1,973.

Bembridge Beds is the name given to Middle Oligocene deposits of the Isle of Wight and Hampshire. They consist of an upper series of marls and clays; a middle calcareous division; and a lower series of marls, clays, and limestones, known as Osborne Beds.

BEMERSYDE. Estate and residence in Berwickshire, Scotland, since the 12th century the home of the Haigs. On the Tweed, about

2 $\frac{1}{2}$ m. from S. Boswells, it incorporates a castle built in the 16th century for Border defence. Alone among the towers and castles in the Scottish Border counties, it has been seven centuries in the same family. In 1921 Bemersyde was handed over to Earl Haig (who took his title from here) as a gift from the people of the British Empire, thus fulfilling Thomas the Rhymer's prophecy:

Tyde what may betide,

Haig shall be Haig of Bemersyde.

BEN. (1) Hebrew prefix in proper names meaning "son" (Benjamin, "son of the right hand"). The plural, Beni, indicates a clan or society (Beni Israel, sons of Israel). Ben appears in Arabic as Ibn, corrupted into Aben, Aven, Avi (Abeneerrages, Avenpace, Avicenna). (2) Ben (Pen) is a Celtic word for mountain, common in names of mountains in Scotland and in Cornish and Welsh names (Ben Lomond, Ben Nevis, Pendennis, Penarth, Penmaenmawr). (3) The name, of Arabic origin, of an oil used in scents.

BENADIR. Former name of the Italian colony forming the S. portion of Italian Somaliland, now known as Somalia Italiana Meridionale, or Southern Somalia. It extends from $4^{\circ} 30'$ N. lat. to the mouth of the Juba. In Aug., 1892, the sultan of Zanzibar leased the Benadir ports to Italy, and ceded his sovereign rights for a payment of £144,000 in 1905, when the ports, hitherto administered by the Italian Benadir Co., were placed under the administration of the Italian Government. The chief ports are Mogadiseio (the capital), Merea, and Brava. See Somaliland.

BENARES (Skt. Varanasi). City of the United Provinces, India, headquarters of Benares division (area, 10,427 sq. m.). On the Ganges, here spanned by the great Dufferin bridge, 3,518 ft. long, it is of great antiquity. It came into possession of the East India Company in 1775.

It is celebrated for its temples and shrines, and is one of the holiest places of the Hindus. The principal temple is the Bisheshwar, or Golden Temple, dedicated to Siva. Great numbers of pilgrims visit Benares every year, and its prosperity is largely dependent upon the pilgrim traffic.

Benares is a mart for shawls, silks, embroideries, and diamonds, and manufactures ornamental brass ware, jewelry, and lacquered wooden toys. It is an educational centre of some importance, containing Benares College, opened in 1791, and the Hindu University, opened in 1916. Pop. city, 198,447; division, 4,443,898.

The native state of Benares was created in 1910 by transferring part of the family domains to the maharajah, who has a salute of 13 guns. In 1919 the town of Ramnagar, near Benares city, was handed over to him for his capital. Area 875 sq. m. Pop. 362,735.

Ben Attow. Mt. on the borders of Ross and Cromarty and Inverness-shire, Scotland. Alt. 3,383 ft.

Benbecula (Gael. mountain of the fords). Island of the Hebrides, between N. and S. Uist. The inhabitants are crofters.

BENBOW, JOHN (1653-1702). English admiral. Born at Shrewsbury, March 10, 1653,

by 1678 he was a master's mate. He took part in the battles of Beachy Head (1690) and of Barfleur and La Hogue (1692), and in the operations off the French coast in 1693-4. Rear-admiral in 1696, and vice-admiral in 1700, he held a command in the West Indies in 1699 and 1702. When he fought his great fight against the French, he pursued them for five days, until his leg was carried away by a chain shot and he was compelled to return to Jamaica, where he died, Nov. 4, 1702.

John Benbow, English Admiral Sir Godfrey Kneller

BENCH. Comprehensive term for the judicial body, either as a whole or in any given court. The title originates in the fact that the judges sat on a bench raised above the floor of the court, while the litigants, bar, and others sat on the floor level.

A member of the governing bodies of the four Inns of Court in England, and of the King's Inns, Dublin, is known as a bencher, the full name being master of the bench. There is no limit to the number of benchers of an inn; they are elected by their fellows, and usually

all barristers who attain eminence are called to this dignity. All questions affecting calls to the bar and the maintenance of discipline in the profession are settled by the benchers, subject only to an appeal to the visitors. See Bar; Inn of Court

Bench mark used in land surveying

BENCH MARK. Surveying term. A land surveyor, when taking levels, requires some fixed point or datum as a standard of height by which to regulate and verify measurements and operations. This basic point is indicated by a bench mark, a term which is also applied to any such mark set up in the course of the survey.

Benares. Temples and shrines on the bank of the Ganges. The ghats, or landing-places, are generally crowded with worshippers and bathers in the sacred river

Ordnance bench marks take the form of the so-called "broad arrow" placed in some prominent position where it is least likely to be disturbed—on a boundary-stone or on the wall of a public building. They bear an ascertained relation to ordnance datum, i.e. to the mean sea level agreed upon as a standard basis or unit for the ascertainment or assumption of vertical height. See Surveying.

BENCKENDORFF, ALEXANDER, COUNT (1849-1917). Russian diplomatist. Entering the Russian diplomatic service in 1869, after serving in minor capacities in Rome, Vienna, and elsewhere, he was minister at Copenhagen, 1897-1903, and ambassador in London from 1903 until his death, Jan. 11, 1917.

Bemersyde, for seven centuries the home of the Haigs. From it Earl Haig took his title

BENCOOLEN OR BENKULEN. Seaport on the W. coast of Sumatra, Dutch East Indies. Owing to coral reefs and surf, vessels must lie in the roads. Pepper, coffee, and camphor are the chief exports, maize, sugar, coconuts, and rubber are grown. The district was British from 1685-1825, when it was exchanged for Malacca. Pop. 7,700.

Ben Cruachan. Mt. of Scotland, in mid Argyllshire, between Loch Awe and Loch Etive. Its alt. is 3,689 ft.

BEND. In heraldry, a charge represented by a broad diagonal band (which should occupy one-third of the shield) from dexter chief to sinister base. A shield or charge divided by a diagonal line is said to be "per bend"; charges placed in a diagonal position are termed "in bend." The word sinister is added whenever the diagonal position is reversed and has been used as a mark of illegitimacy.

Bend. When the diagonal is reversed (right) it is a bend sinister

Bendery. Town of Bessarabia, Rumania. On the Dniester, 37 m. S.E. of Kishinev. It trades in cattle, grain, and timber. There are salt mines, paper factories, tanneries, and ironworks. In April, 1919, it was taken by the Soviet forces from the Rumanians, who recaptured it and made it a base for operations in Ukraina. Pop. 36,000.

BENDIGO. City of Victoria, Australia, capital of Bendigo co. It is 100 m. by rly. N.N.W. of Melbourne, in a rich gold-mining and agricultural region. The mines, discovered in 1851, employ many thousands. Other local products are wheat, fruit, wine, beer, pottery, tiles, and bricks. Its earlier name was Sandhurst. Pop. 33,910

BENDIGO (1811-80). Popular name for William Thompson, the British pugilist. He was born at Nottingham, Oct. 11, 1811, and as one of three sons was known as Abednego, his brothers being called Shadrach and Meshach. His first victory in the prize ring was in 1832; in 1839 he was awarded a championship belt, and his last fight was in 1850. Bendigo later became a Nonconformist minister, and, as the converted prize fighter, was a popular preacher at revival services. He died Aug. 23, 1880.

BENEDETTI, VINCENT, COUNT (1817-1900). French diplomatist. He was born at Bastia, in Corsica, of Greek descent, April 29, 1817, and entered the foreign service of France about 1840. He was in Paris until 1864, when he went as ambassador to Berlin. He took some part in arranging the peace between Prussia and Austria in 1866, and his interview with William I at Ems led to the Ems telegram and the declaration of war by France. On the fall of Napoleon, Benedetti retired from public life, and his last years were spent in Corsica. He died March 28, 1900.

BENEDICTE (Lat. Bless ye). Canticle of the Christian Church. Part of the addition to Dan. 3 in the Greek version of the O.T. called the Septuagint, it is also known as The

Song of the Three Holy Children, and it is an extended paraphrase of Ps 148. In the Greek Church it is sung daily, and in the Roman Catholic Church on Sundays and festivals at Lauds. In the Church of England from 1552 the alternate use of the Te Deum or Benedicite was left to the discretion of the minister. In the Scottish Prayer Book Ps. 23 takes the place of the Benedicite.

S. Benedict. Statue by Antonio Raggi in the Holy Grotto, Subiaco, Italy

BENEDICT (c. 480-543). Saint and founder of Western monasticism. Born at Nursia in Italy, of a noble family, about the age of twenty he retired to Subiaco, 40 m. from Rome, and for three years lived a hermit's life. Invited to become abbot of a monastery at Vieovar, he accepted, but the rule of the community was not congenial, and he resigned his office and again retired to solitude.

Within the next few years so many asked to share his life that Benedict established twelve monasteries, with twelve monks and a superior in each. In 529 Benedict moved to Monte Cassino, where he established the monastery which was to become famous as the mother house of the great Benedictine order of monks. His sister, S. Scholastica, had adopted a similar life, and devoted herself to establishing communities of women. S. Benedict died in 543 and was buried at Monte Cassino. See Benedictines; Monasticism.

Benedict XV, Pope, 1914-22
d'Alissandri

was the creature of a faction. Nominally he reigned from 1032-46, but was several times deposed. Benedict X, an antipope, reigned for a few months, and was degraded by pope Hildebrand in 1059.

Benedict XIV was pope from 1740-58. His name was Prospero Lambertini, and he was born at Bologna. He became bishop of Ancona in 1727, cardinal in 1728, and archbishop of Bologna in 1731. A man of scholarship and great administrative powers, he did a great deal for education in Rome. He died May 3, 1758.

Benedict XV (1854-1922) was pope from 1914 until 1922. Born at Genoa, Nov. 21, 1854, of an old noble family, his name was Giacomo della Chiesa. He studied at the university of Genoa, became a doctor of law in 1875, and went

thence to Rome, where he graduated in theology. In 1878 he was ordained, and in 1883 was Cardinal Rampolla's secretary, and later held the same office for four years under Cardinal Merry del Val. In 1907 he was made archbishop of Bologna, and in May, 1914, cardinal. On the death of Pius X he was elected pope, Sept. 3, 1914. In the Great War he endeavored to mitigate the sufferings of the civilian populations, and in 1917 he made proposals for peace. He died on Jan. 22, 1922.

BENEDICT BISCOP (c. 628-690). English monk and saint. Of noble birth, Benedict was a thano of Oswiu, king of Northumbria, but tiring of this life, he became a monk in a monastery at Lerins. With Theodore of Tarsus he went to Canterbury in 669, when he was made abbot of S. Peter's, and in 672 he returned to his native Northumbria. There he founded Benedictine monasteries at Wearmouth and Jarrow, being himself abbot of the former. He had a distinct influence on Anglo-Saxon architecture. The Venerable Bede was his pupil. He died Jan. 12, 690, and his festival is kept on Feb. 12.

BENEDICTINE. Green liqueur invented and formerly made by the monks of the Benedictine monastery at Fécamp, France; now made in a factory there. It is also called Dom, from the inscription D.O.M. (Deo optimo maximo, to God most good and great) on the label. See Liqueur.

BENEDICTINES. Monks of the Benedictine order, i.e. who live under the rule of S. Benedict. In 580, when Monte Cassino, the chief Benedictine monastery, was sacked by the Lombards, the monks took refuge in Rome and there spread the knowledge of the Benedictine rule—a rule marked by an entire absence of extravagant asceticism, a liberal recognition that a community is made up of individuals of very varying dispositions, a paternal system of government, and an inspired common sense. Study is an essential part of the work with which a monk must occupy himself, and from its foundation the Benedictine order has been distinguished for its learning and its promotion of education, most of the older universities having grown out of Benedictine schools.

The rule soon superseded all others in the Western Church. It was introduced into France and generally accepted throughout Italy in the 6th century. The first English Benedictine monastery was established at Canterbury in 595. Two English Benedictines, SS. Willibrord and Boniface, evangelized Germany in the 7th century and in the 10th the order was firmly established in Spain.

The habit of Benedictines is commonly black, and hence they are known as black monks. There are Benedictine houses throughout the world. See Benedict, S.; Cluny; Monasticism. Consult Benedictine Monachism, E. C. Butler, 1919.

BENEDICTION (Lat. bene, well; dicere, to speak). Solemn form of ecclesiastical blessing which varies with the offices of which it forms a part. In the Anglican Church the Benediction, known also as the Grace, at the close of the morning and evening services, is based on 2 Cor. 13, 14: to that in the Communion service is prefixed Phil. 4, 7. The benedictional offices in Roman ritual for setting persons and things apart as sacred are

Benedictine monk. In the rule of this order work has an integral place

very numerous. A comparatively modern and very popular devotion in the Roman Catholic Church is the Benediction of the Blessed Sacrament. It has also been introduced into certain Anglican churches.

BENEDICTUS (Lat. blessed). Canticle of the Christian Church. It is said or sung after the Second Lesson at Morning Prayer in the Anglican Church, and daily at Lauds in the Roman Catholic Church. The Song of the Priest Zacharias, in thanksgiving for the performance of God's promises, it is taken from Luke 1, and in the latter part the priest addresses his son, the newly born John the Baptist.

BENEFICE (Lat. bene, well; facere, to do). In England, a compendious ecclesiastical legal term used to describe the holding of property by a bishop, dean, rector, or other ecclesiastical person or corporation. Thus a bishop may be patron of a benefice which may be a canonry, rectory, etc.

BENEFICIARY. In English law, a person entitled to the benefit of property, though he may not have the legal estate in it. Thus the legatees and devisees under a will are called the beneficiaries. As a rule, where there is a trustee of property, holding it in trust for beneficiaries, the trustee is the person to deal with the property and protect the interests of the beneficiaries.

BENEFIT OF CLERGY. A right claimed by ecclesiastical courts to sole jurisdiction in all cases where a person in orders was concerned. Exception was made in cases of treason, felony, and other serious crimes. It was not finally abolished until 1827.

BENES, EDUARD (b. 1884) Czech statesman. Born May 28, 1884, he became a lecturer on sociology and economics at Prague university. Escaping across the frontier in 1915, he reached Paris, where he helped to establish the Czechoslovak National Council. When Czechoslovakia came into existence in 1918 he was chosen its foreign minister. In 1921-22 he was premier, and he was still foreign minister in 1930. As such Benes was mainly responsible in 1921 for the Little Entente between his country, Rumania and Yugo-Slavia. My War Memories, an English translation of his book, appeared in 1928.

Eduard Benes,
Czech statesman

BENEVENTO (anc. Beneventum). City of Italy, capital of the prov. of Benevento. On a hill between the rivers Sabato and Calore, 31 m. direct and 61 m. by rly. N.E. of Naples, it has a 15th century castle, a 12th century cathedral, and the 8th century circular church of S. Sofia. Its triumphal arch, built in 114-16 in honour of Trajan, is one of the best preserved in Italy. It makes parchment and gold and silver articles, and trades in grain. In 1053 Benevento was given to Pope Leo IX by the emperor Henry III. Captured by the French in 1798, Napoleon made it a principality in 1806, but it reverted to the pope in 1815, becoming part of united Italy in 1860. Pop. 34,429.

BENEVOLENCE (Lat. bene, well; volens, wishing). Method of raising money for the crown by forced loans from the people. The term was first used in England by Edward IV. In 1484, during the reign of Richard III, Parliament declared benevolences illegal, but Richard himself resorted to this means of raising money, and was followed in the practice by Henry VII and Henry VIII. James I was the last English monarch to ask for benevolences.

BENFLEET. Two parishes (North and South) of Essex. They are 29 m. E. of London, on the L.M.S. Rly. The Danes were defeated here in 894. Pop. 2,209.

BENGAL. Prov. of India, and a presidency since 1912. It comprises the Bardwan (Burdwan) Presidency, Rajshahi, Dacca, and Chittagong divisions and the semi-independent states of Cooch Behar and Tippera. Its area is 82,277 sq. m. and its pop. 47,592,462. By the partition of 1905 Rajshahi, Dacca, and Chittagong were placed under the lieutenant-governor of Eastern Bengal and Assam. In 1912 the Presidency of Bengal was established under a governor.

Bengal chiefly comprises a large alluvial plain. It is traversed by the Ganges and Brahmaputra, which enters the Bay of Bengal by a combined estuary. Seventy-seven per cent of the population depend on agriculture. Rice and jute are the chief crops, others being barley, wheat, maize, tea and oil seeds.

Jute manufacture is the principal industry, the mills employing over 325,000 workpeople. Other industries are the making of cotton twist and yarn, silk yarn, and hand-made cloth. Coal is mined, and iron, mica, manganese, and slate are obtained. There are universities at Calcutta and Dacca. Calcutta, the capital, is the centre of the commercial and industrial activities. Other important cities are Dacca and Howrah.

The most important railway is the East Indian which serves the Ganges valley. Others are the Eastern Bengal Rly. and the Bengal-Nagpur Rly. Additional transport is also afforded by canals.

Bengali is the language spoken by about 35,000,000 people in Bengal and Assam. The Calcutta dialect may be taken as the standard Bengal

hemp is another name for sunn hemp.

The term Bengal lights is applied to the steady, slow-burning, vivid illuminants used in military and sea signalling and also in firework displays and on the stage. See Fireworks.

BENGAL GRAM

OR CHICK PEA (Cicer arietinum).

Small annual leguminous plant, native of S. Europe, W. Asia, and Abyssinia. It is very like a vetch, and is extensively grown in India as a crop plant, the seeds being ground into meal for making cakes, or parched for use as food. See Chick Pea.

BENGHAZI OR

BENGASI (anc. Berenice).

Seaport of the Italian colony of Libya, Northern Africa, on the Gulf of Sidra, the capital of Cyrenaica. Its harbour is shallow and exposed, and admits only light-draught vessels. Barley, ivory, sponges, sheep, and horses are exported. An inland trade is carried on by caravan. It was occupied by the Italians on Oct. 20, 1911. Pop. 30,056, exclusive of the garrison. See Libya

BENGUELLA OR SÃO FELIPE DE BENGUELLA. Town of Angola and capital of a district. It exports rubber, wax, and ivory, but is important as a railway centre. Pop. 4,000.

The Benguella Rly. runs eastwards from Lobito Bay on the Atlantic through Angola to the border of the Belgian Congo, a distance of 800 m. The section to Luao on the border was opened in Nov., 1929, and a further extension to Katanga is planned. The line shortens the route between England and parts of Central Africa by 2,500 m.

BENI HASAN. Village of Upper Egypt, on the right bank of the Nile, 169 m. above Cairo. In the limestone cliff are 39 rock-tombs of princes and monarchs of the XI and XII dynasties. Their mural scenes, depicting social and industrial life, were re-surveyed by Newberry (1893-94). Garstang opened up (1903-4) a necropolis of 1,000 pit-tombs in the valley beneath the cliff-terrace.

BENI-ISRAEL (Heb. sons of Israel). Jewish community in Bombay presidency. They may represent a post-exile emigration from the Persian Gulf. Although there was at first some admixture with Indian blood, they have for centuries practised a strict endogamy, and regard their more mixed congeners as Kala Israel or black Israel.

BENIN. Name of a city and river of W. Africa. Formerly applied to a large section of the coast E. of the Volta river and including the delta of the Niger, hence the Bight of Benin, the name has been gradually restricted to the city and prov. of Benin, in Nigeria. The area of the prov. is 8,429 sq. m. The Benin are a pure negro race, speaking a distinct language. Benin city, with a pop. of about 15,000, is some distance N. of the river.

Bengal. Map of this province of India. It includes the deltas of the Ganges and Brahmaputra, and alluvial plains along their courses, an extremely fertile area

Exports include palm oil, rubber and timber.

Benin was discovered by the Portuguese in 1863, Sir Richard Burton made an

unsuccessful attempt to put a stop to human sacrifice, as the Beni were given to fearful excesses in fetishism. After two British expeditions, in 1897 and 1899, Benin was placed under a British resident. Native works of art collected after the expedition of 1897 are in the British Museum.

BENJAMIN. Youngest and favourite son of Jacob (Gen. 35). The tribe of Benjamin, which settled in Palestine between Ephraim and Judah, produced mighty men of valour who were often ambidextrous (Judg. 20; 1 Chron. 8); but it suffered terribly from the other tribes (Judg. 20-21). Saul and the apostle Paul belonged to the tribe of Benjamin. The word means son of my right hand.

BEN LAWERS. Mt. of Perthshire, Scotland, W. of Loch Tay. Rising 3,984 ft., it is easy of ascent, commands magnificent views, and is rich in alpine flora.

BEN LEDI (Gael. God's Hill). Mt. of Perthshire, Scotland, N.E. of Loch Katrine. It is 2,875 ft. high, and is referred to in Sir Walter Scott's *Lady of the Lake*.

Ben Lomond, rising from Loch Lomond. One of the beauty spots of Scotland
Fifth

BEN LOMOND. Mt. of Stirlingshire, Scotland. On the E. side of Loch Lomond, 3,192 ft. high, it is almost entirely covered with vegetation and commands extensive views of hill and lake scenery.

BEN MACDHUI (Gael. black pig mountain). Mt. on the borders of Aberdeenshire and Banffshire, Scotland. One of the Cairngorm group, it is composed chiefly of red granite, and is the second highest mountain (4,296 ft.) in Great Britain.

BENN, SIR JOHN WILLIAMS (1850-1922). British municipal leader. Born Nov. 13, 1850, he became head of Benn Brothers, Ltd., printers and publishers. M.P. in 1892-95 for St. George's-in-the-East and for Devonport from 1904-10, he was a Progressive member of the L.C.C. from 1889, and served as chairman in 1904-5. Knighted in 1906, and in 1914 created a baronet, he died April 10, 1922.

His eldest son, Sir Ernest John Pickstone (b. 1875), became head of the firms of Benn Bros., Ltd., and Ernest Benn, Ltd. A strong opponent of socialistic ideas, he published *Prosperity and Politics*, 1924; *Confessions of a Capitalist*, 1925; and *Letters of an Individualist*, 1927.

The second baronet's younger brother, William Wedgwood Benn (b. 1877), was a Liberal M.P., 1906-27, first for Tower Hamlets and then for Leith. From 1910-15 he was a junior lord of the treasury, and he won the D.S.O. in the Great War. In 1927 he joined the Labour Party and in 1928 became M.P. for N. Aberdeen. In 1929 he was made secretary of state for India.

BENNETT, ENOCH ARNOLD (b. 1867). British novelist. Born May 27, 1867, in the

district of Shelton, near Hanley, in the Five Towns, or Potteries, he studied law with his father and afterwards with a London solicitor,

Arnold Bennett,
British novelist
Gosler

In 1902 Anna of the Five Towns established Arnold Bennett's reputation as an interpreter of social and commercial life in the Potteries. Amongst their smoke Clayhanger, 1910, *Hilda Lessways*, 1911, *The Card*, 1911, *The Matador of the Five Towns*, 1912, and other novels, were born. In later years he wrote fluently and with weight upon wider subjects.

Other important books were *A Great Man*, 1904; *The Old Wives' Tale*, 1908; *The Pretty Lady*, 1918; *Riceyman Steps*, 1923; *Lord Raingo*, 1926; *Accident*, 1929. His plays include: *Milestones*, 1912, and *Mr. Prohack*, 1927, written with Edward Knoblock.

BENNETT, JAMES GORDON (1795-1872). American journalist and founder of *The New York Herald*. Born at Newmills, Banffshire, Sept. 1, 1795, he emigrated in 1819, going first to Halifax, Nova Scotia, where he taught bookkeeping, and thence to Boston, where he was proof-reader in the office of *The North American Review*. After varied journalistic experience in New York and Washington, on May 6, 1835, he founded *The New York Herald*. His *Memoirs* appeared anonymously in 1855. He died at New York, June 1, 1872.

His son, James Gordon Bennett (1841-1918), first edited the *New York Evening Telegram*, and on his father's death, in 1872, took over the active control of the *Herald*, instituting its Paris edition in 1887. In 1875, with the proprietors of the *London Daily Telegraph*, he bore half the expense of Stanley's Congo expedition; in 1879 he fitted out the Jeannette Arctic expedition, and in 1884, with John A. Mackay, founded the Commercial Cable Company. He did much to promote yacht racing, motoring, and other forms of sport. He died at Beaulieu, France, May 14, 1918.

BENNETT, RICHARD BEDFORD (b. 1870). Canadian politician. Born July 3, 1870, he became a barrister and for a time practised in his native province, New Brunswick. In 1897 he moved to Calgary, where he was a member of the legislative assembly of the North West Territories, and later of that of Alberta. In 1911 he was elected to the Dominion House of Commons, and in 1917 was director of national service. In 1921 he was minister of justice in the Conservative ministry, and in 1926 minister of finance. In 1927, on the retirement of Mr. Meighen, Bennett was chosen leader of his party, then in opposition to the Government.

R. B. Bennett,
Canadian politician

but, after winning a prize in *Tit-Bits* and getting a story accepted by *The Yellow Book*, turned to journalism, and from 1893-9 was assistant editor, and from 1896-1900 editor of *Woman*, a London weekly paper. For eight years, from 1900, his work was mainly done in a cottage at Fontainebleau.

at an Academy concert. In 1849 he helped to found the Bach Society, and in 1856 was elected professor of music at Cambridge and conductor of the Philharmonic Society. He became principal of the R.A.M. in 1866 and was knighted in 1871. He died Feb. 1, 1875. His compositions include symphonies, overtures, concertos, an oratorio, *The Woman of Samaria*, the cantata, *The May Queen*, and many piano pieces. Consult *Life*, by his son, J. R. S. Bennett, 1907.

BEN NEVIS. Mt. of Inverness-shire, Scotland, loftiest summit in the United Kingdom. Situated 5 m. E.S.E. of Fort William. It has

Ben Nevis, from Corpach, on Loch Eil. The highest peak in Britain, it is generally snow-capped

an alt. of 4,406 ft. and a base circumference of 30 m. On its N. and N.E. sides are precipices of great height, one with a sheer fall of 1,500 ft. The Scottish Meteorological Society opened an observatory in 1883, but it was closed in 1904.

In 1930 a tunnel, 15 m. long, through the mountain was completed. It carries water in connexion with a power scheme for an aluminium factory near Fort William.

BEN-NUT TREE (*Moringa pterygo-sperma*). Small tree, native of India. From its seeds, produced in long pods, is obtained the oil of ben, used by watchmakers.

BEN RHYDDING. Village of Yorkshire, (W.R.). It is on the river Wharfe, 9 m. N.W. of Bradford by the L.M.S. and L.N.E. Rlys. In its hydropathic establishment, built in 1846, the compressed air bath was introduced.

BENSON, ARTHUR CHRISTOPHER (1862-1925). British author. Son of Edward White Benson, archbishop of Canterbury, he was born April 24, 1862. He was a master at Eton from 1885-1903, and was elected master of Magdalene College, Cambridge, in 1915. Benson wrote a *Life of his father*, 1899, and collaborated with Viscount Esher in editing the letters of Queen Victoria, 1907. He is the author of biographies of Rossetti, 1904, Edward Fitzgerald, 1905, and Walter Pater, 1906; some volumes of poems, novels, and various volumes of essays, including *The Upton Letters*, 1905, and *From a College Window*, 1906. He died June 17, 1925.

A. C. Benson,
British author
Russell

BENSON, EDWARD FREDERIC (b. 1867). British novelist. Son of Edward White Benson, the archbishop, he was born July 14, 1867. After a brilliant career at Cambridge he spent some time in archaeological work. In 1893 he made a sudden reputation with his novel *Dodo*. A number of other novels followed, including *Dodo the Second*, 1914; *Lucia* in London, 1927. He also published a biographical volume, *Our Family Affairs*, 1920.

E. F. Benson,
British novelist
Russell

W. Wedgwood Benn,
British politician

BENSON, EDWARD WHITE (1829-96). British ecclesiastic. Born at Birmingham, July 14, 1829, he became assistant master at Rugby and fellow of Trinity. In 1859 he was chosen as the first headmaster of Wellington College, which he raised to the status of a great public school. In 1872 he resigned to become chancellor of the diocese of Lincoln. In 1877 he was consecrated first bishop of Truro, and inspired the building of the cathedral. In 1883 he succeeded Dr. Tait as archbishop of Canterbury, and in 1889 gave judgement as metropolitan on the ritual practices of Dr. King, bishop of Lincoln. He died suddenly at Hawarden, Oct. 11, 1896.

E. W. Benson, Archbishop of Canterbury
Russell

His third son, Robert Hugh Benson (1871-1914), took Anglican orders, but in 1903 was received into the Roman Catholic Church. He wrote a number of books, chiefly novels, all from the Roman Catholic standpoint.

BENSON, SIR FRANCIS ROBERT (b. 1858). British actor. Born Nov. 4, 1858, at Alresford, Hants, he was prominent at Oxford University in the founding of the O.U.D.C. He made his first appearance in Henry Irving's company at The Lyceum in 1882, and two years later founded the Benson repertory touring company. For more than 25 years he organized the annual Shakespeare Festival at Stratford-on-Avon, and in 1901 founded a school of acting. He was knighted in 1916. His Memoirs appeared in 1930.

Monsignor R. H. Benson,
British novelist
Russell

Sir Frank Benson,
British actor
Russell

BENSON, RICHARD MEUX (1825-1915). Anglican divine. He was ordained in 1848, was made vicar of Cowley, near Oxford, in 1850, and in 1870 vicar of Cowley St. John. In 1865 he founded the Society of St. John the Evangelist, Church of England brotherhood, whose members, known as the Cowley Fathers, engage in mission work chiefly in India and S. Africa, and he was for many years its superior, resigning his vicarage in 1886. He died Jan. 14, 1915. He was the author of devotional works.

BENT, JAMES THEODORE (1852-97). British explorer and archaeologist. He was born at Baildon, near Bradford, March 30, 1852. His most notable work was done in Mashonaland in 1891, where, after careful measurements and excavations of the ruins of Zimbabwe, he formed the opinion that the builders were a northern race from Arabia closely akin to the Phoenicians, a view elaborated in his Ruined Cities of Mashonaland, 1892. He died in London, May 5, 1897.

BENT GRASS. Name for grasses of the large genus *Agrostis*, represented in all temperate and cold climates. In Europe they grow in damp pastures and waste places. Marsh bent or fiorin-grass (*A. alba*), forms long, creeping stems above ground which root at the knots. Dog bent (*A. canina*) is sought after by dogs and cats as a medicine.

BENTHAM, JEREMY (1748-1832). British philosopher, jurist, and reformer. Born in London, Feb. 15, 1748, the son of an attorney, he became a member of Lincoln's Inn, but, though called to the bar in 1772, soon ceased to

practise. His first work, *A Fragment on Government* (1776) was an attack upon Blackstone's complacent eulogy of the English constitution. His ideas were further developed in his *Introduction to the Principles of Morals and Legislation* (1789), which brought him fame in both France and England. In 1785 he was inspired with the idea of his Panopticon or model prison. He died June 6, 1832.

Jeremy Bentham,
British philosopher
After J. Watts

The keynote of Bentham's utilitarian philosophy, as it has been called, is to be found in the well-known phrase, which he borrowed from Priestley, "the greatest happiness of the greatest number." Some of the reforms he advocated have actually come to pass, and his influence can be traced in much of the ameliorative legislation, which has been passed since his time.

BENTINCK, LORD WILLIAM CAVENTISH (1774-1839). Governor-general of India. Born Sept. 14, 1774, second son of the 3rd duke of Portland, he joined the army in 1791. In 1803 he was made governor of Madras, but was recalled in 1807 after the Sepoy mutiny at Vellore. He was made governor-general of Bengal in 1827, and in 1833 became governor-general of India. His administration is memorable for the abolition of suttee (widow burning) and the suppression of the Thugs. He died June 17, 1839.

Lord Wm. Bentinck,
Gov.-General of India
Sir T. Lawrence

BENTINCK, LORD WILLIAM GEORGE FREDERICK CAVENTISH (1802-48). British politician and sportsman, better known as Lord George Bentinck. Born at Welbeck Abbey, Feb. 27, 1802, the third son of the 4th duke of Portland, he sat in Parliament 1828-48 as member for King's Lynn. He vigorously opposed Sir Robert Peel's free trade policy and, giving up the turf and his fine racing stud, accepted the leadership of the protectionist party. He died suddenly, Sept. 21, 1848.

Lord Geo. Bentinck,
British politician

BENTLEY, RICHARD (1662-1742). British scholar. Born at Oulton, Yorks, Jan. 27, 1662, he was ordained in 1690, and appointed keeper of the royal libraries in 1694. The following year he was involved with a young Oxford man, Charles Boyle, in what became known as the Phalaris controversy. This controversy, which really turned on the question of ancient and modern learning, brought Sir William Temple and Swift into the field in support of Boyle, and was the inspiration of the latter's brilliant effort *The Battle of the Books*. In 1700 Bentley was appointed master of Trinity College, Cambridge, which he combined from 1717 with the regius professorship of divinity. He died July 14, 1742.

Richard Bentley,
British scholar

BENTLEY, RICHARD (1794-1871). British publisher. Born in London, he started as a publisher in 1829, and in 1837 issued Bentley's Miscellany, with Charles Dickens as editor.

Harrison Ainsworth succeeded Dickens in 1839, and the Miscellany continued until 1868. Bentley specialised in the publication of novels. He died Sept. 10, 1871, and was succeeded by his son George (1828-95). The firm of Richard Bentley and Son was absorbed by Macmillan & Co. in 1898.

BENUE. River of western Central Africa. Rising in Adamawa, it enters Nigeria about 22 m. above Yola and flows W. to the Niger at Lokoja. Unbroken by rapids, it is navigated by stern-wheelers, is shallow in the dry season, but small boats can then reach Ibi (342 m.) and Yola (520 m.). Beyond Yola it is navigable for shallow boats as far as Garua and Léré. Its length is over 800 m., and the chief tributary is the Gongola.

Ben Venue. Mt. of Perthshire, Scotland, S.E. of Loch Katrine. It is a prominent feature of the Trossachs. Alt. 2,393 ft.

Ben Wyvis. Mt. of Ross and Cromarty, Scotland, 8 m. N.W. of Dingwall. Its alt. is 3,429 ft. Its deer forest covers 24,000 acres.

BENZAONINE or **BENZOYL-ACONINE.** Amorphous alkaloid which occurs in the roots of *Aconitum napellus* or monk's hood. It is also prepared by heating aconitine hydrochloride. Benzaonine has a bitter taste, but does not produce the tingling sensation in the mouth which is characteristic of aconitine.

BENZALDEHYDE or **ESSENTIAL OIL OF ALMONDS.** A colourless non-poisonous liquid with the smell of almonds. It is prepared by distilling bitter almond press-cake, but chiefly from benzyl chloride (q.v.). It is used in preparing benzaldehyde green and other aniline dyes, and as a flavouring agent in cookery and perfumery. See Almond Oil.

BENZENE. Colourless inflammable liquid obtained during the process of manufacturing coal-gas. Benzene, C_6H_6 , was first isolated by Faraday in 1825. In commerce benzene is known as benzol, which is suggested as a better name owing to the similarity of the words benzene and benzine (q.v.). Benzene is made by distilling coal-tar; it is the starting-point in the manufacture of aniline dyes. Benzene has remarkable solvent powers, indurates, asphalt, fats, sulphur, and phosphorus being readily dissolved in it.

Benzene Ring is the name given to the ring-like arrangement of the six carbon atoms of the benzene molecule (C_6H_6), by which its chemical combinations are explained.

BENZINE. Distillate obtained from petroleum which passes over between 70° and 90° C. It has a specific gravity of 0.68 to 0.72. The term is also applied to petroleum spirit generally. Benzine is used in dry-cleaning garments and gloves and as a solvent of india-rubber. Lighter varieties of petroleum spirit are known as petrol. Benzine should not be confused with the product benzene (q.v.).

BENZOLIN. Resinous substance obtained from the stem of *Styrax benzoin*. Benzoinic acid is prepared from benzoin and also synthetically from toluene and other substances. Preparations of benzoin and benzoic acid are employed as expectorants in bronchitis and consumption. Benzoic acid is used in the manufacture of aniline blue. The compound tincture of benzoin (frier's balsam) added to hot water makes a useful inhalation in laryngitis. These drugs are also of value in disinfecting the urinary tract in cases of inflammation of the bladder.

BENZYL CHLORIDE. Liquid with a penetrating odour which produces a rapid flow of tears. It is prepared on a large scale by passing chlorine into a vessel of toluene heated by a water bath. It is used in the preparation of other benzyl compounds, also in the manufacture of benzaldehyde and aniline dyes. See Tear Shells.

By distilling henyl chloride with potassium acetate and alcohol a sweet-smelling liquid known as benzyl acetate is obtained. It occurs naturally in the oils obtained from jasmine and ylang-ylang, and is used in the manufacture of perfumes. From benzyl chloride or benzaldehyde is prepared henyl alcohol, a liquid with a faint aromatic odour. It occurs naturally in Peru balsam.

BEOWULF. Anglo-Saxon epic poem probably dating from the 7th or 8th century, the only MS. of which, ascribed to the 10th century, is in the Cottonian Library of the British Museum. The oldest long poem in any Teutonic language, it consists of 6,356 short alliterative lines. The story tells mainly of the three great adventures of Beowulf, his slaying first of the monster Grendel, then of Grendel's mother, the fen-dwelling monster, and last of the dragon or fire-drake, when he himself was killed. The narrative includes much description of the life and customs of the period.

BEQUEST (A.S. be-; cwedhan, to say). In English law, a gift of personal property, not land or any interest in land, made by will. It is the same as legacy. Bequests or legacies are of four kinds: (1) specific, as of "the furniture in my house"; (2) general, as of "the sum of £100"; (3) demonstrative, when the testator gives a sum of money, or stocks, or shares, but also points out a particular fund from which the legacy is to be given—e.g. "I give to John Jones £100 out of my money in the Post Office Savings Bank"; (4) residuary, where the testator, after specific, demonstrative, and general legacies, gives the rest or residue of his personal property to one or more persons, who are called "residuary legatees." See Will.

BERANGER, PIERRE JEAN DE (1780-1857). French poet. Born in Paris, Aug. 19, 1780, after serving as printer's apprentice, he devoted himself to literature, encouraged in 1804 by the gift of a small pension from Prince Lucien Bonaparte, which was supplemented by a clerkship in the imperial university. His satirical, witty, and dainty songs under the Empire gained for him the widest popularity and the admiration of Goethe and Heine. The republican views expressed caused his imprisonment in 1821 and again in 1828. He died in Paris, July 16, 1857.

BERAR. Sub-province of India, in the Central Provinces. Its area is 17,766 sq. m. Since 1853 Berar has been administered by the British Government on behalf of the nizams of Hyderabad. and in 1903, by a new agreement with the nizams, it was transferred to the Central Provinces. It consists of a broad valley between two ranges of hills, and is watered by tributaries of the Godavari and Tapi. Pop. 3,075,316.

BERBER. Group of peoples of the Caucasian or white race, inhabiting Africa N. of the Sahara. They are the living representatives of the Libyans of early Egyptian history. Though usually brunet and dark-eyed, with wavy black hair, they sometimes exhibit blond characters, especially in the higher altitudes of the Atlas. They are mainly agricultural and village-dwellers. In Morocco and Libya they are the dominant race; in Algeria and Tunis they pertain chiefly to the settled Kabyles, and in the Sahara they become the nomad Tuaregs.

BERBER OR EL-MEKHEIR. Town in the Anglo-Egyptian Sudan. On the right bank of

the Nile, below its confluence with the Atbara, it was the capital of the prov. of Berber until 1905. It is on the rly. from Khartoum to Wadi Halfa and was formerly an important caravan station on the Red Sea and Cairo routes. A trade in the produce of the Nile valley is carried on. Pop. about 10,000.

BERBERA. Capital and chief port of British Somaliland. On the Gulf of Aden, about 160 m. S. of Aden, it has a small harbour and a wireless station. Pop. about 4,000, but during the annual fair from 25,000 to 30,000.

Berberis. Spiny shrub of the order Berberidaceae, commonly known as the barberry.

BERBICE. River of British Guiana. Rising in the S., it flows N. and N.E. for 350 m., entering the Atlantic through a wide estuary. It is navigable by small vessels for 175 m. The great water lily, *Victoria regia*, was discovered on its upper reaches in 1836. Drainage area, 13,500 sq. m.

The easternmost division of British Guiana is named Berbice, which is also the alternative name of the chief town, New Amsterdam.

BERCHEM OR BERGHEM, NICOLAAS (c 1620-83). Dutch painter. He was born at Haarlem, the son of a painter, Claes van Haarlem. One of the best and most prolific of the little masters of Holland, his works in the European galleries are extremely numerous. Conspicuous among his pictures is *The Halt of the Huntsmen*, formerly in St. Petersburg. He died Feb. 18, 1683, at Amsterdam.

BERCHTA. Supernatural being in German folklore. Her festival is kept upon New Year's Eve by the eating of oatmeal and fish or dumplings and herrings. She especially presided over all matters connected with spinning, visiting with wrath any careless spinners. She was ruler over night hags and enchantresses, elves and dwarfs, and was attended by the souls of unbaptized children.

BERCHTESGADEN. Town of Bavaria. About 1,700 ft. above sea level, its beautiful situation in the Bavarian Alps makes it popular with tourists. The Königssee and other lakes are in the vicinity. There are two old churches and an abbey. Mines of rock salt have been worked for nearly 800 years, and the inhabitants are skilled in making toys. Berchtesgaden was long the capital of a little principality ruled by an abbot. Pop. 3,214.

BERCHTOLD, LEOPOLD ANTHONY JOHANN, COUNT (b. 1863). Austrian diplomatist. The son of Count Sigismund Berchtold, he was born at Vienna, April 18, 1863, and entered the Austrian diplomatic service in 1900. For four years he was ambassador in Petrograd, and when the Great War broke out he was Austro-Hungarian minister for foreign affairs, and as such had much to do with the negotiations that led to the Great War. In Jan. 1915, he was replaced by Baron Burian. Afterwards he held a position in the court of the emperor Charles.

BERCK. Watering-place of France, in the dept. of Pas-de-Calais. It is on the English Channel, 28 m. S. of Boulogne. The actual town stands somewhat inland, a newer quarter having sprung up by the sea. Pop. 8,914.

BERDICHEV. Town of Ukraina. It is 120 m. W.S.W. of Kiev, on the Brest-Litovsk rly. Its chief trade is in grain, cattle, and horses; it has tobacco factories, dye and iron works, and four great yearly fairs. The town is the centre of the Jewish sect of the Chasidim. Pop. 55,613.

BEREHAVEN. Channel between Bere Island and the S.W. part of co. Cork, Irish Free State. During the Great War the American army had an aircraft station on the coast here. Bere Island, on the N. side of Bantry Bay, is 6 m. long by 1 m. and has slate quarries.

BERENGARIA (d. c. 1230) Queen of Richard I of England. Daughter of Sancho VI, king of Navarre, she was married and crowned at Limasol in Cyprus, May 12, 1191, and travelled on to Acre. She saw little of her husband after 1192. During his captivity in Austria she visited Sicily and Rome, and eventually settled at Le Mans. She was buried in the neighbouring Cistercian monastery, founded by her at l'Épau.

BERENGARIA. British liner belonging to the Cunard Co. Formerly belonging to the German Hamburg-Amerika line, and known as *Imperator*, she was laid up in the Elbe throughout the Great War. Launched 1912, she is of 51,969 tons, with a length of 882 ft. and a speed of 23 knots. In Dec., 1919, she was delivered to the British government under the armistice arrangements. The name *Berengaria* was adopted in 1921.

BERENGUER. DAMASCO. Spanish general. He was high commissioner in Spanish Morocco, 1921, and chief of the king's military household, 1926-30. On Jan. 28, 1930, he became premier, following the downfall of the dictator Primo de Rivera (q.v.). See Spain.

BERENICE OR PHERENICE. City of ancient Egypt. It was situated on a bay of the Red Sea, mentioned by Strabo, and was at one time the chief centre of commerce with India and Arabia. Founded by Ptolemy II Philadelphus (308-247 B.C.), he named it after his mother.

BERENICE. Name of several Jewish and Egyptian princesses. Of the former the best known is the daughter of Herod Agrippa I, king of Judaea. An earlier Berenice was the daughter of Salome and the mother of Herod Agrippa I. The Egyptian princesses of this name include the wife of Ptolemy Soter, in honour of whom the city of Berenice was built; a daughter of Magas, king of Cyrene, who became wife of Ptolemy Evergetes and gave her name to the constellation Coma Berenices; the sister of Cleopatra, and queen of Egypt, put to death by the Romans in 55 B.C.

BERESFORD, CHARLES WILLIAM DE LA POER BERESFORD, BARON (1846-1919) British sailor and politician, better known as Lord Charles Beresford. He was a younger son of the 4th marquess of Waterford, and was born Nov. 10, 1846. He became a naval cadet in 1859 and commanded the Condor at the bombardment of Alexandria. He was commander of the Channel Fleet 1903-5; commander in the Mediterranean 1905-7; and again commander of the Channel Fleet 1907-9.

Beresford was returned as Conservative M.P. for Waterford in 1874. He sat until 1880 and, again off the active list, was M.P. for E. Marylebone 1885-89, being from 1886-8 a lord of the Admiralty. From 1897-1900 he was M.P. for York, in 1902-3 for Woolwich, and from 1910-16 for Portsmouth. In 1916 he was made a peer, and he died Sept. 6, 1919.

BERESFORD, WILLIAM CARR, VISCOUNT (1768-1854). British soldier. Born Oct. 2, 1768, an illegitimate son of the first marquess of Waterford, he entered the British army in 1785. He was in Egypt, 1801-3, and in South Africa in 1806, but his best service was in the Peninsular War. He was conspicuous in the

Lord Beresford,
British Sailor
W. & D. Downey

Berbers from the Sahara, a race descended from the early Libyans

retreat to Corunna in 1808, and in 1809 was made commander of the Portuguese auxiliary army, in which capacity he did good work at Busaco in 1810 and assisted to defeat Soult at Albuera in 1811. Beresford was rewarded with a barony, and in 1823 became a viscount. He died Jan. 8, 1854.

BERESFORD, JOHN DAVES (b. 1873). British novelist. Born March 7, 1873, the son of a clergyman, he was educated at Oundle School. He qualified as an architect and practised as such for a few years, but in 1906 he began to write. His novels include *Jacob Stahl*, 1911; *Goslings*, 1913; *These Lynnekers*, 1916; *God's Counterpoint*, 1918; *Love's Pilgrim*, 1923; and *Real People*, 1929.

BERESINA (Russian, *Berézina*). River of Russia. Rising in the marshes of Borisov, N. of Minsk, it flows 350 m. S.E. to the Dnieper. It is much used for timber floating, and is connected with the Dvina (Daugava) by a canal. Its passage by Napoleon during the retreat from Moscow is famous.

BERETTINI, PIETRO (1596-1669). Italian painter also known as *Pietro da Cortona*. The ceiling of the Barberini Palace, Rome, is one of his most celebrated works. In Florence he was commissioned by the grand duke of Tuscany to decorate the Pitti palace. Grandiose conception, with bright colour and plenty of gilding, is the chief characteristic of his art.

BERG. Hot, dry, northerly wind round the coasts of S. Africa. It blows frequently, and its normal duration is about a day. The interior plateau is heated and warms the air above it. This warmed air is drawn over the coastal lowlands, and, further heated by compression on descending, reaches them as a hot, dry wind.

BERGAMO (anciently *Bergomum*). City of Italy. It is 33 m. by rly. N.E. of Milan, and is the capital of the prov. of Bergamo. The ancient walled town, standing on a hill, contains the cathedral, begun in 1459, and the church of S. Maria Maggiore, built 1137. In the lower town are several churches and monasteries, and the Carrara academy, with paintings by artists of the Lombard school. An important rly. junction, Bergamo manufactures cotton, silk, pottery, organs, iron goods and agricultural instruments. Its old cattle fair is still important. Pop. 81,411.

BERGAMOT (Lemon Bergamot). Alternative name for the sweet lime (*Citrus limetta*). An essential oil extracted from the rind of the fruit is largely used in perfumery. Bergamot nint is the natural variety citrata of the water mint (*Mentha aquatica*), and bergamot pear is a small roundish, brown-tinted pear, fine-flavoured and juicy.

BERGEN. Seaport and city of Norway. On a peninsula in a deep bay, 190 m. by rly. W.N.W. of Oslo, it is a tourist centre. Built largely of wood, Bergen was damaged by fire in 1702, 1855, and in Jan., 1916. The cathedral, founded in 1248 and rebuilt in 1537, was restored in the 19th century. The 12th century Gothic *Mariae Kirke*, with Romanesque nave, was used as a German church by the Hansa merchants from 1408 to 1763. The Hanseatic Museum is housed in one of the original wooden warehouses of the German fish merchants. The castle of *Bergenshus*, formerly the residence of Norwegian kings, has two towers and the fine 13th century King's Hall. Bergen has a commodious harbour and a wireless station. Fish is the chief export. Pop. 91,443.

BERGEN-OP-ZOOM. Town of Holland, in the prov. of North Brabant. On the river Zoom, near its junction with the Schelde, it is about 20 m. N. of Antwerp, with which it is connected by steam tramway. An old

town, it has remains of a castle, a palace, now used for barracks, and a fine Gothic church; but most of the buildings are modern. The manufactures include tiles, bricks, pottery, and cloth, and there is an export trade in fish, as well as a beet sugar industry. Oyster culture is carried on. Pop. 21,102.

BERGERAC, SAVINIEN CYRANO DE (1619-55). French novelist and dramatist. He was born in Périgord, and became an officer, fighting many duels, most of them to avenge affronts about his enormous nose. He also won fame with a tragedy (*Agrippine*, 1653) and a comedy (*Le Pédant Joué*, 1654). After travelling in England and Italy, he died in 1655, after a long illness. His famous *Comic Histories of the States and Empires of the Moon*, 1656, and of the *Sun*, 1661, were issued posthumously. Public interest in *Bergerac* was revived in France and England in 1897, when Rostand's comedy, of which he was the eponymous hero, was produced in Paris with Coquelin in the title-role. An English version was given in London, 1919. See Rostand, E.

Cyrano de Bergerac, French novelist and dramatist
From an old engraving

French philosopher. He was born in Paris, Oct. 18, 1859, of Jewish descent, and in 1900 was appointed professor of philosophy at the College of France. He is the representative of a kind of Panvitalism, in which life is regarded as the real Being. An empiricist in method, he attaches great importance to internal experience as the source of knowledge. The solution of the chief problems of metaphysics is to be sought in an analysis of the phenomena of consciousness. Life is a continual development, a creative evolution, ever unfolding new elements.

BERI-BERI. Disease chiefly prevalent in Eastern Asia, the Philippine Islands, the Malay Archipelago, the West Indies, and parts of South America. It affects principally the nervous system, producing paralysis and loss of sensation, with dropsy in some cases.

The disease was observed to have a connexion with a diet in which polished rice bulked largely. This led to the discovery that, in polishing, a vitamin was removed in the husk. *Beri-beri* can be prevented or cured by the diet being rearranged so as to include foods containing this vitamin.

BERING OR BEHRING, VITUS (1680-1741). Danish navigator. After serving in the Russian navy in the war against Sweden he

Bering Sea. The ice-encumbered waters separating Asia from America in the far North, first navigated by Bering in 1728

began his voyages of exploration, seeking the eastern limits of the northern coast of Asia. He made various voyages, hoping to find land to the E., and actually reached Alaska. On his return he was wrecked on an island in the Bering Sea, called after him *Bering Island*, where he died, Dec. 19, 1741.

BERING SEA. Northern division of the Pacific Ocean, separating N. America from Asia. It lies N. of the Aleutian Islands, and is connected with the Arctic Ocean by the strait which extends between Cape Prince of Wales, Alaska, and East Cape, Siberia; here it is about 50 m. across. Bering Strait was discovered by Deshnev in 1648, and navigated by Bering in 1728. The sea, which contains several islands, receives the Yukon, the Anadyr, and other rivers. One of the islands, *Bering*, covers 615 sq. m.

Soon after the purchase of Alaska by the U.S.A. from Russia in 1867, a dispute arose between Great Britain and the United States in reference to the fishing rights in the Bering Sea. The *Pribilof* Islands, also assigned to the U.S.A., were the chief breeding ground of the seals, and Congress had passed laws to preserve them. In 1886 three Canadian sealing vessels were seized and condemned by an American court for fishing in forbidden waters. Acts of a like nature followed, and in 1892 it was agreed to submit the question to arbitration.

The court met in Paris in 1893. The case for the U.S.A. turned largely upon the rights possessed by Russia before 1867, and the arbitrators found in favour of Great Britain. Regulations for the future control of the industry were agreed upon, and in 1896 the sum of 473,151 dollars (=£95,000) was awarded to the Canadian sealers.

BERKELEY. Market town of Gloucestershire. It stands on a hill, overlooking the Severn, 24 m. N. of Bristol, on the L.M.S. and G.W. Rlys. Berkeley Vale is famed for its Double Glos'ter cheese and its castle, one of the finest in the country, in which Edward II was murdered in 1327. (See illus. p. 238.) The Berkeley hunt is one of the most famous in the country. Here Dr. Jenner, discoverer of vaccination, was born. Market day, first Wed. in month. Pop. 790.

The British title, *Earl of Berkeley*, borne since 1679 by the family of Berkeley, is named from the manor of Berkeley. The barony was created in 1295. The 8th earl inherited the

and Bond Street, in Mayfair. Horace Walpole died at No. 11 and Clive committed suicide at No. 45. Pope and Bulwer Lytton resided here, and later, Lord Rosebery. The square was laid out about 1700, and some of its houses have extinguishers for links and torches before their doors. With some adjoining property, the land was sold in 1919 by the earl of Berkeley to Sir Marcus Samuel, later Lord Bearsted (q.v.).

BERKELEY. City of California, U.S.A., in Alameda co. It is 10 m. N.E. of San Francisco, on the Atchison, Topeka, and Santa Fé rly., and stands on a hill overlooking San Francisco Bay and the Golden Gate. Here is the university of California. It manufactures soap, motors, etc. Pop. 80,707.

BERKELEY, GEORGE (1685-1753). Irish divine and philosopher. Born in Ireland, March 12, 1685, he was educated at Trinity College, Dublin, of which he became a fellow in 1707. He was ordained and in 1734 was made bishop of Cloyne, co. Cork, Ireland. In 1752 he resigned his bishopric and retired to Oxford, where he died Jan. 14, 1753.

George Berkeley, Bishop of Cloyne

Founder of the philosophy of idealism, as opposed to the realism of Hobbes, he regards both the primary qualities of things (extension, figure, motion) and their secondary qualities (colour, taste) as not belonging to the things, but transferred to them by the perceiving subject. Our ideas, then, being the things themselves, it must be assumed that we receive them from a spirit, since only a spirit could produce ideas in us, and from a superior spirit—in fact, from God. At the same time, however, although objects cannot exist anywhere except in the mind, it is not denied that they possess a reality independent of us. Consult *Life*, A. C. Fraser, 1901.

BERKHAMPTSTAD, GREAT, OR BERKHAMSTED. Market town of Hertfordshire. On the Bulbourn river and the Grand Junction Canal, 10 m. N.W. of Watford by the L.M.S. Rly., it has a Gothic church. The public school, founded in the time of Henry VIII, was refounded in 1841, after a period of decay. The Inns of Court O.T.C. had a training school

here during the Great War. The poet William Cowper was born here, 1731. Market day, alternate Wednesdays. Pop. 4,746.

BERKSHIRE OR **BERKS.** Southern county of England. S. of the Thames, it is 53 m. long, 30 m. broad, and has an area of 724 sq. m. Chalk hills (White Horse Hill, 856 ft.), a spur of the Chilterns, traverse the W. of the county, to the N. of which is the Vale of the White Horse, and to the S. the Kennet valley. In the S.W. is Inkpen Beacon (1,011 ft.), the highest chalk down in England; Windsor Forest and Castle are on the E. border; and Bagshot Heath penetrates into Surrey.

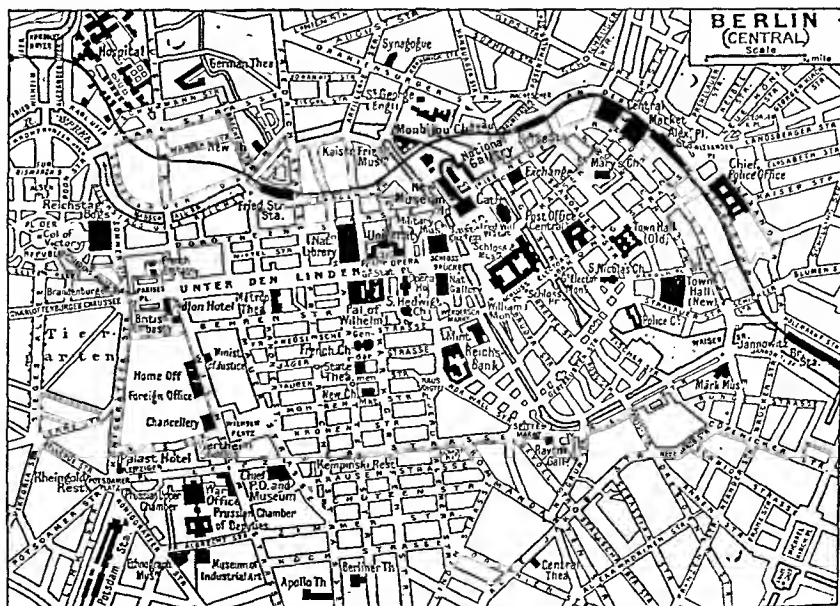

Oats and wheat are cultivated, and sheep- and pig-breeding and dairy farming engaged in. Manufactured products include agricultural implements, biscuits (at Reading), whiting, and paper. Railway communication is provided by the G.W., L.N.E., and Southern Rlys., and water transit by the Wiltshire and Berkshire and Kennet and Avon Canals, in addition to the Thames. Wellington and Sandhurst colleges are in the county. Towns include Reading (county town), Windsor, Abingdon, Maidenhead, Wallingford, and Newbury. The county is divided into three parliamentary divisions, one member for each; Reading also returns one member. Pop. 294,821.

LITERARY ASSOCIATIONS. Perhaps the most notable of the older uses of Berkshire as literary background is in Shakespeare's *Merry Wives of Windsor*, where *Heme's Oak*, in Windsor Forest, is the scene of *Falstaff's* final discomfiture. *Bray*, above Windsor, recalls the vicar of the old popular song. Much of the county, notably *Cumnor* and *Wayland Smith's cave*, appears in *Scott's Kenilworth*. *Mary Russell Mitford's Our Village* presents the rural surroundings of *Three Mile Cross*, near Reading.

The English title of earl of Berkshire has been borne by the family of *Howard* since 1626. Since 1745 it has been united with that of *Earl of Suffolk*.

BERKSHIRE REGIMENT, ROYAL. Known as *Princess Charlotte of Wales's*, this is a union, dating from 1881, of the 49th (Hertfordshire) and 66th (Berkshire) regiments. The regiment saw service at *Egmont-op-Zee* (1799) and at *Copenhagen* (1801). In the *Peninsular War* and the *Crimean War* it

Berlin. Plan of the main portion of the city, showing the principal buildings. See opposite page.

won distinction, and the 2nd battalion made its historic stand at Maiwand in the Afghan War (1879-80). For gallantry shown by the 1st battalion on the occasion of an Arab attack on McNeill's zariha, March 20, 1885, Queen Victoria granted the title of Royal to the regiment. During the Great War it gained many additional battle honours. The regimental depot is at Reading.

BERLAD, BERLAT, OR BARLADU. Town of Rumania, in Moldavia. Capital of the dept. of Tutova, on the river Berlad, 145 m. by rly. N.E. of Bukarest, it has an annual horse fair, and trades in grain and timber. Pop. 25,367

BERLIN. Largest city of Germany and capital of the republic. It stands in a plain on both sides of the Spree. The city proper has an area of 29 sq. m. Greater Berlin covers 339 sq. m. and has a pop. of 4,024,165.

Unter den Linden may be regarded as the centre of the city. The Friedrichstrasse is a great shopping centre. The Wilhelmstrasse houses the various ministries. The Behrenstrasse is Berlin's Lombard Street. Among the many squares are that of the Opera House, the Castle or Schloss, the Leipziger, the Potsdamer, and the Pariser.

At the E. and older end of Unter den Linden are the university buildings, the nucleus of which was a palace. The Brandenburger Tor leads into the Tiergarten, a public park containing the zoological gardens. Overlooking the Tiergarten are the buildings of the Reichstag. A fine group of buildings centres round the palace. Here, enlarged and modernised, was the Berlin home of William II until his abdication in 1918. On one front is the Lustgarten, and on the other the Schloss Platz. Adjoining are the stables (Marstall), where the worst of the fighting took place in Nov., 1918.

In the old town are the exchange, the old and the new town halls, the post office, and several museums. Other buildings include the house of the Prussian Landtag, the Reichshank, the museum of industrial art, and the Kaiser Friedrich museum. The largest church is the cathedral. Of the few old churches only S. Nicholas and S. Mary are of any note. The most imposing bridge is the castle bridge, built in 1822-24 and adorned with eight large allegorical groups. The elector's bridge, with an equestrian statue of the great elector, a century older was restored under William II.

From 1881 until 1918 Berlin was a distinct administrative district of Prussia. On Nov 11, 1918, the German republic was officially proclaimed from the steps of the Reichstag. In 1920 a new municipality was formed, uniting Berlin and all its suburbs into a single uniform municipal region.

There are five great railway stations and several local railways. The North-South tube was opened in 1923. Of the canals, the Teltow connects the city with the Havel river, and another, opened in 1915, affords communication with Stettin by way of the Oder. The industries include the manufacture of machinery and railway stock, chemicals clothing, furniture, and fancy goods of all kinds, as well as beer and electrical apparatus. Berlin is a commercial, especially, perhaps, a banking and insurance centre, and also a publishing one. There is a terminal aerodrome at Tempelhof.

On Nov 9, 1918, Berlin banks stopped payment, and on Nov 11 the Socialists took complete control of the city. Grim fighting took place, particularly in the first week of Jan., 1919, when Karl Liebknecht, the Spartacist leader, attempted to overthrow the Ebert-Scheidemann Government. The capital was reconquered from the revolutionaries by Jan. 20. Further Spartacist disorders broke out at the beginning of March, heavy fighting taking place in the Alexanderplatz and other

parts of the city. There was renewed rioting in Berlin in Jan., 1920, and a more serious outbreak in March of that year.

BERLIN. Former name of the Canadian town now called Kitchener. It was changed at the request of the inhabitants early in the Great War. See Kitchener.

BERLIN, CONGRESS OF. Meeting of representatives of the Great Powers in Berlin to adjust conditions brought about by the Russo-Turkish war. Lord Beaconsfield having claimed that the treaty of San Stefano (March, 1878) should be revised, the congress met on June 13, Great Britain being represented by Lord Beaconsfield and Lord Salisbury. Bismarck's diplomacy was required in the capacity of "honest broker."

The result was the recognition of the independence of Rumania, Serbia, and Montenegro. A Bulgaria was established, autonomous, but tributary to Turkey, while two-thirds of the territory assigned to her remained under Turkish administration. Bosnia and Herzegovina were placed provisionally under the administration of Austria. Turkey separ-

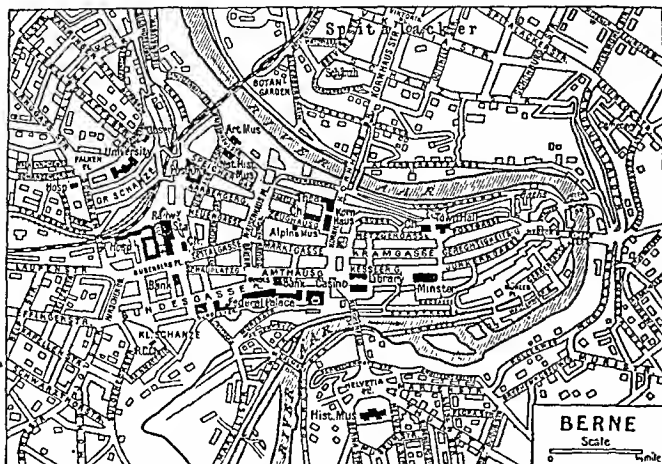

ately assented to the occupation of Cyprus by the British in return for a British guarantee of the possessions of Turkey in Asia apart from the cessions made to Russia. Lord Beaconsfield returned home bringing, as he himself said, "peace with honour." See Beaconsfield.

BERLIN DECREE. Order issued by Napoleon Nov. 21, 1806, with the object of destroying British trade. He proclaimed the British Islands to be in a state of blockade, forbade commerce with the ports of France and her dependents, confiscated British goods in French and allied ports, and treated British subjects in France and countries occupied by her troops as prisoners of war. Britain replied by forbidding neutrals to trade with France and her allies under penalty of confiscation of ships and goods.

BERLINE OR BERLIN. Carriage popular in France in the 18th century. It was first made in Berlin, about 1670, hence its name. A covered vehicle on four wheels, it seated two persons inside and one in a seat, sometimes hooded,

Berline. Side elevation of a specimen in the museum at Vienna

Berne. Plan of the federal capital of Switzerland. It is famous for its old houses and the extensive views of the Bernese Oberland section of the Alps obtained from the streets

behind, as well as the driver. The word is nowadays used for a motor vehicle, a development of the limousine, which is designed to carry five passengers.

BERLIOZ, HECTOR (1803-69). French composer. Born Dec. 11, 1803, the son of a doctor, he studied music at the Paris Conservatoire and soon began to compose. He won the Grand Prix de Rome, 1830, but the unusual character and elaborate scope of his work hindered him from procuring adequate recognition. His best known compositions are a setting of Faust for voices and orchestra, an opera, *Beatrice and Benedict*, and several symphonies and overtures. Berlioz married the Irish actress Henrietta Smithson, 1833. He died in Paris, March 9, 1869. He wrote his *Mémoires*, published in 1870.

Hector Berlioz, French composer

BERMONDSEY. District of London and one of the 28 metropolitan boroughs. S. of the Thames, which it borders, between Deptford, Camberwell, and Southwark, it includes Rotherhithe, and its chief industries are connected with leather. Bermondsey possesses a leather market in Weston Street, a technical institute, and tanneries. It contains Tooley Street, the S. approach to the Tower Bridge, S. Saviour's Dock, and Jacob's Island, the supposed place of Bill Sikes's death. S. Olave's grammar school was founded in 1539. Bermondsey is governed by a mayor and council. It sends two members to Parliament. Pop. 119,452

BERMUDA GRASS (*Cynodon dactylon*). Perennial grass with stout creeping stems of woody consistence, stiff awl-shaped leaves, and erect flowering branches, a native of sandy shores in Europe, Asia, and Africa. It is a drought-resisting grass, of value as pasture in dry countries.

Bermuda grass, *Cynodon dactylon*

America and W. Indies station, they possess good harbours, with dockyards, victualling yards, and floating docks.

maintained with Halifax, Jamaica, New York and other ports.

Discovered by the Spaniard, Juan Bermudez, early in the 16th century, the Bermudas were settled by Sir George Somers, who was wrecked here in 1609, and were long called the Somers Islands. They are administered by a governor, assisted by executive and legislative councils and an assembly of 36 members. Civil pop. 30,814, of whom 15,833 are whites.

BERNADOTTE.

Name of a family members of which have been kings of Sweden since 1818. Jean Baptiste Bernadotte, son of a French lawyer, Henri Bernadotte, rose to the rank of marshal in Napoleon's armies, and in 1810 was selected as successor to the king of Sweden, Charles XIII. He was virtually ruler of the country from that time, and succeeded to the throne as Charles XIV (q.v.), king of Sweden and Norway, in 1818.

BERNARD OF CLAIRVAUX (1090-1153).

Saint and theologian. Born near Dijon of a noble Burgund family, when about 23 he entered the Cistercian monastery at Cîteaux. Two years later he was sent to found a branch house at Clairvaux in Champagne, of which he became abbot. His sanctity, learning, and preaching powers made Clairvaux famous throughout Europe. In 1128 he was secretary to the Council of Troyes, and drew up the outline of the rule of the Templars. Within the Cistercian order he accomplished many reforms, and when he died in his abbey

The climate is so healthy that they are a popular resort for Americans. They produce and export onions, potatoes, and tomatoes, with arrowroot, bananas, and lily bulbs. The largest islands are Great Bermuda, also known as Long or Main Island (area 13 sq. m.), St. George, Somerset, Ireland, and St. David. The capital is Hamilton. There are no rlys., but many excellent roads and causeways. There are telegraphic, wireless, and telephonic services, and steamship communication is

of Clairvaux, Aug. 20, 1153, the 163 monasteries founded by him had increased to 343. The Cistercian order of Bernardine nuns is named after him. He was canonized in 1174. His writings consist chiefly of sermons and hymns. See Cistercians.

BERNBURG. Town of Anhalt, Germany. On the Saale, about 23 m. S. of Magdeburg, it consists of the old town, the new town with a newer suburb, Waldau, and the so-called Bergstadt or hill-town on the other side of the river. The three were at one time separate municipalities, being united early in the 19th century. Situated in the chief salt-mining district of Germany, its manufactures include chemicals, pottery, and paper. At one time the capital of the little duchy of Anhalt-Bernburg, Bernburg is a very old town, with a moated castle on the Bergstadt. Pop. 34,305.

BERNE OR BERN (Ger. Bären, bears). City of Switzerland, capital of Bern canton, and, since 1848, of the Swiss Confederation. Picturesquely placed on a sandstone bluff 1,788 ft. above sea level, it is enclosed on three sides by the Aar, here crossed by six bridges. Bern is an important rly. junction; it has direct communication with the Simplon rly. and N. Italy by the Loetschen tunnel through the Bernese Oberland. The Minster is a late-Gothic church, built 1421-1598. In the Bears' Den bears have been kept continuously.

The Historical Museum contains relics of Bern's historic past, and also the original MS. of the *Wacht am Rhein*. Other noteworthy buildings are the university, founded 1834, the art and natural history museums, the 15th century town hall and the towers of the old town walls. Bern has few manufactures. It is the seat of several international bureaux, such as the Universal Postal Union, the International Telegraphic Union, and the Transport and Copyright Associations. Founded in 1191, Bern became a free city of the Empire in 1218. It allied itself with the three Forest Cantons, 1323, and joined the Swiss Confederation, 1353. Pop. 109,020.

Bermudas. British islands off the coast of N. America. Of some 360 isles and islets only 20 are inhabited

Berne. Air view showing the city in an elbow loop of the Aar, the bridges to left and right being the Kornhaus and Kirchenfeld respectively. The great building in the centre foreground is the Federal House of Representatives

Aerofilm

The Convention of Berne, an agreement to bring about reciprocity of copyright on uniform lines, was signed at Berne, Sept. 5, 1887, by representatives of Great Britain, Belgium, France, Germany, Haiti, Italy, Spain, Switzerland and Tunis. Other states afterwards came in. Modifications were introduced by conventions in Paris in 1896 and Berlin in 1908. See Copyright.

BERNERS, JOHN BOURCHIER, 2ND BARON (1467-1533). English diplomat and author. Succeeding his grandfather in 1474, he went on missions to France, 1514, and Spain, 1518, on behalf of Henry VIII, and acted as the king's deputy at Calais, 1520-33. He translated Froissart's *Chronicles* (1523 and 1525) and *The Golden Book of Marcus Aurelius*.

The barony which Berners inherited fell into abeyance on his death, remaining so until 1720. It was again in abeyance from 1743 to 1832, when it was secured by a member of the Wilson family, a descendant in the female line of Jane Knyvet, daughter of Sir John Bourchier. In 1871 it passed to Emma, wife of Sir H. T. Tyrwhitt, Bart., and it has since been held by the Tyrwhitt family.

BERNESE OBERLAND. Division of the Swiss Alps. Mainly in canton Berne, and N. of the Rhône, it extends N.E. from the Lake of Geneva nearly to the Lake of Lucerne. The term embraces also Hasli, Lauterbrunnen, and other valleys, and such resorts as Interlaken, Meiringen, Mürren, Grindelwald, Adelboden, Kandersteg, Château d'Oex, and Thun. The range increases in height from W. to E., culminating in the Finsteraarhorn. Among the next highest summits are the Aletschhorn, the Jungfrau, the Mönch and the Schreckhorn.

BERNHARDI, FRIEDRICH VON (b. 1849). German soldier and writer. Born at St. Petersburg while his father was attached to the German embassy, Nov. 22, 1849, he entered the German army in 1869, retiring in 1909.

Bernhardi had become a keen follower of Treitschke and his gospel of force, and in 1912 wrote *Germany and the Next War*, which ran into many editions and was translated into English in the same year. In this book he advocated the theory that civilization could make progress only by warfare. In 1921 appeared his book on the Great War, *Deutschlands Heldenkampf, 1914-18*.

BERNHARDT, SARAH (1845-1923). French actress. Born in Paris, Oct. 23, 1845, she became a pupil at the Conservatoire, 1860, won several prizes, and made her stage

Sarah Bernhardt,
French actress
Downey

début in Racine's *Iphigénie* at the Comédie Française, 1862. Her first appearance in London was at *The Gaiety*, June 2, 1879, in *Phédre*; at New York, Nov. 8, 1880, as Adrienne Lecouvreur. Other rôles, in all of which temperament was predominant, included *Fédora*, *Théodora*, *La Tosca*, *Joan of Arc*, *Hamlet*, *Marguerite Gautier*, *Magda*, *L'Aiglon*, *Frou-Frou*, *Cleopatra*, and *Queen Elizabeth*. It is doubtful if any actress played so many parts so well. Sarah Bernhardt's magnetic personality, incontestable genius, and golden voice were themes of international eulogy. Apart from the stage, she achieved distinction as painter and sculptor. What was described as the first volume of her *Memoirs* appeared in 1907. She died Mar. 26, 1923.

BERNICIA. Name of an old English kingdom, corresponding roughly to the modern Northumberland. For about a hundred years it had its own kings, and its capital was Bamburgh. See Northumbria.

BERNINI, GIOVANNI LORENZO (1598-1680). Italian sculptor. Born at Naples, he settled in Rome, where he planned a palace for Pope Urban VIII and the great colonnade of St. Peter's. Of his statuary the most famous piece is the group *Apollo and Daphne*. He died in Rome, Nov. 28, 1680.

BERNOULLI OR BERNOULLI. Name of a family noted for its mathematicians. Originally settled at Antwerp, they removed to Switzerland in the 17th century, and eight descendants of Nicholas Bernoulli (1623-1708) achieved distinction.

James (1654-1705), a son of Nicholas, was professor of mathematics at Basel. He extended the use of the differential calculus and determined various curves. Another son, John (1667-1748), was professor successively at Groningen and Basel, and investigated similar problems; and a grandson, Nicholas (1687-1759), was professor of mathematics at Padua and of law at Basel.

Of John Bernoulli's three sons, Nicholas (1695-1726) became professor of jurisprudence at Berne, and from 1725 was professor of mathematics at St. Petersburg. John's second son, Daniel (1700-82), was professor of mathematics at St. Petersburg, of anatomy and physics at Groningen, and of anatomy, botany and physics at Basel. His younger brother John (1710-90) was professor of mathematics at Basel, and contributed by his investigations to the theory of light and heat.

Of the latter's two sons, John (1744-1807) was appointed astronomer to the academy of Berlin in 1763, and wrote books on astronomy; and Jacob (1758-89) succeeded his uncle, Daniel, as professor of physics at Basel.

BERNSTEIN, EDUARD (b. 1850). German socialist. Born in Berlin, June 1, 1850, he was forced to leave Germany on account of his pronounced socialist views, and he resided in London from 1888 until 1901. Bernstein was a member of the Reichstag, 1902-6, and again in 1912. During the Great War his full support was given to the Minority Socialists who opposed it. His writings include *Social Democracy of To-day*, 1905, and a study of the Revolution in Germany, 1921.

Eduard Bernstein,
German socialist

BERNSTEIN, HENRY LÉON GUSTAVE CHARLES (b. 1875). French dramatist. He was born in Paris of Jewish parents. His plays, generally marked by strong emotion, include *Le Marché*, 1900; *Joujou*, 1902; *La Griffe*, 1905; *Le Voleur*, 1906; *Samson*, 1907; *Israël*, 1908; *L'Assaut*, 1912 (English versions of the last three were produced); and *Le Secret*, 1913.

BERNSTORFF, JOHANN HEINRICH, COUNT (b. 1862). German diplomatist. Born in London, Nov. 4, 1862, he entered the German army in 1881. He joined the diplomatic service in 1889, and in 1908 was appointed ambassador to the U.S.A. He held that post until Feb., 1917, when he was given his passports by President Wilson. In 1919 he was one of those who discussed the terms of peace presented by the Allies.

BERRE, ÉTANG DE. Lagoon of France, in the department of Bouches-du-Rhône. It is connected with the Mediterranean by the narrow Canal-de-Bouc, about 3 m. long, and has an area of about 60 sq. m.

BERRUGUETE, ALONZO (c. 1450-1561). Spanish artist. Born at Paredes de Nava, he

studied under his father, painter to Philip I of Spain. In 1503-4 he visited Italy, where he came strongly under the influence of Michelangelo, the result being that his art combines the qualities of both the Italian and the Spanish schools. He produced some wonderful altar pieces—combinations of painting and sculpture—for the churches of Notre Dame de San Lorenzo and the Benedictine convent of S. Benito at Valladolid. Other typical works are at Ventosa, Palencia, and Toledo, where he died.

BERRY (A.S. *berie*). Succulent fruit with several seeds immersed in pulp. Familiar examples are the grape and gooseberry. Some of the fruits popularly known as berries are not so in the botanical sense. See Blackberry; Raspberry, etc.

BERRY OR BERRI. One of the provinces of France before the Revolution. It is now covered by the departments of Cher and Indre. In early times it was inhabited by the Bituriges, and its capital was Bourges. In the 13th century it came under the rule of the king of France and in 1360 Berry was made a duchy for John, a son of John II. The title duke of Berry was borne by one or other of the Bourbons until 1820.

Charles Ferdinand, duc de Berry (1778-1820), son of Charles X, served with the royalist army 1792-97, went to England in 1801, and returned to France at the restoration of 1814. He was stabbed to the heart in Paris, Feb. 13, 1820. Seven months later a son, the duc de Bordeaux, better known as the comte de Chambord, was born to him.

BERRY, SIR JAMES GOMER (b. 1883). British newspaper proprietor. The third son of John Mathias Berry, an alderman of Merthyr Tydfil, he was associated with his elder brother, Baron Camrose (q.v.) in acquiring control of many important newspapers and journals. He became deputy-chairman of The Amalgamated Press, Ltd., Allied Newspapers, Ltd., The Daily Sketch and Sunday Graphic, and part proprietor of The Daily Telegraph and a number of other journals.

Sir J. Gomer Berry,
Newspaper proprietor
Russell

Apart from his share in these great publishing enterprises, Sir Gomer Berry is a director of various large industrial undertakings, and takes a prominent part in philanthropic work, being chairman of the Infants' Hospital, to which in May, 1928, he made a gift of £50,000 in memory of his wife, who died Feb. 1, 1923. He became a baronet in 1928.

BERSAGLIERI (Ital. sharpshooters). Name given to regiments of Italian infantry which are recruited from selected men of exceptional physique.

They do not act as a corps d'élite, but one regiment is allotted to each army corps. Their picturesque head-dress—consisting of scout's hat with drooping plume of black cocks' feathers—and their custom of marching at the trot have always attracted attention. They correspond to the English rifle regiments and light infantry and the French Chasseurs à pied.

Bersaglieri. Soldier
in marching kit

BERSERK. Viking champion of the 10th and 11th centuries, generally included as bodyguard in the households of Scandinavian kings. The name is variously explained

as bare sark, going into battle without mail coats; bear sark, wearing animal skins; and as descendants of one Berserker. The old sagas name them wolf-coats and bear-coats. Their rage in battle became proverbial.

BERT, PAUL (1833-86). French scientist and politician. Born at Auxerre, Oct. 17, 1833, he became a doctor of medicine. His valuable and successful experiments concerned the grafting of skin, the subject of air pressure on living organisms, and the influence of light on plants. In 1886 he was sent out to Hanoi as resident-general in Annam and Tongking, and died there, Nov. 11, 1886.

BERTHA (d. c. 615). Queen of Kent. She was the wife of Ethelbert, king of Kent. A Christian princess, she influenced Ethelbert to be baptised in 597, and gave S. Augustine a dwelling place in Canterbury.

BERTHELOT, PIERRE EUGÈNE MARCELLIN (1827-1907). French chemist. He was born in Paris, Oct. 29, 1827, and in 1854 took his degree of doctor of science.

P. E. M. Berthelot,
French chemist
Gerschet

In 1865 he was appointed to the chair of organic chemistry at the Collège de France, and commenced his researches in thermo-chemistry, of which branch of the science he was the creator. Afterwards he turned his attention to the study of explosives, and prepared synthetically acetylene, benzene, methane, formic acid, and methyl and ethyl alcohols. He was minister of public instruction, 1886-7, and of foreign affairs, 1895-6. In 1889 he succeeded Pasteur as secretary of the Academy of Sciences. He died Mar. 18, 1907.

BERTHIER, ALEXANDRE (1753-1815). French soldier. He fought under Lafayette in America, and after the French Revolution became chief of staff to Napoleon, from the Italian campaign, 1795, onwards. He was made marshal by Napoleon 1804, prince of Neuchâtel, 1806, and prince of Wagram, 1809. On the emperor's downfall in 1814 he made peace with Louis XVIII. He died at Bamberg, June 1, 1815.

BERTHOLLET, CLAUDE LOUIS, COUNT (1748-1822). French chemist. Born at Talloire, in Savoy, Dec. 9, 1748, he succeeded Macquer in 1784 as superintendent of dyeing processes at the Jardin du Roi, Paris, and published *The Art of Dyeing* (Eng. trans. A. Ure, 1824). He was the first to propose the use of chlorine for bleaching fabrics. At the beginning of the Revolution Berthollet showed how to make saltpetre for the manufacture of gunpowder in Paris. His work on national defence led him to discover also potassium chlorate, cyanogen chloride, and fulminating silver. He died Nov. 6, 1822.

BERTHON, EDWARD LYON (1813-99). British inventor. Born in Finsbury Square, London, Feb.

20 1813, he was of Huguenot descent. After six years of European travel, in 1841 he went to Cambridge, and in 1845 was ordained. He had a living at Farnham, 1847, and in 1849 became vicar of Romsey, where he

Berthon. Collapsible canvas boat carried by submarines and destroyers

remained until his death, Oct. 27, 1899. Berthon's claim to remembrance rests on his inventions. He conceived the idea of propelling ships by a screw, and invented an instrument known as Berthon's log for registering their speed, and a collapsible boat, constructed of canvas upon wooden stretchers. Owing to the handiness with which they can be stowed, all destroyers and submarines in the British navy carry Berthons.

BERTIE, FRANÇOIS LEVESON BERTIE, 1st Viscount (1844-1919). British diplomatist. He was a younger son of the 6th earl of Abingdon and was born Aug. 17, 1844. He entered the Foreign Office in 1863, and was made assistant under-secretary in 1894. In 1903 he was appointed ambassador to Rome, being then Sir Francis Bertie, but two years later he was transferred to Paris. There he remained until 1918. In 1915 he was made a peer, as Baron Bertie of Thame, and on his retirement he was rewarded with a viscounty. He died in London, Sept. 26, 1919.

BERTILLON, ALPHONSE (1853-1914). French criminologist. Son of Louis Adolphe Bertillon (1821-1883), one of the founders of the Paris school of anthropology, a doctor and a statistician, he was born in Paris and became head of the identification department of the Paris police. In 1879 he evolved his system for measuring and so identifying criminals.

Bertillon Measurements. British system of photographing the subject with a mirror showing profile

length of left foot, length of left forearm. In the British service Bertillonage has been discarded for the finger-print system.

BERTRAM, CHARLES JULIUS (1723-65). British literary forger. He was born in London, and was teacher of English in the Royal Marine Academy at Copenhagen, where he died. To obtain notoriety he carried out a remarkable literary fraud. In 1747 he wrote to William Stukeley (1687-1765), the antiquary, stating that a friend possessed a MS. containing a history of Roman Britain by a certain Richard of Westminster, together with a map. Stukeley asked Bertram to procure him a facsimile copy, which duly arrived. Stukeley then identified the supposed Richard of Westminster with Richard of Cirencester (d. 1400), a monk of S. Peter's, Westminster, and author of a chronicle of the deeds of the kings of England. The copy was generally accepted as made from a genuine MS. and historians used it as an authority. In 1866-67 Dr. Woodward, librarian at Windsor, exposed the fraud in *The Gentleman's Magazine*.

BERTRAND DE BORN (c. 1140-1215). French troubadour. He was born in Périgord, and as vicomte de Hauteeforte played a conspicuous part in the feuds which the three sons of Henry II of England carried on against their father. On the death of Henry II he accompanied Richard I to Palestine, and the

last 20 years of his life he spent at the abbey of Dalon. Over forty of his poems are extant.

BERVIE OR INVERBERVIE Royal burgh, seaport, and market town of Kincardineshire, Scotland. It stands at the mouth of Bervie water, 13 m. N.E. of Montrose by the L.N.E. Rly., and manufactures woollens, yarns, and chemicals. Market day, Wed. Pop. 1,041.

BERWICK, JAMES FITZJAMES, DUKE OF (1670-1734). French soldier. Born at Moulins, in Bourbonnais; Aug. 21, 1670, he was a natural son of James II by Arahella Churchill, sister of the duke of Marlborough. He was made a duke before his father lost his throne, after which he served with the French forces in Ireland and Flanders, being made a marshal in 1706. In the war with Spain he was in command of the army which defeated the allied English and Portuguese forces at Almanza in 1707. He was killed at the siege of Philippsburg, June 12, 1734. In 1930 a descendant, the Duke of Alba and Berwick, became foreign minister of Spain.

James Fitzjames,
Duke of Berwick

BERWICK-UPON-TWEED. Borough, seaport, and market town of Northumberland. At the mouth of the Tweed, 67 m. N.W. of Newcastle-upon-Tyne, on the L.N.E. Rly., it comprises with Spittal and Tweedmouth the county of the borough and town of Berwick-upon-Tweed. The town communicates with

Berwick. Royal Tweed Bridge, of ferro-concrete, opened in 1928. In foreground is the 17th cent. bridge

the S. bank of the Tweed by several bridges, one opened in 1928 supplementing the 17th century stone one, too narrow for modern traffic, and another a railway viaduct designed by Robert Stephenson. Constantly in dispute between England and Scotland, Berwick was neutral until 1551, when it was attached to Northumberland in 1885. Market day, Sat. Pop. 12,994.

BERWICKSHIRE. Maritime and border county of S.E. Scotland. It falls into three natural divisions—the Lammermuir Hills in the N., the valley of Lauderdale in the W., and the richly fertile district of Merse in the S.E. Its length N. to S. is about 21 m.; breadth E. to W., about 31 m.; area, 457 sq. m. The steep and rocky coast affords little shelter to the few but important fishing harbours. The loftiest summit is Meikle Sava Law, 1,749 ft., on the Haddington border. Two rivers flow to the sea, the Tweed, which partly separates the county from England, and the Eye. More than half the county is under cultivation, and the fisheries are among the most valuable in Scotland. The L.N.E. Rly. traverses the county. Duns is the co. town; others are Eyemouth, Coldstream, and Lauder, a royal burgh. Berwickshire and Haddingtonshire unite to return one member to Parliament. Pop. 26,200.

LITERARY ASSOCIATIONS. Berwickshire has association with much of the old ballad literature of the Border. At Dryburgh Abbey

Sir Walter Scott is buried. There are many memories of Scott and his works. Fast Castle, Coldingham, is the Wolf's Crag of the Bride of Lammermoor, which takes its title from the Lammermoors of the county.

BERWYN MOUNTAINS. Range in N. Wales, between Montgomeryshire and Merionethshire. Moel Soch (2,713 ft.) and Cader Idrion (2,568 ft.) are the highest summits.

BERYL (Gr. beryllon). Generic term including several of the finest gem stones, such as the emerald, the aquamarine, morganite, and euclase. The beryl of the jewellers is a pale green stone, while the pure yellow-green variety is called the gold beryl, and is frequently classed as a chrysoberyl. Chemically, beryl is a silicate of beryllium and aluminium; it is found in the Ural mountains, Hungary, Brazil, and many other countries.

BERYLLIUM. Metal related to barium, calcium, magnesium, and strontium, and the base of one of the so-called alkaline earths. Chemically it is an element, with an atomic weight of 9.1 and the atomic number 4; its symbol is Be. It is hard, in colour of a bright, silvery white; its melting point is 1,400° C. It is found in nature in the mineral gems, beryl, emerald or aquamarine, in euclase, and in chrysoberyl.

BERZELIUS, JÖNS JAKOB, BARON (1779-1848). Swedish chemist. Born at Väverunda, near Linköping, Aug. 29, 1779, he was educated at Upsala University, and was appointed professor of botany and pharmacy at Stockholm University in 1807. He spent ten years in determining with great exactness the atomic and molecular weights of more than 2,000 chemical substances, the results being published in his book on fixed proportions and weights of atoms. He invented the system of symbols used for the chemical elements, and discovered selenium, selenic acid, cerium, and thorium. He died Aug. 7, 1848.

BES. Egyptian deity. Of Sudanese origin, he is represented as a bandy-legged dancing dwarf, wearing a feathered head-dress and the tailed pelt of a dog-like leopard.

BESANCON. Town of France, capital of the department of Doubs. On a peninsula on the river Doubs, 76 m. by rly. E. of Dijon, it is the seat of an archbishop. The cathedral of S. Jean dates in part from the 11th century, and the Gothic and Renaissance palaces of Cardinal Granvelle from the 16th century. It has a university, a fine library, and an observatory. The making of watches and clocks is carried on. It was the capital of Franche-Comté, became a free city in 1184, and belonged to Spain from 1648 to 1678, when it was ceded to France. Victor Hugo was a native. Pop. 58,525.

BESANT, ANNIE (b. 1847). British Theosophist. Born Oct. 1, 1847, daughter of William Page Wood, she was married in 1867 to the Rev. Frank Besant, brother of Sir Walter Besant, vicar of Sibsey, Lincolnshire, from whom she was legally separated six years later. Mrs. Besant joined the National Secular Society in 1874, and for some ten years was associated with Charles Bradlaugh. She then became a socialist. In 1889 Mrs. Besant came under the influence of Madame

Mrs. Annie Besant,
British Theosophist
E. H. Mills

Blavatsky, and henceforth devoted herself to the theosophical cause. She founded a college and a school at Benares, and in 1907 was elected president of the Theosophical Society. Identifying herself with the Indian Nationalist movement, Mrs. Besant was interned for a time in 1917. Her Autobiography appeared in 1893.

BESANT, SIR WALTER (1836-1901). British author. Born at Portsea, Aug. 14, 1836, he was educated at King's College, London, and Christ's College, Cambridge. In 1871 he began to collaborate with James Rice, editor of *Once a Week*. This partnership, which lasted until Rice's death in 1882, resulted in the production of a number of novels, including *Ready Money* (1872), *Butterfly* (1876), and *The Chaplain of the Fleet* (1881). Henceforward Besant worked singly as a novelist. The best of his later novels are *All Sorts and Conditions of Men* (1882); *Dorothy Forster* (1884); *Children of Gibeon* (1886); and *The World Went Very Well Then* (1887). The last seven years of his life he spent

Sir Walter Besant,
British author
Elliott & Fry

include *The Virgin Goddess*, 1906; *Olive Latimer's Husband*, 1909; *Don*, 1909; *Lady Patricia*, 1911; *Kings and Queens*, 1915; *Kultur at Home*, 1916; *A Run for his Money*, 1916; and *The Ninth Earl*. He collaborated with the author in a dramatized version of H. G. Wells's *Kipps*, 1912.

BESIKA BAY. Opening on the N.W. coast of Asia Minor. Opposite the island of Tenedos, it was used as a naval station by the British Fleet in 1853-54, and was a base of operations in the Russo-Turkish War of 1877-78.

BESKID MOUNTAINS. Name given to the northern portion of the Carpathian system, between Galicia on the N. and Slovakia on the S. The Western Beskids extend from the W. side of the Jablunka pass to the valley of the Dunajetz, and the Eastern Beskids from the Dunajetz to the Lupkov pass. Fighting took place in the Beskid passes between the Russians and the Austrians in 1914-15. Early in the latter year the Russians conducted a great offensive in the Carpathians, and by April 9 had gained many of the summits, but by May 16 had lost them.

BESNARD, PAUL ALBERT (b. 1849). French painter and etcher. Born in Paris, June 2, 1849, he studied at the Ecole des Beaux Arts, first exhibited at the Salon, 1868, and carried off the Prix de Rome, 1874. After two years in London with his wife he returned to astonish Paris with some paintings for the Ecole de Pharmacie in which he applied his theories to decoration.

BESSARABIA. Eastern portion of Rumania, formerly a government of S.W. Russia. It lies between the Dniester, the Pruth, and the Black Sea, and has an area of 17,146 sq. m. The country is generally low and flat, except in the N., where it is relieved

Berwickshire. Border county in the S.E. of Scotland. It was frequently overrun by the Scots and English in their struggles for the possession of Berwick.

by wooded offshoots of the Carpathians. It is watered by the tributaries of the Dniester and Pruth. Large quantities of wheat, maize, fruit, flax, and tobacco are cultivated. The leading industry is stock rearing. Marble, salt, and other minerals are obtained, and the forests provide timber. The chief towns are Kishinev, the capital, Bender, Ismail, and Akkerman. The pop. of 2,344,800 is very mixed, the predominating races being Moldavians, Little Russians, Jews, and Bulgarians.

Bessarabia figured in the Great War, considerable operations taking place between Austro-Germans and Russians on the frontier in 1915 and 1916. When Russia deserted the Allied cause in 1917 Bessarabia proclaimed itself an independent republic, and asked Rumania for aid against the Bolsheviks. The Rumanian Government sent troops, but by the Treaty of Bukarest (q.v.) they evacuated the territory. By a convention signed Oct. 29, 1920, the sovereignty of Rumania over Bessarabia was recognized by the Powers.

BESSBOROUGH, EARL OF. Irish title borne since 1739 by the family of Ponsonby. William Ponsonby, a landowner in co. Kilkenny and M.P. for that county, was made Baron Bessborough in 1721 and Viscount Duncannon in 1722. His son, the 2nd viscount, was made earl of Bessborough in 1739 and a peer of the United Kingdom in 1749. Most of the succeeding earls took some part in public life, John William, the 4th earl (1781-1847), being lord lieutenant of Ireland, and Vere, the 9th earl (b. 1880), as Viscount Duncannon, was M.P. for Dover, 1913-20. The family seat is Bessborough, co. Kilkenny.

BESSEMER, SIR HENRY (1813-98). British scientist and inventor. Of Huguenot stock, he was born at Charlton, near Hitchen, Jan. 19, 1813. His father was Anthony Bessemer, an engineer, who set up a small works at Charlton for the manufacture of gold chains and later started type founding. Here his son gained some valuable experience, but soon he settled in London, where he was hard at work putting his ideas into practice. He invented dies for stamps which made fraud in their use almost impossible; he made lead pencils from waste plumbago; he improved the casting and setting of type, and he made bronze powder by a secret process, deriving thereby much profit.

Sir Henry Bessemer,
British inventor
Elliott & Fry

But his great invention was the making of steel by the process named after him. He was knighted in 1879, and died March 15, 1898.

THE BESSEMER PROCESS. By this process air is forced through a molten mass of iron in a special type of furnace known as a converter, thus removing impurities such as carbon, silicon, sulphur, phosphorus and manganese. The resulting metal is a highly purified iron, but to make it tractable a small proportion of carbon must be replaced, and the metal must be freed from an appreciable quantity of oxygen it contains. This is effected by adding a quantity of an alloy such as ferro-manganese or spiegelisen, and again forcing an air blast through the mass, when a Bessemer mild steel results. The slag removed in the Bessemer process is a valuable fertiliser.

BEST, SIR ROBERT WALLACE (b. 1856). Australian politician. Born at Fitzroy, Victoria, June 18, 1856, he became a barrister and mayor of his birthplace.

Sir Robert Best,
Australian politician
Elliot & Fry

In 1889 he was sent to the legislative assembly, and in 1894 became minister of lands in Victoria. On the foundation of the Commonwealth, in 1901, he became a senator. In 1907-08 he was made leader of the government and deputy prime minister under Deakin, and in 1909-10 was minister of trade and customs. He sat in the House of Representatives, 1910-22. He was knighted in 1908.

BESTIARY (Lat. bestia, wild beast). Name given to a book describing, in word and picture, the animals of the world. Popular in the Middle Ages, these books included fabulous animals, such as the unicorn, and exhibit the credulity and ignorance and also some of the nobler features of their time.

BETA (β, β). Second letter of the Greek alphabet. It has the same position in the Hebrew alphabet, where it is called Beth (house) from a fancied resemblance in its outline. In astronomy β generally denotes the second brightest star in a constellation. It appears as the name of one of the earliest British airships, and is used in connexion with certain chemical combinations.

BETAINE. Alkaloid occurring in beet root and beet root molasses. It can also be made synthetically by the interaction of monochloroacetic acid and tri-methyl-amine. Betaine hydrochloride is known under the name of acidol, and is used in the treatment of gastric affections due to a deficiency of hydrochloric acid. Betaine hydrochloride liberates hydrochloric acid in the stomach.

BETEL NUT. Fruit of the Betel palm (Areca catechu; see illus. p. 119). A handsome tree, which rises to a height of about 30 ft., it is a native of India, and has feather-like leaves from 3 ft. to 6 ft. long. The fruit is the size of a hen's egg, the rind enclosing a single "nut" or seed as big as a nutmeg.

The betel pepper (Piper betel) is a trailing or climbing shrub, native of the E. Indies. The leaves, with a little lime and a slice of the areca nut, are chewed. The combination acts as a stimulant to the salivary glands and digestive organs, and turns the saliva a bright red.

Beth. Hebrew word meaning house. It is of frequent occurrence in place names, such as Bethel and Bethlehem.

Betel Pepper, leaves
and flower spikes.

BETHANY (Heb. house of dates). Village of Palestine. It lay 2 m. E. of Jerusalem, on the S.E. slope of the Mount of Olives. To-day the site is occupied by the hamlet of El Azariyeh or Lazariyeh, and it has remains of a 12th century convent, beneath which is the reputed grave of Lazarus. Bethany is frequently mentioned in the N.T.; it was the home of Lazarus and his sisters, and the reputed scene of the Ascension. In the Great War it was occupied by the British, Dec., 1917.

BETHEL (Heb. house of God). Ruined town of Palestine. It lies 12 m. N. of Jerusalem, at a height of 2,880 ft. Called Luz before Jacob's time, the present village is called Beitin. It was here that Abraham pitched his tent and Jacob dreamed. It became a resting-place of the ark, a royal residence, a national shrine, and an idolatrous centre. In the Great War it was occupied by the British on Dec. 30, 1917.

The word Bethel is sometimes applied to a seamen's church or chapel. It also came to be used in England and Wales for a Nonconformist place of worship, hence the phrase Little Bethel.

BÉTHENCOURT, JEAN DE (c. 1360-1422). French explorer. Of noble birth, he became a courtier in the train of Charles VI of France. His claim to fame rests on his attempt to conquer the Canary Isles, whither he sailed in 1402. This was not altogether successful, although something was accomplished by his companion, Gadifer de la Salle, and Béthencourt received from his patron, the king of Castile, the empty title of king.

BETHESDA. (Heb. house of mercy or house of the spring) Name of a pool or public bathing place in ancient Jerusalem. The exact site is unknown, but some identify

Bethlehem. David's royal city, the birthplace of Christ. Known now as Beit Lahm, it is 5 m. S.W. of Jerusalem

it with a natural spring S.E. of the Temple. Its waters were supposed to possess miraculous powers, and it was frequented by the blind, the lame and other sufferers. See John 5.

BETHESDA. Urban district of Carnarvonshire, Wales. It is 5 m. S.E. of Bangor on the L.M.S. Rly. Named after its Nonconformist chapel, it has extensive slate quarries. The slate is conveyed to Port Penryn by a light rly. Pop. 4,134.

BETH HORON (Heb. house of the hollow way). Two neighbouring villages of Palestine. They lie 11 m. N.W. of Jerusalem and command the ancient main pass from the coast to the city. Through the pass Joshua drove the Amorite kings (Josh 10), and here Judas Maccabaeus won a victory over the Syrians (1 Mac 3), about 166 B.C. The two villages, now called Upper and Lower Beit-ur (Beit-ur el Foqa and Beit-ur et Tahta), were the scene of bitter fighting with the Turks before the British captured Jerusalem in Dec., 1917.

BETHLEHEM (Heb. house of bread). Town of Palestine, birthplace of Jesus Christ and of King David. The modern Beit Lahm,

it lies 5 m. S.W. of Jerusalem, and contains the famous grotto of the Nativity said to have been built by the Empress Helena, wife of Constantine, on the spot where the Saviour was born. The Church of the Nativity, built over the grotto or crypt, is perhaps the oldest church in the world. It is surrounded by several chapels and convents belonging to various Christian communities. During the Great War Beit Lahm was captured by British troops on Dec. 8, 1917. Pop. 6,658.

BETHLEHEM. Borough of Pennsylvania U.S.A., in Northampton co. On the Lehigh river and canal, it is 56 m. N. of Philadelphia and is served by the New Jersey Central and other rlys. It has iron and steel works, silk and knitting mills, and paint works. It is the American headquarters of the Moravian sect and an educational and musical centre. Bethlehem was incorporated in 1845; in 1904, West Bethlehem was annexed. Pop. 62,828.

Two bridges connect Bethlehem with South Bethlehem, a centre of the iron and steel industry, containing the enormous works of the Bethlehem Steel Corporation. It is the seat of Lehigh University and contains a women's college and a Moravian seminary.

BETHLEHEMITES. Name given to three religious orders. One, mentioned by Matthew Paris, was granted a house at Cambridge in 1257; the members wore a white habit with a red and blue star on the breast. Another order was founded in 1660 by a Franciscan brother at Guatemala, to attend the sick and teach in schools; this order spread widely in Latin America, and its members were placed under the rule of St. Augustine in 1687. It was suppressed in 1820.

A military order known as the Knights of Bethlehem was instituted by Pope Pius II (1456-64) to defend the island of Lennos against the Turks, but it was suppressed.

BETHLEN, STEPHEN, COUNT (b. 1874). Hungarian statesman. Born Oct. 8, 1874, he belonged to a family that had long been settled in Transylvania, where they had large estates.

In 1901 he entered the Hungarian parliament, where for 20 years he was a prominent member of the opposition. In 1921, after he had taken a leading part in crushing the Bolshevik movement led by Bela Kun, he was chosen prime minister of Hungary, and he was still holding that position in 1930. He had to deal with the attempts of the emperor Charles to regain the throne and with serious financial and economic difficulties. He reformed the land laws and set up a new electoral system, but his great work was carrying through a scheme of financial reconstruction.

Count Bethlen,
Hungarian statesman

BETHMANN HOLLWEG, THEOBALD VON (1856-1921). German statesman. Son of Enkel von Bethmann-Hollweg, a Göttingen

Theobald von
Bethmann Hollweg,
German statesman

professor, he was born at Hohenfinow, Eberswalde, Sept. 29, 1856. Educated at Strasbourg, Leipzig, and Berlin, he entered the civil service in 1879. He was made president of Brundenburg in 1901 and vice-president of the Prussian ministry in 1907. In 1909 he was chosen by the emperor to be chancellor and minister president of Prussia, and was holding

those positions when the Great War broke out. In numerous speeches in the Reichstag, Bethmann-Hollweg defended the action of Germany. During the latter part

of 1916 he coquetted with a movement in Germany towards democracy, but the German military party would not countenance him, and their opposition led to his fall, July 13, 1917. In 1919 Bethmann-Hollweg published a book justifying his conduct in the war. He died Jan. 2, 1921.

BETHNAL GREEN. District of London. It is one of the 28 metropolitan boroughs, and since 1885 a parliamentary borough, returning two members. It lies E. of Shoreditch, S. of Hackney, and N. of Stepney. Its industries include the making of furniture, boots, and matchboxes, and the weaving of silk. The museum, opened in 1872, in Cambridge Road, is a branch of the Victoria and Albert Museum. Part of Victoria Park is in the borough, as are also Oxford House and a chest hospital. The L.N.E. Rly. serves the borough. Pop. (1921) 117,238.

BETH-PEOR (Heb. house of Peor). Place near Nebo, in Moab, where was a sanctuary to Baal (Baal-Peor, Num. 25). It was one of the last resting-places of the Israelites before they entered Canaan, and near the burial-place of Moses (Deut. 3, 4, 34; Josh. 13).

BETHPHAGE (Heb. house of green figs). Village of Palestine. It occupied a site, the exact location being unknown, on the Mt. of Olives, probably near Bethany. It is mentioned in the N.T. (Matt. 21).

BETHSAIDA (Heb. house of fishing). Town of Galilee. It stood N.E. of the Lake of Galilee, and was the scene of the feeding of the five thousand by Christ (Luke 9). It is called Bethsaida of Galilee to distinguish it from another Bethsaida, W. of the lake, the home of Peter, Andrew, and Philip.

BETHSHEMESH (Heb. house of the sun). Name of three ancient cities of Palestine, and of a temple of On, in Egypt. One city was in Upper Galilee, a fenced city of Naphtali (Josh. 19, 38), and another in Issachar (Josh. 19, 22). The most important of the three was a town of the Levites, in Judah, the principal city of Dan. Here Jehoash captured Amaziah (2 Kings 14). Duncan Mackenzie's excavations (1911-12) revealed its story from the coming of the Semites to Byzantine times. By 1500 B.C. the city was walled, with a strong south gate. The Israelite occupation was finally overthrown by Sennacherib (701 B.C.).

BÉTHUNE. Town of France, in the department of Pas-de-Calais. It is 24 m. by rly. N.W. of Arras, at the junction of two canals and in a rich coal mining region. It has a fine 14th century belfry, and the church of S. Vaast dates from the 16th century. Before the Great War its industries were oil distilling, salt refining, and earthenware and linen manufacture.

In the war Béthune was a principal railway head for the Allies' positions N. of the Lys river, strategically covering their communications with the Channel ports. In 1915 and 1918 the Germans made serious attempts to penetrate the Allied line in front of Béthune, and in April, 1918, they all but captured the town. The British, by recovering Locon northward, restored the Béthune canal defences. The town suffered great damage. Pop. 15,840.

BETHUNE. Sir Edward Cecil (b. 1855). British soldier. Born June 23, 1855, he entered the army in 1875. He saw service in Afghanistan and S. Africa and in the S. African War of 1899-1902, where he raised and commanded Bethune's Horse. He was director-general

Sir Edward Bethune, British Soldier
Russell

of the Territorial Force, 1912-17, and was knighted in 1915. Pron. Beeton.

BETONY (*Stachys betonica*). Perennial labiate herb. It is a native of Europe, N. Africa and W. Siberia, and has woody root-stock and annual stems about 30 ins. high. The leaves are heart-shaped, with rounded teeth, and the flowers red-purple, in whorls. It was used as a remedy for coughs.

BETROTHAL. Formal engagement for marriage. Elaborate usages and rites often attend betrothals. It is a very widespread institution, and among some primitive peoples infants are betrothed with elaborate rites. A fowl given to the girl's mother may suffice, or the boy's mother may drop a rupee into the girl baby's first bath. Infraction of the compact at puberty may be punishable by death, as in Australia. In Mahomedan India spies report upon the girl's looks to the boy's people. Courtship may rest with the maiden; if her offer of a neck ornament be accepted the engagement is complete (New Britain). The bride elect may be sent to a fattening house (S. Nigeria), a fasting hut (Orinoco), or may be secluded for five years in a leaf cage (New Ireland). In China her department is regulated strictly by the ancient Book of Rites.

The Jewish engagement (*shiddukhin*) should be distinguished from the legal betrothal (*qiddushin*). This, by rabbinical law, is the first step in the marriage, both ceremonies being, since the 16th century, performed on the same day.

BETTERMENT. Term employed in England to describe the state of things that exists when a public improvement has been effected, and in consequence thereof the property of an adjacent owner becomes more valuable. Thus, if A owns land in a slum and the local authority clears away the slum and makes a broad street along the site, so that A's land now abuts upon a fine street and increases largely in value, there is said to be a betterment of A's land. At common law A gets all the benefit, but local authorities have power under certain Acts of Parliament to make a charge on A's property for the benefit conferred by the improvements.

BETTERTON, THOMAS (c. 1635-1710). English actor. He was born in London, the son of a cook to Charles I, and was for some time a bookseller's apprentice. In 1659 he became an actor, and in 1661 he joined the company formed by Sir William Davenant at the theatre in Lincoln's Inn Fields. In 1695 he and Mrs. Bracegirdle opened a theatre in Lincoln's Inn Fields, removing in 1705 to the building erected by Vanbrugh in the Haymarket. Betterton made his last appearance on April 25, 1710, as Melantius, in Beaumont and Fletcher's *Maid's Tragedy*, and died three days later. Betterton is buried in the cloisters of Westminster Abbey. Consult Life, R. W. Lowe, 1891.

Thomas Betterton, English actor
Kneller

BETTIA. Town of Bihar and Orissa, India. It is 105 m. by rly. N. by W. of Patna, and contains the mabarajah's palace, an English school, and a Roman Catholic mission founded 1746. Pop. 24,291.

BETTING. Staking money or other valuable consideration upon the still undecided issue of an event. In Great Britain it is associated with many forms of sport, but more particularly with horse racing. The layers and backers resemble the bulls and bears of the stock exchange.

On every racecourse, and also elsewhere, are bookmakers who correspond to stockbrokers. They watch the odds against the various horses, and take money from the public on these terms. Like stocks and shares, the odds against each horse vary from hour to hour; those laid just before the race starts are the starting prices. On important races like the Derby betting begins some months beforehand. This is known as ante-post betting, and it is usual to call over the card, i.e. to fix the betting prices, at one of the chief racing clubs on the night before a race. These

Bettws-y-Coed. The Miner's Bridge, a wild glen near this beautiful Welsh village

and the prices ruling on all recognized racecourses are given in the newspapers for the guidance of intending backers.

Although carried on to a vast extent, betting was long illegal in Great Britain, and bookmakers were occasionally fined. In 1926 a tax on bets was introduced and bookmakers were ordered to take out an annual licence. The tax was reduced in 1928 and abolished in 1929, its place being partly taken by a heavy charge on the telephones used by bookmakers, who must also pay £10 a year for a licence to carry on the business of a bookmaker.

In 1928, too, a law was passed allowing totalisators to be used for betting on racecourses and elsewhere. A tax of ½ per cent was put upon the amount of each bet and a Betting Control Board set up to supervise the arrangements. See Bookmaker: Totalisator

BETTWS-Y-COED. Urban district of Carnarvonshire, Wales. It is 4 m. S. of Llanrwst on the L.M.S. Rly. Beautifully situated at the confluence of the Llugwy with the Conway, it is a tourist, fishing, and coaching centre, while the surrounding scenery, with the waterfalls and mountain views, attracts many artists. It was a resort of David Cox, who is said to have painted a signboard for the Royal Oak Inn. Pop. 1,027.

BETTY, WILLIAM HENRY WEST (1791-1874). British actor. Born at Shrewsbury, Sept. 13, 1791, he was taken to Ireland, and when twelve years old appeared on the stage in Belfast. His popularity in Ireland, and still more in Scotland, was remarkable: he was called the Young Roscius, and in 1804 made his début in London, and on one occasion the Commons adjourned to see him play Hamlet. His extraordinary career as a boy actor ended in 1808; after three years spent at Christ's College, Cambridge, he returned to the stage in 1811, but his success was only moderate. He retired very rich in 1824, and died Aug. 24, 1874.

BEUTHEN or **OBERBEUTHEN.** Town of Upper Silesia, Prussia. About 50 m. S.E. of Oppeln, it is a mining centre, coal, iron, and zinc being found in the neighbourhood. There are foundries and rolling mills in the town, and manufactures of woollens and furniture. It has railway communication with Warsaw by way of Czeszochowa. Pop. 62,543.

BEVELLING (Fr. hiveau). In carpentry, the cutting off the edge of a surface at a slight angle. Thus if a wooden strut intended to be set at an angle of 45° is to rest evenly on its support its lower end must be bevilled.

Bevel also denotes the inclination of one surface to another at an angle other than a right angle. In heraldry it is used to describe a break made in a line so as to form two equal acute angles, a bevilled line becoming two parallel lines joined by a slanting one.

BEVERLEY (anc. Beverlac, heaver lake). Borough and market town of Yorkshire (E.R.). It stands near the river Hull, with which it has canal communication, 8 m. N.W. of Hull, on the L.N.E. Rly. Its minster, 13th to 15th cent., is one of the finest Gothic churches in England; the Percy shrine is of exquisite workmanship. S. Mary's church also is a fine example of later Gothic. Outside the town are an aerodrome and racecourse. In 1929 the town celebrated the 800th anniversary of the granting of its charter. Until 1868 Beverley sent two members to Parliament. It is now part of the Holderness division (East Riding, Yorks.). Market days, Sat. and alternate Wed. Pop. 13,469.

Beverley Minster. West front of this splendid church, one of the marvels of Gothic architecture
Frith

BEWDLEY (originally Beaulieu). Mun. bor. and market town of Worcestershire. On the river Severn, 3 m. W. by S. of Kidderminster by the G.W.R., it manufactures malt, combs, ropes, bricks, and leather, and has tanneries and brass works. Its grammar school was founded 1591. Bewdley was separately represented in Parliament until 1885. It is now a co. div. with one member. Pop. 2,758.

BEWICK, THOMAS (1753-1828). English engraver. He was born at Cherryhurn, near Newcastle, Aug. 12, 1753, and apprenticed to a copper plate engraver. His apprenticeship over, Bewick came to London, but soon returned to Newcastle, and became partner with his old master, Ralph Beilby. His best work followed: *Select Fables*, 1784; a *History of Quadrupeds*, 1790; *British Birds and British Water Birds*, 1797; and *British Fishes*, 1822. Bewick's work is distinguished by its infinitesimal detail. He died at Gateshead, Nov. 8, 1828.

He was assisted by his brother John (1760-95) in the woodcuts for the *Poems of Goldsmith and Parnell*, 1795, and by his son, Robert Elliot Bewick (1788-1849), in those for *Aesop's Fables*, 1818. Consult *Life*, H. A. Dobson, 1884.

BEX. Town of Switzerland in the canton of Vaud. In the Rhône valley, 29 m. by rly.

S.E. of Lausanne, it is frequented for the grape-cure, and is connected by electric rly. with Gryn and Villars. Salt, first found in 1544, is extensively worked. Pop. 4,609.

BEXHILL. Borough and watering-place of Sussex. It is 5 m. S.W. of Hastings, with which it is connected by electric tramway, and is served by the Southern Rly. Bexhill old town, with a Norman church, lies inland; Bexhill-on-Sea is a modern seaside resort with a kursaal. Pop. 20,363.

BEXLEY. Urban district of Kent. It stands on the river Cray, 4 m. W. of Dartford, and 14 m. S.E. of London by the Southern Rly. The church of S. Mary, in the Early English and later styles, was restored in 1883. Hall Place occupies the site of a house in which the Black Prince is stated to have been born. Bexley Heath, to the E., has a Gothic church and a Foresters pensioners' asylum. At both Bexley and Bexley Heath there are several dene-holes (q.v.). Pop. 26,000.

Nicholas Vansittart (1766-1851) was raised to the peerage as Baron Bexley in 1823. He was secretary for Ireland in 1805, and chancellor of the exchequer 1812-22. He helped to found King's College, London. His title became extinct on his death.

BEY. Turkish title for officials, military officers, and other distinguished persons. The hereditary sovereigns of Tunis are called beys. The word is a modern form of beg (lord).

BEYERS, CHRISTIAN FREDERICK (1869-1914). Boer soldier and politician. Born at Stellenbosch, he served as a general in the S. African War. He was chairman of the peace conference at Vereeniging in 1902, and later was made speaker of the legislative assembly of the Transvaal. He was also commandant of the Union Defence Force, but resigned this post in Sept., 1914, and roused the Boers against Great Britain. His men were routed by Botha near Rustenburg, and soon he was a fugitive. On Dec. 8 he was again attacked, and was drowned while trying to escape across the Vaal.

Christian F. Beyers, Boer soldier

Beyrout. Variant spelling of the name of the Syrian seaport Beirut (q.v.).

BEZA OR DE BESZE, THÉODORE (1519-1605). French-Swiss reformer. Born at Vézelay in Burgundy, June 24, 1519, and educated at Orleans, he graduated in law. In 1548 a dangerous illness persuaded him to a serious view of life. He removed to Geneva with his wife, became a Calvinist, and from 1549-59 was professor of Greek at Lausanne. In 1559 he left Lausanne for Geneva to become Calvin's chief assistant and president of the college, and, on Calvin's death in 1564, became head of the reformed church in that city until his death Oct. 13, 1605. Consult *Life*, H. M. Baird, 1899.

BÉZANT OR BESANT. Byzantine gold coin which was current between the 4th and 15th centuries in the East Roman Empire and Europe generally. Silver bezants worth between one and two shillings were current in England in the 13th and 14th centuries. The bezant was long the medium and standard of exchange between East and West, and was used in India. In heraldry, a bezant is a golden roundel, represented in drawings by a circular figure covered with small dots.

BÉZIERS (anc. Beterrae). Town of France on the river Orb, it is 47 m. by rly. S.W. of Montpellier. Its most interesting building is the church of S. Nazaire, partly 12th century, and there are remains of a Roman arena and of the town walls. Béziers is the terminus of the Canal du Midi, which here joins the Orb. It has a trade in wine. Pop. 65,654.

BÉZIQUE. Card game, usually played by two persons. Two packs of cards are shuffled together after all the twos, threes, fours, fives, and sixes have been discarded. The highest cut indicates the dealer, who reunites the pack and gives eight cards by three, two, and three to his opponent and himself alternately. The seventeenth card is turned for trumps and placed on the table face upwards between the players, the remainder of the pack, forming the stock, being disposed in a pile by its side, so that a single card may be easily extracted.

A game generally consists of 1,000 points up; or for a certain stake per point, the loser's score being deducted from that of the winner. The score is kept by a marker.

BEZOAR (Persian padzahr, expelling poison). Term originally denoting an antidote for poison, and now applied, from their supposed efficacy against poison, to the stony concretions or "hair balls" formed round hair, wood, or other indigestible nucleus, occurring in the stomach or intestines of ruminants. As a prolific source of bezoars, the wild goat of Persia has been called the bezoar or bezoar-goat. Bezoars are still esteemed for their medical properties in India, China, and other Oriental countries, those obtained from the Persian wild goat and from the S. American llama being especially prized.

BHAGALPUR (Hind. tiger city). Town and district of Bihar and Orissa, India. The district is divided by the Ganges into two nearly equal parts.

Bhagalpur town, the headquarters of the division and the district, is on the Ganges, 265 m. by rly. N.W. of Calcutta. It has grown in importance owing to increased trade in agricultural produce. It manufactures coloured glass and coarse silken goods, and contains a college, monuments, and Jain shrines. Pop. district, 2,033,770; town 68,878.

BHANG. Name given in India to the hemp plant (*Cannabis indica*), and particularly to a narcotic and intoxicant obtained from it. The drug is prepared from the dried leaves, stalks, and fruits, and is dark green with hardly any taste. It is taken into the system by smoking, chewing, eating, or drinking. The Arabic name of preparations made from bhang is hashish.

BHARTPUR OR BHARATPUR. City of Rajputana, India, capital of the native state of Bharatpur. It is 35 m. by rly. W. of Agra. Unsuccessfully besieged by the British four times in 1805, it was captured, 1827, by Lord Combermere. The town was named after Bharat, a famous character in Hindu mythology. There is an agricultural fair in September. Pop. 33,494. Bharatpur state covers 1,982 sq. m., and has a pop. of 496,437.

BHAUNAGHAR OR BHAYNAGAR. Seaport town of Kathiawar, Bombay, India, capital of the native state of Bhaunagar. On the W. coast of the Gulf of Cambay, 60 m. N.W. of Surat, it is a terminus on the Gondal rly., and exports cotton. Founded in 1743, it rapidly rose in importance, owing to its commodious harbour for ships of light draught, becoming the principal harbour for the export of cotton in Kathiawar. Pop. 59,392.

Bhaunagar stato has an area of 2,860 sq. m. and a pop. of 426,404.

BHEL, BAEI, OR BENGAL QUINCE. Fruit of a small Indian tree (*Aegle marmelos*), about 10 ft. high, with trefoil leaves and fragrant white flowers. The thick rind of the not quite ripe fruit is a valued remedy in diarrhoea and dysentery on account of its astringent properties, and the pulp is a laxative. The rind furnishes a yellow dye.

BHILS (bowmen). Primitive forest tribes occupying hill ranges in India, principally in Bombay, the Central Agency, and Rajputana.

They are descended from the low Caucasian race which made India its home until driven out of the plains by the Aryan invaders. They number upwards of a million, two-thirds being animists and one-third Hinduised. Most of them speak, instead of their original Munda dialect, a debased Gujarati. Of medium height, dark, broad-nosed, and small-headed, they are clever trackers and expert bowmen.

Bhils tribe. A warrior from Mt. Abu with bow and arrow

BHOPAL. British political agency, native state, and town of Central India. The agency, which has an area of 11,653 sq. m., includes the native state, and is administered by an agent responsible to the governor-general.

The native state, area 6,902 sq. m., was founded in 1723 by Dost Mahomed, an Afghan chief. Since 1844 the throne had descended in the female line, but this was changed in 1926, when the hegum abdicated in favour of her son. In 1927 the right of the daughter of a ruler to succeed in the absence of a son was recognized. At the same time a legislative council was established. The ruler is entitled to a salute of 19 guns. Pop. 692,500.

The town, the capital of the state, is served by the Great Indian Peninsula and other rlys. Cotton weaving and printing are carried on, and there is a large oil depot. Pop. 45,094.

BHUTAN. Independent state of India. On the S. declivity of the eastern Himalayas, it is bordered on the S. by Bengal and Assam, and covers an area of about 18,000 sq. m. Almost wholly mountainous, it is watered by tributaries of the Brahmaputra. Punakhā is the winter capital and Tashichozong (Tasichodzong) the summer capital. A treaty in 1865 regulated the state's relations with India. Bhutan formerly possessed two rulers: the Dharm Rajah, the spiritual head, and the Deb Rajah, the temporal head. In 1907 the Deb Rajah, who was also Dharm Rajah, resigned and an hereditary maharajah was appointed. Pop. about 300,000.

BHUVANESWAR. Town of India in Bihar and Orissa, 16 m. S. of Cuttack. It was from A.D. 474 to 950 the capital of the Kesaris or Lion dynasty of Orissa. Yayati, the first of the line, restored the worship of Juggernaut and began the building of the great Sivaite temple here in 500. The lake was at one time surrounded by 7,000 shrines, of which some 500 remain. Pilgrimages are made to Bhuvaneswar by Siva worshippers.

BIAFRA, BIGHT OF. Large bay of West Africa, an E. extension of the Gulf of Guinea. Situated between Capes Formosa and Lopez, it contains Fernando Po, Principe, and São Thomé islands, and receives the Niger, Old and New Calabar, Cameroons, Sanaga, and Gabun (Gabon) rivers, and the Rio del Rey.

BIARRITZ. Watering place of France, in the dept. of Basses-Pyrénées. Picturesquely situated on the Bay of Biscay, 5 m. S.W. of Bayonne, it has a mild climate and a fine beach. Originally a fishing village, it became the summer residence of Napoleon III and the Empress Eugénie and attained popularity as a health and pleasure resort, both in summer and winter. There are casinos, fine hotels and villas and three harbours. Pop. 18,353.

BIBLE. The word Bible has come down to us from the Greek through the Low Latin *biblia*, meaning a book. When the Church set beside the Hebrew Scriptures a collection of classical Christian documents, the two great divisions of the Christian Bible came to be known as the Old Covenant and the New Covenant. Covenant was generally represented in Latin by *testamentum*; in this way came the familiar titles the Old Testament and the New Testament.

THE ENGLISH BIBLE. As regards the history of the Bible in English, the early versions, such as Caedmon's paraphrase, Bede's rendering of a portion of John, the Vespasian Psalter, the Paris Psalter, the Lindisfarne Gospels, the translation of Old Testament books by Aelfric, and other early versions, were made from the Vulgate, which was a translation from Hebrew into Latin, not from the original languages. Before Wycliffe's death, in 1384, a translation from the Vulgate into English was completed, but it is uncertain whether Wycliffe himself had any part in it. This was revised probably about 1388.

The true history of the English Bible begins with Tyndale rather than Wycliffe. He translated directly from the original, and not from the Vulgate. He completed the New Testament, the Pentateuch, and Jonah, and left in MS. a translation of the Historical Books of the Old Testament. The version was published piecemeal, 1525-35.

In 1611 the revision, known as the Authorized Version, was published. Gradually it drove all rivals, including the Geneva Version, out of the field, and for more than two centuries and a half no attempt to supplant it was made. In 1870 a revision of it was undertaken, and the Revised Version of the New Testament was published in 1881, the Old Testament being completed in 1884, and the Apocrypha in 1895.

RARE EDITIONS. The most valuable printed work in the world is the copy of the Bible printed at the press set up by Gutenberg and Fust at Mainz, in 1452-56. In two folio volumes, printed in Latin, in double columns, from movable types, with large initial letters resembling those of old MSS., it is commonly known as the Mazarin Bible, from the discovery of a copy in the library of the cardinal of that name. Coverdale's Bible, 1535, folio, black letter, was the first complete Bible printed in English; only one perfect copy is known. The Geneva Bible was first printed in 1560; the Authorized Version in 1611, the latter a large folio of 1,464 pages. The British Museum contains more than 16,000 copies of the Bible with different titles.

BIBLE SOCIETIES. Protestant societies formed for the dissemination of the Scriptures. The oldest is the Constein Bible Institute, founded at Halle, Germany, in 1710. The Naval and Military Bible Society was formed in London as The Bible Society in 1780. The most important of the others, with dates of their foundation, are the British and Foreign Bible Society, 1804; the National Bible Society of Scotland, 1861; the American Bible Society, New York, 1841; and the American Bible Union, a Baptist organization, 1850.

BIBLE CHRISTIANS. A body of Christians, an offshoot of the Methodist movement. Founded 1815, at Shebbear, N. Devon, by William O'Bryan (d. 1868), and until the split in 1829 known as Bryanites, they made great progress in the west of England. In July, 1907, they joined with the Methodist New Connexion and the United Methodist Free Church to form the United Methodists. See Methodism.

BIBLIOGRAPHY (Gr. *biblion*, book; *graphein*, to write). Word first used to denote the transcribing of books and the enumeration of size, title-page, contents, and colophon. It has become more generally

applied to the grouping together of works on some particular subject, place, or period, or the different volumes of one author.

In connexion with English literature an exhaustive work has been completed in *The Cambridge History of English Literature* (1907-16), the bibliographies at the end of each volume covering the work of all known writers in English to the end of the Victorian period. The bibliography of each author has been compiled as far as possible with the object of recording his original MSS., every edition of his separate works, and all editions of his collected works; these being supplemented by every critical work of other competent writers upon the author in question.

BIBLIOMANCY (Gr. *biblion*, book; *man-teia*, divination). Practice of opening a book at random and regarding the word or passage that first meets the eye as an omen. So the Greeks used Homer, and the Romans Virgil. Similar to the *Sortes Homericae* and *Sortes Virgilianae* was the *Sortes Biblicae* or *Sortes sanctorum* of the early Christians.

Bibliomania has been practised by Jews and Moslems and was general in Christendom, as was proved by its prohibition by several Church councils between the 4th and 14th centuries. Bunyan, Wesley, and Cowley were victims to the superstition. Charles I and Falkland consulted Virgil in this way before the Civil War. Tennyson introduces the practice in *Enoch Arden*, and Defoe in *Robinson Crusoe*. Consult *Credulities Past and Present*, William Jones, 1880.

BIBLIOMANIA (Gr. *biblion*, book; *mania*, madness). Passion for book collecting, especially without regard to the value of the contents of the books. The victim is described as a bibliomaniac. The earliest known English satire on the mania is in Barclay's version of Brandt's *Shyp of Follys*, 1509; another is John Ferriar's *The Bibliomaniac*: an Epistle in verse to Richard Heher, 1809.

BIBLIOTHÈQUE NATIONALE. Library in Paris, one of the largest and finest in the world. The building is surrounded by the Rues de Richelieu, des Petits Champs, Vivienne, and Colbert. Its nucleus was the palace of Cardinal Mazarin. There are a public reading-room and rooms for students.

The collection of books dates back to Louis XII, or perhaps earlier, for Charles V had a library in the Louvre and there was another at Blois. Louis XII obtained these, and added others, which had various homes until 1724, when they were put in Mazarin's palace. The collection was then known as the *Bibliothèque Royale*. The library receives a copy of every book printed in France, and contains more than 3,000,000 printed books and 100,000 MSS. The collection of objects d'art is a later addition. It consists of some 250,000 engravings and 150,000 coins, etc. See Library.

BIBRACTÉ. A Gaulish settlement on Mont Beuvray, Saône-et-Loire, France. Controlling the traffic route from Marseilles into the Loire and Seine basins, the Aedui made the hill-top their capital, protected by a rampart enclosing 334 acres. Excavations have brought to light houses, streets, a market place, and quarters devoted to metal-working and enamelling. The finds—crucibles, balances, iron and bronze tools, horse trappings, ornaments, pottery, and coins—illustrate the late *Tenian* period of the early Iron Age. Caesar wintered here in 52 B.C. See La Tène.

BIBURY. Village of Gloucestershire. It stands on the Colne, 6 m. from Cirencester, and is regarded as one of the prettiest villages in England. A group of picturesque cottages, called Arlington Row, became the property of the National Trust in 1928.

BICARBONATE. Carbonic acid forms with soda and potash two carbonates, one containing double the amount of carbonate and hence designated bicarbonate. Bicarbonate of soda is made by passing carbonic acid gas into a saturated solution of carbonate of soda. It gives off a larger amount of carbonic acid gas when acted upon by acids, and hence, mixed with cream of tartar, is employed in baking powder.

BICESTER. Urban district and market town of Oxfordshire, 12 m. N.E. of Oxford by the L.M.S. Rly. It is an agricultural and hunting centre, the town giving its name to a hunt. Its industries include brewing and the manufacture of leather, rope, sackings, and clothing, and cattle fairs are held. The church of S Eadburg, the holy nun of Aylesbury, was originally Norman, but embraces several later styles. There are remains of the Augustinian priory of SS. Mary and Eadburg, founded in 1182. In 1928 excavations proved the existence of a Roman settlement near Bicester. Market day, Fri. Pop. 3,200.

BICHAT, MARIE FRANÇOIS XAVIER (1771-1802). French physiologist. Son of a surgeon, he was born at Thoirre, Jura, Nov. 11, 1771. At the age of 26 he was appointed lecturer, and in 1800 physician at the Hôtel Dieu. He died July 22, 1802. In his *Anatomie Générale Appliquée à la Physiologie et à la Médecine*, 1801-12, he shows the intimate connexion between brain, heart, and lungs.

BICKERSTAFF, ISAAC. Pseudonym used by Swift, and adopted by Steele and the Scottish poet Allan Ramsay. Swift used the name to discredit a certain astrologer or prophet named John Partridge. In January, 1708, he wrote *Predictions for the Ensuing Year* by Isaac Bickerstaff, asserting that on March 29 Partridge would die. On March 30 a notice appeared saying that the man was dead. In asserting that he was still alive, Partridge covered himself with ridicule, and Swift wrote in April, 1709, his *Vindication of Isaac Bickerstaff*.

Bickley. Residential district of Kent. It is 12 m. S. of London, with a station on the Southern Rly. Pop. 6,154.

BICYCLE (Lat. bis, twice; Gr. *kyklos*, circle). Machine consisting of two wheels one behind the other and used for riding. Something of the kind had long been in existence, but the modern use of bicycles dates from about 1800. At first propulsion was effected by the primitive method of pushing the feet against the ground. Then came the pedals and their connexion with the back wheel, the main principle of the modern bicycle. After experiments in 1860 there was evolved the bicycle known as the boneshaker, with one large and one small wheel. Rubber tires were introduced, and about this time the name bicycle came into general use.

About 1880 came the earliest types of the modern safety bicycle, one with the two wheels of approximately equal size. This made the bicycle much more popular, especially after the invention of the pneumatic tire, which reduced friction to a minimum. Other improvements, the free wheel, for instance, were introduced; the machines were made lighter and were able to travel much faster, this being aided by new methods of gearing. The motor-bicycle was then evolved and to some slight extent ousted the safety.

In Great Britain, under an Act which came into operation in April, 1928, all bicycles that are without a lamp showing a red light to the rear must carry an unobscured and efficient red reflector. See *Cycle*; *Motor Cycle*.

BIDA. Walled town of Nigeria, W. Africa. The capital of Nupé province, it is 25 m. N. of the Niger and 40 m. by rly. from Baro. It

has metal, glass, and dyeing industries. Pop. about 50,000.

BIDASSOA (Basque, clean river). River of France, forming in its lower reaches the boundary with Spain. About 33 m. long, it enters the Bay of Biscay near Fuenterrabia. On an island in the stream the treaty of the Pyrenees (q.v.) was signed in 1659. In 1813 Wellington forced the passage of the Bidassoa, carried the French lines on its northern side, and planted his army in France. Consult War in the Peninsula, Napier's, vol. iii, 1893.

BIDDER, GEORGE PARKER (1806-78). British mathematician and engineer. Born at Moreton Hampstead, Devonshire, he showed as a boy a remarkable gift for arithmetical calculations. He gave public exhibitions of his abilities, but eventually was sent to school and then to Edinburgh University. Having taken his degree, he became an engineer, his time being divided between practical work and appearing before committees. He originated the rly. swing bridge and was a founder of the Electric Telegraph Co. He died at Dartmouth, Sept. 20, 1878.

BIDDERY or **BIDRI**. An alloy of zinc with copper, lead, and usually tin, used by Indian craftsmen as a foundation for inlaid work in gold and silver. See *illus.* above.

BIDDING PRAYER (A.S. *biddan*, to pray). Form of prayer in the Church of England. It is only customary to-day before university sermons and at special cathedral services. Embracing the whole of Christendom and all appointed rulers and governors of the British realm, its origin may be traced to the collective prayers of the early Christian Church, when the exhortation, *Let us pray*, preceded each petition. Later came the injunction to bid (or offer) prayer after the sermon at Mass for all sorts and conditions of men, the people "bidding their bodes," i.e. using their rosaries, and at each petition saying in silence the Lord's Prayer. Survivals of this form may be found in the prayer for the church militant

BIDEFORD. Borough, seaport, and market town of Devonshire. On Torridge estuary, it is 3 m. S. of Barnstaple Bay and 9 m. by rly. S.W. of Barnstaple, with a station on the Southern Rly. Its two portions are connected by an old bridge. In 1928 it again became a port, a status it had lost in 1882. The "mine" of Bideford black, a mineral deposit used for anti-fouling composition for ships, was modernised in 1929. Market day, Tues. It was the birthplace of Sir Richard Grenville, and the scene of much of Kingsley's *Westward Ho!* Pop. 9,125.

Bidder ware. Examples of this Indian metal work
Victoria and Albert Museum

BIELEFELD. Town of Westphalia, Prussia, S.W. of Hanover. It stands at the base of the Teutoburger Wald, on both sides of the river Lutter. The 12th century castle of Sparenburg has been rebuilt as a museum. Its chief industry is linen manufacture; others are the making of silk and plush goods, sewing machines, agricultural machinery, and motor-cars. Bielefeld consisted of two towns until 1520. In 1606, as part of the duchy of Jülich, it passed to Brandenburg, and so to Prussia. Pop. 86,062.

BIELOSTÓK or **BIALYSTOK.** Town of Poland, in the county of Białostók. It is 45 m. by rly. S.W. of Grodno, on the Bialy river. It has wool, linen, silk, and felt hat manufactures, and trades largely in grain and timber. At the partition of Poland, 1795, Białostók fell to Prussia, but by the treaty of Tilsit, 1801, was transferred to Russia. It became part of Poland in 1919. There was a massacre of Jews here in 1906. Pop. 76,792.

BIENE, AUGUST VAN (1850-1913). Anglo-Dutch actor and musician. Born of Dutch parents, he played the violoncello for many years on the British stage, chiefly in *The Broken Melody*. He died while performing, Jan. 23, 1913.

BIENNE or **BIEL.** Town of Switzerland, in the canton of Berne. At the N. end of the lake of Biemme, just below the Jura and on the river Suze, it is 20 m. N.W. of Berne. Its industries include the making of watches and clocks, railway machinery, nails, cement, and earthenware, and it has a large technical institute. The Schwab museum contains relics of prehistoric men and Celtic and Roman antiquities. The health resorts of Macolin and Évilard are reached by cable-railways. Pop. 36,800.

The lake of Biemme is about 10 m. long.

BIENNIAL (Latin *bis*, twice; *annus*, year). Plants which live for two years or seasons, flowering and dying in the second season.

Bicycle. 1. Hobby or Dandy Horse, 1818. 2. Kirkpatrick's bicycle, 1839. 3. Bicycleette, 1879. 4. Rudge's "Ordinary," 1884, a type known as the boneshaker

BIDDULPH. Urban district of Staffordshire. It is 4 m. S.E. of Congleton, on the L.M.S. Rly., in a coal and iron-stone district. Market day, Sat. Biddulph Grange is noted for its gardens. Pop. 7,936.

The usual method of culture is to sow seed in the open ground in the autumn and transplant the young plants the following summer, when they will bloom and die in the season after that. Hollyhocks, Canterbury

bells, and snapdragons are good garden biennials. See Annual.

BIERCE, AMBROSE (1842-1914). American author. He was born in Ohio, in June, 1842, served in the Civil War, and in 1866 went to California. His books include *Tales of Soldiers and Civilians*, 1891, Eng. ed. 1892, renamed *In the Midst of Life*; *Can Such Things Be?*, 1898; *Fantastic Fables*, 1899; *Shapes of Clay*, 1905; and *Write it Right*, 1909. His collected works were published in 1909-12. As a master of the short story he may be said to rank with Edgar Allan Poe and Bret Harte. He was last heard of in Mexico, where in 1914 he served on the staff of General Villa.

Ambrose Bierce, American author

BIFRÖST. Bridge built by the Norse gods over the earth, described variously as the rainbow and the Milky Way. At its apex was Valhalla in Asgard. When the sons of Muspel from the burning south went to the last great fight with the gods, the bridge broke down under their weight.

BIG. Name of several rivers. The most important, in Quebec, Canada, flows from the centre of the province W. for about 500 m. into James Bay. Others are in Canada, the U.S.A. and New Zealand.

BIGAMY (Lat. bis, twice; Gr. gamos, marriage). Legal offence consisting in going through the ceremony of marriage with a person when one is already married to another. If the first spouse has not been heard of for seven years or more before the second marriage, the prosecution must prove that the prisoner had good reason to believe that the real spouse was alive. In any case the prisoner escapes if able to convince the court that he or she had good reason to believe that the spouse was dead, even though seven years had not elapsed since the last communication. The punishment is seven years' penal servitude as a maximum or imprisonment with or without hard labour for a maximum of two years. See Marriage.

BIG BEN. Great bell in the Clock Tower of the British Houses of Parliament. It was named after Sir Benjamin Hall, first commissioner of works when it was hung, in 1856. Originally weighing 15 tons, it was recast and the weight reduced to 13½ tons. The total cost was about £40,000.

BIGELOW, POULTNEY (b 1855). American author and traveller. Born Sept. 10, 1855, he was a son of John Bigelow (1817-1911), American ambassador to France. He travelled extensively in Europe, Australia, China, Java, and Japan, was editor of *Outing* from 1885-87, and correspondent of *The Times* and of *Harper's Weekly* during the Spanish-American War. His chief works are *The Borderland of Tzar and Kaiser*, 1895; *History of the German Struggle for Liberty*, 1896; and *Prussian Memories*, 1915. In 1928 his *Memoirs: Seventy Summers* appeared.

BIGGARSBERG. Mt. range in Natal, S. Africa, a branch of the Drakensberg. Extending E.S.E., below Dundee, it cuts off the N. corner from the rest of the province. See Drakensberg.

BIGGLESWADE. Urban district and market town of Bedfordshire. On the navigable Ivel, 11 m. E.S.E. of Bedford by the L.N.E.R., it manufactures cycles and trades in corn, timber, coal, and market garden produce. Market day, Wed. Pop. 5,400.

BIG HORN. River of the U.S.A. Rising as the Wind river in the Shoshone mts., Wyoming, it flows through Montana, to the

Yellowstone river. Its length is about 445 m., and it is navigable to Fort Custer, where it is joined by the Little Big Horn. In N. Wyoming, E. of the Big Horn river, are the Big Horn mts. Cloud Peak, the highest, is 13,165 ft. high.

BIGHORN. Name given to the mountain sheep (*Ovis cervina*) of N. America. Once found along the whole chain of the Rockies, they are now not seen S. of Montana. They live in bands up to 50 and are wild and shy. The horns of the larger rams sometimes measure 42 ins. around the curve.

BIGHT. Long curve in a coastline, or a wide, open bay. Examples are the Bight of Biafra, W. coast of Africa; and the Great Australian Bight, S. coast of Australia.

Bignonia, American trumpet-flower

has crowded orange leaves of B. chiria with which Indians on the Orinoco paint their bodies.

Bigorre. Older name for a district in France, once part of Aquitaine and then of Gascony. Its capital was Tarbes.

BIHAR. Town of India. It is 38 m. from Patna, and has remains of Buddhist buildings. It was the capital of the ancient kingdom of Magadha and, as the cradle of Buddhism, is still regarded as sacred by Buddhists. Pop. 36,700. The sub-province of which it is now the capital has, on account of its fertility, been called the garden of India.

Bihar and Orissa is the name of a province of India. Formed in 1912 by five divisions of the old province of Bengal, it consists of the three sub-provinces of Bihar, Orissa, and Chota Nagpur, and has a total area of 53,181 sq. m. and a pop. of 34,002,189. The capital is Patna.

Chota Nagpur is in the hill country;

the other sub-provinces consist of the valleys of the Ganges, Mahanadi, and other rivers. Rice is the most important crop grown:

Coal-mining is a very important industry, and iron and mica are found. At Jamshedpur are the Tata iron and steel works.

BIJAPUR. Ancient city of Bombay, India. It is 60 m. by rly. S. of Sholapur and was once the capital of a powerful Mahomedan kingdom. It contains a fort 6 m. in circuit, palaces, and mosques. Here is the tomb of Adil Shah, one of the most magnificent in the world. The city became British in 1848. Pop. 32,485.

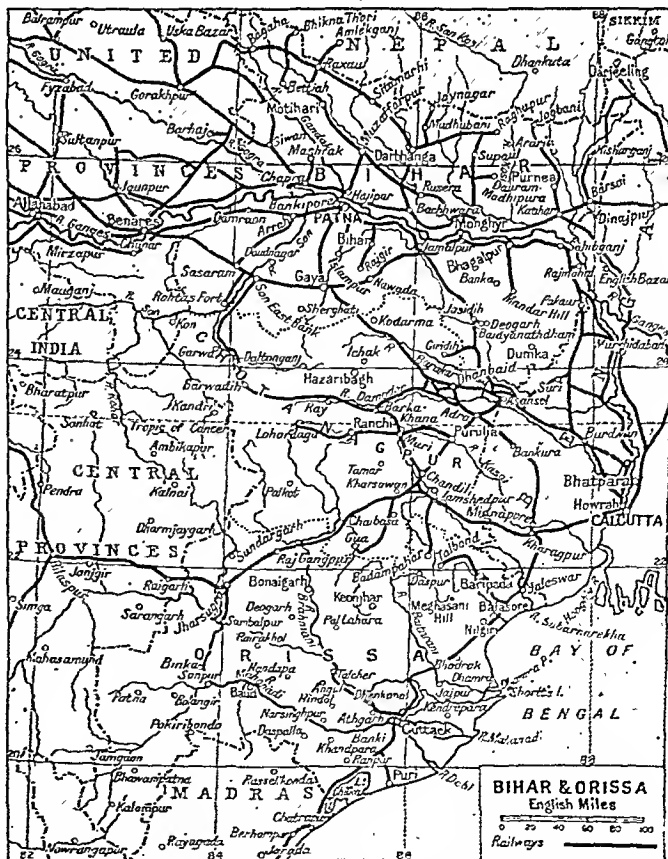

BIKANER. Native state of Rajputana, India. A desolate, sandy region of 23,215 sq. m., with no perennial streams,

Bighorn, *Ovis cervina*. Mountain sheep of N. America

It has coal deposits, and its shallow lakes produce salt. The people of Bikaner are Rajputs, Jats, and Bhattus. Pop. 659,685.

Bihar and Orissa Map of the province of India which was formed in 1912, on the reconstruction of Benral, from five divisions of the old province

The maharajah of Bikaner, who is entitled to a salute of 19 guns, accompanied the Indian Expeditionary Force to France in 1914.

Maharajah of Bikaner
Tandyk

He was one of India's representatives at the Peace Conference, Paris, 1919. The Bikaner Camel Corps rendered important services against the Turks in Egypt in 1916.

Bikaner, the capital of the state, is the terminus of a branch line of the rly. from Jodhpur to Jaipur. It contains carved Jain monasteries and a palace.

Carving and the manufacture of pottery, blankets, and sweetmeats are among the industries. Copper, fuller's earth, and red sandstone are found. There is an annual sheep and cattle fair. Pop. 69,410.

BILBAO. Seaport of Spain. On the river Nervion, 8 m. from its mouth, and 348 m. by rly. N. of Madrid, it is the largest Basque town. It owes its importance to the neighbouring iron mines. The old and new towns are connected by five bridges. It has the largest dry dock in Spain, and a wireless station. Bilbao has long been noted for its iron and steel, and in addition to iron ore it exports pig iron and wine, most of its trade being with England. It has iron-smelting works and foundries, breweries, distilleries, flour mills, and tanneries, manufactures rope, leather goods, paper, soap, cotton, and glass. Founded in 1300 as Belvao, it was long celebrated for sword blades. Pop. 148,383.

BILBERRY OR WHORTLEBERRY (*Vaccinium myrtillus*). Small shrub of the order Ericaceae, a native of Europe, N. and W. Asia, and N.W. America. It has a creeping root-stock with erect stems (2 ft.), smooth angular branches, and small oval leaves. The rosy-green in verted pitcher-shaped flowers are solitary. The fruit is a glaucous blue-black berry, which is made into jam, and also produces a purple dye. The plant thickly covers elevated heaths.

Bilberry, the fruit and leaves

BILBOES. Name given to the fetters on board ship into which culprits were put. It is derived from the name of the Spanish town Bilbao. A sword was called a bilbo, and its plural came to have the sense mentioned above, in which it is used by Shakespeare (*Hamlet* v. 2). Bilboes were carried by the Spanish Armada, and used in the British navy until about 1700. They were usually shackles round the ankles joined by an iron bar.

BILE (Lat. *bilis*). Secretion of the liver. It is stored in the gall bladder, or discharged into the upper part of the small intestine through the common bile duct, the discharge being most active when food is passing through the intestine. Bile is a yellowish brown or green fluid. Its most important function is to act in conjunction with the pancreatic juice in the digestion of fat. When the bile is prevented from entering the intestine, the most common cause of which is obstruction of the bile ducts, the bile passes into the blood-stream, and is distributed all over the body, producing the yellowish tint in the skin termed jaundice (q.v.).

BILHARZIA. Parasitic worm of the fluke group (*Trematoda*), chiefly found in tropical Africa, especially Egypt. The male carries the female about with him in a fold of the skin. The parasite invades the veins of the

bladder in man, and sets up haematuria, a condition sometimes known as bilharziosis. It may be cured by the use of antimony. It is named from Theodor Bilharz, who discovered the parasite in 1851.

BILL (late Lat. *billa*, a writing). Word used in commerce in various senses. It originally meant a sealed written paper, but to-day, in its simple form, it is generally used for an account of goods bought. The more complex kinds of bills are each distinguished by words explaining their nature.

BILL OF EXCHANGE. This is a document by which debts, especially foreign debts, are discharged. They are divided into inland and foreign bills, and a considerable business is carried on in them by bankers and firms called bill brokers.

Bill of Exchange. Example of document extensively used to finance purchases of goods, more especially when such purchases are made in foreign countries

A bill is usually drawn thus :

Due May 4.
£100. London, Feb. 1, 1930.
(Impressed stamp)
Three months after date pay to me or to my order the sum of £100 for value received.
Henry Robinson.
To Mr. John Smith,
159, High Street, Kensington, W.

If he undertakes to pay this bill, Smith will accept it. That is to say, he will write across it from top to bottom the words :

Accepted, payable at Barclays Bank, Lombard Street, E.C.

John Smith.

Drawn on Feb. 1 and payable three months after date, this bill naturally be due on May 1; but by custom an extra three days, called days of grace, are allowed, bringing the date of maturity to May 4. Where the bill, with days of grace added, falls due on a Sunday, Christmas Day, or Good Friday the bill is payable on the preceding business day. When it falls due on a bank holiday, it is payable on the next business day. Before it is due, however, the holder can obtain money by discounting it with a bank or bill broker.
